across overran much of the northern shores of Africa, and they soon became the acknowledged rulers of all the Mediterranean coast, from Egypt to the Atlantic coast, family hath for other designs respecting such plants in his garden, than to suffer them to fall into the hands of unreasoning men. And, indeed, when I have considered that some of the ruling powers on earth have so long helped to buy up those people in such grievous practices as robbery and the slavery of others, all that can feel in me, of nature or spirit, seems raised in indignation and protest against it. But, in the present case, respecting our situation, soon after going to bed, my mind was quiet and consoled with a fresh remembrance of the compassionate language from the Father of mercies to the children of Israel—"The enemies you have seen to-day, you shall see no more;" that I fully believed that those vessels

would not come very near us. The captain, Swain, at our leaving the deck about 10 o'clock, thought they might be up with us, and probably some of them on board of our vessel at about 12 o'clock, but on Second-day morning we were thankful to find they were out of sight.

(To be continued.)

FOR "THE FRIEND."

"The Word of God" is not to be limited to that which is written, and which we read with our natural eyes, and hear with our natural ears, and become intellectually convinced of its truth, and believe it, as we believe the constitution of the United States, to be true, and that we are bound to live up to and obey it.

This kind of intellectual belief in the Bible (although God's words) would be of no avail to the saving of the soul. For the Bible itself saith that the "Letter" killeth; but the spirit, that same spirit in which it was given forth, giveth life. It is only the Spirit of God in communion with our spirits, that enables us to receive the word of God to us, as He powerfully convinceth us of sin, leads us to repentance, shows us a Saviour, then leads us unto all truth; taking of the things which are Christ's and showing them unto us; as also opening our understandings to understand the Scriptures, that we may profit by that written aforetime for our instruction—we then having the same light in a measure to read them by as that in which they were written by holy men of old.

It was the word of God to David when Nathan the prophet led him to pass sentence on himself for his sin (not knowing it); then said to him, "Thou art the man."

It was the word of God to Isaiah, when he cried, "Woe is me, for I am undone, for I am a man of unclean lips."

It was the word of God to Peter when the cook crew and he went out and wept bitterly.

It was the word of God by Peter on the day of Pentecost, whereby thousands were pricked in their hearts, and impelled to cry out, "What shall we do?" And yet without doubt they being Jews had often before this heard and read what Peter then narrated from Scripture.

It was the word of God to the jailer at Philippi which led him to cry out, "What shall I do to be saved."

Verily then, the "Word of God" by which the Apostle John testifies, the worlds were made, "is quick and powerful, sharper than any two edged sword, piercing even to the dividing asunder of soul and body and joints and marrow, and is a discerner of the thoughts and intents of the heart." T. D.

SAN LEONARDO, CAL., Twelfth Month 8th, 1888.

THERE are differing views of economy of time. One man will use two minutes, three times a day, for six months, to adjust and secure a broken gate, because he has "no time to repair it;" while his neighbor would take one good hour for repair at the start, and so save at least a day and a half in the half-year.

"THOUSANDS of men remain poor all their lives because they are bent on getting rich by means of some great business or large transaction. They might earn an honest and ample living in a smaller way, little by little, and even grow rich thereby, were it not that they are always hoping that they will accomplish their desire "at a jump" or by means of large transactions.

Forgiveness.

"My heart was heavy, for its trust had been Abused, its kindness answered with foul wrong; So turning gloomingly from my fellow man One summer Sabbath day I strolled among The green mounds of the village burial place, Where, pondering how all human love and hate Find one sad level; and how soon or late, Wrangled and wronger-doe, with necked face, And cold hands folded over a still heart, Pass the green threshold of our common grave Whether all foetters die, whence none depart: Awed for myself and pitying my race, Our common sorrow like a mighty wave Swept all my pride away and trembling I forgave." John G. Whittier.

The venerable and beloved author of the above truthful lines, this day, completes his 81st year. In a letter dated Seventh Month 13, of the present year, he uses this expressive language: "I have reached a period in life when new fame and notoriety are burdensome; and love, the love of God and our neighbor, is the one thing which makes life really worth living."

This is the experience of one full of years and full of honors, and we may also add, full of "faith, hope and charity." How beautiful it is, as life here draws to its close, and the shades of night come perceptibly on, to see these Christian traits shine forth like the rays of the setting sun gilding with radiance all surrounding objects.

The publication of the article on "Forgiveness" in the *Daily News* of the 22d ultimo has elicited the following: "I have the *Daily News* of the 22d containing thy contribution on "Forgiveness." It is one of the rarest and most difficult to exercise of human virtues. The incident in the lives of Webster and Benton was quite familiar to me, as I have read with much interest Harvey's book. We had near home a conspicuous instance of a similar kind. After a personal intimacy of many years between the late Eli K. Price and Henry C. Carey, of Philadelphia, an estrangement arose growing out of a misunderstanding of a business matter, in which Carey erroneously imagined he was injured. Strictly, it was an honest difference of opinion in regard to the value of a security. Carey took offence and was quite indignant, broke off all personal intercourse, and they met frequently without speaking for some years. At a social gathering one evening where Frederick Fraley, General Patterson, Morton McMichael and other venerable men were present in a group by themselves with Henry C. Carey in the centre of the conspicuous circle, Eli K. Price approached. All except Carey welcomed him warmly with cordial hand-grasplings, and, for a moment, there was an awkward, embarrassing silence, when prompted by a sudden better impulse, Carey held out his hand and exclaimed, with such feeling: "Price, my good friend, how are you? We are both getting old, too old to be anything but friends. Here is my hand, take it and let us forget our differences." Of course the response was friendly, their old friendship was renewed, and in less than a year Carey was dead.

The late Samuel Bette, Junior, of Philadelphia, a minister in the Society of Friends, related to the writer the following occurrence in his own life, and as he has for some years been deceased there seems to be no inpropriety in making it public. One First-day morning he felt his mind strongly impressed with the belief that it was his duty to go to a certain house, the occupants of which were strangers to him, and slip under the front door a tract on Charity and Forgiveness, published by the Tract Association of Friends. It was a humiliating

act, being at the time of day when many persons were on the streets returning from their places of worship, &c.; but he did what he felt to be his religious duty. Samuel Bettle was afterwards informed that on that day a female member of the family on entering the door, picked up the tract, carried it to her room and read it. It appeared there had been an estrangement toward some one, arising, perhaps, in the settlement of an estate, in which hard feelings had taken possession of her mind. On returning to the family she said she had read the tract on "Charity and Forgiveness," and had forgiven those who had injured her. Within twenty-four hours she was suddenly summoned into the presence of Him who said, "If you forgive not men their trespasses neither will your Father forgive your trespasses." As the year is now drawing to its close how desirable it is that all should realize the truth of the expression, "The noblest remedy for injuries is oblivion."

FOR "THE FRIEND"

Leadings of the Spirit.

Man appears to be mysteriously composed of various discordant elements. Ever since the fall there has been enemy between the two seeds of good and evil. The seed of the serpent had power to bruise the heel; and he has the same power yet; so that the children of God, in travelling through this probationary world, often feel the painful effects of his bruising power. But the seed of the woman, which is Christ, has power over all the powers of the enemy. So that his rod and his staff, if we lean upon them, often comfort us. And if we submit to his power, and to the drawings of the Father's love, until the head or principal seat of that forbidden knowledge, which the serpent by his subtlety introduced into the world, is subdued and overcome, then we can, like Paul say, "thanks be to God, which giveth us the victory through Jesus Christ our Lord."

But until this is done, and a victory over the serpent nature is gained, we remain in a sad mixture; and the language of our Saviour to one of the churches of Asia, might be applied to us: "I would that thou wert cold or hot." For while we are in this mixed condition—half Jew and half Ashdod—and contenting ourselves with a form of godliness without the power, we may think we are rich and increased with goods, and have need of nothing, and do not seek for Divine help, or the guidings of the Spirit or the drawings of the Father; and be so blinded as to accept religious amusements for worship. It is not strange, therefore, that Christ would rather we were either cold or hot than in a lukewarm, lifeless condition.

He counselled the Church of Laodicea to buy of Him gold tried in the fire, and to anoint their eyes with the eye-salve of the kingdom, that they might see. For they were in darkness, like we all by nature are; and while we are in darkness we are easily led aside by the deceit of the serpent, and mistake his promptings for the drawings of the Spirit. While in this condition, it appears to me that we have two elements in us: the one from the Spirit of the Lord; the other from the spirit of man—and that each of us will grow and flourish in us, in proportion to the culture it receives. One of the most difficult culture for me to learn, is to distinguish between the two, and not to take the imagina-

tions or promptings of man for revelations from the Lord. This discernment we can only have, as we believe in and receive the light of the Lord. So we should prayerfully seek to know what kind of a spirit leads us; for we become servants to whichever ever we yield ourselves servants to obey; whether the spirit of man or the Spirit of the Lord.

The natural man receiveth not the things of the Spirit of God, because they are foolishness to him; so he will not follow the drawings of the Spirit, and be led by it to something that he does not inwardly know or have a heartfelt belief in. The preaching of the cross of Christ is to such a stumbling-block, and to the worldly-wise, foolishness—and therefore the Spirit of Christ, which was designed to be heard over all things unto his church, and to be the leader of his people, is set aside and rejected by many of the worldly-wise holders of the present day; and instead of becoming the head of the corner, has become a rock of offence, and a stumbling-block for the poor, benighted ones to stumble over. So they are led by the spirit of man, under a light which they substitute for a Divine light, though it leads them more and more into a conformity to the world, until they are so mingled with it, that it may be said of them, "strangers have devoured their strength and they know it not," and they become blind leaders of the blind. Such as these persuade them-selves, and strive to persuade others, that the new way to the kingdom is an easier way than the old path, and more adapted to these enlightened times; that while the ways of our forefathers might have been suited to the old-fashioned ways of their day, yet now, a broader way, which accommodates itself more to the cultivated religion and the preaching of our intellectual times, will bring more souls to Christ. So it is no wonder that they do not, in mere silence, listen to the drawings of the Spirit, as they have found what they think a better way.

But this remains to be the condemnation, that, although light has come into the world, this self-pleasing religion is not brought to the light of Christ lest it should be reprov'd; but being judged by the light of their own intellect, it is receiving the applause of men, and gains great popularity.

When darkness is taken for light, and light for darkness, a great deal may go under the guise of religion, and be highly esteemed among men, which is abomination in the sight of the Lord. For the heart, when it has become darkened, is deceit above all things; but as many as are led by the Spirit of God, they are the sons of God, and they can see and know the hidden things of darkness, "for the Spirit searcheth all things; yea, the deep things of God."

So we have the privilege to be led by the Spirit of God, and become his sons, or we have the privilege to be led by the deceiver, and become the children of him who rules and reigns in the hearts of the children of disobedience. And when we, by following the leadings of the deceiver, become his ensarvants, he can persuade us that duty calls us to compass sea and land to make proselytes, and when they are made, what are they?

Many are running to and fro, and knowledge appears to be on the increase; but is it a heavenly knowledge or an earthly one? Are not vital Christianity and true humility fading away; the religious zeal and self-denying devotion that once characterized us as a people becoming

mixed and mingled with worldliness? That which is born of the Spirit is spirit, and that which is born of the flesh is flesh; and flesh and blood cannot inherit the kingdom of heaven. If we live after the gratifications of the flesh we shall die, spiritually; but if we are so led by the Spirit as to mortify the fleshly deeds of the body, we shall live and flourish spiritually, and grow in grace, and in the true heart-changing knowledge of God.

John's light was a burning and shining light, and the children of men rejoiced in it. But his mission was only to prepare the way of the Lord, and to point to Christ, the true Light, the Lamb of God, which taketh away the sins of the world out of the heart. This Light is a discernor of the thoughts and intents of the heart, and as it is followed it will lead away from sin and death. It is the true Light which lighteth every man that cometh into the world, and which is from everlasting to everlasting, and changes not; for of the increase of his government and peace there is to be no end. So the sons of God may well rejoice in the everlasting and unchangeable light, that shines more and more to the perfect day.

Orational Modes of Covenanting.

BY CUNNINGHAM GRIEKE.

Agreements between individuals or communities must in all ages have been almost equally frequent; and hence it is only what might have been expected, to find the word "covenant" occurring more than two hundred times in the Bible.

As a rule, they were confirmed by a solemn oath, taken before God, with an imprecation that evil might light on perjury. An oath, however, in early ages, was confirmed, not by the mere spoken word, but also, at the same time, especially in the East, by an appeal to several objects or persons as witnesses of the agreement made, as is strikingly shown in the fact that the Hebrew word for "to swear an oath" means "to pledge one's self by seven things."

An instance of this occurs as far back as in the history of Abraham. The wells he had dug in the open pasture land near Gerar being in danger of becoming a cause of strife between him and Abimelech, king of the Philistines, the patriarch, as we read, "set seven ewe lambs by themselves, . . . and said, These seven ewe lambs shall thou take of my hand, that they may be a witness unto me that I have digged this well." . . . Thus they made a covenant." (Gen. 21: 32-2.) It is curious to notice how widely the idea was spread, in antiquity, of special sanctity connected with the number seven. We have it here, and find it also in the old Aecadian literature brought from Nineveh and Babylon. Homer introduces it in his account of the covenant confirmed by an offering, for the surrender of Briseis by Achilles (Iliad 19, 243 ff.) "With the desire to purify myself," says one of the ancients, "I bathe in the sea, dipping my head seven times in the waves; for this number, as the divine Pythagoras tells us, is the proper one in all matters of religion."

It was customary, on the occasion of such covenants, to confirm them by the erection of some visible memorial, which might remain as a witness against either side breaking the oath, it had, as it were, heard sworn. Thus Laban caused Jacob to "take a stone and set it up for a *matsebah*," the word used, stones set up with a religious, or, in some cases, an idolatrous

object. It occurs four times in the story of the patriarch,—when he raised such a stone as a witness and memorial of the covenant made by God with him at Bethel, when he parted from Laban, when God made a second covenant with him at Bethel, and at the spot where Rachel was buried, by the wayside, near Bethlechem.

It is added in the narrative of Laban's covenant, that "the brethren of Jacob," members of Laban's family, took stones and made a heap, or cairn, and ate together on it, as a further ratification of the agreement made, while Laban gave it the name, "(This is) a cairn of witness" in Aramaic; and Jacob, assenting, called it the same in his own Hebrew. An additional sanction was given to the oath sworn on the occasion by calling the cairn by the further name of Mizpeh, or the watch-tower; both parties believing that Jehovah, who had been invoked, would keep guard on the spot, and from this high vantage-ground watch both parties, to bring on either who broke his word, and thus insulted the Being named in his oath, the full penalty of Divine wrath for his perjury.

The eating" is expressly mentioned as connected with a sacrifice, so that the covenant was in every sense a religious act. It was in effect a form of communion with Him to whom the sacrifice had been offered, the consuming of part of the victim on the altar—in this case the stone of witness—being, as it were, the partaking in it by God, while the meal was the sharing of it on the side of the human parties to the covenant; heaven and earth being thus bound together by an act like that which binds men to one another.

Another characteristic of covenants in the early ages was the heaving the sacrifice into two parts, and putting them at a short distance from each other, so that those who were making the treaty or covenant might pass between these bloody witnesses of their oath. It was understood that this showed the parties contracting to be in effect one, as the two halves of the victim had been, and also to express their belief that, whichever of them might break the covenant made, would share a doom as terrible as that of the divided sacrifice. We find this custom in the covenant made between God and Abraham. On the occasion of the promise of the Holy Land for his posterity, given by God to the patriarch, we are told that Abraham asked, "Lord God, whereby shall I know that I shall inherit it? And he said unto him, Take me an heifer of three years old, and a she-goat of three years old, and a ram of three years old, and a turtle dove, and a young pigeon. And he took unto him all these, and divided them in the midst, and laid each piece one against another; but the birds divided he not. . . . And it came to pass that, when the sun went down, and it was dark, behold a smoking furnace and a burning lamp [the symbols of the Divine presence] that passed between those pieces" (Gen. 15: 8-10, 17). So common, or even universal, was this custom, that the Hebrew word for "covenant" seems to be derived from the verb "to eat asunder."

A very usual form of covenant was associated in the ancient religions, including that of the Jews, with the presentation of thank offerings. These were not all burned on the altar, but the greater part of each offering was made the material of a feast, with the same idea as marked the eating of the sacrifice by Jacob and Laban—that it implied communion and friendship between those partaking of it and the God to whom part had been offered. At this day,

the Bedouin regard any one allowed to eat with them as their friend, with a claim on their protection; and this feeling was extended, in feasts or a sacrifice, to the Divine Being. The same conceptions were embodied in the covenant made between God and the children of Israel, as recorded in Exodus 24: 4 ff, Revised Version: "And Moses wrote all the words of the Lord, and rose up early in the morning, and builded an altar under the mount, and twelve pillars, according to the twelve tribes of Israel. And he sent young men of the children of Israel, which offered burnt offerings, and sacrificed peace offerings of oxen unto the Lord. And Moses took half of the blood, and put it in basins; and half of the blood he sprinkled on the altar. And he took the book of the covenant, and read in the audience of the people; and they said, all that the Lord hath spoken will we do, and be obedient. And Moses took the blood, and sprinkled it on the people, and said, Behold the blood of the covenant, which the Lord hath made with you concerning all these words. Then went up Moses, and Aaron, Nadab, and Abihu, and seventy of the elders of Israel; and they saw the God of Israel; and there was under his feet, as it were, a paved work of sapphire stone, and as it were the very heaven for clearness. And upon the noddles of the children of Israel he laid not his hand; and they beheld God, and did eat and drink." The halving of the blood had reference to the two parties to the covenant God and Israel; but as God is invisible, the half of the blood set apart for him was simply poured on the altar as a peace-making holy gift, while the other, connected with the people, was sprinkled on them, that being thus touched with what had been dedicated to the holy and pure God, and was in itself sacred, they might be brought, as it were, into close relationship with the Being to whom the blood, as the life, belonged. It was a figurative consecration and a pledge by Israel to live as if they themselves were holy and pure offerings to God. Chosen thus, Israel was God's "peculiar people," his "first-born," marked out from all other nations by this especial favor.—S. S. Times.

FOR "THE FRIEND."

"For whatsoever things were written aforetime were written for our learning, that we through patience and comfort of the Scriptures, might have hope."

Although there are many families up and down through our Society that are in the daily practice of having a portion of the Holy Scriptures read aloud in their midst, yet I fear there are too many that are neglectful of it. Some may assign for a reason, they have never been used to doing so and think they are not good enough—it would make them appear better than what they were; and others have no interest in such reading because they do not comprehend and see the beauty of it. To the last-mentioned class I would say, seek an interest in these Scriptures of truth, and, with your minds turned inward, ask for wisdom, and an understanding heart, that you may know the meaning thereof; and if you strive for this from day to day, the Father of Mercies will give you an understanding heart, and open your blind eyes, so that you will see the beauty therein. And for the other class, that do not feel themselves good enough to be in this habit, search and see what it is that is wanting or hindering (delays are dangerous) and keep on the watch-tower, the only place of safety; and when you have made a start or taken a few straight steps, you will know what the Psalmist meant when

he said, "Thy word is a lamp unto my feet, and a light unto my path." The Apostle says the Scriptures are able to make wise unto salvation, through faith which is in Christ Jesus. The Bible is the best of books, and one that a Christian never tires of reading, but always finds something of interest to cheer, reprove or instruct.

To the awakened child, whose ears are opened to hear, the Redeemer of souls will not be lacking on his part to lead a helping hand in every time of need. "They that be whole need not a physician, but they that are sick." So that it is the sin-sick souls that He wants to heal of their maladies; and all such that come unto the Master in full faith—living, child-like faith—will find Him to be the physician of value.

"He wounds to heal and kills to make alive."

When any feel aroused to a sense of their undone condition, it is the Master himself that begets this uneasiness, making such feel dissatisfied with their past ways of living, tired as it were of feeding upon the husks, but wanting to be fed with that spiritual manna that comes down from Heaven, and thirsting for the water of life, which the Saviour declared He would give, and which would be a well of water springing up unto everlasting life.

Then, dear friends, if there are any of you that are not in the habit of reading the Holy Scriptures, either individually or collectively, I would say, let the time pass suffice, and make a beginning; and by continuing therein, see if the Lord of Heaven and earth does not create a new feeling within you, such as you have not experienced before; and if you are faithful and take heed to these little intimations, He, the mighty God of Jacob, will lead you on, step by step, and cause you to experience a great change, even as becoming new creatures: "old things are passed away, all things are become new." And He will at times give you that peace that passeth all understanding, which the world, with all its pleasures and treasures, can neither give nor take away. Then be persuaded to turn inward in your minds, and seek to know this blessed Saviour, who said, "I am the Way, the Truth and the Life," and who will guide you into paths you have not known, but which, through continued faithfulness, lead to everlasting life. E. C. COOPER.

PENNA., Twelfth Month, 1888.

FOR "THE FRIEND."

William Pollard on Iowa Yearly Meeting.

In a communication to the *London Friend* of Twelfth Month, by William Pollard, of Manchester, England, reference is made to the course of Iowa Yearly Meeting, which has gone further than most other bodies professing the name of "Friends," in the appointment of regularly paid ministers to labor in its subordinate meetings. The article says:

"Is not the following striking description of modern Quakerism, by a recent writer, specially applicable to the prevalent teaching in Iowa Yearly Meeting?—'It shows too often an imperfect grasp of the great principle of the Presence of God in man; it speaks but little of the Light of Christ within him, and hesitates to say, even if it does not deny, that this is the gift to all men. The Revelation of which it speaks is a thing rather of the past than the present; it exalts the letter of Scripture and the importance of a correct interpretation of certain doctrines, more than its spirit, by which

lone the Scriptures can be judged and rightly interpreted?"

"But this is by no means the full statement of the difference. Not only is the 'Light of Christ within us, as God's gift for man's salvation' (to use William Penn's description of 'the fundamental of our religion') undervalued, if not ignored, but the secret and progressive teaching of Christ by the Spirit—granted to individuals and to the Church—would seem to be greatly undervalued. The principle that has always led Friends to hold their meetings for worship on a basis of silence, is in many cases practically abandoned and disbelieved. Faith in Christ is habitually confounded with faith in certain theological phrases and definitions, in a way totally opposed to the spirit of early Quakerism. Underlying all this there is a growing literalness in dealing with Scripture, which is steadily and naturally leading back to an unspiritual view of truth, and to types and ceremonies and words."

"In dealing with these divergent tendencies, we do not help matters by assuming that there is no radical difference between the old and the new. To put aside the duty of consistency for the sake of peace, is as unwise as it is wrong. This is not a question of expediency. In a Church that professes so fully to recognize the right of private judgment, we are bound to have great charity for one another. Further than that, we can hardly help admiring the zeal and dedication of these earnest Christian people in Iowa and elsewhere. They have a right to their opinion as to the best course of Church action. If they are convinced—as their actions seem to imply—that the principles and methods hitherto adopted by the Society of Friends, and which form its *sole reason for existence as a separate Church*, are impracticable and unsound, they are justified in abandoning them and adopting another system. But are they justified in still calling themselves Friends, or are we doing wrong in trying to keep up this delusion?"

"It cannot be doubted that there are methods and openings for doing all our church work—the building up, the gathering in, and the testimony-bearing—on lines altogether in harmony with our great principles. If patience were but combined with zeal and unswerving fidelity to the truth as we are permitted to see it, we might yet be enabled to develop and to unfold consistent and far more effective methods of operation and service, that might prove to be rich in blessing to the Churches and the world."

WILLIAM POLLARD.

Eccles, near Manchester.

FAITH is better than sight; for faith is true in One who can be depended on more surely than even our own senses. Our eyes may deceive us; but He who deserves to be trusted implicitly, cannot prove untrue. The very idea of faith is confidence beyond the realm of the senses. It is the child's restfulness in the strong arms of the capable parent, in an hour when the child himself would be powerless for his guidance or his protection.—*Selects*.

My dear girls, it is not necessary to meddle with politics. Educate women, and men will be educated. Let all women understand the great doctrine of seeking the greatest good, of loving their neighbors as themselves; let them indoctrinate their souls in these fundamental truths, and we shall have legislators. All our statesmen, rulers and ministers must come under the moulding hand of mothers and teachers.—*Mary Lyons*.

FOR "THE FRIEND."

COMPENSATION.

"For each southward treasure life takes away, God offers us a spiritual blessing more complete, more satisfying, if our hearts are but sanctified to reach up after Him.
Can I tell how the morris awoke

When I was a child!
Up from the walnut tree out in the lane
A bird had sent a faint, low strain,
Which the robin caught in its lifted throat,
Then trilled and echoed a calling note,
Till all the birdies far and near
However sleepy must surely hear.
Soon from orchard, meadow and hedge-row came
A dull refrain of the glad refrain.
Thus, with swell of music and rush of wings,
The morris awoke.

Can I tell how the light came down
When I was a child!
Enchanted, from dreamless sleep I awoke
When the first faint sound of the morris broke
From meadow and pasture and orchard wild,
And swept o'er the meadows that ran by their side,
To see in the east a new, pale light,
Child of the morning star and the night.
In the lap of a beautiful cloud 'twas nursed,
(Growing and it finally burst,
A rose, radiant, sweet delight
That bathed in its beauty the gloom of night,
Then lost itself in the sea of gold
That o'er the walls of the green world rolled.
So much more like a new surprise,
The light came down.

Can I tell how the winds of morn
Blow when I was a child!
Sweeping down through the fields of corn
They came, when the first faint light was born;
And I fancied they played with the waves of gold
That o'er my world so lovably rolled.
As I tried to say perch by the dark, green wall,
To watch the cities so grand and tall
That with shadows and mist-bands and moonlight
Bright
I had built o'er the meadow-lands in the night.
I could not see to this faraway day
How my child arms reached to bid them stay—
How I held to my heart a warm delight
As I thought: "They will come again with the night,"
Then turned to welcome the winds so sweet
That brought to my eager, childish feet,
For the treasure lost, a reward so meet—
A glad new day.

Can I tell how the no-mornings come
Now in this land of the real!
Do the near horizons of duty rise
And hide from my hungry, homesick eyes
The beauty I know must lie so fair,
Under the glow of the morning air?
Do the quick, imperative calls that claim
The service of heart and hand and brain,
Draw to my harmony-loving soul
The waves of music that break and roll
In a swelling chorus Nature gives
Unto the Author of all that lives?

I catch faint gleams of the morning's gold—
And O it is fair to me!
And my heart thrills glad for the beauty told
E'er o'er land and sea!
But my spirit bounds with a deeper joy,
As I think of that land where no cloud's alloy
E'er dims the brightness, not of the sun—
Where no gladness wanes that is once begun.
For the battles that come to each earnest life,
To list to the music that swells as a tide,
When wings are bathed in the crimson light
And the air is stirred with a bird's delight;
But my heart grows stronger for daily strife—
For the battles that come to each earnest life.
The winds my child-heart begged to spare,
The wonders built of the mist-crowned air—
They blow no more from a nameless shore,
Nor can take from me treasures evermore,
Because they are hid where no harm can abide
Close to the loving Father's side.

Here in my narrow world I find
A beauty grander, more sublime,
For lo! in my heart's upturned face
The image Diviner I turn to trace.
And I marvel, with hushed and reverent soul,
That He who plans of our lives the whole,

Should have placed my truant, wild feet
In this quiet, sheltered and safe retreat—
Where my heart, not eyes, must seek the grace
I worshipped blindly in nature's face;
Where my soul must listen intent to hear
The will of One who is ever near,
And who fills with joy that is musical, sweet,
The soul that bows alone at His feet.

L. C. Roy.

THE LITTLE SISTERS.

BY ELLEN J. TALBOT.

"Mother, why did they take away
My sister who loved me best?
I watched them to the churchyard gate,
While bitterly you wept,
The cold snow lies upon the ground,
And frosty is the air;
Her little crib was always warm,
'She cannot sleep out there."

"Dear child, it was not baby's self
That from our home she left you;
Her little body holds her sore,
She will not need it more.
The dear Lord took her up to heaven,
For angels full of love;
And angels now will care for her,
In God's own home above."

"But, mother, when the angels come,
My sister is so shy
I'm sure she will not go to them,
But will begin to cry.
Will not our Father send her back
Till she is bigger grown,
Or let me go and stay awhile?
'She is afraid alone."

"Dear little one, in that bright land
Our baby feels no fears;
But she can never come again,
Through all the changing years.
Some time you, too, may go above,
Though when we cannot know,
Christ guards some little lambs in heaven,
And some on earth below."

S. S. Times.

FROM THE CHRISTIAN ADVOCATE AND JOURNAL.

The Most Precious Music.

Truly, as said a brother a few days ago, before I was converted I loved the violin, it was my constant companion. The first thing after I arose in the morning was my violin. Immediately after breakfast I must have my violin. Coming home from my work at noon, I wanted my violin before my dinner. After dinner I would have a few spare moments, and I must have a tune before I went to my work. It was the same in the evening, and often times I have set up half the night, and sometimes until almost morning, with my precious violin. But when I found the Saviour I lost my love for the violin and

Jesus all the day long,
Was my joy and my song.

Before this blessed change I loved music intensely, but since then the name of Jesus and the music of salvation have become more precious, and so it will be ever. Jesus is far sweeter and more precious than all worldly pleasures. O yes, dear reader, admit Him to thy heart and He will fill thy spirit with such hallowed melody as shall render all mere earthly joys insipid.

His name yields the richest perfume
And sweeter than music his voice,
His presence dwells within my gloom,
And makes all within me rejoice.
While liest with a sense of his love
A palace, a toy, would appear;
And prisons would dwindle prove
If Jesus would dwell with me there.

E. H. S.

NEW BRUNSWICK, N. J., 1862.

Natural History, Science, &c.

Subsidence of the Ground.—In the Cheshire Salt district in England, the subsidence of the ground has caused alarm. It is due to the pumping up of the brine, which is formed by melting of the rock-salt far down in the earth. As the brine is removed, fresh water takes its place, to react upon the rocks until it is itself transformed to brine. And so the process goes on year after year, the very props of the earth being constantly removed.

Affection in a Cat.—A correspondent knew a cat, a playmate of a little boy, who bore with patience the occasional buffets which the playmates of children too often receive. At length the child was attacked with illness. In the first days the cat never quitted his bedside. As the disease progressed it became necessary to remove her, and even to lock her up. The child died. The cat was liberated, and instantly flew to the apartment where she hoped to find her playmate, but the body was not there. Then she ran about the house until at last she got into the room where the dead boy lay. Here she lay down in silent melancholy, and had again to be locked up. As soon as the child was buried she disappeared, but about a fortnight after returned to the well-known apartment quite emaciated. Still she would not take any food, but ran away with dismal cries. At length, compelled by hunger, she made her appearance every day about dinner-time; then left the house. She never recovered her old spirits.—*The Animal World.*

Dangerous Expansion of Ice.—A short railway was once built in the Province of Ontario, which crosses a fresh-water pond known as Rice Lake by a bridge two miles and-a-half long. The bridge was mostly composed of trestle work, very strongly built, with uprights driven to hard bottom and thoroughly braced. The middle portion, over the deepest part of the lake, was composed of trusses—eighty feet in span, supported by piers measuring twelve by twenty-four feet, and filled with stones. Early in the first winter after the bridge was built, the lake froze over to a depth of about seven inches. Before snow came to protect the ice the weather moderated, the sun shone brightly, the ice expanded, and in a few minutes the bridge was in ruins nearly its whole length, the trestles being pushed over in the direction of the principal expansion. The destruction of the bridge caused the temporary abandonment of the railway, but years afterward the trestles were repaired and filled in with an embankment of gravel, the top of which is eight feet above the level of the water; yet the expansion of the ice during sunny days is so great that it frequently creeps up the embankment and, by successive movements, is pushed upon the rails.—*Engineering and Building Record.*

A Sheep Panic.—A strange occurrence near Reading, England, is thus described in the *London Times* by two spectators: "At a time as near eight o'clock as possible, the tens of thousands of sheep folded in the large sheep-breeding districts north, east and west of Reading, were taken with a sudden fright, jumping their hurdles, escaping from the fields, and running hither and thither; in fact, there must for some time have been a perfect stampede. Early on Sunday morning the shepherds found the animals under the hedges and in the roads, panting and frightened, as if they had been terror-stricken. The extent of this remarkable occurrence may be

judged when we mention that every large farmer from Wallingford on the one hand to Towford on the other, seems to have had his sheep thus frightened, and it is also noteworthy that, with only two or three exceptions, the hill country north of the Thames seems to have been principally affected. We have not heard, nor can any of the farmers give, any reasonable explanation of what we have described. The night was intensely dark, with occasional flashes of lightning, but we do not think either circumstance would account for such an effect being produced over such a large area. We would suggest the probability of a slight earthquake being the cause."

The Lark's Surprising Song.—J. G. Wood, in an article on "The Wonders of the Spring," says that the volume of sound, produced by the skylark is most wonderful. "The lark ascends upwards it looks no larger than a midge, and can with difficulty be seen by the unaided eye, and yet every note will be clearly audible to persons who are fully half a mile from the nest over which the bird utters its song. Moreover, it never ceases to sing for a moment, a feat which seems wonderful to us human beings, who find that a song of six or seven minutes in length, though interspersed with rests and pauses, is more than trying. Even a practiced public speaker, though he can pause at the end of each sentence, finds the applause of the audience a very welcome relief. Moreover, the singer and speaker need to use no exertion save exercising their voices. Yet the bird will pour out a continuous song of nearly twenty minutes in length, and all the time has to support itself in the air by the constant use of its wings."—*The Swiss Cross.*

Sharks in the Mediterranean.—Sharks are reported to have become uncommonly numerous on the shores of the Mediterranean, to the great annoyance of the dwellers by the sea. A few years since the shark was comparatively unknown there, but they have discovered that the Suez Canal is an easy route from their Indian Ocean home to the pleasant waters of the Mediterranean. They pass through the canal in great numbers.

A Fight between a Pack of Wolves and two Minnesota Farmers.—Two men, with their guns and a dog, were out hunting near Fergus Falls, when they came across a deserted cabin in the woods in a lonesome spot about seven miles from the city.

In the middle of the floor lay a man with his clothing torn completely off, and his body lacerated in a terrible manner. In one hand was grasped an ax covered with blood, and around him lay eleven huge gray wolves. One of the beasts was not quite dead, and lay snapping and snarling at the newcomers until silenced by a shot from a revolver. In the corner lay the partially eaten body of another man, who grasped an empty revolver in one hand and a bloody knife in the other. The first man was still living, and soon after he had been removed to Fergus Falls and had received medical treatment he told his story. He was William Emory, a farmer. Accompanied by August Melleck, he had gone on a hunt, and on reaching the vicinity of the cabin he had heard wolves howling. The two hunters were not afraid, for, as a general thing, the beasts will not attack a man, and Emory and Melleck thought they would try to kill one or two for the bounty on their scalps. Emory shot one, whereupon the whole pack, instead of running away, made a furious attack on the men, compelling them to run for refuge into the cabin.

The door was broken so that they could not shut it, and the snarling, hungry brutes followed them into the shanty, where a desperate fight for life ensued. Emory struck one of the animals with his gun, breaking it, and then seized an old ax which lay on the floor. But for the death of his companion he would have undoubtedly come out of the fight without serious injury. Melleck killed two wolves with his revolver and wounded another, and then began fighting with his knife. The animals made a rush at him and he slipped down on the floor, when they all pounced on his prostrate body, and Emory saw his companion torn to pieces without being able to render him any assistance, as he was being attacked in the same way by the others. Emory remembered killing five with his ax and disabling others, after which he fell to the floor from exhaustion, and knew no more until he found himself on the ground, with the men pouring water on his face. He will ultimately recover, although one of his hands has been amputated, the wolves having eaten the flesh to the bone. His right cheek was torn nearly off, and his neck and breast were literally torn to shreds. The remains of Melleck were taken to Fergus Falls, where they were buried.

The carcasses of twelve wolves were secured, and the marks on their bodies were proof of the terrible battle which had raged in the lonely cabin. The bounty on their scalps and the value of their skins, will suffice to pay Emory's doctor's bills. These wolves have been a constant menace to farmers, having carried off a large amount of stock, and on several occasions have chased children. This is probably the last pack in this section, which was formerly overrun with them, and the farmers will raise a purse for the injured man, who has succeeded in ridding the neighborhood of them.

DR. LYMAN ABBOTT says that early in his ministry he re-*voled*—and still holds to the resolution—that he "would not profess religion for a man after death who had never professed it for himself when living." No man ever made a more rational resolve. The orthodox preachers who are ready to find a title for every great, rich, or popular man to mansions in the skies, even though he never gave any Scriptural evidence of being born again, say much in the particular that they preach in the general, excite contempt among unbelievers, encourage neglect of religion, and strengthen the hands of loose thinkers in and out of the church.—*Selected.*

A THOROUGHLY converted sinner is at first always very humble. He does not seek publicity. The wretch who on Tuesday is an abandoned sinner, and on Wednesday is converted, and on Thursday begins to lecture the church and denounce those who have borne the burden and heat of the day as Pharisees, and who glories in telling the story of his life, and paints with a kind of loving enthusiasm the hole of the pit from which he was dug, and whose eyes sparkle and frame erects itself in the description of his abominations, had better be kept on probation twelve months instead of six. There is hope for every repentant sinner, and all such should be encouraged; but at the slightest manifestation of presumption they should be warned and instructed.—*Selected.*

CHARLES and BROS., and a liberal faith, will do nothing for us. We must give up our own wills entirely, and become like little children; it is the only way we can enter the kingdom.

Items.

Articular Confession.—A contributor to the *Episcopal Recorder*, who writes from Seville, in the most interesting manner, some objections to the Papal Church, requiring confession of sins to the priest. One of these is that it "bestows a dangerous power upon the priesthood."

"Every priest has access to the heart of every individual who is under his religious jurisdiction; and all are positively obliged to confess to him their most secret sins, the weight of which is made deeply ashamed, and which, if known, might ruin their prospects and their character, and might endanger their lives. Though the priest is laid under a most solemn oath never to divulge what is revealed to him in confession, this is not a perfect guarantee against danger, because the oath of secrecy is by no means so inflexible as is supposed to be. The following are the words of one who was himself a Popish priest for some time. Referring to another priest with whom he occasionally met, he says: 'All our conversation ran upon the different stories he heard in confession. But he is the only person who is free in revealing what he has heard; for it is the ordinary discourse of the priests when they meet, to inform one another of what they have heard in confession, and how dexterously they behaved on these occasions. This I can assert, because I was often present at such conferences where the conversation was so indecent that even an honest Pagan would have blushed.'

"Are not disclosures made to priests the very deepest and darkest secrets of the bosom? Should any set of men have the character, the worldly prospects, the very lives of others in their hands, and absolutely at their mercy? No! Such unqualified power and irresponsibility, constituted as human nature is, must be abused."

"Were it not, it would belie all experience and all history. Its inevitable tendency is to convert the priest into a spiritual despot, and the people into slaves, as many of them now are in this benighted corner of Spain, where these lines are penned, and where popes still dominate."

A second objection to the practice is, that "it has been the prolific source of the grossest wickedness. The mind of every Popish priest becomes the common receptacle of all the sewerage in his district. Such a system is therefore condemnable as a system of education, to be exposed that he is able to withstand the power of such temptations. Constituted as human nature is, and so easily tainted and polluted, if it at all comes in contact with vice, must it not be fearfully dangerous to listen to a detail of all the corruption that is in the bosom of a fellow-creature?"

"Familiarity with vice necessarily lessens our abhorrence of it, debauches the imagination, and operates as fuel to the unwholesome fires within our bosoms."

"The language of one who was himself a Roman Catholic priest is, 'At the confessional, and by the questions of the confessor, I had learned more sins than I could ever have known of otherwise.'

"The following is the expression of one once a Roman Catholic priest, but afterward a Protestant minister. 'If articular confession be at all times conducted as it was when I was engaged in it, I have no hesitation in saying that I consider it one of the most abominable and corrupting institutions of the Papacy. If it were not for the fact, that at a moment, through defect of memory, or through the feelings, if shown, the father confessor proposes a leading question in the various kinds and degrees of iniquity, and thus stimulates the reluctant devotee, and drags from him or her the inmost secrets of the heart, the questions which the father confessor will thus propose, tend to increase the knowledge of the young and simple in the way of transgression, and to render vices of the most injurious kind familiar to all.'"

In view of the evils and dangers that seem to be inseparable from the practice, it is much to be regretted that the persons confessing hesitate for a moment, through defect of memory, or through the feelings, if shown, the father confessor proposes a leading question in the various kinds and degrees of iniquity, and thus stimulates the reluctant devotee, and drags from him or her the inmost secrets of the heart, the questions which the father confessor will thus propose, tend to increase the knowledge of the young and simple in the way of transgression, and to render vices of the most injurious kind familiar to all."

A Suggestive Hint.—The Iowa State Register, in

describing a fraternal visit to Iowa Yearly Meeting of Friends (Larger Body) from a Methodist delegation, gives the following as the language of Dr. Coxe, one of the speakers on this occasion:—

"We recognize, in harmony with Friends, the rights of individual conscience, and accord the largest liberty of personal opinion among our members; but we limit our teachers in their teaching to the standards of the church in doctrines. We do not allow one of our ministers, holding doctrines not accepted by our church, to advocate such doctrines to the pulling down of the work that others are laboring to build up. While we regard the liberty of personal opinion among all who will flee from the wrath to come, we also keep the rear doors open for all teachers who find themselves out of harmony with our standards of doctrine, that such teachers may go out from among us as not being properly of us. The success of our church is largely due to the unity of doctrine running through our church the world over, to which all our ministers are required to be loyal."

We believe the Society of Friends would be in a more healthy condition, if in some neighborhoods a similar care had been exercised "to keep the rear doors open" for those teachers out of harmony with its standards of doctrine.

Celebration of the Abolition of Slavery.—On the 21 instant the 25th anniversary of the Emancipation proclamation was celebrated by the old "Pennsylvania Society for Promoting the Abolition of Slavery," &c., which has been in existence for more than a century; and has included among its members many of those held in high esteem in the country for their piety and philanthropy. The funds in the control of this society are largely used in aiding institutions for the benefit of the colored race.

Two meetings were held on this occasion in Association Hall, at which speeches were made by several persons. The general tone of these was encouraging, and it is believed that the freed-man had made considerable progress in the right direction in the past 25 years, yet impressing the need of further development to fit them for the duties of the citizenship which had been bestowed upon them.

To be at oneness with God is to be in accord with all that God does, and to be rested under all that God permits. And to be at oneness with God is the privilege of every believer in Jesus.

THE FRIEND.

FIRST MONTH 12, 1889.

A letter from a valued friend, in another Yearly Meeting, speaks of the appointment last Spring, of the committee to visit subordinate meetings, &c. The letter was written more than three months ago, but in again taking it up, it appeared to contain some thoughts which may prove useful in stirring up the pure mind in others, besides the original recipient.

After expressing his belief that the appointment of this committee was owned by the Head of the Church, the writer says: "I have in my small measure, travelled with the committee in its movements, in appointing meetings in different places, which it is to be hoped, will result in good. And it has been brought to my mind, how, in Joseph Pike's time, many things had been said to friends in houses, not consistent with the truth we profess; and how the committee, (then appointed) labored to have the things removed, which caused pain to the rightly exercised ones, in that day. And has there not been of latter years, a following the fashions, or imitating the world in the furniture of our houses, as well as in the style of building them? And I have felt like querying whether there was

nothing now to be done in putting a check to this outgoing, or departure from the simplicity of our fore-fathers.

"That dignified servant of Christ, William Edmundson, in a postscript to an Epistle from Leinster Province Meeting (Volume 2d, page 181, of Friends' Library) says:

"When the Lord first called and gathered us to be a people, and opened the eyes of our understandings, we saw the exceeding sinfulness of sin, and the wickedness that was in the world, and a perfect abhorrence was fixed in our hearts against all the wicked, unjust, vain, ungodly, unlawful part of the world in all respects. We saw that the goodly and most lawful things were abused and misused; and that many snares and temptations lay in them, with troubles and dangers of divers kinds, which we felt the lead of, and that we could not carry them and run the race the Lord had set before us so cheerfully, as to win the prize of our salvation. Wherefore, our care was to cast off this great load and burthen, viz: great and gainful ways of getting riches, and to lessen our concerns therein, that we might be ready to answer Christ Jesus our Captain, who had called us to follow Him in a spiritual warfare, under the discipline of the daily cross, and self-denial. Then the things of this world were of small value with us, so that we might win Christ; and the goodliest thereof were not near us, so that we might be near the Lord; for the Lord's truth outbalanced all the world, even the most glorious part of it. Then great trading was a burthen, and great concerns a great trouble; and all needless things, fine houses, rich furniture and gaily apparel, was an eversion, our eye being to the Lord, and to the insubbling of his light in our hearts, this gave us the sight of the knowledge of the glory of God, which so affected our minds, that it stained the glory of all earthly things; and they bore no mastery with us, either in dwelling, eating, drinking, buying, selling, marrying, or giving in marriage. The Lord was the object of our eye, and we were all humble and low before Him, self being of small respect. Ministers and elders in all such cases, walked as good examples, that the flock might follow their footsteps, as they followed Christ in the daily cross and self denial in their dwellings, eatings, eating, drinking, buying, selling, marrying and giving in marriage. And this answered the Lord and his witness in all consciences, and gave us great comfort among men."

"I think it is good for us often to recur to first principles and practices, to that which gathered this society in the beginning, and which alone can keep it on the sure foundation, Christ Jesus, the Rock of Ages. I believe it is needful for some, with you as well as with us, to arise and shake themselves from the dust of the earth, and once more to put on the beautiful garments and shine as in former years. All that is wanting is individual faithfulness to Him who is calling to glory and to virtue."

If all the members of our religious Society were really following Christ in all things in their daily lives, it would still be the case that the witness for truth in the hearts of the people would be reached thereby. Every disciple of Christ, however humble and obscure, is called upon to be a preacher of righteousness in this way; and it is a preaching which no sophistry can answer, and which is one of the most effective means of spreading the kingdom of the Redeemer among men. May the Lord give us all grace so to walk that none may be stumbled by our example!

We have received from the publishers, Ferris Brothers, Sixth and Arch Sts., Phila., a copy of *OLD WESTOWN*, a book principally made up of the reminiscences of their school-days furnished by former inmates of this institution. We doubt not it will prove interesting to many of this class, bringing to mind many incidents of their youthful days. These recollections will probably be of a varied character—pleasant in most cases, but sometimes marred by the revival of scenes in which the force of temptation or the heedlessness of youth had led to neglect of duty, or to the commission of acts which brought over the mind the discomfort that ever attends wrongdoing.

A judicious Friend, who has read the book, regrets that the natural beauties which conspicuously mark the surroundings of Westtown, and the religious concerns which have been prominent a feature in its management, have not been more fully brought into view; but we suppose the labor of the editor was confined principally to the arrangement and preparation of the materials placed in her hands, and that these did not include much of the character referred to.

The book may be obtained of J. Smedley, 204 Arch St., Phila.

CHANGES IN AGENTS.

Sarah Huestis is appointed Agent in the place of her father, Dr. Isaac Huestis, deceased. Address: Chester Hill, Morgan Co., Ohio.

Asa Ellis is appointed Agent in the place of Nathan Penison, released at his own request. Address: Westfield, Hamilton Co., Indiana.

SUMMARY OF EVENTS.

UNITED STATES.—On the 14th instant, the Electoral Colleges of the different States met in their respective capitals and cast their ballots for President and Vice-President of the United States. Each college appointed a messenger to convey the certificates to Washington, where they will be presented to Congress. Harrison and Morton received 233 of the Electoral votes.

The total coinage of the United States Mints during 1858, was \$95,318,615, divided as follows: Gold, \$31,258,085; silver, \$59,232,096; nickel, \$904,290.

Governor Hovey, of Indiana, was inaugurated on the 14th instant. In his address he truthfully said:—"There is reason to believe that the ballot has been polluted, not only in this State, but in many of the other States of the Union, and in both the honest political parties, until, in the eyes of many respectable men, it seems to be no longer regarded as a crime. This cannot continue and increase if we hope to perpetuate our free institutions. If it does, a nameless aerial war will be commenced between the Government, and that liberty which we now so highly prize, will be lost to us forever. The demagogue who would buy the vote of his poor and needy neighbor is far more corrupt and vile than his victim, and will only give this chance to sell the liberties of his country for a higher price. As a rule, he who buys a vote will sell his own."

The value of real estate in New York City, as assessed by the Board of Taxes and Assessments, is \$1,255,755,586. Originally, Manhattan Island was purchased from the Indians for a few dollars, and the increase in its assessed valuation over 1858 is \$31,296,959, of which \$12,549,163 was in one ward—the 24th. The 24th ward shows a decrease in valuation on account of the exemption from taxation of the lands condemned for the new parks, but every other ward shows an increase.

Twenty shares of the New York Chemical Bank stock were sold on the 7th instant for \$115½ a share, the highest price ever realized for the stock. The par value is \$100. The holder was Mr. Wolfe B. Hoop, a relative of the late A. Mariner Wade.

A bill has been introduced into the Legislature of New York State, providing for an other bridge across the East River, to be built by private capital. The bill provides for the building of a few dollars, and the capital of \$5,000,000. The men interested in the movement are confident that a bridge similar to the

one now in existence could be built now for considerably less than that one. The cost of steel has been reduced since the completion of the recent bridge, and the experience of engineers has increased.

On the evening of the 9th instant a fearful cyclone struck the northern part of the city of Reading, demolishing and damaging buildings and causing loss of life. The principal buildings destroyed were the Reading & R. Company's paint shop and Grimshaw & Brothers' silk mill, a large four-story brick structure, at the corner of Twelfth and Marion Streets. Five men perished in the paint shop, and eighteen persons, mostly girls, in the silk mill. The injured numbered ninety-eight, most of whom are expected to recover.

A wind storm, accompanied by hail and torrents of rain, visited Pittsburg about noon on the 9th. A new building, 30 by 80 feet in dimensions, and seven stories high, under construction, was blown down on Wood Streets, and the front has not yet been put in. The wind entered this shell and parted the walls, one falling each way, and partly wrecking nearly a dozen surrounding buildings. Fourteen persons were killed and fifty-eight injured; some of the latter are in a critical condition.

Since the discovery of natural gas in Indiana, about a year ago, it is said 79 new manufactories have been established in that State, with a capital aggregating \$1,500,000.

On the 8th instant, Hunterdon County, N. J., gave 537 majority against the sale of liquor.

Deaths in this city last week numbered 390, a decrease of 6 from the previous week and a decrease of 59 compared with the corresponding period last year. Of these, 142 were males and 148 female; 83 died of pneumonia; 44 of consumption; 34 of diseases of the heart; 16 of old age; 15 of convulsions; 13 of cancer; 11 of inflammation of the brain; 10 of typhoid fever; 9 of scarlet fever, and 9 of peritonitis. Of these, 44—L, 8, 4½, 108; 4, 129; currency 678, 118 & 128.

Cotton sold in a small way to spinners on a basis of 10c. per pound for middling uplands.

Feed.—Winter bran, choice, \$17.25; do, fair to prime, \$16.50 a 17; white middlings, \$15 a 16; red middlings, 14 1/2 a 15.

Flour and Meal.—Western and Pennsylvania super, \$2.85 a 3.50; do, extras, \$2.50 a 3.75; No. 2 winter family, \$4.00 a 4.50; Pennsylvania family, \$3.62 1/2 a 4; Rouseffranco, roller refined, \$5.00 a 5.25; Indian, clear, \$4.75 a 5.00; do, straight, \$3.00 a \$5.25; Indian, clear, \$4.75 a 5.00; do, straight, \$5.00 a 5.25; St. Louis and Southern Illinois, clear, \$4.75 a 5.00; do, do, straight, \$5.00 a 5.25; winter patent, fair to choice, \$3.50 a 6.00; Minnesota, clear, \$4.25 a 5.00; do, straight, \$5.12 a 5.87; do, patent, \$6.00 a 6.80. Rye flour sold in a small way at \$2 a 2.25 per bbl.

Grain.—No. 2 red wheat, 95 a 95½ cts.; No. 2 mixed corn, 41 1/2 a 42 cts.

No. 2 white oats, 32 a 34 cts.
 Red Caffee, Java, No. 1, 41 cts.; No. 2, 40 cts.; 5 cets.; medium, 44 a 45 cts.; common, 38 a 43 cts.; at cuts 21 a 33 cts.

Sheep.—Extra, 5½ a 6 cts.; good, 5½ a 5½ cts.; medium, 4 a 5 cts.; Western dressed, 37 a 42 cts.; ewes, 38 a 43 cts.

Hogs.—Extra, common, 75 cts.; good Western, 75 cts.; fair, do, 72 cts.; State, 61 a 7 cts.

Milk cows were in good request at \$30 a 60.

Dressed beavers, 5 a 7 cts. for Abattoir slaughtered, and 3 a 6 cts. Western dressed.

The aggregate results of the thirty Parliamentary elections held in Great Britain during 1858 are not encouraging to the friends of Home Rule, as the net gains of the Liberals and Nationalists represented no more votes than two seats. It is true that in many of the districts the Liberal party either increased their majorities or reduced that of their opponents, but while that must be considered a moral victory, it was not a practical one, inasmuch as it did not impair the power of the Tories, who, in the Commons, had a large majority, and in the Lords, either a majority of about eighty votes, their given majority being ninety-four votes.

The London *Chronicle* asserts that the Government will be informed of Henry M. Stanley's safety long before the public excitement, and in search of Henry M. Stanley by the New York *World*, can reach the east coast of Africa.

In the incanting recent letters from Stanley will be published in London.

On the 13th inst., the *Chronicle* says, for keeping secret at present the whereabouts of the explorer.

Effiel's tower, in Paris, is now nearly eight hundred feet high, and the men at work on it tell blood-curdling stories of the progress of the tower which is to be blown through its iron whisks, and wind up by asking, "What will it be like when two hundred feet more are added to it?"

A dastardly attempt to blow up the Royal Palace in Madrid, on the 17th inst., failed. Fortunately no one was injured, and the only damage done was the smashing of many windows. The petard, with which the attempt was made, was exploded on the staircase of the palace. Great excitement prevailed for a time, the members of the Royal household being almost panic-stricken.

There are 136,000 drink-sellers in Belgium, or one for every ten families.

The *Dutchess Weekly Advertiser*, a free conservative organ, declares that Prince Bismarck's report on the Greeken affairs—the publication of the Emperor Frederick's diary—resulted in his defeat, and that the Morier incident is a still uglier edifice of the diary affair. Things having gone so far, it says, the continuance of Morier at St. Petersburg will be a severe blow to German diplomacy and ill-filient to explain away.

Jerusalem is fast becoming the city of the Jews. In 1850 there were not more than 6,000 Jews there; now there are more than 20,000.

Lepold Bates, the Mexican Government archaeologist, states for 18th June to inspect the ruins and to give the names of chambers discovered. It claims that this is the greatest archeological discovery of this century.

Six hundred thousand acres of land were conveyed to 4,000 actual settlers in Manitoba last year, increasing the population of that province by 17,000. The prospects in that section are bright for this year.

The poll list in Windsor, Ontario, shows that nearly all the widows and single women whose names are on the tax roll voted for Mayor and other officers at the recent election. They were courteously received at the polls, and when the election was closely contested their presence materially helped to keep order. The vote of the women was almost equally divided for and against annexation.

Advices received in San Francisco from Honolulu, state that the volcano, Kilauea, situated on one of the Sandwich Islands, has been in an eruption dormant since Third Month, 1858, has broken out.

NOTICES.

WESTTOWN BOARDING SCHOOL FRIDGE.—During the Winter term the stage will be a Westtown station on the arrival of the 8 o'clock train, and on the Philadelphia, to convey passengers to the school, and at other times on timely notice to

FOR "THE FRIEND."

Journal kept by Martha Routh, on her Passage
from London to America.

(Continued from page 194.)

"The day continuing fine we were again on deck several times; the wind being in our favor though not much of it, we got forward about three knots an hour, and though this is slow procedure yet stationed as we are, such a select company of friends, and some of us near and dear one to another through the channel of best love and fellowship, I freely acknowledge as to myself if right to have any choice it would be mine rather to have a nine weeks passage with such quiet getting than to steer in half that time in boisterous winds; being now fully convinced it is the irritable motion of the ship, to the vital part of the bodily frame, which David might well say was "fearfully and wonderfully made," that causes sickness, and not from the smell of the vessel or any particles of salt getting into the stomach, as some have been ready to apprehend; for my appetite has now returned to its usual channel, and my health restored with that of my companions, to our mutual satisfaction; though I scarcely can expect it will continue so with me if such tossing should again take place, but much desire in all states not to be found a murmurer in the wilderness travel whether by sea or land, but rather that submission and content may be the attendants of my mind.

Yesterday morning, Third-day, two vessels were seen coming towards us which it was thought might be merchantmen from America, that Wm. Rotch wrote a letter giving information of us for the satisfaction of our friends intending to direct it for London if bound there, or if to France, for his son, so we all went on deck waiting to see them. Our vessel bore down in order to hail them, still apprehending they were deeply laden merchantmen, but soon after, the captain discovered with his glass that which approached nearest us was an English man-of-war of about thirty-six guns. Our colors were directly hoisted, and whether seeing our innocent attempt to hail them or from any other restraint may be safest to leave, they offered us no harm, though came so near as not only to inquire through the trumpet from whence we came, how long out, and if any news, but we could hear them speak to one another; and a very great number of men there appeared to be on deck and among the shrouds. One dressed in laced clothes looked

hard at us from a side cabin window to whom I heard another give the title of my lord, who I expect might not have seen so many women that looked like Quakers on board a vessel before, or perhaps men either, but we did not offer our letter to go by them, neither inquire of their route, but the name of the vessel, which they informed us was the Winchester. They were both soon out of our sight, for which I trust some of our minds were made thankful, though indeed much to be lamented is the consideration that the sons of men render that a trial, and not a small one either, which otherwise would be very pleasing, of meeting and greeting one another on the mighty waters, if that Christian disposition and harmony were preserved with which the heavenly host at the birth of our blessed Lord congratulated the people. "Glory to God in the highest, on earth peace and good-will to men." But the situation of things being now so far otherwise, it feels more desirable that we steer alone, than to see or salute any by the way.

"Last evening, sitting alone nearly dark in my little room, and some of my near friends in the cabin, dear S. Emien came down from walking on the deck, and like a well instructed scribe from the Heavenly Treasury that has things new and old, had to dispense in the renewing of life, the language of encouragement amongst us, which drew me out of my doubt, to hear and feel the echo thereof.

"The early part of this morning (Fourth-day) a portion of wind increased and we now go about six knots an hour. Yet the vessel keeps a moderate motion, and I have nothing to complain of, either of body or mind, though the latter hath felt secretly pressed down more than at some other times. Yet I trust not forsaken, because I have been in company with the few names who are diligent in the attendance of our week-day meetings at home, whom I have seemed to look at, scattered in their respective seats. And desires have been raised in me that not any such might be at all discouraged or by any means drawn aside from meeting together, when bodily health is afforded, because of the absence of poor fellow servants who by example and precept were sometimes drawn in the language of encouragement to speak unto others, that they might come forward in the discharge of this duty, religiously meeting together to wait upon the Lord, bringing a sacrifice of that which might cost them something. Yet how little do we render to God of that which is his due in the most diligent attendance of First and week-day meetings! I trust a remnant know this, and therefore are engaged to offer their daily sacrifice. I have often looked towards my valuable fellow laborer John Thorp,* in the bonds of the

*John Thorp was born in the County of Chester, England, 1742. When about twenty years of age he joined the Society of Friends, through conviction of the truth of its principles, a conviction so deeply founded that a few years before his decease he remarked that he had never for a moment doubted their certainty or the source from which his impressions came. He removed to Manchester in 1767, and con-

Gospel in our meeting, in that fellowship, which hath often united our spirits in worship and raised desires in us that the Lord on High might strengthen his little ones, on whom we had cause to believe his anointing oil was poured forth, that they might offer to Him the turtle-doves or young pigeons as He might see meet to call for them, having, I believe, no wish to oppose that disposition cherished in that dignified but much humble leader of the tribes and families in days past, who said he would to God that the Lord's people were prophets.

Sixth-day. We are still much under the influence of head winds and very rough sea, that several are again sick, dear Wm. Rotch is also very poorly. Captain Swain has said to-day he thinks we might have come ninety times out of a hundred and not have had so much occasion to tuck about in a summer passage; but so it hath been permitted; that we have not yet made quite one-third of our way, yet we are at times favored to feel whose notice we are under, and a hope revived, which is sometimes expressed, that it may be all for our good that we are thus disposed of.

First-day, 24th of Eighth Month. This evening an increase of wind caused the waves of the sea to rise like mountains, that S. Emien invited me to go on deck to see its movements, but I declined, knowing it would be very difficult to get me there, and my curiosity was quite satisfied with seeing through the cabin windows, which sometimes appeared as though they were over us, and at others the stern of the vessel seemed to touch the clouds, such are the alternate motions that salute the eye on the unstable element; yet through all my mind hath been preserved from entertaining any fear of our safely landing in the appointed season of the Great Ruler whom winds and sea obey. Before bed time the captain thought it safest to put up one of the dead lights on the lee side of the vessel, to take down or reef most of the sails, and to set her (as he termed it) in a snug position through the night which proved a very tossing one; and the motion continued great till towards evening, when more calm ensued, and we had a religious opportunity together. Captain Haws and as many hands as could be spared sat with us; and a humble trust revived; that it was a season of renewed instruction to those who were much strangers to the principles we profess, under the spreading influence of Gospel love, neither were the plaintive children in the family unnoticed

tinued to reside there to the end of his days. About the year 1773 he first appeared in the ministry.

He was several times engaged in religious labor in company with Martha Routh, especially in paying family visits in the limits of different Monthly Meetings, so that the expression she uses, "My valuable fellow-laborer," is peculiarly appropriate. He died in 1817.

He was often led to address letters of counsel or of consolation to his friends. Some of these are very valuable and have been at different times printed. The last edition is that recently issued by the Meeting for Sufferings, of Philadelphia Yearly Meeting. It may be obtained at the Book Store, No. 304 Arch Street, Phila.

by our Gracious Helper, whose design is not to give their bread unto others, but to feed them with that food which, in his perfect Wisdom, He seeth most convenient; who hath in his store-house, milk for babes and meat for those of riper years, to whom belongeth the praise of his own works. Those who have been much on deck have an opportunity of seeing his wondrous formations in the deeps, such as large and small whales, porpoises, etc. Though I do not expect much ability to take observation of such creatures in their wonted element, the contemplation of my mind has been that "great and marvellous are his works," who hath formed all these things, who is justly proclaimed King of Saints.

Second-day morning the wind was now in our favor, and the day looks pleasantly, but what is called the old sea, still causes great rocking. Captain Swain sail yesterday we had sailed upwards of three thousand miles from London, but not more than one in the right course, which I cannot but apprehend must, at times, be very trying to those who have had the management of the vessels; that I have thought, if such were not steady men, or did not know something of that foundation, which standeth sure, it is no marvel there should be many who have more opportunities of quiet reflection and less difficulties to try their disposition in their passage through life; that great hath been the love and tenderness my mind hath felt for those who are steering this, our floating habitation, and strong have been the desires raised in me, that we who are differently situated, and who have been abundantly instructed in the things that appertain to life and salvation, might be so preserved in our lives and conversation as to be way-marks or helpers, rather than any cause of stumbling unto them. And when these thoughts have impressed my mind in our present inclosure, they have spread far and wide, to those I have left behind, many of whom, in different places, I think I never felt nearer to my best life; and strong hath been the solicitude raised in me that we may so witness the blessings of preservation, as to experience the encouraging language proclaimed formerly. "Rejoice O Zebulon in thy going out, and Israel in thy tents."

(To be concluded.)

FOR "THE FRIEND."

A Geological Excursion into Maryland.

The necessary studies which accompanied the preparation of the semi-geological articles recently published in *THE FRIEND*, describing a visit to the Nickel Mine in Lancaster Co., Pa., awakened in the mind of the writer a fresh interest in a subject which has long been attractive to him, (although he knew but little about it) and led him to visit some other points of geological interest—a description of which may prove interesting to some of the readers of *THE FRIEND*. While conscious of his own imperfect knowledge of the subject upon which he is writing, he is encouraged by the hope that some of the enthusiasm which attends the exploring of fields of science comparatively new may be felt by others. For truly, it may be doubted whether any department of science opens to its reverent student more ennobling views of the wisdom and prescience of the Almighty Creator of the Universe, than those which are connected with the formation of the earth, the solar system, and the innumerable heavenly objects, which all appear to be governed by the same laws—laws which must be regarded as the expression of

the will of Him who made and still upholds the myriads of worlds.

The tendency which all matter has to draw other matter towards itself, as shown by any unsupported body falling to the earth, is felt through our planetary system, and may be traced among the fixed stars.

The rays of light which reach us from the remotest stars are similar in character, and subject to the same laws as those rays which come from the sun, or originate on our earth.

The Meteoric stones which have come from the heavens may be regarded as specimens of celestial bodies. They contain the same elementary substances that we are already familiar with, and these are combined together by the same chemical forces that act on these substances on the earth, and they are subject to the same laws of crystallization which determine the form and character of corresponding materials from our own mines.

It is a most reasonable supposition that these laws have acted in all ages of the world as we see them acting now; and that, therefore, the rocks which we now find on the earth are the *historical records* of the effects produced by these laws in past ages. We find layers of sandstone, clay rock, limestone, &c., lying one above another; and we infer that the sandstone was made from sand deposits, the clay rock from clay deposits, and the limestone from lime deposits. We also conclude that the lowest layer must have been laid first, and the others deposited successively upon it at later periods. The rocks and sands and clays thus become to the geologist pages of the great book of nature, which reveal to him the past history of the earth. These pages are often difficult to decipher, and, like the inscribed clay tablets unearthed from the ruins of the Assyrian palaces, require patient study before their meaning becomes clear. No doubt many mistakes have been made in reading these tablets of rock, and some of the conclusions at which we have arrived may be modified by a further knowledge.

The simple principle that rocks were made as they are now made, and that life lived in olden time as it now lives, is clearly illustrated by James D. Dana in his work on geology:—

"We go to the seashore and observe the sands thrown up by the waves: note how the wash of the waves brings in layer upon layer, though with many irregularities; how the progressing waters raise ripples over the surface, which the next wave buries beneath the sands; how such sand beds gradually increase in extent; how they are often continued out scores of miles beneath the sea, as the bottom of the shallow shore waters, and that these submerged beds are formed through constant deposits from the ever-moving waters. Then we go among the hard rocks, and find strata made of sand in irregular layers, much like those of the beach; and on opening some of the layers we discovered ripple-marks covering the surface, as distinct and regular as if just made by the waves; or, in another place, we find the strata made up of regular layers of sand and clay alternating, such as form by the gradual settling of the muddy material emptied into the ocean by rivers,—or, in another place, layers of rounded, water-worn pebbles, such as occur beneath rapidly-moving waters, whether of waves or rivers. We remark that these hard rocks differ from the loose sand, clay, or pebbly deposits simply in being consolidated into a rock. Then, in other places, we discover these sand deposits in all stages of con-

solidation, from the soft, movable sand, through a half-compacted condition, to the gritty sandstone. By such steps as these the mind is borne along irresistibly to the conclusion that rocks were slowly made through commonplace operations."

The visit described in the present article was performed on the 19th and 20th of Twelfth Month. The most southern point was Port Deposit, in Maryland, on the east bank of the Susquehanna River. This great river has here cut itself a channel far down below the general level of the country. The rocky bank rises abruptly, leaving scarcely room for a single street and its houses between it and the water. Into this bank, at the upper end of the town, the great quarries of granite have been cut. They cover a space of several acres, and have been worked for many years. They are at the present time a scene of great activity. The rock as exposed to view in the quarry presents broad, smooth faces, rising nearly perpendicularly to a height of more than one hundred feet. An interesting peculiarity in the stone is the existence in it of joints, along which it can be split into layers whose surface is remarkably even and flat. These joints vary in their distance from each other, sometimes not being more than an inch apart; but they are so fine, and the opposite faces of the stone adhere so closely, that they are not easily detected by an unpractised eye. They did not seem to me to be the lines of separation which mark the depositing of separate layers of stone, but to be due to the same cause which has produced the systems of joints, which are often found in the stratified rocks, cutting directly across the layers, and extending through great depths. The places of division are often as even as if a thin blade had been drawn through with a clean, long stroke. They often extend with nearly uniform directions through regions that are hundreds of miles in length or breadth. Dana says, that in "traversing the surface of a region thus intersected, the joints appear as mere fractures, and are remarkable mainly for their great extent, number and uniformity. In case of two systems of joints—the case most common—the rock breaks into blocks, which are rectangular or rhomboidal according as the joints cross at right angles or not. In some places a layer looks like a rectangular pavement on a vast scale. In others, where the layers are thick and coarse and somewhat displaced, there is a resemblance to artificial fortifications, or cities in ruins, which is quite striking."

It is easy to imagine that in the changes which the earth's surface has undergone, many cracks may have been made in the rocks, but that they should (in some cases) be so regularly repeated over great areas of country is very remarkable.

Wishing to obtain a fair specimen of the Port Deposit granite, one of the workmen took a flat slab of nearly three inches in thickness, which had been split out along two of the joint lines I have been speaking of, and roughly dressed the edges so as to make a rectangular block of four or five inches on the sides. An examination of the flat sides showed that they were coated with thin scales of limestone, not much thicker than paper, showing that after the joints had originally been formed, water having limestone dissolved in it had found its way into the slender crevices, and the limestone had crystallized there, filling up the cavities, and finally cementing together the adjoining faces of

FOR "THE FRIEND."

Fenny-Drayton.

BY JAMES J. LEVICK, M. D.

rock. That the cement was limestone was evident from its comparative softness, for it could be scratched by a knife; while the Granite is too hard to be marked in that way. The splitting of a Granite block along one of these joints is done by the use of wedges and sledge hammers. The thin layer of cementing limestone is either broken by the jar, or loosened from the Granite on one side or the other.

Granite is a crystalline rock, in which the three ingredients that compose it—Quartz, Feldspar and Mica—are closely intermingled. In the Port Deposit quarry, the Quartz and Feldspar are almost purely white, and the Mica, which is nearly black, lies in thin, rather long plates; so that the stone has a lively and cheerful appearance. In those parts of the quarry where the joints lie near each other, so that the stone can be split into slabs of about three inches in thickness, much of it is dressed into blocks of a suitable size for paving streets. When so used, the blocks are set on edge, and the smooth faces are opposite each other.

In another part of the works men were employed in dressing into a circular form blocks nearly two feet in thickness and six feet in diameter (I did not measure them) resembling huge grindstones in appearance. These were designed for crushing and grinding Quartz in the Flint mills, of which there are several within a few miles.

As stated in a former article, the distinction between Granite and Gneiss is that the latter shows signs of having been deposited in layers or strata. They are practically the same rock, but one is massive (without layers), and the other stratified. To which of the two, the Port Deposit stone should be assigned I do not know. Years ago, the proprietor of the quarry was travelling in the cars in company with a man of much geological knowledge, whose name I forget, and spoke to him of his "Granite" quarry. The geologist told him it could not be Granite, because from his description, he supposed it to be stratified. When the train reached Parryville, where the Susquehanna River is crossed, the owner picked up a piece of the rock from the stoneyard, located there, brought it into the car, and asked him what he called that. "Granite," was the reply. "Well, that is stone from my quarry."

(To be continued.)

CHRIST in His Divinity, as He is the Word that was in the beginning, by whom all things were made, is the true Divine Light, who lighteth every man that cometh into the world. He said unto the world, "Believe in the Light, that ye may be the children of the Light." The children of the Light are the children of God; for God is Light.

God's will is, that all people, male and female, may believe in the Light wherewith Christ, hath enlightened them; this Light being believed in, giveth to see Christ, and leads to Him the giver of it, and to God the Father of Lights.—*William Gibson, 1678.*

Any one who finds religious thought unwelcome to him need look no further for proof than that his "heart is not right in the sight of God." This one fact settles the question against him. If his heart was right, religious meditation would be to him one of the richest sources of pleasure. What would such a man, if unchanged in his tastes and affections, do in Heaven? The delights of that world certainly would not please him.

In that Journal which Sir James Mackintosh says is one of the most extraordinary and instructive documents in the world, which no reader of competent judgment can peruse without revering the virtue of its writer, George Fox says of himself: "I was born in the month called July, in the year 1624, at Drayton-in-the-Clay, in Leicestershire. My father's name was Christopher Fox. He was by profession a weaver, an honest man, and there was a seed of God in him. My mother was an upright woman; her maiden name was Lago, of the family of the Lagos, and of the stock of the martyrs." Twenty-five years later, in the year 1649, it is written in the same journal:—"from Coventry I went to a place called Atherstone, and it being their lecture day I was moved to go to their chapel to speak to the priests and the people, and they were generally pretty quiet; only some few raged, and would have had my relations to have bound me. I declared to them largely how God was come to teach his people himself, and to bring them off from all their man-made teachers to hear his Son. And some were convinced there."

Two hundred and thirty-nine years later, the railway train brought me by Coventry to this same Atherstone—a little town, distant from Birmingham about twenty-one miles. Some friends at Birmingham, where I was passing a day or two, learning that I wished to visit the birthplace of George Fox, had kindly marked out the route for me. So I left Birmingham at 9.10 A. M., having bought my ticket for Atherstone. At Coventry, that quaint old town, we changed trains, and went on to Nuneaton—another old town, famous for the manufacture of ribbons, and situate on the direct line of railway travel from Liverpool to London; and thence to Atherstone.⁸ I did not ask for "Drayton-in-the-Clay," as this name is now unknown, but I found there were few of my fellow-travellers who could tell the exact situation of *Fenny-Drayton*, as the birthplace of George Fox is now called. But I followed the route marked out for me at Birmingham to Atherstone, and learned there that a drive of four miles from Atherstone would bring me to Fenny-Drayton.

Just in the rear, or perhaps more properly, just opposite, the station, is a neat little inn—"The White Hart"—and here I found a bright, pleasant landlady, upon whom, as usual in these English inns, the duties of the house devolved. I told her I was a Philadelphian, a Friend, and that I could not go home without seeing the birthplace of George Fox. She entered at once into my wishes, but, as is too often the case, when they are wanted, all of the "traps" and their drivers were out for the morning. Seeing how disappointed I was, she brought her womanly wits to work, and after a short absence came to me with the information that her husband had a pony which he valued very much, and which he did not hire, but which, under the circumstances, she thought he would be willing for me to have if a driver could be found. I am

⁸From Liverpool there is railway connection to Atherstone by the London and Northwestern Railway—distance from Liverpool, 98½ miles. It is on the direct route to London by way of Rugby.

Nuneaton, which is about five miles from Fenny Drayton, would be first reached by the traveller coming from London by the same route.

used to horses, but I was not used to the road to Drayton. Fortunately a young man happened to come in—and, to make a short story of it, in a little while we were driving through the high street of Atherstone.

The pony, whom my driver told me was the fastest trotter in the neighbourhood and could go over a five-bar fence without difficulty, did credit to his reputation. He fairly dashed along, while the youthful Atherstonians, to whom he seemed no stranger, cheered him as he passed them. Fortunately, the weather was, for the hour, perfect; it had rained early in the morning, and it rained again in the afternoon, as it had done every day for a month, or more; but, for my visit, nothing could be more favorable. Like all English highways, the road was excellent. It is the old road made by the Romans, and it does credit to them and to those who have cared for it after them. In a little while—too soon it seemed to me, so enjoyable was the drive—we were at Fenny Drayton. As we drove away from "The White Hart," my kind hostess called out, "You must be sure to see the monument," and so my driver, an intelligent young fellow, at once drove to George Fox's monument, of the existence of which, up to the time of this visit, I had been ignorant.

It is a plain pyramidal shaft, of light-colored stone, twelve or fifteen feet in height, having this inscription:

TO THE MEMORY OF GEORGE FOX,
THE FOUNDER OF THE SOCIETY OF FRIENDS.
Born near this spot—Fenny Drayton
A. D. 1624. Died A. D. 1690.
And was interred in the Burial Field
Burial Ground, London.
Erected 1872.

It is placed close by the roadside, in a pretty little grove of oak trees, and near it were growing bushes of holly and the rose. The monument, I was told, was erected by a gentleman named Bracebridge, himself not a Friend, but an admirer of George Fox. He was the last representative of a family who held the Lindley Hall estate, which includes all the parish of Drayton. The estate is said to be charged by him with £5 per annum to care for the monument.

Across the field, opposite, are two brick houses, built together, in one of which, it is said, George Fox was born. They are three stories high—plain, unpretending buildings, with floors of brick, and deep old-fashioned fire-places. The people living in them were simple cottagers, who had, however, heard of George Fox—the Quaker.

Then we drove to the Rectory of the parish church to which George Fox's parents belonged. The Rector was not at home; but a clergyman acting as his substitute was very kind, and gave me every facility for seeing the church building itself. This is very old—the doorway is said to be Norman. There are many old tombstones in the chancel, and an elaborate monument of recumbent figures at the side of the aisle. On one the inscription was rather an odd one, saying that he to whom this was erected had for forty years suffered from the gout, and that his age (or the age of the gout, it was not quite clear) rendered vain all medical skill!

Here for many years Christopher and Mary Fox had worshipped; here their grave and thoughtful boy—grave and staid for beyond his years—sat and pondered over the mysteries of life, and, perchance, his own mysterious future. The old walls, with the same tablets, the tombs

which were here two and even three centuries ago, are here now, but whatever there may have been in the older time, there are no pews here now, but plain rush-seated chairs, which the poorest may freely occupy.

I shall always retain pleasing recollections of my visit to Penny-Drayton, but why it is called *Fenny* I cannot imagine; I certainly saw no fen or marsh near it. It is indeed a small hamlet with a few houses widely scattered,—very rural, very pretty, and in the heart of beautiful England.

The long-continued rains had made the grass luxuriant in its growth, and it seemed to fairly rejoice in the unwonted sunshine. There are noble trees and pleasant lanes in this, "my own country," as George Fox calls it; but where, as he tells us, "in great sorrow and trouble I walked many nights by myself." The very sheep in the fields seemed as though they might be the lineal descendants of the flocks he had tended, and I felt largely repaid for the effort I had made to find and to visit the birthplace of him of whom our great founder, William Penn, his younger friend and associate, has written:—*"Many souls have done virtuously in this day, but thou, dear George, excellest them all."*

Our little rat of a pony brought us back in a hurry to Atherstone, scarcely giving us time to see the old church building of Manetter, where young George Fox had once vainly gone for counsel. As we drove through the street of Atherstone my attention was arrested by familiar names on the houses and the shop windows,—*Underhill, Pickering, Savery*, and, on one of them, the name of *Fox*. I made careful inquiry, but failed to find anyone who could trace his ancestry back to "righteous Christ-er."

A pleasing surprise awaited me on my return to "The White Hart." It was not yet quite time for luncheon, and, in the coffee-room, on the table, I found a large Encyclopedia open at the biography of George Fox? There was not much in it with which I was not familiar, but it was deeply interesting to me to be thus reading it close by his birthplace, and in the very street, if not the very house, where as a boy he had often visited.

My host of "The White Hart" was now at home, and gave me much interesting local information. From him I learned that Manetter had witnessed, some centuries before, the execution of Christian martyrs. I wondered then, and I wonder now, if this was "the stock of martyrs" to which Mary Fox belonged.

A little later in the day we had such a good luncheon served, and so nicely served, that I cannot but recommend those of my friends who may make a pilgrimage to Penny-Drayton, to stop, as I did, at "The White Hart" inn, even though it may not be the greatest house of its kind in Atherstone.

WHEN the Duke of Kent (father of Queen Victoria) was ill, and under concern about the state of his soul, in the prospect of death, his physician endeavored to soothe his mind by referring to his high respectability and his honorable conduct in the distinguished situation in which Providence had placed him. The Duke stopped him short, saying, "No! remember, if I am saved, it is not as a prince, but as a sinner."

Russian Fable.—A horse was heard reproaching a peasant who was sowing oats, "Why waste time? Why not give them to me?" The oats grew up, however, and then the horse was fed on them.

COMING.

SELECTED.

"At even, or at midnight, or at the cock-crowing, or in the morning."
 "It may be in the evening,
 When the work of the day is done,
 And you have time to sit in the twilight
 And watch the sinking sun,
 While the long, bright day dies slowly
 Over the sea,
 And the hour grows quiet and holy
 With thoughts of me;
 While you lean the village children
 Passing along the street,
 Among those thronging footsteps
 May come the sound of my feet.
 Therefore I tell you: Watch
 By the light of the evening star;
 When the room is growing dusky
 As the clouds afar;
 Let the door be on the latch
 In your home,
 For it may be through the gloaming
 I will come.
 "It may be when the midnight
 Is heavy upon the land,
 And the black waves lying dumbly
 Along the sand;
 When the moonless night draws close,
 And the lights are out in the house;
 When the fires burn low and red,
 And the watch is ticking loudly
 Beside the bed;
 Though you sleep, tired out, on your couch,
 Still your heart must wake and watch
 In the dark room,
 For it may be that at midnight
 I will come.
 "It may be at the cock-crow,
 When the night is dying slowly
 In the sky,
 And the sea looks calm and holy,
 Waiting for the dawn
 Of the golden sun,
 Which draweth nigh;
 When the mists are on the valleys, shading
 The rivers chill,
 And my morning-star is fading, fading
 Over the hill;
 Behold I say unto you: Watch;
 Let the door be on the latch
 In your home;
 In the chill before the dawning,
 Between the night and morning,
 I may come.
 "It may be in the morning,
 When the sun is bright and strong,
 And the dew is glittering sharply
 Over the little lawn;
 When the waves are laughing loudly
 Along the shore,
 And the little birds are singing sweetly
 About the door;
 With the long day's work before you,
 You rise up with the sun,
 And the neighbors come in to talk a little
 Of all that must be done.
 But remember that I may be the next
 To come in at the door,
 To call you from all your busy work
 For evermore;
 As you work your heart must watch
 For the door is on the latch
 In your room,
 And it may be in the morning
 I will come.
 So He passed down my cottage garden,
 By the path that leads to the sea,
 Till He came to the turn of the little road
 Where the birch and laburnum tree
 Lean over and arch the way;
 There I saw him a moment stray,
 And turn once more to me,
 As I wept at the cottage door,
 And hid up his hands in blessing—
 Then I saw his face no more.
 And I stood still in the doorway,
 Leaning against the wall,
 Not heeding the fair white roses,
 Though I crushed them and let them fall;

Only looking down the pathway,
 And looking toward the sea,
 And wondering, and wondering,
 When He would come back for me;
 Till I was aware of an Angel
 Who was going swiftly by,
 With the gladness of one who goeth
 In the light of God Most High.
 He passed the end of the cottage
 Toward the garden gate—
 (I suppose he was going down
 At the setting of the sun
 To comfort some one in the village
 Whose dwelling was desolate)—
 And he passed before the door
 Beside my place,
 And the likeness of a smile
 Was on his face.
 "Weep not," he said, "for unto you is given
 To watch for the coming of his feet
 Who is the glory of our blessed heaven,
 The work and watching will be very sweet,
 Even in an earthly home;
 And in such an hour as you think not,
 He will come."
 So I am watching quietly
 Every day,
 Whenever the sun shines brightly,
 I rise and say;
 "Surely it is the shining of his face!"
 And look unto the gates of his high place
 Beyond the sea;
 For I know He is coming shortly
 To summon me,
 And when a shadow falls across the window
 Of my room,
 Where I am working my appointed task,
 I hit my head to watch the door and ask
 If He is come to me,
 And the Angel answers sweetly
 In my home:
 "Only a few more shadows,
 And He will come."

THE CHERRY FESTIVAL AT HAMBURG

Hard by the walls of Hamburg town,
 Four centuries ago,
 Precepits his soldiers led
 To fight their German foe.
 Unthought, unmoved, in nature's calm,
 The Hussite army lay—
 A threatening, deadly human storm,
 With Hamburg in its way.
 To swift destruction now seemed doomed
 The dear old German town,—
 Before Precepits the Great
 The strongest walls went down,
 And soon, upon the soft, warm air,
 Came sounds of trampling feet.
 The Hussites swiftly sprang to arms
 Their ladders for to meet.
 Ready they stood to meet the charge!
 The great gate opened wide;
 And out there poured, not armed men,
 But, marching side by side,
 The little children of the town,
 Whose round eyes met their gaze
 With innocence; that courage was
 Unlearned in worldly ways.
 The men threw all their weapons down
 At sight so strange and fair!
 They took the children in their arms,
 They smoothed their faxen hair,
 They kissed their cheeks and sweet red lips,
 They told how, back at home,
 They left such little ones as they,
 And then they bade them come.
 To cherry orchards, close at hand;
 And there they stripped the trees
 Of branches rich with clustered fruit.
 Their little arms with these
 They filled, and with kind words of peace
 They sent them back to town;
 And all the soldiers marched away,
 Nor thought of their renown.
 And now, each year in cherry time,
 In Hamburg we may see
 The little children celebrate
 This strange, sweet victory.

Again the tramp of little feet
Is heard, as side by side
They march all through the quaint old town,
In childhood's joyous pride.

Again within their arms they bear
Green branches, through whose leaves
Ripe berries gleam, and tell a tale
More strange than fancy weaves,
About a bloodless battle fought
Four hundred years ago,
When children saved old Hamburg town
By conquering its foe.

The Penncemaker.

FROM THE BRITISH FRIEND.

The Pastoral Movement.

The gravest question with which the Society of Friends has at present to deal is undoubtedly involved in the pastoral movement, wherein Iowa Yearly Meetings takes the lead.

It is now so fully developed and so far an accomplished fact, that it may be seen in its full proportions, and defined as it is *publicly* announced and urged.

It is claimed that this Yearly Meeting is *united* in the movement. If in its late sessions little or no dissent was expressed, the fact is not difficult to account for. In the first place, without reflection upon the motives or sincere devotion of those engaged in it, let it be considered that an influence is exerted by such a *leadership* as is shown upon the face of the report, this year, of the superintendent of the evangelical work. Thousands of miles of travel, attendance of most of the Quarterly Meetings, and some of them two or three times, the writing of a thousand letters, and all with the express purpose of introducing pastors to the meetings generally, and of arranging and directing the ministerial forces. "Last year," the report says, "three pastors were devoting their whole time to the work, and were supported. This year we report sixteen, besides twenty others who are accepted as pastors, several of whom receive part support!"

And what is the pastoral system thus pressed upon the Society? Many may suppose it to be a missionary adjustment for the teaching principally of a new membership. Instead of this being the case, the leading pastors are in the largest meetings, in the centres of influence, and where there are the most resident ministers. One of the largest Meetings for Worship, having *very few new members*, has at least nine recorded ministers, not one of whom is expected to speak in the First-day Morning Meeting, except the supported pastor; or could do so, without invitation or intrusion. The subject of the discourse is sometimes (I know not whether usually) announced beforehand in the daily paper. Another of the largest and most influential meetings, with several prominent ministers, has for some years been conducted similarly and often referred to as a model.

With this practical working of the system in view, another reason for the silence of dissent may be appreciated. Our ideal of worship has been so little held up, and is now so lost, that the people come to hear the preacher, not for individual waiting upon the Lord; and so they know not what to do with silence. There must, therefore, be the regular sermon (and order of exercises), and of course the best preacher is sought. Ministers set aside, and made to feel that others are preferred, have little strength or place to speak. The feelings of these do not appear on the Church's written records.

I may not pause here to do more than ask—
"How long the pastors of Iowa Yearly Meet-

ing can be expected to maintain successful competition with the cultured clergy of other denominations, when the Quaker idea of worship has so far died out that to *hear* the discourse is the chief object in going to meetings?"

The power and aim of personal leadership as exhibited, especially in Ohio [the Binns' Body] and Iowa Yearly Meetings, is an unprecedented factor in the church government of the Society of Friends. In the one Yearly Meeting it seems to be successfully suppressing opposition within its borders to the demands, not merely for *toleration* of outward ordinances, but for the *endorsement* of those who practice and preach them; in the other it is pressing with equal insistence the establishment of an order of clergy.

I think Friends at a distance are very liable to be misled by the reported results of the new movements. In the last ten years Iowa Yearly Meeting has greatly extended its borders to States and Territories further west, and to the Pacific coast. Four new Quarterly Meetings have been set up, and another asked for this year. The greatest gain of numbers is said to have been where pastors are settled. And yet the total gain in the last ten years is 281 less than during the previous ten years.

No comment on these statistics is needed except to say that so far as they are affected by removals to and from the Yearly Meetings, the emigration of the former ten years was largely to Kansas Yearly Meeting; of the latter time it has been almost wholly within its own territory.

This communication is rather for information than argument, in order that our English Friends may better understand the subject as it is developed here.

May wisdom be given them so to deal with it that they may help us to turn back from an impending ecclesiastical bondage to the liberty wherewith Christ makes free, and from an outward-bearing current to these spiritual realities which can alone give us as a Church the strength of deep conviction, and the compactness of a *uniting faith*.

SAN JOSE, CALIFORNIA.

J. B.

Indian Scraps.

The *Red Man*, published at Carlisle, contains some interesting and amusing illustrations of Indian peculiarities. From its columns the following scraps are taken.

Indian Letters.—The Piegans have a very interesting way of writing letters, not with pen, ink and paper, but by placing stones, pieces of bark, chips and twigs in a certain order on the ground upon some hilltop where the "letter" thus formed will be seen and read by other Indians passing that way. A ranchman visiting a deserted camp of these Indians found the following letter:

"We called at this ranch at dinner time. They treated us badly, giving us no dinner and sending us away. There is a head man, who has two dogs, one of which has no tail. There are two larger men who are laborers. They have two pairs of large horses and two large colts, also another smaller pair of horses and two ponies which have two colts."

The letter was written thus: A circle of round stones represented the horses and ponies, the latter being smaller stones; the stones outside of the circle meant there were so many colts. Near the centre was a long narrow stone, upon the end of which was a small one. This denoted the head man or owner whose two dogs were shown by two pieces of bark, one with a square

end, while the other had a twig stuck in for a tail. Two other long narrow stones, larger than the first, stood for the laborers; these had no small stones on them. Some sticks of wood upon which was a small pile of buffalo chips meant that dinner was ready; and empty shells turned upside down told that they got nothing to eat, but were sent away.

On a certain afternoon one of the little girls was detailed to sort and mate stockings. (We have them by the cart-load weekly to handle.)

On finishing her task the troubled girl appeared at the office door with three odd stockings in hand, and holding them up exclaimed, "Miss I——, these three have no partners."

To one of the well advanced classes, the following question was asked, "What is the highest form of animal life?"

"The giraffe," was the immediate response from a bright member of the class.

Only a Slight Misunderstanding.—"Does it require much patience to teach the Indians?" is the often repeated question of visitors.

"Not always as much as the following incident suggests, perhaps," is our reply to the readers of the *Red Man*.

During the summer, while our boys were camping in the mountains and supplies were being daily sent from the school, an intelligent young Indian was placed in charge of the commissary at that end of the line.

Upon one occasion the camp was greatly in need of hard, so an urgent request to that effect was sent down to the school.

When the train returned in the evening and the supplies had been received and stored, the officer in charge of camp asked of the commissary-boy if the hard had arrived.

"No, sir; it did not come," was the quick response.

A letter was forthwith despatched to the school inquiring why the matter had not been attended to, and calling attention to the fact that the camp was inconvenienced by such neglect.

A reply from the school commissary sergeant informed the irate mountaineer that the matter had been attended to and if he would take the trouble to look among the previous day's supplies he would probably find the missing package.

This the officer immediately did, and in hot haste sent for the boy to ascertain why he had been so deceiving. "I thought you told me that the hard did not come," said the officer.

"I did," answered the boy, "and it did not come."

"Why I saw it just now in the commissary."

"Where?"

"Come with me and I will show you."

"Oh," said the boy in surprise, "I didn't know that was what you meant. I always call that WHITE GREASE."

A Pupil's Description of a Fair.—"I went in a little show and saw a man nearly nine feet tall, and he is only nineteen years of age, they call him boy. About twenty folks were in the tent or show and the tallest man among them was called to stand along side of the man or boy as they call him, and the man stood by him and the boy stretched his arm and the man's head did not touch under the boy's arm.

"They call the boy, 'African Indian.' They also call him the 'giant of all giants.'"

"I also saw two young monkeys, one is brown and the other is black with white from his forehead down to his nose. I liked the way the

monkeys acted, they were full of fun and mischief, you could tell by their way they looked and moved about.

"They were tied by their necks with a little chain about three feet long. I stood close to one of them and the monkey came to me and climbed on my leg, and came up higher and felt my vest pockets, but could not find anything; so he jumped down and hung himself by his tail on a rope, and I believe he moved in every way a creature could move.

"Well, I saw other things besides the giants and the monkeys.

"I saw a great serpent; a man took the serpent out of a box, and hung it on his neck. The serpent is about six or seven feet long.

"The other thing that I saw is a talking machine. The manager talked in a place in the machine, and while he was talking in it he was turning a handle on the side of the machine, and when he stopped talking he turned the handle backwards, then he turned again and the machine began to talk and said just what the man said. The manager also allowed any one to come and talk in the machine, but nobody came."

The word "shan't" occurred in a reading lesson. Explanation was given that "shan't" is an abbreviation of "shall not," and that people said "shan't" when they hadn't very much time, as it is a shorter word.

In a recitation which followed the word occurred again and an Indian boy read it out with considerable emphasis, "shall not."

Teacher: "The word is 'shan't.'"

Indian Boy: "O, plenty of time now?" and went on happily in the thought that for once he had understood his teacher, and was able to go ahead without assistance.

A teacher put the following question to a young Sioux.

"How do you parse 'Mary milks the cow?'"

The last word was disposed of as follows: "Cow is a noun, feminine gender, singular number, third person, and stands for Mary."

"Stands for Mary! How do you make that out?"

"Because," added the intelligent pupil, "if the cow didn't stand for Mary, how could Mary milk her?"

How to Handle a Wasp.—"It is a fact not generally known," says a writer in *Science*, "that if one holds his breath, wasps, bees and hornets can be handled with impunity. The skin becomes sting-proof, and, holding the insect by the feet and giving her full liberty of action, you can see her drive her weapon against the impenetrable surface with a force that lifts her body with every stroke; but let the smallest quantity of air escape from the lungs and the sting will penetrate at once. I have never seen an exception to this in 25 years' observation. I have taught young ladies, with very delicate hands, to astonish their friends by the performance of this feat, and I saw one so severely stung as to require the services of a physician through laughing at a witty remark of her sister, forgetting that laughing required breath. For a theory in explanation I am led to believe that holding the breath partially closes the pores of the skin. My experiments in that direction have not been exact enough to be of any scientific value, but I am satisfied that it very sensibly affects the amount of insensible perspiration."

Natural History, Science, &c.

The Prairie Wolf.—The large timber wolf, identical with the wolves of Europe and Northern Asia, has never found the prairies a congenial home, but a few may be found skulking in the woods which line the banks of our rivers.

But the most conspicuous, as well as the most characteristic member of the dog family in Iowa is the prairie wolf, *Canis latrans*, which ranges the western plains, the basins of the Missouri and Saskatchewan rivers, and extends as far south as Mexico, the name coyote, often applied to it, being derived from the Mexican word for "wolf."

The days of the buffalo are numbered. The deer has become a rare sight. The railroad has sealed the doom of everything foreign to civilization. Even the Indian, because he cannot accomplish in a few years the development which it has taken the white race centuries to achieve, and because he cannot put on civilization as he puts on the white man's clothes, and drink in the spirit of modern progress as he drinks the white man's whiskey, seems doomed to extermination. But the prairie wolf still lingers, though in diminished numbers, apparently better fitted than its companions to survive amid the new environment which the advent of civilization has produced.

On some cold still winter night, when the moonlight bathes the snow covered fields, his short, quick, snapping bark, quite different from the prolonged howl of other wolves, may be heard challenging the dogs of the vicinity, who thereupon set up an answering cry that drives away sleep from the inhabitants of the farmhouse, and brings to mind grim tales of blood-thirsty wolves howling around some lone cabin or attacking some belated traveller. But the early riser may see the author of the commotion glide swiftly away in the gray dawn of the winter morning, and no life is lost unless it be that of some unlucky sheep or chicken. The coyote, however, is not fastidious as to his food, and like his Old World cousin, the jackal, regales himself upon the carcass of any dead animal that he can find.

Again, early in the spring, the farmer may find upon some southern hill-slope the burrow of this denizen of his fields, and, with an eye to the bounty paid for their scalps as well as the safety of his barnyard, may invade the home and in spite of the vigorous defence of the small inmates, carry them away in the absence of the parent. A younger brother, with a boy's fondness for pets, tried, a few years ago, to tame seven of these little savages, and though the experiment was not carried far enough to base any scientific theories upon it, it did not appear that they took kindly to civilization. Their first impulse on the approach of any member of the family was to hide. They refused to eat in the presence of their captors, but devoured food eagerly when left to themselves.

Though seldom seen in packs, the prairie wolves are often found in pairs and in the fall whole families range together.

They vary less in color than the timber wolf and are of a dirty gray mixed with yellow and dashed with black. The nose is sharp, the tail bushy, and the ears erect.

Like most carnivores they are good runners, well-fitted for their active and often precarious life. They avoid the timber and in the open field are more than a match for an ordinary dog.

—*Anna Nichols in The Friend's Intelligencer.*

The Cactus.—Our northern cactus, *Opuntia vulgaris*, escaped from cultivation in Europe, has

spread over large tracts of land in southern Europe, so as to seem in some measure an indigenous plant. Don Fernando de la Camara, a member of the Malaya Society of Natural History, announces that it can be profitably turned to account for the alcohol to be derived from it. He has obtained as much as eight per cent. from the juice of the fruit.

The Oldest Books in the World.—Among the oldest writings which have come down to us are the arrow-headed, or wedge-shaped writings used in Assyria and Media. These writings are either stamped on bricks, or chiselled into stone and rock. They date about 3000 years B. C. The letters are all formed by combinations of a stroke with a head to it, like a barb, or a wedge. By the labors of recent scholars the meaning of tablets and inscriptions written in this way can be deciphered. Then there are the papyrus, or paper books of Egypt. Papyrus is a flowering reed growing luxuriantly in the still waters and marshes of the Nile. There are specimens of it to be seen in the basins of our parks in New York. The pith of this reed is taken out, flattened and gummed together so as to make long pages and rolls. The Greek for this natural paper is *lybhus*, hence our Bible. These rolls of papyrus are then filled with writing. The writing of Egypt was hieroglyphic, or produced by a series of pictures of different natural objects. The trustees of the British Museum have recently obtained a roll of papyrus written out by an Egyptian scribe called Ani. He lived more than 1300 years B. C., *i. e.*, about 3200 years ago. Every chapter of the book is illustrated by vignettes of extraordinary beauty. In this respect it resembles one of the illuminated parchments of monkish times. The colors laid on so carefully by the skillful brush of Ani, although most delicate, are apparently as fresh to-day as ever they were. A group of weeping women, which forms part of the first vignette, is particularly well done. The book itself is a copy of the Book of the Dead, which contains prayers and devotions relating to the condition of the disembodied soul. For the Egyptians believed in the soul's immortality.

The trustees of the British Museum are going to have this old book reproduced by the press, with all its colors. There will be a full description of the vignettes, or translation and introductions. Thus we shall be able to read old Ani's work 3000 years after he wrote it. Homer is almost a modern author in comparison.

The Fig.—If we can imagine a branch to be like the finger of a glove, and around the branch to have small flowers closely set together, and then imagine this branch, like the finger of a glove, pressed inward from the apex, carrying the flowers on the outside inward so that the inner and not the outer side is lined with the flowers, we have nearly what takes place when Nature forms a fig. In some way or another the usually outer surface has become the inner, and the fig flowers are concealed from view. Something of the same course is taken by Nature when she makes a pear, or the fruit of the rose, though in these cases the apex of the pistils projects far enough out to receive easily the pollen necessary for fertilization. In the fig the flowers are wholly cut off from the external world except by a small orifice at the end of the swollen branch, which in time we know as the fig. The fig is monoecious—has separate male and female flowers on the same branch. The domestic fig has usually all female; a wild kind, known to the ancients as the Caprific, has almost wholly male.

more care taken as was usual in other Friends' Schools." JOHN BENINGTON.

It is evident from the above that the Friends who had charge of that institution in its early days were not neglectful of the religious welfare of the pupils.

When more systematic scriptural instruction was introduced it did not meet with the approval of all the members; for some of them feared that it would have the effect of withdrawing the attention from the teachings of Christ in the heart, who alone communicates the true knowledge of spiritual things; and of leading the children to depend too much on that outward knowledge which is the fruit of the intellect; and thus of training up a set of formalists, who might think themselves to be "rich and increased with goods, and have need of nothing," and not know that in reality they were "poor and blind and naked" as to the possession of that knowledge of Heavenly things which the Spirit of God bestows on the humble and obedient seekers.

The concern felt by such Friends is set forth in a remarkable series of "Three Letters," written by John Barclay, which were especially called forth by the state of things in the Society in England in his time; and which contain many truths of great importance to the Church. These Letters have been several times reprinted.

SUMMARY OF EVENTS.

UNITED STATES.—The Senate still has the Tariff Bill under consideration. The bill seems to be generally finished, it will fall to be enacted the present Session.

It is reported from Albuquerque, New Mexico, that hundreds of cattle and sheep are perishing. The plains and the mountains are covered with deep snow. A drought of several weeks has resulted to death in the mountains south of Albuquerque.

Another piece of rock has broken away from the crest of the Horseshoe at Niagara Falls.

The use of the electric light on trains was begun on the 1st of January, Milwaukee and St. Paul Railroad. Two vestibule trains of nine cars each, steam heated, were started with the electric light—one from Chicago to St. Paul, the other in the opposite direction. The electricity is furnished by a dynamo in the baggage car. In sleeping cars there is an incandescent burner in every section, so that the occupant can read a book or paper while lying in bed.

California supplies more than half of the quicksilver consumed in the world. The consumption of this metal has averaged 125,000 lbs. a year. The principal uses to which it is applied are: (1) Meteorological and other scientific instruments; (2) chemical preparations; (3) looking-glasses and mirrors.

A census of Atlanta, Georgia, just completed, gives a population of 73,676.

Prohibition in the city two years, but because the law was violated, and now and then a drunken man was seen on the streets, some of our people (good people they are) came to the conclusion that unless they had a license and when the election took place last June, they would not go to the polls to vote.

Immediately the bar-rooms were opened, and the city was flooded with liquor. What is the consequence? Is there more drunkenness now than during Prohibition? At least, we think not; and, as commensurate with the increase of drinking and drunkenness is the increase of wickedness and crime.

The daily arrests by our policemen will give any citizen some information as to what the drum-beats are doing. But if one is not satisfied with that exhibit, let him go out and see for himself, and if he has a heart of flesh he will be saddened indeed when he begins to realize the true condition of things, especially among our young men.

At least one week more, and the increase of 22 over the previous week, and a decrease of 33 compared with the corresponding period of last year. Of the foregoing 192 were males and 100 females; 75 died of consumption; 38 of pneumonia; 17 of diphtheria; 10 of paralysis; 17 of convulsions; 14 of scarlet fever; 11 of apoplexy; 13 of old age; 11 of diptheria; 10 of cancer, and 10 of Bright's disease.

Markets, &c.—U. S. 4½'s, 109½; 4's, 128; currency 6 1/8, 118 a 128; sterling exchange, 4.86 a 4.89.

Cotton was quiet but firm, at 10¢ ets per pound for medium.

Flour and meal.—Western and Pennsylvania super, \$2.85 a \$3.50; do., do., extras, \$3.50 a \$3.75; No. 2 winter family, \$4.00 a \$4.50; Pennsylvania family, \$4.82 a \$4.75; Pennsylvania roller process, \$5 a \$5.25; do., do., extras, \$5.25 a \$5.50; do., do., extra, \$5.50 a \$5.75; Indiana, clear, \$4.75 a \$5.00; do., straight, \$5.00 a \$5.25; St. Louis and Southern Illinois, clear, \$4.75 a \$5.00; do., do., straight, \$5.00 a \$5.25; winter patent, fair to choice, \$5.40 a \$6.00; Minnesota, clear, \$4.25 a \$4.50; do., do., straight, \$5.12 a \$5.85; do., patent, \$6.00 a \$6.00. No. 3 flour was dull at \$3 a \$3.20 per barrel as to quality.

Grain.—No. 2 red wheat, 95 a 95½ cts.

No. 2 mixed corn, 41 a 41½ cts.

No. 2 white oats, 33½ a 34 cts.

Beef cattle, extra, 5 a 5½ cts.; good, 4½ a 4½ cts.; medium, 4 a 4½ cts.; common, 3 a 3½ cts.

Sheep.—Extra, 5½ a 6 cts.; good, 5 a 5½ cts.; fine, 4 a 5 cts.; common, 4 a 4½ cts.; culls, 3 a 3½ cts.

Lambs sold at 4 a 7 cts., a decline of 1 ct.

Wool, No. 1, 7 1/4 a 7 1/2 cts.; No. 2, good Westerns, 7 cts.; heavy do., 7 cts.; good State, 7 cts.; common State and rough Westerns, 6½ a 6½ cts.

Milk cows were fairly active, at \$25 a \$35.

Milk calves were in fair demand, at 3 a 8 cts.

Fur market.

FOREIGN.—A letter has been received in Brussels from Henry M. Stanley to Tipu Tib. This letter, which was taken to Stanley Falls by a messenger and which reached Brussels by post on the night of the 15th inst., is the only one from Stanley which reached the coast of Africa. A number of other letters which the messenger conveyed to Stanley Falls still remain there, but it is expected that they will arrive in Europe in two or three months.

A recent English eye-act is of the opinion that Stanley reached Emin in Eleventh month, and that his journey from Emin's headquarters to the East Coast would occupy from six to ten months.

A recent English eye-act shows that with men over twenty years of age the hepatic use of alcohol beverages cuts off the life span of life. Also that occasional indulgence, if carried to excess, doubles diseases of the liver, quadruples diseases of the kidneys, and greatly increases deaths from pneumonia, pleurisy and epilepsy.

It is stated on trustworthy authority that the British Government has decided to uphold the treaty by the terms of which European powers are precluded from obtaining or attempting to obtain dominance in Samoa. The Government has been fully informed of and shares in the United States Government's views on the subject. It is agreed that the action of the German agent in Samoa is opposed to the letter and spirit of the treaty; that it violates diplomatic etiquette and enlarges the now relations so necessary for Europeans to the good relations with the barbarous nations. Despatches to this effect have been sent to Berlin.

The Morier incident, it is stated, has not had any effect on the relations between the British and German Governments. It may have formed the subject of conversation in the diplomatic circles in London, Prince Bismarck and Sir Edward Malet, the British Ambassador. Officially, Lord Salisbury leaves Morier to manage his own case. The diplomatic circle is confident that Prince Bismarck has a strong feeling against the Morier incident, and will oblige Lord Salisbury to take official notice of the affair by transferring Morier from St. Petersburg to some post that has less influence on European politics.

The majority of the Royalists have decided to vote for General Canales in the coming election of the Seine department. It is believed that many persons will abstain from voting, either for the General or his opponent, Jacques.

The Madrid correspondent of the *London Daily News* says that the Spanish Government is trying to set off Spanish claims for damages sustained in the war of secession in the United States against the Mora compensation claim.

It is announced that Dr. Kruss, a chemist, of Munich, has succeeded in developing soluble and melted, both of which have hitherto been supposed to be elementary substances.

The *Vossische Zeitung* declares, on the testimony of residents of the East African coast, that English troops have been sent to the East African coast for the equipments of the Arab slave-hunting caravans, and that to clip their wings would be equivalent to the annihilation of the slave trade.

The Vatican has received news of terrible floods, accompanied by great loss of life, in Manchouira. Indian advisers say that cholera prevails in a virulent form at Quilim, on the Malabar coast. It is reported that two thousand Christians have succumbed to the disease. Italian Carmelite missionaries are attending the plague-stricken people.

On the 21st instant three hundred horses were destroyed in the State of Virginia by an earthquake. Plants hitherto unknown have been recently discovered in the Philippine Islands, with flowers almost a yard in diameter, the petals, five in number, being of a creamy-white color.

Nicaragua and Costa Rica have had a dispute in relation to the proposed Nicaraguan Canal. They have agreed to submit the question to arbitration, and the President of the United States is named as the arbitrator.

NOTICES.

WESTWON BOARDING SCHOOL.—At a meeting of the Committee charged with the care of this Institution, held in Philadelphia on the 11th instant, it was decided that the minimum age at which children shall be admitted to the school hereafter shall be *seven* years, instead of *nine*, as heretofore. This rule to apply to future *new* admissions, and not to those who are, or have been in, and are desiring to return.

JONATHAN G. WILLIAMS, *Sup't.*

First Month, 1888.
A Friend in New England is desirous of obtaining a woman Friend in the State of New Jersey, &c., &c., if being an invalid. Further information can be obtained by addressing THE FRIEND, No. 116 N. Fourth Street, Philadelphia.

WESTWON BOARDING SCHOOL.—During the Winter term the stage will be at Westown Station on the arrival of the 8:53 and 2:47 trains from Philadelphia, to convey passengers to the school, and at other times on timely notice to

P. O. BOX 120, Morristown, N. J.

A MEETING OF FRIENDS' TEACHERS' ASSOCIATION, OF PHILADELPHIA, will be held at 140 N. SIXTH STREET, Second Month 9th, 1888, at 2 P. M.

Program:

1. Politics in History—Edward P. Allison.
2. Some of the Advantages of General Reading—Charles Wood.

To be followed by discussion.

DIED, at her residence in this city, Twelfth Month 24th, 1888, ELIZABETH C. wife of John S. Lowry, in her 72d year. She was an esteemed member of the Philadelphia Yearly Meeting of Philadelphia Friends. Her attachment to Friends' principles was sincere, and her life and conversation manifested her earnest efforts to make an acceptable use of the talents entrusted to her, and to walk humbly with her God. Her sympathies were for broadly, and extended her to many. Her last illness was accompanied with much suffering, which she endured with patience and great consideration for those about her. Although sometimes, in her pain and weakness, she was a little firm in spirit; and once, in a fit of a quiet, retiring disposition, she was, in consequence void of offence toward God and man; and she spoke many times of "the wine of the kingdom and the sweet waters of Shiloah" as all she desired; of these, we reverently believe, it has pleased her Heavenly Father to give her.

On the 24th of the Twelfth Month, 1888, at the residence of her son-in-law, John W. Stokes, RAUEL E. WOOLMAN, a member of Upper Evesham Monthly and Preparative Meeting, in the 82d year of age, being of a quiet, retiring disposition, she said but little about her spiritual exercises; but her friends have a comforting belief that through mercy she has been permitted to enter into the rest prepared for those whose sines have gone before her to judgment.

FOR "THE FRIEND,"

Journal Kept by Martha Routh, on her Passage from London to America.

(Continued from page 202.)

This evening the vessel continued much in motion, and remained till towards morning, when the wind changed in our favor, and we went near eight knots an hour for a short time; yet the tossing of the night, and little sleep, caused me to feel very languid—that it was a trial to take anything. My mind also much proved, yet not with any fear respecting our safely landing, but under a renewed solemn searching of heart respecting the embassy I was going on; and much solicitude of mind was raised in me, that I might so witness preservation as to bring no dishonor to the cause. Being thus humbled, my feelings were relieved by such an effusion of tears, as I have not often experienced; and I remembered, with some instruction and profit the interesting farewell salutation of my beloved friend and younger sister, Ann Tuke.* "Let thy Urin and thy Thummim be with the Holy One of Israel, and all thy wants be made known unto Him," &c. And in a little time I seemed to revive both in body and in mind, and had evidently felt in this proving season, the help of the spirits of fellow travellers who are nearly united to my best life in our present allotment together; that I found I had much to be thankful for.

On Sixth-day, the 27th of Eighth Month, the Journal states that for several days, though there had been much sailing, there had been very little progress in the desired direction; and then goes on to say:—

"Most of my companions seem to have got over their trial of sickness, but I keep still weak, yet was a little refreshed both in body and mind this evening in a religious opportunity in which dear John Wigham had the language of encouragement instructively to communicate amongst us, and I was glad we had such an opportunity, having several times remembered that our be-

loved Friends D. Darby* and R. Young when in like situation, without the help of spiritual brethren, held religious meetings twice in the week, which the frequent tossings of our vessel hath prevented our joining in with, more than has been quite easy to some of our minds.—Seventh-day, I slept comfortably last night, but while trying to get down a cup of tea this morning was attacked with a fresh turn in my stomach, that I seem almost to give up the thought of being much better, except a fair wind should take place and cause a more steady motion, which may be lawfully hoped for, as also when favored to disembark, I may regain my former strength; or else I have several times thought I was not worth the carriage from England, not remembering at any time so complete a loss of appetite or depression of natural spirits so long together. That if my near neighbor I. R. had been with me, he would have little room to assert what he sometimes hath done, that my spirits kept me alive, for I have even laid knitting aside; I also thought to read much while on board, but in this am disappointed, not having been able to look at a book many minutes together; yet have cause to be thankful that what is lacking in me in this respect is made up by L. and M. Rotch and others of our young friends. My spirit is also at times refreshed in the company of sometimes one and then another of my valued friends in my little cabin, and was much so this morning in silent retirement with Wm. Rotch, and am tenderly supplied with all I can partake of, for my outward help. As I have been able to do so little, I have much time to think of those I have left behind, and have several times remembered what my dear E. Tuke said to me when at York, in that perfect love and freedom which hath long subsisted between us, she thought I should not be helped first at table, that I might not have so much time to observe how long others were eating after me." But contrary to such a precept, I have mostly in this enclosure been first served, so that the old proverb has not been verified, "out of sight out of mind;" and not having had power to make long meals, I have much time for observation; though when stationed as I am now, lying in my crib, I have only had in view the chiefs of our tribe, or governor and governess Wm. and E. Rotch, can only comment upon them, which I have often done, seeing it possible for right sort of great folks to become little and least of all; for in order to make commodious room for priests, levites and captains, their stations have been on the sofa, sometimes with one plate between them, and in like manner partaking of a piece of bread. At high times have had each a plate, and glad have I been to see they could eat food any way with their simplicity of manners; and when such low truth, and prize the preciousness of my soul desirer, no higher dwelling place in time or eternity, than to be the companions of the humble and contrite ones.

*These Friends came over to America on a religious visit in this year (1794) and returned to England in 1796.

24th. This morning I felt recruited, and arose time enough to have a quiet sitting together before dinner, which was a select opportunity with those of our Society. In the evening we had a more public one for all the hands that could be spared from the deck, with one of the steerage passengers who has daily attended our religious sittings of this kind. On our first sitting down, and for some considerable time, I thought it was not possible for any mind present to feel more unfruitful God-ward than mine did, inasmuch that secret mourning over myself was all the exercise I could get to, but towards the close of the Gospel labors, in which I thought dear J. Wigham was lovingly engaged in opening the doctrines of truth, a little life arose in me. I humbly trust from that quickening word which was in the beginning; and soon after he sat down, gave authority to say, I had to apprehend there might be those present who had not so much as heard tell of the Holy Ghost, or the operations of the Spirit of Truth, as had then, and in some preceding opportunity been opened to them through the doctrines of the Gospel; and who knew but the great Ruler of all things, who waited to be gracious to the children of men of every description, might for their sakes, have seen meet to detain us together, by permitting a slow progress, which had been contrary to our wills and theirs, in order for our and their instruction, with what further opened in the counsel of truth; which opportunity closed with some emphatical openings of the Divine mind and will concerning us. Our ancient and honored elder brother S. Emlen, who is in general preserved in health, full as well as when on land, walks much on deck, and I have no doubt as in times made useful to those who mostly preside there.

"In the afternoon heard L. and M. Rotch read, and afterwards read myself many pages of the life and religious experience of that female Apostle of Christ, Lady Guion, from which my mind seemed renewedly to gather instruction, and indeed all within me was ready to acknowledge that in suffering for Christ I was so far behind her, as scarcely to have touched the hem of her garment. And desires were afresh raised that I might more and more get into resignation to whatever might be permitted to body, soul or spirit, and become like-minded with the Apostle, in all states to be content. Our two sheep have been killed, the fowls that remain seem also thriving, that I expect their time of seasoning is over, but whether mine will be so or not before we leave the vessel if spared till that time, is yet hidden, and I have no desire to have it revealed, but in due submission to that power who always knows and does better for us than we can do for ourselves.

"Fifth-day morning, I felt myself so exceedingly enfeebled and such an entire aversion either to speak or take any nourishment, that I thought as I lay in bed, if I could be quietly conveyed through the bottom of the vessel into the water it seemed little matter, yet, perhaps though in this debility or humility, in which

*Ann Tuke, afterwards Ann Alexander, was one of the children of William and Esther Tuke, of York. She was born in 1767; first appeared as a minister in 1786, and, after a long life of active usefulness, died in 1849. She paid a religious visit to America in 1803, and while on this continent, visited all the Yearly Meetings of Friends then in the United States.

judgment seemed taken away, if such an event had been likely to take place, it might have weakened both nature and spirit to have had a different choice.

On Sixth-day morning our quietude was interrupted from being informed that that ship which appeared in distress about three miles from the stern of ours, had, according to the usual signal, fired a gun from her lee side, when the humane intention of our captain appeared likely to bring us into difficulty by his laying to; to let them come up with us in order to have rendered them any assistance that lay in our power, which disposition I could but commend when men are at peace one with another, but at such a time as the present, I thought it required great clearness of judgment to know what was to be done, and the little I felt was entirely against our stopping to aid that vessel; though on its nearer approach a part of its main mast appeared to be taken away, but I thought it possible that not only such an appearance, but much more might treacherously be done in order to decoy. How far this was really the case I leave, but their further conduct did not show a kind aspect to us; for when our captain perceived it was a ship of war, with two tiers of guns, and thought it then best again to hoist sail and make the best of our way; they fired after us four times, and once or twice so near that the balls were heard to whistle along the water, and though in feeling the attention of my mind drawn inward, I was somewhat renewedly strengthened and consoled in a hope that no material harm would be suffered to reach us, yet it was a great trial of faith, &c., and some that I tenderly loved seem to feel it so much, that all within was moved, and my soul was bowed, in supplication to our alone Almighty Helper, in like manner, in which I was engaged in the congregation of his people, at the last meeting I sat in London. "That we might be preserved out of the hands of unreasonable men," which favor is still granted; for after our sails were hoisted we had a little fresh breeze, and they seeing we outsailed them, though then not more than a mile from us, tacked about towards England and left us, for which I believe feeling minds were humbled in thankfulness. For in a little time afterwards we were quite becalmed, and had that been permitted at that critical juncture they might have come up to us, not being then out of sight. At dinner I took the liberty to mention to Captain Swain, I thought we had a right and lawful liberty to keep in as nearly our right course as Providence permitted without stopping to salute any by the way, and he kindly assured me he would not do it again.

(To be concluded.)

"*Forgiveness*.—How oft shall my brother sin against me, and I forgive him? Till seven times?" said Peter to the great Teacher. The answer was in these words: "I say not unto thee, until seven times, but until seventy times seven." This was followed by a parable to enforce the duty of forgiveness, no matter how frequently the occasion for it may occur. If we expect to be forgiven by God, we must forgive one another. The unforgiving temper and truculence can never dwell together in the same heart.

If the things that are seen are our chief good, what is to be done when we can neither take them away with us, nor remain on earth to enjoy them?

Swarthmore Hall.*

BY JAMES J. LEVICK, M. D.

A year before seeing Fenny-Drayton, I had visited *Swarthmore Hall*, another home of George Fox, frequent printed notices of which have made it more familiar to us than is Fenny-Drayton. There is indeed a great difference between the little brick house at Fenny-Drayton and the handsome old hall of Judge Fell, but the gap between the two is filled up by the span of George Fox's eventful life. The simple shepherd boy had become the acknowledged founder of a Religious Society which numbered its members by many thousands, and the weaver's son was now known in official deeds involving the transfer of property—though perhaps he would himself have refused the title—as "George Fox, gentleman."

To reach Swarthmore, when visiting the lake country of England, is a very easy journey. The traveller coming from the north, who has visited Grasmere, Derwentwater, Ambleside, and other parts of this beautiful region, will take the little steamer at the head of Windermere, the largest lake in England, and pass the whole length of the lake to Lakeside, a little village at its foot. Here is a railway of nine and a half miles to Ulverstone, a town of 10,000 inhabitants in the direct route to Furness Abbey, six miles beyond, one of the finest ruins of its kind in all England. It is a pleasant walk from Ulverstone Station to Swarthmore Hall and Swarthmore Meeting-house, and the visit will well repay the time and labor it involves.

Visits to Ulverstone are frequently mentioned in George Fox's Journal, and were generally synonymous with personal insult and abuse. Swarthmore Hall, the home of Judge Fell and his wife Margaret, a little more than a mile distant, was indeed a peaceful haven for these poor persecuted Friends. "Now when I came up to Swarthmore," writes Fox (Journal 1st ed., page 86), "I found Friends there dressing the heads and hands of Friends and friendly people who had been broken or hurt that day [in Ulverstone]. My body and arms were yellow, black and blue with blows and bruises received amongst them that day."

Margaret Fell, the great-granddaughter of Anne Askew, the martyr, was very early convinced of the truth of the doctrines preached by George Fox, as a little later were the larger number of her family. Religious meetings of Friends were now frequently held in the Hall, as Fox thus writes: "And while I was in these parts, Richard Farnsworth and James Naylor came hither to see me; and the family and Judge Fell being satisfied that it was the way of truth, notwithstanding all the opposition, let the meeting be kept at his house. And a great meeting was settled there in the Lord's Power, . . . which hath continued there nearly forty years, until the year 1690 that a new meeting-house was erected near it."

George Fox modestly refrains from telling by whom this new meeting-house was built, but a letter written by him, under date 15th of Twelfth Mo, 1686, tells the story. In it Fox says: "I offer and give up freely to the Lord, for the service of his sons and daughters and servants called

* *Swarthmore*—*Swarthmore*. I have no doubt that the correct word of writing this name is the latter, *Swarthmore*—the *strong* being in the name; but as the name is always written *Swarthmore* in Fox's Journal, and has for two centuries been so written, I have retained this title. See "Fells of Swarthmore Hall." London, 1875.

Quakers, the house and houses, barn and kiln, stable and all the land, with the garden and orchard, being about three acres of land, more or less, with all the commonage, great turling, moss, with whatsoever privileges belonging to it, called *Pettys*, at Swarthmore, in the parish of Ulverstone. And also my ebony bedstead with painted curtains, and the great elbow chair that Robert Widder sent me, and my great sea case with bottles in it. The land is free from all tithes, and it may keep the meeting-house in order and repair."²

This property of Pettys was one George Fox had some time before purchased; and on it was built what is now known as Swarthmore Meeting House. The place is surrounded by a gray stone wall, inside of which is some pretty shrubbery. Over the doorway of the meeting-house is the inscription—

EX DONO G. F., 1688.

Within the stone vestibule is another doorway, the frame of which is made of two of the bed-posts of his ebony bedstead; the great elbow arm chair, and another from Swarthmore Hall are here, and a long narrow chest is pointed out as that which George Fox carried with him when he crossed the seas. The interior of the meeting-house is plain, neat and comfortable looking. The wood work is painted a light lead color. The preachers' gallery is somewhat elevated above the floor, and has its table for the Monthly Meeting. Meetings both for worship and for discipline are still regularly held here. But the most interesting object in the building is George Fox's old Bible and its chain, by which it is said it was attached to the gallery post in the early days of the meeting-house. The Bible is the edition sometimes known as the *Treacle Bible*, printed A. D. 1541. It is now on a table, and with its huge chain, is covered by a glass case. It was open at the text Jeremiah 8th chap. 22d verse, and read "Is there no treacle? in Gilead, no physician there?"

It is but a short distance from the meeting-house to the Hall, which has itself been a comfortable old-fashioned house well suited, two centuries ago, to a family of wealth and position. The old hall or dining-room in which the "great meetings" were held is still there, as it was two centuries ago, and adjoining it is Judge Fell's study or library in which he was accustomed to sit, with open door and within hearing of what was said, but without compromising himself as being actually present in the meeting itself. For, however much Judge Fell may have been "convinced," as George Fox writes, he never allowed himself one of the Friends. Perhaps in this way he was better able to help them when in trouble, than he would have been had he publicly joined in their meetings.

The old walls have, many of them, carved oak wainscoting, and the place shows what it once "has been." But it is rather sad to see the decoherence into which Swarthmore, Dolobran, Llaithgwyn and other homes of the early Friends have now fallen. Given up to tenantry, sometimes to simple farm hands, the contrast between what they now are and what they have been is anything but cheering. And yet in the great hall at Swarthmore on the table there was at the time of my visit a large folio volume. The book was open as if some one had lately been reading

"The Fells of Swarthmore Hall." London, 1875. ² *Treacle* is here used as synonymous with *theriac*, a Latin word meaning a medicine capable of curing or preventing the effects of poison, especially that of the bite of a venomous animal.

it. I was curious to see what was on the page, and my curiosity was gratified by finding that it was a sermon by Charles H. Spurgeon entitled, "We must fight against sin." So that the old warfare is still waged at Swarthmore Hall, though by other hands and under other banners.

Eleven years after the death of Judge Fell, his widow became the wife of George Fox. Everything connected with this marriage shows the unselfish character of George Fox. The marriage did not take place until it had the full approval of Margaret Fell's daughters and their husbands; and it was well known both to Fox and to his future wife, that by a second marriage the widow of Judge Fell forfeited her right to Swarthmore Hall. Fortunately by this forfeiture the estate went, not to her son but, to her daughters who, all her remaining years, regarded their mother as mistress, and their "dear father," as they then always styled George Fox, as the master of Swarthmore Hall. But it was not until nearly six years after their marriage that George Fox came to Swarthmore to make any stay.

Here he remained for a year and eight months in feeble health, which gradually improved in the loving social atmosphere which he now breathed. But on the 26th day of First Month, 1677, he again entered on his public service, crossing to Holland, and so far as can be learned, was rarely if ever again resting at Swarthmore. He died in London, A. D. 1690, and twelve years later Margaret Fell peacefully ended her days in this old hall, which will always be associated with much that is deeply interesting in the history of the Religious Society of Friends and of him who is so generally regarded as its founder.

FROM THE FRIEND.

The Late Jane Wigham, of Edinburgh.

This beloved Friend, who died on the 29th of 11th Month last, aged eighty-seven, was the daughter of William Smeal, of Glasgow, and widow of John Wigham, tertius. She was widely known throughout the Society, and for her connection with many philanthropic movements in which she took warm and active interest. She was one of the earliest workers in the anti-slavery cause in this country, and earnestly labored for the abolition of slavery in the West Indies, and then of the "apprenticeship system," which was slavery continued under another name. The wonderful address to the Queen, which gave the final blow to West Indian slavery was largely indebted to her help. She was the friend and co-worker of George Thompson, Elizabeth Pease (now Elizabeth P. Nichol), William Lloyd Garrison, Maria W. Chapman, and the many noble workers for the abolition of slavery in America. With them she rejoiced at the downfall of that horrible system, and after the emancipation she took a warm and active interest in the welfare of the freedmen.

The Bible Society, and the cause of peace, purity and temperance had ever her warmest sympathies. In the year 1829 she signed the first temperance pledge-book in Scotland, and all movements for the spread of temperance had her ready help. Everything connected with the progress, protection and enfranchisement of women was of importance to her. And in regard to what are called political matters she felt that there was religious duty involved, claiming the earnest attention and right action from all who seek the welfare of humanity.

But it was in connection with the Society of Friends that her chief interests lay. A Friend

by conviction as well as by education and training, she was, during her long life, a conspicuous example of consistency, and in all the public movements with which she was associated she was careful never to sacrifice her religious convictions. She was a diligent attender of meetings for worship and discipline. For many years her interested face might be regularly seen in the Women's Yearly Meeting in London, and the concerns of her own meeting were faithfully watched over. The meetings for worship were dear to her to the very last day of her tarriance on earth. Even when failing powers prevented the attendance she was still anxious and longing to go; her heart seemed to adopt the Psalmist's words, "My soul longeth, yea, even fainteth for the courts of my God; when shall I come and appear before God?" She was most devoted as a wife, and in all her domestic duties. She was kind and liberal to the poor, and given to much hospitality. Many Friends will recollect the warm welcome invariably offered them by her.

She was not a woman of many words on religious things, but her whole life was a testimony to her calm faith in Jesus Christ. She seemed long to have adopted the assurance, as she expressed it years ago, "I sought the Lord, and He heard me and delivered me from all my fears," and when health failed from time to time, and the decline came, there seemed to be no anxiety.

The readiness to attend the meetings of her people on earth might be taken as a token of her preparation for the "church and assembly of the first-born in heaven." Very nearly her last words were, "I am quite ready; art thou ready?"

At her funeral, as the words were quoted, "Friend after Friend departs," we felt in looking back over her long life, how few of her contemporaries were left, and a desire arose that the successors might brightly follow, and faithfully accomplish their mission too, and ever be ready for their work on earth, and their perfected work in heaven.

The Power of a Holy Life.—W. C. Conant in the *Honorable Review*, speaks of Archibald M. Morrison, recently deceased, as one who practically fulfilled our Lord's condition of discipleship. "Whosoever forsaketh n't all that he hath, he cannot be my disciple." W. C. Conant says of him: "Possessed of a large fortune, he was 'rich toward God,' but in no other wise rich. For himself, he lived like a poor man, that he might use all that he had in simple stewardship for his Lord's house. In his own house or equipage, there was nothing that would have prompted remark or inquiry, if he had been only a bank teller on fifteen hundred dollars a year. Not everything that his income could afford and that might be argued conducive to personal or family welfare; far less anything that the customary style of life requires only of those in his circumstances, but solely what was really essential to comfort, health and culture, entered into the scale of his private expenditure; the rest was (like the former, indeed, but more directly) the Lord's."

"The writer's first knowledge of him was by letter in which he mentioned having been entrusted with 'some of the Lord's money,' concerning which he was seeking the Lord's will; and in much subsequent experience he was never found to have any other money or any other will concerning it than the Lord's."

A Geological Excursion into Maryland.

(Continued from page 203.)

Port Deposit has long had the reputation of being an unhealthy place—being subject to malarial fevers, as are most parts of the lower Susquehanna. Although at the town itself there is little land between the foot of the hills and the water, yet in other places there is more of a valley; and as the river is subject to high freshets, this is often overflowed, and pools of water and mud from the stream left behind when it retires within its usual limits. To this cause, I heard the sickness attributed which often prevails.

Malaria is a very real and very serious evil, causing in the aggregate an enormous loss of life. It has been mostly supposed to arise from decaying vegetable material, giving rise to a subtle aerial poison; yet as Dr. John K. Mitchell has shown, it is sometimes absent from places where all the elements that usually produce it are present in abundance; and it is sometimes very fatal where there would seem to be no sufficient cause discernible. These and other considerations led him to suggest that it might be due to a minute form of fungus—a theory which has considerable plausibility, but which I believe has not been fully accepted.

A kind friend who resided in Harford County, Maryland, sent his team to meet us (for I was accompanied by a congenial companion) at Conowingo, where the Susquehanna is crossed by a long wooden bridge. We reached the place early in the morning, and while waiting for the arrival of the team, examined a flint mill close by the station, which was driven by the waters of Conowingo Creek. The Flint or Quartz or Silica (as it is known by all of these names) is brought from a ridge on the west side of the Susquehanna, which we visited later in the day; from which it is quarried out in massive crystalline blocks. The first process is to roast it in a kiln, which has the effect of destroying much of its toughness, so that it can be much more easily powdered.

The roasted Quartz, after being reduced to pieces of a suitable size is thrown into the crushing mill, which consists of two of the great grindstones, which we saw the workmen at the Port Deposit Quarries shaping out of the granite blocks. These are set on edge and made to revolve around a vertical support, crushing the fragments of Quartz on which they roll, and reducing them to a coarse powder. They perform this work the more effectually because they have a double motion—a forward roll and a sideways grinding movement caused by their being continually forced out of direct onward movement into the circular path in which they are compelled to travel.

In the mill were several circular wooden vats, in which the further grinding process was completed. These vats were floored with stone, and in the centre revolved an upright shaft with horizontal arms, each of which pushed before it a great block of Quartz whose toughness had not been destroyed by burning. The coarse powder from the crushing mill, was mixed with water and poured into these vats, and there was reduced to the desired condition of fineness, by being ground between the stone floor of the vats and the heavy blocks which were being continually moved over its surface. When sufficiently ground, the water and sand are run out into long wooden troughs, where the coarser particles settle. The more finely ground portion, which remains suspended in the water for a longer time, is then allowed to run into other

troughs, in which it also settles, and from which it is transferred into a drying box, where the moisture is evaporated from it by the heat of steam pipes running through it. It is then ready for shipment. Much of that manufactured along the Susquehanna finds a market in the extensive potteries of Trenton, N. J., where it is largely used as one of the ingredients in the manufacture of porcelain and other wares.

One noticeable feature in the process of the Flint mill, was the care observed to prevent any admixture of iron in the flint powder. In the grinding process the Quartz was not allowed to come into contact with that metal, but was reduced to powder between surfaces of stone. The presence of iron, we were told, greatly injures the value of the powdered flint, as it causes dark specks in the finished porcelain which lessen its commercial value.

We had finished our examination of the Flint mill, before the arrival of the team which was to convey us to the house of our friend, to whom we were to be indebted for the opportunity of examining some of the geological formations of Harford Co., Maryland. On entering the low wooden bridge (perhaps a mile in length) which here spans the Susquehanna, a sweet musical sound, as of an Eolian-harp drew attention to the numerous telegraph wires which were fastened to it. The wind which was blowing caused these to vibrate, and their vibration produced the sound we heard. It brought to mind the description given by the poet Thomson:

"A certain music, never known before,
Here hallow'd the pensive melancholy mind,
Full easily obtained. Behoves no more
But sideling, to the gently-waving wind,
To lay the well-tun'd instrument reclining;
From which, with airy flying fingers light,
Beyond each mortal touch the most refin'd,
The God of winds drew sounds of deep delight;
Whence, with just cause, *The Harp of Æolus* it hight.

Ah me! what hand can touch the string so fine?
Who up the lolly Diapason roll?
Such sweet, such sad, such solemn airs divine,
Then let them down again into the soul?
Now rising lower they fann'd; now pleasing dole
They breath'd in tender musings, through the heart;
And now a graver sacred strain they stole,
As when seraphic hands an hymn impart;
Wild, warbling nature all, above the reach of art!"

The sensation of sound is caused by vibration in the air or other elastic medium striking on the drum of the ear. The tightly stretched wires of the telegraph line were made to vibrate by the wind, and as they alternately struck against and receded from the air in front of them, they caused it to condense and expand, and thus set up a corresponding series of vibrations in the air, which reached our ears. This vibration is not attended with any sensible motion in the air; but its effect on the ear may be compared to the impression which would be felt by a person whose hand was in contact with one end of a log or beam of wood or metal, when a blow was struck on the other end. The log would not be moved, but the force of the blow would be carried from particle to particle until it reached and was felt by the hand at its further end. The character of the sound depends on the rapidity of the vibrations. Unless there are 30 of these in a second, the human ear cannot detect them. The difference between a simple noise and a musical one is, that in a musical note the same noise is repeated at equal small intervals of time. The rapid vibration of the telegraph wire produced a corresponding set of blows on the ear-drum by the air it set in vibration, and this

was the cause of the pleasing effect we noticed on entering the bridge at Conowingo.

A few days before our visit, there had been a heavy rain storm from the south, extending over a wide area of country. An intelligent Friend who resides at Colora, Maryland, a few miles distant from Conowingo, informed us that four inches of water had fallen at his place of abode. It was not surprising therefore to see the Susquehanna considerably swollen—the water was estimated to be ten feet above its usual level. As I looked upon the broad expanse of water, turbid with the mud it was carrying down towards the ocean, and noticed the force of its current, I was afresh impressed with the magnitude of those geological changes which have been effected through the agency of water; and I was prepared to appreciate the remark of Dana, who says,—"The amount of transportation going on over a continent is beyond calculation. Streams are everywhere at work, rivers with their large tributaries, and their thousand little ones spreading among all the hills, and to the summits of every mountain. And thus the whole surface of a continent is on the move towards the ocean. In the rainy seasons the streams increase immensely their force. Streamlets in the mountains that are almost dry in summer, become destructive torrents during the rains."

As a result of the survey of the Delta of the Mississippi by Humphreys and Abbot, it was estimated that the amount of material carried down by that river in each year was sufficient to cover an area of 268 square miles to the depth of one foot.

(To be continued.)

FOR "THE FRIEND"

In the number of THE FRIEND bearing date Twelfth Month 29th, is a contribution entitled "Form," which has arrested my attention; and I feel like expressing my desire that it may not only claim a reading, but also the serious consideration of every reader of THE FRIEND, both as regards reading the Scriptures and other devotional exercises. Surely if we were not standing as upon the background and not coming forward into the ranks of the Lamb's army, we should not plead, as do some, that, because our forefathers felt it their duty to meet in the middle of the week for Divine worship, is no reason that we should perpetuate that form; that it is not proof that such sacrifices are called for at our hands.

But surely we live in a day and age when there are just as many snares, just the same adversary to contend with, just as much need to see that we have the all-sufficient Oil in our vessels with our lamps, than there have been in any day or age of the world; and I am persuaded that such pleadings as cited above are nothing more nor less than the insinuations of the Evil One, who is continually seeking to rob us of the crown that is laid up in Heaven for all those who are faithful unto death, or unto the end, having overcome and been made more than conquerors through Him who loved us and gave himself for us. Would that we might all awake to the great truth, that, without the gracious assistance of our God we can do nothing, and that unless we seek Him by prayer and fasting, He will not be found of us to our souls' comfort. We need none of us fear that when the winding up of all things here below shall come, we shall ever have to look back with regret, that we have too humbly and ardently sought Him. M. E. LEE.

PASADENA, Cal., First Month 9th 1889.

FOR "THE FRIEND."

MODERN PROGRESSION AND REFINEMENTS.

"The march of refinement" has entered our meetings
And erected an altar to which we now bow;
The worldly-wise preachers receive friendly greetings,
And also receive good salaries now.

The world and the church walk friendly together,
And mix social amusements with worship to God;
They walk hand in hand, and scarcely know whether
They might not unite on the heavenly road.

The way once so narrow, is now made so wide,
That attractions of fancy may pass smoothly along;
And our worship has softened its features beside,
So that meetings are cheered with many a song.

Lights new and delusive are shining around us,
To charm with their brightness and lead us astray;
The world with its glories and vain sports surrounds us,
And tempts us to leave the old narrow way.

Our sires of old in true wisdom grown hoary,
Denied the vain pomp of theological schools;
And discarded the world and high sounding glory,
And the worldly-wise trainings of clerical rules.

The letter of Scripture is exalted on high,
Even over the Spirit that first gave it forth;
And the silent, still waiting for the Word that is nigh
Is esteemed as lost time, of no value or worth.

Our worship was once, more solemn and holy;
Less religious amusement, or emotional noise;
We sought inward retirement, and spiritual glory;
Not the flattery of men, nor human applause.

We conform to the world, with its many allurements,
And follow the things which our fathers denied;
With a self-pleasing hope, and unholy assurance
That that strait narrow way is growing more wide.

The light of God's grace seems but dimly now shining,
And the ministry lacks the effect it once had;
Its lapping power is sadly declining,
And the listening hearers no longer made glad.

I have a faint hope, it is but for a season,
And intended to test our faith and our love;
That the children of God may lean less upon reason,
And more on that power which comes from above.

O! the heart-melting power of the long ago preaching;
How it humbled and cheered and brought penitent
tears;

While in its measure we received the life-giving teaching
As it flowed fresh from God on our listening ears.

Now, we trust far too much in the wisdom and might
Which the culture of science can give unto man,
And think they are sufficient to lead us aright,
Without the strict rules of the old gospel plan.

But amidst all the glare of modern inventions,
No other pure gospel can ever be found;

Though smooth be the teachings; with honest intention,
They all lead away from the high, holy ground.

So what we most need is more humble confiding
In God's leading spirit to guide us along;
Though scoffers may scoff, and in their deriding,
May tempt us to leave the right for the wrong.

DAVID HIDDLESTON.

DUBLIN, Ind., First Mo. 4th, 1889.

SELECTED.

THE CHILDREN'S FRIEND.

Little children, come to Jesus;
Listen to his voice within;
For by that He seeks to lead us
From all nightfulness and sin.

Once on earth, a little stranger
From his Father's throne above,
He was cradled in a manger;
No amazing great his love!

Here, He lived "a man of sorrow,"
And by cruel hands was slain;
That all might his footsteps follow,
And retain no guilty stain.

Now He sends his Holy Spirit
Down into your hearts to stay
That you may his grace inherit,
And his perfect will obey.

Then you will be good and lowly ;
And your Heavenly Father's care
Will protect, and make you holy,
And your home above prepare.

There to be as angels, glorious,
Clad in spotless robes of white ;
Over every foe victorious ;
Dwelling in eternal light.

KEEPING NOTHING BACK.

BY MARGARET E. SANSTONER.

Keeping nothing back, dear Lord,
I would come to thee,
All that mine is only thine,
Given unto them.
Help my weakness with thy strength ;
Give me thine to be.

Keeping nothing back, dear Lord,
Talents, service, time,
Gold that thou hast lent to me,
Health and life's glad prize ;
Day by day the upward way
Surely I would climb.

Keeping nothing back, dear Lord,
Giving thee my best,
Shrinking from no task or toil,
Tried by every test,
Finding thee my heart's delight,
Thou my home and rest.

Keeping nothing back, dear Lord,
Loving all the way,
Pouring out my soul in prayer,
Seeking to obey ;
Help me to in this happy life,
Loving Lord, to-day !

—American Messenger.

FOR "THE FRIEND."

The letter of our friend, John Bennington, printed in the editorial column of THE FRIEND for First Month 26th, appropriately supplements the review of the "Biographical Catalogue" in giving an insight to the practice at Ackworth School in relation to religious instruction when he was a scholar, as well as the rules established at the commencement of the school. The essayist in the Catalogue, in stating that up to 1812, "no direct Scriptural instruction was given in the school" does not appear to intimate that there was a lack of religious instruction in other ways. He seems rather to mean that Scripture lessons such as are now given at our select schools and Westown were not in vogue at Ackworth in those early times.

As respects the wearing of cocked hats, John Bennington informs us that they were not in use when he was there. The statement that they were worn when the school was established in 1779 is given on the authority of Thomas Pumphrey (superintendent from 1854 to 1862), who probably obtained his information from reliable sources; and as our friend J. Bennington could hardly have been at the school earlier than 1810, there was ample time in the intervening thirty years for many changes to have taken place.

At the time Ackworth School was established in 1779, cocked hats were generally and perhaps universally worn by Friends, both in England and Philadelphia. Forty years later, Friends could be occasionally seen wearing them in our own streets. I remember to have often heard in my boyhood days that my great-grandfather, who died in 1824, "was one of the last Friends who wore the cocked hat." Authentic portraits are in existence of James Pennington, Nicholas Wala, Samuel Sansom, Robert Prond, and other prominent Friends who died in the early part of the present century, which show them with that style of hat.

In a notice of Robert Prond, read by the late Charles West Thomson before the Historical Society of Pennsylvania in 1826, the writer says: "I remember having seen him when I was quite a small boy; his appearance was striking and could not readily be altogether forgotten. I have not been able to recall the expression of his countenance, but I well remember the imposing effect which the curled gray wig, the half-cocked patriarchal hat, and the long, ivory-headed cane had on my boyish imagination." I believe Prond was one of the last of the old school—I mean those who adhered faithfully to the dignified dress of our ancestors."

These circumstances are interesting, as showing the change which time has wrought in what is thought to be suitable in the matter of attire.

G. V.

Joseph Phipps on the Gospel.

In reply to one who had opposed the doctrines he maintained, Joseph Phipps explained the views held by the Society of Friends as to what is meant by the Gospel of Christ.

The evangelic and apostolic writings are descriptive and declarative of the Gospel, which therein is defined to be "The power of God unto salvation." Christ is the power of God, who spiritually and internally administers light and life to the souls of men; which spiritual and powerful administration is the *essential Gospel*. Both those parts of Scripture, which bear testimony to the incarnation and outward process of Christ, and those that witness to his inward manifestation in spirit, whether narrative or doctrinal, being the best and most eminent testimonies of the Gospels, are therefore, by a metonymy, usually called by its name.

This Gospel is not to be truly and certainly known without Divine illumination; for, "the things of God knoweth no man, but the Spirit of God."

We read that "life and immortality are brought to light by the Gospel." But what is this life and immortality? Did not mankind believe in a future state before the incarnation of Christ? Yes, certainly; both Jews and Gentiles believed and held the truth of it. What life and immortality then is that which is *peculiar to the Gospel*, and which it is its peculiar property to unveil? It consists not wholly in the relation of the external procedure and doctrines of our Lord, but mainly in that spiritual gift He procured for us through his sufferings, which is the *life and power*; that the immortal spirit of God manifests in the believing and obedient soul—that spirit which quickens those who have been dead in trespasses and sins, and therein alienated from the life of God. The very essence of the Gospel is that issuing forth of this spirit of life to the hearts of men. "Keep thy heart with all diligence," saith the wise man, "for out of it are the issues of life." This teaches that these living issues arise in the heart of man, but not from the heart itself. Was it so, the heart would be its own quickener and saviour, and Christ would be excluded as such, but He alone is the way, the truth and the life, therefore, the issuing of life to the heart are from the Spirit, and in and through it, by his spirit.

The Divine influence of it is the life of the soul, that which renders it living; and void of this it cannot be, in a Gospel sense, a *living soul*. It may endure to eternity, but mere duration is not this Divine life. To exist without this life is to be scripturally dead. It is therefore

requisite for the soul to wait for, feel after and find this immortal life and also to keep to it with all diligence, that it may experience the daily issues thereof to its comfort and preservation, and to be as a well of water springing up into everlasting life.

Natural History, Science, &c.

The Horns of Deers, &c.—It has been the usual impression that the horns of the elk and of deer, while useful for purposes of defense, were in the creature's way while threading dense woods or underbrush. Sir James Hector maintains that the chief use of the antlers is not so much for fighting as for facilitating the progress of the stag through dense woods. He had had considerable experience with the elk, and found that by throwing up the head, thereby placing the horns along the back, the animals were enabled to go forward with great rapidity and follow the hind. Fort-scene added that in New Zealand he had observed that the antlers assisted the stags in penetrating dense forests, and Higginson bore out this statement from his experience in India.—*The Independent*.

Winter Rooms.—Sunshine is indispensable to make a winter room delightful. If one has a southern exposure she should make the most of it. Let the curtains be so arranged that the sunlight may pour into the room without hindrance. Let the furniture be so arranged that lounges and easy chairs may be near the windows, where their occupants may bask in the solar ray and rejoice in its brightness and warmth. A bay window looking toward the south is just the place for children to play, for the invalid, for the patient recovering from pneumonia. We know a gentleman who, barely escaping death from the last mentioned malady, was advised by his physician to be in the sunshine on a lounge. No medicine but this, so delightful to take, was given, and he entirely recovered. We know a lady who suffered greatly from rheumatism until she moved into a sunny room, and here she sat in her chair by the window day after day, and was almost entirely relieved of her pain by simple sunshine (which is one of the most mysterious and complex things we know anything about).—*Christian Advocate*.

To Drive Away Flies.—Oil of hays is extensively used in Switzerland by butchers to keep their shops free from flies, and after a coat of this oil has been applied to the walls none of these troublesome pests venture to put in an appearance. This remedy has been tried and found effectual in the south of France in preserving gilt frames, chandeliers, &c., from becoming soiled. It is even remarked that flies soon avoid the rooms where this application has been employed.

Zinc Poisoning.—At a dinner party given by Charles Wilson, living near Creston, Iowa, on New Year's day, his family and nine guests were poisoned by partaking of meat salted in a vessel made of zinc. All are in a serious condition.

The Rose-breasted Grosbeak.—The rose-breasted Grosbeak is one of the few, perhaps the only bird that feeds regularly on the Colorado potato beetle. Although the rose-breasted Grosbeak used to be a rather common summer resident in Chester and Delaware counties, in Eastern Pennsylvania, it is now seen in small parties from five to a dozen in each, passing northward in May and southward in September. In the north-western part of the State, particularly in Craw-

ford and Erie counties, the farmers anxiously protect these birds, because of their activity in the potato field. In the gizzards of some other birds, the potato beetle is occasionally found, but the grosbeaks seem to have developed an avidity for this particular insect diet, and should be encouraged by every means to continue their good office. They are sweet songsters and beautiful in plumage besides.—*Dr. Warren's Report on the Birds of Pennsylvania.*

Sanitary Precautions.—At a meeting of the New Jersey Sanitary Association, Professor Wilber, of New Brunswick, showed the danger arising from impurity of water, with reference to wells. The well may be regarded as a draining tube, receiving such decaying vegetable and animal matter as is not filtered out by the soil through which the water passes. The wells of a city may furnish good water for a time, but when the strata beneath it have been penetrated by hundreds of holes in the form of wells, these give entrance for organic matter. He insists that all wells should be so constructed that organic matter cannot enter them from the top.

Fossil Foot-marks.—The sandstone quarries at Wethersfield, Conn., have furnished evidences of thirty-five species of lizard or bird-like animals which had left their foot-marks on the sand before it had hardened into rock. Many other species have been discovered in other places, so that the list of these animals now amounts to one hundred and seventy.

A Singular Death.—A singular case of a man drowned in a glass of beer is reported as having occurred recently in Trenton, N. J. It is said that he had been drinking hard, and was well under alcoholic influence, when he entered a saloon and ordered a glass of beer, which was brought him. He sat down at a table and fell into a stupor, his head dropping forward into the glass before him. When the barkeeper tried to arouse him half an hour later it was found that he was dead, his nose being immersed in the liquor in such a way that respiration was completely stopped. Death, from *drowning* in beer is a new form of the saloon peril. "Such a death, may of course, occur quite as readily if the license fee be high or low. For this form of the saloon peril high license is obviously no remedy. To escape it altogether "the saloon must go."

A Natural Stimulant.—Milk heated to much above 100 deg. Fahrenheit loses, for a time, a degree of its sweetness and density. No one who, fatigued by over-exertion of body or mind, has ever experienced the reviving influence of a tumbler of this beverage, heated as hot as it can be sipped, will willingly forego a resort to it because of its being rendered somewhat less acceptable to the palate. The promptness with which its cordial influence is felt is indeed surprising. Some portion of it seems to be digested and appropriated almost immediately, and many who now fancy they need alcoholic stimulants when exhausted by fatigue will find in this simple draught an equivalent that will be abundantly satisfying, and far more enduring in its effects.—*N. Y. Medical Record.*

Smoking Boys.—Science gives the following significant facts concerning the results of smoking by boys: "In an experimental observation of thirty-eight boys of all classes of society, and of average health, who had been using tobacco for periods ranging from two months to two years, twenty-seven showed severe injury to the constitution and insipient growth; thirty-two showed the existence of irregularity of the heart's action, disordered stomachs, coughs and a crav-

ing for alcohol; thirteen had intermittency of the pulse, and one had consumption. After they had abandoned the use of tobacco, within six months' time one-half were free from all their former symptoms, and the remainder had recovered by the end of the year."

Artificial Propagation of Shad.—The fisheries census of 1880 showed a decline in the productiveness of the shad fisheries in the rivers of the Atlantic coast. This was partly due to the increasing obstructions by dams and other hindrances which excluded the fish from their natural spawning grounds; and partly to the transfer of the shad fisheries to the estuaries of the rivers, where no eggs are laid.

The U. S. Fish Commission have endeavored to remedy this difficulty by saving the eggs taken from the fish caught by the fisherman, impregnating and hatching them, and returning the young fish to their native waters. The number of these shad thus planted in last year amounted to nearly one hundred and fifty-four millions.

That the work has been successful is shown by the steady increase in the number of shad caught in successive years—running up from a little over four millions in 1880, to more than seven and a half millions in 1888.

Test for Honey.—Worthington G. Smith, the eminent microscopist, finds that genuine honey can be readily distinguished from manufactured honey by the microscope. The former has few or no sugar crystals and abounds with pollen grains, while the imitations have little else than these crystals, with rarely a trace of pollen grains. Each class of plants has its own specific form of pollen grain, and W. G. Smith says that any one conversant with this branch of botany could tell from what part of the world the honey came, by studying the pollen grains that it might contain. The honey he had was English honey, and it abounded with grains of *Leguminosæ*, especially beans and clover, the English health and evening primroses. In America, however, bees freely visit the compressed flowers not, however, for honey, but for the pollen. They are, indeed, among the most popular of flowers with our pollen gatherer. As the bees make a separate task of honey-gathering from pollen-gathering, this may account for the rarity of the pollen grains of this order in honey.—*The Independent.*

Deceiving our Children.

Of necessity the mother, in nine instances out of ten, forms the character of her children. If a child cannot believe his mother, whom can he trust? Yet so few of us are perfectly truthful to our children in both "spirit" and "letter."

Can any motive in deceiving—apparent necessity, convenience, or even a desire to increase pleasure or spare pain—compensate for the injury done a child by loss of perfect faith in his mother? He is sure to discover a deception sooner or later.

How often a mother who would warily resent an insinuation that she is untruthful will say: "There is no more candy for you Jamie," quieting her conscience with the *letter* of the decree. Next day when Jamie sees more candy taken from the same box he remembers the "no more candy," but does not realize the force of "for you," and a little faith in mamma is gone. Or, when baby has a forbidden treasure, mamma says: "Let me look at it, dear," trustful baby allows mamma to "look," and the prize is placed safe out of reach. It is doubtful if that request will be so readily granted next time.

A few days ago, upon hearing her mother recite a startling fact, I saw an expression of doubt instantly suppressed, pass over the mobile face of a bright girl friend. When opportunity offered, she said: "Do you know I would give anything I can think of if mamma had never told me there were fairies and a Santa Claus. Until I was a great girl I believed in those myths, against all ridicule and reason, solely upon faith in her assurances. I shall never forget the shock I received when she lightly told me that 'such ideas were for little girls,' and I lost then what I can never regain—implicit belief in mamma's word. If she says anything surprising, that horrible doubt of its truth always flashes over me."

Another form of deception is in answers to questions which are beyond the years of the little inquirers. Instead of saying, "When you are old enough to understand I will explain," so many mothers silence inquiry with palpably silly or untrue replies. Such answers are a positive injury to children, hurting their pride and making them suspicious. Their keen intuition detects the deceit, though unable to correct it. We know how we feel on that point, and we are only grown-up children.

It is not necessary to hurt their self-respect by telling them that "that is nothing for little boys and girls to know; children should not be too inquisitive;" but simply explain that when they have learned enough to understand it, you will tell them. I think any child would be most benefited and best pleased by such a reply.—*C. C. Fowler, in Babyhood.*

From West Chester Local News.

The Inauguration, the Military Features Thereof, &c.

Editor News:—Would it not be more conducive to the permanency of Republican institutions for us to discourage martial display and the parade which distinguished some of the extinct and expiring dynasties of Asia and Europe on great occasions; if we adhered to true Republican simplicity at the beginning of a new administration at Washington?

It was very refreshing to read, in a recent paper, the protest of the M. Methodist Preachers' Association at Columbus, Ohio, on the 24th inst., against "the tendencies in certain quarters to imitate the follies, displays, pageantry and extravagance of European courts, and the proposed expenditure of nearly \$100,000 for the purpose of imitating these follies, corrupting the simplicity of Republican principles, encouraging the tendency to extravagance and perpetuating that relic of barbarism—the inauguration ball on our occasion of the inauguration."

Have our thoughtful people, and especially those who are professed Christians, will examine these things carefully for themselves and consider fully whether other denominations than the Methodists (if true to their professions of Christianity) should not now, or ere long, show clearly their professions in their practice, and on all suitable occasions make their influence felt in opposition to the spirit which, under the guise of great display and military parade, endeavors to foster and perpetuate that relic of barbarism, war, in cultivating the spirit which leads to it. I regret that the State which was founded by William Penn, and kept up for seventy years with such great success without military, should be expected to furnish the marshal for the inauguration parading and the largest contingent of troops.

This, to me, is cause for mourning and not for congratulation, and to my mind shows declination, not progress. If the doctrines of the Sermon on the Mount are to prevail, is it not time for some of us to endeavor to put them in practice? I appeal to all thoughtful people, without regard to their political proclivities, to examine this matter closely and see where this spirit of display is leading us.

Well did Longfellow write in the arsenal at Springfield:

"Is it, O man! with such discordant noises,
With such accursed instruments as these
Thou drownest nature's sweet and kindly voices,
And jarrest the celestial harmonies?
Were half the power which fills the world with
terror,
Given to bestow the wealth bestowed on camps and
ports,
Given to releaseth the human mind from error,
There were no need of arsenals or forts."

Planting With a Cannon.—Alexander Nasmyth, the landscape painter, was a man fruitful in expedients. To his mind, the fact that a thing could not be done in the ordinary manner, was no reason why it should be given up. His son relates the following interesting example of his ingenuity:

The Duke of Athol consulted him as to some improvements which he desired to make in his woodland scenery near Dunkeld.

Among other things, a certain rocky crag needed to be planted with trees, to relieve the grim barrenness of its appearance. The question was how to do it, as it was impossible for any man to climb the crag, in order to set seed or plants in the clefts of the rocks.

A happy idea struck my father. Having observed in front of the castle a pair of small canons, used for firing salutes on great days, it occurred to him to turn them to account.

A tinsmith in the village was ordered to make a number of canisters with covers. The canisters were filled with all sorts of suitable tree seeds. The cannon was loaded, and the canisters were fired up against the high face of the rock. They burst, and scattered the seed in all directions.

Some years after, when my father revisited the place, he was delighted to find that his scheme of planting by artillery had proved completely successful, the trees were flourishing luxuriantly in all the recesses of the cliff.

Items.

Our Free Institutes for the Promotion of Brutality and Degradation.—With the above title, our friend, John W. Levels, of Germantown, has issued a tract designed to call attention to the demoralizing effect of sensational literature, and of some of the illustrated posters displayed on the walls and fences about our cities. From it the following paragraphs are extracted.

"Walking along one of our down town thoroughfares one day, my attention was drawn toward a lad, evidently an errand boy, who, with head bent down, was coming toward me. He moved at a very slow pace, as he was intently engaged in reading a story paper, which he held in his left hand, close to his face. A similar paper was seen in the queues of parcels, boxes depending from the other arm. The story paper was recognized at once, by its flashily conspicuous illustration, as being identical with others, which, an hour or so ago, had been scattered by the sower of tares in the building where my office is located. Its leading story—I might say its *pièce de résistance*—was of a school-boy who, on days ago, was about depending the completeness of his knowledge of the art of self-defence, by his 'knock-down arguments,' frequently repeated, both at a village school and in a great city where he ran against detectives and des-

perados at every turn. Another story, appropriately illustrated, related to untrampled upon the plains, and the shooting of 'rascally Indians.' This little detail of story paper distribution, appears to have received special emphasis since it was noted, in the late repeated arrests, about the city, single or in gangs, of youthful deprecators and house-breakers. One of the accounts, rather more startling than the rest, informs us of the doings of a twelve-year-old highwayman, armed with a loaded revolver, who was arrested (as alleged) for waylaying small boys and "holding the pistol to their heads, compelling them to disgorge the contents of their pockets." A companion piece to the foregoing, happening a few days later, relates to a party of boys, who held a pistol at the head of a captive school children, while his confederates rummaged their pockets."

"A colporteur in Southwest Missouri, writing very recently to the American Tract Society, remarked: 'The lives of Jesse James and other criminals have been extensively circulated, and have produced a harvest of recklessness and roving-in, which has manifested itself in Sabbath-breaking, disturbing religious meetings, gaming and intemperance.' Recent dispatches from Durant, Mississippi, report frequent robberies by masked highwaymen, of farmers, who go to the town to sell their cotton, and who are then taken to camp or to jail, have to be ransomed and their money taken from them. From New York City a succession of daring highway robberies was reported during the last month of the year just past. Fifty suits have been entered before an Alderman in Lancaster, Penna., charging twenty boys, ranging in age from fifteen to twenty years, with stealing fruit, and robbing the boys were an organized gang. These are but samples of almost every day's records. Very often the literature of detectives and thieves is found either upon the persons of the juvenile offenders or at their rendezvous, thus evidencing the directness of the connection."

A quotation is made from a London journal to show its estimate of the demoralizing effect of 'highly colored pictorial advertisements' representing sensational scenes of violence and murder on the morbid imagination of unbalanced minds. The tract then says:

"There are in the 'City of Brotherly Love,' founded by Penn in deeds of peace and with many prayers, have been exhibited at one time and within a few days of the writing of this, advertisements of three of the theatres, which are of the brutal character referred to. Especially horrible was that in which a man, terribly excited, was shown clatching an opponent by the throat with his left hand, while, with the right, a dirk with a foot-length of blade was held over the uncovored head of his antagonist and beneath were the words, 'Why don't I rid the world of this man.' Similar ones were to be seen on the extensive boardings on Broad Street, nearly opposite the Central High School. Such representations of the most brutal and low-down character means an elevating or refining spectacle for the contemplation of the hundreds of lads who are receiving their education over the way at the public expense, nor are they healthily suggestive to the multitude of operatives of the Baldwin Locomotive Works, and other large manufacturing establishments in the immediate neighborhood."

"The Superintendent of Police of this city having expressed the opinion that there is no law at present upon the statute books to prevent such degrading representations, the following bill has been forwarded to Harris-burg for early presentation to the Legislature, to wit:

"An act to prevent and punish the making and posting of any obscene circulars, hand bills, and show-bills:—Be it enacted, that any person or persons who shall print, utter, publish, or otherwise prepare, or shall put up, or cause to be put up in any public place, any circular, hand-bill, or show-bill, representing a person in the act of assaulting another in a threatening, brutal, or savage manner, with a pistol, dirk, or other deadly weapon, shall be deemed guilty of a misdemeanor, and on conviction thereof shall be fined not less than twenty-five dollars nor more than three hundred dollars."

"Sunday" Newspapers.—A few weeks since the Methodist, Congregational and Baptist ministers of Chicago, at their regular weekly meeting, passed resolutions condemning the publication of newspapers on the First-day of the week; and asking that all notices of church services to be held on that day should be withheld from such papers, and that all manuscripts or notes of sermons should be refused to reporters, when these were designed to be put in type or printed on that day. This last provision excited the indignation of the publishers of some of those papers, who threatened to prosecute the ministers who passed the resolutions, as violators of the laws which prohibited "boycotting, &c.;" but they made no attempt to carry out their threats.

THE FRIEND.

SECOND MONTH 2, 1889.

A recent number of the *Christian Worker* contained a letter from John F. Hanson, one of the ministers of Iowa Yearly Meeting, (the Larger Body) in which, after alluding to the arguments in favor of a regularly supported ministry, which had appeared in that journal, he says:—

"There is, however, a side to the subject which has not been sufficiently attended to, namely:

"What is to be done with the ministers who are superseded in those meetings where a regular pastor has been called?"

"It is a fact that the poor and needy meetings cannot be supplied with a regular supported ministry in the present condition, as we have not a fund, like some other denominations, from which to draw to help needy meetings. In some larger meetings 'pastors' have been employed, where heretofore several resident ministers have jointly carried on the pastoral work while supporting themselves, who are now superseded and released from much, if any, work in the meeting."

"The church cannot afford to ignore their presence by saying they ought not to expect to preach where they are not wanted, or they may go out and gather a congregation where they can get a hearing, as many of them are not evangelists."

"The tendency is also with large and financially able meetings to command the best talent, eloquence and education—to compare or compete with the pastors of other churches in their respective localities; therefore we are in a fair way of 'superannuating' many efficient, though 'plain' ministers, who are now somewhat at a discount, unless some means can be provided to place them in needy and newer fields, where their services will be better appreciated."

This letter brings to view one of the difficulties that attend the system of having regularly supported ministers. It is only one difficulty out of many, with which some other denominations are called upon to contend, and from which our Society has heretofore been happily freed.

Independently of all questions of expediency, we believe the system would never have been introduced into any part of our Society if there had not first been a loss of confidence in our testimonies to the nature of true Gospel ministry and Divine worship, and a want of faith in the practical government of his church by our Holy Head. We believe that as time goes on, it will be increasingly evident that the testimony which the Society of Friends has borne from its earliest

days against a "hiring minister," strikes at the root of all such arrangements; and that a man who accepts a salary on the condition that he is to deliver a sermon on each meeting day, is not the less a "hiring minister" because he bears the name of a "Friend."

We do not use the term "hiring" as implying any want of conscientious effort to perform the duties for which such persons have contracted, and for which they are paid; but in its primitive meaning, of doing labor for wages. But Friends have ever believed that Gospel Ministry was a Divine gift, to be exercised only when, and as the Lord himself gave the renewed ability and command; that the reward to be looked for was the sense of Divine approval for faithful obedience; and that it was not a proper subject for bargain or contract between those who were called into this service and their fellow-men.

We are requested to caution our readers against the impositions of a young man, with dark hair and beard, and whose left leg is deformed below the knee, who, representing himself as a member of our religious Society from England, and giving the names of well-known Friends, has already enlisted the sympathies of many, who subsequently discovered that his statements were false.

SUMMARY OF EVENTS.

UNITED STATES.—The Honolulu *Bulletin*, which has reached San Francisco by steamer, prints a circular sent out by the German officers at Samoa regarding the late disturbances there. The circular states that the Germans have expressed or mistreated the natives, and reaffirms the statement that in the late battle in which 22 Germans were killed, the natives were led by an American newspaper correspondent.

The total value of the exports of merchandise from the United States during the year 1888, was \$690,799,442, against \$715,201,044 during the preceding year. The value of our imports during 1888 was \$725,224,153, against \$708,819,478 during 1887.

The Senate Committee on Appropriations has finished the Diplomatic, Military Academy and Pension Appropriation bills. The appropriations in the Diplomatic bill are increased from \$1,427,000, the House figure, to \$2,050,000. The most interesting new items are: To protect American interests in Samoa, \$500,000, and to establish a coaling station at Pago-Pago, Samoa Islands, \$100,000. The Consulate at Apia, in the Samoa Islands, is raised to a consulate General, and the salary from \$2000 to \$2500.

In the U. S. Senate, on First Month 22d, the Tariff bill was finished and passed finally—yes 52, nays 30—in a party vote; all the amendments offered by the Democrats in the interest of reduction having been rejected.

On Seventh-day, the 12th of last month, the Kennebec River, Maine, reported a peril for navigation from August to the sea. The ice having gone out. Not a pound of ice has been harvested yet.

Information has been received fromeward County, Kansas, to the effect that many of the residents are on the verge of starvation. Appeals for help have been sent to the Kansas Relief Committee, in the State of Kansas that has suffered from crop failure, and many of those who went there with little money lost their all, and are now forced to appeal to the charitable for help.

The new West-Washington Markets, in New York, were opened on Seventh-day, the 26th. The structure is claimed to be the most costly and to possess more facilities for the business to which it is devoted than any other in the world.

After an earthquake had been received from Bonnet, Colorado. The shocks commenced on the afternoon of the 15th ult., and at 4 o'clock there were violent ones which rocked small buildings, detached large masses of rocks from the mountains, and greatly frightened people upon animals. The cattle were especially terrified and ran frantically back and forth. Thunder preceded the shocks, but there was no rain. "A peculiar phenomenon was observed at Hot Springs, below the Government bridge. The shock was productive of

great gushes of water and gas. Fully three times as much water as gas was thrown out, and accompanying it was a most sulphurous stench that made the people sick, and caused the birds to drop to the ground. When the convulsions ceased the water receded, and the odor of the sulphur of the great river.

The course of the shock was from the south, northward. The healthfulness of the present mild weather is evidenced by the number of deaths in this city last week, which was 229, a decrease of 47 from the previous week, and a decrease of 103 compared with the corresponding period of last year. Of these there were 190 males and 126 females; 47 died of consumption; 34 of pneumonia; 28 of diseases of the heart; 20 of old age; 16 of inflammations; 14 of inflammation of the brain; 12 of diphtheria; 11 of Bright's disease, and 10 of typhoid fever.

Markets.—In U. S. 4's, 109 1/4, 4's, 128; currency 6, 119 1/4 to 129. Cotton was in light demand from spinners, at 10 1/2 cts. per lb for middling uplands.

Feed.—Winter bran, choice, \$17 a \$17 25; do., fair to prime, \$16.50 and \$16.90; white middlings, \$16 a \$18; red middlings, \$15 a \$16.

Flour and Meal.—Western and Pennsylvania super, \$2, 82 1/2; do., extra, \$1.00 to \$1.07; No. 1 winter family, \$3.75 a \$4.25; Pennsylvania family, \$4.00 a \$4.75; Pennsylvania roller process, \$5 a \$5.25; Ohio, ear, \$4.75 a \$5.00; do., straight, \$5.00 a \$5.25; Indiana, ear, \$4.75 a \$5.00; do., straight, \$5.00 a \$5.25; \$2, Louis and Southern Illinois, clear, \$4.75 a \$5.00; do., do., straight, \$5.00 a \$5.25; winter patent, fair to choice, \$5.40 a \$6.00; Minnesota, clear, \$4.25 a \$5.00; do., straight, \$5.00 a \$5.87 1/2; do., patent, \$6.00 a \$6.75.

Grain.—No. 2 mixed wheat, 94 1/4 a 95 cts. No. 3 mixed corn, 41 a 41 1/2 cts. No. 2 white oats, 23 1/4 a 24 cts.

Beef cattle.—Extra, 4 1/4 a 5 cts; good, 4 1/4 a 4 1/2 cts; medium, 3 1/4 a 4 cts; common, 3 a 3 1/2 cts.

Sheep.—Extra, 3 1/4 a 6 cts.; good, 3 1/4 a 5 1/2 cts.; medium, 3 a 5 cts.; fair, 2 1/4 a 4 1/2 cts.; culls, 3 1/4 a 3 1/2 cts. Lambs, 4 to 4 1/2 a 5 cts.

Hogs.—Extra (Chicago, 7 1/4 a 7 1/2 cts.; good Westerns, 6 1/4 a 7 cts.; fair Western, 6 1/4 a 6 1/2 cts.; common State and rough Western, 6 a 6 1/2 cts.

FORBIDDEN.—On the 24th of last month, the trial of Wm. O'Brien, in the charge of conspiracy, began at Carrick-on-Suir. About 20,000 persons gathered round the Court-house, and while the prisoner was striving to pass in the building, he was seized by a police inspector and dragged for the city yards. An attempt was made to bring the trial to a close there.

When the case for the Crown had been presented Timothy Healy, on behalf of the defendant, applied for subpoenas for Lord Salisbury and Balfour, both of whom, he asserted, had made speeches similar to those of Wm. O'Brien. The court refused to issue the desired subpoenas. The spectators in the courtroom received this decision with murmurs, and the Magistrates ordered the galleries to be cleared.

While this was being done Wm. O'Brien exclaimed: "I'll clear out, also," and started for the door. The Magistrate ordered the doors to be kept closed, and a gable O'Brien. After a sharp struggle, O'Brien, with the aid of some of the spectators, managed to reach the street, where an immense crowd escorted him through the town, until he disappeared. It is estimated that 30,000 persons were wounded in the disturbance.

The next day, the trial of William O'Brien was resumed at Carrick-on-Suir; O'Brien was absent. The trial, however, proceeded in his absence, and he was convicted and sentenced to four months' imprisonment, without hard labor. The police have as yet discovered no clue to his hiding place.

On the 24th, the trial of McCarthy, a priest, charged with inciting boycotting, was resumed at Clonkilly. McCarthy was found guilty, and the Magistrate imposed a sentence of four months' imprisonment upon him. Notice of appeal from the sentence was given.

On First-day the 27th ult., the election in Paris resulted in a plurality of 81,750 for General Boulanger. In consequence of the victory of General Boulanger, the next morning the Ministry tendered their resignations to the President of the Republic to accept them.

The comments of the European press on the Parisian election, generally agree that an important crisis has been reached in the Republic.

that if Sir John Kirk returns to Zanibar a British Consul, as reported, it will mean the restoration of absolute English supremacy. The writer accuses England of stirring up the feeling against the Germans.

The *North German Gazette* (Prince Bismarck's organ) denounces the existence of any treaty providing any European power from acquiring, or seeking to acquire, ascendancy in Samoa. The *Gazette* also denies that England and the United States are agreed that the proceedings of the German Agent in Samoa are contrary to the stipulations of the treaties concerning Samoa and are opposed to diplomatic etiquette, and that those Powers have officially notified the German Government accordingly. The treaties between Samoa, Germany, England and the United States, the *Gazette* further says, provide that Samoa shall concede to each treaty Power equal rights with any other Power, but no treaty regarding the neutrality or independence of Samoa exists between Germany and the United States. The *Colonist Gazette* says it has reliable authority for the statement that Germany and England are negotiating on the Samoa question in a spirit of mutual understanding, and that all reports to the contrary are incorrect.

A telegram from Paniaia says that except the recent temporary stoppage of work at 'Aielea, work on all the other sections of the railway has continued, and matters have assumed their customary pacific appearance.

NOTICES.

WESTWON BOARDING SCHOOL.—At a meeting of the Committee charged with the care of this Institution, held in Philadelphia on the 11th inst., it was decided that the minimum age at which children shall be admitted to the school hereafter shall be six years, instead of nine, as heretofore. This rule to apply to future new admissions, and not to those who are, or have been there, and are desiring to return.

JONATHAN G. WILLIAMS, *Sup't.*
First Month, 1889.

A Friend in New England is desirous of obtaining a woman Friend as housekeeper, &c., his wife being unable to do the school hereafter shall be six years, instead of nine, as heretofore. This rule to apply to future new admissions, and not to those who are, or have been there, and are desiring to return.

WESTWON BOARDING SCHOOL STAGE.—During the Winter term the stage will be at Westwton Station on the arrival of the 8.53 and 2.47 trains from Philadelphia, to convey passengers to the school, and at other times on timely notice to

J. G. WILLIAMS, *Sup't.*
Westwton, Pa.

WESTWON BOARDING SCHOOL.—A competent teacher of Mathematics will be wanted in the girls' department, at the opening of the next session, Fourth Month 20th. Application may be made to

ELIZABETH ALLEN,
2215 Locust St., Phila.,
ANN ELIZABETH COMFORT,
Fallsington, Bucks Co., Pa.,
or REBECCA EVANS,
P. O. Box 1220, Moorestown, N. J.

A MEETING OF FRIENDS' TEACHERS' ASSOCIATION, OF PHILADELPHIA, will be held at 140 N. Sixteenth Street, Second Month 19th, 1889, at 2 P. M.

Program.
1. Politics in History—Edward P. Allinson.
2. Some of the Advantages of General Reading—Charles Wood.
To be followed by discussion.

DIED, suddenly by drowning, on Second Month 17th, 1889, AARON PARKER, aged 31 years, son of Aaron and Judith Ann Parker, members of Rich-square Monthly, and Cedar Grove Particular Meeting, North Carolina. His friends trust that, through the love and mercy of a compassionate Redeemer, he has been taken from the evil to come.

—, at the residence of her brother-in-law, Hamilton Haines, First Month 2nd, 1889, ELIZABETH KAYLEN, in her 44th year. Being of a meek and retiring disposition, she said but little about her spiritual exercises; she was very self-dedicating, and afraid of offending her Creator. Her friends have a comforting belief that through mercy she has been permitted to enter into the rest prepared for those whose sins have gone beforehand and judgment.

FOR "THE FRIEND."

Journal kept by Martha Routh, on her Passage
from London to America.

(Continued from page 210.)

"Seventh-day, Eighth Mo. 30th, four vessels more were seen this morning, but did not come near us, and I believe we shall be generally glad to steer without other company, until it may please the Great Ruler to permit our landing at the desired port. And though our travel hath seemed long, and our passage is not yet half over, we have no cause to complain, but rather to give Him thanks unto whom alone they are due. The evening being fine, we walked on deck till after dark, the seas and clouds looked solemnly beautiful and grand; our vessel going the right course, all things seemed pleasant. About 10 o'clock on First-day morning (31st) we quietly sat down together, and had cause humbly to acknowledge that our Heavenly Father owned us by breaking of bread, and opened counsel through his servants to the states of those present. Dear J. Wigham in a particular manner hath been rendered an instrument of instructive labor to the seamen. We had another meeting in the evening; and as we have a hope that the latter part of our voyage may be attended with more quietude, our meeting together on Fourth-day morning in like manner was proposed. Our justly valued elder brother Samuel Emlen, keeps his usual health, and for the narrow compass he is in, is frequently employed in dropping instructive encouraging hints in general, and to individuals as truth opens the way—particularly to the two young women in the station of servants, which I much desire may by them be remembered to profit. The sea ran high through this day, and in the night caused a very great tossing, with thunder and lightning and heavy rain. Yet my mind was kept quite easy from any fear respecting our situation, though I understood the steerage passengers were so alarmed as to get up, with the great pitching of the ship; yet she is an excellent one, rides the waves and ploughs them from her in an extraordinary manner; and I remain to have no doubt that, in the appointed season of our Heavenly Pilot, we shall land safely.

Seventh-day morning, do not feel much anxious in my health, which claims thankfulness where it is due; have also, in some sweetness of spirit, visited divers of my near and dear friends whom

I have left behind in different places, and could now dearly salute them by name, if needful; but I know there is a much nearer language in which kindred spirits can meet and greet one another, than through the medium or expression of any form of words whatever—in this union and communion with such, I humbly crave my dwelling place may be within time, and then I believe it will not fail in eternity.

First-day, rose and assembled with my friends at ten, divers of the mariners attending as usual; it was a quiet favored opportunity; also another in the evening, the day being calm and pleasant; and indeed it hath been remarked that whatever tossing we have had at other times, during those of our religious sittings we have had little or no interruption; which much corresponds with an observation that S. Emlen made in our first opportunity, that he had remarked it to his admiration when at sea.

Fourth-day, held our week-day meeting as usual, which was attended by the captain and others; and if the fault is not ours, designed to be an instructive season, through the renewal of Divine favors extended towards us. Those belonging to our Society have mostly stopped a little after the others have gone, though without any proposition for it by any of us; and sometimes we have been atresh owned together in the administration of suitable counsel; and my mind hath several times had a glance or transient view, that one First and one Fourth-day more will close our religious meetings together in our present habitation.

First-day, Ninth Month 14th, met together as usual; spoke with several vessels from Boston, who left it four days since, and as we are drawing thus nigh, I have been ready at times to be looking out which way my land travel may begin, but can make little or nothing out at present, so must leave it in submission, to let the wind blow where it listeth; and if in the appointed season I am favored to hear a certain sound thereof, or witness the clear wafting of the Divine breath and preservation under its influence, it is all I crave. Our evening meeting was a quiet opportunity, held mostly in silence.

Fourth-day, the wind in our favor: held our week-day meeting, which some of us were ready to apprehend might possibly be the closing one of a public kind; and we had cause humbly to acknowledge it was a favored season, graciously owned by Him who is a God hearing prayer, to whom solemn supplication was made by our brother J. Wigham, for the continuation of preservation upon us. Captain Haws is a valuable part of our company, a very quiet steady man, and I believe has both felt and loved the truth; that I have felt more than a common solicitude of mind that all his ways may be ordered thereby in his future steppings along, as well as that each of us may thereby witness preservation.

This afternoon one of our little cats being at play on the edge of the vessel, went over and was drowned, though several attempts were made to save her life; and as this accident gave several

of us concern, how much greater must it have been had such an event been permitted to any of our fellow-creatures, divers of whom have frequently bathed in the sea and have escaped without harm, which favor hath indeed been mercifully extended to all on board through every time of trial, which claims our humble, grateful acknowledgment to the great Preserver of men.

Second-day, 22nd, have made little progress, yet the land of Plymouth is to be seen for a considerable length, likewise trees and some houses, which look pleasant and tend to furnish a hope that we shall not much longer be detained in our floating habitation; but if it should please our Heavenly Father to try us with a further detention, I wish on my own account to feel submission to his will; and also in the large field of labor before me where if spared to move in, I have no expectation to be freed from Divine exercises and secret baptisms which, though much a mystery to mankind in general, are experienced by a few who are called from one nation to another to preach the Gospel. And who, like his own immediate followers, can take neither purse nor scrip; and who often have to sit amongst the people in weakness and fear and in much trembling. Sometimes like a sign; and in regard to spiritual clothing, as naked and bare-footed to themselves as to others—bearing the resemblance of Joshua, who sat before the Lord like a man wondered at. Yet as some knowledge and experience of these things, according to my measure in the gift, may be esteemed by any like enthusiasm, may my soul dwell with the Lord's anointed whether sons or daughters, servant or handmaid, as one of these enthusiasts.

This evening the light-house at Boston hath been discovered, yet more than usual heaviness seemed to be the attendant of my mind. And while at tea particularly so, in a feeling of sympathy with our captain, that after dark going on deck with my dear friend, E. Rotch, to see the light-house, I could not forbear expressing something of it to him, though not from any sense or impression at that time more from the trial and disappointment he had frequently had to combat with in the course of the passage, and not having sailed into Boston harbor through the same course as before, thought he might feel, as I believe he did, very anxious for our safely getting in. The difficulty evening being squally, the difficulty seemed to increase, till about ten when a pilot came on board to our assistance, which seemed a present relief to several, though I did not think it was altogether so to Wm. Rotch, neither did I feel quite so easy as at some other times when lying down on my pillow; yet things seemed then quiet, my beloved friend Lydia Rotch who was then in my cabin with myself, got a short sleep, but a squall of wind and rain soon awakened us, when Calvin Swain, one of the mariners, and brother to the captain, going up to reef the sail of the maintop-mast, fell from thence into the boat that was lashed on the deck, and was instantly killed. This unexpected but

moving event, deeply affected our minds; and as might be expected, prevented our resting again, and indeed (this morning, Third-day, Ninth Month 24th) covered our departure from the vessel with a sable clothing, drawing our spirits in a particular manner into a near and tender feeling for our captain on several accounts. My dear friends E. and L. Rotch made a garment for the corpse, which was decently laid out in the steerage.

About ten, we cast anchor in Boston harbor, about a mile from the town, but did not go on shore till afternoon; some of our minds being impressed with the desire to have a farewell opportunity with the sailors. After dinner they were called together, with our own company, and though on account of what had been permitted, it was rather an affecting than what might be esteemed by some a joyous parting, yet remembering the assertion, "it was better to go to the house of mourning than to that of mirth" I was not without a hope it might tend to some profit, in a little staying or checking the desire of floating minds among our company. Many of our mariners are comely young men, well behaved in their stations. And my heart hath frequently felt the emotions of love and tenderness towards them, with solicitude for their preservation from every evil way. About four we left the vessel, took boat and landed safely at the long wharf; a coach was ready to take us women about a mile further to our lodgings, where we were kindly received by Hannah and Ann Orrok, two maiden women Friends, under whose roof we are comfortably accommodated in much freedom and simplicity of manners. And though I feel my inward clothing to be that of spiritual poverty, my soul desires in submission to the Divine will of our heavenly Father, to render humble grateful acknowledgment for his merciful dealings and continued preservation to his humble depending servants; who, while together in our late inclosure, nearly united us one to another, and hath seen meet to land us safely at the desired port in view; for which renewed favor, I believe our spirits desire to return unto Him, which is his due, thanksgiving and praise.

Fourth-day; the corpse of the deceased was this afternoon buried in a piece of ground near this town, which is set apart for strangers. The solemnity was attended by my valuable friends William Rotch, Samuel Emlen and John Wigham; also our young men that were passengers. Which was reported to have been a quiet, satisfactory opportunity. No lucrative priest being present, but Gospel ministry opened through Samuel Emlen in the exercise of his gift."

EVERY duty is an exponent of a principle; but not every person who does an act of duty comprehends the principle of which that duty is an exponent. In fact, there is only now and then a person who is capable of comprehending principles so as to see the relation to them of the duties of every day-life. A child can know what his duty is in a given matter, long before he can grasp the principle that is illustrated by that duty. And there are those who never pass beyond the stage of childhood so far. A parent and a teacher should have this truth in mind in all counsel-giving. Whatever may be done in the way of explaining principles to a child— young or old—let explicit instructions in duty-doing be a prominent feature in all efforts at control and guidance.—*Selects*.

FOR "THE FRIEND."

A Geological Excursion into Maryland.

(Continued from page 212.)

We reached the home of our Maryland friend between 9 and 10 o'clock in the morning; and he was soon ready to take us, with a good pair of horses, in an open wagon, which gave a full view of the country through which we were travelling. The stone walls which bordered the road side and enclosed many of the fields showed that it was a region in which loose stones were abundant on the surface. The prevailing color of these, when long exposed to the weather, was a rusty brown; and, where freshly fractured, a dark grey. When a piece was closely examined, it was found to be somewhat similar in composition to the gray rock spoken of in a previous article as found on the Schuylkill River, near Philadelphia. Like that it was a compound rock, containing quartz and feldspar, but in it, the black mineral Hornblende had taken the place of the Mica, and to this its dark color was due. It is a hard, tough rock, and the loose fragments are often called Ironstone, and sometimes Nigger-head, in the neighborhoods where they are found. Geologically speaking, I suppose it would be called a Hornblende Gneiss—that is a Gneiss containing Hornblende. Hornblende is a crystalline mineral, and differs from Mica in its composition chiefly by containing Magnesia and Lime in place of the Alumina which forms one of the essential ingredients of Mica.

A ride of a few miles brought us to a ridge several miles in length, which extends from the Susquehanna in a southwest course—the general direction of all the ridges in South Eastern Pennsylvania. This ridge is a vast deposit of Quartz, or Flint, and at various points along it quarries of that mineral have been opened which supply the material used in the Flint-grinding mills of that section. These quarries have been extensively worked, and many thousands of tons of rock have been taken from them. The extent of the operations is shown, not only by the size of the excavations made, but by the huge piles of refuse material which have accumulated in the neighborhood. A large part of this refuse is Quartz, rejected because its reddish hue shows that it is contaminated with the iron, which is objectionable to the Porcelain manufacturers, for whom it is mined and prepared. Only the pure white mineral is preserved and hauled to the mills. This is white, translucent, and crystalline. One of the fragments which I picked up as a specimen, appeared to be decidedly granular in its structure; as if the ridge had originally been a bed of pure white sand, the interstices of which had been filled up by the same material, which had crystallized around the particles from its solution in water. The solid beds of Quartz thus formed were probably in a horizontal position, and have subsequently been tilted and elevated in some of the many changes which the earth's surface has undergone.

Of course, this explanation may not be the true way of accounting for the fact, that by some means such a body of Quartz has been collected together in comparative purity. One of the first objections to it, that may occur to some minds is, that Quartz, as we commonly see it, is one of the things on which water has no effect. But the chemist is able to obtain it dissolved in water or mixed with it in a gelatinous state; and crystals of it have been separated from glass, which is a compound of it with lime and soda, by the long continued action of water, under pressure, at a high temperature. Quartz itself in the

form of opal is dissolved by a heated solution of Potash, and sea-water contains a small portion of it. So there is no difficulty in supposing that the heated waters of the ocean that was formed when the earth's surface cooled sufficiently to permit its existence, and which must have been charged with many alkaline substances in solution, would be able to dissolve from the earth's crust an abundant supply of salts containing Quartz, and probably the Quartz itself in a free state.

As we are speaking of Quartz, it may be proper to add, that it is not a simple substance, but a compound of *Silicium* with oxygen. Oxygen itself, which forms about one-fourth of the atmosphere, and nine-tenths of water, is the most abundant material in the earth's crust, of which it is estimated to form about one-half by weight. *Silicium* is the element next in abundance, and forms at least one-fourth of the earth's crust. We say of the earth's crust, because we have no means of knowing with certainty what may be contained in its remote interior. It is never found in nature except in combination with oxygen, but when separated from this in the laboratory of the chemist, it appears as a brown substance, without any metallic lustre, and somewhat similar to Carbon in its chemical properties.

Silica or Quartz is common everywhere. It combines with alumina, magnesia, lime, &c.; so that chemically speaking it is an acid, although tasteless. It and its compounds are the principal ingredients of all rocks, except limestones. The Granite and Gneiss of which mention has already been made, are nearly three-fourths *Silicium*. Of its geological properties and value, James D. Dana says:—

"Silica is eminently adapted for this eminent place among the architectural materials of the globe by its great hardness, its insolubility and resistance to chemical and atmospheric agents, and its infusibility. As it withstands better than other common minerals the wear of the waves or streams, besides being very abundant, it is the prevailing constituent of sands, and of the movable material of the earth's surface, as well as of many stratified rocks; for the other ingredients are worn out by the Quartz under the constant trituration. It is also fitted for its prominent place by its readiness in forming silicious compounds, and the durability of those silicates. Moreover, although infusible and insoluble, many oxides enable heat to melt it down and form glass; or, if but a trace of alkali be contained in waters, those waters, if heated, have the power of dissolving it; and, thus dissolved, it may be spread widely, either to enter into new combinations, or to fill with Quartz fissures and cavities among the rocks, thereby making veins and acting as a general cement and solidifier.

"Its applications in world-making are, therefore, exceedingly various. In all, its action is to make stable and solid."

The quarry which we examined furnished an illustration of the correctness of Dana's remark concerning the "resistance [of Quartz] to chemical and atmospheric agents." The strata appeared to be many feet in thickness and considerably inclined. Both above and below the Quartz was a bed of decomposed rock, so soft that it could be easily worked up with a pick. This rock had yielded to the atmospheric effects, which the Quartz had successfully resisted.

After satisfying our curiosity at this interesting spot, we continued our journey northward.

Our road lay for the most part through a large tract of woodland, of which there are said to be about 2000 acres. The soil is not fertile, so that there is not much motive to bring it into cultivation; and the cost of hauling to the river is too heavy to allow of much profit from cutting of the timber. As we were descending the side of a hill, our driver stopped the carriage and guided us to the opposite side of the little stream that flowed down the ravine. There he pointed out a vein of mineral about 14 inches thick, soft enough to be easily cut with a knife, or to leave a white mark on a piece of cloth over which it was rubbed. It was of a greenish white color, and had a greasy feel when the fingers were rubbed over it. They had quarried and pulverized some of the stone to mix with wood-pulp in making printing paper, to which I suppose it adds smoothness and body. It is one of the minerals allied to Tale, and is composed principally of Silica and Alumina, with some Potash and Water. Its presence indicated that we were nearing the Serpentine Quarry, which was to be the northern limit of our excursion.

Among the undergrowth of the wood through which we were passing the common Laurel was conspicuous, retaining its thick, glossy green leaves throughout the winter. The stems are remarkable for their irregular, angular style of growth, bending about in all directions, so that when close together they render a passage difficult.

In many parts of the wood, the evergreen leaves of a long trailing species of Club Moss or *Leycopodium* attracted my attention. I had not seen this species in lower New Jersey, although it is often met with in southern Pennsylvania. A few days later, I saw long wreaths of it in the City of Philadelphia, which were sold for Christmas ornaments. The vendors stated they procured the plants from Maryland and Virginia, and sold the finished wreaths for about four cents per yard.

(To be concluded.)

Blowing the Bellows.

The happiness to be derived from retirement from the bustle of the city, to the peaceful and rural scenes of the country, is more in idea than it often proves in reality. A tradesman in London, who had risen to wealth from the humble ranks of life, resolved to retire to the country to enjoy, undisturbed, the rest of his life.

For this purpose, he purchased an estate and mansion in a sequestered corner in the country, and took possession of it. While the alterations and improvements, which he directed to be made were going on, the noise of hammers, saws, chisels, &c., around him kept him in good spirits. But when his improvements were finished, and his workmen discharged, the stillness everywhere discontented him, and he felt quite miserable. He was obliged to have recourse to a sooth upon his estate for a relief to his mind, and he actually engaged to blow the bellows for a certain number of hours in the day. In a short time this ceased to afford the relief he desired; he returned to London, and acted as a gratuitous assistant to his own clerk, to whom he had given up his business.—*Arvine's Cyclopaedia.*

AFTER listening to thousands of prayers for pardon, I can hardly recall a case where I did not feel that I might have fallen as my fellow-man has done, if I had been subjected to the same demoralizing influences and pressed by the same temptations.—*Horatio Seymour.*

FOR "THE FRIEND."

The Diary of Mary Coates.

She was a Friend of Philadelphia, who died in rather early life, in the First Month of 1769. The memoranda which follow have been preserved in manuscript in her family since that period. They seemed to the editor to contain material which might prove interesting and instructive to some of the readers of THE FRIEND; and are, therefore, inserted in its columns with a hope that their perusal may stimulate others to increased diligence in accomplishing the great end of life—a preparation for happiness in the world to come.

"Having been in a poor state of health for some months, I was advised to go into the country, and was inclined myself to think that change of air and riding might be of use, but was desirous, according to ability afforded, before I left the city, that let it be as it might, with respect to the body, my better part might be strengthened.

"I was inclined to go to Wilmington, and accordingly set out on the 18th of the Sixth Month, 1768, in company with B. H. and D. F. (David Ferris); had some solid conversation on the road; lodged that night at W. Swayne's (being much wearied with riding); was kindly entertained; after breakfast next morning we proceeded to Chester, dined at J. Heston's with several other friends, then set forward for Wilmington, which we reached that evening. Went to D. Ferris' at whose house I purpose to make my home sometime, hoping it will prove serviceable, in the best sense, to have my lot amongst solid, exemplary Friends. May I improve it to my own advantage!"

"25th. During my stay this week have had the company and conversation of some which I hope will be remembered to profit. One friend expressed a tender sympathy with me in the state wherein a veil might be cast over every created beauty and pleasant prospect in this world, with some observation upon the advantage of such a dispensation tending to wean from all visible things and increase desires for entire redemption, which, that I might experience, was wished for. Twenty-sixth and first day of the week, attended morning meeting, the latter part of which was favored with something lively, yet accompanied with a sense of want; and those are good meetings if rightly improved wherein we are made sensible of our poverty, and the need we are in of help from above. Was also, at the afternoon meeting, which was silent as to any vocal testimony.

"28th. This day not quite so agreeably spent, but blame myself for it. May it serve as a caution! Being rather free in company and conversation than was quite easy for me, though perhaps no other person was sensible of or hurt by it. Twenty-ninth, employed some time in writing; spent the evening much to my satisfaction at my lodgings, in company with some Friends; one of them, D. F., mentioned a desire he had for the restoration of my health, and that if I should be raised, that I might become as a valiant and mother in Israel and be exemplary to others, but at the same time, when he felt that

desire, he also found a check, believing it best to leave it to the Great Master (although he could not but desire it) seeing nothing to the contrary since I came but that if I was taken it would be well with me. I write not this from a boasting spirit; it had not a tendency to exalt or puff up, but rather to humble and bow my mind under the consideration of my state and condition, with secret cries to the Father of Mercy for help, and that I might be what He would have me to be. It is a satisfaction and strength to be with those who I believe seek my good both spiritually and temporally.

"30th. Had some profitable conversation respecting a preparation for death, which led me to consider the difference between barely desiring to end well, and the being really prepared for it.

"Oh! my soul; may thou seek diligently unto Him, who has been the Guide of my youth, that He may thoroughly purge and cleanse from everything that is offensive in his sight; who will not behold iniquity in Jacob or transgression in Israel with any allowances or abatements. Enable me, if by the Holy will, to resign up all, body, soul and spirit into thy Hand! But leave me not destitute of thy Holy Spirit in this trying season. Suffer me not to become a prey to the devourer! Oh! fit and prepare me for mine awful change, that so my latter end may be peace! * * *

"3rd. Being the first day of the week I attended the morning meeting; our ancient Friend E. S., appeared in a lively testimony, but as to my own particular, it was mostly a heavy time, feeling but little strength to labor. In the afternoon meeting (which begins at three o'clock) was favored to feel more stillness, with breathings of soul to Him who is the alone Helper of his helpless children; yet [I was] sensible of the workings of an opposite spirit to draw away the attention from that which is truly good."

"6th. Was not down stairs, the weather proving very wet, and my constitution so broken that damps affect me much, yet not altogether idle; though confined, found some useful employment for my hands, but my mind not so composed as would have been profitable; feeling the prevailing of that spirit, which loves liberty and to have its own will in thinking and acting, this oppresseth the life in us, and genders to bondage. It is a great blessing when we can feel the Yoke of Christ subduing all in us that would not that He should rule and reign whose right it is, but when we get a little from under it and take the reins in our own hands, what danger we run ourselves into, for it is not in man that walketh to direct his steps, neither can the will of man work righteousness.

"In the evening my mind was led to look back at some part of my life, wherein I had been much favored, having the tender dealings of a merciful God to my soul. The past compared with the present humbled my heart, and purged my spirit; and I was [enabled] to cry unto Him who knows the secret language of his distressed ones, who at times are under great discouragements by reason of the many infirmities which attend us poor frail mortals, often impeding our progress Zionward. The breathing of mind was not only on my own account, but for those then present who I thought were fellow-travellers, that we might be preserved. How strengthening and enlivening it is, when we can feel this heart-tendering power to prevail.

"9th. This morning finished the perusal of a small book and would gladly retain some weighty remarks therein made, which afforded

* David Ferris was a valuable minister in the Society of Friends. He was born in Connecticut, and brought up among the Presbyterians, but the views of religious doctrine which he adopted, not coinciding with theirs, he left them and joined in membership with Friends. He removed to Philadelphia, and afterwards settled in Wilmington, where he resided at the time of which Mary Coates speaks.

POW "THE FRIEND"

instruction and comfort in the reading; afterwards was engaged in attending to some observations made by one to whom I give the right hand of fellowship concerning the stumbling stone and rock of offence, and respecting obedience in small requirements being the way to grow in strength, with an apt comparison of a natural parent requiring small services of his child, with some other remarks; but these hints may serve to revive in my memory the conversation more fully.

"I love to listen to the counsel and admonition of those who are engaged at heart for the prosperity of Truth, both in themselves and others, such as those who may be farther advanced in their heavenly progress than myself, and thereby enabled to point out the way and hints at times something like an invitation to others to come forward, and be taught of the Lord and walk in his paths. May I always love the flock of Christ's companions, and endeavor to follow their footsteps as they follow Him!

"10th, and First-day of the week, was at both meetings, in which, had to taste some savor of life and a hunger after more, but was fearful I was not patient enough to wait the Father's time, there being something in me that would wander from that still, quiet waiting frame of mind, which I would gladly experience, though poverty might be (as it often is) the companion of my mind. Oh! that I could, as in days past, feel the dew to lie long upon the branches, as in the time when the candle of the Lord shone as upon my head, and by his light I walked through darkness; but now there seems another dispensation, even a time wherein there must be deep labor and travail, the spring lying very low. The Lord will be sought unto by the House of Israel, but this true seeking with all our hearts, soul and strength, to know and perform his will who hath called us, is too much neglected, both in particulars and in the general, or I believe there would be better times, for He has promised, who faileth not, [that] those that seek shall find. But there is too much a sitting down at ease in a lukewarm indifference of mind in some; others, Demas-like, have got into the earth, and are delighting themselves in the present enjoyment and gratifications of this life, as what shall we eat, what shall we drink and wherewithal shall we be clothed, not duly considering that for all these things we must come to judgment. Oh! that Zion might arise and shine, shake herself from the dust of the earth and put on her beautiful garment!

"In the evening some of the family with several others sat in silence for a little space, then something was dropped very instructive respecting living near the truth and in the seriousness of it, that we might fill up the measure of our duty as the time was drawing on that we must give account, and hinted something of the low state of religion, but that we should endeavor to live so near as to do our duty, though it might be through the Cross, and a fear might attend some of discharging it, in some respect, lest all their own conduct should not be equal; with a few words of encouragement for such should be engaged to promote the Church's coming out of captivity. I had unity with what was spoken and it left something of a sweetness on my mind, though I sat amongst them in a very poor, dry situation, but felt not a murmuring disposition, rather a desire to learn how to suffer want, as well as how to abound. Suffering is, I believe, the portion of many brethren, and it is better to suffer with the seed than like Dives to 'fare sumptuously every day.'

(To be continued.)

A CHILD'S PRAYER.

Jesus, Saviour, Son of God,
Who for me life's pathway trod,
Who for me became a child,
Make me humble, meek and mild.

I thy little lamb would be;
Jesus, I would follow Thee;
And, like Samuel of old,
I would live within Thy fold.

Dearest Saviour, I am thine;
Bid Thy Spirit on me shine,
Keep my weak and sinful heart,
Lest it should from Thee depart.

Teach me how to pray to Thee,
Make me holy, heavenly;
Let me love what Thou dost love,
Let me live with Thee above.

SELECTED.

LITTLE THINGS.

Scorn not the slightest word or deed,
Nor deem it void of power;
There's fruit in each wind-wafted seed,
Waiting its natal hour.

A whispered word may touch the heart,
And call it back to life;
A look of love bid sin depart,
And still unholily strife.

No act falls fruitless; none can tell
How vast its seed as we draw near,
Nor what results enfolded dwell
Within it, silently.

Work and despair not, give thy mite,
Nor care how small thy fee,
God is with all who serve the right,
The holy, true, and free!

SELECTED.

I SHALL BE SATISFIED.

Not here! not here! not where the sparkling waters
Fade into misty sands as we draw near,
Where in the wilderness each footstep falters—
I shall be satisfied; but oh! not here!

Not here—where every dream of bliss deceives us,
Where the worn spirit never gains its goal,
Where, haunted ever by the thoughts that grieve us,
Across us floods of bitter memory roll.

There is a land where every pulse is thrilling,
With rapture earth's sojourners may not know,
Where heaven's repose the weary heart is stilling,
And peacefully life's time-tossed currents flow.

Far out of sight, while yet the flesh infolds us,
Lies the fair country where our hearts would glide,
And of its bliss is naught more wondrous told us
Than these few words, "I shall be satisfied."

Satisfied? Satisfied? The spirit's yearning
For sweet companionship with kindred mind—
The silent love that here meets no returning—
The inspiration which no language finds—

Shall they be satisfied? The soul's vague longing—
The aching void which nothing earthly fills?
Oh! what desires upon our souls are thronging
As I look upward to the heavenly hills!

Thither my weak and weary steps are tending,
Saviour and Lord! with thy trail child abide!
Guide me, onward home, where all my wanderings
Are ending, home.

I then shall see Thee and be satisfied. —A. Ann.

HAPPINESS depends not on what one *has*, but on what one *is*. He who is of a cheerful spirit will be cheerful in all his privations. He who is of a complaining spirit will never lack occasions of complaining. It is not one's possessions or one's surroundings, but one's way of looking at his possessions and surroundings, that settles the question of one's cheerfulness, wherever he is, or whatever he *has*. —Selected.

Settlement of Meetings in New Jersey.

The Province of New Jersey being largely settled by Friends, their meetings were generally the first places of worship established in their neighborhoods, and in many of the Towns and Hamlets so settled, "the meeting-house" was the only public building for many years, (except the school-house) and served a variety of purposes beside a place of worship, such as Town Hall, Court of Justice, and Legislative Hall, &c., or as the poet has expressed,

"One house sufficed for gospel and for law."

Around some of these, many historic facts and precious memories linger. In order to preserve these, and some account of the early establishment of meetings, in a somewhat connected form, the following compilations and extracts have been made, in the hope that they may possess some interest for the readers of THE FRIEND."

The history and early settlement of the Society of Friends in New Jersey and Pennsylvania, and the establishment of their meetings, is so intimately connected with both Provinces, that it is not easy to separate them, although that of New Jersey preceded the latter by several years.

The first settlement made by Friends south of Long Island was at Shrewsbury, in 1664, or thereabout. One account says, "About 1670 a meeting was settled at Shrewsbury, being the first settled meeting in these Provinces. Near the same time a Monthly and General Meeting was also held there, and they were soon regularly established. It is probable that meetings for worship were held at private dwellings prior to this date.

Their first meeting-house was built in 1672, which was replaced by another in 1719.

The first settlement of Friends in West New Jersey, was undoubtedly that made by John Fenwick's colony at Salem, in 1675; theirs being the first English ship to come so far up the Delaware River, or that landed passengers upon its shores.

They first held their meetings for worship at each others' dwellings, and a meeting was established at the house of Samuel Nicholson, which was continued for some years; they sometimes joined with a few Friends at Upland, (now Chester, Pa.), meeting at the house of Robert Wade, at or near that place.

The first meeting-house of Friends in West Jersey was at Salem. In 1681, Samuel Nicholson and Ann his wife, conveyed to the Trustees of Salem Meeting his sixteen acre lot, whereon stood his dwelling-house, for the purpose of a meeting place for Friends; an addition was built to this house, making it when completed, 40 feet in length by 16 feet in depth,—partly of brick, and partly frame,—it was provided with a large open fire-place at each end, windows with 4 panes of thick "bulls eye" glass, 7 by 9 inches in size, benches or forms without backs, and "a good clay floor." It was thus used until about the year 1700.

In the early part of the year 1677, many Friends who had become proprietors in West Jersey, left the shores of old England to settle on their newly acquired possessions.

"The ship 'Kent' sailed from London with 230 passengers, consisting of two companies of Friends, one from Yorkshire, and the other from London; after a tedious passage the ship anchored safely in the waters of the Delaware, on the Sixth Month, 1677."

The Commissioners who were on board, and were also Friends, proceeded up the river to the place where the city of Burlington now stands, in order to treat with the Indians about the land; for, be it known, that not one foot of the soil of the State of New Jersey was ever taken from the Indians, except by purchase.

The number of Friends who emigrated to the new colony during this year and the following one, are said to be about 800; and up to the year 1681, at least 1400 persons had found their way to the Province.

Although the country was a wilderness, they did not forget the assembling of themselves together as was their wont in the land of their nativity, in order to worship the Almighty, whose protecting hand had followed them in the perils of the deep, and now delivered them from the savage people among whom their lot was cast.

The first account that we have of a place of public worship of Friends at Burlington, was of a tent made of the sails taken from the ship in which they had crossed the ocean. Under it they assembled for at least a year after their arrival, or until the house of Thomas Gardiner was built, which was the first dwelling house erected within the town limits, and although built of logs, it was more commodious than those of his neighbors. Meetings were regularly held here, and at the house of John Woolston and others, until the building of the meeting-house in 1685, when the meeting had outgrown the capacity of any private house.

The first Yearly Meeting of Friends in New Jersey which sat four days, was held Sixth Mo. 25th, 1681, at the house of Thomas Gardiner, afterwards, was also the Monthly Meeting. By a minute of that meeting, held 5th of Twelfth Month, 1682, we find "It is ordered that a meeting-house be built according to a draught of six square building, of forty foot square from out to out." This building was completed in 1685, and was called the "great meeting-house," which must have been very singular in appearance, being as indicated, hexagonal in form, with a roof of steep pitch, surmounted by a sort of cupola, corresponding in shape with the main building. It was a frame structure, and found to be too cold for use in the severe winters to which the settlers were subjected.

In 1696, an addition was made to it for a winter house, built of brick, 30 feet long, and of equal width and height with the other; provided with a large open fire place, and a "double wooden floor," wainscoted and plastered walls. This house stood for a century, and was replaced by the present substantial brick structure.

The house known as the "new meeting-house" was built for the better accommodation of the Yearly Meeting, in 1716, on ground given by Thomas Wetherill for that purpose.

Burlington Monthly Meeting was first organized "ye 15th of ye Fifth Month, 1678," and consisted of "Friends settled about the Falls (near Trenton, &c.), and the Particular Meetings of Ancocks, Shackamaxon and Upland (Chester, Pa.); also the Hoarkills and New Castle, Del., and the Friends on Long Island, who, in 1681, desired to be considered members of this Monthly Meeting.

In 1680, it issued an epistle to London Yearly Meeting, on the subject of certificates being furnished to the Friends who emigrated, &c. It was the first official communication received by that meeting from any body of Friends in America.

(To be continued.)

FOR "THE FRIEND."

A Botanist's Notes from California to a Friend.

[The writer, a health-seeker from the East, resides on a lot of about an acre, at Santa Clara, an open little town contiguous to San José, about two miles south of the southern end of San Francisco Bay, and more than double that distance from the Pacific, from which its valley, the Santa Clara, is separated by the Santa Cruz mountain range.]

Eleventh Mo. 25th, 1888.—I would be glad to say what I might be able to, respecting vegetation in this part of California, if or when my garden work may permit. My trip to the mountain top, or rather my attempt to walk up some of the steeper and rougher portions of the road, quite upset me, as I may have told thee. The actual trip might not have had this result, had not some heavy garden work done immediately after my return, continued the heart trouble started by the walk.

I have done but little botanical work since my return. Just now I am getting my garden ready for a lot of spring flowering bulbs, ordered quite awhile ago. They are Holland grown, from the house of Anton Rozen & Co. There may be 1500 or more of them altogether; many of them, however, requiring but little garden space. This lot includes crocuses, narcissi, jonquills, anemones of various kinds, hyacinths of many varieties, tulips, irises, bulbocodrums, Ilies, ranunculuses, alliums, and a lot of miscellaneous bulbs. A number of plants, also ordered quite awhile ago, have just come to hand; these from Western Massachusetts, natives, pretty wood plants, climaxes and such.

The most showy plant in bloom just now is a scarlet sage, one of several that seem to have come up from volunteer seed. The exquisite redwood oxalis, the specimens that I have, do not appear to flower as early as I have seen them elsewhere. The ageratum, pale-blue, the geraniums and the heliotropes against the house, with the sweet violets, the sweet alyssum, the chrysanthemums, and the glaucous-leaved *Silene Armeria*, are doing something yet to cheer us.

Twelfth Mo. 14th. Last winter was a much colder winter than this. Then we had ice, and the ground was frozen quite hard for several consecutive days. This season, so far, the weather has been mild, but very moist; and some think we will have no frost hereafter to hurt the plants. The heliotrope blooms, and the maurandia is as green and bright as in summer, and so with many others. The weather has been the occasion of no disappearances.

Twelfth Mo. 29th.—More rain last night and this morning. A heavy fall just now (10 A.M.), and the sky dark. Am still keeping close to the house, but do some work in the yard occasionally, as adding to my bulb plantation, or the removal of grass and starting weeds. The mild wet weather brings the wild vegetation forward rapidly, but the young plants are easily raised out of the ground, and after two or three removals they are pretty well suppressed. This is the time for the fingers.

First Month 12th, 1889.—My carpenter has finished fence and espalier, and I hope when the five gates and latticed doors are completed, that the yard may be dog proof. But it will not be tight against gophers and moles. An hour ago I found a pretty fennel plant had fallen over, the root having been eaten away. The mole is much more easily caught than the gopher, the latter only appearing at the surface occasionally, and then very hard to catch with the trap.

They come on me from every direction, and are almost or quite as hard to drown out as they are to catch with the aid of a trap.

First Mo. 13th. The portulaca, an annual, has not been killed, and is actually sending out new growth. I moved yesterday a native gnaphalium, a foot high and nearly a foot wide plant—a beautiful object. I have another native species that grows to a height of 3 or 4 feet, the leaves of which are deliciously sweet, noticeably so two or three feet away.

First Mo. 16th.—Last night was the coldest we have had. Callas down on the ground early in morning. Later, they were watered heavily, that is to say, water was thrown over leaves and flowers, and now I find they have partially recovered.

B. F. L.

FROM THE BRITISH FRIENDS.

"Isms" in the Church.

A correspondent of *The British Friend*, writing from Sydney, Australia, after speaking of some things which "tend to cast a veil over the simplicity of the Gospel of Christ," says:

"There are doubtless a few that are in no way affected thereby, but live uniformly with their eye single to the great Redeemer of mankind, the Creator and Sustainer of their spiritual as well as their animal life, and know and feel their entire dependence on Him for all they need for time and eternity, for body and soul, and for spiritual growth, and readiness for their departure from this into the world of spirits, and into the immediate presence of Him whose they are and whom they serve. They have partaken of the anointing spoken of by John, 'and it abideth in them, and they need not that any man teach them, but as the same anointing teacheth them of all things, and is truth and is no lie.'"

"It is the spirit that quickeneth, the flesh profiteth nothing." The material, however beautiful to the senses, cannot of itself benefit our spiritual well-being. It is quite possible to receive and enjoy, as far as our animal nature is concerned, the good things that God has provided, with no reverent or worshipful thought of the Giver. The assemblies of true worshippers of God when they come together in his name, do not need instrumental or vocal music to aid them in realizing his declared presence, nor a stipendiary minister to tell them what they can read out of the Book of books without money and without price."

"It is no inconsiderable task that is asked of the people in the Episcopalian section of the Christian Church to support ritualistic forms and ceremonies; and dissenters are not altogether without blame, in the money obtained and expended by them on showy services, as a kind of bait for the reception of the proffered blessings of the Gospel of Christ."

"The buildings erroneously styled churches are far too expensively erected both within and without the pale of the Episcopalian establishment, being to some extent a revival of Judaism, with the idea that God is honored by the architectural beauty of the places. This is a fatal mistake in the present dispensation of our Lord and Saviour Jesus Christ, 'who dwells not in temples made with hands,' but in the hearts of his people, 'their bodies being the temples of the Holy Ghost which is in them.' One of the popular errors of the day is the almost universal practice of calling a building a church, and teaching the people to believe that it is more sacred than any other, and that on entering a reverential form is to be observed of uncover-

ing the head. Could anything be more diametrically opposed to the truth, than in no house or temple built by man does God dwell? It is this that has led to what is termed consecration when a house is erected for the use of those who meet together from time to time in the name of Him, who has said that where two or three are assembled in His name, there is He in the midst of them. Are not the memorable words uttered by the Great Redeemer of mankind in His conversation with the woman of Samaria at the well fresh in our minds? "Neither in this mountain nor yet at Jerusalem."

"Some years since, a remark was made by a professing Christian woman to the effect that it was an expensive thing to be religious, and one could not be surprised when there is so much that is mere material brought in the Church for the gratification of the senses, and of a costly kind, which the people are called upon to pay, but not in any way calculated to promote the spiritual character of the Church."

Joseph Phipps on the Scriptures.

We do not pretend that the internal motion of the Spirit is the only means of reformation and religion to those who are likewise favored with the Scriptures; but highly prize, thankfully accept and use them as the *best secondary means extant*. I also understand the propitiatory sacrifice of our Saviour, by which He opens the door of reconciliation for us, to be the initiatory part of man's salvation; and the internal work of regeneration by His Spirit, to be its actual completion, for thereby an entrance is administered into the heavenly kingdom.

No man can have the influence of the inspired sentiments of the Book of God, without receiving those inspired sentiments; which no man hath who reads without the inspiring power. Every reader hath only his own conceptions about the sentiments inspired of God, and not those real sentiments, without a degree of inspiration from Him; which the manifest mistakes and contradictions of many demonstrate they are strangers to.

The real use of the Scriptures is to afford instruction and comfort: their *chief* importance is to recommend to the Spirit of Christ, from whence they came, that his people may be enabled rightly to put their trust in Him. The apostle declares, "God had given them the earnest of the Spirit, therefore they were always confident." Was not their confidence grounded in the earnest of the Spirit given them of God? And is a trust in this Spirit, and a belief in the contents of Scripture, incompatible with each other? Or is a Christian to have no confidence in the spirit and power of the Saviour himself, but all in his own notions of what he reads in Scripture? And will his own efforts according to these notions save him? Cannot he follow those scriptural exhortations and doctrines which plainly teach us to pray for the Spirit, to live and walk in the Spirit, without setting the Scriptures aside and treating them with contempt?

Those who have experienced a living sense of the Spirit, instead of dividing from the Scripture and depreciating their service, are by the Divine influence more closely united to them, read them with a better understanding, and more to their comfort and advantage than ever—al together as fervently concerned to press the frequent perusal of them, as any of those who so unjustly accuse them, and who are so inexperienced in the truth, as it is in Jesus, as to place their whole confidence in the opinions they

gather from reading the Scriptures, and remain strangers to the necessary knowledge of Christ within the hope of glory.

"Not Understood of the People."

Under this heading, the *Cornhill Magazine* gives some amusing illustrations of the ignorance shown by some of the illiterate classes in England, of the meaning of many parts of the Book of Common Prayer, which they have been accustomed to hear read in the Episcopal Church service. "Its phraseology is so familiar to them that they never stop to ask what it is all about."

"It is not long ago since a Yorkshire incumbent, dwelling in a valley where the people are supposed to be particularly long-headed, told me of a mournful experience which befell him when visiting a sick parishioner. The Yorkshireman was ill, very ill, but doggedly offered to spending a penny upon the doctor. He had found, he thought, a more excellent way, and was accordingly conducting, with very alarming result, some experiments upon his constitution. Excessive devotion to a cheap, but far from innocuous quack medicine was fast bringing him to a state in which medical aid and the infallible pill would be alike superfluous.

"My dear Mrs. —," said the vicar to his obstinate parishioner's wife, "your husband is really killing himself with those pills. It's a case of suicide—a downright sin."

"Yes, sir," replied the tearful partner, "I know it, and many and many's the time I've prayed against it in the Church service."

"In the Church service?" said the vicar, a little doubtfully; "you mean when we pray for the sick?"

"Oh no, sir," was the reply; "I mean where we always say in the Litany—isn't it?"—"From all *false doctoring* [teaching] good Lord deliver us."

"Mistakes of this kind are not perpetrated in Yorkshire alone. The London poor have erred, and do still err, with equally strange results. During a sojourn of some three years in East London I had, for example, excellent opportunities of observing the way in which the marriage service is misunderstood by the unlearned. Our parish was not lacking in intelligence of a kind. But the language of the Prayer Book was above us.

"The marriage service from first to last is full of pitfalls for the unlearned man. In some cases it becomes painfully clear that the contracting parties recognize but few of the words they are bidden to say, and merely imitate the sound with such accuracy as their imperfect knowledge will permit. The words 'to have and to hold' ought to be simple enough, but, as a matter of fact, they are the subjects of some astounding blunders. I remember one bridegroom who had brought a very charming young bride to church, and perhaps regarded her as a thing of beauty to be in his home a joy forever, rendering: 'to have and to hold' as 'to have and behold.' Another struck out an entirely new version, and faithfully promised 'to have and be told.' 'To love and to cherish' is another frightful stumbling-block. 'To love and be cherries' was the nearest to the original of many variations popular amongst the males of that parish. The brides were happy with the familiar rendering 'to love cherries and to bay.' 'Pledge thee my troth, and give thee my troth' were, I imagine, words of foreign sound, and I well remember one young person, who was wedding a most vil-

laneous looking fellow, changing her statement into 'thereto, I give thee my throat.'

"In the clause 'with all my worldly goods I thee endow,' they were content to produce a similar sound with a sublime indifference to sense. 'I thee and thou,' 'I thee do bow,' 'I thee allow,' were the most popular of these versions."

Natural History, Science, &c.

An Intelligent Parrot.—The Journal of the Trenton Natural History Society contains some notes by Dr. T. S. Stevens, on a parrot which seems to have been an unusually intelligent bird. The doctor says:

"About four years ago a friend gave me a beautiful grey African parrot (*Ptilinopus erythraeus*). She was but a few months old when I received her, and I have found her to be not only an affectionate and tractable pet, but an interesting object of study. I have watched her with a great deal of interest, with a view of ascertaining whether her imitation and articulation of words are purely mechanical, or whether she has any degree of intelligence as to their meaning. The parrot's memory, power of imitating sounds, and of articulating words, are really astonishing, and with it all I am satisfied there is connected a superior degree of intelligence. There are no words which she cannot be taught to articulate, and scarcely any sounds that she cannot imitate. The barking of a dog, the mewling of a cat, the crowing of a rooster, the cackling of a hen, the whistle of any bird or boy, a cough, a sneeze, the creak of a door, the street-car whistle, and all such sounds she will mimic with a startling degree of perfection. She can so closely imitate the voices of persons with whom she is familiar, in accent and inflection, that the hearer sometimes starts, expecting to see the person standing before him. She imitates my own voice and that of my wife so closely, that when about the house and out of sight of each other, we are both often deceived by her answering for us. If my wife asks me a question, or requests me to do something, Polly's 'What do you say?' will often cause her to repeat the question, while her 'Yes,' 'No,' 'All right,' are in such perfect imitation of my voice, as to entirely mislead into the belief that I have answered her questions and received her messages; and Polly's call of my name in my wife's voice often sends me off on a fool's errand to see what it is wanting.

"She also possesses ventriloquial powers of no mean order. She can reproduce a distant sound just as it falls on the ear. The howling of a distant owl, the barking of a dog in the distance, and similar sounds are reproduced with such effect that it is hard to realize that their author sits within a few feet of you. Her power of learning words and sentences is remarkable; all commonplace words that she hears about the house, she readily picks up and uses. She recognizes the milkman, the butcher's and the grocer's boys, and will give the stereotyped salutation of each with laughable mimicry and effect."

"She will initiate a running conversation between two or three different persons, interspersed with exclamation and laughter. If she hears two or three ladies chatting together, she may keep silence until they have departed, and then she will begin to imitate their different voices so naturally that you might imagine they were still in the room chatting and laughing together in the most energetic manner. Of course she does

not articulate the words properly, but her chatter sounds to you just as their talking and laughing would if you were just far enough away to hear the conversation without distinguishing the words. This gibberish, no doubt, conveys as much meaning to her as if she could repeat word for word the whole conversation. It is only an imitation of what she hears."

"Then again, she sometimes uses language that she has before learned when it accidentally happens to fit the occasion, and to this I think might be attributed some of the startling things that have been credited to parrots. On one occasion Polly looked on with interest while an old lady was paying me some money, and while it was being counted out, but just as it was handed to me, she exclaimed, "That's the way money goes." The lady thought that the bird surely knew that she was parting with her money, while the fact is that the sight of the money had nothing to do with it. She only happened to utter at the proper time a sentence she had learned. On another occasion a young lady asked Polly to sing for her. After pressing her request several times she was answered by the common excuse, "Polly has got a bad cold," accompanied with a violent fit of sneezing. The young lady was just as fully satisfied that she had the answer as an excuse for not wishing to sing as if she had given it herself, while in reality the parrot only happened to say at the right time something she had previously learned, without the least intention of making an excuse."

"There are words whose meaning she has learned to understand and to use intelligently expressing her wishes, as a young child would. She is very fond of coffee and will say, "Polly wants some coffee," and she expects to get coffee by thus asking for it. If she sees a person pouring water or taking a drink, she will say, "Polly wants a drink," and stretch out her neck expectantly and persists in asking until she gets it."

"Nothing gives her more pleasure than to be allowed to sit a while after supper on my shoulder as I am reading, and she will be as delighted and as ready as a child to have a little romp if I will but give the signal by laying down my paper and pulling her red tail. She will retaliate by playfully pulling my hair or whiskers, or giving me a little pinch on the ear or cheek or by snatching my lead pencil or cigar out of my pocket, and throwing it on the floor. Then she will swing herself over, hanging out of my reach; and if I attempt to get hold of her tail or foot, she will threaten: "Polly will bite!" Polly will bite!" at the same time getting hold of my finger and giving it a gentle pinch. If I pull my hand away as if hurt, and place it over my face, pretending to cry, she will try to remove it, and plead in a most tender manner, "Oh, don't cry, don't cry, kiss me; kiss me!" and when she gets my hand from my face she will give a kiss on the cheek, consider everything made up, and be ready for another bit."

"I am satisfied that in asking for a drink, for coffee, for her dinner, her supper, to be taken from her perch, and for many other things, she understands the language she uses. She knows nothing about the syntax, but she knows that by using such and such verbal formulae, she will attain certain definite ends."

"She seems to recollect and recall things of the past by the same mental process that a human being would use, and by the association of ideas. The summer months she spends in the country, and when there she will soon learn the names of the men, the boys and the dogs

about the farm. She will call and scold the chickens and ducks, drive the horses and the cows, squeal like the pigs, cackle like the hens and crow like the roosters. When she returns to town she will, in a few days, drop all this and take up the talk that she has been used to at home. If in a week or two, or a month, it may be, some one whom she knows comes in from the country, the sight of him recalls to her mind the country and its associations, and for the remainder of the day the household will be entertained by all the noises, sounds and calls that she recalls in the country, as one after another she recalls and repeats them, thus showing that one thing will suggest to her mind other things associated with it."

Items.

The Indian School at Carlisle.—The Ninth Annual Report of this institution, for the year ending Sixth Month 20th, 1888, gives the total number of pupils connected with the school as 657 belonging to 42 different tribes. During the year 108 pupils had been received, 27 had been returned to the different agencies, and 21 had died. Of the deaths 16 were Apache children, who had arrived at the school in a low physical condition, many of them suffering from chronic disease. All the deaths were from tubercular consumption or kindred disease. During the year 436 of the pupils had been placed for a longer or shorter period in families and on farms. The reports received from those under whose care they had been placed were generally favorable.

Theological Training.—The Chicago correspondent of the *Ecclésiastical* of Philadelphia, gives the following advice on the subject of the training of ministers to the Methodists. It is of peculiar interest to those who hold the views of the Society of Friends on the qualifications which alone are necessary for the exercise of gospel ministry.

"At a recent Monday meeting of our Methodist ministers, a paper was read by one of their number advocating the necessity for a theological and classical training for the Methodist ministry. Brethren, just let that subject alone. You have already drifted into a very serious error. The views of our outsiders can be allowed to express an opinion, you have lost by the drift. If you have kept the run of current discussions you have seen that the Presbyterians, after a long and thorough experience with Theological Seminaries and the literary training of our ministers, are now trying to find some way by which, without the influence of our seminaries, of which we now have too many, we can get men into the ministry around the seminaries and with more of a practical than a literary and theological training—men of sound sense and earnest piety, and who are 'in touch with the people.' Perhaps we have had more of a feeling, and a Church History and Bible study, and a literary training for practical and successful work among the people. Call a halt, brethren, and if you do not wish to stay where you are, just go back to your old lines of work and wait for us to join you."

Secular Appropriations.—Of the taxes to be levied during the current year in the City of New York, \$1,142,232.61 is appropriated to charitable and benevolent institutions. Of this sum \$832,130.25 is set aside for institutions under the specification of Episcopals, Roman Catholics and Hebrew Jews. In reference to such appropriations *The Independent* remarks:

"We have no objections that Catholics, Episcopals, Presbyterians, Congregationalists, Jews, and even infidels, should organize as many private charities as they please, and in the same teach their own religions tenets, provided always that they will be content to foot the bills thereof out of their own funds. This is their unquestionable right. But when religious sects seek to use the funds raised by general taxation for the support of their sectarian charities, either in the form of a private charity or in aid of a private sectarian school for the education of children, is misused and diverted from the purpose for which it was raised by taxation. The fundamental principle of our institutions is that the friends of religion must pay it bills by voluntary contributions, and that the public money shall be used only for purposes in which all the people have a common interest.

"To compel a taxpayer to help support Catholicism, whether he wishes to do so or not, by using for this purpose a part of the money collected from him as a tax, is to him a gross injustice. This injustice is avoided only by leaving all the religious sects to pay the bills of their special propagandism. There should be no departure from this rule in a solitary instance or to the amount of a dollar."

THE FRIEND.

SECOND MONTH 9, 1889.

In connection with the efforts now being made in the limits of Philadelphia Yearly Meeting to spread a knowledge of the spiritual principles of the Gospel of Christ, and to invite the people generally to submit to his government in their hearts, we have recently felt how important it was that the members of our own religious Society should dwell in such close communion with the Father of spirits, and live so "holy, justly and unblameably" as to show forth the practical fruits which true religion is designed to produce.

Our Saviour said to his disciples, "Ye are the light of the world. A city that is set on an hill cannot be hid." "Let your light so shine before men, that they may see your good works and glorify your Father which is in Heaven." And He gave a serious warning to those who cause others to offend by their evil example, when He uttered the solemn language, "It were better for a man that a millstone were hanged about his neck, and that he were drowned in the depth of the sea," than that he should offend one of these little ones which believe in Him.

If the members of a religious Society are redeemed from the spirit of the world, and seeking first (above all else) the Kingdom of heaven and the righteousness thereof, they will, in the nature of things, attract those who are visited by the same Divine Spirit that is dwelling in them. Their whole course of life will say to such, "Come and have fellowship with us, for only our fellowship is with the Father, and with his Son, Jesus Christ." Thus, they will be "preachers of righteousness," even although they may seldom express much in words to others. On the other hand, whatever profession they may make, if their lives do not come up to the gospel standard, they will have little or no influence in drawing others to the Source of all good, or inducing them to yield obedience to the Spirit of Christ—the only way in which they can experience redemption.

May we all be duly sensible of the responsibility that rests upon us for the influence we exert over others; and bear in mind the truth, that if we would be instruments in the Lord's hands to promote his blessed cause among men, we must walk in the Light of his Holy Spirit.

SUMMARY OF EVENTS.

UNITED STATES.—The President has sent to Congress additional correspondence relative to Samoa. The papers show that in conference with representatives from Secretary Bayard, the German Government has exempted foreigners from the operations of martial law in Samoa, and has ordered the German Consul there

to relinquin his command of the administration of the islands.

The Secretary of State has received from Prince Bismarck a proposition for the continuance, in Berlin, of the sessions of the conference on the subject of Samoa, held in Washington in 1887.

During the First Month the reduction in the public debt amounted to \$1,226,284. The cash in the Treasury amounted to \$2,000,000.

The Twentieth Annual Report of the Board of Indian Commissioners, was, on the 1st instant, submitted to the Secretary of the Interior. It asks, among other things, that the appropriation for educational work among the Indians be increased to \$2,000,000 for the first year, \$3,000,000 for the second, and \$4,000,000 for the third year. Education among the Indians is stated to be making substantial progress.

The United States wear out annually 100,000,000 pairs of shoes, of which New England makes and sells 10,000,000.

On the morning of the 2d instant, the *New York Herald* was published simultaneously in the three greatest cities of the world—New York, London and Paris. After months of preparation the London edition was successfully issued. It is an eight-page sheet, not quite so large as the New York edition, but typographically as nearly like it as a due regard for English tastes and traditions could permit.

In the Senate of Pennsylvania, the joint resolution adopted to submit to the President an amendment to a popular vote has been passed by a vote of thirty-three to two. The resolution has been signed by the Governor, and the election will take place on the 18th of sixth month, next.

Adversity from Alaska saw the winter there has been a very discouraging one to the people, owing to severe storms. The heaviest snow storms since 1875 occurred this winter, and traders and hunters have suffered great hardships and much delay in preparing for the coming hunting trips.

A very destructive fire started in Buffalo, New York, early on the morning of the 2d instant, and burned fiercely for four hours, doing damage estimated at over two million dollars. Two firemen were killed.

A street car drivers and conductors' strike in Brooklyn and New York, almost totally prevented travel on the surface railroads of both cities during last week. In the latter city they were mostly running again on the 4th instant, the places of many of the men being supplied from Philadelphia, and other parts.

Dr. Kenworthy, City Health Officer, of Jacksonville, Florida, in his report for the month, notes only twenty-two deaths, from sixteen different causes, and not one of them from fever of any type.

Deaths in this city last week numbered 399, an increase of 34 over the previous week, and a decrease of 61 compared with the corresponding period of last year. Of the foregoing 209 were males and 190 females; 55 died of pneumonia; 51 of consumption; 37 of old age; 25 of typhoid fever; 22 of cholera; 22 of various diseases of the heart; 12 of Bright's disease; 12 of casualties and 10 of debility.

Markets.—C. — U. S. 4 1/2, res, 108; cotton, 100; 48, 12; currency 65, 120 a 130.

Wheat advanced, but not much. Small sales at 10 1/2 cts. per pound for middling uplands.

Feed.—Winter bran, choice, \$17; do, fair to prime, \$16 a \$16 75; spring bran, \$15 a \$16.

Flour and Meal.—Western and Pennsylvania super, \$2 75 a \$3.00; do, extra, \$3.00 a \$3.60. No. 2 winter family, \$2 75 a \$4 25; Pennsylvania family, \$4.00 a \$4 75; Pennsylvania roller process, \$5 a \$5 25; Ohio, clear, \$4 75 a \$5.00; do, straight, \$5.00 a \$5 25; Indiana, clear, \$4 75 a \$5.00; do, straight, \$5.00 a \$5 25; 25; Louisiana, clear, \$5.00 a \$5 25; winter patent, fair to choice, \$5.10 a \$6.00; do, straight, clear, \$4 25 a \$6.00; do, straight, \$5.00 a \$5 75; do, patent, \$6.00 a \$6.75.

Wool.—Wool.—Extra, 4 1/2 a 5 cts.; good, 4 1/4 a 4 1/2 cts.; medium, 3 3/4 a 4 cts.; common, 3 a 3 1/2 cts.

Sheep.—Extra, 5 1/2 a 6 cts.; good, 5 1/4 a 5 1/2 cts.; medium, 4 1/2 a 5 cts.; common, 4 a 4 1/2 cts.; culls, 3 a 3 1/2 cts.; lambs, 4 a 7 1/2 cts.

Hogs.—Western, 9 a 7 1/2 cts.; State, 6 a 6 1/2 cts.

Small cows were not much sought after, at \$2 1/2 a \$5.00.

FOREIGN.—It is stated that Sir Julian Pauleston, Permanent Under Secretary of State for the Foreign Office, has been appointed British Minister to the United States. Although the report is not officially confirmed it is believed to be true.

It is also stated that the British Government's appointment is creating intense irritation in British

diplomatic circles, as a departure from the rule of succession in appointments according to rank in the service.

D. Sheehy, member of Parliament for Galway, was being sentenced to four months imprisonment, without hard labor, for making speeches at Ballynett.

Joseph Cox, M. P., and Tully, editor of the *Roscommon Freeman*, have been sentenced to four months imprisonment on a charge of conspiracy. They have entered an appeal.

William O'Brien was arrested in Manchester on the 29th ultimo. He was taken to Ireland and lodged in Clonmel Jail to undergo the terms of a sentence of three months' imprisonment on Sir John Lubbock on the Crimes act. When ordered to remove his civilian clothing and don the prison garb, W. O'Brien refused to obey the order, whereupon he was seized by warders and his clothing was forcibly removed. His beard was then shaving, the hair made a desperate resistance, and was exhausted by his efforts to prevent the removal of his clothing.

The Manchester *Guardian* says that Lord Salisbury, yielding to great pressure, will withdraw the English vessels from the blockade on the East African coast as soon as Germany commences to operate on shore.

Confidence in the French Government has passed the Chamber of Deputies on the 21st ult., by a vote of 300 to 240.

The London correspondent of the *New York Tribune* says:

"Thursday's events in Paris do not seem to have changed the situation. The Boulangists practically acquiesced in the vote of confidence given by the Chamber to the Floquet Ministry. They still hold to the view that the Government cannot carry immediate dissolution, nor put in a Ministry of their own. Their policy for the present is to keep quiet.

"Paris, in truth, is alarmed by its own act. Not the Anarchists, of course. They are only alarmed when they come well away. There is amongst the middle-class and upper-class commercial classes, who gave General Boulanger a great deal of support, now see that they have injured the prospects of the Exhibition. Nobody knows what will happen this summer. Many foreigners have left Paris, many who meant to come will stay away. There is amongst every European capital. The press is asking whether France means to celebrate one revolution by another. The syndicate which is running General Boulanger has large commercial interests to think of. Its leaders know that France would bitterly resent anything which should lessen the expected profits of the Exhibition."

The journals of both parties in England condemn the German action of Samoa. The *Daily News* declares that this country cannot sanction the German policy until some clearer justification for it appears. The *Standard*, which cannot be suspected of friendliness to America, discusses the whole subject in an elaborate article, moderate in tone, most strenuous in substance and entirely hostile to the Anglo-German policy in Samoa as applied to America. Articles of this kind in the leading *Tory* journal are often supposed to be inspired by the Foreign Office. They sometimes are, but more often are wholly independent of official influence.

On account of the action of the United States Senate in granting a credit for a coaling station at Pago Pago, the *National Zeitung* says: "America obtained the right to establish a coaling station on Malietoa, but she did not take advantage of the privilege within the specified time." The establishment of a station now would appear to be an American protest against German annexation."

On the 30th of last month, Archduke Rudolf, the Austrian Crown Prince and heir apparent to the throne, died suddenly at Meyerling, near Baden, about 12 miles from Vienna. It is not known whether it was his head, but whether he died by his own hand or by that of another, is not known to the public.

George Kennan says in his article on Siberia, in the *Twelfth Month Outing*: "There are thirty runshops to every one of our runshops, and throughout Eastern Siberia runshops to every school throughout Eastern Siberia, and in a country where there exists such a disproportion between the facilities for education and the facilities for intoxication, one cannot reasonably expect to find clean, orderly or prosperous villages."

NOTICES.

A Friend in New England is desirous of obtaining a woman Friend as housekeeper, &c., his wife being an invalid. Further information can be obtained of one of the *FRIENDS*, No. 116 N. Fourth Street, Philadelphia.

CONCORD QUARTERLY MEETING.—For the accommodation of Friends attending Concord Quarterly Meeting, a special train will be run from West Chester to Media on the 12th inst., leaving West Chester at 9 o'clock, and stopping at intermediate stations to take on passengers, about 20 minutes ahead of the regular train.

FRIENDS' INSTITUTE LYCEUM.—An organization of Friends in Philadelphia, is now holding its meetings fortnightly on Sixth-day evenings. For each meeting some literary exercises are arranged, after which there is time for social intercourse. The average attendance so far this year, has been about 125 on each occasion. It is the desire of those who are active in the management of the Lyceum, that Friends generally should feel that they are always welcome at its meetings. The next meeting will be held in the lecture-room of Friends' Select School, No. 140 North 10th Street, on Fourth-day, Second Mo. 13th, at 8 o'clock. Notice of subsequent meetings, which it is expected will be held on *Seventh-day* evenings, will be posted on the bulletin board in the Institute Rooms, No. 1305 Arch Street.

WESTWON BOARDING SCHOOL.—At a meeting of the Committee charged with the care of this Institution, held in Philadelphia on the 11th inst., it was decided that the pupils of the school, which children shall be admitted to the school hereafter, shall be *eleven* years, instead of *nine*, as heretofore. This rule to apply to future new admissions, and not to those who are, or have been there, and are desiring to return.

By J. CONNATHAN G. WILLIAMS, *Sup't.*

First Month, 1889.

WESTWON BOARDING SCHOOL STAGE.—During the Winter of the present year the Western Station on the arrival of the 8:53 and 2:47 trains from Philadelphia, to convey passengers to the school, and at other times on timely notice to

J. G. WILLIAMS, *Sup't.*
Westwton, Pa.

WESTWON BOARDING SCHOOL.—A competent teacher of Mathematics will be wanted in the girls' department, at the opening of the next session, Fourth Month 30th. Application may be made to

ELIZABETH ALLEN, Principal,
3210 North 10th St., Phila.,
ANN ELIZABETH COMFORT,
Fallsington, Bucks Co., Pa.,
or REBECCA EVANS,
P. O. Box 129, Moorestown, N. J.

DIED, at her residence in the 6th concession of Pickering, on the 2nd of the Eleventh Month, 1888, REBECCA HUGHES, relict of the late Wing Rogers, aged 86 years, 10 months and 28 days. She was a member of Pickering Monthly Meeting of Friends. Her funeral was largely attended by persons of different denominations. On this occasion, several testimonies were borne on the necessity of a preparation for that life which is to come, while time and opportunity are afforded. This dear Friend led to her friends with a meek and lowly living, and a quiet life that had no peace. She was of a meek and quiet spirit, lived in peace with all, and was generally beloved. She was a true helpmate to her worthy husband, who often was absent from home for weeks together, performing sometimes long and arduous journeys with his own horse and carriage, leaving the care of the farm and family to his beloved wife, who faithfully discharged her part, and shared in the sheaves of peace on his return. Their friends have reason to believe they have been gathered as shocks of corn fully ripe, ready for the reaping, and that the mercy of Christ Jesus our Lord, whom they loved and served.

—, Twelfth Mo. 20th, 1888, near Dupont, Kansas, (GREAT SMITHSON, aged 68 years, a member of Oklawaha Monthly Meeting, Iowa.) Living, his family and friends ample evidence that he was prepared for the final change.

—, First Month 24th, 1889, at her residence in Exeter, Berks County, Pa., LYDIA LEE, widow of James Lee, in the 70th year of her age, a member of Exeter Monthly Meeting. She was a consistent member of our religious Society, and was of a meek and quiet spirit. She felt that her day's work was accomplished, and as the end drew near, frequently asked to be released, and has, we would not care, one of the "many mansions" prepared for the righteous.

THE FRIEND.

FOR "THE FRIEND."

The Diary of Mary Coates.

(Continued from page 220.)

"11th. The fore part of the day engaged in reading some epistles, one of which in particular, affected my mind to some profit. In the afternoon, took a ride with Deborah Ferris; had some communication concerning meetings of discipline, and such not giving up to put a hand to the work who might have a concern, but through fear or looking at their own weakness, fell short of performance; which, at that time, I thought, appeared to me not only a hurt to particulars, but hurt the cause."

"14th. Was much disordered in my health, so that when meeting time drew near, was doubtful whether I had best go, not knowing but I might have to leave it before it was concluded, but having a desire to go, I went, and think I was better part of the time (my pain not increasing in my breast) and have cause to be thankful for the opportunity, having to feel in some degree longings of soul for renewed help, and that I might witness Him who had from time to time visited my soul, still to be near, but the humbling consideration of my unworthiness bowed my mind, and this secret cry was raised to the Father, 'leave me not.' Thou knows, Oh! my God, that the desire of my mind is towards Thee; that I may be an object of Thy continued mercy, and whether Thou may see meet to lengthen out my days or not, yet let me be Thine, whether in life or in death; and if it should stand good with Thy Will to take me hence, before my dear mother, be Thou near to support her under the trial, and comfort it to her, and in Thine own due and appointed time give us to meet again in Thy Glorious Kingdom, where we may ever live to sing praises to Father, Son and Spirit, who is worthy both now and forever. Amen!"

"19th. Let me remember and be encouraged by it. He who said, 'in this world ye shall have trouble,' also graciously said, 'but in me ye shall have peace.' Not much conversation passed at this time, yet hope it was spent to profit. My spirit being measurably tendered under the consideration of some things, past and present, and this cry repeatedly ran through my mind to the Lord (with a degree of life) 'Let me be thine.' Manifold are Thy mercies, Oh, my God! to me an unworthy creature! And what returns have I made? humbling con-

sideration indeed; having nothing to plead but infirmities, a back-sliding daughter, but Thy compassion faileth not toward that seed which thou hast quickened. Oh! that Thou mightest be pleased still to preserve it; and re-visit my soul with sanctifying grace, that so, I may be strengthened to put in practice that good desires which have been raised, and are best known to Thee who knows the secrets of all hearts!"

"21st. Took a ride; divers subjects were discoursed on, worth remembering, with a particular hint to me by way of caution, which I received well, and desire to remember. After I returned, went to the weekly meeting, and here it may not be amiss to note the exemplary cure I have observed in some of this family that they may all attend meeting, both children and servants, week-days as well as First-days. I put me in mind of the good resolution of one formerly who said, 'Let others do what they will as for me and my house, we will serve the Lord.' The meeting was silent as to the outward, but my mind seemed unstable as the waters most part of the time; towards the conclusion some feeble desires were raised that if [I] could not go towards Jerusalem, I might not go towards Jericho, but stand still."

Eighth Month 2nd. This day came my uncle Reynolds and cousin R. H., being on their return from Nottingham to Philadelphia. In the evening had some reason to think the increase of my disorder will prove the intermittent fever. If it should be the case, desire I may be patient under it, though far from home, yet amongst kind friends, and if I am but favored with his presence who can make hard things easy and bitter things sweet, hope I shall be enabled to resign myself up to his all-wise disposal."

"11th. Was not well enough to attend their week-day meeting. My mind much in the same situation as yesterday, most part of this. The evening was a time of favor, may I thankfully say, my spirit being deeply bowed, and my heart melted in humble contrition before Him who regardeth the cries of the poor and needy. I was led in a particular manner to desire the preservation of the visited youth. Oh! that you may stand faithful; girl up the loins of your mind, watch and be sober; think not that you may abate of that care and watchfulness you found necessary in the beginning, but keep on your Spiritual Armor, and fear always, that you may be preserved from the snares of death; look not out to the example of such who have not been faithful, but are leaning to this and the other wrong thing, gradually falling away into the spirit of the world, baulking their testimony and becoming stumbling blocks in the way of tender inquirers; plead not the example of these, neither be discouraged by them, but study to be quiet, and mind your own business, love retirement, often get alone to wait upon the Lord, that ye may renew your strength, to persevere in the Spiritual Warfare, to the pulling down of strongholds of sin and Satan, both in yourselves and others."

"12th. Some conversation passed this day

from which I think there may be a little instruction gathered, respecting moderation which is too much departed from by us as a people. Oh! that the eyes of many might be opened to see the wrong things which have crept in and now prevail amongst us to the dimming of the beauty of Zion. The evening spent to some satisfaction."

"14th, and First-day of the week, am prevented by indisposition from attending meeting, which has often been the case of late, and would, I believe, be an affliction to me now I am frequently deprived of that benefit, if I had been negligent in time of health, which I hope I have been preserved in a good degree from, the last twelve years of my time, and have cause to be humbly thankful for the many blessed opportunities afforded in time past. And now, my brothers and sisters, I would recommend it to you to be diligent in attending meetings; be retired therein, and observe the time appointed, which many are deficient in. It bespeaks a careless, indifferent mind. If such knew the value of them, when rightly improved, it would stir them up to more diligence; they would not need to be called upon by others to attend, but would be glad when meeting day came, and not let small matters hinder them. I would have my dear brothers and sisters be concerned to seek first the Kingdom of Heaven and the righteousness thereof, and other things will be added. Let not the world, nor the things of it, which perish with the using, engross your time and attention beyond due bounds; it will afford more joy and comfort on a sick bed, or in a dying hour, if you can have the evidence of peace, than all the world can give. Press after this righteousness, although the way to obtain it may be strait and narrow; and you must give up your whole hearts and bear the cross, which, if you faithfully do, you will have cause to say, 'Thy ways, O Lord! are ways of pleasantness, and all Thy paths are peace!' May this be your happy experience is the desire of your sister, who expects to be clothed of mortality when you may read these lines."

"16th. Employed part of the morning in reading; the subject was weighty, and led my mind into some profitable considerations; it proved a heart-tendering season."

"21st. Was at the First-day morning meeting, great part of which was to me a hard, dry time, (yet willing to hope it fared better with others) till near the conclusion. Ancient Kindness touched my heart and tendered my spirit, in some measure, and though sorrow and lamentation was my portion in the prospect of things, I then had, yet have cause to be thankful, in that I had to feel the risings of life, in which there were breathings of soul to the Father who hears the secret cries of those who have no helper like unto Him who is the all-sufficient Helper of his people."

"25th. In the afternoon had a profitable season in retirement (and reading some passages of Scripture) feeling the renewed extendings of Divine Kindness, which affected my heart."

"28th, and First-day of the week, attended both meetings; the first was to me, a humbling, baptizing season, under a sense of my weakness and great unworthiness, with an apprehension or fear that all was not right, or it would not be thus with me, not only at that time, but many others. Oh! I want to be deeply grounded and established in the life of religion, to grow in the root and not to sit down at ease, or trust to former experience: it will not do, being sensible it is not what I was, but what I am, the Lord looks at. Oh! strengthen my faith in Thee, whose power is above every other power, Thou that art touched with a feeling of our infirmities, increase my hope and confidence in Thee, who art the Great Shepherd of Israel, that I faint not. The afternoon meeting was a heavy distressing time, great poverty and leanness being my portion, but I do not judge of the state of the meeting by what I felt, yet fear there is too great indifferency prevails with some to their own loss, and the increasing of the burdens of the true burden-bearers."

(To be continued.)

FOR "THE FRIEND."

A Geological Excursion into Maryland.

(Concluded from page 219.)

At the conclusion of the last number of this article, we were approaching a serpentine quarry on Broad Creek. Here we found much to interest. The quarry has been opened for some time and worked to a considerable extent.

Serpentine is one of the softer rocks, about equalling limestone in hardness, so that it may be scratched with a knife or file, which is not the case with the Granite, Gneiss and Quartz which we met with in our excursion. These are all harder than steel. It is generally of a green color; often of various shades intermingled, and from this it derives its name, from a fancied resemblance to the markings on the skin of a snake. It is composed principally of Silica, Magnesia and Water, and often contains Iron and Chrome, to which the dark color of some varieties is attributed.

The Serpentine in this quarry is massive in character, that is does not appear to lie in any regular beds or strata, though it is often intersected with joints or crevices. In quarrying, it is thrown out by the explosion of powder in large, irregular or rounded masses. Those of these which are suitable are taken into the mill and then cut into slabs in the same manner as blocks of marble are in a marble mill. A frame containing as many blades of soft iron as are sufficient to cut the whole of a block into slabs, swings back and forth over the block, on which a small stream of sand and water steadily flows. The sand, pressed against the stone by the iron blades, cuts its way into it, and, if the process is continued long enough, eventually cuts through and converts the block into separate slabs of whatever thickness the manufacturer has decided to make them. These slabs are then cut into whatever shape is desired and polished, just as the marble tops of bureaus, tables, &c., are polished.

The irregular shapes of the pieces thrown out, causes an enormous amount of waste stone, which there seems no way to prevent. The refuse stone would be valuable for building purposes, if it were nearer to a market, but the distance to be hauled before reaching railroad or canal is too great to permit such a use of it. So the quarrying operations are restricted to the preparation of ornamental articles, whose value is large in proportion to the weight. The stone takes a

fine polish, and in this form is very beautiful. The foreman of the works kindly gave us polished specimens, which are by far the most beautiful of the objects we collected during this excursion.

Professor Genth of the University of Pennsylvania, who made an examination of this deposit, says, that in addition to the Silica, Magnesia and Water of which all Serpentine consist, this stone contains Chrome, Iron, Manganese and Nickel. To some of these metals he attributes the dark shades of green which diversify its appearance. It is a stone on which the weather has but little influence, and when polished so as not to admit of the absorption of atmospheric influences, he regards it as practically unalterable.

We noticed in different parts of the quarry, thin scales of what is called Precious Serpentine, a light green, almost translucent form of the mineral. In other parts we observed veins composed of Serpentine crystallized in needle-like fibres; and at one place there was a long vein, nearly vertical in position, filled with Feldspar. It was evident that after the Serpentine had been formed, a crack had taken place, and the narrow opening thus made had been filled with water holding in solution the materials contained in Feldspar, which had there crystallized and thus cemented together the separated faces of the original stone.

I have already spoken of Feldspar as one of the minerals present in Granite and Gneiss. Indeed next to Quartz it is the most abundant material in the rocks of the earth. All of its varieties contain Silica and Alumina, but they differ in having different alkalis, as potash, soda and lime, added to these constant ingredients. It has a pearly lustre on the broad smooth faces of its crystals.

In speaking of the mill which we visited on this excursion, where the lumps of Quartz were powdered for the use of the porcelain manufacturers, it was mentioned that the first process was to heat these in a kiln. The object of this is to render them more easy to be pulverized. The effect of heat is to expand bodies subjected to it. The outside of the blocks of stone exposed to the flames in the kiln receive the heat first, and expand with irresistible force, before the inner parts can partake of the same effect. This expansion tends to break loose the layers of particles on the outside from those within to which they were before joined; and thus to form a series of cracks, which extend through the whole mass as the process of heating goes on. This effect is increased by the reverse process of cooling in which the contraction, which always accompanies it, is different in different parts of the lumps, and so still further weakens the cohesion of the parts.

There are few housekeepers who have not witnessed the effect of these sudden changes of temperature on crystalline substances, such as vessels of glass, which are often broken by hot water coming into contact with them when cold, or by being suddenly chilled when hot. This method of pulverizing is sometimes applied to the slag issuing from iron furnaces, which is an impure glass, and which is reduced to powder by pouring a stream of cold water over it while still red hot. In the manufacture of soluble glass, which is generally sold to consumers in a state of solution, the former process was to reduce to powder by mechanical means the solid mass that was poured out from the furnace, and then to dissolve this in water. A great improvement has been effected by receiving in a vessel of water the glass as it issues from the furnace

in an intensely heated condition. This reduces it into the state of a coarse powder, and greatly facilitates its subsequent solution in water.

The Quartz, Feldspar and perhaps other minerals with which we met in our excursion, have been spoken of as *crystalline* substances. Among the most common of crystals are those beautiful forms of Quartz, which are termed Rock-crystal, and are familiar probably to most of my readers. In their perfect state they are very transparent, so that they illustrate the force of the comparison, "clear as crystal;" and they have regular shapes. Originally, indeed, the term "crystal" was applied only to Quartz, which the ancient philosophers believed to be *water* hardened by a very intense cold, and so gave it this name, from the Greek word for ice. Ice itself is one of the most common forms of crystal; and during the winter season, every one may witness its formation when a vessel of water is exposed. The crystals will be seen starting from the side of the vessel, or from any object floating on the surface, and shooting out in regular lines till they interlock and entirely cover the surface; and if the exposure is long enough continued, converting the water into a solid mass. Though the ice which is thus formed is a mass of crystals, yet in a lump of it we are not able to see the individual crystals of which it is formed. Such is the condition of most of the masses of rock found on the earth, whose structure we know to be crystalline. It is only rarely that the crystals are found isolated from other material, so that we can see their real shape.

Crystals are found of all colors, and many of them are opaque; so that transparency is to be regarded as an accidental circumstance, but the regularity of form is an essential character. In their formation, the particles of matter arrange themselves in certain definite lines; but it is mostly the case that the process is interfered with by some disturbing cause, so that the crystals are imperfect in shape. Professor Dana states that the greater part, and probably all, of the rocks and minerals that occur on our globe, are collections of imperfect crystals. Even those whose structure seems to show the least trace of it, he believes, are probably composed of crystalline grains.

This tendency of the particles of matter to arrange themselves in certain definite lines, and to cohere in those positions (which is the meaning of crystallization) is the cause of the solidity of the earth's crust. Without it, those particles might be free to move among each other, and there would be no solid matter, no rock, nothing more stable than the waves of the sea. Whether this tendency is to be regarded as an ultimate law of matter; or whether the researches of science may so connect it with other facts, as to show their mutual dependence on some more general principle; in either case the Christian philosopher, who recognizes in all the works of Nature the hand of the great Architect of the Universe, can reverently ascribe unto Him the praise of his own works. J. W.

"NOTHING short of the work of grace in the heart, the new birth, and the washing of regeneration by the word, can make a sound and right Christian, and a true minister, for we must be born again, before we can see the kingdom of God."—S. Loomis.

An uninspired ministry cannot be clinging to the hearers in a spiritual sense. It is like a cipher that will hold no water.

FOR "THE FRIEND."

A Letter from Ebenezer Worth.

The following letter has been forwarded by a Friend in Ohio. It was written by that delicate servant of Christ, Ebenezer Worth, of Chester County, Pa., whose memory is precious to many who knew and loved him. He was at the time residing at Tunesassah, endeavoring to carry out the concern of Philadelphia Yearly Meeting for the improvement of the Seneca Indians, and this letter gives evidence that the promotion of religion among them was a subject near to his heart.

The allusion in the early part of the letter to the state of things then [1845] existing in the Society of Friends, refers to the disputes and discussions which arose out of the writings of the late J. J. Gurney, of England.

"Reading thy token of brotherly kindness, has brought feelingly and solemnly to my recollection days that are past, when we were brought to sympathize with our elder brethren, whilst they were passing through that deep and sore trial, occasioned by a sorrowful departure in many of our members from the precious doctrines and testimonies which our early friends in Christian love and boldness promulgated to the world and suffered for. I have of late, at times, felt much sympathy with my friends, on account of the present truly distressing state of things in society. I believe, dear friend, these trials evidence in our own experience the great necessity of being engrafted into Him who is the true vine, who would be our life, light and strength, and preserve us from the dividing and scattering of the enemy, to the one people to the praise of his great and excellent name.

"O was this our happy situation! is the breathing desire of my heart. Would it not be so with us at the present, had we, as a society, more generally kept near to Him who gathered our forefathers to be a people, and who can alone preserve us?"

"As thou hast expressed a wish to hear how the Indians were getting along, I will endeavor to give thee some account. The Seneca Indians, as others, have been much wronged and injured by the whites. Previous to the year 1838 the Senecas owned four reservations in this State, containing 114,869 acres of land as follows: Buffalo Creek Reservation, 49,920 acres; Cattaraugus, 21,680; Alleghany, 30,469; Tonawanda, 12,800.

It is said the Ogden Company (they hold the prescription right) obtained the treaty of 1838 very dishonestly, by bribes, and in some instances gave the Chiefs intoxicating drinks in order to get them to sign the treaty. In 1842 there was another treaty made that is called the compromise treaty, in which the Ogden Company agreed to give up the Cattaraugus and Alleghany Reservations, and I understand the majority of the chiefs signed away their rights to the other two. I think I have been told the Tonawanda Chiefs never signed either; and that the first was not signed by a majority of the chiefs. It seemed hardly to have the shadow of legality about it. In the first, the company was to have all the land and improvements for \$202,000; \$100,000 for the soil, and \$102,000 for the improvements; in the last treaty, the price was proportioned according to the one fixed upon in the first. The Ogden Company, according to the last, is to have possession next spring. The Tonawandas have always stood opposed to these treaties, and have said they would not leave theirs until they are forced. They appear

strongly attached to the homes of their forefathers. There is said to be about twenty-five hundred Indians living on the four—about eight hundred on this. The Alleghany Reservation is about twenty-nine and a half miles long, commencing at the lower end at the Pennsylvania line; and follows the river to the upper end. In some places along the river there are some fine flats; back from the river, the country is mountainous and rough. The natives generally improve but slowly in agriculture, a number of them keep oxen, cows and hogs; and some, horses and sheep. There are a few that have pretty good farms, and raise grain to sell; but a number of them have not land enough cleared to raise provisions for their own families, and are quite poor. They appear naturally lazy. I think the women are rather more industrious than the men. They both appear to learn readily anything they undertake. The men generally build their own houses and barns, and a number of the women cut out and make clothes well. I got a pair of trousers made by one, some time ago, they fit well and appear to be well made; since then the same woman has made two or three pair for the white family that lives on Friends' farm, where I board.

"The natives appear rather mild in their dispositions, and have been very friendly to me; I have had a good deal of satisfaction in talking with some on the subject of religion. They appeared to give evidence of a good deal of tender feeling and concern on the subject. A number have, upon their death beds, expressed their willingness to die, with a comforting and consoling hope they were going to the Great Spirit.

In two instances they expressed a wish to be gone; one of these was the daughter of old Complanter, and the wife of a Chief, a woman about fifty. A short time before her death I talked with her; the interpreter told me she thought the time long, she wanted to be with her Saviour. She was a member of the Presbyterian Society. The other did not belong to any Society. I frequently called at the house where she was during her sickness. I think the first time I talked with her about her situation, she spoke in this way, that she had been a great sinner; that there was a great debt of sin resting against her, which she did not feel able to pay; that her mind and body were sinking together; that when she had strength she used to pray (I suppose during her sickness); that she then hardly had strength to pray. I told her that it was not always necessary that prayer should be spoken aloud; that the Lord knew the desires of our hearts and could understand secret prayers as well as that spoken aloud; and mentioned the parable of the prodigal son, setting forth the mercy and loving kindness of the Lord to sinners, and that our Saviour could remove that debt of sin, and I believed would, if she would look unto Him and be faithful to what is required of her. I felt it a serious matter to express so much. It remained with me after I had left the house, but believing that I had spoken from a sense of feeling, I felt satisfied. I believe the poor woman was much favored with a feeling sense of her own situation. Before her death she expressed her resignation to the will of her Divine Master, and the day before she died I understood she appeared to be happy and expressed a wish to be gone.

"There was a young man died near Tunesassah, whose disease was a lingering one. The latter part of his time he appeared quite serious. I understood the day before his death, he talked with his father, mother and two sisters; express-

ed his willingness to die; that he believed that he was going to the Great Spirit; advised them to be good, and warned them of the uncertainty of time. I have attended some of their funerals, they were conducted in a solemn and becoming manner. There is only one thing very singular about them, that is, before leaving the house, the women sent themselves near the corpse (or I may say a number of them) and draw their blankets about their heads and make a kind of mournful singing cry. I allude to the old party.

"I have had two schools in operation the most part of the summer and fall; one at Cold Spring, the other about fourteen miles further up the river near to Great Valley. I taught the one at Cold Spring myself, and hired a white man to teach the other. Schools amongst the natives are rather poorly attended during the pleasant seasons of the year, and better attended in the winter. There are some of the children that read in the Testament and write pretty well, and are learning the arithmetic. I expect to continue the schools through the winter. A year ago I had three schools, one on Complanter's Reservation. This reservation is in Pennsylvania, on the Alleghany River, about four miles below this. It is about two miles long and half a mile wide; besides, they have two islands that I think contain about one hundred and forty acres. The land is of a good quality, and is mostly occupied by the descendants of old Complanter. He was a chief, a man of talent and good influence.

"In regard to leaving, I am not able to fix the time, but desire to be preserved in patience and resignation until our Divine Master shall make it known to me. Please write when thou feels it right so to do, for thy letters are very acceptable. In sincere love, I remain thy friend,
EBENEZER WORTH.

FOR "THE FRIEND."

Settlement of Meetings in New Jersey.

(Continued from page 221.)

The Friends settled on the Ranococas or "Northampton River," very soon set up meetings for worship at their dwellings, as follows, viz.: "A six weeks meeting was held at Joshua Paine's on Northampton River; a meeting was also held at the house of Daniel Wills in the forks of said river. Another was very early settled at the house of Daniel Wills, ('not that in the forks' of the river.')

"Meetings for worship on First and Fourth-days, were also settled at Northampton, to be held at the house of Thomas Harding," &c., as is shown by the following minutes of Burlington Monthly Meeting. "It is agreed that the meetings on Ancocks (or Ankokas) be held at the house of Thomas Harding."—1681.

"The meeting that used to be kept at Thomas Cline's, and John Woolman's, is now ordered to be kept at Daniel Wills' house, weekly."—1687.

In 1703, a meeting-house was built upon ground given by John Wills, called Northampton Meeting-house; the meetings before alluded to were then discontinued. This house which stood quite near the present burial ground, was replaced by another upon nearly the same site, in 1722, which continued until the new brick house was erected in 1772, about half a mile north of it, which was enlarged as it now stands in the village of Ranococas.

CHESTERFIELD.

A meeting for worship, held on First-days, was continued from the first settlement by the English (1677) at the house of Thomas Lambert,

until the building of the meeting-house and settlement of the Meeting at Chesterfield, about 1680, at which time the Monthly Meeting was established, but it was not always held there as is shown by the following minute:

"At our Monthly Meeting at Francis Davenport's house, near Crosswicks Creek, the place now called Chesterfield, ye 2nd of ye 8th month, 1684. It is agreed that a week day meeting be kept every 4th day of ye week at ye house of Matthew Watson."

The meeting-house at Crosswicks was built in 1692, and the first Monthly Meeting held in it 6th of Eighth Month, 1693. Meetings were held here until 1706, at which time a new and more commodious house was erected near the former one. This house was of brick, and enlarged in 1753. Another account says, "About 1738-9, it was found desirable to have a larger meeting-house, and a large brick building was built upon land given by Samuel Bunting; this house was enlarged in 1773." This building was occupied as barracks by the American troops in 1778, and a cannon-ball was lodged in its walls. On First-days, however, the benches were arranged and meetings held in it as usual.

In 1831, a frame meeting-house was built near this, which was succeeded until 1853, when a brick structure succeeded it.

OLD SPRINGFIELD.

1682.—"It is ordered that Friends at Esiskunk Creek have a meeting at the house of Thos. Barton, on First-days, for the winter season."

1687.—"A meeting for worship was set up at Esiskunk Creek, and held by turns at the houses of Thomas Barton, John Day, and John Curtis." "A three weeks meeting for worship was established to be held circularly at Old Springfield and at Burr on the Hankokas."

1694.—"It is agreed that the meeting-house of Springfield be built on the hither side of Mattacopyn bridge."

The meeting-house was built in 1698, on ground given by Richard Ridgway.

MANFIELD.

1731.—Mansfield Meeting was settled in 1731, and a meeting-house built the same year on ground of Francis Gibbs. It was a long narrow frame building, and was replaced by a more modern brick structure, upon the same site, in 1812.

MANFIELD NEW.

1753.—A meeting was allowed to be held near William Polwell's on First-days, once in three weeks during the winter. In 1783, it was established with the privilege of a Preparative Meeting.

UPPER SPRINGFIELD.

As respects the origin of this meeting we find the following minute:

"A meeting for the winter season hath been for several years past, held in part of Upper Springfield, at a house provided for the purpose, nigh Shreeve's Mount." In 1728, the meeting of Upper Springfield was established, and their meeting-house built the same year upon ground of Joshua Shreeve.

In 1783, the Monthly Meeting was organized, being parts of Burlington and Chesterfield Monthly Meetings, and was composed of the Meetings of Mansfield, Armetown, Upper Freehold and Upper Springfield.

MOUNT HOLLY (or Shreeve's Mount.)

In 1704, a Meeting was settled at Restow Lippincott's to be held for the winter season, which was discontinued as the

following minute of Burlington Monthly Meeting shows.

1716.—"Whereas there was one little meeting kept at two places, one at Restow Lippincott's, and one at Daniel Wills', which hath been for a considerable time; but now there is a meeting-house built at Mount Holly for the accommodation of those two meetings."

The Mount Holly meeting-house was built upon ground given by Nathan Cripps, on the northern slope of the mount, and on the site of the Cemetery on Wood Lane. It was standing in 1776, and used by the British troops as a stable.

1742.—"The Friends at Mount Holly, alias Bridgeton, requested of this meeting to hold a First-day evening meeting in Bridgeton, for the winter season, which is allowed by this meeting." (Burlington M. M.)

1743.—"The Meeting having considered the application of sundry Friends belonging to the upper part of Mount Holly Meeting, do consent that they hold a meeting according to their request." (B. Mo. Meeting.)

In 1762, a new meeting-house was built in the more central part of the town, for an afternoon meeting. It was used by the British during the Revolutionary war, as the head-quarters of their Commissary department, and the benches for cutting meat upon; the hacks and marks of both cleaver and knife are still to be seen upon them, as well as the marks of the British musket barrels upon the floor.

Mount Holly Monthly Meeting was constituted in 1776, by a division of Burlington Monthly Meeting, and was composed of the Meetings of Mount Holly, Shreeve's Mount, Old Springfield and Upper Springfield.

VINCENT TOWN.

1765.—"A written proposal from sundry Friends, for keeping an afternoon meeting during the summer at a school-house lately erected near William Bishop's, was now read and agreed to." (Min. Burlington Monthly Meeting.)

A meeting was afterwards established at Vincent Town, and a meeting-house built; but the meeting has been discontinued some years.

(To be continued.)

A Remarkable Negro.—A negro, one remarkable for literary attainments, was recently discovered in one of our Chicago Police Courts. When an interpreter was needed on the trial of a disorderly Italian, this negro was brought into Court. He spoke the Italian language with the fluency and correct emphasis of a native. And then the wonder began to grow. It continued to grow. It reached its climax when it was discovered that this negro, who professed to work around the city at "chores," although entirely uneducated in other branches, could speak the German, Spanish, French, Italian, Greek and several Indian languages fluently and correctly. He was born in Spain, had wandered over a large portion of Europe and of this country, and had picked up his linguistic knowledge in the countries he visited without acquiring any thing else of more service to him than that knowledge was. Probably, for the first time in his life, the Professor held a *levée*. He was honorably discharged and went his way in search of more chores after receiving a fairly liberal contribution.—*Correspondent of the Presbyterian.*

WHEN the creature and its works are in the grave, when self is entirely dead, then the Creator is most glorified.

THE DYING MOTHER.

A mother lay on her dying bed,
Beside her stood her son.
With one hand placed on his youthful head,
She prayed to the Holy One.
Her cheek was pale, and her eyes grew dim,
And faintly she drew her breath;
She had labored well through life for him
And she strove for him in death.

"I come, I come from the scenes of care
To a world where all is love;
Oh! that I in my arms could bear
My child to the realms above.
I have sown good seed in his tender heart,
I have taught him from sin to flee,
But, oh! the summons has come to part,
And I leave him now to Thee.

"A mother's care, he may know no more,
But Thou canst her place supply;
O! keep him safe, and when life is o'er,
May she meet her boy on high."
Her spirit fled to a better world,
And a wail rose over the dead;
And the daisy spraves on that mossy tomb,
And the grass waves o'er her head.

But think ye, no marks of her life remain,
Because she has passed away?
Or that her efforts were all in vain,
Lost like the ocean spray?
Nobly her mission was finished here,
And well has she won her high."
But think ye no fruits of her toil appear!
Are there none by her efforts blessed?

Go, mark that man who is bowed with age,
Who wears the wreath of frost,
Long hath he travelled the world's broad stage,
Ask him if his life was lost.
For he, though changed, was the self-same child
That stood by her dying bed,
The child who died in his sorrow wild,
When he found his mother dead.

Go mark his reply, "I have travelled far,
I have sweated from my track,
But she has served as a guiding star,
And her prayers have led me back.
And often in the festal hall
When I have heard the wicked scoff,
Would thought of her or my spirit fall,
And I could not shake them off.

And often, too, in the solemn night,
When all around me sleep,
In dreams once more she has blest my sight,
And I awoke and wept."
A high degree have her efforts won,
And soon 'twill be hers to meet,
Where all is love, with the darling son
She led to the merciful seat.

BY-AND-BY.

What will it matter by-and-by,
Whether my path below was bright,
Whether it wound through dark or light,
Under a gray or a golden sky,
When I look back on it, by-and-by?

What will it matter by-and-by,
Whether I unheeded I left a stone,
Dashing my foot against a stone,
Missing the charge of the angel sign,
Bidding me think of the by-and-by?

What will it matter by-and-by,
Whether with laughing joy I went
Down through the years with a glad content,
Never believing—nay, not I—
Tears would be sweeter by-and-by?

What will it matter by-and-by,
Whether with cheek to cheek I've lain
Close by the pallid angel, Pain,
Soothing myself through sob and sigh;
"All will be elsewise by-and-by?"

What will it matter? Naught, if I
Ook am sure the way I've trod,
Gloomy or gladdened, leads to God;
Questioning not of the how, the why,
If I but reach Him, by-and-by.

What will I care for the unshared sigh,
If, in my fear of slip or fall,
Closely I've clung to Christ through all,
Mindless how rough the path might lie,
Since He will smooth it by-and-by?

Ah! it will matter by-and-by
Nothing but this: That Joy or Pain
Lited ne skyward, helped to gain,
Whether through rack, or smile, or sigh,
Heaven—home—all in all, by-and-by!

—Margaret J. Preston.

THANKSGIVING.

BY IRVING BROWNE.

Upon the frozen, fruitless ground,
Above a treasure he had found,
A robin sang;
Such rapture swelled his slender throat
The dall air quivered with his note;

The silence rang
With melody so high and long
He seemed to be incarnate song;

He seemed to thirst—
So tame he was as I drew my pen—
That all the heavens and earth should hear
The grateful burst.

No alderman at turtle feast
Nor hungry man o'er smoking beam

Such bliss could he know;
No parching traveller on the sand,
Discovering water near at hand,

More joy could show.
No juicy fruit nor dainties ripe
Had thus attuned his little pipe

To thank the Lord;
'Twas but a bunch of withered berries
Or nutritious, starving cherries
That spread his board!

That robin's rapturous merriment
Exposed man's selfish discontent

In its true feature:
That day a sermon rare and good
Was preached in aisle of summer wood

By feathered creature,
And often when I bow my head
In thankfulness for bounties spread

And look on high,
I walk once more as in my youth
And hear again in very truth

That robin's cry.

ALBANY, N. Y. —The Independent.

THE men employed about the dome and roof of St. Peter's are called San Pietrini. They dwell upon the roof. Most of them were born there, as were generations of their kind gone before. There are forty-one of them—twenty regular employés, seventeen supernumeraries, two aspirants to the place of supernumerary, and two who do only sweeping and cleaning. The illumination of the dome and cupola used to take over 300 men. Extra hands were hired for the occasion from trades and occupations in which labor is done at dizzy heights, and they were set to work under the direction of the San Pietrini. Every precaution was taken against accidents. The writer's informant, a San Pietrini grown old and gray in the service, said that although oftentimes some of the men employed were careless, yet, during the forty-four years preceding 1870, only three men, all of them San Pietrini, had lost their lives by falling. One fell from the roof while repairing an arm of the statue of St. Andrew; the other two fell while illuminating the dome. —Exchange.

"WHEN a stranger treats me with want of respect," said a poor philosopher, "I comfort myself with the reflection that it is not myself that he slights, but my old and shabby hat and cloak, which, to say the truth, has no particular claim to adoration. So, if my hat and cloak choose to fret about it, I let them, but it is nothing to me." —Christian Age.

FOR "THE FRIEND."

The instances given in a late number of THE FRIEND of some mistakes in the meaning of words made by the Indian children at Carlisle, are not unlike those which are frequently met with by persons who have the care of the instruction of children.

In a class on United States History, a boy was reciting the adventures of Sir Walter Raleigh, in his attempts to establish colonies in this country. The teacher inquired whether Queen Elizabeth had in any way rewarded him for what he had done.

"O, yes," said the boy, "she gave him a *night-eep*."

The book said she had rewarded him with *knighthood*; and this was the interpretation of that word which the child had given to it.

T. N. Rawlins of Delaware, who relates the above anecdote, also says that one of the teachers in the public schools of that State was in the habit of giving her small pupils talks on various subjects, and calling upon them at some subsequent time to repeat what they had heard. One day the State Superintendent came in, and among other classes called was the class of little fellows to whom she had been giving these talks. She had but recently given them the story of the capture of Quebec, and, as they had all seemed to be much interested, she concluded to have one of the little fellows give her the story. She had asked for this particular story because she wanted the little fellows to do their best. So one of them began, telling all about the situation, and how the English had stealthily scaled the Heights of Abraham.

"And," said he, "when the French saw what had been done they were struck by lightning."

"Struck by lightning?" exclaimed the truly amazed teacher.

"Yes, marn," said he, "you told us that they were struck by *thunder*. But then you know you told us one day that thunder never struck any body. So we concluded you made a mistake and meant they were struck by lightning."

She had told them that the French were *thunderstruck*.

The *Sunday School Times* states that a teacher asked a bright boy in his class, what was the meaning of the expression in reference to our Saviour, that "They were astonished at his doctrine?"

The boy promptly replied: "They wondered that he could cure the people." That boy had confounded "doctoring" with "doctrine."

In another case, a teacher asked one of his scholars, "What is a wilderness?" Promptly the answer came back, "A little house." That scholar's ignorance was appalling to his teacher. Yet it was not thoughtlessness on that boy's part which prompted that answer. The boy had been told of the Israelites going out from their Egyptian homes to live in the wilderness, and of their living forty years in the wilderness. He naturally inferred that a wilderness—as a place to live in—was a house; and as he was told that it was a privation to the Israelites to live there, instead of in their Egyptian home, he took it for granted that a wilderness was not a capacious house, but a small one.

This answer showed that the child had an active mind, and that he had reasoned on the use of the word, although he had drawn an erroneous conclusion. And it must be borne in mind, that the main source of our knowledge of the meaning of words is, the manner in which they are used.

FOR "THE FRIEND."

The White Ant as an Agriculturist.

Henry Drummond, in his "Tropical Africa," adduces some reasons to show that in parts of Africa, the White Ant or Termité, performs the same function for which Charles Darwin has shown that other portions of the globe are indebted to the common earthworm.

In order to produce a succession of crops, the lower layer of soil, exhausted with bringing forth of it. The upper film, restored, disintegrated, and saturated with fertility and strength, must next be slowly lowered down to where the rootlets are lying in wait for it, deep in the under soil. Man performs this work with the plough, turning up the crust and turning down the refreshed soil. And nature does it by natural ploughmen, millions of whom are at work in every part of the globe, slowly turning over the earth's crust from year to year.

According to Darwin, the animal which performs this most important function in nature is the earth-worm. He calculates that on every acre of land in England, more than ten tons of dry earth are passed through the bodies of worms and brought to the surface every year. He says: "The plough is one of the most ancient and most valuable of man's inventions; but long before he existed the land was, in fact, regularly ploughed by earthworms. It may be doubted whether there are many other animals which have played so important a part in the history of the world as have these lowly organized creatures."

In the central plateaus of Africa, during the greater part of the year, the worm cannot operate at all. "The soil," says Drummond, "baked into a brick by the burning sun, absolutely refuses a passage to this soft and delicate animal. All the members of the earthworm tribe, it is true, are natural skewers, and though boring is their supreme function, the substance of these skewers is not hardened iron, and the pavement of a tropical forest is quite as intractable for nine months in the year as are the frost-bound fields to the farmer's ploughshare. During the brief period of the rainy season worms undoubtedly carry on their function in some of the moister tropical districts; and in the sub-tropical regions of South America and India, worms, small and large, appear with the rains in endless numbers. But on the whole the tropics proper seem to be poorly supplied with worms. In Central Africa, though I looked for them often, I never saw a single worm. Even when the rainy season set in, the closest search failed to reveal any trace either of them or of their casts."

Its place in those regions seems to be taken by the White Ant. This insect "lives almost exclusively upon wood; and the moment a tree is cut or a log sawn for any economical purpose, this insect is upon its track. One may never see the insect, possibly, in the flesh, for it lives underground; but its ravages confront one at every turn. You build your house, perhaps, and for a few months fancy you have pitched upon the one solitary site in the country where there are no white ants. But one day suddenly the door-post totters, and lintel and rafters come down together with a crash. You look at a section of the wrecked timbers, and discover that the whole inside is eaten clean away. The apparently solid logs of which the rest of the house is built are now mere cylinders of bark, and through the thickest of them you could push your little finger. Furniture, tables, chairs, chests of drawers, everything made of wood, is

inevitably attacked, and in a single night a strong trunk is often riddled through and through, and turned into matchwood. There is no limit, in fact, to the depredation by these insects, and they will eat books, or leather, or cloth, or anything, and in many parts of Africa I believe if a man lay down to sleep with a wooden leg it would be a heap of sawdust in the morning."

The White Ant is most seen, and yet it cannot procure its food until it comes above the ground. How does it solve the difficulty? It takes the ground out along with it. I have seen white ants working on the top of a high tree, and yet they were underground. They took up some of the ground with them to the tree-top; just as the Esquimaux heap up snow, building it into the low tunnel-huts in which they live, so the white ants collect earth, only in this case not from the surface but from some depth underneath the ground, and plaster it into tunnelled ways. Occasionally these run along the ground, but more often mount in endless ramifications to the top of trees, meandering along every branch and twig, and here and there debauching into large covered chambers which occupy half the girth of the trunk. Millions of trees in some districts are thus fantastically plastered over with tubes, galleries, and chambers of earth, and many pounds weight of subsoil must be brought up for the mining of even a single tree."

"The extent to which these insects carry on their tunnelling is quite incredible until one has seen it in nature with his own eyes. The tunnels are perhaps about the thickness of a small-sized gas-pipe, but there are junctions here and there of large dimensions, and occasionally patches of artwork are found embracing nearly the whole trunk for some feet. The outside of these tunnels, which are never quite straight, but wander irregularly along stem and branch, resembles in texture a coarse sandpaper; and the color, although this naturally varies with the soil, is usually a reddish brown. The quantity of earth and mud plastered over a single tree is often enormous; and when one thinks that it is not only an isolated specimen here and there that is frescoed in this way, but often the whole of the trees of a forest, some idea will be formed of the magnitude of the operations of these insects and the extent of their influence upon the soil which they are thus ceaselessly transporting from underneath the ground."

"In travelling through the great forests of the Rocky Mountains or of the Western States, the broken branches and fallen trunks strewn the ground beneath are all sorts of decaying litter. Frequently make locomotion impossible. To attempt to ride through these western forests, with their mesh-work of interlocked branches and decaying trunks, is often out of the question, and one has to dismount and drag his horse after him as if he were clambering through a wood-yard. But in an African forest not a fallen branch is seen. One is struck at first at a certain clean look about the great forests of the interior, a novel and unaccountable cleanness, as if the forest-bed was carefully swept and dusted daily by unseen elves. And so, indeed, it is. Scavengers of a hundred kinds remove decaying animal matter—from the carcass of a fallen elephant to the broken wing of a gnat—eating it, or carrying it out of sight, and burying it in the decaying earth. And these countless millions of termites perform a similar function for the vegetable world, making away with all plants and trees, all stems, twigs, and tissues, the moment the finger of God strikes the signal."

"But the works above ground represent only

a part of the labors of these slow-moving but most industrious of creatures. The arboreal tubes are only the prolongation of a much more elaborate system of subterranean tunnels, which extend over large areas and mine the earth sometimes to a depth of many feet or even yards."

"The material excavated from these underground galleries and from the succession of domed chambers—used as nurseries or granaries—to which they lead, has to be thrown out upon the surface. And it is from these materials that the huge ant-hills are reared, which form so distinctive a feature of the African landscape."

"Some idea of the extent to which the underlying earth of the tropical forests is thus brought to the surface will have been gathered from the facts already described; but no one who has not seen it with his own eyes can appreciate the gigantic magnitude of the process. Occasionally one sees a whole trunk or branch, and sometimes almost an entire tree, so swathed in red mud that the bark is almost completely concealed, the tree looking as if it had been taken out bodily and dipped in some crystallizing solution."

"On one range of forest-clad hills on the great plateau between Lake Nyassa and Tanganyika I have walked for miles through trees, every one of which, without exception, was ramified, more or less, with tunnels."

Items.

African Slave Trade and War.—The recent fighting with the Arab tribes near Suakin, on the Red Sea, by English troops is condemned by the advocates of peace in England; as well as the attempts to stop the slave trade by military blockade of the East African Coast. The *Herald of Peace* states that the Slave Trade carried on by the Arabs is worse than ever, and that the most effectual means of checking it, is by the application of civilizing influences to Turkey, Barbary, Egypt, Persia and Asia Minor, which are the principal markets for the slaves. In the House of Commons Sir William Lawson and others strongly protested against the slaughter at Suakin.

Undercurrents in Favor of War.—In speaking of the influences which tend to neutralize the efforts of the friends of peace, the *Herald of Peace* mentions among others the following:

"There are in every country a great multitude of persons, including a large proportion of the upper and most influential classes, whose special interests and prospects of honor and wealth, are inseparably bound up with militarism. This single circumstance, more than ever, and that the most effectual means of human intervention, lead to Divine commands. They are like the man who obstinately arguing, on merely selfish grounds, for his own interests, in spite of religious considerations, was at length simply answered, by his opponent taking a sheet of paper, writing on it the word 'God,' and then putting a piece of red wool over it, and saying, 'Now, do you send the word 'God'?' Of course not,' was the reply. 'Just so,' declared the other, 'your own temporal interest blinds you to the Divine claims in regard to your duty.'"

"There are myriads in European and other nations, whose honors and emoluments similarly blind, and who are so much attached to the military system and the peace of the world are concerned. This vast force of vested interests, in the highest ranks especially, furnishes, at present, incalculable resistance to the effectual promulgation of Peace and Arbitration. To suppose that the presentation, to such persons, of schemes for Civilization and Africanization, and the like, will have any effect, unless it will avail to overcome their present attachment to militarism, is to expect that the tides of the ocean will retire at human command."

Church Discipline. The Arkansas Churchman, in speaking of the Protestant Episcopal Church in

that State, says it has suffered much from various causes, "such as unwise financiering; foolish ritualism, false teaching, unworthy ministers and disreputable laymen." But yet it thinks the outlook is good, for they propose to get their juridical machinery into such a shape as speedily to depose any "unworthy ministers." If, to this proposal, they should add a determination to depose all "disreputable laymen" as would lead to their reformation or expulsion from membership, there would be still greater ground for hope; for, as a contemporary remarks, "Any Christian church can afford to be small—it cannot afford to be impure. It will live with few members, but all of them may fade out of it, when the unworthy members are crowded to their doors, if ungodliness is suffered to rule."

Changes Among Roman Catholics.—A conference of Roman Catholics was recently held in London, at which one of the papers read bore the title, "The Best Way of Inspiring a Love for Holy Scripture." Let no one say that the Roman Catholic Church never changes. How many of the Saints have been burned at the stake, beheaded, imprisoned and otherwise overcast by their priests, preach the Bible and teaching it to their children. In many Roman Catholic countries the people are not allowed to read a copy of the Scriptures now. The example and influence of Protestantism have compelled the Catholics in England and America to adopt religious customs which they denounce and forbid in lands where Protestants are few. Even in Catholic Mexico the effect of the presence of Protestantism has become manifest within a few years. C. W. Drees, who for years was superintendent of Methodist Missions in that country, says that when he first went to Mexico, some twelve years ago, there was no preaching in Catholic churches. The people began to be interested in the Scriptures, and he expounded the Bible, and teach their hearers religion, and began to inquire why the priests did not preach; and in many places a preaching service was introduced which bids fair to become general.

Deaconesses.—A writer in *The Christian Advocate* (Methodist) refers to the action of the last General Conference in instituting an office of Deaconesses in the Methodist Episcopal Church, and regards this not as an innovation, but as a revival of an office recognized in the early Christian church—especially at the time of the first century. It was not a public teacher, but were expected to look after the sick, poor and helpless, and to exercise supervision over the women members. The duty of these primitive deaconesses seem to have been very similar to those which, in the organization of the Society of Friends, are assigned to the woman "overscers," and to the committees which have charge of the poor. In the west of Europe the office was abolished by the Council of Orleans, A. D. 533. In the Eastern Church it appears to have been continued to the Twelfth Century.

Of the use and spread of deaconesses in Europe, in modern times, the article in *The Christian Advocate* is well worth perusing.

In the early part of this century there was at Kaiserwerth, a little village about six miles from Dusseldorf, a devout evangelical pastor, Theodore Fliedner. While in England he became interested in E. Fry's efforts at prison reform. On his return he asked permission for a time to be imprisoned, in order to look at prison life from the inside, as German prisons then were poor indeed. This was refused, but he was allowed to hold services in the prison at Dusseldorf, and through his efforts the first prison society of Germany was formed. One day a discharged female convict came to him asking for shelter and work. In the parsonage garden was a little summer-house twelve feet square. This was given to the poor woman as a home. It was truly a helpmate to him in all his work, and offered the poor woman as a home. Another came, and then another, and the little house became too small. Fliedner called to his aid the pious women of the church, and they responded to his call.

In 1836 he bought a house, fitted it up as a hospital and a work-house for Christian nursing. It was found desirable to organize these devoted trained women into a distinct band, so statutes were drawn

THE FRIEND.

SECOND MONTH 16, 1859.

up and a Society of Deaconesses formed. Such was the humble beginning of the Kaiserswerth of today. The little garden-house is still standing, to be held in perpetuity as a monument of God's Providence. Ending after building has been finished as the circle of practical philanthropy has been enlarged. First of all is the Mother House and Hospital, to which a dispensary is attached; near by the Refuge for discharged female convicts; the Normal School Girl's Orphanage; Insane Asylum for Protestant women; Home for invalid women; and a printing office, publishing all the best issues religious books and tracts. Outside of Kaiserswerth there are twenty-four branch houses, and numerous affiliated stations, such as hospitals at Jerusalem, Alexandria, and Cairo, and girls' schools at Smyrna, Beirut, and in Italy.

There are also Deaconess Institutions in Holland, France, Switzerland, Denmark, Sweden, Finland, Russia, England and Austria. None are received as members save unmarried women and childless widows. As a rule, they must be between eighteen and forty years of age, giving proof that they are devout Christian women entering on this service from pure motives and with a willing heart. The period of probation varies from a few months to two or three years according to the experience and ability of the applicant. Before she becomes a sister, all the Deaconesses at the Mother House have a right to vote upon her acceptance. Each Deaconess is expected to perform her duties gratuitously, not even accepting gifts from patients. All are dressed alike in a simple garb of blue with white cap and collar; all are boarded by the institution, and have a small amount of money for personal expenses. If a Deaconess engages in outside or foreign service, the institution still continues to care for her, and receives the money paid for her services. Of her own property she has entire control.

Beer vs. Food.—Among modern millionaires, brewers have in recent years become conspicuous. Their wealth is accumulated by importing to the poor is well illustrated by the Holyoke (Mass.) *Tromper*, which in a late paragraph, headed "Meat or Beer," says: "On a recent cold morning the very smallest size of a small boy went into a market and asked for five cents' worth of salt pork. It was portioned out, and then the child returned with the money, and said it was for a soup-bone. The bone was produced, and as the marketman handed it to the child, who was barefooted, though snow and ice were on the ground, he observed that he held in one hand a large pail, and inquired what he was to get in it." "Beer," said the small boy. To fill that pail with beer would cost fifteen cents, which was doubtless the sum appropriated for the family's food for that day. This happens daily.—*Nat. Temperance Advocate.*

"THOUGH we may have known our natural tempers subdued in a great degree, at our first setting out in the ministry, by the cross and power of Christ, yet if there be not a daily abiding under that power, our natural inclinations and tempers may prevail again to our hurt, and the blessed effect of that subjection to the spirit, spoken of by the prophet, we shall not experience, 'They shall not hurt nor destroy in all my holy mountain, for the earth shall be full of the knowledge of the Lord, as the waters cover the sea' [Isaiah xi: 9]."—*S. Bownas.*

THE "Indian Witness" says: "When a banker fails in China, all the partners and employees are beheaded." If this law existed in the United States, and were faithfully executed, there would be a wilderness of headless trunks, or a vast improvement in the financial condition of bank patrons.—*Selected.*

THE severity of a man's condemnation is in proportion to the light against which he sinned, and to the clearness of recognition of a duty to resist the temptation to which he has yielded.

The efforts which have been made of late, and which are still making, to obtain possession of additional slices of Indian territory, bring to mind the remarks of the Editor of the *National Gazette* in 1831, when the State of Georgia was most unjustly endeavoring to force the Cherokees to vacate their possessions in that State, and remove to their present homes on the west of the Mississippi. The Editor then said:—

"Whithersoever they may go, the whites, if their lands be of any value, will form settlements about them, will covet their farms and hunting grounds, will organize themselves into States, and set up those pretensions which are now acknowledged as just and irresistible on the part of Georgia. The dilemma will recur, the sad catastrophe be acted over. They never can be able to proceed unmolested in the interesting experiment of gradually advancing a community of American Indians from barbarism to the habits or enjoyments of civilized life."

This prophecy seems likely to be verified, unless the better feelings of the people of the United States, or the interposition of Divine Providence, should check the unscrupulous efforts of some persons, who are seeking to set aside or evade the contracts which our Government made in former years with different Indian nations.

Our readers will, we think, be interested in the following extracts from a letter, received by a friend, from a Chickasaw Indian, G. W. Harkins, an attorney at law, at Tishening, Indian Territory; the Chickasaws were one of the five Indian nations, who thirty or forty years ago were compelled to remove into the Indian territory, from the Southern States.

"I failed in getting money for my people last session of Congress.—[The bill passed the Senate and failed in the Conference committee. It was not carried hand indeed for the Government to sell our land, place the money of the sale in the U. S. Treasury for the land, then force the Indian to go to the Court of their own creation, get judgment, then Congress cut it off, because they don't want to pay."

"There is not an Indian man, woman or child, among my people, who do not wear citizens' clothing, in most cases after the 'improved modern style'—I feel too much attention paid to dress, [in]ore than comfort and economy require."

"My nation is growing in agriculture daily and yearly.—See well arranged farms, good dwelling-houses, barns all over the country. Churches and school-houses are growing in number yearly; and my people spend more money for education than any other people in the world, according to population. This last scholastic term, we spent over \$34,000 for about six hundred scholars. It's too much money for the benefits realized, but the money was spent with good will and intentions for the good of our children. The U. S. Government don't furnish one cent to aid us. The money comes from our invested funds and local taxes. The Chickasaws (my people) are the only Indians whose chief magistrate is styled Governor, with a Legislature and judiciary modeled after the State of Mississippi, the people being better acquainted with that State form of government."

"We have a brick State-house, four large academies for males and females and about

twenty primary schools, with a large number (say sixty) going to school in the States. For this privilege we feel thankful to our Heavenly Father, and ask to be let alone to work out our own salvation—while Congress wants to pass the Oklahoma bill to destroy the autonomy of the Indian Government, [which] they have built up (in a wild country, in fifty years) without aid or help."

"Give the five tribes, the Chickasaws, Cherokees, Creeks, Choctaws, and Seminoles, a little time, they will prove to the world they are capable of self-government, and will compare favorably with the adjoining States. Is this too much to ask for a long-suffering people who own their own lands that they bought and have patents for from the United States Government?"

We are aware that there are differences of opinion among those who have the best interests of the Indians at heart, as to the line of policy which will most promote their true welfare. But we believe that all lovers of them and of our country ought to be united in the conviction, that right or justice should prevail, that our Government should faithfully adhere to its own covenants with them, that no force or fraud should be permitted to be used by its agents in the formation of new agreements, and that whatever changes in their relationship to the general government are desirable, should be brought about, not by the exercise of arbitrary power, but by the slower, but more salutary process of education and conviction.

We fully believe that "righteousness exalteth a nation, but sin is a reproach to any people," that every violation of equity incurs the displeasure of the Great Ruler of the Universe; and that in our treatment of the Indians, as in all other cases, we should do to them as we would have them do to us in similar circumstances, wish to be treated by others.

SUMMARY OF EVENTS.

UNITED STATES.—Secretary Bayard has notified the German Minister at Washington that our Government accepts the proposition for a resumption at Berlin of the conference begun in Washington in 1857, in regard to Samoa.

The President on the 8th instant sent to Congress Prince Bismarck's proposal for a resumption of the Samoan conference, and the President's response. The basis is "mutual independence and equality of rights among the treaty powers." In accepting the proposal Secretary Bayard requests a truce, and that the German officers at Samoa be directed to cease belligerent operations pending the decision of the conference. The Governments of Germany and Great Britain have consented to the publication of the protocols of the last Convention.

A bill making the head of the Agricultural Department a cabinet officer has been signed by the President, who has also nominated Norman J. Colenan, the present Commissioner, to be Secretary of Agriculture. Six nurses from Syracuse, N. Y., have gone out to nurse in the leprosy colony in the Sandwich Islands, and there has arrived here from Liverpool an English woman, named Fabian, who is on her way to act as a nurse in the same colony. Denmark, the priest in charge of the colony, has caught a large quantity of opium, and nurse Fabian does not expect to escape the same fate, but she does not shrink from her heroic task in what is probably one of the most terrible places on earth.

On the 6th instant a blizzard from the northwest had for two days raged throughout the upper peninsula of Michigan. Traffic has been stopped on some of the railroads, but lumber hauling is facilitated by the freezing of the swamps. At Sand Beach the temperature was below zero, and a large load of lumber got stuck. "The air is full of fine frozen particles, and it is almost impossible for man or beast to move. Twenty inches of snow has fallen, but it is heaped in drifts by the gale and all travel and business is suspended."

The Iowa Supreme Court on the 7th instant, decided the original package liquor case, appealed from the

Keeok Superior Court. The decision was against the liquor men on every point, on the principle laid down by the United States Supreme Court in the *Bowman* case. That Inter-State shipments to parties, not authorized to sell, cannot be prohibited, is admitted. "It is just," says the Chief Justice, "by no means follows that the owner has a right, after the property has been delivered to him in the State, to use or dispose of it in a manner different from that prescribed by the laws of the State for the sale or use of such property generally."

On the closing of the saloons in Topeka, Kansas, County Attorney Curtis said recently: "At one time there were 140 saloons open in Topeka; their average sales per day were not less than \$30 each, which would make \$8,400 per liquor; this amount is largely from the working people; to-day there is not one dollar of that amount spent for whiskey. Where does it go? It goes for food and clothing, for children and wife. I know of scores of instances where families were suffering for food, because they no longer gave their wages to the saloon-keeper. Now they are living in a cozy home of their own; they have all the necessities of life, and indeed a few of the luxuries; the children, who were once poverty-stricken and living in rags, are now attending public school. The father will tell you he was saved by Prohibition."

The Massachusetts House of Representatives has adopted the proposed constitutional prohibitory amendment by a vote of 161 to 69.

The prohibition or high license question will be submitted to the people of Nebraska at the next State election.

The mild weather of Twelfth, and the first half of First Month, had its effect on the maple trees of New England. In Maine and Vermont and other sections, trees which gave a good flow of sap, and sugar, were made in midwinter, a very unusual occurrence.

Jacob I. Tonne, the millionaire banker of Port Deposit, Md., has given \$250,000 to a board of seven trustees to fund a training school in that town, to be called the Female Normal Seminary of Port Deposit." The sum of \$500,000 will be spent in erecting buildings, and \$200,000 for the maintenance of the school.

Deaths in this city last week numbered 408, an increase over the preceding week, and an increase of 18 as compared with the corresponding period of last year. Of the foregoing 210 were males and 198 females; 53 died of consumption; 42 of pneumonia; 22 of diseased heart; 20 of old age; 18 of inflammation; 18 of typhoid fever; 17 of convulsions; 14 of inanition; 13 of the brain; 12 of cholera; 12 of Bright's disease; 11 of scarlet fever; 11 of debility and 10 of diphtheria.

Markets, &c.—U. S. 4½, reg. 108; coupon, 109; 4s, 128½; currency 65, 120 a 130.

Cotton was quiet but firm at 10½ cts per pound for middling uplands.

Feed.—Winter bran, choice, 816½ cts; do, fair to prime, 816 a 816.50; spring bran, 815 a 816.

Flour and Meal.—Western and Pennsylvania super, \$2.75 a \$3.00; do, do, extra, \$3.00 a \$3.50; No. 2 white, \$3.00; do, do, Pennsylvania, \$3.00; do, do, \$3.00 a \$4.75; Pennsylvania roller process, \$4.75 a \$5.25; Ohio, clear, \$4.60 a \$4.80; do, straight, \$4.50 a \$4.75; Indiana, clear, \$4.60 a \$4.80; do, straight, \$4.50 a \$4.75; St. Louis and Southern Illinois, clear, \$4.60 a \$4.90; do, do, straight, \$4.50 a \$5.25; winter patent, fair to extra, \$5.40 a \$6.00; Minnesota, clear, \$4.25 a \$5.00; do, straight, \$5.00 a \$5.87½; do, patent, \$5.00 a \$6.75. Rye flour was dull at \$3.00 per barrel for choice.

Grain.—No. 2 red wheat, 95½ a 96 cts.

No. 2 mixed corn, 41½ a 42 cts.

No. 2 white oats, 32½ a 33 cts.

Beef cattle.—Extra, 4¼ a 4½ cts; good, 4 a 4½ cts; medium, 3¼ a 3½ cts; common, 3 a 3½ cts.

Sheep.—Extra, 5½ a 6½ cts; good, 5¼ a 5½ cts; medium, 4½ a 5 cts; common, 4 a 4½ cts; culls, 3 a 3½ cts.

Lamb, 4 a 7½ cts.

Hogs.—Western, 64 a 7½ cts; rough fat Western, at 6 a 6½ cts; State, 6 a 6½ cts; State sows and stags, 5½ cts.

Which cows were not very active, even at \$25 a \$50. His editor writes a paper on "The Amount and Incidence of Imperial Taxation in Different Countries," by J. S. Jeans, was read some days ago, in London, before the Royal Statistical Society. J. S. Jeans described in very general terms the sources of revenue of most of the States of the world, and pointed out the enormous and the great increase during the last twenty years in the amounts levied by taxation upon their peoples. He pointed out that this increase was mainly due to in-

creased expenditure for war purposes, and said: "The present annual expenditure in Europe for war purposes, including armies, navies and interest on war debt, is over £350,000,000 per annum. Thirty years ago the same expenditure was not more than £10,000,000 per annum. This is a very large increase in the use of resources. What is there to show for it? No single nation is one whit the happier, the better, or the more secure. We have at this moment nearly 4,000,000 of men under arms in Europe. Add what these men ought to earn as producers—taking the moderate average of £20 per man per annum, or about £80,000,000 sterling in all—the to the war expenditure already stated, and we have a total waste of £430,000,000 per annum."

On First Month 8th, London experienced a fog, that, indeed, was the most unprecedented and extensive since the "Great Smog" of London, on that day reached the highest point ever recorded—namely, 105,045,000 cubic feet.

It has been ascertained beyond doubt that the steamer which was sunk in collision with the British bark *Large Bay*, off Leith Head, on the night of the 4th inst., was the *Glencoe*, belonging to the Glen Line, of Glasgow. The *Glencoe* was bound from Liverpool to London. She carried a crew numbering 52 men, including 28 Chinamen, all of whom were probably drowned.

The action brought by C. S. Parnell against John Walter, registered proprietor of the *Times*, for libel came up before the Court, at Edinburgh again, and the case was dismissed, the costs being taxed against the plaintiff as producer. It was the understanding that Walter, being one of the partnership owning the *Times*, arrests against him as an individual would be invalid. Parnell will appeal from this decision.

The Caron, an English spy, has given damaging evidence before the Parnell Commission, against several of the Irish Nationalists. The Caron joined the most important Irish Secret Societies in this country, and made himself prominent by his assumed extreme views. It is worthy of remark, however, that several of the English Irish leaders of high character in this country who have been implicated by the informer's evidence have stoutly denied the truth of every part of it relating to them.

Notwithstanding the fact that a heavy snow storm prevailed in London on the 10th inst., that date denoted a great amount of business in the Park, denouncing the Government's coercive measures in Ireland and to express sympathy with William O'Brien was successfully carried out. Thousands of citizens, chiefly from the workingmen's and Radical clubs attended the demonstration, and the park was filled with banners and banners. Speeches were delivered from two platforms. The speakers denounced the Government generally and Balfour especially.

Thomas Condon, member of Parliament for East Tipperary, has been sentenced to two months' imprisonment for inciting boycotting. Kilbride, member of Parliament for South Kerry, has been sentenced to three months' imprisonment, without hard labor, for breach of the Crimes act. Both of them have appealed, and their appeals have been allowed.

On the 10th inst. the *Serfuta* d'Arondissement bill was passed by the French Chamber of Deputies, by a vote of 268 to 222.

De Lesseps has sent a circular letter to the subscribers of the new Panama Canal Company, in which he says: "The law regarding the formation of companies requires the deposit of one-quarter of the share capital. This condition has not been fulfilled by the subscribers for the new issue of shares. I cannot, therefore, constitute a company for the completion of the Panama Canal, until the subscribers have agreed to the liquidator the care of our interests and the destiny of a work which must yet be completed. We will show our confidence by calmly awaiting the decision of the liquidator."

Two French physicians, Drs. Roux and Yers, members of the Pasteur Institute, have discovered a way of isolating the crop microbe, and they furthermore have inoculated the disease in rabbits and pigeons. This is considered in Paris a great step towards the discovery of a method of vaccination against diphtheria, which has been the cause of so much suffering.

A storm of exceptional severity was raging throughout Holland on the 10th inst. The rivers are greatly swollen, and Rotterdam, Dordrecht, Scheidam, Zwole and Kampen are inundated. Many ships wrecked and lives are reported.

Naples, Second Month 11.—A shock of earthquake was felt in this city to-day. Vesuvius is again active. The abnormal severity of the season and the extra-

ordinary heavy snowfalls have made wolves exceeding aggressive in Southern Russia. A native paper says that "issuing from the Podolian and Volhynian and Lithuanian forests, they have assembled in formidable numbers, compelling the inhabitants in the smaller towns and the steppe hamlets to observe a constant watchfulness. On the Nicolaiev post-road a pack of some two hundred wolves appeared some days ago. They were partially dispersed by an organized raid, but such travelers as have the temerity to proceed by that route in sledges are officially warned to see to their weavers."

Much distress prevails in the Chinese provinces of Yangtze and Anhui. A native paper reports that many hundreds of thousands of people are in a condition bordering on starvation; and that the Chinese authorities, being unable to supply the great demand for food, have appealed for assistance, not only to their own countrymen, but to foreigners as well. The severity of the winter is increasing the distress caused by the famine in Sheng Tsung and Manchuria. It is estimated that 250,000 persons are starving in Cheuk-Kiang.

Christmas Island, the latest annexation of Great Britain, is the highest coral island known, rising three or four hundred feet from the sea.

The annual report of the Indian Department of the Dominion Government, which has been issued, says that there is certainly cause for encouragement at the advancement toward that status which, when attained, must result in the amalgamation of the Indian element with the general population of the country. The various tribes, on the whole, are enjoying prosperity. The Indian population of the Dominion is 124,589.

RECEIPTS.

Received from Henry Bell, Agent, Waterford, Ireland, 4s, 10s, being 10s. each for himself, John Adair, William White, Thomas R. White, John H. Colvin, S. Fayle, Daniel Alesbury, and John E. Southall, vol. 62, and 10s. for Benjamin Bishop, to No. 27, vol. 62.

NOTICES.

WESTWON COMMITTEE ON INSTRUCTION.—A stated meeting of the Committee on Instruction will be held in Philadelphia on Seventh-day, the 23rd of Second Month, at 10 A. M.

GEORGE M. COMFORT, Clerk.

BUCKS QUARTERLY MEETING.—Bucks Quarterly Meeting will be held on the 28th of Second Month at *Fallington* instead of at *Buckington*, as heretofore.

GEORGE M. COMFORT, Clerk.

WESTWON BOARDING SCHOOL STAGE.—During the Winter term the stage will be at Westwton Station on the arrival of the 8:53 and 2:47 trains from Philadelphia, to convey passengers to the school, and at other times on timely notice to

J. G. WILLIAMS, Supt.

Westwton, Pa.

WESTWON BOARDING SCHOOL.—A competent teacher of Mathematics will be wanted in the girls' department, at the opening of the next session, Fourth Month 30th. Application may be made to

ELIZABETH ALLEN,

327 North 16th St., Phila.,

ANN ELIZABETH COMFORT,

Fallington, Bucks Co., Pa.,

OR REBECCA EVANS,

P. O. Box 129, Moorestown, N. J.

A Friend in New England is desirous of obtaining a woman Friend as housekeeper, &c., his wife being an invalid. Further information can be obtained by addressing THE FRIEND, No. 116 N. Fourth Street, Philadelphia.

MARRIED, at Friends' Meeting-house, Germantown, 13th of Second Month, 1888, HENRY ECKHART, of Philadelphia, son of Jesse and Mary W. Haines, of Muncy, Pa., and ANNE MARISS WISTAR, daughter of the late Thomas Wistar, Jr.

DIED, Tenth Month 1st, 1888, at her residence, Reading, Pa., LYDIA HARTZ, wife of Elias Hartz, in the 54th year of her age, an esteemed member of Exeter Monthly Meeting, Pa. Although not residing near the meeting of which she was a member, she always manifested a lively interest in its welfare, and attended it whenever able to do so. She was of a meek and gentle spirit, and bore the suffering meted out to her with Christian fortitude. Her friends feel the language to be applicable to her, "Blessed are the dead who die in the Lord."

THE FRIEND.

Entered as second-class matter at Philadelphia P. O.

FOR "THE FRIEND."

Historical Review of the Society of Friends.

The period of the arising of our Society, about the middle of the Seventeenth Century, was one of much religious excitement in England. Many people had become uneasy with dependence on forms and ordinances, and were earnestly seeking to experience the real virtue and saving efficacy of the Gospel of Christ. The ears of the people were open to hear, and when George Fox and his fellow-laborers showed them the way of salvation which they themselves had been taught of the Lord, the message was received with gladness of heart. Many of their hearers were persons who had long mourned over the dominion which they felt sin had over them, but yet knew not how to escape from its bondage; and when they were told that the same Holy Spirit which showed them their sin would enable them to forsake it, if they would but listen to and obey its Divine teachings, they rejoiced that the way of deliverance was thus pointed out to them. Great was the conviction that followed. Meetings of Friends were established in many parts of Great Britain; and it was estimated that in and around London alone, the number of members soon exceeded 10,000; while the whole membership of the Society within fifty years of its rise, was probably not less than 60,000, and may have far exceeded that number.

The severe persecution to which Friends were exposed in those early days, tended to keep them in a healthy spiritual condition—and this necessarily, in time, won the esteem of sensible and thoughtful men; for however public opinion may be misled for a season, it generally in the end, forms a true estimate of the characters of those who are brought prominently into view. As persecution subsided, the zeal and devotion which characterized the early members were somewhat relaxed. Having won, in considerable measure, the favor of the world, and grown in wealth and influence through the practice of those self-denying virtues which true religion teaches, it no longer required a man to take his life in his hand in order to be a consistent Quaker. But the tendency of these altered conditions was to make it easy for a person to be a professor among Friends, while not subject in heart to the crucifying, regenerating power of the Spirit of Christ. Hence we believe there was an ebbing in the flow of vital religion among

us in the earlier and middle portions of the eighteenth century.

But in his wondrous goodness, the Lord raised up in different parts of the Church about that time, many noble instruments who labored earnestly and extensively for a revival of primitive zeal and faithfulness, and whose labors were widely useful. Such were John Churchman, John Griffith, Samuel Bowens, John and Samuel Fothergill, and many more, whose journals contain much information as to the state of society in their day, as well as much deep instruction in religious things. As the century drew towards its close, many were raised up with Gospel authority, and sent to and fro to preach its glad tidings. At one time no less than seven ministers from Philadelphia Yearly Meeting alone were so engaged beyond the ocean.

In the latter part of the eighteenth century, the Society of Friends began to be more conspicuously known as advocates of the rights of man, and promoters of those reforms in which the happiness of mankind is so much involved. In examining the records of its history, it is interesting to notice how one concern after another came prominently before it, in addition to the never-ceasing exercise which belongs to every religious body for the preservation of its members in the life of religion, and for the spread of the Redeemer's kingdom in the earth. If we take, for instance, the Yearly Meeting of Philadelphia, at that period much the largest and most influential body of Friends on this continent, we find that up to about 1755, the civil government of the then province of Pennsylvania was largely in the hands of members of our Society. The troubles growing out of the war between France and England, in which some of the American Indians were induced to take part, by the agents of the contending parties, brought so heavy a pressure in favor of military measures to bear on the colonies, that Friends generally withdrew from the management of public affairs. Our Meeting for Sufferings was established at that time, originally to watch over the interests of our Society and its members, especially those dwelling in remote districts and exposed to hostile movements, during the intervals of the Yearly Meeting. It was found so convenient and useful a committee, that it has been continued to this time, and additional duties have been assigned to it by the Yearly Meeting.

For several years after its appointment much of the time of the Meeting for Sufferings and of the active members of the Society was occupied in the relief of those driven from their homes by warlike movements, in contending against militia laws which violated the rights of those who were conscientiously opposed to war, and in endeavoring to bring about a peaceable settlement on a just basis of the disputes with the Indians, so as to put a stop to the murderous work on the frontiers. This course naturally exposed them to much unjust censure and ridicule from those of a different spirit, especially in places which had been subjected to hostile incursions, where an unchristian and murderous spirit was easily

excited, as it still is in such localities at the present day. As an illustration of the feeling towards Friends at that time, Watson, in his Annals of Philadelphia, quotes the following lines:—

"In many things, change but the name,
Quakers and Indians are the same,
I don't say all, for there are such,
That honest are—'em of the Dutch;
But those who the Indians' cause maintain
Would take the part of bloody Cain,
And sell their very souls for gain."

A mob of Irish Presbyterians in Lancaster Co., about the beginning of the year 1764, gave sad evidence of the prevalence of this spirit by murdering in cold blood the feeble remnant of a band of inoffensive Indians who had lived all their lifetime as peaceable neighbors of the white settlers—and with whom they had grown up in friendly relations. Yet these bloody-minded fanatics killed every man, woman and child of the race they could find, under the crazy notion that it was a religious duty to extirpate, as Proud says, "the heathen from the earth, as Joshua did of old, that these saints! might possess the land alone."

Notwithstanding the many discouragements, Friends, aided by divers other well-disposed persons, persisted in their efforts to redress the grievances of which the Indians complained, and by liberal presents out of their own pockets to those who had been wronged, and by patient, prudent, persevering labor, did much to open the way for the restoration of peace.

After these Indian troubles had passed away, the disputes between the Colonies and the British Government, respecting the right of taxation; and the war which grew out of them; furnished ample occasions for concern and labor to those who felt bound to watch over the flock for their preservation. The members of our Society were alive, as well as others, to the importance of the political questions involved; and they were liable to be carried away with the current of popular excitement. To guard against this the Meeting for Sufferings, in 1769, issued an epistle of caution and advice "To our Friends and brethren in these and the adjacent provinces," containing an earnest exhortation "to guard against promoting or joining in any measures proposed for the support of our civil liberties, which, on mature consideration may appear not to be dictated by the wisdom from above which is pure, peaceable and gentle." From this time onward, for a number of years, there was a frequently recurring necessity for the extension of care to prevent the more impulsive members from violating their allegiance to the government under which they were placed, by taking part in revolutionary measures; and to preserve them from becoming infected with a military spirit.

In the Sixth Mo. 16th, 1774, the following minute was adopted, and was subsequently sent down to the Quarterly and subordinate meetings: "A considerable time was spent in this meeting in a weighty consideration of the fluctuating states of people's minds under the situation

of public affairs, and it appeared to be the sense of this meeting, that it would be safest and most consistent for us, as a religious Society, to keep as much as possible from mixing with the people in their human policy and contrivance, and to forbear meeting in their public consultations, as snares and dangers may arise from meetings of that kind."

In the First Month, 1775, 3000 copies were directed to be printed of a "Testimony" prepared by a committee consisting of Anthony Benezet, David Evans, John Morris and James Pemberton. This "Testimony" recognizes the duty of denouncing themselves as peaceable subjects of the king; declares their entire disapprobation of many of the late political writings and addresses as contrary to the nature and precepts and harmony of civil society; and laments that in endeavoring to ascertain and establish the just rights of the people's modes of proceeding have been pursued which have involved the colonies in confusion, and appear likely to produce violence and bloodshed.

(To be continued.)

Along the Route of the Nicaragua Canal.

The great basin of the Nicaragua, which is about three hundred and fifty miles long and about one hundred miles wide, is what first attracted the eyes of the engineering world toward the section as probably the best point for an inter-oceanic canal. The basin drains Nicaragua from every direction, and has but one outlet to the Atlantic—the River San Juan, whose waters will be utilized by the canal company. After some days delay at Moabita, at the northern end of Lake Managua, I secured the services of two bright Indians to accompany me as sailors through the lakes and down the San Juan to Greytown, on the Atlantic. I managed to hire a large, safe canoe, and with the aid of a native tailor and carpenter, to rig her as a cat boat.

I had not intended to touch at any point to buy the solids for food until reaching Greytown, and the bow was pretty well staidied by the canned stuff laid in at Moabita. The unavoidable delays of preparing early breakfast on shore induced me to put a small petroleum stove amidship, so that at the dawn of day we were often scudding along while our coffee was cooking. The trade winds come from the northeast and sweep the lake and continent until they meet the conflicting currents of the Pacific and use themselves up on the coast in revolving breezes, which a landsman would say "blew from every quarter." Making use of these trades, we had not to make a tack until we reached Fort San Carlos, at the head of San Juan.

The volcano of Monotumbo is of black lava, and is warm to the feet when one has left the thin soil at the base. A thin line of smoke still escapes from the summit, and the base is surrounded with hot sulphurous springs. The Indians regard this volcano with superstitious awe, and claim that no human foot has ever pressed the summit. However true that may be, I prevailed upon one of my Indians to go with me to the sulphur springs, and to the edge of the bare and blistered lava flow; but no money could induce him to go further. The few sulphurous springs we visited were larger in volume than that of Saratoga, and unaccountably hot to the touch and very strongly impregnated with sulphur. Where they trickled down over the rocks into the lake the deposit of sulphur was in some places from twelve to fourteen inches thick.

Passing further into the timber at the base, crowds of paroquets rose, frightened at our approach, and it was no doubt the first appearance of a human being in their solitude. Thousands of small rabbits scampered here and there when disturbed by our footsteps. Many gorgeously-plumaged birds were darting about in a frightened way, and we were ourselves sometimes startled by the sudden rustling of leaves in the heavy foliage.

In our two hours' walk through the jungle we passed many varieties of the beautiful native orchids, and with American instinct I sighed as I appreciated the impossibility of placing them in the New York market. In the soil between the lava streams innumerable wild flowers were growing, and, as we proceeded further up, they gradually disappeared till not a green sprig was seen and the heat of the volcano could be felt through the soles of my shoes. My guide, wearing only sandals, was taking more rapid steps, and I soon found he was very willing to return. We had ascended far enough to obtain a view of the whole of the lake, down to the river Tipitapa, which connects it with Lake Nicaragua. With my glass our little boat could be distinctly seen, and, as I could discern the Indian we had left behind busily engaged in her bow, where the provisions were stowed away, I gave up the beauty of the scenery to hurry back to the boat.

Toward evening the breeze freshened and our canoe fairly cut through the water. Due to the heavy breeze—and it is always fresher at night—the surface of the lake ahead of us seemed to be piled up higher than behind; and, in fact, it was. The early explorers in the southern end of these lakes noted the fact that at night the water rose up on the shore further than during the day, and not knowing that the trade winds were stronger at night, they imagined that the ocean tides affected the lakes through subterranean connections, and so asserted in their letters; but this phenomenon is undoubtedly due to the intermittent "trades." We camped for the night on the shore, just south of a small river which comes down from the mountains of Segovia and Matagalpa, which are rich in minerals, and where the early Spanish explorers found the aborigines washing gold. Segovia and Matagalpa, both large provinces of Nicaragua, are wilder to-day than when the Spaniards came. Their greed drove the Indian tribes out of the country, the location of many of the "washings" was lost, and characteristically the Spaniards "killed the goose that laid the golden egg," and after years of unprofitable "prospecting" for the lost mines they, too, abandoned the section.

During the day we passed the island of Momotombita, which is almost a perfect cone. It is undoubtedly of volcanic origin, as its lava shows testify, but it is now covered with dense forests. The cone is about one thousand feet above the lake, and was originally a place of worship of the Toltecs. There are many caves, natural and artificial, in which were kept the images of their gods, and but thirty years ago many of these images were there. In the days of the conquest the Spanish priests destroyed many of these interesting relics, and from then until now these gods have, one by one, found their way to the different museums of the world.

Toward evening on the second day we arrived at the connection between Lakes Managua and Nicaragua, where I met the surveying party who have lately obtained a concession to canal it and to establish a navigation and transportation company on the lakes. I fancy they re-

garded me with suspicion as a rival to their enterprise, for it is very difficult to persuade any one who has lived in Central America that you have come solely for pleasure, and these gentlemen were very chary in speaking of their plans and intentions, and I have no doubt that they felt a relief next morning when our queer-looking little party pulled down stream to the great lake, though any fool could have discovered their business at a glance, from the number of surveying instruments that lay scattered about. The Tipitapa has an average depth of five feet, and is about fifty yards wide, with only a few dangerous rocks that could be easily removed. By noon we had reached Lake Nicaragua, and with a spanking breeze to push us along and to relieve us from the intense heat, we arrived at a point on the western shore, nearly opposite the island of Ometepe, at eight o'clock p. m.

I wanted to run across the lake, for it was a beautiful moonlight night, but you can do nothing with sleepy Indians, so we prepared to camp on shore. I noticed swarms of gnats and mosquitoes, and, after two hours' vain effort to sleep, during which I had smeared my face and hands with petroleum, I got my two companions into the boat, allowed them to sleep in the bottom while I took the helm, and with the wind abeam, put her for the island, upon which the two volcanoes stood out against the moonlit sky beyond. It was a very pretty sight, the wind was fresh enough to brush up white caps, and our true little bark fairly sped along, now and then giving graceful plunges, only to rise and recover herself on the next wave, and seemingly shake the spray off her wet nose. It was midnight when we left the shore, and at five o'clock a. m., before any of the inhabitants of the island were stirring, our keel scraped gently on the shore of a well sheltered cove. My men slept so soundly that our coffee was ready before they awoke. The pleasure, novelty and excitement of the beautiful night sail made me feel no want of sleep, and, after a heavier breakfast than usual, and securing our boat, we all three started out to see the island. My men, I discovered, were all natives of the island, and had many relatives and friends to see.

The islanders live in the most primitive way. Their small herds of sheep and fields of corn and uncultivated tropical fruits furnish them with food. These Indians are said to be purer Aztecs than any other to be found in Central America; and, while universally kind and obliging to foreigners, they do not allow them to settle and live among them. The climate is hot, and the thatched hut is the only habitation on the island. The children run around naked up to eight or ten years of age, when the girls wear a skirt without a waist and the boys get their first pantaloons. In complexion these natives are darker than the native tribes of Arizona. As a rule they are tall and beautifully proportioned, resembling the Mo-Jave Indians one sees between Fort Yuma and Fort Mojave, along the Colorado River.

There are many cool and delicious springs on the island, and the inhabitants do not depend on the warmer waters of the lake. The supreme Government exercises but little control over this small cluster of families, and contents itself with the appointment of "Alcaldes," a sort of Indian Justice of the Peace, selected from amongst themselves. The office is but a sinecure, for the streets and lanes of the villages are quieter than those of Brooklyn appear to the average New Yorker. Very seldom can one hear Spanish among these people, and while it is not apparent in their bearing, I presume they feel a pride in

preserving their native tongue, which is very euphonious and sweet in tone.

I would willingly have remained longer among these quiet, peaceful people, where, during my two days' stay I saw not one drunk, and where every face seemed to say "welcome," instead of expressing the usual suspicion; but wishing to reach Fort San Carlos in one day's sail, we left at four A. M., but not too early for my men's friends to load our boat with fruit. In the centre of the lake the depth runs from forty to fifty fathoms, but along the shore it is shoal, and there are few places where vessels of any draught can approach close in. Near the San Juan it shallows down to from five to seven feet in depth for some miles from the shore, though the central flow of water, which takes the river's channel, has formed a channel in the lake, so that the canal company will have little or no dredging to do at that point. The San Juan is about one hundred and twenty miles long, and, though a very fine stream, its capacities have many times been exaggerated. As it is now, vessels of five feet draught can run its whole length, but to make it navigable for greater depth would cost much money.

We passed the night on a high bank below the fort, building fires to ward off of us to smoke away the clouds of mosquitoes, who left us in peace—not that they "loved us less," but that they disliked the smoke more. Early next morning, with our sail furled and with but little else to do than steer our canoe, we drifted between dense walls of verdure, so thick in many places as to resemble banks of moss. The shores are lined with palms of every variety, tall canes, whose leaves furnish material for the basket-makers, and nearly every class of tropical timber. In the open spots the morning songs of the birds welcomed us as we approached, only to be frightened away as we came in sight. Some large trees were so covered with parasitical growth that the bark of the tree from the ground to the summit was completely hidden. Many of the larger plants thus living on trees dropped their tendrils down to the ground as if for food or water, and these tendrils in many cases were from 60 to 100 feet long and an inch in diameter.

We passed the Toro Rapids without any difficulty, but before camping I had determined to run the Castillo Rapids, which are much shorter, and where the water rushes over an abrupt drop and falls about nine feet in seven or eight yards' distance. Some distance above we engaged the services of a native who called himself a pilot to take us over, and, shifting a few heavy weights aft, we gave the helm to our pilot. As we drew near the water seemed to have a convex surface as it rose up to the ledge of rock and disappeared below. I had stripped down to shirt and drawers in case of accident. We drew nearer and nearer, and the current seemed slower. Below where the water broke over the rocks was but a foamy mass, but in the channel there was not a ripple, indicating a good depth of water. As we rose to the edge our bow and half our length were out of water only for an instant, when we shot down the smooth decline so suddenly and rapidly that one could scarcely breathe, and with no other accident than the overturning of our stove.

The hardest part of the journey was about twenty-two miles of rowing through the delta of the San Juan. This delta is very low ground, and does not differ much in appearance from the Jersey Flats between Jersey City and Newark. In some places and on higher ground we started up thousands of waterfowl. I saw some beautiful pure white cranes, which stood fully four feet

high, and myriads of that bird so detested by duck hunters, the sheldrake.

The sea cow is said to live in this region. I saw none alive, but in Greytown I was shown a canoe which was made by merely twisting a strip of the tough hide of the animal into the desired shape. At nearly every turn of the stream we saw alligators, many running to 20 feet in length, which simply raised their heads with an inquiring look as we passed. It was 5 P. M. when we arrived at Greytown and put up at what is called the hotel, and after the first meal I did not regret that the steamer for the south would sail the next day.—*Letter from Greytown to the N. Y. Times.*

FOR "THE FRIEND."

Settlement of Meetings in New Jersey.

(Continued from page 228.)

STONY BROOK.

1710.—This was a meeting indulged by Chesterfield Monthly Meeting, to be held once in three months, and it was afterwards at the house of Joseph Worth and others.

In 1724, a committee for the purpose, reported that "a (meeting) house may be built of stone, 34 by 30 feet."

In 1726, the meeting-house was built on ground given by Benjamin Clark for the use of Friends, and the Meeting was established there the same year.

The Preparative Meeting was laid down in 1878, and the members joined to Trenton Meeting.

"Trent Town."

1734.—We find the following minute of Chesterfield Monthly Meeting: "Our Friend Isaac Haman, with other Friends, requested liberty to keep a meeting for worship at Trent Town on First-days," which was granted.

In 1740, the meeting-house at Trenton was built, and a meeting for worship settled there. The week-day meetings were established in 1756, and the Preparative Meeting opened in 1786, and was closed for some time, and re-opened in 1797, and again laid down in 1836, and re-established in 1848.

BORDENTOWN.

The Meeting at "Bordens Town" was settled in 1740, and a meeting-house built the same year on ground given by Joseph Bordon.

The week-day meetings were established in 1759, and the Preparative Meeting set up in 1804.

ANWELL.

In 1727, a meeting was allowed to be kept every First-day, at the house of John Stephenson, at Anwell, which appears to have been discontinued in 1786.

About this time (1727) there was also a meeting held at Allentown, under the direction of Chesterfield Monthly Meeting. The Preparative was opened in 1797, and called "Robins' Meeting." In 1804, it appears in the Minutes of the Monthly Meeting as "East Branch." It was laid down in 1833, and the members joined to Crosswicks Meeting.

UPPER FREEHOLD.

1739.—From the minutes of Chesterfield Monthly Meeting we learn that "Isaac Foreman, Joseph Arney and others, requested liberty of this Meeting to keep a meeting every First-day at Joseph Arney's house, and this meeting gave consent that they have liberty to keep a meeting for one year."

1740.—"This Meeting gives liberty to the in-

habitants near Thomas Woodward's to make application to the Quarterly Meeting for a meeting-house, according to their request."

The Meeting at "Woodward's," held at Joseph Arney's house was settled in 1742, and the meeting-house built the same year on ground given by Joseph Arney.

BETHLEHEM.

In 1746, the meeting-house at Bethlehem was built, but a meeting for worship was settled there some years before, and the Monthly Meeting was first held in 1744. The meeting-house being accidentally burned; it was rebuilt in 1752.

GREAT MEADOWS.

The meeting-house at the Great Meadows was built in 1751; but their meetings for worship were held at each others houses from the time of Friends first settling there, about 1740.

A meeting for worship was held at Amboy from 1680 to 1689, during which time a Monthly Meeting was established there.

A meeting was held at Woodbridge, and alternated with that at Amboy, every third First-day, until 1704, when, by direction of the General Meeting at Shrewsbury, it was ordered to be held at Woodbridge, where the meeting-house was built in 1709.

A Meeting was early settled at Manasquan; Friends met at each others' houses until 1730, when their meeting-house was built; it was of frame with shingled sides, and stood until about 1855.

A meeting-house was built at Freehold about the year 1683; but the meeting being chiefly established through the influence of George Keith, who then resided there, by the same influence it ceased upon his defection from Friends.

UPPER FREEHOLD.

"In 1739-40, a small number of Friends being seated together in Upper Freehold, built a meeting-house high Moses Robins, where a meeting was sometimes held."

PLAINFIELD.

"A meeting was held at the house of Nathaniel Fitz Randolph, in Woodbridge, Ninth Month 16th, 1704, and continued to be held there until 1713, when reference is made to a meeting-house."

In 1721, John Laing of Plainfield, on behalf of himself and the Friends settled near him, requested leave of the Monthly Meeting of Woodbridge to hold a meeting for worship among themselves at his house, which was granted them for three months.

In 1725 they had liberty to hold a meeting weekly, which was thence continued till 1731, when they built their meeting-house on land given by the said John Laing. "Said house not to exceed 24 foot square and 14 foot between joyns." Which was occupied until 1788, when the house was replaced by another, which is still standing.

About 1750, the Monthly Meeting was transferred from Woodbridge, and held alternately at Railway and Plainfield.

Meetings were held at Railway, at the house of William Robertson, in 1707, and in 1742 at the request of Friends of Railway, leave was given by the said Monthly Meeting (Woodbridge) to hold a meeting for worship on the first days of the week, at the house of Joseph Showtell, for three months in the year, which was continued till 1745, when it was ordered that a meeting should be held on First and Fourth-days for the winter season.

LITTLE EGGS HARBOR.

Egg Harbor Meeting was first settled in 1704, at Tuckerton. In 1708, Edward Andrews con- veyed to Friends two acres of land, on which a meeting-house was built, and completed the fol- lowing year (1709), and stood for over 150 years; it was hip roofed, with shingled sides, there were four windows about four feet square with nine panes of glass 7 by 9 inches. The original windows were imported from England, the panes were small, and diamond shaped, and the sash was of lead; during the Revolutionary war the windows were concealed to prevent their appropriation by the army, and the lead being run into musket balls. This venerable structure was taken down in 1863, and replaced by a more modern building. It was believed to have been the first-meeting-house along the Jersey coast, and was known far and near as "the Egg Har- bor Meeting-house."

In 1714, the Preparative Meeting was opened, and in 1715, the Monthly Meeting was estab- lished.

The Yearly Meeting was first held there in 1729, and continued for some years. John Churchman, in his journal, speaks of attending it in 1772, where he says there was a large con- course of people.

A Meeting was settled at Barnegat in 1767, and a meeting-house built the same year.

At an early date Friends built a meeting- house in Bass River Neck.

Burlington Quarterly Meeting was established Ninth Month 29th, 1681-2. The first meeting was held at the house of William Biddle at "Mount Hope" on the Delaware River, opposite Biddle's Island, and near what is now Kinkora. It continued to be held there until 1712, when it was removed to Burlington, and after a few years held alternately at Burlington and Chester- field (now Crosswicks). In time it was settled permanently at Burlington.

In 1681-2, Shrewsbury Monthly Meeting, which had previously belonged to Long Island, was annexed to Burlington Quarter.

(To be continued.)

Meaning of Sincerity.—In the palmy days of Roman prosperity, when her merchants lived in their marble palaces on the banks of the Tiber, there was a sort of emulation in the grandeur and artistic adornment of their dwellings. Good sculptors were eagerly sought after and em- ployed. But tricks were sometimes practised then as now; thus, if the sculptor came upon a flaw in the marble, or chipped a piece off by accident, he had a carefully prepared wax with which he filled in the chink, and so carefully fixed it as to be imperceptible. In process of time, however, heat or damp would affect the wax, and reveal its presence there. The conse- quence was, that when new contracts were made for commissioned works of art, a clause was added to the effect that they were to be *sine cera*, or without cement.—*J. Tesseymann.*

ONE cannot speak lightly of wrong without indirectly harming the cause of right. One cannot be really and wholly right without being seriously, earnestly, and actively right. The moment you are willing to trifle either with the right or with the wrong, that moment you are wrong.

So long as we fancy ourselves the mere creatures of a day, at liberty to please ourselves, and do what we will with our own, we must necessarily be trifiers.

SELECTED.

A VERY QUEER MAN.

"The queerest man we ever knew,"
His neighbors said to me,
"Though if one give the man his due,
A right good heart has he;
But then he's known both far and near,
And everybody thinks him queer.

"We've often known that man to go
When others were in bed—
He never wants the folks to know—
And fill old Perkins' shed
With wood enough to last him through
The winter, and with good wood too.

"They say he has a favorite trick
He plays upon the poor—
He goes to those who're old and sick
And talks their troubles o'er.
Of course, sir, when he gives away
He knows their needs as well as they;

"Then he will go to town and buy
Whatever's needed most,
And creep up to the door as sly
And still as any ghost,
And knock, but when the door swings wide
No visitor is seen outside;

"But on the doorstep there will be
The very things they need;
And though no face or form they see,
They know the generous deed.
"Waldene by Jones—queer Jones," they say;
"God bless the man and his queer way!"

"No one from him would ever hear
Of those good deeds of his;
That's the one thing why we think him queer.
(Queer? Why, of course he is.)"
"Twere well, thought I, if we had more
Queer men to play tricks on the poor.

—*Our Youth.*

SELECTED.

REDEM THE TIME.

I sometimes feel the thread of life is slender,
And soon with me the labor will be wrought;
Then grows my heart to other hearts more tender.
The time,
The time is short.

A shepherd's tent of reeds and flowers decaying,
That night winds soon will crumble into naught;
So seems my life, for some rude blast delaying.
The time,
The time is short.

Up, up, my soul, the long spent time redeeming;
Sow thou the seeds of better deeds and thought;
Light other lamps, while yet thy light is beaming,
The time,
The time is short.

Think of the good thou might'st have done, when
brightly
The suns to thee life's choicest seasons brought;
Hours lost to God in pleasures passing lightly.
The time,
The time is short.

Think of the drooping eyes that might have lifted,
To see the good that Heaven to thee hath taught;
The unhelped wrecks that past life's bark have drifted.
The time,
The time is short.

Think of the feet that fall by misdirection,
Of noblest souls to loss and ruin brought,
Because their lives are barren of affection.
The time,
The time is short.

The time is short. Then be thy heart a brother's
To every heart that needs thy help in ought,
Sow thou thy seed, and need the sympathy of others.
The time,
The time is short.

If thou hast friends, give them thy best endeavor,
Thy warmest impulse, and thy purest thought,
Keeping in mind, in words and action ever,
The time,
The time is short.

—*From Philadelphia Methodist.*

Lines suggested on remembering the last words of
Thomas Scudder.

"OH! WHO WILL STAND!"

Oh! who will stand! the good man said,
And soon was numbered with the dead,
The happy and the just,
And didst thou see his present day,
When standard-bearers faint away,
And Friends forsake their trust?

Didst thou behold the hail-stones fall,
And buildings fair both great and small,
Come prostrate to the ground?
No wonder, then, thou didst exclaim,
And with a warning voice proclaim—
Oh! who will stand?

Did thy prophetic vision view
The mournful solitary few,
That stand on an ancient ground?
And didst thou tremble for that few,
Lest they should lose their standing too
Midst dangers that surrounded?

And when thou drank that bitter cup,
Wast thou to send that vision up,
And quickly pass away?
And leave those words so full and few,
To be unfolded to our view,
In this eventful day?

Yes! who will stand this sitting day,
When standard-bearers faint away,
But whose whose buildings stand,
Like thee, upon that corner-stone
Which never can be overthrown—
The rock and not the sand?

Then, Holy Father, lend an ear,
In condescending goodness, hear
The fervent prayer we make;
'Tis not to ask for length of days,
For worldly honor, wealth or praise;
But, for thy mercy's sake,

Spare not thy hand 'til thou behold
Our spirits purified, like gold
Tried in the fire;
'Till every action, thought, and word,
Be holiness unto the Lord,
Whatever it may require.

Then may we hope to stand the day,
When standard-bearers faint away,
And Friends forsake their trust;
And find at last a resting place,
Through mercy and redeeming grace,
With spirits of the just.

—*Ann Branson.*

FOR "THE FRIEND."

The Glory of God, and the Glory of Man,
a Little Contrasted.

The royal Psalmist, in taking a nocturnal view of the heavenly bodies, and the glory and splendor of them, breaks forth in the following sublime language to God: "When I consider the heavens, the work of thy fingers, the moon and the stars which thou hast ordained; what is man, that thou art mindful of him; and the son of man, that thou visitest him? For thou hast made him a little lower than the angels, and hast crowned him with glory and honor. Thou madest him to have dominion over the works of thy hands," &c. But where are we now, in our fallen condition? Are we still only a little lower than the angels? And are we still crowned with glory and honor? And have we still dominion over the works of God's hands? Are all worldly things put under our feet; or are they not up- permost with many of us?

If the great change from nature to grace has not been wrought in us, we are not created anew in Christ Jesus. We are not changed from the glory of man to the glory of the Lord. We cannot, like David, praise the Lord with our whole hearts, and show forth his wondrous works to

those around us. Because we must first be made new creatures, and have the light of the knowledge of the glory of God, which was lost in the fall, renewed in us in the face or appearance of Jesus Christ, for He came to seek and to save that which was lost. So if we want to come out from under the bondage of sin, and be restored into the glorious liberty of the children of God, we must submit to the heart-cleansing baptisms, and to the washings of regeneration until we are changed by successive steps, from glory to glory, even by the manifold operations of the Spirit of the Lord.

We must continue to walk in the light until we become children of light, and then we shall have fellowship one with another, and with the Father, Son and the Holy Spirit, and witness the blood of Jesus Christ to cleanse us from all sin; and be holy as the Lord our God is holy. But countless thousands, I fear, do not abide the day of his coming, or stand when He appears as a refiner or purifier. But He knows the amount of impurity that has accumulated in our rebellious hearts, better than we do; and if He should have to sit longer as a refiner and purifier than we may think needful, let us abide and remember that our afflictions, which are but light in comparison to what our Holy Redeemer suffered for us, are for our profit, and designed to work out for us a far more exceeding and eternal weight of glory, that we might be partakers of his holiness, and the glory of man be humbled and laid low.

It appears evident that all along from Adam to Moses, before the Scriptures were written, that God's converse with man was often immediately through his Spirit. And before the creation of man the glory and power of his Spirit were wonderful. It is said, "The Spirit of God moved upon the face of the waters and said, let there be light and there was light." And He then made a separation between the light and the darkness. And the same glorious Spirit and power is still operating on the chaotic nature in man, saying, "Behold I make all things new." And I believe that the same Holy Spirit of God is still moving upon the unstable elements in man, saying, let there be light and there is light, independent of the Scriptures. Though I believe that the Scriptures were written under the influence of the same Holy Spirit of light and life, that we through patience and comfort of the Scriptures might have hope. So that now, as we have the Scriptures without, and the Spirit of God within, we are thoroughly furnished unto all good works, and without excuse.

But the things of men are only known by the spirit of man; so the things of God are only known by the Spirit of God; and it, (not the Scriptures) searcheth all things. And this searching spirit scans every secret movement of the heart, and sees us as we are, and it changes not. But we seem to be much inclined to be changed about by the various changing of doctrines, and the cunning craftiness of man, who is unstable in all his ways. Now what we want and greatly need, is to have more of the light of the glory of God shining both in our devotional meetings, and in our every day walks through life, and less of the wisdom and glory of man to depend on and guide us. I greatly fear that many fellow-professors, while travelling from time to eternity, are under a serious mistake by taking the busy imaginations of man for the Spirit of the Lord. So that the deluded hearers are consoling themselves with a belief that it is from the Lord, when the Lord has not spoken.

Oh! for more of the Spirit of the Lord and less

of the spirit of man to lead us in our religious performances, and in our every day walks of life. Then, as we were obedient to his commandments, our peace would flow as a river, and our righteousness as the waves of the sea. Then, when the Son of Man shall come in his glory, and all the holy angels with Him, and sit upon the throne of his glory, we shall hear the welcome language of "Come, ye blessed of my Father, inherit the kingdom prepared for you from the foundation of the world." D. H.

DUBLIN, Ind., First Mo., 9th, 1859.

FOR "THE FRIEND."

The Diary of Mary Coates.

(Continued from page 226.)

"31st. This morning, before I left the chamber, felt very poor and little in my own view. Oh! that mine eye may be towards Him who quickens and gives life! Draw me and enable me to run after Thee, oh! Thou who regardest the feeble amongst thy flock, with a compassionate eye. Afterwards passed some time in attending to a friend who expressed his thoughts on divers religious subjects to my satisfaction, with some hints respecting myself, which I desire may not only be for present edification, but future improvement."

"4th. Was at meeting to-day, the fore part of which was so poor I was ready to say, who is like unto me? Distressing; exercising seasons indeed I at times pass through, from a sense of my great poverty and want. What if I say it is at times like the vale of the shadow of death! yet have no cause to murmur at the dealings of my Heavenly Father, but still to trust in Him who hath led me, and fed with the Bread of Life from my youth, and often healed the breach and restored the path to walk in, and hath lifted up a standard against the great enemy of souls. The remembrance of the many mercies received, and the sense of my own unworthiness bends my mind and affects my heart at this season. The latter part of the meeting E. S. appeared in a lively testimony, part of which I was ready to take to myself, and would rather like the disciples of old be more apt to inquire, 'is it I?' than to be looking abroad, and saying this part belongs to such a one, and that to the other; these, whose eye is thus gadding abroad, and feeding on the failings of others, and their own vineyards neglected, [are] not like to thrive in religion. It is the wise man's eye is in his head."

"8th. Was at their weekly meeting and Preparative meeting, in which was favored to feel a degree of heart-tendering goodness, and breathings of soul were begotten that I might have a part and interest in Christ when that stripping time came, that there must be parting with all terrestrial things; even soul and body separated—solemn thought! May it be my concern to lay up treasure in heaven! There was a burial of an ancient friend before meeting; after which E. S. appeared in testimony and had something to deliver suitable to the occasion; passed the evening to some profit, my mind being turned inward; and that I may be admitted "where the wicked cease from troubling and the weary are at rest," is the earnest longing of my soul at times when favored with the renewal touches of heavenly regard which is mercifully continued towards me."

"10th. Rode out in the morning, during which time had a tender season, my mind being turned to look at the trying time, which probably is near at hand, that I may be confined to a sick bed. Oh! that I may be blessed

with a patient submission to the Divine Will in whatsoever He may see meet to allot; whose wisdom is unsearchable, and ways, past finding out; by poor, finite creatures. If Thy good presence be but with me, it will sweeten every bitter cup. Support me by Thine own free Spirit, and enable me to say in holy reverence and awful fear, 'Not my will, but Thine be done!'"

"14th. Had the company of divers friends, from other parts. In the evening came several sober young folks, the company of such is pleasant. I wished their number were increased. In retiring this evening, and meditating upon a solemn subject, have a humble hope that I shall not be wholly forsaken of Him, who hath hitherto helped in the needful time, though I may have near, inward and outward trials to pass through, yet, if Thou art my Helper, I shall not faint!

"16th. Had some thoughts of going home-wards, not expecting to reach it in one day, by land carriage, but the weather proving unfavorable and being much indisposed, concluded it best to defer it. The latter part of the day, heard several epistles read to some profit. In the evening, feeling a desire after stillness, endeavored to retire inward. But Oh! the poverty and weakness that covered my mind! The sense of which was cause of humbling, and in conviction of spirit, was enabled secretly to intercede for renewed help; both for myself and a young Friend, who was sitting in the room with me, whose preservation and growth in the Truth, I sincerely desire.

"17th. Was something better. Rode two miles with John Churchman and wife, who were on their way to Philadelphia. It was pleasant to be in their company, though not much conversation passed between us.

"19th. Was in less pain of body, but poor in spirit. In the evening, several came in, and after a while fell into silence, which to me seemed seasonable. I having some thoughts of leaving Wilmington next day, in order to return home, and as it was likely it might be the last opportunity of that kind I should have with them in that place; it was very affecting to me, having to feel love towards them, with a secret desire that the presence of the Great Preserver of men might be with me in my going, and also with them that staid.

"20th. In the morning, left my dear friend David Ferris and took boat; Benjamin Ferris and sister accompanying me to Philadelphia, where we landed that evening, having had a fine passage, which I bore beyond expectation; that way of coming was easier than it would have been in a land carriage. The same evening, took leave of my friends, Benjamin and Deborah Ferris, not expecting to see them in the morning.

The many kindnesses I have received, and the tenderness and care of my dear friends, David Ferris, wife and children, towards me, I hope I shall ever gratefully remember; and although their endeavors for the restoration of my health may not have the desired effect, yet it hath been some relief to be in a clearer air, and having the advantage of very frequent riding. And I may further add, it hath been profitable in the best sense, having to remark their exemplary conduct, in divers respects, with satisfaction, and believe I shall often remember a small remnant amongst them (if I keep my place) for whom I have to feel a degree of that love which unites the fellow-pilgrims, who are travelling along through this vale of tears towards a better

country. May I, with them, be favored from time to time, with renewed strength, to keep our way through tribulations, which may and will attend all such as follow Christ in the regeneration; yet, let us not be discouraged at them, but remember that these light afflictions, which are but for a moment (in comparison of eternity) will, if we persevere to the end, work for us a far more exceeding and eternal weight of glory. Therefore, brethren, suffer with me, to my dear mother, brothers and sisters, after a long separation, for which favor, with many other favors and blessings conferred upon me, I desire to bow in humble thankfulness to the Great Author of all our mercies."

MARY COATES, Junior.

Here follow some expressions of Mary Coates, Jr., on her death-bed, about ten days before she died, taken down by one of her sisters.

On the 16th of First Month 1769, my dear sister being somewhat released from the acute pain which she had patiently endured for many weeks, with very little intermission, was concerned in a sweet, composed frame of mind to drop the following expressions, or as nearly so, as can be recollected by sister Langdale and myself, then attending upon her, viz:

"I esteem it a great favor that I am a little released from pain, although I do not apprehend from that I shall continue much longer. I am sensible, from what Daniel expressed (meaning Daniel Stanton, who visited her a few days before) that my sun is almost set; while he was speaking, I remembered my dream, when I thought I was going down from the top of a high hill about the close of the day, I saw the shades of the evening gradually advancing upon me, till I came to the foot of the hill, when I found myself in a grave yard, and so I believe it will be; but through mercy, death does not appear to me with terror. I have nothing to plead but infirmities, nothing to rely upon but Divine Mercy, and do not boast; yet have a humble trust, that when I go hence, I shall be received into the arms of my Saviour, and I hope ere long we shall meet again.

"I should have been glad if you (her other sister and brothers) had all been here, as I may not have the like opportunity again, but tell them what I say, and of my good desires for them all. The longest life is very short in this world, and it is full of snares and temptations, but, my dear sisters, choose you the better part, that part which Mary chose, which could not be taken from her: if you choose that part and keep to it (for a good beginning only will not do) then I have no doubt but you will do well as to the things of this life, and I hope ere long we shall meet again in the Mansions of the Blessed. Love retirement; seek it often; it is profitable; keep still and quiet in your minds, and clear of this new doctrine; listen not to it, any of you; for they that trust to what they call a purgatory will, I believe, find themselves woefully mistaken.

"The enemy is always busy, especially in meetings. I have found it so, when I have in some good degree labored to come at that which is good, but do not be discouraged; sometimes after such seasons, I have been broken in upon very unexpectedly. And my dear mother, endeavor all you can to make her life easy to her; you will have peace in it. She has been a good mother to us; it affords satisfaction to me in the reflection, that while I was able, I did what I could for her.

"My dear sisters, you have tended me dili-

gently, and [you] will have your reward. Now, but in a few words, I would say, as I expect I have a little while to stay, let what may be wanted for me be had in readiness, that there may be no hurry, I would be buried in a plain manner; let there be nothing put upon me that I would not otherwise; let the coffin be of walnut; the factors, if not washed. Don't grieve, my dear sisters, I would not grieve you too much. Remember me often, but do not grieve for me."

Here my dear sister left off speaking, and lay for some time in great composure of mind, partaking (as I believe she had done at many other times) the sweet foretastes of that happiness, which she was going to enjoy in the fullness.

BELLAH COATES.

Natural History, Science, &c.

Counting the Motes in the Sunbeam.—Counting the dancing motes in a bar of sunlight sounds like a hopeless task. Something more than this, however, has been achieved by modern science, which is now able to count the particles floating in any given portion of the atmosphere and determine what proportion of these are dangerous germs and what are mere dust. Dr. Frankland's curious experiments have shown us how to count the micro-organisms, and now John Aitken, of Falkirk, by a totally different method, has been enabled to take stock of the more harmless but less interesting dust motes. Thirty thousand such particles have been detected by him in the thousandth of a cubic inch of the air of a room. In the outside atmosphere in dry weather the same measurement of air yielded 2119, whereas, after a heavy rainfall, the number was only 521. That this power of prying into atmospheric secrets will eventually yield very important results must be obvious to all. Among the most curious discoveries already made is the direct relation between dust particles and fogs, mist and rain.—*London Daily News.*

The Camel's Humps.—Structurally, of course, the humps are nothing—mere lumps of fat, collected under a convenient fold of the skin, and utterly unprovided for in the framework of the skeleton. When the animal is at its best and well fed, they are full and plump, standing up on its back firm and upright; but on a long journey they are gradually absorbed to keep up the fires that work the heart and lungs, and in the caravan camps which arrive at the coast the skin hangs over—an empty bag—upon the creature's flanks, bearing witness to the scarcity of external food during the course of his long, forced march from the interior. A starved, small camel in this state of health far more closely resembles a Peruvian llama than any animal who has only seen the fine, well-kept herds in European menageries or zoological gardens could readily imagine.

But water is even scarcer in the desert than food; and against want of water, therefore, the camel has had to provide himself, functionally at least, if not structurally, quite as much as against want of herbage. His stomach has accordingly acquired the power of acting as an internal reservoir, and he can take in as much water at the Bahrs or Wadis, where he rests for awhile on his toilsome march, as will supply his needs for four or five days together. There are some differences in this respect, however, between the two chief varieties of the camel. The African kind is most abstemious, and best

adapted to sandy deserts; the Bactrian, a product of more varied and better watered country, is larger and stronger, but less patient of hunger and thirst, while at the same time it can manage to subsist and to make its way into somewhat rockier and more rugged country.—*Popular Science Monthly.*

Cruel Children.—In the gradual development there is always a sense of pleasure in the exercise of power, but this pleasure has to be subordinate to the good of society; and this is one of the first necessary steps to successful social growth. So the young boy who is even among us, more frequently cruel than his synthetic, may go through a period of bullying, &c. to become a refined and sympathetic man full of generous impulses. I say this is the ordinary method, but, as might be expected, some boys never become kindly, and some, instead, grow from cruel to brutal, and end as social pests. There are children who inflict torture on every kind of living thing. Thus I have known a child of tender years begin by pulling off the wings of flies, then proceed to bake frogs, and next take birds and bore out their eyes, and later still try to injure any child who might fall into his power. I do not know of any age at which this brutality may not develop, as I have seen brutes of this nature as young as four. In one such vice and cunning were extreme, that though many evil and cruel deeds were done the culprit was long undiscovered. Another most serious trait is that these morally insane children will make false accusations, and will even destroy their clothes and produce the appearance of injury to support tales of assault and robbery.—*Fortnightly Review.*

Shad in Utah Lake.—On June 10th, a car of the United States Fish Commission arrived in Salt Lake, and during its stay of about twenty-four hours about 2,000,000 shad were hatched. A day or so later these were taken to Battle Creek Station, on the Denver and Rio Grande Western, and near that point deposited in Utah Lake. Yesterday A. M. Musser received a letter: "I send you by to-day's mail a shad caught in the Utah Lake, about fifteen miles from where you put them in last June. I think it has made a very good growth, and I believe they will be a success. We caught this one near the south end of the lake. I have heard of two others being caught on the west side of the lake, and another one where we caught this one." The fish referred to was a trifle over six inches in length and well proportioned.—*Salt Lake (Utah) Herald.*

Birthing Membership.—An essay on this subject was read during the present winter before Friends' Lyceum in Philadelphia, by John H. Dillingham.

In this a clear distinction is drawn between being a *birth* member, a privilege secured to the child of Friends by natural birth; and being a member of the *Church* of Christ, which can only be attained by partaking of a spiritual birth, and so being admitted into the flock of Christ's companions. This distinction between *society* and *church* membership, the writer states, was more conspicuous in the early days of our movement, than it is now. "There was, then, and even within the memory of Friends now living, a distinction drawn between those members (presumably church members) who were admitted or invited to sit in meetings for conducting the affairs of the Society; and those supposed to be yet only society members, who were not invited, and were not admitted, though it is not for the sake of confusing the distinction between the church and the world within our meetings for business, or to lose sight of the truth that 'all are not Israel who

THE FRIEND.

SECOND MONTH 23, 1859.

of Israel. When those who were of little religion were admitted as spectators, it was in the hope of increasing their interest in the Society, and in the principles of Truth which it aims to represent. It was not for the sake of counting one's vote as equal to another's, or discerning the judgment of the Head of the Church, by majorities.

Among the advantages in being brought up from infancy as members, the Essay mentions that of "having our outward lives in youth shaped to a consistency with the principles of the church which it is hoped we will become true members of." "Our parents feel that as the inheritance is ours, so ought to be the most for the inheritance." As the result of this, it says,—"Unfaithful to their high trust, and careless of it, as any youth have been in the rearing of their children; still our youth in general have been reared, I should like to believe, under more of a moral guardianship; under more of the restraints of truth; under a closer inculcation of the fundamental principles of right life, and under a fair balancing of motives and discerning of spirit; under a more habitual reference to the searching voice of our Holy Head and witness for Truth in his heart,—just because the children were members and were expected to continue as members, than if the parents had no idea of any denomination they were educating them for."

Religious Labors in Philadelphia Yearly Meeting.—In the meetings of the Committees appointed by the Yearly Meeting and the different Yearly Meetings, various suggestions have been made looking towards the holding of religious meetings for the spreading of Truth among those who are not members of the Society, in different localities to which the thoughts of individual members had been turned. Several of these have been set aside or postponed, either because it was thought the time was not ripe to come, or because they are aware of want of sufficient clearness as to the Divine requirement—under the conviction that no spiritual good could be effected without the help of the Lord, and that his guidance and direction must be waited for in such undertakings.

Yet since the last notice appeared in THE FRIEND of a meeting held in Philadelphia on the 10th of First Month, nine such public meetings have been held in Pennsylvania, New Jersey and Delaware; besides three in Philadelphia, which were designed more especially as joint opportunities for worship for all the City Friends. A visit also has been completed by a sub-committee to the family composing Birmingham Monthly Meeting, Penna.

In these varied engagements there has been experienced such a measure of Divine help; and so much of solemn feeling has covered the minds of those present; as to give evidence that a blessing is being sent on these efforts to promote the cause of the Redeemer. In several instances, the public acknowledgments and the private remarks of those for whose sake the meetings were held, showed that the labors among them were appreciated, and that they were partakers of the heavenly influences graciously dispensed on those occasions.

"Sunday" Railroad Trains.—A few years ago a petition from locomotive engineers to one of the railroad managers, asked for a cessation of trains on the First-day of the week. Among the reasons were, that the health of the men which was being naturally worn out by want of sufficient rest—the exclusion from church, family and social privileges which they were deprived of by not being able to enjoy that day of the week—the demoralizing influence on their families of ignoring it as a day for religious observances—and the impossibility of getting their work with the same energy and success, when sufficient relaxation was not allowed.

GULIELMA MARIA, wife of William Penn, when giving her children their last tender embrace, lifted her eyes beaming with reverence and hope, and said, "Lord, thou knowest I never asked grandeur for my children, but only Godliness." 1693.

The Society of Friends has always believed that the First-day of the week is not the anti-type of the Jewish Sabbath; and has discarded the idea that there is any inherent holiness in one day of the week more than another; yet, while avoiding any superstitions reverence, it has always encouraged its members to observe one day in the week as a day of rest from outward labor, and as a time peculiarly appropriate for the observance of public worship and for the cultivation of those spiritual desires which are apt to be dissipated in the pressure of business and outward engagements. Under the most favorable circumstances, it is not easy fully to live in accordance with our Saviour's command, "Seek first the kingdom of Heaven and its righteousness." The earnest Christian will find by experience the necessity of watching against the inroads of worldly-mindedness, and will be taught to guard against those things which turn the thoughts too much from heaven to earth, and prevent his "conversation being in heaven."

These thoughts have been suggested by some statements recently made respecting the great increase of what are called "Sunday newspapers," their wide circulation in the community, and their effect in leaving their readers into a worldly spirit. We sincerely hope that few, if any, of the readers of THE FRIEND, indulge in the perusal of such papers; but as a caution to those who may be exposed to temptation in this matter, we condense the following paragraph from an article on this subject which appeared in the *Christian Advocate* of First Month 17th.

Prior to the Civil War there were very few such papers published in the United States, but lately their number has astonishingly increased, till now they can be counted by hundreds. The regular issue on First-days of three of the leading New York and three of the leading Philadelphia journals amounts to more than half a million of copies.

The atmosphere of these papers is surcharged with the very essence of worldliness. When we take up the paper, "we open the flood-gates of the world and inundate our being with doings and thinkings and feelings so far removed from godliness as earth is from the heavens. In rush the seas of yesterday's wicked world, flecked with all sorts of checks and bits and patches of evil human life, wave after wave accompanied by the debilitating breezes of frivolity and easy self-indulgence; and if, after half an hour we command the tide to recede, what an ill-assorted mass of unholy odds and ends will be sure to have stranded on the borders of our consciousness! What man can preserve the freshness and purity of his soul, when these waters rush in and flood its fields?"

"As Christians, we teach that it is the day on which we are to empty our minds of the affairs of the world, and keep them fresh for communion with God. But the news columns distribute our attention among thousands of heterogeneous facts and theories, which, though in juxtaposition, are not held together in the mind by any unifying principle. Is it any wonder that when our energies are thus dispersed into atomistic sparkles of thought, often unlawful thought, that our morning devotions are debauched because we cannot keep the merest trifles of news from running in our mind?"

"It is, however, the general tone of the Sunday press that is most destructive to religion and sober morality. These papers are robbing us and our children of reverence and of earnestness. Notwithstanding their occasional gilding of weak piety, they are teaching us to trifle with what is noble, sacred and holy. Side by side with articles of the highest merit, there are always others that lower by playing, toying, joking, and these are the raucous articles, and are always read. We despise gossip, except in a newspaper.

"The newspaper does not ask, 'What is elevating?' but 'What will please?' As the human heart is stained with sin, and human eyes are allured by what is forbidden; as the fulfillment of law does not startle like its transgression, the attractive newspaper does not present a wholesome picture of human life. Not the pure but the impure, not the sound but the diseased life, not a modest but a showy and unmodest demeanor, not a moral but an immoral culture, insinuates itself into the bosoms of our families, and slowly stealing into our children's consciousness, robs many a cheek of its virgin blush of shame.

"The most innocent mind cannot habitually waste through foolishness and emerge immaculate. To fill the mind with pictures of social and business scandals and unholy gossip, and with playful palliations of what is termed 'the frailty of human nature,' at least blunts the moral sense. Even the most intellectual are susceptible to moral taint. Sublimated voluptuousness deftly embodied in fine glittering phrase and clothed over with rhythmic dignity will yet creep forth into the soul and leave its mark there. Said a great secular editor, 'I have banished that paper; I cannot associate with it without injury to myself.'"

The article called "Historical Review of the Society of Friends," which is commenced in our present number, was prepared several years ago with the design of presenting to the readers of THE FRIEND such an account of the origin of the different bodies claiming the same name, as might in some measure remove the confusion of idea which exists respecting them. Circumstances having delayed its publication, the writer concluded to include in it some notices of matters of historical interest with which the Society of Friends has been connected during the last sixty years.

Since the preparation of the Moral Almanac for 1859, Northern District Monthly Meeting, Philadelphia, has altered the times of holding its meetings. They are now held at 10 o'clock in the mornings of First and Third-days; and at 3 o'clock on the afternoons of First-days in Summer (beginning on the 1st of Fourth Month); and at 4 o'clock in Winter (beginning on the 1st of Tenth Month).

David Marshall, of Carthage, Rush Co., Indiana, sends a sample copy of a small pamphlet containing visions of Joseph Hoag and Daniel Barker, and a prediction of war to come, uttered many years ago by Stephen Grellet. Price, 5 cents per copy, or 50 cents a dozen, post paid.

SUMMARY OF EVENTS.

UNITED STATES.—Last week the President transmitted to Congress an agreement with the Creek Indians, of the Indian Territory, by which they ceded to the United States 2,669,754 acres of land held by them under treaty. The compensation fixed upon was \$2,280,857. Since the transmission of this agreement it

has come to the knowledge of the Secretary of the Interior that an attorney of Washington has a contract with the Creeks by which he is to receive a commission in negotiating this sale, 10 per cent of the purchase price agreed upon, which in this case would amount to over \$228,000. The Secretary, believing that this fee was greatly in excess of the value of the services rendered, has refused to approve the contracts, and has obtained from the attorney a relinquishment of his claim under them. The attorney must now look to the Creeks for such compensation as they may voluntarily allow him.

On the 14th instant, Senator Wilson, of Iowa, addressed the Senate on a bill introduced by Senator Frye in Twelfth Mo. 1887, which reads:

"The consent of Congress is hereby given that the laws of the several States relating to the sale of distilled and fermented liquors within the limits of each State may apply to such liquors when they have been imported, in the same manner as when they have been manufactured in the United States."

Senator Wilson dwelt at considerable length on the beneficial effects of the anti-liquor laws, and upon the opinions of judges as to the remarkable reduction of crime since the law had gone into operation. He quoted one of the judges as saying in regard to his judicial district:

"In many of the counties the jail is almost an empty building. In the last three counties visited there was not an occupant of the jail." He spoke of the illiteracy of Iowa having been brought down to 12-10 per cent. Iowa being thus placed the said "at the head of the educational column not only of this country but of the world." Such a State might hopefully ask Congress to remove the judicial construction which alone stood as an obstruction in the way of the rightful exercise of her police powers, by which removal she could successfully suppress crime within her borders.

The action was taken on the bill, which still remains on the calendar.

The Oklahoma bill has passed the House of Representatives by a vote of 148 to 102. The bill organizes this part of the Indian Territory into a separate Territory, and opens the country to settlement. Senator Butler's substitute for the Oklahoma bill authorizes the Government to treat with the Indian nations for the extinguishment of their titles to the lands included within the limits of the proposed Territory, preparatory to the organization of the Territory.

On the 11th instant, the people of Nevada voted on a constitutional amendment giving the Legislature power to establish lotteries in the State. The result is not definitely known as yet.

On the morning of the 18th instant, a few minutes before 5 o'clock, the main portion of the Park Central Hotel, in Hartford, Connecticut, fell. A number of persons were burned in the debris, which caught fire. The cause of the accident is not known, but it is thought to have been the result of a boiler explosion, as windows in surrounding buildings were shattered, and a portion of the wall of the Earl House was broken. At last accounts 19 dead and 10 injured persons had been taken from the ruins of the building.

The number of deaths in this city last week were reported to have been 128, including 211 females—an increase of 9 over last week, and a decrease of 23 from the number reported one year ago. Of the whole number 37 died of consumption; 57 of pneumonia; 26 of disease of the heart; 21 of typhoid fever; 21 of old age; 10 of influenza; 18 of convulsions; 15 of Bright's disease; 15 of cramp; 12 of cancer; 11 of apoplexy; 10 of debility and 7 of uremia.

Markets.—C. S. 43s, 80s, 100s; cotton, 100 $\frac{1}{2}$; 4s, 12d; currency 6s, 12s a 15l.

—Nigricated castor oil, 100s on a basis of 100, etc., per pound for middling uplands.

—Feed.—Winter bran, choice and fancy, \$16.75 a \$17; do., per ton, \$16 a \$16.50; spring bran, \$15 a \$16.

—Flour and Meal.—Western and Pennsylvania super, \$2.25 a \$2.25; do., extra, \$2.25 a \$2.25; do., 2 winter family, \$2.10 a \$2.25; Pennsylvania do., \$1.70 a \$1.85; Pennsylvania roller process, \$5 a \$5.40; Ohio, clear, \$4.80 a \$5.10; do., straight, \$5.10 a \$5.40; Indiana, clear, \$4.80 a \$5.10; do., straight, \$5.10 a \$5.40; St. Louis and Southern Illinois, clear, \$4.10 a \$4.40; do., straight, \$4.40 a \$4.70; do., patent, fair to choice, \$5.50 a \$6.00; Minnesota, clear, \$4.50 a \$5.00; do., straight, \$5.25 a \$6.00; do., patent, \$6.00 a \$7.00.

—Grain.—No. 2 red wheat, 48 a 50 $\frac{1}{2}$ cts.

—No. 2 white oats, 32 a 34 cts.

—Beef cattle.—Extra, 41 a 43 cts; good, 4 a 41 cts; medium, 32 a 35 cts; common, 3 a 33 cts.

—Hogs.—No. 1, 53 a 55 cts; No. 2, 51 a 53 cts; medium, 41 a 43 cts; common, 31 a 33 cts; culls, 3 a 33 cts. Lambs, 4 a 7 1/2 cts.

—Hogs.—Western, 67 a 7 cts; State, 6 a 6 1/2 cts.

FUGITIVE.—In Donegal, on the 12th instant, James O'Kelly, of the Parliament, North of the common, was sentenced to six months' imprisonment for inviting tenants to adopt the plan of campaign. O'Kelly entered an appeal.

On the 16th instant, in the Spanish Congress, Prime Minister Sagasta presented a proposition by which he proposed a large reduction of the army estimates, in order to permit reduction of taxation without reversing the Liberal party's free trade policy.

He declared that the time had arrived when Spain must direct her whole attention to economical matters in preference to military and naval armaments, and that for a nation that harbored no warlike designs armaments were not needed. The speech is considered a good stroke of policy.

In the French Chamber of Deputies, on the 14th instant, when the question of the revision of the Constitution came up, Comte De Donville Mailléfren moved that the debate on the subject be adjourned. Notwithstanding the opposition of the Government, the motion was adopted by a vote of 397 to 218.

On the 15th instant, the Honorable member for the Ministry would immediately resign.

Immediately after P. Floquet's announcement in the Chamber of Deputies, all the members of the Ministry sent their resignations to President Carnot.

It is stated in Berlin, that the German Government is willing to effect a settlement of the Sino-German question on the basis of the United States Government's proposal at the Washington conference, namely, the establishment of a joint American, German and English control over the Samoan Government through the consent of the Samoan Government.

The question as to whether children shall receive religious instructions in the schools of Milan, was recently taken, and out of 27,000 votes 25,000 were in the affirmative.

The Government has granted a concession for a period of eighty-one years to a company which proposes to join the Black Sea and the Sea of Azov. The company has a capital of 85,000,000 francs. The Grand Duke of Leuchtenberg is chairman. A famine prevails in the interior of the West Coast of Africa.

The Chilean Government is to undertake the building of about 2,500 miles of railroad next autumn. A corps of American Engineers are to superintend the surveying and the construction of the road. The railway lines will extend from coast cities to the interior, where the silver mines are located.

A large number of laborers have been discharged from the Panama Canal Works. The majority have gone to the West Indies, Costa Rica and Chili. A limited amount of work continues to be done on all sections of the canal, and total suspension is not expected until the middle of Third Month.

Immense harbor improvements are to be undertaken by the city of Montreal, Canada. The outlay is 84,000,000 francs. Four miles of wharfage and a still-water basin of 815 square miles are to be built, and the street running along the river-front is to be widened from 35 to 100 feet. These improvements, along with the uniform deepening to 27 feet of the river channel from Montreal to the Gulf, will add greatly to the commercial value of the city.

Further advices from Shanghai by the China steamer, which has arrived at San Francisco, state that the famine in Amoi and Kiangsu is worse. In one province 200 families are starving, and altogether several millions are suffering from the pestilence.

Dr. Norman Kerr, an eminent physician of England, believing the statement of temperance people that 60,000 people die annually from the effects of strong drink to be extravagant, began as early as 1870 personal inquiry in connection with several medicinal and experimental inquiries into the lives of the figures. According to their deductions the latest estimates of deaths of adults annually caused through intemperance are, in Great Britain, 120,000; in France, 112,000; in the United States, 80,000; or nearly a half a million in the most temperate countries aggregating a population of 112,000,000.

BREK'S QUARTERLY MEETING.—Brecks Quarterly Meeting will be held on the 28th of Second Month at Fallstown instead of at Hopewell, N. J.

GEORGE M. COMFORT, Clerk.

NOTICES.

WESTON COMMITTEE ON INSTRUCTION.—A stated meeting of the Committee on Instruction will be held on Monday, the seventh-day, the 23rd of Second Month, at 10 A. M.

GEORGE M. COMFORT, Clerk.

WANTED.—A woman to teach the inmates of the Howard Institution (numbering from 12 to 14) to read. The object is to enable them to read the Bible. She should be interested in their spiritual welfare. The compensation \$3 a week. The time required, two months. Apply to

MARY MORRIS, C. LEEDS, Germantown, or MARY MOORE, Overbrook, Montgomery Co., Pa.

WESTON BOARDING SCHOOL.—A competent teacher of Mathematics will be wanted in the girls' department, at the opening of the next session, Fourth Month 30th. Application may be made to

ELIZABETH ALLEN,

3214 Arch 16th St., Phila.,

or ELIZABETH COMFORT,

Fallsington, Bucks Co., Pa.,

or REBECCA EVANS,

P. O. Box 129, Moorestown, N. J.

DEATH.—At the residence of her brother-in-law, Amos Evans, Marlton, N. J., on the 20th of First Month 1889, ANN KALVIN, in the 74th year of her age, a member of the Monthly Meeting of Friends of Philadelphia. While deeply concerned for the welfare of our religious Society, she was for many years unable to attend our meetings. Her last sickness was of but few months' duration, during which time she said but little of her spiritual exercises; and though called in an unexpected moment, we have the comforting hope she is now joined to loved ones gone before.

She resided in West Grove, 21st of First Month 1888, having been a member of the Friends of Geo. S. Passmore, in her 96th year, a member of New Garden Monthly Meeting, Chester Co., Pa. To her language is applicable, "Thou shalt come to thy grave in a full age, like a shock of corn cometh in in his season."

She was a member of the Friends of the City of Norwich, Ontario, Canada, on the 22nd of First Month 1859, LYDIA P. STOVER, in the 71st year of her age, a member and minister of Norwich Monthly Meeting. She was born the 6th day of Third Month 1818, a few miles from Rome, in the State of New York. Her parents were the late William and Mary Avis Flakes, who were concerned to train up their children in the fear of the Lord, and in conformity with principles of the religious Society of Friends. At different times she spoke of her thankfulness for the religious care of her parents; and more especially for early Divine visitations to her soul; on one special occasion, she clearly saw the position she must occupy, particularly in the matter of dress, with the solemn admonition, "See that thou make all things according to the pattern which thou hast seen." She endeavored to make straight steps with her feet; and profoundly considered her motives, so that her decisions were mature before she expressed them. In the Tenth Month, 1861, she was united in marriage with Jesse Stover, of Norwich, and the remainder of her days her home was with her sweet and devoted husband. Her husband came forth in the line of the ministry, and was recorded a minister by Norwich Monthly Meeting in the year 1867. Her public testimonies were generally brief, with well chosen and directed words, and the order of her meetings was simple and unobtrusive. Frequently in the service of the Truth; her labors were to the satisfaction of those visited, and to the peace of her own mind. She suffered for some time from pulmonary and heart disease. The last few days her suffering was alleviated by the use of the medicine of Dr. Dr. Norman Kerr, an eminent physician of England, believing the statement of temperance people that 60,000 people die annually from the effects of strong drink to be extravagant, began as early as 1870 personal inquiry in connection with several medicinal and experimental inquiries into the lives of the figures. According to their deductions the latest estimates of deaths of adults annually caused through intemperance are, in Great Britain, 120,000; in France, 112,000; in the United States, 80,000; or nearly a half a million in the most temperate countries aggregating a population of 112,000,000.

She died on the 20th of First Month, at the residence of her son, in Washington, D. C., ELIZABETH R. widow of John P. Ballderson, late of Cecil County, Maryland, in the 84th year of her age, a beloved member and minister of New Garden Monthly Meeting of Friends of Chester Co., Pa. She bore her illness with quiet submission to the Divine will, saying, "I can do nothing of myself, but the everlasting arm is supporting me." Leaving the comforting belief that through great mercies she has been permitted to enter through the pearl gates into everlasting rest.

FOR "THE FRIEND."

Historical Review of the Society of Friends.

(Continued from page 234.)

As party hate increased, recourse to arms naturally followed the violent language and measures which were used or advocated by the leaders in the political discussions. The different bodies of Friends entered into sympathy with each other, and by frequent and affectionate epistles endeavored to strengthen one another in a faithful maintenance of the peaceable principles of the Gospel. Some of these are beautiful illustrations of that Christian love and interest which prevailed between the different branches of our Society. An epistle, dated Eighth Mo. 31st, 1775, from London Yearly Meeting, and addressed to Friends in America, exhorts them "Above all things to keep near the pure principle of Truth, not only in your meetings and in your families, but throughout your whole conversation and conduct, as the alone sure and safe guide to peace and rest." "It will add much to your safety in every respect to dwell alone, to suffer your minds to be agitated as little as possible by the present commotions, to keep out of the spirit of parties, and to cherish in your hearts the principle of peace and good-will to all. * * * Dwell under a sense of the power and presence of God, all-sufficient and merciful; so will ye be preserved in peace and innocence, amidst all the various exercises ye may meet with; and if afflictions, such as neither we nor our fathers have felt, are permitted to come upon you, you will be enabled to bear a part in the general calamity, with a patience and resignation that a sense of the Lord's presence only can inspire."

In the trials attendant on the war of the Revolution, there was abundant occasion for the exercise of the "patience and resignation" which Friends in England advised. In addition to public odium, there were many cases of arbitrary imprisonment, and the imposition of fines. "Councils of Safety"—bodies which had no constitutional or legal existence assumed the power to imprison at their pleasure those who refused to join the revolutionary movements. An epistle from the Meeting for Sufferings in Philadelphia to that in London, dated Second Mo. 26th, 1778, says, "Great findings, imprisonments and various other distresses, have been inflicted upon many who cannot for conscience sake join in their

measures." The minutes of the former body contain frequent notices of the efforts used to procure the release of our members imprisoned at Reading, Lancaster and other places, on this account. An epistle from New England Meeting for Sufferings, in 1778, states that in Rhode Island Government £2473 had been distrained from Friends between their two last Yearly Meetings.

Active military operations were first commenced in New England, and to relieve the suffering occasioned thereby, and by the interruption of ordinary business which resulted from them, Friends of Philadelphia remitted to their brethren in New England £2000, to be expended at their discretion. "A partial report of the expenditure of this fund states that 5229 persons had partaken of its benefit, most of whom were probably in no way connected with the Society of Friends. As the desolating scourge of war extended over the country, the sympathies of Friends in Great Britain were much drawn forth towards their brethren in this country, and large amounts of money were contributed to assist those in distress. This was principally or altogether placed under the care of Friends of Philadelphia, and by them distributed in various parts of the country, as occasion required. Out of this fund were paid the expenses connected with the ransom and return of the Gilbert family, who had been taken captives by the Indians at their home north of the Blue Mountains, Pennsylvania, and carried off to Canada. A summary of the disbursements and losses on military accounts inflicted on the members of Philadelphia Yearly Meeting, between 1777 and 1784, amounted to over £35,500.

The experience of the church in this case was the same as in all similar periods; it was refined through suffering. An affectionate epistle from London Meeting for Sufferings in 1779, says: "We think we perceive in your account the evident traces of Divine regard and mercy to the churches amongst you. The zeal with which many Friends from distant places, and through many dangers, attend your solemnities, the love and harmony that prevails among you, the sacred union that is apparent in the conduct of your affairs, evidently betoken that the refining hand has not been at work in vain." The Meeting for Sufferings of New York, in 1783, thus allude to their own condition: "We believe there is a living remnant who are zealously concerned to labor in love and meekness for the promotion of our Christian testimony and the exaltation of the kingdom and government of the Prince of Peace; and that under the various exercises and difficulties which have attended, Friends have generally kept to their meetings for the performance of Divine worship, and the support of our Christian discipline, although sometimes exposed thereby to the insults of wicked men, yet we think we may say with you, 'we believe that hitherto the Lord hath helped us,' and that when we had none other to flee to for succor, He hath been our shield and our exceeding great reward." When the war ceased,

and free communication with England was restored, many of the American ministers were led in the love of the Gospel to visit their brethren across the water. An epistle in 1785 gives the names of ten of these messengers of glad tidings then in Great Britain, and for a number of years after, these visits were of frequent occurrence.

While our Society in America had been passing through this ordeal, it had been afresh aroused to the importance of spreading abroad the journals of faithful Friends and other works calculated to promote correct views of the Christian religion, and to awaken their readers to the importance of living in conformity with its requirements. It had also in great measure completed the work of clearing its hands of complicity with the evil of domestic slavery; and was prepared to labor with others in its advocacy of the principles of justice and human rights, which are completely at variance with this system. An epistle from the Meeting for Sufferings in Philadelphia to that in London, dated First Mo. 20th, 1780, says that Friends in this country are nearly clear of holding slaves, and calls their attention to the "cruel traffic" as it is termed, in slaves, carried on by the English nation. The African slave-trade was then a profitable business carried on by British capital; and public sentiment had not been awakened to its vileness and wickedness. It was considered as a respectable branch of commerce. When the attention of Friends in Great Britain was plainly called to the subject, though not hasty in proceeding, yet they did not long delay in accepting the responsibility thus laid upon them. An epistle from their Meeting for Sufferings, in 1783, acknowledges the propriety of the call that had been made upon them from America, to apply to their government for the suppression of the slave-trade—"a work," they say, "in which whoever should be engaged must expect to meet with the greatest opposition from the combination of interested parties." In reply to this epistle their friends in Philadelphia endeavored to strengthen their hands, and express the hope in reference to the slave-trade, that "instruments will be raised to step forth and engage with unrelenting care and endeavors to extirpate the root of this inhuman commerce; for as righteousness exalteth a nation, and sin is shameful to any people, so such an enormous iniquity as to encourage and promote by lawful authority a traffic founded on avarice, theft, bloodshed and other multiplied evils, must greatly increase the weight of national guilt." An epistle from London in the early part of the year 1784, mentions that a petition on behalf of the Africans had been presented to the House of Commons, and that the subject was kept continually under their notice. Having once put their hands to the plough, Friends in England persisted in the work with noble perseverance, until such a change was wrought in public opinion in that country, that England became, as for many years she has been, the most determined enemy of slavery of all civilized nations.

The records of our Society in America for

many years after this period, contain numerous references to their labors in the same good cause. With unwearied zeal they appealed to the legislatures of the different States and to Congress, to put an end to the slave-trade, still carried on to some extent, particularly from Newport, Rhode Island; to do away with the system itself; and to take measures to protect the free people of color, who were often illegally forced into bondage. When Congress, in 1794, in accordance with the request of Friends in New England and others, had passed the bill against the slave trade, and it had become a law, an epistle from Philadelphia Meeting for Sufferings to that of New England, thus refers to this important step: "Hitherto we may humbly acknowledge the universal Father hath blessed our mutual endeavors in the cause of humanity; which we hope will encourage both you and us to a diligent attention to every future call of duty on behalf of that injured and afflicted people." Some of the minutes made in those days, are very strong and clear in their condemnation of this evil system. The Yearly Meeting of Philadelphia, in 1798, addressed the following minute to its Meeting for Sufferings:

"The enormous iniquity of enslaving and trading in the persons of men, which *erying abomination* renewedly impressing the minds of many Friends with very painful sensations, under the awful prospect of Divine judgment manifest in the earth, it is desired we may individually labor for qualification to offer up effectual, fervent prayer for the removal of this *unspeakable wickedness* from our land—and that the Meeting for Sufferings more especially, may suffer no season to escape unimproved, wherein there may be an opening for the relief of this grievously oppressed people, or for holding up our religious testimony against every species of this aggravated evil."

In 1808, after a struggle of nearly twenty-five years, the British Slave-Trade was prohibited by act of Parliament—in reference to which an epistle from the Meeting for Sufferings in London says: "We cannot easily avoid expressing to you our heart-felt comfort at that great, memorable, and may we not say blessed event."

(To be continued.)

A Winter Sunrise.

The waning moon was scarcely visible in the western sky and not a star shone overhead, when I ventured out of doors, at the call of the gathering crows. These noisy scavengers of the river's shore had evidently slept with one eye open, and at the first faint glimmering of the dawn signalled, in no uncertain tones, the coming day. Across the brown meadows floated their clamorous cries and roused me when my own slumber was most profound; and I responded promptly, willing at least, if not wildly anxious, to witness a winter sunrise.

I have said the meadows were brown; such was their color when I saw them last; but now, every wrinkled blade of last year's grass was daintily feathered with pearly frost. A line, too, of steel-gray crystals topped every rail of the old worm fence, and capped the outreaching branches of the scattered trees. The glint of splintered glass filled the landscape.

Knowing the view would there be least obstructed, I walked leisurely to a high knoll in the lower meadows, leaving a curiously dark streak behind me where I brushed away the frost as I passed. Not a bird greeted me. The sparrows and chickadees of yesterday were still asleep. The crackling of brittle twigs beneath

my feet was the only sound I heard, save, of course, the blended voices of the distant crows. The brightening of the eastern sky proceeded slowly. Cloud above cloud threatened to shut out the light until the day had well advanced; while from the river rose a filmy bank of smoke-like fog that settled in huge masses over the intervening marshes. But still the crows were clamorous, and I had been told that their songs at sunrise augured a fair day; so, 'twixt hope and fear, I reached the high knoll in my neighbor's meadow. It was at the nick of time. Without a heralding ray in the whole horizon, a flood of rosy light leaped through a rift in the clouds and every cold gray crystal of the frost glowed with ruddy warmth. Then deafening loud was the din of the forging crows, as though they exulted at the fulfillment of their prediction; and from that moment on, the day was beautiful.

And if crows could be so enthusiastic over a bright winter day, why not other birds? What of that host of arctic finches that tarry with us until spring? I listened in vain for the foxie sparrow's warble, the call of the Peabody bird, and whistling of the purple finch. These were all here yesterday and making merry; now every one was mute. The ceaseless cawing of the crows may have drowned their voices, but I think not. However, in other ways and no less cheerful ones, the vivifying effect of sunrise was soon apparent everywhere about me.

My friends, the meadow mice, were in their glory. Their grass-walled run-ways were roofed with ice and not a breath of the chilly breeze that fretted the outer world could reach them. I quite forgot the increasing beauty of the eastern sky, in my eagerness to watch the mice. I could look down upon them, through the transparent roofs of their crystal palaces, and wonder what might be their errands. Every one was in a hurry, and none stopped to nibble at a blade of grass or tarry at a cluster of seed-pods. Was it the mere pleasure of activity that prompted them? It was very warm beneath the ice and far from cold above it. But all the while I might be frightening the poor creatures, so I withdrew, at the thought, to the cover of a clump of bushes. Quiet then seemed partially restored and soon a mouse came from an opening in the roof, where many run-ways met. It picked its painful way over the frost, as though every crystal was a pricking needle. I moved and away it darted, but not to tell its fellows. Another and another came and like the one first seen, they simply ran from post to pillar and back from pillar to post. Perhaps a weasel was on their track—but, if we commence surmising, there will never be an end to it. Let me declare dogmatically, these mice were taking a sun bath, and with this thought, leave them.

As I looked about me, the crows again became the most prominent feature of the landscape. They hovered in a loose flock over all the meadows; literally, in thousands, and as the rays of the sun struck them, they too glistened as though the frost crystals had encased their feathers. Higher and higher they rose into the misty air and soon dispersed in every direction; but they will gather again as the day closes, for over the river, somewhere in the woods, they have a roosting place. I have seen this knoll now thickly tenanted by mice, black with crows day after day, within a fortnight. What then became of the mice? Surely their cunning stood them well in need to escape these ravenous birds, and yet they have done so. Rapacious as

they seem when studied individually, these mice must have a modicum of mother-wit, to thrive in spite of so many odds against them.

But now, as the day advanced, the wooded bluff a mile away, and the willows on the river-shore gave evidence that not alone were the crows and mice awake to the beauty and warmth of a winter sunrise. The feathered world was now astir and music from a hundred throats filled the crisp air. There was, it is true, not that volume of sound that greets the day-break in June, and no one voice was as tuneful as the thrush. This mattered not. The essential feature of a pleasant stroll, evidence that I was not alone, was present; for I cannot keep company with meadow mice. I call it a dead day, where there are no birds, and he who would know what such a day is, should be on the marshes or the river, when not a sound rises from the wild waste about him.

I stood long listening to the afar-off choir, and then, turning my steps homeward, fancied I could distinguish the different birds that now made the woods fairly to ring. There was a ditch to cross before reaching the hillside, and right glad I am that I looked before leaping it, for I saw a lazy frog slowly responding to the increasing warmth of the sunshine. All night long, this creature had been sleeping in a cozy nook, a foot deep in the soft mud which was protected here from the north and west, and has never been known to freeze. One eye and a small fraction of the frog's head was visible, but the former was bright and I was sure that no accident had happened to bring it even so far above the surface. I stood very still, expecting much, but it was like watching the hour hand of a clock. In time the whole head was exposed, then the fore-limbs and this, for many minutes, was the extent of the frog's activity. I ventured finally, to assist, and lifting up the clammy creature, placed it on a floating fence rail, whereon the sun shone as in summer. The frog was happy. Its expression showed this, its pulsing sides proved it, and could I have heard it croak, my own satisfaction would have been complete; but this it would not do. But let it be remembered, the croaking cannot be forced, either in June or January, and the voices of frogs have been heard frequently during the latter month. Even when the winter has been very severe, a typical January thaw has led them to give tongue, to croak unmistakably, although in thinner tones than during a summer's night choruses.

There were hours yet before noon, and my little adventure with the languid frog prompted me to explore the ditch in a rude way. All forms of aquatic life seemed as active as in spring. Fish, salamanders, snakes, turtles, and insects were not only active, but alert and as difficult to capture as I have ever found them. Actual sluggishness characterized the frogs only, and yet these creatures are supposed to be less susceptible to cold than all the others. The truth is, the winter habits of every form of life, are little known, and what impressions, if any, most have upon the subject are more or less erroneous. We have had no winter as yet, but the same conditions that I found to-day, were true of the ditch dwellers, last year and the year before, when we had not only winter, but winter intensified.

I did not enumerate the many birds aright, as I approached the hillside. My attention was suddenly called from the ditch to the green-briar thicket beyond, by a familiar sound, yet which now late in January, seemed quite out

of place, if not out of tune and harsh. It was the querulous cry of a cat-bird. This familiar thrush is no *rara avis* at such a time, although probably in Andubon's day, few if any remained in New Jersey during the winter. No author makes mention, I believe, of such an occurrence. The number seen each winter gradually increases, and the disposition to remain affects apparently these birds over a steadily extending area. So, at least, from correspondence, I am led to believe.

I found but three flowers as I neared my home, a dandelion, a violet and a pale spring beauty; but earlier in the month, a friend had been more successful, and gathered not only those I have named, but others. Doubtless these superlatively early blossoms have to do with the present extraordinary winter, now more than half gone, but not altogether, perhaps. Many a plant is more vigorous than we suspect and stray flowers are hidden beneath the fallen leaves more often than we know.

When, in the forbidding gloom of a winter dawn, I ventured out of doors, it was with the anticipation of a cheerless walk, if not fear of actual discomfort; but the brilliant sunrise promptly dispelled all this; my fears giving way to hopes that were more than realized.

CHARLES C. ABBOTT.

Near Trenton, N. J. in *The American*

FOR "THE FRIEND."

"Ephraim, he hath mixed himself among the people; Ephraim is a cake not turned,"—strangers have devoured his strength and he knew it not."

I have been led to fear that the above language of the Prophets is applicable to too many who are members of our highly favored society. When we fall in with the ways and doings of an evil world, and give countenance in this way to that which is wrong, we gradually lose our strength, imperceptibly to ourselves, until we may be so mixed with evil that we scarcely know where we are.

It fell to my lot, in attending to my proper business, to be in our town on the day called Christmas; and the commotion and excitement that therein prevailed produced feelings of sorrow. How very far, I thought, such a way of spending the precious time was, from giving honor and glory to Him whose kingdom is not of this world. I believe that the day called Christmas is turned more to the ways of evil, by many of the inhabitants of the earth, than other days of the year; which cannot but be offensive in the Divine sight. And I have been grieved to learn that many members of our society have made it a day of feasting, and call it a holiday, as though it was a day of more liberty than others.

Every day of our lives ought to be devoted to the service of our Father who is in Heaven, and "whether we eat or drink or whatsoever we do, all should be to his glory." Again I have feared that some amongst us give more encouragement to some public exhibitions and organizations than is consistent with the will of God; and thus there is danger of becoming "mixed with the people." I do fully believe that friends are loudly called upon to be a "peculiar people, zealous of good works" so that, "our lights may so shine before men that they, seeing our good works, may have cause to glorify our Father who is in Heaven.

I have also feared that many have departed from our plain way of speaking and writing; and in their manners are conforming too much to the ways of an evil world. I am often brought

under exercise and travail (according to my measure) for the welfare of our beloved society, and I have from season to season been made to believe that the blessed Head of the Church is designing to gather us nearer to himself, if we will hearken. That the language concerning Ephraim may not be applicable to us as a people, is my fervent desire. "If we are willing and obedient we shall eat the good of the land" but if we refuse and rebel, we must reap the reward thereof. R. M.

PENNSVILLE, Morgan Co., Ohio.

FOR "THE FRIEND."

Settlement of Meetings in New Jersey.

(Continued from page 236.)

In 1681, a number of Friends settled on Newton Creek, in Gloucester County, near Arwamus, or what has since become Gloucester City.

In the same year, a meeting was allowed by the Burlington Friends, to be held at Pine Point on the D-laware, (now the City of Camden), as appears by the following minute:—"At a Monthly Meeting held at the house of Thomas Gardiner, the 5th of Seventh Month, 1681.—It is ordered that Friends at Pine Point have a meeting on every Fourth-day, to begin at the fourth hour, at Richard Arnold's house."

In 1682, there was a meeting set up, and kept at the house of Mark Newbie, on Newton Creek, which soon increased so much that a meeting-house (of logs) was built in 1684. In 1715-16, a meeting-house was built at Gloucester.

NEWTON.

In 1801, Friends removed from the old meeting-house on Newton Creek to the present location; the brick house was built upon land given by Joseph Kaighn. The old Newton Meeting-house was burned in 1817.

"At a General Meeting held at Salem in the Province of West Jersey, the 11th of Second Month, 1682, it was ordered that Friends at Arwamus and those at Shackamaxon do meet together once a month; the first meeting to be at William Cooper's at Pine Point, at Arwamus," to which were joined the Friends settled on Woodbury and Cooper's Creeks.

The Friends of Salem and Newton Monthly Meetings constituted a Quarterly Meeting in 1686, as is shown by the following minute:

"At a Yearly Meeting held in Burlington the 8th of Seventh Month, 1686.—Friends of this meeting ordered that the Monthly Meeting of Salem, and the Monthly Meeting of Newton make up one Quarterly Meeting, called Gloucester and Salem Quarterly Meeting, to be held at Gloucester and Salem, alternately."

The Monthly Meeting of Gloucester or Newton, was held alternately at Newton, and at the house of Thomas Shackle, (near Haddonfield) from 1695 to 1721. In that year Elizabeth (Haddon) Eastaugh, procured from her father John Haddon, (in England) a deed for one acre of ground for the use of Friends, on which the meeting-house was built in the early part of that year. It was of logs, and stood near the King's Road.

In 1732, John and Elizabeth Estaug conveyed one and a-half acres of land adjoining the meeting-house lot to Friends.

In 1760, a brick meeting-house was erected upon the same site, and the old log house removed across the "Ferry road," and used as a stable.

After nearly a century of service, that house was taken down, and the bricks used to enclose

the burial ground. It was very inconveniently arranged, especially so for holding a large Quarterly Meeting. It had probably been built at two different times.

The present commodious meeting-house at Haddonfield was erected upon an adjoining lot, in 1851.

CHESTER.

In 1685, a meeting was established with the consent of Burlington Friends, at the house of Timothy Hancock, at "Penisauken," which was held on alternate First-days with one at the house of John Kay, on the north branch of Cooper's Creek, for the accommodation of Friends at Penisauken and Evesham, and those on Cooper's Creek.

CHESTER, (at Moorestown.)

About the year 1700, the Meeting at Chester was established, and was called the Adams' Meeting from its being located upon their land.

By a deed of James and Esther Adams, dated 9th of Fourth Mo, 1700, we learn that a meeting-house already stood there, viz: "To the Trustees of the Religious Society of Friends, for one acre of land lying and being on the west side of the King's highway, with all that house or building now erected, and being upon said acre of land, called the Quaker Meeting-house."

It was of logs, and was destroyed by fire. In 1721, a house built of stone succeeded it, and was located in what is now the burial ground near the large buttonwood tree on the north side of Main Street, in Moorestown, (or Chester Town, as the place was formerly called.)

The present substantial brick structure, on the south side of the street, was built in 1802.

The frame building in the same yard, built in 1837, and enlarged in 1854.

Chester Monthly Meeting was established with the consent of Haddonfield Quarterly Meeting, First Mo, 1st, 1804, composed of Chester and Westfield Preparative Meetings.

WESTFIELD.

This was an indulged meeting for some years, and held in a school-house from 1794 to 1801, at which time the large stone meeting-house was built, which was destroyed by fire in 1859, it has been succeeded by a substantial brick building.

The frame building standing about half a mile south of the above, and occupied by our Friends, was built in 1848.

EVESHAM.

The first account we have of meetings at Evesham, is of one held at the dwelling of William Evans, in 1694—his wife Elizabeth was a minister.

A meeting-house was built in 1698, which was replaced by another, in 1760, of stone, this was enlarged in 1798, and formed the present venerable-looking structure, which stands as a monument to the liberality of Friends of that day.

The Preparative and Monthly Meetings were established in 1760, as appears by the following minute: "Agreeable to ye direction of ye Quarterly Meeting held ye 3rd day of ye 9th month, 1760. Friends of Evesham and Chester held their meeting at Evesham on ye 9th of 10th month, 1760." Evesham and Chester composed one Monthly Meeting until 1804.

In the Third Month, 1793, the Monthly Meeting of Evesham proposed to the Quarterly Meeting held at Salem, that there be a division of that Monthly Meeting, viz: that Friends of Upper Evesham and Cropwell Particular Meet-

ings become a Monthly Meeting, which was united with, and the Monthly Meeting of Upper Evesham organized First Mo, 1794.

Upper Evesham was an individual meeting from 1760 until 1774. In 1775, the meeting place was enlarged, which was built in 1759. The present commodious brick structure was erected in 1814, to replace the small frame building above alluded to.

The Preparative Meeting was established in 1783.

CROPWELL.

The Meeting at Cropwell was first established in 1786, as appears by the following minute of that year.

"A request by direction of the Preparative Meeting of Evesham in favor of holding a meeting for worship in a school-house lately erected near Cropwell Creek, was united with." The present brick meeting-house was built in 1812.

EASTON.

1803.—"Friends who live in the vicinity of Easton school-house request that two meetings a month be held at that place, which is allowed." The Meeting was regularly established; and the Preparative Meeting organized in 1810, and the meeting-house built the same year. It is a branch of Evesham Monthly Meeting.

GREAT EGG HARBOR.

"The first convincement of Friends about Great Egg Harbor was about 1702. Since which time Meetings have been settled and houses built." Egg Harbor Monthly Meeting established.

The first Yearly Meeting held at Egg Harbor was in 1754.

HADDONFIELD QUARTER.

In 1794, Gloucester and Salem Quarterly Meeting proposed to the Yearly Meeting to constitute two Quarterly Meetings in their limits; one of Evesham and Haddonfield, Great Egg Harbor, and Cape May, called Haddonfield Quarterly Meeting; to be held at Haddonfield and Evesham alternately, which was approved, and meetings held accordingly from that time until 1835, when the meeting circulated more generally, and was held once a year at Haddonfield, Evesham, Upper Evesham, (Medford) and Chester, (Moorestown) as at present.

FOR "THE FRIEND."

Have not the special favors enjoyed by Philadelphia Yearly Meeting, been largely owing to the faithfulness of the founders and early settlers of the country over which this Yearly Meeting extends? I trust so, as the founders of the States of New Jersey and Pennsylvania were concerned that the first owners of the land should be treated justly, and all land obtained, paid for by regular purchase.

If this is so, should not we be equally careful to uphold the character which they bore, in the full support of all the testimonies given them, which led them to leave their European homes and attachments, and endure the sufferings inseparable from a new settlement?

As William Penn was more anxious to secure civil and religious liberty than to maintain and increase his estate, I hope we will also be more careful and anxious that our descendants should enjoy these things, than that we should be rich in this world's goods, and poor in other respects.

B.

Second Mo. 12th, 1840.

FOR "THE FRIEND." THE GOSPEL LIGHT OUR GUIDE.

Thou God of all light, thy candle shines bright
Ofttimes, while musing before thee;
So may I yet be more thankful to thee,
While in spirit and truth I adore thee.

If my body is weak, may I fervently seek
While yet in this world I still linger,
To be shown the right way, by night and by day,
With the pointings of thy holy finger.

And when I thus know the way I should go,
May I be willing to heed thy voice,
And follow the light, which often shines bright,
As I, in my darkness, do need it.

Israel of old, we plainly are told,
Had a guide to show them the way—
A pillar of light to lead them by night,
And a pillar of cloud by the day.

Whilst they kept his command, and were led by his hand,
Their peace as a river would flow;
But they loved their own way, and oft went astray,
As they through the desert did go.

So truly may we, by this plainly see
That we need a strong spiritual guide,
To lead us aright, through our wilderness fight;
For in this dark world we are tried.

If we are made free, and continue to be,
From the power and thralldom of sin,
We will joyfully know, while on earth we still go,
That the kingdom of God is within.

And then we will find, both in body and mind,
That a peaceful reward will be given;
For God's kingdom will come, and his will will be done,
In our hearts as it is in heaven.

The wild nature then will no longer remain,
But all will in harmony blend,
No lion be there, to rend or to tear,
As all discord and hatred will end.

So, while we have light, let us use it aright,
And follow it on, though it leads far away
From the idols we love to mansions above,
'Twill shine more and more to the full perfect day.

So, what we most need, is to give earnest heed
To the true gospel light, which is given
To show us the way, from darkness to day,
And give us a passport to heaven.

DAVID HUDDLESTON,
DUBLIN, Ind., First Mo. 20th, 1839.

FOR "THE FRIEND."

A PICTURE.

When years agoe our country roused to claim
The homage due her century of fame,
And from afar the nations of the earth
Poured kindly greetings with their treasures forth,
As one day wandering thro' "Memorial Hall,"
Letting brief glances on each painting fall,
Viewed, but lightly with no critic's eye,
Works that would seem with Nature's self to vie,
I found my gaze arrested and delayed,
Indifference broken, and my footsteps stayed
Before a picture I can ne'er forget,
Whose form and groupings lingers with me yet.
Perchance in merit it would scarce compare
With many other bright conceptions there,
But long it held me with a potent spell,
While dropping minutes in Time's hour-glass fell;
And, passing on, my steps again returned
To where those colors on the canvas burned.
Small need there seemed to read its title o'er,
"The foolish virgins at the fast shut door."
So vividly was every thought portrayed,
So faithfully each feeling was conveyed,
That in the wild abandonment of grief
That in expression finds a sad relief,
But fixed, and deep, unutterable despair,
Anguish and horror, all were blended there,
A fallen lamp, that from the nerveless hand,
Whose love the will no longer could command,
Dropt idly down, while on the threshold stood
The bearer's form in agony was thrown.

In many a way, and of unthought of hour
The heart is smitten by a secret power,
When that the fervor of its love grows cold,
Led to renew the covenants of old,
Counsel from the slumbering restfulness of ease,
Whose dreary hope, life's greatest phantom, flees,
And through the brief remainder of that day
Close as a shadow did this memory stay—
What'er the scene, there rose mine eyes before,
Those foolish virgins at that fast shut door,
The awful danger that the midnight cry
Find our lamps empty and our vessels dry;
That on our ears the fatal language fell,
"I know you not," when at the door we call;
Alone was pressing upon mind and heart,
Freshly awakened by the painter's art.
Though almost sacrilege the daring seems,
That from such subjects choose for my themes,
Yet He who ruleth over and above,
In faultless wisdom, and in pure love,
Can make the puny purposes of man
Subservient ever to his holier plan.
And even now I never read or hear
That parable so beautiful and clear,
Told to the twelve by Him, their joy and pride,
Beyond Jerusalem on the mountain side,
Without a shudder at the doom that waits
The lamp unlighted, at the Golden Gate,
As mental vision grows more clear and true,
Those foolish virgins at that fast shut door.

FOR "THE FRIEND."

In What Art Thou Trusting?

"And I saw the wicked buried, who had come and gone from the place of the holy."

My heart goes out in anxious solicitude for those to whom the above language may apply. The prophet, looking down through the vista of the coming years, saw in vision the life and departure of those who had had the opportunity to seek salvation; who had had warning after warning sounded in their ears; been again and again under the very droppings of the sanctuary; but had failed to give an attentive ear to the call.

His language may apply to a class who have been diligent church or meeting-goers, faithful in their attendance at the place of Divine worship, but who went away as they came; no change being wrought in the heart, no true spiritual worship having been performed. They had the form of godliness, but they lacked the power. Does it not come home to us now, that each one should see whether we have made our "calling and election sure."

We are emphatically told, that "now is the accepted time, and to-day is the day of salvation." "To-day, to-day, if ye will hear his voice, harden not your hearts."

Let none, then, settle down in a state of easy indifference; thinking if we belong to a religious body, and are faithful attenders to its general assemblies, &c., that this will give us an entrance into life and peace beyond the grave. Nay, verily I must belong to the Church of the living God, which He hath redeemed with his own blood, in order to be heirs to salvation. We cannot enter in without the wedding garment; we must be clothed with the righteousness of Christ.

How many there are who come and go, like the door on its hinges, leaving the place of religious worship the same as they entered it, not one step nearer the Father's house. Nay; are they not farther away? for, for every opportunity of this kind does there not come to us an added responsibility? Many become, as it were, "gospel-hardened," they are continually under the sound of the message, but do not give earnest heed, and so "drift away" from the things which they have heard, whether it be by the external ear or the inward manifestation of God's Spirit on the heart. To these, the Divine impressions

become less and less sensible; they are hearers of the Word but not doers thereof. There is no change in heart and life; and of them it can be most sorrowfully said when they come to die,—And I saw the wicked buried who had come and gone from the place of the holy."

I would that the language may be sounded in our spiritual ears this day. "Awake thou thatapest, arise from the dead, and Christ shall give thee life." "Arise and shine," for He should have every one to shine for Him, that others might be led to his feet. Reader, art thou, or art thou not, a child of his? Hast thou, or hast thou not, yielded thy heart to Him in a full surrender of thy will, thine all, to Him? Art thou willing that He should use thee in the harvest field? "The harvest truly is plenteous, but the tillable laborers are few." The religion of our Lord and Saviour is not a religion of dead works, but it is one of living experience. It is at that which Paul speaks, when he says, "I live, and yet not I, but Christ liveth in me." If as he our experience, it will be shown in our daily life; we will honor Him in our walk and conversation. Having "tasted of the good word of life" we shall "know of the doctrine" and we can say, as did the people of the olden time, in samaria, "Now we believe, not because of thy saying, but because we have seen for ourselves."

Yea, if we receive Him into our hearts in his likeness, we shall not be content with a mere appearance of religion, but we shall earnestly seek to know that we possess that which we make profession. We shall desire so to live, that those with whom we mingle in life, may see that we have been with Jesus, and that we have learned of Him, and are led and guided and kept daily by his Grace. Thus may all come to know the Lord, "whom to know is life eternal."

"Thus may our lips and lives express,
The pure religion we profess."

For

"Am I a soldier of the cross,
A follower of the Lamb,
And shall I fear to own his cause,
Or blush to speak his name?"

J. H. Y.

N. Y. CITY, Second Mo. 4th, 1889.

FOR "THE FRIEND."

A Circular Letter to Friends.

Dear Friends—The Lord of heaven and earth indeed and in truth on his way, as has been foretold by one of his messengers not long ago. He is I believe, near, even at the door. The sound of his footsteps, if I may so speak, is joyous in my ears, "nevertheless when the Son of Man cometh, shall He find faith on the earth?" There are many doubting Thomas in this day, who have not yet been able to see with an eye of faith, nor to hear with their ears, spiritually, nor in their hearts to conceive of the good things that the Lord hath in store for them that love Him. Those that do love the Lord with their whole hearts, that do count nothing too near or too far to part with for his great name sake, and his precious cause's sake, and that have been made willing to suffer with Him, (even all the very trials He permits to come upon them for their purification) these shall in his great and unmerited mercy and favor, as they keep faithful to Him, be permitted in his own good time to reign with Him.

Then let these be encouraged to trust in the Lord, the Omnipotent Holy One. Be nothing without Him, nor think the time long, but endeavor to abide in the patience and in a steadfastness of mind upon Him who will keep and pre-

serve them both on the right hand and on the left, and enable them to make straight steps with their feet in the Heavenly pathway, to his glory, honor and praise, and to their own souls' unspeakable comfort, happiness and peace. These shall know their goings to be established in and upon Him, the Rock of Ages, the Rock on which the true Church of Christ is built, (through the revelation of his spirit in their hearts), "against which the enemy or gates of hell shall never be able to prevail." "Thanks be to God who giveth us the victory through our Lord Jesus Christ" to whom belongeth the praise of his own works now and forevermore. amen: who is God over all, blessed forever and magnified be his name. "God is not a man, that He should lie," neither the son of man, that He should repent, hath He said, and shall He not do it? or hath He spoken, and shall He not make it good? "Read Francis Howgill's prediction, and others also of the Lord's faithful servants and prophets who have prophesied of good in store for this people, the despised people, called Quakers, whom He raised up after a night of apostasy, in the days of G. Fox, R. Barclay, Wm. Penn and others, to bear a noble testimony to his name and truth. They stood faithful as a body, through grievous and sore persecutions, and became a mighty people. The same doctrines and peculiar testimonies and principles that they so faithfully maintained before a perverse and crooked generation, are as precious now as ever they were, and are worth suffering for if need be, and He who hath promised that these testimonies should never fall to the ground, nor his people become extinct, "will not forsake nor fail those that are faithfully concerned and engaged through his holy help and assistance, to support and maintain these same precious doctrines and testimonies in their primitive simplicity and purity," but will dignify them with strength, and animate them, with a holy zeal and courage in the support of them, and will also endue them with that degree of heavenly wisdom and authority which their adversaries or opponents shall not be able to withstand, gain-say, or resist.

With love, from your brother,

CHARLES WOOD,
JACKSONVILLE, N. Y. 2nd month, 7th., 1889.

FOR "THE FRIEND."

First-day Schools.

[We have received from our valued friend, Robt. Knowles, of Iowa (formerly of New York State), a communication on the subject of First-day, or Bible Schools, as a means of instructing the children of Friends. His views may be gathered from what follows, which is slightly condensed from the original. They are worthy of the serious consideration of those who may be inclined to favor such schools, as a substitute for that personal and individual care and instruction of the young which, in the ordering of Providence, rightly devolves on all those who are entrusted with the rearing of children.—EDITOR.]

Most other religions societies have adopted First-day scripture schools—and they have adopted scripture study for their ministers, and a little singing. But have they as fully adopted the Light of Christ as their teacher? and that we need not teach every man his neighbor, but can only point them to Christ as we are moved there-to?

I am informed bible schools, (scripture classes) were first introduced in England, by Jos. J. Gurney. An old Friend, a member of Smyrna

Monthly Meeting, New York, says, he attended his bible classes. And the first scripture school in America, I am told, was started in Western New York by Joseph Talcott, who published a small pamphlet, titled *Friendly Visitant*, (I think monthly) advocating scripture study strongly, and sent copies to father and others. Father saw him, and spoke about it, told him, he feared it would lead to reading the scriptures in meetings for worship. J. T. said, he expected it would, and thought it would be right to read scripture in meetings.

Now these were the great advocates of bible school study, and what has been the result but division, departure, and a worldly spirit—searching the scriptures for eternal life, but not coming to and obeying Christ, who is the only way to Life? And shall we, who have been so long tried through their wanderings and false theories, fill we could bear it no longer, but resolved to leave them and follow the pure gift of God in our heart, and come back to the good doctrine and practice of our fathers; I say, shall we start again in an intellectual study and teaching of scripture?—If we appoint others to do it, or set ourselves where we are expected to do religious teaching, the result will be about the same. There is great danger of the teacher being led to depend on intellectual study, and search for something to say to those, he has assumed to teach.

It is not my place, or object to condemn others; or to say, no good has been done by scripture-schools. But I can say, that I know not one person in Iowa or New York who was essentially helped to be a consistent Friend, by attending such schools; and I have known many who have attended and who have gone far away from us.

The remedy, for ignorance of the Bible, that I would propose, is, that parents not only read the scriptures themselves, but also encourage their children to read them frequently, and if they neglect their duty, they should be advised and labored with by faithful friends; or a committee of the Monthly Meeting should endeavor to convince and restore them to faithfulness, as required by our discipline, and to unity with faithful friends. Then they could say to their children, "My son, know thou the God of thy father, and serve Him with a perfect heart. If thou seek Him, He will be found of thee, but if thou forsake Him, He will cast thee off forever."

I have been in the practice of having my family together, and reading a chapter in the Bible every morning after breakfast, with very few exceptions for all my married life, more than thirty years; and I believe it a good, and safe practice. But reading of scriptures in public meetings, I feel restrained from joining with. If parents neglect their duty, shall Monthly Meetings appoint some one to relieve them, and take the responsibility? If we do that and attend, we expect to hear words; and are we not practically saying! that it needs less of waiting, and Divine guidance to teach children, than their parents? or, that we would like a little more freedom for intellectual teaching in our meetings for worship. Does not Sarah L. Grubb speak of some, who were ready to say, "Come and see what a beautiful structure we are building up?" Instead of waiting on the Master of all rightly gathered assemblies, to know his will and guiding hand in all our religious labors.

ROBERT KNOWLES.

WEST BRANCH, IOWA, Twelfth mo. 6, 1888.

To adopt the modes and fashions of the world, is to be unchristian-like.

Natural History, Science, &c.

Mimicry in African Insects.—Henry Drummond in his travels in Africa, says, that the pitch of perfection to which mimicry has attained in Central Africa is so marvellous that one almost hesitates to utter what his eyes have seen.

One day, on the borders of lake Shirwa, "I had stopped among some tall dry grass to mark a reading of the aneroïd, when one of my men suddenly shouted 'Chiroombo!' 'Chiroombo' means an inedible beast of any kind, and I turned round to see where the animal was. The native pointed straight at myself. I could see nothing, but he approached, and pointing close to a wisp of hay which had fallen upon my coat, repeated 'Chiroombo!' Believing that it must be some insect among the hay, I took it in my fingers, looked over it, and told him pointedly there was no 'Chiroombo' there. He smiled, and pointing again to the hay, exclaimed, 'Moio!'—'It's alive!' The hay itself was the Chiroombo. I do not exaggerate when I say that that wisp of hay was no more like an insect than my aneroïd barometer. I had mentally resolved never to be taken in by any of these mimetic frauds; I was incredulous enough to suspect that the descriptions of Wallace and the others were somewhat highly coloured; but I confess to have been completely stultified and beaten by the very first mimetic form I met. Take two inches of dried yellow grass-stalk, such as one might pluck to run through the stem of a pipe; then take six other pieces nearly as long and a quarter as thick, bend each in the middle at any angle you like, stick them in three opposite pairs, and again at any angle you like, upon the first grass-stalk, and you have my Chiroombo. When you catch him, his limbs are twisted about at every angle, as if the whole were made of one long stalk of the most delicate grass, hinged in a dozen places, and then gently crushed up into a dishevelled heap. Having once assumed a position, by a wonderful instinct he never moves or varies one of his many angles by half a degree. The way in which insect keeps up the delusion is indeed almost as wonderful as the mimicry itself; you may turn him about and over and over, but he is mere dried grass, and nothing will induce him to acknowledge the animal kingdom by the faintest suspicion of spontaneous movement. All the members of this family have this power of shamming death; but how such emaciated and juiceless skeletons should ever presume to be alive is the real mystery.

"These grass-stalk insects live exclusively among the long grass which occurs in patches all over the forests, and often reaches a height of eight or ten feet. During three-fourths of the year it is dried by the sun into a straw-yellow colour, and all the insects are painted to match. Although yellow is the ground tone of these grasses, they are variegated, and especially towards the latter half of the year, in two ways. They are either tinged here and there with red and brown, like the autumn colours at home, or they are streaked and spotted with black mould or other markings, painted by the finger of decay. All these appearances are closely imitated by insects. To complete the deception, some have the antennæ developed to represent blades of grass which are often from one to two inches in length, and stick out from the end of the body, one on either side, like blades of grass at the end of a stalk. The favorite attitude of these insects is to clasp a grass-stalk, as if they were climbing a pole; then the body is compressed against the stem and held in position by the two fore-limbs,

which are extended in front so as to form one long line with the body, and so mixed up with the stalk as to be practically part of it. The four other legs stand out anywhere in rigid spikes, like forks from the grass, while the antennæ are erected at the top, like blades coming off from a node, which the button-like head so well resembles. When one of these insects springs to a new stalk of grass it will at once all but vanish before your eyes. It remains there perfectly rigid, a component part of the grass itself; its long legs crooked and branched exactly like dried hay, the same in colour, the same in fineness, and quite devoid of detection.

"Besides the insects which imitate grass, another large class imitate twigs, sticks, and the smaller branches of shrubs. The commonest of these is a walking twig, three or four inches long, covered with bark apparently, and spotted all over with mould like the genuine branch. The imitation of bark here is one of the most perfect delusions in nature; the delicate striation and the mould spots are reproduced exactly, while the segmentation of the body represents node-intervals with wonderful accuracy. On finding one of these insects I have often cut a small branch from an adjoining tree and laid the two side by side for comparison; and when both are partly concealed by the hands so as to show only the part of the insect's body which is free from limbs, it is impossible to tell the one from the other. The very joints of the legs in these forms are knobbed to represent nodes, and the characteristic attitudes of the insects are all such as to sustain the deception.

"A still more elaborate set of forms are those which represent leaves. These belong mostly to the Mantis and Locust tribes, and they are found in all forms, sizes, and colours, mimicking foliage at every state of growth, maturity, and decay. Some have the leaf stamped on their broadened wing-cases in vivid green, with veins and midrib complete, and with curious expansions over the thorax and along all the limbs to imitate smaller leaves. I have again and again matched these forms in the forests, not only with the living leaf, but with crumpled, discoloured, and shrivelled specimens, and indeed the imitations of the crumpled autumn-leaf are even more numerous and impressive than those of the living form. Lichens, mosses, and fungi are also constantly taken as models by insects, and there is nothing in the vegetable kingdom, no knot, wart, nut, mould, scale, bract, thorn, or bark, which has not its living counterpart in some animal form."

On one occasion he had encamped for a week near the dried bed of a stream. "A canopy of leaves arched overhead, the home of many birds, and the granite boulders of the dry stream-bed, and all along the banks, were marked with their white droppings. One day I was startled to see one of these droppings move. It was a mere white splash upon the stone, and when I approached I saw I must be mistaken; the thing was impossible; and now it was perfectly motionless. But I certainly saw it move, so I bent down and touched it. It was an animal. Of course it was as dead as a stone the moment I touched it, but one soon knows these impostures, and I gave it a minute or two to become alive—lastly sketching it meantime in case it should vanish through the stone, for in that land of wonders one really never knows what will happen next. Here was a bird-dropping suddenly become alive and moving over a rock; and now it was a bird-dropping again; and yet, like Galileo, I protest that it moved.

It would not come to, and I almost feared might be mistaken after all, so I turned it over on its other side. Now should my sceptic persist that this was a bird-dropping, I leave him to account for a bird-dropping with six legs, a head, and a segmented body. Righting that creature, which showed no sign of life through all this ordeal, I withdrew a few paces to watch developments. It lay motionless on the stone, no legs, no head, no feelers, nothing to be seen but a flat patch of white—just such a patch as you could make on the stone in a second with a piece of chalk. Presently it stirred and the spot slowly slid across the boulder until it caught the impostor and imprisoned him for me cabinet. I saw in all about a dozen of these insects after this. They are about half the size of a fourpenny-piece, slightly more oval than round, and as white as a snowflake. This whiteness is due to a number of little tufts of delicate down growing out from minute protuberance all over the back. It is a fringe of similar tufts round the side that gives the irregular margin so suggestive of a splash; and the under surface of the body has no protection at all. The limbs are mere threads, and the motion of the insect is slow and monotonous, with frequent pauses to impress surrounding nature with its moribund condition. Now unless this insect with this colour and habit were protectively coloured it simply would not have a chance to exist. It fearlessly exposed on the bare stones during the brightest hours of the tropical day, a time when almost every other animal is skulking out of sight. Lying upon all the stones round about are the genuine droppings of birds; and when one sees the two together it is difficult to say whether one is most struck with the originality of the idea, or the extraordinary audacity with which the role is carried out."

Items.

Prohibition in Iowa.—In the consideration of a bill before Congress, which enacts that the laws of the several States in relation to the sale of liquor may apply to those which have been imported, as well as to those which have been manufactured in the United States—Senator Wilson, of Iowa, made some interesting statements as to the experience of his own State in the practical effects of the prohibition policy.

While the census reports show an increase of crime in the United States greater in ratio than the increase of population, the reverse is the case in Iowa, since it came under the influence of prohibition. From official returns it appears that the number of persons in that State sent to the penitentiary and to the county jails in 1887, was 567; in 1888, 323. In 48 out of the 99 counties of the State there were no convictions requiring imprisonment so that about one-half of the county jails had no convicted criminals in 1888. The general testimony of the Iowa Judges was, that the prohibitory law had largely reduced criminal offences and the expenses of the Courts.

The motive for applying to Congress for the passage of the act proposed was, a judicial decision that although every State had an undoubted right in the exercise of its reserved police powers to enact such laws as might be necessary for the protection and welfare of its citizens; yet that this right must be exercised in submission to the power given by the Constitution to Congress, "to regulate commerce with foreign nations."

Italy's Military Burden.—About twelve years ago, the Italian Government surprised Europe by launching out into the most extravagant expenditure upon their navy. As ships of war were constructed, one of which, the "Dulio," attained the size of eleven thousand tons. These vessels were armed with guns of one hundred tons each and further, were partially covered with armor-plates

were built on such a scale, and so heavily weighted, that it was feared that complete armory could cause them to sink peacefully to the bottom of the sea before they would be the slightest bit in active hostilities.

A competent native authority has just written an article, in the *Naples Courier*, in which he shows that in this new fleet, which was a source of such pride to its originators at the time, has already become antiquated and comparatively useless, owing to the advances in naval construction subsequently made by other nations. Had the Italians maintained cool heads upon their shoulders, and kept their money in their pockets, instead of squandering untold millions upon these huge vessels, they would be now in an incomparably stronger position, able to avail themselves of the latest improvements in construction instead of being limited to a humiliating process of patching up their almost obsolete ships.

Italy being a poorer nation than England, is severely pinched by such humiliating failures. The peasantry are huddled together for warmth, on the agricultural and indigent classes. So proud is the misery amongst millions of these, that they are becoming desperate and disloyal. Thus, at a meeting held last month, in Milan, the cry of "long live Anarchy" was welcomed by a large audience.

A recent author and traveller, Dr. W. N. Beaumont, states in his new work, entitled "Rural Italy," that the peasantry "are always in debt," although their food is so poor that it really consists of coarse feed (made of barley or maize), a few beans, lentils, and vegetables. In winter the families of their cattle are huddled together for warmth, and are comparatively dear. The moral condition of the peasantry, and even of their priests, fearful.

The mortgages on Italian land amount to eight hundred million pounds, or more than the vast national Debt of Great Britain. The total estimate value of the property on which these mortgages are effected only exceeds that amount by 160 million pounds, so that the country is mortgaged up to the hilt," whilst the rate of interest on the debt is about 8 per cent. Hence it is no wonder at misery, vice, and murder abound in Italy, at the chief cause of all this woe is the madness of striving to naval and military ambition and pampering folly.

THE FRIEND.

THIRD MONTH 2, 1889.

Since the publication of the article in No. 15 THE FRIEND—"Thoughts in a Friend's ceiling House"—we have received several letters and communications bearing on the same subject, which seem to require some notice. One from a Friend in England who thinks that the statement made by J. S. W. in that article, at the Hicksite Friends as a society do not acknowledge the Divinity of Christ," misrepresents their sentiments. We did not understand at when J. S. W. used the words, "as a society," to mean to imply that all their members rejected that doctrine; but rather that it was not regarded among them as an *essential* article of faith, so that the preaching of contrary views could subject the person so preaching to the censure of the discipline.

A recent re-examination of the whole subject has led to the conviction, that the doctrinal questions out of which arose the controversies that agitated the Society of Friends, and led to the separation in 1827, mainly turned on three points.

The first of these was the Divinity of Christ. In this subject, one party maintained the views set forth by Friends in the beginning—as ex-

pressed by William Penn—"I do heartily believe that Jesus Christ is the only true and everlasting God, by whom all things are made that are made in the heavens above, or in the earth beneath, or the waters under the earth; that He is, as omnipotent, so omnipresent and omnipresent, therefore God."²

On the other hand, Elias Hicks used many expressions which implied that he regarded Jesus Christ as only a man eminently gifted for the work of a teacher and an example to the people; and that although He might be called Divine, yet it was in the same sense, in which all the children of God might be so termed, i. e., because they were brought into harmony with the Divine Spirit.

The second of these points was the doctrine of the atonement, which E. Hicks rejected.

The third was the inspired origin of the Holy Scriptures, which he denied.

While we believe that a difference in belief on these subjects was the primary cause of the dissensions of sixty or seventy years ago, yet we by no means suppose that all of those who then left our Society, had imbibed erroneous views; still less, that all the members of the new organization that was then established, hold them at this day. The position taken by those who represented their Society in the New Jersey trial for the right of possession of certain funds, was, that the doctrines enumerated were *not essential* doctrines. This we suppose is still the general feeling among them; and in consequence a degree of liberty on doctrinal questions is allowed among them, which we regard as not conducive to the best interests of our meetings and members.

We make these statements and explanations, not from any controversial feeling, but through a desire to simply show the true state of the question, without exaggeration or misrepresentation.

Another communication which we have received, comes from Kansas. In this the writer, who, we believe, is not in membership with our Society, quotes from the writings of Isaac Pennington to show that our early Friends made a distinction between Christ, "the eternal light, life, wisdom and power of God," and the bodily garment which he took. This is very true, but however applicable the passages quoted may be to those who give too little place to the spiritual appearance of Christ in the heart, they do not seem to us to settle the question that was at issue in 1827, i. e., whether the Apostle, in stating that the Word, which was God, was made flesh and dwelt among men; meant anything of a higher nature than the visitations of the Holy Spirit, with which all men are in measure favored.

A third communication is from an esteemed Friend in Illinois, who queries, "What is the vital difference?" meaning, we suppose, between the two divisions into which Friends separated in 1827. Perhaps this has been sufficiently answered in the previous part of this editorial. This was accompanied by some earnest remarks on the necessity of Christians cultivating that love for one another, which our Saviour declared was the badge of discipleship; that obedience to Christ's commands, which entitles them to be called his "Friends;" and that faithful following of the leadings of the Spirit, through which they become "the sons of God." "I read," says the writer, "George Fox, William Penn, Robert Barclay, Job Scott, and all

those who bore the burden and heat of the early days; and I see and feel the pulsating cord of Divine life to flow from one to another, and it comes down to even me; and I doubt not this is the experience of many others; still, there is something that separates and divides a part of the household of faith."

The concern of the writer appears to be that all should come to feel that the true fellowship does not flow so much from a uniformity of opinion, as from a partaking together of the Divine life; and walking in the Light of Christ.

We can sympathize with these views; believing that religion is far more in the heart than in the head; and that there may be a unity of feeling and of spirit between persons, who have been led by the same Divine Power into a similar experience of the regenerating process, which is indispensable to the Christian; and yet that these may differ in their intellectual conceptions and definitions of points of doctrines. At the same time, it cannot be denied that where there is a wide divergence in doctrinal belief, harmony and love are more likely to be preserved, by the coming together of those of the same sentiments into distinct organizations. The apostle queries, "How can two walk together unless they be agreed?"

Respecting the Friend whose diary was completed in the last number of THE FRIEND, the following additional information has been received—

Mary Coates, Junior, whose diary is now being published in THE FRIEND, died, I think, at about thirty years of age. Her mother Mary Langdale, was daughter of Josiah and Margaret Langdale, who were both ministers in high esteem among Friends, and visited meetings in England, Ireland, and America. The grandmother of Mary Coates, Jun., on her father's side, was *Bodaly*, wife of Thomas Coates, who came to America late in 1682, a short time after William Penn. She was an elder in the Society of Friends, and Treasurer of the Yearly Meeting from 1730 to 1741.—*Coates' Memorials*.

A communication from a Friend of New Sharon, Iowa, mentions that at a Monthly Meeting (of the Larger Body) held at that place on the 19th of First Month, nineteen new members were received, some of whom had been members of other religious societies, which practice the outward ordinances. The writer expresses his belief that if the Society of Friends "live up to their profession, there is no branch of the Christian Church better calculated to meet the masses and gather to the Truth as it is in Jesus, than ours."

We have no doubt that if, as a people, we faithfully maintained our doctrines and testimonies, and exemplified their power and efficacy by our self-denying and holy lives, and by our sincere efforts to spread the kingdom of the Redeemer among men, that the influence for good of our Society would be greatly enlarged; and that many more would be drawn into fellowship with us, from a conviction that our fellowship was with the Father, and his Son, Jesus Christ. But is there not a care needed less any should endeavor to promote the cause of Truth by lowering the standard of our principles, and so widening the terms of admission into membership as to lose in part the characteristic features of our Society? Such a process would practically amount to little more than bringing

² Works, vol. I. p. 165. Ed. of 1726.

the Society down to the level on which others are standing, in order to include them in its fold; instead of elevating them to a true appreciation and conviction of the spiritual doctrines of Primitive Christianity which our Society ever believed itself raised up to maintain. From such a process, we see, no substantial good that is likely to result, but its tendency must be a gradual declension from the position assigned as the Head of the Church, without a corresponding benefit to others.

We wish Friends everywhere would bear in mind, that the strength of our Society does not depend so much on the number of its members, as on the faithfulness with which it maintains its original principles; and on the experience of its members generally of that baptizing power of Christ, by which they are crucified to the world, and fitted to become as lights to others.

The illustrated Catalogues of Seeds and Plants, annually issued by several of our seedsmen and florists, are attractive publications. They abound in well executed drawings of flowers, fruits and vegetables, and are prepared with much taste. We have received three such catalogues—one from Vick, of Rochester, New York, and one each from Maule and Dreer, of Philadelphia. Their examination is well calculated to awaken a fondness for gardening, and to stimulate the reader to purchase the seeds or roots of some of the many attractive plants described in them.

Archibald Crosbie has been appointed Agent for THE FRIEND; address, Paulina, O'Brien County, Iowa.

SUMMARY OF EVENTS.

UNITED STATES.—The President has signed the bill for the admission of North and South Dakota, Montana and Washington Territories into the Union of States. The bill provides that the people of each Territory shall vote on the adoption of the Sioux Falls Constitution on Fifth Month 14th, and the location of the capital is to be settled by election. On the same day the residents of North Dakota, Washington and Montana may vote for the election of delegates to constitutional conventions, and for a full list of State officers. On the first Third-day in Tenth Month the people may vote upon the constitutions proposed by the conventions, and, if adopted, after the President's proclamation to that effect, the Governors of each may order an election of members of the Legislature and the Representatives in Congress. The Legislatures may meet and elect two Senators, each in time to take their seats at the beginning of the first regular session of the Fifty-first Congress in Twelfth Month next, at which time the Representatives shall also be admitted to seats. These provisions apply also to the Senators and Representatives from South Dakota.

The President has signed the Nicaragua canal bill. The Department of State has received despatches from our consuls at Panama and Colon in regard to the situation of affairs in that Isthmus. The consuls report that no disorders had taken place up to Second Month 13th, and that no trouble was anticipated because of the expected final collapse of De Lesseps's company. The event of the collapse has been discounted by the fact that a great amount of the work had been going on for the last two months, and the overflow had drifted out easily and in several directions.

An application for an injunction made in Waterloo, Iowa, to restrain the American Express Company from carrying letters from outside the State to Independence, has been denied by Judge May on the ground that it would interfere with inter-State commerce. It is believed that on the strength of this decision the wholesale dealers in papers in the river cities will establish their presses in the adjoining States and ship papers from them into Iowa.

A correspondent of the Boston *Transcript*, talking about cigarettes, says that "those bought by our boys are quite another thing from those comparatively innocuous smoked by citizens and South Americans that set the fashion. Wrappers, 'warranted rice paper,'

are proven to be ordinary paper whitened with arsenic. In the 16 expensive popular brands, with one exception, were found sufficient quantities of opium to create such a craving as could only be satisfied by an incessant use of cigarettes or resort to opium alone. We see many cases of lighting paralysis, insomnia, insanity, and other evils produced, among the army of cigarette smokers who sit in skin, weak eyes and weaker nouloud."

Snow began to fall in Columbia, South Carolina, on the morning of the 21st ult., and the receding it was in full decay on a level, and still falling fast. It was the heaviest snow-storm within the recollection of the oldest Columbia.

A blinding snow prevailed all day on the 21st ult., at Augusta, Georgia, and was followed by heavy rain and high winds. Trains from upper Georgia and South Carolina came in covered with snow, and reported very cold weather. Such a storm is almost unprecedented in that section.

On the morning of Seventh-day, the 23rd ultimo, the temperature at Philadelphia was 70° below zero, lower temperature than on any previous day of this winter, or of that of one year ago.

Excitement is intense in Lexington, Va., over the discovery of an immense mountain of the richest iron ore, which rivals in quality and size deposits of famous districts in Pennsylvania. Trains from upper Georgia and persons who went out to investigate the newly opened property called Buena Vista, on the line of the Shenandoah Valley and Richmond and Allegheny Railroads, within a few miles of this town. Chemists pronounce the ore more than 50 per cent. pure, and high grade. This, it is thought, will insure the building of a new city.

A wonderful ice cave, according to the *Bakonia Herald*, was discovered recently near Trout Lake, Dickinson County, W. Va. It is of great size, but cannot be explored on account of the intense cold.

Deaths in this city last week numbered 247, a decrease of 70 as compared with the previous week, and of 35 with the corresponding period of last year. Of this number 175 were males and 172 females; 34 died of influenza, 48 of pneumonia; 25 of disease of the heart; 18 of typhoid fever; 12 of debility; 12 of inflammation of the brain; 11 of scarlet fever; 11 of old age; 10 of crop; 9 of convulsions, and 9 of marasmus.

Markets.—*U. S.* 4½, reg. 108½; coupon, 109½; 4½, 120; 4½, 120.

Cotton sold in a small way to spinners, on a basis of 10½ cts. per pound for middling uplands.

Feed.—Winter bran, choice and fancy, \$16.75 a \$17; do, fair to prime, \$16 a \$16.50; spring bran, \$15 a \$16 per ton.

Flour and Meal.—Western and Pennsylvania super, \$2.75 a \$2.85; do, do, extras, \$2.55 a \$2.75; No. 2 winter family, \$1.85 a \$1.85; Pennsylvania family, \$1.70 a \$1.85; Pennsylvania roller process, \$5 a \$5.40; 4½, choice, \$4.80 a \$5.15; do, straight, \$5.15 a \$5.40; Indiana, choice, \$4.80 a \$5.15; do, straight, \$5.15 a \$5.40; \$5.40; St. Louis and Southern Illinois, choice, \$4.80 a \$5.15; do, do, straight, \$5.15 a \$5.40; winter patent, fair to choice, \$5.50 a \$6.00; Minnesota, choice, \$4.50 a \$5.00; do, straight, \$5.25 a \$6.00; do, patent, \$6.50 a \$7.00; do, do, do, in limited request at 85 per barrel for choice.

Grain.—No. 2 red wheat, 98½ a 98½ cts.; No. 2 mixed oats, 40½ a 40½ cts.

No. 2 white oats, 39½ a 39½ cts.; Beef cme.—Extra, 44 a 44½ cts.; good, 4 a 4½ cts.; medium, 32 a 32½ cts.; common, 34 a 34½ cts. A few extra choice sold for 5 cts.

Sheep.—Extra, 51 a 6 cts.; good, 51 a 51½ cts.; medium, 41 a 5 cts.; common, 4 a 4½ cts.; culls, 3 a 3½ cts.; Lambs, 44 a 7½ cts.

During the week of 7 cts.; State, 6 a 6½ cts. Milch cows were sold at \$25 a \$30.

Fat cows were in poor request at 2 a 3½ cts.

FOREIGN.—Parliament reassembled on the 21st ultimo. In the House of Commons, after the reading of the Queen's speech, John Morley gave notice that he would introduce an amendment to the address in reply to the speech from the Throne, condemning the administration of the law in Ireland as harsh, unjust and oppressive, and asking that measures be adopted to terminate the Irish and re-establish a real union of Great Britain and Ireland.

On the 19th ultimo, William O'Brien was sentenced to six months imprisonment without hard labor. He has since been taken to Galway jail, where he is to undergo his sentence.

During the week before the Parnell Commission, McDonald, Manager of the *Times*, Honston, Secretary of the Irish Loyal and Patriotic Union, and Richard

Pigott were examined. The latter alleged that he had obtained the Parnell letters, published in the *Times* from several men who found them in a bag that had been discovered in a room in Paris. When Pigott was cross-examined, he was confronted with evidence which he admitted to be true, and he was asked several questions put to him as to completely break down his credibility as a witness, and to give rise to the belief that he had himself forged the letters pretended to have been written by Parnell and Egan.

On the 21st ultimo, President Carnot, of the French Republic, signed a decree instituting a new cabinet of which Briard is Premier and Minister of Commerce and De Freycinet is Minister of War.

There have been heavy falls of snow in the Bernese Oberland. Avalanches have destroyed many homes and caused a number of deaths at Oberamt and Solothurn.

The results just published of the census taken on Twelfth Month 1st, 1888, show the population of Switzerland at that time to have been 2,364,057, an increase of more than 100,000 since 1880.

A despatch received in London from Berlin says that statement that four German iron-clads at Tientsin have been ordered to immediately sail for Samoa, is official confirmation.

The *London Standard* journal has made the discovery that moonarchy in Europe is in danger of dying out owing to the increase of lunacy in royal families. The newspaper says that more than twenty Princes and Princesses have been under medical treatment for mental disease, and the number displays a tendency toward rapid increase. The trouble is attributed to close intermarriage.

A China steamer which has arrived at San Francisco, brings news of a great snow storm in Chee Foo. Over a million and a-half of people in the province are starving and riots occur daily. Misadventures have been attacked by mobs of Chinese, led by the genus. On Second Month 2nd, a great fire broke out in Shidok Japan, extending down fourteen streets, and destroyed one thousand houses, including temples, schools and hospitals. On the following day, a fire on another island, burned five hundred houses, and caused the death there. On the same day ten houses were destroyed at Joshiu and fifteen at Tokio.

CORRECTION.—In THE FRIEND of last week, 1 speaking of the change in the time of holding the meetings for worship of Northern District Month Meeting, Philadelphia, on the afternoons of First-day the hour for Summer months should have been 6 o'clock, and for the Winter months 3 o'clock.

NOTICES.

WESTWON BOARDING SCHOOL, STAGE.—During the Winter term the stage will be at Westwton Station on the arrival of the 8.33 and 2.47 trains from Philadelphia, to convey passengers to the school, and at other times on timely notice to J. G. WILLIAMS, *Sup't.* Westwton, Pa.

DIED, at his residence, Salem, Iowa, on 10th of First Month, 1889, JONATHAN MOSELEY, aged 92 years and 80 days. He was zealous for the cause of Christianity and his wife was aided in by the Society of Friends in its piousitary purity.

—, at her residence in Wellington, Ontario (Canada, Second Month 6th, 1889, after a painful illness of seven months, which was borne with Christian patience and fortitude, 88-85 C. Everlast, daughter of Stephen and Ruth Moore, and widow of Wille Dorland, M. D., aged 78 years, 8 months and 2 days; a member and elder of Wellington Particular Meeting and West Lake Monthly Meeting of Friends. She was a highly respected lady, who was ever ready to give ever having a loving, watchful care over her poor and needy, often ministering to their needs both in word and deed. To this watchful care testimony was born by one who had lived in the family forty years ago and who spoke of her motherly counsel and kindness as being a great blessing to her, which she could not bless, influential for good; although, until he himself had children growing up, he could not understand her paternal concern and deprivatv of soul for him. At times during her sickness she was favored with religious impressions, and she had seen several spiritual manifestations before her final change. She appeared to be gone, and on receiving she said she had seen such a beautiful place—beyond description; and when enquired of how she felt? she replied, "Oh! such peace I have had, and I have seen such a beautiful country, a great light, and a great hope for it." It is beyond anything I ever expected or even hoped for."

FOR "THE FRIEND."

Historical Review of the Society of Friends.

(Continued from page 212.)

On this side of the ocean, efforts to protect the civilization of the Indians, to protect them in their rights, and to maintain peaceful relations between them and the United States Government; absorbed much time and thought. There was frequent occasion, also, to plead with the different legislatures against the passage of militia bills which conflicted with the civil rights and religious privileges of our members.

The thoughtful reader may have observed, that many of the subjects which claimed the care of Friends on both sides of the ocean, for several years before and after the close of last century, were of a nature that brought them much into contact with others in a semi-political way. Though the services were those into which they were called of the Lord, and therefore they could reasonably hope to experience his help and preserving power in the performance of them; yet they were such as the mere promptings of natural benevolence would lead to, independently of any Divine requireing. If carried to an extreme, they might readily be instrumental in withdrawing the attention of the unwary from a close adherence to that Divine guide, which whispers to the attentive soul, "This is the way, walk thou in it." This danger did not escape the attention of Friends of that day. In 1803, the epistle from the London Meeting for Sufferings contains this salutary hint: "The concerns which engage both your meeting and ours, have often much of an outward nature in them; there seems therefore the greater occasion of watchfulness, that we be not induced to suppose, that of ourselves we may act in them to advantage; and it is good ever to have in remembrance, that the ultimate purpose of all our meetings is to serve the cause of Truth, and that unless the Lord keep the city, the watchman waketh but in vain."

The year 1801, was a period of much distress in England owing to the scarcity and high price of provisions. Friends in America liberally contributed for the relief of their brethren (who had been so kind to them in their time of need) and forwarded moneys to the amount of £8326, of which £5798 was raised among the members of Philadelphia Yearly Meeting. This was applied to the relief of 810 persons in England

who were members, and 420 who were not in membership, besides a portion used in Ireland.

We are now approaching the period when there arose within our Society the most widely spread differences of sentiment on important religious doctrines, and the most bitter controversies that had ever agitated its usually peaceful community. It is not very easy to form a clear and decided judgment as to the remote causes that led to the terrible convulsion of 1827, and to the separation from our organization of about 30,000 members, with all the sad attendants of alienation of friendships, loss of influence in the community, and destruction in many cases of the comfort and happiness of families. It is probable that the season of ease and prosperity which followed the termination of the war of the revolution, was accompanied with a gradual decline among our members of that watchfulness and fervency of spirit which are necessary for preservation; and that, as a body, they were more easily led to embrace speculative views than would have been the case if they had been more deeply grounded in religious experience. The immediate cause was the promulgation of doctrines, principally in relation to the Divinity and Atonement of our Saviour, which a large part of the Society could not accept as consistent with the testimony of Scripture, or with the long-established belief of Friends.

There are traces to be found of such sentiments in our borders about the end of last century, both in Great Britain and America. This began to develop itself in Ireland about 1793, and some in high standing in the Society became infetted with these views. It was for several years the occasion of great exercise and labor to those who still held to our original principles; but eventually the leaders in the promulgation of the new doctrines were mostly disowned, and the testimony of Friends against their views was maintained. Hannah Barnard, a minister from Hudson, New York, visited Ireland from 1798 to 1800, and it was said, became an advocate of these doctrines. On going over to England in 1800, her case was taken under care, and her sentiments were found to be so at variance with those held by Friends, that her way for further labor in England was closed up and she was advised to return home. After her return she was treated with by her own Monthly Meeting, but as she continued to defend and propagate the same doctrines, was finally disowned from our Society.*

* The following extract of a letter from London, dated Second Mo. 16th, 1801, which has been handed to the writer in manuscript, is of interest in this connection:

"A remarkable circumstance occurred yesterday at Peel Meeting: in the afternoon, a young man who had been intimate with Hannah Barnard, and had pretty gradually swallowed her sentiments, stood up, and in an awful and tender manner expressed the uncommon agony of soul he had lately endured; that he had been tempted to doubt at first part of the Scriptures, such as the miraculous conception, the wars of the Jews, and so on, step by step, till both the Old and New Testament were doubted; from doubt he proceeded to

Her case is thus referred to by Stephen Grellet, a young Frenchman, who had been received as a member of our Society in 1796, and much of whose after life was devoted to spreading the glad tidings of salvation among his fellow-men. In his journal he describes a very suffering experience of which he had to partake in the Ninth Month of 1800. He says: "I was plunged into a state of doubting, and even of unbelief in the mercy of God through Jesus Christ; a dark spirit on whose account I have at times so bitterly suffered for those who have been carried away by it. I continued in such a state for some days that I could not travel. It would indeed have been presumption to go forth as an ambassador for Christ, whilst I was tempted to doubt his eternal Divinity and God-head, his meritorious sacrifice for the sins of the world, even to let go the hold of my hope in Him, through whom is the atonement, through faith in whom alone remission of sins is to be obtained." "Whilst wondering why such an exercise should come upon me, I saw I must be prepared to feel for, and enter into, the states of those that are thus variously tempted, through the subtleties and stratagems of Satan. It was but a few days after, that the account reached us of the falling away of Hannah Barnard, from New York State, while on a religious visit to England. She had become a prey to this spirit of infidelity, so that instead of advocating the cause of the blessed Redeemer, the Lord and Saviour Jesus Christ, consistently with the work of a Minister of his glorious gospel, she was disseminating infidel doctrines, even denying the Lord that bought us with his own blood, and calling in question the validity of the Holy Scriptures."

Richard Jordan, a minister then belonging to North Carolina Yearly Meeting, while paying a religious visit, was at Matinicoke on Long Island, in the year 1797. Of the meeting which he attended there, he says in his journal: "Here my spirit was uncommonly baptized into feeling on account of a state of infidelity and disbelief in Christ Jesus, the Saviour of the world; and my

disbelief until he became a thorough deist; and now his morality began to be tried. The obligations to strict uprightness which the religion of Jesus Christ had impressed him with, seemed gradually dissipated, and he became a perfect atheist." Here wandering in the dark, every man's hand was apparently lifted up against him, and he was brought to a state of despair; all comfort, inwardly and outwardly, left him; he found himself a vagabond upon the earth. Still Divine goodness followed him, though with sore chastenings, until he was brought to a sense of his situation; and was repeatedly warned to expose himself in that public manner as the only means of experiencing a return of Divine favor, and as an atonement for having thus forsaken his dear Lord and Master; and had he not been thus strengthened to express himself he believed he could not have existed another day. Saying, it had been sealed on his mind that at the name of Jesus every knee should bow, and every tongue confess. It brought a great weight and solemnity over the meeting; and in addition to the striking and extraordinary movement, another young man got up at the close of the meeting and expressed himself much to the same purpose, with some awful caution to any who might be under similar temptation."

month was largely opened on the subject, in a manner I thought strange of, amongst so many Friends; but I was afterwards informed that these principles much prevailed in that neighborhood." J. W.

(To be continued.)

FOR "THE FRIEND."

Stars and Planets Visible in Third Month.

The bright green in the western sky about two hours high is the planet Venus. The planet Mars, not near so bright, is below it. Above, some farther than Mars, is the constellation Aries; the upper and brightest star is Alpha; the other two are Beta and Gamma. The latter and dimmest one is a pretty double star, visible with a two-inch telescope.

To the north of Venus the great square of Pegasus appears to hang in a diagonal position; the lower star, Markab, not much above the horizon.

The northern star is Scheat, the southern one—next to Venus, is Algenib, and the upper one Alpha, of the constellation Andromeda, which is still above—the first star of second magnitude, nearly as far above Alpha as it is from Algenib, is Beta, and the next one, as much higher, is Gamma Andromeda, a double star of most beautiful colors. It makes a pretty sight with a four-inch telescope.

Southerly—bearing east—from Alpha in Aries is Menkar, in the head of Cetus, the Whale—east end of the constellation. Then above, we see the Pleiades, or seven stars; and nearly an hour still above, or eastward, bright Aldebaran in the big A, or Hyades group, all in the constellation of Taurus; the second of the Zodiac. The bright gem a little north of Zenith is Capella; Menkalinah being 8° east of it.

The Great Dipper will be easily recognized in the north-east, with its handle hanging downward and the Pointers above—always pointing out the North star, five times as far from them as they are apart. Then away on the other side, nearly as far from North star as it is from Pointers, we find Cassiopeia, a fine constellation. The North Pole of the heavens is a little more than one degree from the North star, on the side toward the Dipper. The North star, Dipper, Cassiopeia, &c., all seem to move in circles around the Pole, or central point of the northern heavens, every twenty-four hours. These stars never set below the horizon, and are called circumpolar stars. Others farther south, including the sun and planets, rise and set, being above the horizon less time the farther south (farther from the Pole) they are. So, all stars within about 40° of the South Pole never rise to us who are 40° or more of north latitude.

To see the stars as indicated above you should look as soon as daylight is gone, in the first week of Third Month; for those which are lowest in the west will set soon after dark. And by the last of the month nearly all the stars will appear to be two hours farther west than they do on the first, at the same hour. So, we must recognize two motions (both apparent) of the stars (I mean the "fixed" stars)—one the daily motion, causing them to rise and set, on account of the earth's rotation; the other a general westward motion of two hours a month, caused by the sun's apparent motion eastward, and this latter is caused by the actual revolution of the earth around the sun once a year.

About the 1st of Third Month the splendid constellation Orion is on the meridian at seven o'clock. It is 50° above the southern horizon, 5° more than half-way to the Zenith. The

celestial equator passes just north of the Belt; so Rigel is 8° south declination, and Betelgeuse 7° north. Like all the other fixed stars, those of Orion set four minutes earlier every day; hence Orion will be two hours past the meridian at seven o'clock, Third Month, 31st, and the same at this time every year. The brilliant star southeast of Orion is Sirius, the Dog Star. Those stars about an hour below Sirius are in the same constellation, Canis Major, Canis Minor, with its bright star Procyon, is northeast of Sirius, about as far as Betelgeuse; and the three making a large triangle. The Twin stars Castor and Pollux are 25°, nearly two-hours, north of Procyon. They form a great triangle with Betelgeuse and Capella, and are four hours (60°) east of Poles.

About the 8th of Third Month, at 7 P. M., the planet Saturn shines with its ordinary splendor, in the eastern sky, about half way from horizon to zenith. The ring is growing narrower, but it is yet a fine object through a four-inch telescope. About 15°, or an hour below Saturn, we see the fixed star Regulus, at the south end of a group of stars called the Sickle.

W. DAWSON.

SPICELAND, Ind., Second Mo, 20, 1859.

FOR "THE FRIEND."

Friends in Tortola.

Gough tells us in his History of the Quakers that "about the year 1740 accounts were received of a convincement in some of the Virgin Islands, particularly the island of Tortola, which, by the following paragraph of the yearly epistle of that year, appears to have been the effect rather of internal conviction than of instrumental or ministerial labor, viz: 'It hath pleased the Lord by the insinuations of the Divine light, to visit the inhabitants of some islands, where no settled meetings of Friends have formerly been, to the bowing and tendering of some of their hearts, as in the first breaking forth and morning of our day, and to incline them to assemble together and silently wait in spirit and in truth upon the Lord their Redeemer, the unerring teacher who teacheth his people to profit and leadeth them by the way they should go.'"

Among others who were here convinced of the inward principle of light and grace, and submitted to profess themselves of and to pass under the contemptible denomination of Quakers, was John Pickering, Governor of the island, who continued a faithful member of this community to his death.

The subject of this convincement is referred to in the minutes of Philadelphia Monthly Meeting, under date of Fifth Month 31, 1741, when it is stated that "a letter being produced to this meeting from John Pickering, Governor of the Island of Tortola, acquainting this meeting that about thirty persons in that island had embraced the principles of truth as professed by Friends, and kept their meetings twice a week, was read to the comfort and satisfaction of the meeting;" and the following month an epistle was sent from the Monthly Meeting to Friends in Tortola probably in response to the letter above referred to.

A portion of the Records of Tortola Monthly Meeting were sent to Philadelphia, and are now preserved here. Unfortunately, they disclose nothing as to the circumstances of the convincement. They show, however, that there were two meetings and probably two meetings-houses and grave yards on the island, one at Fat-hog Bay and the other at the Road. A few Friends also resided on the adjacent islands of Just

Van Dyke and Little Van Dyke, and it is likely that a meeting may have been held on one or two of those islands. The following are quotations from the records: "Thomas Chalkley, a ministering Friend, arrived here from Philadelphia the 12th day of the Eighth Month, (the year is not given, but Thomas Chalkley's Journal shows it to have been in 1741) sickened on the 29th, and died on the 4th of the Ninth Month about three o'clock in the morning and was buried that evening in Friends Burial Ground, accompanied to the grave by most Friends in the island, and many others."

"John Estangh and John Cadwaledar arrived here from Philadelphia in John Pickering's sloop, on the 8th day of Ninth Month, 1742; and John Cadwaledar died on the 26th of the same month of a flux, which he got on the passage, and John Estangh died on the Sixth-day of the Tenth Month, of a fever."

"Samuel Nottingham and Daniel Stanton arrived here on a religious visit the 28th day of the Seventh Month (1749) and went from here to St. Thomas on the 22nd of the Eleventh Month, and sailed from thence to England on the 31st of the same in an English ship."

"Mary Evans and Phiba Smith arrived here on a religious visit the 14th of the Second Month (1750). Stayed thirty-two days and had good service, and went well away."

Samuel Nottingham appears afterwards to have settled in Tortola, and was married there in 1749 to Mary Hunt. These Friends subsequently removed to Bristol, England, and about 1780 liberated their slaves from conscientious motives, and gave them their estate at Long-look, on the eastern coast of Tortola. In 1782 they addressed a letter of Christian advice to one of the negroes, which was long cherished on the property as a sort of title deed to the estate.

Dr. John C. Lettome, of London, the naturalist, was a native of Little Van Dyke Island, and spent a part of his early life in Tortola. In his memoir of Dr. John Fothergill, he gives an interesting account of John Pickering, which is as follows:

He was in early life brought up to a mechanical employment, but by strength of genius and dint of self-exertion, he acquired a competent knowledge of English, and an extensive acquaintance with mathematics; by industry he became possessed of a large tract of uncultivated land, and by perseverance he covered it with canes and cotton, and gradually rose to be one of the wealthiest planters in the West Indies. He was about his fortieth year made Governor of the island of Tortola, and held the rank of Major in the Insular militia. At length he publicly professed the religious principles of the Quakers and relinquished all his civil and military honors and employments. He afterwards rarely attended the courts of judicature, unless he thought some poor person, some orphan or widow was oppressed by some more powerful neighbor, when he voluntarily attended and publicly pleaded the cause of the weak, if he deemed them oppressed; and his justice and weight were such as generally preponderated. I frequently accompanied him to his plantations, through which, as he passed his numerous negroes saluted him in a loud chorus or song which they continued as long as he remained in sight. I was also a melancholy witness of their attachment to him after his death; he expired suddenly, and when few of his friends were near him. I remember I had hold of his hand when this fatal period arrived, but he had

scarcely expired his last breath, before it was known to his slaves, and instantly about five hundred of them surrounded his house and insisted upon seeing their master. With this they commenced a dismal and mournful yell, which was communicated from one plantation to another, till the whole island was in agitation, and crowds of negroes were accumulating around us. Distressed as I was with the loss of my relation and friend, I could not be insensible to the danger of a general insurrection, or if they entered the house (which was constructed of wood) and mounted into his chamber there was danger of its falling by their weight and crushing us in its ruins. In this dilemma I had resolution enough to secure the doors and thereby prevent sudden intrusion. After these precautions I addressed them through a window assuring them that if they would enter the house in companies only of twelve at a time they should all be admitted to see their deceased master, and that the same lenient treatment of them should be continued. To this they assented, and in a few hours quiet was restored. But it affected me to see with what silent, sullen fixed melancholy they departed from the remains of this venerable man. He died in 1768, aged about sixty years. His only surviving son, an amiable young gentleman, resides in England.

The minutes of Tortola Monthly Meeting, whilst expressing the prevalence of a living spirit, frequently mention deficiencies, and it is manifest that for some years it was in a declining condition. The last mention in the London General Epistle of advices from these Friends was in 1764. We have seen that John Pickering died in 1768, and it is probable that the organization did not very long survive that date. Some of the families removed to England and others to Philadelphia. Richard Humphreys, who provided by his will for the foundation of the present flourishing institution, the Institute for Colored Youth in Philadelphia, was a native of Tortola.

In 1790, when Gough published his history, it was thought that few, if any Friends resided in any of the West India Islands.

It is a source of regret that so little can be learned from the existing records of Tortola Monthly Meeting. They were imperfectly kept and those which we have, cover only a part of the time during which the meeting existed.

GEORGE VAUX.

Second Month 5, 1859.

Since the foregoing was written some further information has been obtained from the minutes of Philadelphia Monthly Meeting, which points approximately to the time when meetings for discipline were discontinued in Tortola. At the Monthly Meeting held the 23rd of Seventh Month, 1768:—

"Our friend Samuel Wiley attended with a certificate dated at the close of a Meeting for Worship, held at Fat-hog Bay, on the Island of Tortola, the 22nd of Fifth Month, last, signed by three men and three women Friends, setting forth that he had lived many years in that island, in which time he had seen the prosperity of the church, which it pleased Divine Wisdom to raise up there, and its present adverse state, being so far declined that no Meetings for Discipline [are] held among them; yet the small remains of Friends, desirous to signify their regard to him, recommend him as a Friend of steady conduct, esteemed by them."

Samuel Wiley appears to have returned to Tortola the following spring, as the Monthly

Meeting granted him a certificate on the 31st of the Third Month, 1769, "directed to such Friends remaining in Tortola, or others in the islands adjacent who signed the certificate he produced, or any others professing the truth in Tortola."

And at the Monthly Meeting held on the 25th of the Fifth Month, 1770, it was recorded "that Thomas Humphreys, being returned to this city from Tortola, produced a letter signed by five Friends, at the close of a meeting for worship, held at Fat-hog Bay on that island, the 8th of the Fourth Month [1770] signifying his orderly behavior during his short stay there."

There has also come into my possession a bundle of loose papers relating to Tortola Friends, among which is an application for membership, which seems of sufficient interest to transcribe. It is without date, but probably written about 1750, as the births of several of the applicants' children are recorded between 1752 and 1758.

G. V.

It is as follows:

TO THE FRIENDS AT FAT-HOG BAY MEETING:

Friends:—I have thought proper to inform you of the many visitations I have had from the Lord (blessed be his holy name for them) and the many strivings of truth that have been in my bosom, now upwards of twelve months; and being desirous for want of a successor, and as a sheep wanting a shepherd, having often been in doubt which way I was to walk to find Him whom my soul longed for. Whilst thus doubting and languishing it was the blessed will of the Almighty God, who would have none to perish, to cause me to look into some of your ancient Friends' writings, and the principles in your profession, when, after perusing them and comparing them with the Holy Scriptures, when in private, soon begot a love in me; and with duly frequenting your meeting, quickly convinced me of the truth as it is in Christ Jesus our Lord. So now, what I earnestly desire is that I may be admitted into your meeting and taken into the care of the elders of your church, that if anything more than the right walking of a true Christian be seen in me, I may have a due correction by them for it; and doubt not but it may be the second author of my salvation, who wishes well unto your Zion.

JOHN VASCORING.

FOR "THE FRIEND."

A Visit to the Cornwall Iron Mines of Lebanon County, Pa.

Having arranged with a friend to visit the remarkable deposit of iron-ore at Cornwall, I left home on the 4th of First Month, going via Pennsylvania Railroad to Conewago, in Lancaster Co., whence a railroad of about 17 miles conducts the traveller to Cornwall.

As we approached Conewago Station, we entered a district of country, where the ground was thickly covered with boulders, or loose rocks of various sizes, some of them weighing many tons. There was a tendency in them to an angular outline, which suggested that they might have been derived from dykes of trap—a volcanic rock—which had been at some period poured up in a melted state in many places through fissures in the earth's surface, extending down to unknown depths. The dark grey crystalline structure, shown by freshly broken surfaces of it, closely resembled the specimens of trap obtained from the remarkable outbursts of

that rock which form the Orange Mountain in New Jersey. It was with much interest, therefore, that on examining the Atlas of the Geological Survey of Pennsylvania, I found marked on it, in the neighborhood of Conewago, a deposit of boulders of *trap*. My curiosity had been excited years before by passing through a similar belt of loose rocks, perhaps a mile or more in width, and extending many miles in length, in the northern part of Chester County, or possibly within the line of Berks County.

As we neared the limit of the limestone land of Lancaster County, unsurpassed in fertility, two ploughed fields were in view at the same time, to the northward. The one nearest us (the southern one) was of the same dark-colored soil as we had been passing through, but the more distant field was decidedly red, showing that we were approaching the red sandstone formation. On the Atlantic Slope of North America the rocks of this formation occur in long and comparatively narrow beds, parallel with the mountains or the coast line. Such a bed occupies the valley of the Connecticut River, reaching from Long Island Sound to the northern limits of Massachusetts, a distance of 110 miles, with an average width of 20 miles. From the quarries in it comes the brown-stone so much used for building purposes in New York and elsewhere.

The longest continuous line of this rock is that which we encountered near Conewago, somewhere about the middle of the belt. This commences at the Palisades on the Hudson River, above New York, and extends through New Jersey, Pennsylvania and Maryland, east and south of the Blue Ridge, into Virginia. It crosses the Delaware River near Trenton, the Schuylkill 12 miles below Reading, and the Susquehanna at Baltimore. Its whole length is about 350 miles. In some parts of New Jersey it is 30 miles wide, but becomes considerably narrower as one goes southward.

It has evidently been formed by the wearing away of an older set of rocks, which have been decomposed into gravel, sand and mud; and these materials have been again solidified into this Red Sandstone. In a former article, mention was made of the creases and folds into which many of the rocky strata in eastern Pennsylvania had been forced by the slow contraction, due to the gradual cooling of the earth's solid crust, or to other causes. Whatever may have been the cause, the effect is very obvious to any traveller through that section of the State, who may notice in the railroad cuts and other places, how the strata are tilted, twisted and bent into all imaginable shapes. If the Red Sandstone had been in existence when these folds and creases were made, it must have partaken in the movement; but instead of doing so it overlies the strata below in a manner which shows, that after they had been subjected to the forces which produced such remarkable effects upon them, a thick bed of gravel and mud had been spread over them, which formed its own layers of rock quite independent of the positions of those below.

It would be reasonable to expect the character of the rocks in this formation to vary somewhat in different parts of the belt, with the variation in composition of the rocks from whose destruction it was formed. Of the specimens which we examined on this excursion, some were largely composed of coarse pebbles, showing that the wearing process had reduced the original rocks into a bed of gravel, which had afterwards solidified. Others were made of a fine sand, evidencing that in their case the process of wearing had been more completely effected,

and had resulted in a bed of sand. In some parts of this sandstone belt the rocks are slaty in their structure; this is owing to the presence of clay in the pre-existing rocks, which has formed beds of mud, which have hardened into slate.

Among the proofs that these rocks were once beds of sand and mud, is the fact that in many places they are covered with ripple marks, and with the impressions made by rain-drops falling upon them while in a soft state; and that they contain mud-cracks, formed by the drying of the mud, such as I have noticed in the alluvial deposits on the banks of the Ohio River, and subsequently filled by fresh material, without obliterating the marks of the original crevices. In some places, especially in the Connecticut Valley, the surface of the beds is marked with the foot-prints of various animals, mostly insects and reptiles, and some birds. Hugh Miller, in describing his labors in a sandstone quarry in Scotland, speaks of these ripple marks and cracks. After a blast had been made, he says:—

"The gunpowder had loosened a large mass in one of the inferior strata, and our first employment, on resuming our labors, was to raise it from its bed. I assisted the other workmen in placing it on edge, and was much struck by the appearance of the platform on which it had rested. The entire surface was ridged and furrowed like a bank of sand that had been left by the tide an hour before. I could trace every bend and curvature, every cross hollow and counter ridge of the corresponding phenomena; for the resemblance was no half resemblance—it was the thing itself; and I had observed it a hundred and a hundred times, when sailing my little schooner in the shallows left by the ebb. But what had become of the waves that had thus marked the solid rock, or of what element had they been composed? I felt as completely at fault as Robinson Crusoe did in his discovering the print of the man's foot on the sand. The evening furnished me with still further cause of wonder. We raised another block in a different part of the quarry, and found that the area of a circular depression in the stratum below was broken and flawed in every direction, as if it had been the bottom of a pool recently dried up, which had shrunk and split in the hardening."

The existence of foot-prints in the Red Sandstone brings us into contact with a very interesting branch of geological study—i. e., the history of the plants and animals which inhabited the earth in former eras. In the oldest known rocks found in America—those north of the river St. Lawrence, and hence called the Laurentian, no clear trace of animal or vegetable life can be discerned. The same is true of the rocks of south-eastern Pennsylvania lying south of Chester Valley. But as the earth cooled from its originally heated condition, and the play of chemical and mechanical forces rendered portions of its surface suited to the maintenance of life, life was created by that Divine creative Power who had been gradually preparing the earth for the support of countless myriads of creatures, in myriads of forms. Of the traces or remains of the ancient forms of animals and plants, which have been preserved in the rocks for our information, many thousands have been examined, studied and described. And the series of rocks which contain them have been divided into classes, according to their respective ages, and the kinds of animals and plants which most abounded in them. The Red Sandstone which we met with north of Onegoque, and of which we have been speaking, comes near the middle

of the series as to age, and belongs to that period when Reptiles were the most abundant and characteristic feature. Their fossil remains have been found in Nova Scotia, Pennsylvania, and North Carolina; and Professor Hitchcock has described a large number of species from their foot-prints in the stone of the Connecticut Valley. Some of these tracks are not more than one-fourth of an inch long, and others measure 20 inches, and must have been made by an animal of the frog kind of enormous dimensions. The largest of the bird-tracks which he examined, the Professor thought must have been those of a bird which exceeded the ostrich in size.

The Red Sandstone belts are remarkable for the abundance of the trap dykes and ridges which accompany them. One of these we saw when we reached Cornwall, lying alongside of the bed of iron-ore. But the fractures in the earth's crust, through which the melted rock has issued, are common wherever this rock is found. In Connecticut they are exceedingly numerous; and in many places the adjacent rocks have been baked and altered by the heat of the volcanic masses.

As has already been stated, the material of the Red Sandstone was gravel, sand, or mud, which filled the valleys and depressions among the former rocks. These deposits in the course of ages, were from 3000 to 5000 feet in thickness; and were accompanied with a gradual settling of the surface on which they rested. This sinking of the surface, under the enormous pressure of the heavy deposits, brought on increasing strain upon the rocks below, often resulting in fractures, through which the lava-like material deep in the bowels of the earth poured upwards. Such is the explanation which geologists give of the formation of these trap dykes.

TRANSFIGURATION.

SELECTED.

Written by Louisa M. Alcott on the death of her mother.

Mysterious death! who, in a single hour,

Life's gold can so refine;

And by thy art divine

Change mortal weakness to immortal power.

Bending beneath the weight of eighty years,

Spent with the noble strife

Of a victorious life.

We watched her fading heavenward, through our tears.

But ere the sense of loss our hearts had wrung

A miracle was wrought;

And, swift as happy thought,

She lived again, brave, beautiful and young.

Age, pain and sorrow, dropped the veils they bore,

And showed the tender eyes

Of angels in disguise.

Whose discipline so patiently she bore.

The past years brought their harvest rich and fair,

While memory and love

Together fondly wove

A golden garland for her silver hair.

How could we mourn like those who are bereft?

When every pang of grief

Found balm for its relief

In counting up the treasures she had left.—

Faith, that withstood the shocks of toil and time;

Hope, that defied despair;

Patience, that conquered care;
And loyalty, whose courage was sublime;

The great deep heart, that was a home for all

Just, eloquent and strong.

In protest against wrong;

Wide charity, that knew no sin, no fall;

The Spartan spirit, that made life so grand,
Mating poor daily needs
With high, heroic deeds,
That wrested happiness from fate's hard hand.
We thought to weep, but sing for joy instead,
Full of grateful peace,
That follows her release;
For nothing but the weary dust is dead.
Oh, noble woman! never more a queen
Than in the laying down
Of sceptre and of crown,
To win a greater kingdom yet unseen.

I MEANT TO.

"I did not rise at the breakfast bell,
But was so steepy—I can't tell—"

I meant to.

"The wood's not carried in, I know;
But there's the school-bell, I must go."

I meant to.

"My lesson I forgot to write,
But nuts and apples were so nice."

I meant to.

"I forgot to walk on tiptoe;
O, how the baby cries! O! O!"

I meant to.

"There, I forgot to shut the gate,
And put away my book and slate."

I meant to.

"The cattle trampled down the corn,
My slate is broken, my book is torn."

I meant to.

"Thus draws poor idle Jimmy Hite,
From morn till noon, from noon till night:"

"I meant to."

And when he grows to be a man
He heedlessly mows every plant
With that poor pie, "I meant to,"

SELECTED.

INCOMPLETENESS.

Not he who first beholds the aloe grow
May think to gaze upon its perfect flower;
He tends, he hopes; but ere the blossoms blow,
There needs a century of sun and shower.

He shall not see the product of his toil;
Yet were his work neglected or ill-done,
Did he not prune the boughs and dig the soil,
That perfect blossom ne'er might meet the sun.

Perhaps he has no presence of ill line,
No sight its form and fragrance to foretell;
Yet in each sun-shaft, in each bead of dew,
Faith passing knowledge tells him he does well.

Our lives, O fellow-men! pass even so,
We watch and toil, and with no seeming gain;
The future, which no mortal may foreknow,
May prove our labor was not all in vain.

But what we sow we may not hope to reap;
Perfect fruition may not seek to win;
Not till, work-wearied, we have fallen asleep,
Shall blossom blow or fruit be gathered in.

Let it be so, Upon our darkened eyes
A light more pure than noontide rays shall shine,
If pain of ours have helped our race to rise,
By just one hair's breadth nearer the Divine.

Upward and onward, plant-like, life extends;
Grows fairer as it thods the more aspire;
Never complete, evermore it sends
A branch out, striving higher still, and higher!

Because so great, it must be incomplete,
Have endless possibilities of growth.
Strength to grow stronger, sweetness still more sweet,
Yearning toward God, who is the source of both.

Chambers's Journal

The professor of religion who boasts of his orthodoxy and indulges in extravagant assertions concerning his personal experience, but does not pay a hundred cents on the dollar when able, is one of the most serious stumbling-blocks Satan ever invented.

FOR "THE FRIEND."

"There is a spirit in man; and the inspiration of
e Almighty giveth them understanding."—JOH XXX.,

There was one who lived in olden time concerning whom we read in the Scriptures of truth, that such was his opinion when assembled with his friends, that he could say, "I perceive great men are not always wise, neither do we aged understand judgment." But being full of the matter, he declared, "the spirit within me constraineth me." As this Divine spirit illuminates the understanding of man and shows to him his inward condition, the upright in heart are enabled thereby to discern between the false and the true—between that which serves God and that which serveth Him only—confessing "that I to grace a debtor am," and with matured experience the duty of teaching others is entered upon—lessons of humility and obedience are found to be among the first peddled to be taught in the school of Christ, being furnished with Heavenly Wisdom, the teacher is enabled to say in the language of inspiration, "I will fetch my knowledge from afar and will ascribe Righteousness to my Maker."

But even these teachers have need to regard the advice of the Apostle, "Beware, lest any man spoil you through philosophy and vain deceit, after the tradition of men, after the rudiments of the world and not after Christ." Jesus said, "To this end was I born, and for this cause came I into the world, that I should bear witness to the Truth. Every one that is of the Truth heareth my voice."

Should not every one that makes profession of the Truth, give evidence by purity of life and conversation, that they are of the number who witness for Him and no other—"for Christ within the Hope of Glory."

"Thy Jesus, the first and the last
His Spirit shall guide us safe home,
Then let us praise Him for all that is past
And trust Him for all that's to come."

P. R. GIFFORD.

PROVIDENCE, Second Mo., 3, 1889.

The Escorial.

I have been in many a hospital, barracks, asylum, and prison, but the gloomiest work of man on which my eyes ever rested, in which my feet ever trod, is the Escorial. It is grand, but it is the grandeur of darkness, vastness, despotism, and death. Philip, less a warrior than a monk, and less a monk than an inquisitor, built it as a tomb for his father, himself, and his successors, and as a monument to San Lorenzo, on whose day, August, tenth, one thousand five hundred and fifty seven, the battle of St. Quentin was fought and won, as Philip believed, through its intercession. While it was intended for a burial-place, it was also a monastery, an asylum, and a palace. For two years he looked for a spot, and at last selected as wild and secluded a gorge as Spain, or any other country, could afford. Upon the lofty slope of the Guadarrama mountains he erected this stupendous structure, more than one-eighth of a mile long and a tenth of a mile wide. It is built of huge blocks of granite, and contains one thousand one hundred and eleven windows, eighty-six staircases, eighty-nine fountains, and dividing the surface into paths wide enough for the step of a man, in walking about it, one could travel thirty-two leagues without going over the same ground twice, though the mountains behind it are high and stern, this building is not dwarfed by the sur-

roundings. The Spaniards called it the eighth wonder of the world. The numerous chapels and altars are filled with paintings by the finest artists, and the high altar made of precious marbles and inlaid with jasper. The library contains an immense number of magnificently bound volumes, many of them illuminated in a very fine style. They are set upon the shelves with their edges toward the center of the room, instead of the backs as is usually the case. The palace is adorned with tapestry, whose colors rival in delicacy, richness, and vividness those of the best paintings upon canvass.

The character of Philip, severe, melancholy, and morbid, is stamped upon every part of the structure, except where his successors of a different temperament have, at the cost of mutilation, given it a more human appearance. During the fourteen years that Philip lived there he did all in his power to transform himself into a monk, sat with the priests as they sang in the choir, finding his way to a certain corner through a secret door. The room in which he died was so placed as to give him a constant view of the high altar. There he suffered excruciatingly, and it is maintained was haunted with doubts as to whether his inquisitorial persecutions, which he supposed to be the real merit of his life, were not in reality damnable crimes. The sufferings of his last days were indescribably awful; but he died with a crucifix in his hands and his eyes fixed on the high altar.

The impression at first is oppressive. The visitor almost unconsciously looks about to see if there is a way of escape, and almost fancies that he hears great keys turning in rusty locks behind him. Monks and beggars flit across the scene and disappear through the passages, or are lost in the prodigious expanse of the main edifice. But after awhile this passes away and the visitor becomes cool, and then stolid. Only professional guides and architects are likely to go there twice.

The Pantheon, underneath the high altar is indeed a worthy sepulchre for kings. From the church, by successive flights of steps of the most polished marble, the visitor descends until he finds himself in an octagonal room, nearly forty feet in diameter and a little less in height, entirely made of marble and jasper relieved by gilt bronze ornaments.

The body of Alfonso XII., who died December, second, one thousand eight hundred and eighty-five, yet remains in a side room subjected to the action of a stream of water, by which the perishable parts are gradually removed. When this process is completed it will be placed in the urn already prepared to receive it.—*J. M. Buckley in the Christian Advocate.*

An effort to conceal emotion and to seem natural, wins sympathy from a beholder; but an effort to exhibit emotion and to seem not natural is a barrier to sympathy. No man ought to show emotion if he can help it; for it is only irrepensible emotion that is to any man's credit, or that wins him sympathy and respect from others. There is a suggestion of this truth in the words of our Lord to his disciples: "When ye fast, be not, as the hypocrites, of a sad countenance: for they disfigure their faces, that they may be seen of men to fast. Verily I say unto you, they have received their reward. But thou, when thou fastest, anoint thy head, and wash thy face; that thou be not seen of men to fast, but of thy Father which is in secret: and thy Father, which seeth in secret, shall recompense thee."—*Selected.*

FOR "THE FRIEND."

In attending a recent Quarterly Meeting, I was interested in the remark of a Friend, who thought we sustained a loss by not mingling more among ourselves socially, so as to strengthen and uphold each other in the support of our various testimonies, and in our efforts to keep out those things which tend to weaken us and draw us away, from that "pure and undefiled religion," professed and practised by the founders of our religious Society.

I hope Friends will consider this suggestion, and see whether some attention thereto will not contribute to our physical health, and improvement, as well as to our advantage in a religious sense.

Does not our religious strength tend to our material advantage and improved physical health? I think it does, and I find many writers of acknowledged reputation of the same opinion. I have noticed that in those neighborhoods or communities where there is the most religious strength and stability, there we see the most thrifty and successful people, and fewer of the extremes of poverty and wealth.

I hope many of our members who endeavor to get their recreation in summer, (under a supposed necessity) at hotels, where they are freed from their usual social and religious restraints; whether at the mountains, seashore, or elsewhere; will look closely into this matter, and see if the advantages to their physical health would not be greater, if they were more anxious to preserve their religious health also; and be willing to more frequently call upon, and visit their dear friends and relatives, who would be glad to see and entertain them, as well as to be entertained by them; I trust in these calls and visits, both visitors and visited would be strengthened and invigorated in every sense.

"As iron sharpeneth iron, so doth the face of a man, that of his friend," is as true now as ever it was. And if "they who fear the Lord, speak often one to another," there would be a blessed reward attending it, as of old.

At many of the usual summer resorts, and even at some kept by our own members, there are many things practised and permitted, which our discipline does not approve of, and which have the effect to weaken our testimony against such things elsewhere. These are the "little foxes" which I think it becomes us to be on our guard against, lest they weaken and destroy many tender and promising vines among us.

There are no doubt many invalids who are greatly benefited by visits to the seashore, mountains and other places. There are also very many who get their usual recreation in such ways, who are not benefited in any sense, but greatly injured; and I trust these matters will claim our serious and careful attention. "Obedience is better than sacrifice;" and obedience in little things, where we feel a check or stop in our minds, will undoubtedly lead to greater faithfulness as well as greater religious stability and strength.

Second Mo. 9th, 1889.

"Till the next stage of our being," says a profound thinker, "has developed the unrevealed mysteries of the Deity who made mankind, we must be contented like obedient children, to believe such that we cannot yet understand." If we limit our faith to what we fully understand, we shall believe almost nothing.—*Selected.*

James Russel Lowell on Religion.

VIEWS EXPRESSED IN AN AFTER DINNER SPEECH IN REPLY TO SKEPTICS.

"I fear that when we indulge ourselves in the amusement of going without a religion, we are not, perhaps, aware how much we are sustained at present by an enormous mass all about us of religious feeling and religious convictions, so that, whatever it may be safe for us to think—for us who have had great advantages, and have been brought up in such a way that a certain moral direction has been given to our character—I do not know what would become of the less favored classes of mankind if they undertook to play the same game.

"Whatever defects and imperfections may attach to a few points of the doctrinal system of Calvin—or any other—it will be found that Calvinism or any other *ism* which claims an open Bible and proclaims a crucified and risen Christ, is infinitely preferable to any form of polite and polished skepticism, which gathers as its votaries the degenerated sons of heroic ancestors, who, having been trained in a society, and educated in schools, the foundations of which were laid by men of faith and piety, now turn and kick down the ladder by which they have climbed up, and persuade men to live without God, and leave them to die without hope.

"The worst kind of religion is no religion at all, and these men living in ease and luxury, indulging themselves in the 'amusement of going without religion,' may be thankful that they live in lands where the Gospel that they neglect has tamed the beastliness and ferocity of the men who, but for Christianity, might long ago have eaten their carcasses like the South Sea Islanders, or cut off their heads and tanned their hides like the monsters of the French Revolution. When the microscopic search of skepticism, which has hunted the heavens and sounded the seas to disprove the existence of a Creator, has turned its attention to human society, and has found a place on this planet ten miles square, where a decent man can live in decency comfort and security, supporting and educating his children unpoised and unpolluted; a place where age is revered, infancy respected, manhood respected, womanhood honored, and human life held in due regard; when skeptics can find such a place ten miles square on this globe, where the Gospel of Christ has not gone and cleared the way, and laid the foundation and made decency and security possible, it will then be in order for the skeptical literati to move thither and there ventilate their views. But as long as these men are dependent upon the religion which they discard for every privilege they enjoy, they may well hesitate a little before they seek to rob the Christian of his hope, and humanity of its faith in that Saviour, who alone has given to man that hope of life eternal which makes life tolerable and society possible, and robs death of its terrors and the grave of its gloom."

Natural History, Science, &c.

Rusting of Car-rails.—The fact that car-rails in active service seldom suffer deterioration from rust, while others less used or, is susceptible of a very simple explanation. The ordinary iron-rust, is bred by the pressure of passing wheels into combination with the iron of the rail, forming a magnetic oxide which protects the rail from further action. The rust which forms on all rails during a rain or damp weather has

hardly time to dry before this combination takes place on the rails in active use. In an experiment quoted in proof of this explanation, the scales on that surface of a rail which received the greatest pressure were removed by the aid of a wire brush and submitted to analysis. They were found to be composed of magnetic oxide mixed with a variable quantity of ferric oxide, and apparently a small proportion of free iron.—*The American.*

Lighting Tunnels.—One of the most obvious of the advantages of the electric light is that it can be put in use when a flame of gas or oil would perish from lack of oxygen. The Hoosac Tunnel, on the Pittsburg Railroad, Mass., has hitherto been unlighted, all signalling of trains being done by means of explosion or torpedoes. The tunnel is, moreover, continually full of smoke, gas, and sulphur. About a week ago, trial was made of an electric plant which will furnish the tunnel 1,200 largesized lights. These are placed forty feet apart on both sides, and alternating thus making one lamp for every twenty feet. A small building at the west portal contains the engines, dynamo, and other necessary machinery.

Thickening Skulls by Exposure.—The Washington correspondent of *Science*, in mentioning Prof. Virchow's recent book, "Medical Remembrances of an Egyptian Journey," speaks of the theory that the skulls of negroes and others become thicker and harder by exposure to the sun. In some of the burial fields visited by Prof. Virchow, the skulls dated from Roman times and were very thick and hard. Herodotus mentions that the skulls of the slain Egyptians were hard in comparison to the brittle ones of the Persians, and attributes it to the exposure of the children to the heat of the sun. Prof. Virchow's expedition found children exposed in this way in the open fields, being put into immense clay bowls for safe keeping in their parent's absence. The theory that the proverbially hard skull of the African negro is an adaption of nature to bear the intense solar heat, in the absence of other explanation, seems plausible.

Large Trees.—In Prof. Rothrock's lecture at the Franklin Institute, Philadelphia, illustrations were given of the *Baobab* of tropical Africa. This tree has been measured and found in one instance to be "girth" 75 feet, in another 82 feet. It has the most remarkable tenacity of life, actually living after the bark had been destroyed completely by fire, or by axe, and when, at the same time, its trunk was almost fully hollow. Whence was its well-spring of life? Livingston thought that it was due to the vitality and restorative powers of the young woody layers beneath the bark. Humboldt regarded it as one of the oldest plants on earth. Livingston doubts whether it is over 1,000 years old, or, at the very outside, 1,500 years. Pickering mentions one baobab that was 112 feet around.

The Ceiba or silk cotton tree of the West Indies towers in the "high woods" over the other trees, supporting among its branches aerial gardens of creepers and parasites, as Kingsley has said. Its broad, stall-like roots are not less remarkable than its spreading top. The ignorant negroes revere the tree, pour libations upon the roots and expect evil to happen to the man who injures a Ceiba.

Of the Tasmanian *Eucalyptus* forest, the lecturer stated, that in spite of all we heard of the sizes of these trees, the largest were not numerous, nor did they extend over any great area.

It had come to be pretty generally believed that an eucalyptus grove did by some means render miasmatic regions more healthful. With this object in view the tree is now largely planted in the island of Ceylon. While it will not endure frost, on the other hand the eucalyptus species, as a rule, do not require a high temperature.

The Oriental plane tree, which is now becoming so popular in our parks and along our roads, was mentioned. Its resemblance to our own buttonwood is quite striking. In spite of all that this tree promises, it is well to bear in mind that foreign trees, as a rule, are not apt to be so long lived as our related native species. One famous Oriental plane tree, within a few miles of Constantinople, has the vast diameter of fifty feet. This species of tree has been a favorite from very early times, and more than once figured conspicuously in certain historical events.

Diseases Contracted from Pets.—Several articles have recently appearing in Medical and other journals, pointing out the danger of a cat and other pet animals communicating disease to persons who handle them. Diphtheria is one of the diseases to which cats are subject. It is advised that children should not be permitted to handle sick domestic pets, especially those suffering from skin diseases.

Effect of Plants in Water.—In the Report of the Massachusetts State Board of Health for 1887, reference is made to the plants which are often found in reservoirs from which water is drawn for drinking purposes. Three classes of these are specified. First, those which are fixed in the basins, such as common pond weeds. Second, those which are suspended in the water but do not readily decompose; such as the Duck weeds. Third, those which are suspended in the water and readily decompose, such as the Blue-green Algae. These last multiply very rapidly and secrete a jelly, which, together with the plants, readily undergoes decomposition and affects the purity of the water. Of animal productions, sponges are the most troublesome as they also easily decay and strongly taint the water.

Animal Instincts.—While trapping Muskrats a number of winters ago, I was surprised one morning on visiting my traps to find in one of them nothing but the foot and part of the leg of what must have been a large sized muskrat. I was still more surprised to find, on closer examination, that the animal had evidently amputated its own leg to regain its freedom. I learned, on referring to a work on trapping, that this was of frequent occurrence among several species of fur-bearing animals, and it was necessary in such cases, to so arrange the traps (I am speaking of steel traps) as to lead the animal into deeper water, where it would be drowned before it could extricate itself from the trap. The Mink becomes very angry when taken into a trap, and will bite and tear its limb in a frightful manner, but always biting that part beyond the trap. On the other hand, the Otter will almost invariably go systematically to work to amputate its limb and thus escape.

Items.

Report of the Indian Commissioner for 1888.—From this Report it appears that the Indian Budget for the year ending 30th Mo. 1887, is \$3,281,116. Of this all but about \$750,000 is their own money, the money due them. The trust funds in the United States Treasury belonging to the different tribes,

amount to \$18,633,841.55. The annual interest on this is \$896,355.19, of which there remains in the hands of the nation one hundred and seven millions which has not yet been paid.

There are about 40,000 Indian children of school age, of whom about 15,000 are receiving education. In regard to the schools maintained by different missionary societies, the Commissioner repels the charge of any discrimination having been made in the matter of education over and above what is stated, although Catholics have received the greatest number of contracts for the education of children, it is simply because they have erected more school-houses and established more schools than others.

During the past year there have been made 3,349 Indian allotments, in conformity to an act, estimating about 349,000 acres. On the subject of allotments, the Commissioner says, that as persons who are heartily in favor of the principle, feel that it would be unwise to force such allotments on Indians "before they are ready to receive, use, and hold them."

"An allotment unnecessarily delayed, deprives an Indian of just so much opportunity for, or incentive to, progress; but an allotment made to an Indian before he has been made to understand its meaning and purpose takes away from its value to him, and he may look upon it as a worthless or as an unwelcome thing imposed upon him. It is probably the best plan which could be adopted on the one hand, but that he would finally abandon it and become a wanderer. Thus," it is said, "that which was intended to be, and, rightly used, would be, a benefit to the Indian, may be so used as to drive any of the race into vagabondage, and thus make them what may be called the gypsies of America."

Mormon Mission.—The Mormons of Utah have band of "elders" whose business it is to make converts in the Southern States. The head-quarters of this mission is at Chattanooga, Tennessee; from which point missionaries are sent out into the adjoining States. The success of these is, of course, usually among the ignorant classes. A correspondent of the *New York Times* says, that in a period of eight years, 2,292 people have been baptized according to Mormon custom, in the South.

The Church of Rome in French Canada.—In the year 1760, French Canada passed by conquest into the control of the British. The population was estimated at 70,000. Now it is one million and a half. Of the present population 200,000 are Protestants, the remainder belonging to the Catholic Church. Of all the latter are French except 100,000 chiefly Irish.

The increase of the French over the English has been most marked from the first, and it threatens the extinction of the latter at no distant day in the province of Quebec and Eastern portion of Ontario. The population of French Canada is also remarkable, by a small amount of her wealth is known. The title she is unsparring in her denunciation of all other societies, she practices the utmost secrecy in conducting her own business. But her wealth is estimated roundly at \$80,000,000.

In addition to this sum-capitalized, there is a yearly revenue of \$10,000,000, and a \$8,000,000 source of income are 200,000 farms under cultivation; taxes on families not possessing land, pew rents, fees for marriages, baptisms, funerals and masses, voluntary gifts, legacies, and income from land owned by the Church, &c.

The above items do not include the wealth of the numerous ecclesiastical orders, and it is known that one of these are very rich. The Sulphurians are one of the most valuable business property in Montreal, and their wealth exceeds that of any corporation on the continent.—*The Independent.*

New York Society for the Suppression of Vice.—The Report of the Secretary, Anthony Comstock, shows that during the last year a large amount of books, plates, pictures, &c., of an indecent character, and lottery circulars and tickets, and other articles of gaming, had been seized, making a total of over five tons in weight. The number of arrests made was 94, and 101 convictions were secured—and fines and imprisonments inflicted on the guilty.

Slipping Away from the Poor.—One of the evils connected with the increase of wealth in a religious denomination is pointed out by the *Christian Advocate* (Methodist) in the following remarks:—

"We hear a great deal in these days about the masses slipping away from the churches; but have we carefully considered the danger of the churches slipping away from the masses? In the great cities the Methodist Episcopal Church began to work chiefly among the poor. Her field was the world, but her spirit was not confined to the neglected classes. Her unpretentious church architecture, free pews, flexible and popular forms of worship, the style of preaching which prevailed, all tended to encourage the masses to come and worship and feel at home. These things were her reproach among certain classes, but glorying in her reproach she won great victories. The process of slipping away from the masses is simple and easy. First, many converts from among the poor acquire habits of loneliness and industry, and soon become wealthy. Wealth naturally demands a stately style of worship and an elegance of church accommodations which repel the poor. The congregation forget formality, and then the cry begins to be heard: 'The people are slipping away from the churches.' If there are any cases in which a separation has occurred between the people and the Methodist churches, the latter may thank themselves. If the Methodist Church shall never separate herself from the people she will never want for congregations, and never be barren nor unfruitful in the work of the Lord."

Opium Trade with China.—The *London Friend* mentions that at a Meeting for Sufferings on the 4th of First Month, the responsibility of England for the introduction of the opium trade was considered; and a committee was appointed to consider what should be done with the view of calling the attention of the Christian churches to the iniquity of the system, and its suppression.

Presbyterian Synod on Prohibition.—At the Presbytery Synod of Pennsylvania, held in Erie, a resolution was unanimously passed, which says,—"We declare ourselves unequivocally in favor of the entire suppression of the traffic in intoxicating liquors as a beverage; and urge upon the members of our churches the duty of using every legitimate means to accomplish this result."

Resolutions of the same general character have been passed by the Synods of New Jersey, New York, and Ohio.

The Bible in Greek Schools.—In Greece, the law makes the New Testament a text-book in all the elementary schools. The text used is that of the original Greek, but this is so similar to modern Greek, that all the children can understand the Gospels.

ONE of the surest signs of a Christian civilization, is reverence for life, and reverence for morality. One of the worst evils attendant on war is, that long after the guns have ceased firing, the public mind is debased by blood, and there is a dreadful harvest of crimes, of bloodshed and violence, to be reaped.

THE FRIEND.

THIRD MONTH, 9, 1859.

Our friend Josiah W. Leeds, has published a protest against the passage of an Act which has been introduced into the Legislature of Pennsylvania, authorizing betting on horse-races at fairs and agricultural exhibitions, under certain restrictions. At the present time such betting is illegal. It seems to us very strange that any considerable body of respectable men can be found who will favor the encouragement of such gambling, attended as it is with demoralization of all those who become infected with its spirit.

In his protest J. W. L. says:—

About two years' ago a middle aged man com-

mitted suicide by jumping into the East River, from a Brooklyn ferry boat, leaving as a legacy to his wife and children, and to the world generally, a letter containing no other allusion than "Let all men take warning and keep away from horse-racing and pool-rooms." About the time that this tragic accident happened, the New York Legislature, despite the earnest protestations of a great many worthy people of the State, passed the "Ives' bill," subsequently approved by the Governor, which permits betting on horse-races at certain race tracks, during five months of the year.

A similar mischievous measure (Honse Bill No. 143) has been introduced into the Legislature of Pennsylvania and referred to the Committee on Agriculture, of which Representative Stevenson is chairman.

In the summer of 1856, the then mayor of Philadelphia sent a large detachment of officers to a noted pool-selling resort in the east-central part of the city, when several of the alleged principals, and upward of twenty of the patrons of the place were arrested. Upon a trial of the case, the principal, against whom also the indictment was conclusive, failed to appear, a bench warrant for his arrest was issued, and his bail was forfeited. And who was the surety whose name appeared upon this bail-piece? It was one who has been summoned over and over again before magistrates and the courts, upon charges of indictments for gambling, though only twice (so the Assistant District Attorney informed me) committed to prison for proved violation of law.

Now, this is the business which it is proposed by legal fiat to make respectable: not to let lurk in darkened and guarded gambling rooms, whose keepers are in daily dread of detection and arrest by the officers of the law, but to permit essentially the same thing to be carried on in the full light of day, at all incorporated agricultural and horticultural fairs or exhibitions, and driving parks, silencing the protestations of the lovers of truth and righteousness in city and country and seeking to set at naught the scrupulous and diligent efforts of the law by laying a tax of five per centum on race-days' receipts to be disbursed as "prizes for improving the breed of cattle, sheep, and horses."

But what about the breed of farmers' sons? What also as to the young clerks, agents, and others in places of trust in the cities? Is the fraudulent application of funds—no matter in so many cases to have been due to some form of betting, gambling, or pool-selling—grown so infrequent, that we have come to a time when it is safe to take down the bars against what reputable people have hitherto looked upon as one of the crying evils of the day, and to let it now have full course upon payment of a tax to the State? A further application of the same principle would bring us to the State regulation of vice with its "infamous acts," such as dishonored Great Britain and India, but the repeal of which was secured a year ago when their enormity became fully apparent. The warning of the wretched suicide of the Brooklyn ferry-boat may be probably repeated:—"Keep away from horse-racing and pool-rooms."

We sincerely hope that the efforts of those citizens of Pennsylvania, who have at heart the honor of their State, and the welfare of its people, will prevent the enactment of the proposed law.

SUMMARY OF EVENTS.

UNITED STATES.—President Harrison and Vice President Morton, were inaugurated on the 4th inst., with the usual pomp and ceremony. The President's inaugural address from a platform in front of the capitol building, in the presence of a vast crowd, which had gathered notwithstanding a driving rain storm. The inaugural procession was the largest and the most imposing of the kind ever seen in this country.

On the 5th, the following named Cabinet officers were unanimously confirmed by the Senate: State Department—James G. Blaine, of Maine; Treasury—William Windom, of Minnesota; War—Redfield Proctor, of Vermont; Navy—William P. Tracy, of Ohio; Post-office—John W. Foster, of Pennsylvania; Attorney General—W. H. H. Miller, of Indiana; In-

ter—John W. Noble, of Missouri; Agriculture—Jeremiah M. Rosk, of Wisconsin.

The public debt statement shows an increase of \$6,443,344 during the Second Month. Total cash in the Treasury, \$607,387,571. The increase is due to the unusually heavy disbursements during the month, exceeding ordinary operations, which amount \$24,500,000 was on account of pensions.

On the 1st instant, in the House, the joint resolution looking to the promotion of commercial union with Canada, was passed. It had been introduced by Senator Pillsbury of Illinois, and unanimously reported from the Committee on Foreign Affairs. It provides for the appointment of Commissioners by the President to meet similar Commissioners on the part of the Canadian Government, and prepare a plan for the assimilation of the import and export duties of the two countries, in a commercial union, the Commissioners to report to the President, and the report to be submitted to Congress.

On the 2d instant, Senator Blair asked unanimous consent to take up his prohibition amendment in further Constitution of the United States. Senator Harris objected. A motion by Senator Blair to take up the amendment was then defeated, the yeas being 13; nays, 33. The affirmative votes were given by Senators Blair, Bowen, Davis, Dolph, Frye, Hawley, Jones of Nevada, Miller, Palmer, Platt, Quay, Sawyer and Stockbridge.

The bill incorporating the Nicaragua Canal Company, after passing both houses of Congress, has become a law through the signature of the President. The bill authorizes the incorporation of a company to construct, equip, and operate a ship canal, either entirely through the territory of Nicaragua, or in part through the territory of Costa Rica, and otherwise to exercise such powers as have been conferred upon the Nicaragua Canal Association. The company is to have a capital of \$100,000,000, and is authorized to increase it to \$200,000,000.

The House bill providing for the taking of the eleventh census has been passed by the Senate and approved by the President. The schedules of inquiries are the same as of the tenth census, with such changes of subject matter and modifications as may be approved by the Secretary of the Interior. An increase of about 30 per cent. over the population in 1880, may be reasonably looked for in 1890.

President Cleveland has signed a negative order in regard to the "act appropriating \$250,000 to enable the President to protect the interests of the United States in Panama," approved Secretary No. 25th. The President says: "Whereas satisfactory information has been received by me that a number of citizens of the United States have been engaged in employment and labor destitute in the Republic of Colombia by the stoppage of work on the Panama canal, it is therefore ordered that so much as is necessary of the fund appropriated by the said act be expended under the direction and control of the Secretary of State in furnishing transportation to the United States to any citizen or citizens of the United States who may be found destitute within the National Department of Panama, in the Republic of Colombia."

A petition, signed by sixteen thousand Cherokee Indians, was sent to the United States Senate protesting against the passage of the Oklahoma bill, particularly that part of it concerning the Cherokee strip. After an examination, a Justice of the Peace in Iowa City, Iowa, has ordered the return to two brewing companies of 500 kegs of beer and 600 cases of beer, seized by the Temperance Alliance, and which were returned to the State, and the beer will be returned to the cars from whence taken.

The *Waterbury American* says: "It ought not to be necessary every day to print a notice of the death of a fortunate young man, but the evidence from 200 doctors before the Michigan Legislature is worth heeding, and that every child case of boys being dwarfed, made insane, killed or rendered incapable of speech, and the professors of Michigan University also testify, and 200 of the effect on the students who were made stupid by cigarettes."

Deaths in this city last week numbered 425, which is 78 more than during the previous week, and 17 more than during the corresponding week last year. Of the following 205 were aged and 61 were of the age of consumption; 47 of pneumonia; 34 of diseases of the heart; 19 of old age; 18 of typhoid fever; 17 of convulsions; 13 of Bright's disease; 12 of inflammation of the brain; 11 of inanition; 10 of cancer, and 10 of casualties.

Exchange, &c.—U. S. 4½, 108½; F's, reg., 128½; coupon, 129½; currency, 92 to 131.

Cotton was quiet but steady at 102 cts. per pound for middling uplands.

Feed.—Winter bran, choice, \$16.75; do, fair to prime, \$15.90 to \$16.50; spring bran, \$15 a \$16.

Flour and Meal.—Western and Pennsylvania super, \$8.00 to \$8.50; do, extra, \$7.50 to \$8.00; No. 2, winter family, \$4.00 to \$4.20; Pennsylvania family, \$4.70 to \$4.85; Pennsylvania roller process, \$5.5 a \$5.25; Ohio, clear, \$4.80 to \$5.15; do, straight, \$5.15 to \$5.40; Indiana, clear, \$4.80 to \$5.15; do, straight, \$5.15 to \$5.40; St. Louis, and Southern Illinois, clear, \$4.80 to \$5.15; do, straight, \$5.15 to \$5.40; winter patent, fair to choice, \$5.50 to \$6.00; Minnesota, clear, \$4.50 to \$5.00; do, straight, \$5.25 to \$5.60; do, patent, \$6.40 to \$7.00.

Grain.—No. 2 red wheat, 90½ a 91 cts.; No. 2 mixed corn, 40 a 40½ cts.

No. 2 white oats, 33½ a 33½ cts.;

Beef cattle.—Extra, 4½ cts.; good, 4 a 4½ cts.; medium, 3½ a 3½ cts.; common, 3 a 3½ cts.;

Sheep.—Extra natives, 6 a 6½ cts.; good, 5½ a 5½ cts.; medium, 5½ cts.; common, 4½ a 5 cts.; culls, 3½ a 4 cts.; Kansas and Texas sheep, 3 a 5½ cts. Lambs, 4½ a 7½ cts.

Hogs.—Westerns, 6½ a 7 cts.; State, 6 a 6½ cts.

Milk cows were in fair demand and 65 per head.

Milk calves were in good demand, at 5 a 8 cts.

FOREIGN.—The statement that Sir Julian Pauncefote has been appointed British Minister to the United States is officially confirmed.

On the 24th of Second Month, in the Parnell Committee room, Sir Charles Russell arose and stated that on the 23rd Richard Pigott went to the residence of Henry Labouchere and, in the presence of George Augustus Sala, signed a confession stating that the letters upon which the *Times* bases its charges against the Irish members of the House of Commons were forged by him.

Pigott had told Houston that he found the letters in a bag, but he fabricated them by using genuine letters of Parnell and Egan, copying certain words showing the general character of the writing and tracing them in the same ink pan.

After Attorney General Webster said everybody would agree that nobody could attach any weight to Pigott's evidence, and it was his duty to ask the Court to withdraw the case, Sir Charles Russell said that he had read the *Times*, he said, desired to express regret for publishing the letters, and the proprietors of that paper would themselves more fully express their regret later. He repudiated the allegation made by Sir Charles Russell yesterday that there was no conspiracy between Pigott and Houston. If such a conspiracy existed the *Times* had no share in it. If the error of the *Times* extended beyond that, the Court should make the fullest inquiry.

Sir Charles Russell said he had hoped the Attorney General would have made stronger statements.

On the 28th, the *Times* in an editorial says, after quoting the Attorney-General's apology: "We desire to endorse as appropriate every word of the foregoing statement. It is our wish, as it is our duty, to do so. Moreover, the Parnell Committee in witness to the fact that the letters are forged, we accept in every respect the truth of that statement. In these circumstances we deem it right to express our regret, most fully and sincerely, at having been induced to publish the letters as Mr. Parnell's, or to use them in evidence against the Parnell Committee. It is regrettable also the letters falsely attributed to Mr. Egan, Mr. Davin and Mr. O'Kelly. It is scarcely fitting now to enter into the circumstances under which we received and published them. We are bound, however, to point out that the error was not the result of carelessness or miscommunication. Moreover, we must add that we firmly believed that the letters were genuine until the disclosures made by Pigott on cross-examination. It must be evident to all reasonable persons that if a conspiracy existed the *Times* was victimized by, and not a party to, it."

"Errors of judgment may have been committed, and for them the penalty must be paid. It must be clearly understood that what we have done is altogether upon our own motion and our own responsibility, and in the full belief that we were doing right. Of course, we reserve exclusively to the letters obtained from Pigott."

Richard Pigott after his last examination before the Commission, ascended to the Continent. At Madrid he assumed another name, but being identified by detectives, he fled to London, where he was arrested. He was under arrest, he excused himself under a false pretense, retired to an alcove and shot himself dead.

Dr. Tanner, Member of Parliament for Cork, was arrested in London on the 29th inst., arrived Clonmel at 2 o'clock on the morning of the 3rd inst. Tanner refused to enter the prison wagon, whereat the constables fired the signal, and held him on a seat. A crowd followed the wagon, growing a throwing stones at the police, both before and after the prison was reached. Six person were arrested but were afterwards liberated.

It is estimated that seventy lives were lost in a recent gale on the North Sea.

Advices from Afghanistan say that the Ameer, marching upon the Russian frontier, and that a coalition with the Russians is imminent. The Ameer persists in committing cruelties.

The pepper colony at Molokai, Sandwich Isles numbers 1,020 persons.

In the Dominion House of Commons last week 1 Weldon explained the provisions of his Extradition bill, which enlarges the list of extraditable offences. It drops of the United States, as well as holding him on coming to her geographical position. Within fifty fifty years a great increase of crime has taken place. The ambassadors of both countries are not alive to the necessity of abolishing the antiquated Ashburton Convention, and the government of the United States must set in motion machinery which will drive the criminals which are enjoying an asylum here. I wanted the Government to be vested with power hand over all these offenders to countries having extradition treaty with England as affecting Canada. The bill was read the first time.

NOTICES.

The Annual Meeting of the "FRIENDS' ASYLUM for the INSANE" will be held in the Committee-room Arch Street Meeting-house, on Fourth-day, Third 20th, 1889, at 3 o'clock P. M.

THOS. SCATTERGOOD, Secretary

WESTWON BOARDING SCHOOL.—A State Meet of the Committee on Admissions will be held in Committee-room, on the morning of the 10th inst., on Seventh day, the 16th inst., at 10 A. M.

JOHN W. BIDDLE, Clerk

WANTED.—A woman to teach the inmates of the Howard Institution (numbering from 12 to 14) to read. The object is to enable them to read the Bible. She should be interested in their spiritual welfare. Compensation \$3 a week. The time required, 1 hours a day (First-day excepted).

Apply to the Rev. G. C. Lewis, Germantown.

MARY MORRIS, Overbrook, Montgomery Co., Pa.

WESTWON BOARDING SCHOOL STAGE.—During Winter term the stage will be at Westwon Station, the arrival of the 8:33 and 2:47 trains from Philadelphia, to convey passengers to the school, and at other times on timely notice, to J. G. WILLIAMS, Supt.

Westwon, Pa.

DECEASED.—Second Month 2nd, 1889, at her home on West Grove, Chester Co., Penna. JANE ANN PA MORE, in the 70th year of her age, a member of St. Garden Monthly Meeting. She bore with resignation and cheerful patience, a long and painful illness, realizing the eternal God to be her refuge and support. At the hour of her decease she was surrounded by her dear friends. Her husband, John, died in 1881, JEMIA MILITORS, daughter of Robert and Mart Milhous, (the latter deceased), a member and old of Pensville Monthly and Particular Meetings, age 48 years, 6 months and 21 days. She was of a meek and quiet spirit, being concerned from childhood for the souls of men, and her Heavenly Father. Having in early life taken heed to the Divine Will for truth in her own mind; and having, we must believe, felt concerned to yield her heart to his baptizing, purifying power, she was made an example of to those who were called to follow her. She was a member of our religious meetings, both for worship and discipline, when of ability to do so (being often under bodily affliction). A short time before her close, her faith expressed to her his belief that she would be glorified in the fold of rest and peace; she expressed the same hope, saying, "But all of mercy." She passed quiet away, as one falling into a sweet sleep. "Blessed are they which die in the Lord from henceforth; yea, said the Spirit, they rest from their labors and their work do follow them."

FOR "THE FRIEND."

Historical Review of the Society of Friends.

(Continued from page 259.)

From this time forward there are similar instances recorded in the journals of our ministers, evidencing the continued existence of sentiments of the same character as those which Richard Jordan found prevailing on Long Island. Stephen Grellet relates, that in 1805, he was one of a committee appointed by New York Yearly Meeting to visit its subordinate meetings. During this visit, he says:—"I became introduced into very deep and painful trials; for one of our committee frequently advanced sentiments repugnant to the Christian faith, tending to lessen the authority of the Holy Scriptures, to undervalue the sacred offices of our holy and blessed Redeemer, and to promote a disregard for the right observance of the first day of the week." "I frequently, fervently and earnestly labored with him." The member of the Committee here referred to was Elias Hicks, who was more influential than any other person in sowing the seeds which resulted in the separation of 1827. In looking over his Journal, which narrates the incidents of a prolonged and very active life, we find a record of some 40 years of labor in the ministry, before meeting with much that would be likely to awaken fears of the kind that impressed Stephen Grellet. In the memoranda he has preserved of his labors, we find him earnestly pressing on his hearers the spiritual nature of true religion, the uselessness of outward ordinances, and the necessity of dependence on the Light of Christ in the heart as that which must show us the way of salvation. In thus preaching, he followed in the footsteps of the early members of our Society, and of those in all times who have adhered to its doctrines; but mingled with this, during the latter part of his career, were other sentiments which justly alarmed his friends, and awakened controversy and dissunity. It is no unusual thing for the earnest advocates of a sound doctrine to push their conclusions to such an extreme as to ignore or even deny other doctrines equally important and essential.

As the separation of 1827 was probably one of the causes which led to the establishment of the paper which after a lapse of more than 60 years is still continued, in the same form, and with similar objects to those which led its original founders to assume the labor and responsibility

of the publication of THE FRIEND, it has been thought that some notice of it and its history would prove interesting, and at the same time give valuable historical information to many of the younger and middle-aged among its readers. For there are comparatively few whose memories go back to the time of its commencement; and it has all along been so fully identified with the concerns of our Society, that its pages are a vast storehouse of information respecting past events that affected it and its interests.

A few individuals in Philadelphia agreed to contribute the funds necessary for its commencement, and to be responsible for the expenses incurred. The first number was issued on the 13th of Tenth Month, 1827; and its prospectus and editorial show that it was designed to be a medium of intellectual intercourse among Friends, and to furnish to their families "an agreeable and instructive miscellany." The current literature of the day, the treasures of ancient lore, the researches of science, selections from the great masters of the old English school, philanthropic information, a summary of passing events, original communications, essays and poetry, historical narratives relating to the early settlement of the country, and a support of the doctrines and testimonies "of the people called Quakers," are all enumerated among the subjects with which it was proposed to fill its columns.

The feelings of the members generally, in those days, were greatly interested in the various incidents connected with the separation which was taking place, and which was extending from meeting to meeting. As might have been expected, therefore, the early volumes of THE FRIEND contain a large amount of detail respecting these movements, and much discussion of the doctrines at issue. Omitting all reference to merely personal charges, such as are inevitable in heated controversies, but which happily die out with the lapse of time, an examination of these volumes, which contain numerous quotations from the sermons and writings of Elias Hicks, shows pretty conclusively that in the latter part of his life he regarded Jesus Christ who was born of the Virgin Mary, and who was crucified at Jerusalem, to have been an eminently gifted man, and a great reformer and teacher; and that He might be regarded as Divine, but only in the sense in which all the children of God may be so called, through a partaking of the Divine nature and spirit; but he did not believe that He was essentially different from us, or that in Him dwelt all the fulness of the Godhead. As a consequence of this, he rejected the doctrine of the atonement as it is held by most professors of Christianity, and as it was believed in by the early members of our Society.

In opposition to these views, numerous extracts from the writings of early Friends were brought forward by those who were uneasy with his teachings; such as the following, taken from a Declaration of Faith—drawn up in 1693 by George Whitehead, on behalf of the Society of Friends.

"We sincerely confess and believe in Jesus

Christ, both as He is true God and perfect man.—That Divine honor and worship is due to the Son of God, and that He is in true faith to be traced unto, and the name of the Lord Jesus Christ called upon, as the primitive Christians did, because of the glorious union or oneness of the Father and the Son."—That in his dying for all, He was "that one, great, universal offering, and sacrifice, for peace, atonement and reconciliation between God and man, and He is the propitiation, not for our sins only, but for the sins of the whole world."

Many similar passages are quoted from the writing of George Fox, William Penn, Robert Barclay, and other standard authors among Friends, who acknowledged as the author of their salvation, Jesus Christ, who was crucified at Jerusalem, and who as a quickening Spirit visits the hearts of those who will receive and obey Him. For, as expressed by John Banks, our Society "is truly believe in that same Christ, who laid down his body and took it up again, as in his Light within; and we have benefit to salvation, by the one as well as the other; and of both, they being one; and are willing to lay hold of every help and means, God, in and through Jesus Christ, has ordained for our salvation."

These doctrinal statements were contrasted with the sentiments expressed by Elias Hicks, who, in exalting the importance of the inward work of grace (which is indeed an essential requisite for salvation) said that "no external Saviour could have any hand" in the cleansing of the soul from inward pollution—that Jesus "was only an outward Saviour"—and used various expressions which implied that He was no otherwise to be regarded as Divine, than as having a larger measure than other men of the Spirit of God poured upon Him.

The doctrinal points at issue were such as it is unsafe for men to reason upon without a measure of Divine illumination; but they were weighty and important, and it is not surprising that the discussions which arose were earnest, and at times even severe in tone.

It is by no means probable that all those who were classed among the adherents or followers of Elias Hicks had adopted all the views of doctrine which he disseminated; or that their successors in this day all hold the same opinions. For in such controversies many secondary motives come into play, and there are persons on one side or the other who become zealous partisans without any clear judgment as to the doctrines involved. This must necessarily be the case in all wide-spread controversies, because in every community there is a considerable body of persons whose religious growth and experience do not qualify them to form an independent judgment on such subjects. Yet, that the question of doctrine laid at the foundation of the division that then rent the Society of Friends, is shown by the statement issued by the leaders among those who organized a new Yearly Meeting in Philadelphia in 1827. This document contains the following paragraph: "Doctrines held by one part of the Society, and which we

believe to be sound and edifying, are pronounced by the other part to be unsound and spurious. From this has resulted a state of things that has proved destructive of peace and tranquillity, and in which the fruits of love and conciseness have been blasted, and the comforts and enjoyments even of social intercourse greatly diminished."

The warmth of feeling that was developed in those days, has in large measure died out, and there now exists an amiable and kindly feeling between the members of the two bodies into which the Society of Friends separated about 60 years ago, and which it is much to be hoped may continue and increase.

This separation was confined to America, and did not reach to the meetings across the ocean. In the controversies and trials which attended it, the unity and sympathy of Friends of London and Dublin Yearly Meetings was strengthening and encouraging to their brethren in this land.

J. W.

(To be continued.)

A Huge Snake Fighting a Seal.—I was paddling along in a small canoe on one of the numerous tributaries of the Rio Parana, looking for ducks when suddenly I heard behind me a fearful yell and a great splashing in the water. A bend in the river prevented me seeing what it was, but, thinking it was some tapirs or carpinches, I turned my canoe in order to get a shot at them, and saw a huge snake hanging from a tree with his body curled two or three times round an unfortunate seal. The water around them was foaming, and every now and then the seal and the fore part of the snake would disappear below the surface and remain below for several seconds, until in a moment the snake would twist his body into a sort of corkscrew shape and lift the seal right out of the water, and they would remain swinging in the air, only supported by the snake's tail.

At one time I saw a second seal jump clean out of water to catch hold of the snake, and all three remained in the air, for some time, when suddenly they dropped into the water again, the snake never losing his hold of the tree. As none of the constants seemed to be in the least affected by my near approach, I put my canoe within some ten or twelve yards of them, so as to have a good shot at the snake the next time they appeared; and I had scarcely laid down my paddle and caught up my gun when they came up again. I aimed at the snake where he had curled himself round the seal and gave him both barrels. The snake let go of the tree and fell with the whole length of his body into the water, splashing me all over, and then again the three disappeared. After about a minute both seals came up on the other side of the canoe, looking at me and shaking their heads in the same way as dogs do when they come out of water. They had both white breasts, and I noticed that one of them was bleeding from a wound in the neck, but whether from my shot or from a bite of the snake, I could not tell. The snake a little later crawled up the "baranca" out of the water, as if nothing was the matter with him, so I gave him one shot more, which made him disappear in the bushes, where I, being alone in the canoe, thought it more prudent not to follow him.

He was a very big one, for from the branch to which he had his tail attached down to the water was a distance of some fourteen feet, and when he fell his tail nearly reached my canoe.—*Buenos Ayres Standard.*

FOR "THE FRIEND."

How Ministers were Raised up Among the Early Friends.

Christopher Story was one of the early members of the Society of Friends, who lived in Cumberland, in the north of England, near the borders of Scotland. It was a part of the country where at that time (Christopher was born in 1648) wickedness of the grossest sort, theft, robbery and murder abounded.

The Journal which he kept of his life (which may be found in vol. 1, of Friends' Library) is written with great simplicity; and gives an interesting account of the work of the Lord in him, the gradual unfolding of counsel and guidance from the Divine Spirit in his heart; and of the manner in which it pleased the Head of the Church to raise up ministers of the Gospel from among these who met, mostly in silence, to worship Him. In his narrative C. Story says:

"As the Lord was pleased to get himself a name in the earth, in calling us to be a people to his praise, who were as the outcasts of the nation, he began to work in the hearts of a young generation, when but tender in age, of which I was one; and though we were short of having an eye unto the Lord in all our undertakings, yet He was not short in having an eye over us for good. I was brought up in a public-house, my father and mother keeping an inn where people of many sorts resorted, yet the Lord preserved me beyond many from the sin of drunkenness, and the excessive smoking of tobacco I never loved.

"Yet as I grew in years, I was drawn after the vain pastimes which are in the world; as shooting with guns and bows, and following them that played at cards, and I was successful in playing, and my mind as much taken with that foolish practice, as most things. For this the Lord gave me a sore rebuke in myself, that I was sensible of trouble of conscience for many days, and was consulting with myself, what to do, not knowing of one man who judged the thing unlawful to be done. The old enemy appeared in my heart and brought a fair pretence with him, viz: that I might safely play at any time except the first-days at night, being a practice amongst us; and this gave me a little ease for a time; and I observed it. Then a fear entered my mind, that I durst not join with young people in their pastimes, and light began more to appear, and I saw we must be more religious than formerly; but the enemy would suggest to me that I was young and might live long, and it was time enough for me to be religious when I was married; and here I rested for some years, though often under trouble, believing I must live more godly, or otherwise I could not enter God's kingdom.

"When I was about eighteen years of age, my father and mother were desirous I should marry a young woman whose parents were of good repute in the country; and a weighty concern it was to me, and under the sense thereof, I prayed to the Lord in the night season, 'that if it were for our good, it might come to pass, and if not, it might not be so.' About this time, my heart came to be more and more opened, and I saw the danger of poverty and riches, and at a certain time, I retired, and the saying of the wise man came into my remembrance, and I prayed to the Lord to give me neither poverty nor riches, for I saw there was danger on both hands; and though I desired to keep company with those that were most sober, yet was I often under great affliction of mind.

"When I was at any time with the profane, if I partook of their joy at night, sorrow came in the morning. While I remained here, a great fever being in the country, and many dying, when I entered my house, and my wife was taken ill of it, I was persuaded to go to a woman who was blind, and pretended she could do great things. I inquired of her if I should take the distemper, she being one who undertook to tell what would come to pass: She told me, no, and I believed her, but when the Lord visited me with sickness, my disobedience on the one hand, and my believing her, which I looked upon as distrusting God, on the other, brought such horror and trouble of mind upon me, that I concluded, if I should then die, there were no hopes of mercy for me. My mother being in great trouble for me, would have comforted me with this, that I exceeded others in my life and conversation, but I could not believe there was any favor at the Lord's hand for me, except He should restore me to my health, and I became a new man. I saw I was not to regard soothsayers, or such as pretend to tell things to come, they themselves being out of the life of righteousness. Under this great distress and anguish of soul I cried nightly unto the Lord, that He would spare me yet a while; and that saying came into my mind, the prayer of the righteous availeth much; and knowing not but the priest might be one of them whom the Lord would hear, I had a mind he should come. When he came, he wanted his book, and could not pray, so that I was disappointed, but may say though all other helps failed, yet the Lord never failed, for He was pleased to restore me, and when restored, included my heart to seek after Him.

"I thought it my duty often to pray to the Lord, in secret places, to show me his way wherein I should walk, for I was satisfied I was out of the way; because of the trouble of mind I was under. As prayer seemed to me to be a duty, I thought it my place to wait upon the Lord, to feel what would open upon my mind to supplicate the Lord for, and not to pray in form; but having little answer of well-done from the Lord, I grew weary, and became more and more formal in my prayers, and my distress increased. Then I began to doubt that I had not been so diligent as I should have been in my devotion in the time of our worship, though I frequently went; so I resolved for the time to come, I would go to church with the first, and hear and observe every word the priest said; but I saw all that I could do, signified little; and I was not to sing, neither durst I open my mouth as others did, but sat solitary. Then the Lord showed me the efficacy of the priest's ministry. He could tell what sin was, and what would be the reward of the righteous; and what would be the reward of the wicked; but how to come out of sin, which was the thing I wanted to know, they left me at a loss, and this lessened their esteem in my view. I read much of the Scriptures and could talk of them."

"A meeting being appointed about a mile off, there was full notice of it, to which many went; and Robert Barclay going northward, hearing of the meeting, came and spoke the word of truth excellently to the people, so that I could have said amen to several things; and amongst the rest he said, 'If a man could begin at Genesis, and repeat all the Scriptures to the end of Revelations, and was not led and guided by a measure of that spirit by which the Scriptures were given forth, it would avail him nothing.' Then I saw, all that I had, availed nothing."

"Being come home, and under great exercise

FOR "THE FRIEND."

A Visit to the Cornwall Iron Mines of Lebanon County, Pa.

(Continued from page 252.)

In the preceding number of this article, the beds of Red Sandstone were said to be from 2000 to 5000 feet in thickness. Enormous as this amount of material appears to be, it is but a small portion of the whole mass of rocks, whose layers overlie the older rocks which may be regarded as the foundation on which they are built. Professor Dana says the thickness of these newer rocks in New York State is about 13,000 feet, while in Pennsylvania it is at least 40,000, and in Virginia still thicker. All of these must have been derived from the wearing down of older rocks, the spreading of their material over the bottom of the primeval ocean, and the subsequent consolidation of this into rocky strata by the action of heat, pressure, and chemical attractions. It may give some impression of the magnitude of the changes which have been effected on the earth's surface, to make it a home for the successive tribes of living beings that inhabited it, if we reflect that miles in thickness of its former crust have been thus, as it were, taken to pieces and rebuilt so as to form the edifice in which we now live!

Cornwall is at the northern limit of the Red Sandstone, which here rises into a ridge of about 1100 feet in height, called the South Mountain, being the southern border of the great Lebanon Valley, which is underlain with limestone. Along the line of junction of the sandstone and limestone, a fissure has been made in the earth's crust at some remote period, through which has poured up a mass of molten rock, forming a trap dyke, of 100 or more feet in thickness. The disturbing force which caused this fissure, appears to have lifted some of the underlying strata, instead of breaking directly through them, and thus made a way for the escape of the trap, in a curve to the north of the sandstone, enclosing a portion of the limestone between the trap and the sandstone. It is believed by geologists that the existence of the wall of trap, has kept the iron which was diffused through the strata thus enclosed from being scattered, while the lime and other ingredients were being slowly leached out, dissolved by water and removed through a long series of ages. However it may be accounted for, we have here three hills of iron-ore, resting against the trap on the northern side, and extending downward an unknown depth, but at least several hundred feet in thickness. No subterranean excavations are here required, but the ore, thrown out from the solid mass by explosions of dynamite, is at once loaded into cars, on the railroad tracks which penetrate the workings, and transported to the different furnaces where the iron is extracted from it.

It is truly a wonderful deposit, which has been worked at intervals for nearly 150 years, and is not likely to be exhausted during the lifetime of the present owners. Up to the first of the year 1886, more than 7,300,000 tons of ore had been removed from it. The substantial and even impressive character of the buildings and other improvements connected with the property, show that it has been a source of abundant wealth to those to whom it belongs. These are mostly members of the Coleman family, who, we are told own more than 10,000 acres of land in that section of country, a part of a much larger tract formerly in their possession. When we left the neighborhood in the evening, it was in company with a friend, who drove us about 5 miles south-

down. When the Friends perceived what we aimed at, Thomas Carleton, being pretty quick and expert in answering questions, called for a Bible, and did not so much argue with us, as endeavor to let us see what the Scripture said, putting us gently by, for we were much for arguing; we parted pretty well satisfied. Next morning the Friends going to Carlisle, Christopher Taylor and I went with them; and we asked many things, which they answered to our satisfaction. In our going along a heavenly melodious song sounded through Thomas Langhorn, and we were affected with it. After we had parted, in our return home we said one to another, 'If there be saints upon earth, those men are two of them.'

"Friends hearing of these things, J. Wilkinson appointed another meeting in two or three weeks after; and coming to the place, it being a wet season, Christopher Taylor was desired that it might be on his ground, on a little hill called Mezzes Hill, (now Friends burying-ground,) which he readily granted. There was a very glorious meeting, and many were convinced.

"That night Christopher Taylor invited John Wilkinson to his house; and he, his wife, and his brother Andrew, all received the truth in the love of it, became worthy Friends, and died in the faith."

(To be concluded.)

It is always the laziest man who shrinks most from any expenditure of time. He who is a hard worker, and who is hard worked, is readiest to take whatever time is necessary for that which he has to do—and he will find the time. This shows itself in little things as in larger. A lazy man finds a few lines quoted as from Tennyson or Whittier in an editorial he is reading. If he is unfamiliar with those lines, and would like to locate them, he is quite likely to write a letter to the editor, asking him to inform him by mail, or through the columns of his paper, in which of the poet's writings those lines are to be found. A busy man, on the other hand, especially if he have the scholarly instinct,—will, under such circumstances go through the entire writings of the poet named line by line, if need be, in order to locate the quotation. And a similar difference will show itself in the lazy man and the busy one in every direction of research or other activity. A lazy man is too lazy to use his time—even when he wants to use it. A busy man is too busy to neglect the right use of his time—for whatever that time is needed.—S. S. Times.

Suffering.—Those of us who have lost little children feel a prompting within us to speak a word of comfort to every parent who is passing through a similar experience. We cannot do good to others save at a cost to ourselves, and our own afflictions are the price we pay for our ability to sympathize. He who would be a helper must first be a sufferer. He who would be a saviour must somewhere and somehow have been upon a cross; and we cannot have the highest happiness of life in succoring others without tasting the cup which Jesus drank, and submitting to the baptism wherewith He was baptized. Every real Barnabas (Son of Consolation) must pass by his vocation through seasons of personal sorrow, and so again we see that it is true that "by these things men live." The most comforting of David's psalms were pressed out of him by suffering, and if Paul had not had his thorn in the flesh we had missed much of that tenderness which quivers in so many of his letters.—W. M. Taylor, D. D.

what to do, I searched the Scriptures—read much and wanted to be informed concerning many things that Friends held. In this time Friends appointed another meeting about a quarter of a mile from my abode, and I had many serious thoughts what to do. At last I resolved I would go to the meeting, and get near the public Friends, and hear every word they said; and if I liked them well, I would invite them to my house on purpose to discourse with them privately about several things. While I was under this resolution, one who had professed truth but had proved unfaithful, coming to work at my house, we presently began to discourse about religion, though I took little notice of him, because of his miscarriages; but when he perceived I was dissatisfied with the priests and their doctrine, he went away home, and brought me a little book written by Francis Howgill, the title of which was 'Mystery, Babylon, the Mother of Harlots.' The reading of this, satisfied me much, and drew me nearer in my mind to Friends; and I began to say to him 'Dost thou think if I should invite your friends to my house they would come with me?' He answered, 'If I did so, I would do well; and further added, that they who gave but a cup of cold water in the name of a disciple, should not lose their reward.' The meeting day came, and many people flocked to the meeting; and I was diligent to hear the testimony of truth.

"Thomas Carleton, a man of a sweet countenance (as I remember) spake concerning the spirit of truth being come that convinceth the world of sin, and that this if taken heed unto, would lead out of all sin; of which words I was heartily glad, for I said in myself, 'I have felt that from a child which condemned me for sin; and if this be sufficient to lead out of sin, it is what I have long wanted.' The meeting parted, and I went home toward my meeting place, and all people going about two hundred yards from the place where the meeting was held, it suddenly came into my mind what I had been thinking of the week before. I stood still to consider what to do; and began to reason that they were strangers to me, and it was not safe to meddle with them. I began to go homeward, and had gone but a little way, when I met a Friend whom I knew; and he asked me about the meeting; and speaking of my satisfaction, I asked him, if he thought the Friends (who were Thomas Carleton and Thomas Langhorn) would go home with me, for the thing was pressing upon my mind. Said he, 'Shall I tell them? I said he might. After he was gone, I began to reason, and was much afraid I had missed my way, but thought I would stand still to see what they would do. When they came near a mighty dread seized upon me, and I had much ado to abstain from shaking and trembling, that I abhorred myself. But when the Friends came and took me by the hand, and asked me if I was willing they should go with me, and I replied, I was, my strength came to me again; and going home to my house, the report spread abroad I was turned Quaker, and the Quakers came to my house. In a few hours, it being in the winter, and the nights about the longest, many neighbors came to hear and see; and the house being pretty well filled, Thomas Carleton and Thomas Langhorn advised me to speak to the people to sit down, and we would have a meeting. I did so, and we had a meeting; and afterward several of us, Christopher Taylor, William Graham of Sikeside, and Francis Story, who was clerk and schoolmaster, with some others, went to an upper room, and having written some queries, came

wards to his dwelling. The whole distance was over the Coleman property, the southern limit of which lay about 2 miles south of our stopping place for the night.

On reaching Cornwall in the morning, we were met at the station by one of the persons connected with this great establishment, who kindly conveyed us in his carriage to some of the interesting points. First, we visited the Bird Coleman Furnace, near by. This has two furnaces, one of which at this time was being repaired, which gave us an opportunity of learning more about its construction. The bottom is made of thick blocks of red sandstone from the neighboring hills. For this purpose they prefer the coarser varieties—those containing many pebbles, which are said to endure the action of the fire and melted iron better than the finer grained sand-stones. The furnace is circular, and its outer casing is a structure of wrought iron. Inside, and against this, is built a wall several feet thick of fire-brick; the space left in the middle is that in which the iron-ore, limestone, and coke are thrown from the top, and where the melting is performed.

The magnitude of the scale on which the operations were performed added to the interest. It was a hot blast furnace, and the so-called stoves in which the ore was heated before being driven into the furnace, were huge circular iron towers, whose object would be a very puzzling problem to one unfamiliar with such operations. When both fires are going, the furnace consumes daily, about 300 tons of ore, 75 tons of limestone, and 200 tons of coke, and produces about 850 tons of iron per week.

The Cornwall ore is a magnetic ore, and averages nearly one-half its weight of pure iron. This is combined with oxygen, and mixed with sulphur and other impurities, one of the principal of which are Silica (or quartz). In order to remove the sulphur, the ore is roasted in kilns before being put into the furnace; and to get rid of the silica, limestone is added. For although silica cannot be melted by itself, yet when heated in contact with lime, the two unite, and form a compound which is more easily melted. Under the tremendous heat produced by the burning of the coke in these great furnaces, the iron is separated from most of its impurities, trickles down in a liquid state, and accumulates on the stone floor of the furnace. The melted quartz, lime and other impurities also trickles down, and being lighter, floats as a scum on the top of the melted iron. Every six hours, openings are made on the side near the bottom, by removing the stoppers of clay with which the holes were filled. The scum (which forms the *slag* or refuse) is first allowed to pour forth. We watched the process with much interest, and as the fiery stream flowed along the channel made for it, into the iron car stationed on a track to receive it, it reminded me of the descriptions given by eyewitnesses of the flow of lava in volcanic eruptions—though on a very small scale in comparison. Our intelligent companion remarked that if any of the melted iron should be permitted to escape with the slag, it would at once eat a hole through the iron of the receiving car. And surely enough, before the process was ended, we saw a stream of molten matter pouring out on the ground through a hole just made in the bottom of the car.

After the slag had been removed, the melted iron was drawn off through lower openings in the furnace. It poured along in red-hot waves along channels made in moulding sand, gradually filling up a series of small troughs in the

sand made to receive it. As soon as it becomes solid enough to bear the weight of a man, but while still heated to redness, a little sand is sprinkled over it; and men with heavy sledge-hammers go over the surface and break the iron into pieces of convenient size to handle. While hot, this is easily done, because this iron is then brittle, being what iron men call "hot short;" but if it were allowed to cool undisturbed, it would be a very difficult and troublesome task to break and remove it.

The superintendent of the furnace kindly gave me a piece of the iron broken out of the middle of one of these bars (which are called *pigs*), and it showed very beautifully the crystalline structure which the iron assumed in becoming solid. The iron made at this furnace is all sold to manufacturers of steel by the Bessemer process.

THE WAY OVER.

SELECTED.

BY JAMES HICKHAM.

Wife was the river; the tide ran fast,
And dim lay the other shore;
But the shepherd took a lamb in his breast,
And so passed on before.
The sheep stood trembling; he called in vain
Till the lamb in his bosom cried.
Then the white ewe answered, and followed fain,
And came to the other side.

My Shepherd hath taken my lamb away—
But I know it is not forever.
"Come, follow! come, follow!" I hear him say;
"It is beautiful over the river."
Aye, beautiful where my lamb has gone,
Thou Shepherd tender and wise.
This is thy loving way: lead on
To the pastures of the skies.

—Sunday School Times.

A STORY OF WINGS.

FROM THE "ANIMAL WORLD."

Just now there is again a deplorable tendency towards the use of natural wings, and whole birds, in millinery.

My Dear,
The wife of the vicar was young and fair:
The simplest hat on her braided hair
Borrowed such charm from her lovely face
That it seemed a thing of artistic grace
But, like many another as kind and good,
She fancied that Fashion understood
The how and the whereabout to wear,
And trusted to *mollie* and milliner,
Instead of her own sweet womanly mind,
Which could but choose the fit and refined.

So one day she took from its wraps with care,
A wondrous erection just sent to her,
In which was set one beautiful thing,
And that was a *bonnet*'s exquisite wing.
She was bound for a stylish afternoon tea,
But first she must visit her nursery,
Where the baby crowed with delight to touch
The ornament which he fain would clutch;
And Harold declared with a wall halloo
That mother was just like a cockatoo;
While Nelly's incontinent womanhood
Pondered the matter in thoughtful mood.

But the lady had an hour to spend
Before she reached the house of her friend,
To her mother's meeting she bent her way,
Though rather shy of her dress that day.
She met each one with kind look and word,
And that was a *bonnet*'s troubles heard;
And she made the time pass pleasantly
With her friendly talk and her sympathy.
Before they left, she ventured to say
How it grieved her to see their boys at play,
Stoning the thrushes, now weak with cold,
And with winter snows under their lead,
And then she spoke of God's loving care
For the creatures. He made, the birds of the air;
How should their children grow good and kind,
While in cruel deeds they could pleasure find?

Good-bye was said. They went one by one,
And the lady thought herself there alone,
As making up her accounts she sat,—
When she felt a sudden twitch at her hat;
It came again, and now her hair
While quicker and louder throbbled her heart,
And then she suddenly was aware
Of a wingless kittiwake standing there
Upon the table. It silence broke,
And (wonder of wonders!) thus it spoke:—

"That wing is mine—you'th wear to-day
The thing that was stolen from me away,
Well I remember the morning fair,
When I skimmed the waves and I cleaved the air,
My mate and I, as we sought to find
Food for the little ones left behind,
When peal on peal broke like thunder's sound,
And soon sea and rock and sands around
Were strewn with the fair birds' dying and dead.
My mate fell first—then, ere life had fled,
The wings were wrenched from my bleeding breast,
And I was flung on the willow's crest
I once had joy to tread, but now
A quivering insect, I saw below,
Hearing my hungry birdlings' cry,
Worse than my own bare agony.
And you are a mother! well, that is good:
What do you think of my starving brood?
The woe'd nestlings that I teach that wing
Were woe'd so cruel to cling,
A nice becoming plume for you—
You who can pity the thrushes, too?
Murder and robbery in one day—
'T yet you'll wear that wing when in church you pray!"

And the poor bird, giving its anger vent,
Waxed so indignant and eloquent,
That it was with almost a shriek it spoke,
And with its wall the lady awoke.

Her eyes were dim for the mother-bird's woe;
The room was dark, and the fire was low;
She was too late to see the roomy tea,
So she gathered her looks up tremblingly,
And went a back way like a guilty thing,
She was so ashamed of that kittiwake's wing.

In her happy home the fire shone bright,
The room was full of a pleasant light,
But warmer and brighter and yet more fair
The welcome bird came to her;
But even that could not charm away
The troubled look on her face that lay,
And she could not find a moment's rest
Till the strange, weird story was confessed,
And she asked with tears in her eyes of blue,
If the phantom bird had told her true?
The vicar looked grave while he stroked her hair,
And thought she never had seemed so fair,
As he answered her that the loving wing
Was, spite of its beauty, a cursed thing.
"You will never have another," said he,
"I will never wear this again," sobbed she,
"Give it to Nell for her doll," said he;
"Nay, it is stained with blood," sighed she,
"Then we will burn it to-morrow," said he;
"No, we will burn it to-night," cried she.

—Jane Budget.

The condition of some who pretend to follow Christ, yet are afar off, affects my spirit: for they know little of any of these enjoyments, and hardly eat so much as the crumbs that fall from Christ's table, and seem to satisfy themselves with a mere conviction of the Truth, or, at best, with a bare confession to it. Who taking up with a formal going to meetings and hearing what others have to say, of the work and goodness of God in and to them, they shun the daily cross of Christ: whereby they affect daily to their earthly wills and vain affections, and overcome the world, the flesh, and the devil. Oh! these are still their own, and not the Lord's; and gird themselves, and go whither, and do what they list! For which cause they are lean, barren, and unfruitful to God and to their own souls; and worship Him in the form only, and not the power of godliness; such must needs be weak in faith, ready to slip and start aside at every windy doctrine, or sensual temptation."—W. Penn.

For "THE FRIEND."

The Blessing of Enduring Temptation.

It appears that ever since man came from the hands of his beneficent Creator, there was a consistent spirit ready and willing to tempt him, and make him believe a lie; and that the two spirits are contrary, the one to the other. When one preferred to listen to and to obey the teachings of the deceiver he took upon himself the evil nature; so we are now, by nature, the children of wrath, and shall remain to be until the wrathful, or evil fallen nature is overcome and sin by the assistance of Him whose power is over all the powers of the enemy. As sin and darkness and spiritual death entered the heart of man through the disobedience of the first Adam; even so now spiritual life and light are stored or received by obedience to Christ the second Adam, who is a quickening Spirit, to quicken and make alive that which was lost in the fall.

As our first parents lost the blessings of spiritual life, and of a paradise below, by enduring temptation; so now, "blessed is the man that endureth temptation," for when he is sufficiently tried, so as to be approved, he shall receive the crown of life which the Lord has promised to them that love Him. But we have not to be tried, not in part, but in all its fullness; until we are "approved" as the new version is. We must be dipped again and again in the laver of regeneration; or seven times, if need be, in Jordan—the river of judgment—before leprosy of sin is removed. Now seven denotes a full number, or until we are "purified did made white and tried."

We must abide the day of the Lord's coming, when He comes as a refiner and purifier. And we must endure temptations or trials in whatever way they are permitted to come upon us, or, "Whom the Lord loveth He chasteneth and scourgeth every son whom He receiveth." It is for us to say what kind of a rod He shall use. But we must admit, that all the multiplied afflictions and temptations which beset us through life, and which seem to come from the enemy of ill good, are only by Divine permission for our good. For when Christ was personally on earth, it seems that the devils could do so much as to enter the swine without his permit, and to give power to Satan now is a limited power; and we must resist him steadfast in the faith; and earn to endure hardness as good soldiers. For, "Blessed is the man that endureth temptation."

Our first parents failed to endure temptation, and to overcome the tempter. So they failed of the blessings of Heaven, and lost the paradise of Eden. And here is where we, the fallen sons of Adam fall, and will fail of the blessings of Heaven, while we listen to the voice of the tempter; instead of patiently enduring temptation and trials. While we are disobedient to the inspeaking voice of the Lord, we shall remain in our fallen nature, and be led by the deceiver, because we cannot serve God and mammon at the same time.

But if we patiently endure the temptations, trials and tribulations of various kinds that daily come upon us, until we overcome the tempter, then the promises are great and glorious. For Christ says, "To him that overcometh will I grant to sit with me on my throne, even as I overcome and am set down with my Father in his throne." And again, "To him that overcometh will I give to eat of the tree of life, which is in the paradise of God." And to such He says, "Because thou hast kept the word of my pa-

tience, I also will keep thee from the hour of temptation which shall come upon all the world, to try them that dwell upon the earth." So, all that we have to try; but such as endure temptations, and keep the word of his patience, and overcome, He promises to keep from falling, and to make them as pillars in the temple of God, that shall go no more out.

We must expect to have temptations, tribulations and trials; for Christ said to his disciples: "In this world ye shall have tribulations, but be of good cheer, I have overcome the world." And if we keep the word of his patience, and endure unto the end, we may expect the crown. We are told, that it is through much tribulation that we enter the kingdom of Heaven; but would it not be far better for us to strive to keep the word of the Lord's patience, and endure the temptations and trials that come upon us, than to neglect, or miss the great salvation, which has been prepared for the righteous from the foundation of the world? But we have to contend earnestly for the faith; we have to endure a great fight of afflictions; we have to strive to enter in at the strait gate; for Christ says, "Many shall seek to enter in, and shall not be able." So it takes something deeper and more heart-changing than a mere seeking. It takes a conflict, a warfare, to gain a victory over evil. We may seek the living among the dead, but never find it. We may seek to keep up the form of Godliness without the power, or after the power has left us. We may seek the praise of men, more than the praise of God. We may seek to enter in by good works, and by hearing much preaching and singing, and many prayers, and not be able. We may talk and write and preach and pray and sing about religion, without its coming from the heartfelt presence of the Lord.

Christ says, "Without me ye can do nothing." Outdoor performances do not prove that we have overcome the world, or the tempter; for he would as willingly lead astray under the guise of religion, as in any other way. So all that is brought forth under the promptings of his spirit amounts to nothing more than sounding brass or a tinkling cymbal, which may please the outward ear, but not profit the people. So we have to watch and pray continually that we enter not into temptation, in our worship or anywhere else. For if the spirit is at times made willing to serve the Lord, we find that the flesh is weak. And it is through the fleshly propensities that the enemy more often enters. So here is where we should keep up the strongest guard, lest we fail to endure the temptations, and so miss the blessing. It is said that when the devil tempted our Saviour, He resisted him, saying, "Get thee hence, Satan," and the devil left Him, and angels came and ministered unto Him. So I believe it will be with us, comparatively speaking. If we resist him, he will flee from us, for a season at any rate; and we shall witness something like the comforting ministrations of angels, as a reward for our obedience in enduring temptation, and overcoming the tempter.

(To be concluded.)

THE Duke of Wellington says, "Men who have nice notions of religion, have no business to be soldiers."

Sir Charles Napier, "To overcome all feelings of religion is generally the means of making a warrior."

Marchand, "War is a profession by which man cannot live honorably; an employment by which the soldier, if he would reap any profit, is obliged to be false, rapacious, and cruel."

Some Notices of Isaac Horner.

Isaac Horner was born in Yorkshire, England, in 1678, and in 1683 came to America with his parents, and settled in New Jersey, within the limits of Chesterfield Monthly Meeting.

In the memorial of him, printed in a collection of memorials, Philadelphia, 1787, we have the only notice which is extant of his early days, in these words: "After his father's death it pleased the Lord to visit him with his blessed truth in his young years, which he received in the love of it, and being obedient thereto, as he grew in years he grew in grace and in the saving knowledge thereof, whereby he became a serviceable member among Friends, both as an overseer and elder."

All the traditional accounts of Isaac Horner give the impression of a strong character, firm in his adherence to his own convictions. He was, as it appears, the *justus tenaxque propostus virum* of the community in which he lived. Physically he was robust, and with a voice so powerful that it is said he could be distinctly heard across the Delaware River, at his residence, where the river is some three-quarters of a mile wide. He inherited a number of slaves, the property of his oldest brother. The lawfulness of holding negroes in bondage was then questioned by few. Isaac Horner became convinced that it was wrong, and accordingly about the year 1745, he set all his slaves free. He was, it is said, the first man in the province of New Jersey to emancipate his slaves from religious convictions. I remember grandfather telling us on one occasion, Benjamin Lay, one of the earliest opponents of slavery, whose eccentricities unapparently are all more remembered than his virtues, came to his father's farm, but refused to enter the gate until he had ascertained that the house was not polluted by slaveholding. Satisfied on this point he entered and was kindly received. —*Memoirs of Coates' Family.*

Natural History, Science, &c.

"The Case of Mr. Brown."—Under this heading, *The Christian Advocate* describes a case, which, whether the person's name was Brown or not, gives the history of many who have prematurely broken down.

"He was a very bright boy, and easily carried off the honors of his class at the academy, and afterward at college and in the school where he studied his profession. During these years he adhered to the simple habits formed in his boyhood, except that he learned to smoke cigars while in college, and occasionally to indulge in night suppers given by the secret society to which he belonged. Having a generous, genial nature, ever ready with witicism, sympathy and aid, he was greatly sought in society. He could sit up all night and as fresh the next day as though he had spent the night in sleep. Late studies, big dinners, hard work, incessant smoking, seemed to make no impression on him. He had a magnificent constitution. He was a magnificent man.

"Into the work of his profession he threw himself with all his might, and early became one of its honored members. His opinions were quoted as authoritative. Money flowed in upon him, and as the years passed on he became connected with large professional enterprises. He was known as a temperate man, but not as a total abstainer. The finer kinds of wine were always found on his dinner table, and the finest brands of cigars were almost all the time between his lips.

"As the years passed on, incessant work, incessant smoking, and heavy dinners, which could not be digested easily without the aid of wine, began to tell on him. The fires which he kept burning so hotly without intermission began to consume the furnace walls inclosing them. Some slight provoking cause laid him upon a sick-bed, from which, after much pain, he rose and continued as before to burn his candle at both ends. The tobacco habit was confirmed and could not be broken, though physicians warned him that nicotine was slowly but surely killing him. The habit of generous living could not be given up, and there were so many pairs of little shoes to buy that the work must still go on undiminished."

"And so the vitality that had seemed inexhaustible was gradually expended, until, after repeated illnesses, recoveries and relapses, it seemed nearly all gone. Medical skill could not restore it. The love of wife and children and friends could not arouse wasted energies. With Samson he said, 'I will go out as at other times before and shake myself.' But his strength was departed from him."

"And now in the prime of life, in the zenith of his days, with his life-work but half done, he has fallen a victim, not to hard work, for many men work as hard as he has, but to over-stimulation by high living and tobacco."

"He that hath ears to hear, let him hear."

Flowering Plants.—The Flora of Europe embraces about 10,000 species. India has about 15,000. The British possessions in North America, though with an area nearly as large as Europe, has only about 5,000 species. One of the richest floras is that of the Cape of Good Hope and Natal, which figures up about 10,000 species. Australia also is rich in species, about 10,000 being already known. In the West Indies and Guiana there are 4,000.

Floating Hospitals.—A proposition has been made by the *Lancet* in favor of fitting out ships for the accommodation of consumptive patients and convalescents generally, with the object in view of supplying these cases with the purest of sea-air. These vessels, it is recommended, will cruise within easy reach of such ports as will afford them fresh vegetables and water; and, according to the season, they will sail either in southern or northern waters.

Elephants at Large in Toulon.—Two circus elephants had a lively tramp around the environs of Toulon the other night. The colossal pachyderms were literally "out on the loose," for they had managed to burst their bonds of captivity after the circus was over, and while their keepers were soundly asleep they wobbled out on the main road of La Seyne. Finding themselves free, they began to flourish their trunks about vigorously and to skirmish for provender.

They first made an incursion into a series of market gardens, where they battered down walls and palings with the greatest alacrity, and proceeded promptly to root up and to stow away down their capacious mouths various specimens of vegetable product. They next wandered along by a trim villa, the grounds of which they entered, and demolished a conservatory therein. After this they strolled around a baker's shop at the entrance to the suburbs of La Seyne, being thereto attracted by the pleasant odor of the new bread. The head baker of the establishment was at his door and saw the dim colossal forms approaching him in the darkness. He retired inside with trepidation,

having well barred the door. The pachyderms came on and halted before the portals, which they began to batter with their trunks and to crush in with their bodies. Luckily for the baker, his door was a good stout one, so that he was able to await a possible catastrophe with comparative calmness. Finding the door too strong for them, the elephants broke a few windows in the bakery and took to the road again. Spying a gypsy encampment on their way, they reconnoitred it, knocked down a few of the huts and caused a terrible uproar in the nomadic settlement. The women and children shrieked, and the men turned out with pitchforks to do battle with the strange foes. By this time, however, the pachyderms were missed by their keepers, and the hue and cry had been raised. Before the gypsy encampment was completely demolished the circus people and the police came to the rescue, the elephants were secured, and were duly marched back to their enclosures.—*Paris Despatch to the London Daily Telegraph.*

Weak Ankles of Children.—Dr. D. Hayes Agnew, in an address before the American Surgical Association, states that in many cases the weak ankles of children and the consequent deformities of the feet are caused by the practice of putting tightly-laced boots on the children, which interfere with the proper development and strengthening of the muscles.

Fish Diet.—The late John P. Hale, Senator from New Hampshire, told the story that while he was once acting as counsel for a fugitive slave in Boston he was entertained in Theodore Parker's house, his host being intensely interested in the case. Parker believed that phosphorus was a stimulus to the brain, and as he was solicitous that the counsel in the case should be up to high-water mark in brain-power, he fed him on baked fish twice a day to supply the phosphorus needed. Hale hated fish, but was unable to escape from his inexorable master, and took submissively his doses of phosphorus until the trial ceased.

Protected by Lions.—Colonel Sparks Stabb, of the British army, is responsible for the following interesting story:

"In 1872 I made an expedition, partly for hunting purposes, northward from Kurumah, past Marico, on the edge of the desert, right up to Limpopo. Near the bank of the great river, in the wooded lion country, we fell in with some Boer travellers and hunters, forming a camp of four wagons and about twenty-two persons. They received us with great hospitality—tobacco, coffee, conversation—and at night, the usual measures having been taken to secure our stock from attack or dispersal, we slept the sleep of the 'elephant hunter'—a much sounder one, by the way, than that of the just, who are intolerably restless people at times.

"About twelve o'clock there was an alarm. A little child, a girl aged nine years, one of the daughters of the famous shot and lion-killer, Viljoen, was missing. A quiet search made for an hour or so had failed to find her in any of the tents or wagons, so it was surmised she was lost. Our encampment was three-quarters of a mile from the great river, a measure of security adopted because the actual bottoms and banks are, at night, positively infested with wild animals going down to drink, and by lions, which more readily find their prey at the watering places of their weaker neighbors. It was dark and no trail of the little girl could be found or followed through the woods or under the vast

forest trees of the river margin, while we beasts of all sorts could be heard passing a-repassing, roaring, moaning, yelling, and sometimes rushing in fright or screaming with pain and anger, as they devoured or fell victims one another. No hope was entertained of a poor child's safety.

"At the first blush of dawn, the Hottentots Kaffirs and Boers, all experienced trackers commenced a search for the child. I, with Captain Patterson, rode with the unfortunate father. Before the sun was an hour high a little one was found asleep in the centre of a clump of giant mimose, quite near the river. The sand through and around the mimos clump was marked everywhere with the spots of lions. How had the child escaped being devoured? When awakened by her father she expressed neither surprise nor any special pleasure, as one saved from death, but simply glad to see him, and that he had brought a horse, so that she could ride back to camp.

"Were you not afraid, Katrina? Were you not afraid to be alone here in such a place away from mother and me last night?"

"No, pa; the big dogs played with me, and were very good, and one of them lay here and kept me warm," said the innocent, unpromoted child, indicating the spot where truly was the mark of some vast recumbent form beside the left by herself, which hardly indented the sand.

"Now, there were no dogs' footmarks about there were no dogs in that part of the country nor kindly animals of any sort. The child had slept with, and been protected by animals.—*London News.*

Items.

Public Meetings in Philadelphia Yearly Meeting.—During the Second Month, there were a few meetings held by appointment of the Committees of the Yearly and Quarterly Meetings. One of these (on the 7th of Second Month) was at the house of the Free Methodists on Master Street, in the City of Philadelphia—a meeting to which those who attended it can revert as an instructive and comfortable opportunity. Two were in our own meeting-houses—at West Philadelphia, and at Haverford—and one at Greenwich, New Jersey. The last of these was followed by a religious visit to the families of the few members belonging to Greenwich Monthly Meeting.

Proposed Prohibition Amendment in Pennsylvania.—The question of Prohibition is now agitating Pennsylvania, and a just estimate of public opinion should be obtained at the approaching vote, soon to be given for or against the adoption of a prohibitory amendment to the constitution of the State. The question is pure and simple in its presentation, entirely devoid of political issues. To be sure it is owing to the action of a Republican legislature, that the opportunity of testing the will of the people is now afforded, but this is no reason why every one should not vote freely upon the merits of the issue itself.

The evils of rum drinking will not be dispated by any intelligent voter, and for ourselves we can see nothing unfair in prohibiting the manufacture and sale for use as a beverage, of so ruinous and deadly a poison. We believe that it is the duty of every one so thinking to stand up now and vote for the right as he holds it. Common honesty demands this much from every free and enlightened voter who properly estimates the responsibility which the suffrage places upon him.—*Episcopal Recorder.*

Liberal Statement in Italy.—"An event is just now transpiring that shows the spirit and power of the Liberal. From the parts of the kingdom they contributed to raise a fund for a monument to Giordano Bruno, who, on Feb. 17th, 1600, was burned as a heretic by the pope in the Campo Dei Fiori, for becoming a Protestant. They had a fine bronze

THE FRIEND.

THIRD MONTH 16, 1889.

It is interesting to notice in the services of the appointed ministers of the Gospel, how frequently, in different forms of expression, is brought to view the great doctrine that the redemption of man is the effect of the Light, Life, and Power of God, working on his heart and bringing him into conformity with the Divine will and purposes. It was the sense of this which made George Fox declare, "We are nothing, Christ is all." Man cannot change his own heart; it is Christ, the eternal Word, by whom all things were made, and who, in the appointed time, took upon him the form of man, so that he might cleanse us from our iniquities and set our affections on Heavenly things.

Our Saviour said to his followers, "No man can come unto me, except the Father which sent me draw him." Is there not an illustration of this truth to be found in the fact that many may read the account of the coming, and suffering and death of the Son of God, as recorded in the New Testament; and may listen to earnest appeals to come unto Christ; and yet no real change may be effected in them?—whatever impression may have been made soon passes away, and they relapse into their former condition. On the other hand, when the convicting power of Grace seizes upon the soul, the man is awakened from his condition of careless unconcern; he is made to feel that he has sinned, and that he needs forgiveness and mercy. His cry is that of the poor publican,—"God be merciful to me a sinner."

It is not enough to read the testimony of the Bible as to Christ, and accept its teachings as truth. This is not that "coming to Christ" which carries with it the promise of salvation. We must receive Him as He manifests himself in our souls, reproving sin, leading in the way of righteousness, baptizing with His Spirit, and turning our thoughts and affections from earth to Heaven. As we obediently follow his guidance in this highway of holiness, we will feel at every step that our dependence must be placed on Him and His Power, and thus the true disciple will be preserved in that humble and contrite state of mind in which he is often favored with the feeling of the Divine presence and support. He will partake of that sweet peace which our Saviour gives to his followers; and amid the trials of time he will be cheered with the hope of rest and joy in the world to come.

Such, in general terms has appeared to be the line of doctrine set forth in several of the public meetings during the past few months within the limits of Philadelphia Yearly Meeting; and it commends itself as sound and edifying to those who have submitted to the operations of Divine Grace on themselves.

Among the suggestions which recently have reached the Editor of THE FRIEND, is the query,—"Would it not be well to give Scripture quotations, and not refer to the writings of 'early Friends?' in supporting the views advanced in the columns of our paper."

We think it probable that the friend who proposed this question did not fully consider what class of readers the articles referred to were designed to reach. In opposing the changes which have been latterly introduced in some places, in the manner of conducting our meet-

ings for worship, and in other respects, the appeals of THE FRIEND have been directed to those who are members of our religious Society, and who profess to hold the same principles which were so nobly maintained by its founders. It is therefore a perfectly legitimate method of reasoning to quote from their approved writings, in order to show whether plans proposed are consistent with our principles, or otherwise.

Friends in the beginning very abundantly and convincingly showed the accordance of their views with the declarations of the Holy Scriptures; and this accordance has come to be so fully recognized amongst their successors, that, in reasoning with each other, we do not feel it needful to go behind their statements of doctrine, in order to show what are the principles of our Society. The case is similar to that of a mathematician, who, when he has once demonstrated the truth of a formula, or of a geometrical proposition, feels himself entirely at liberty to assume its correctness in his further investigations.

If the object of the articles referred to was to convince the judgment of those who do not admit the scriptural soundness and essential truth of the doctrines of Friends, it would be necessary, no doubt, to refer to some standard whose authority they were prepared to recognize, so that a common ground might be found on which arguments could be based.

Our friend, William P. Townsend, of West Chester, Pa., writes, that after receiving the article by Josiah W. Levels on "pool-selling" at agricultural fairs, he had sent a copy of it, with comments, to John W. Hickman, of the lower House of the Pennsylvania Legislature, and also to A. D. Harlan, of the Senate. He encloses also letters received from both of them, in reply to which it seems that there is some hope of the defeat of this effort to legalize gambling.

We think these letters (which follow) will interest our readers.

To Wm. P. Townsend.

Respected Friend: Thine of the 24th instant received. The proposed measure to authorize pool selling under certain conditions, now pending, is not likely to become a law. In my judgment the sentiment of the House is decidedly opposed to any such measure.

Respectfully,

JOHN W. HICKMAN.

To Wm. P. Townsend.

Dear Friend: Your kind letter received, and in reply would say, I am opposed to gambling in every form, and am not in favor of the bill you refer to, and will take pleasure in doing what I can to defeat the same, out of a sense of duty. Will be glad to have suggestions from you at any time.

With all kind wishes,

Yours very truly,

A. D. HARLAN.

SUMMARY OF EVENTS.

UNITED STATES.—The U. S. Senate remains in session for the purpose, mainly, of acting upon nominations made by President Harrison for important Government offices.

Among the measures which died with the Fifteenth Congress was the Oklahoma bill, which remained on the Senate calendar. Some of its provisions were, however, incorporated into the Indian Appropriation bill. No territorial government is established, but an area of land, embracing about six million acres, in the Indian Territory, is thrown open to settlement. The Land Forfeiture bill reached the stage of being re-

ated prepared, and applied to the City Council for permission to set it up on the spot where the heretic was burned. The pope used all his influence, and succeeded in defeating the measure. But the next session gave the Liberals a large majority, and at the first meeting of the new Council the permission was granted.

"On the 17th of next February a strange scene will be witnessed in the streets of Rome; the first of them to a heretic burned by the pope will be set up amid rejoicings that may be heard across the city. It is said that when the Council pronounced its sentence against Bruno, the brave and good man replied, 'You tremble more in pronouncing sentence than I do in receiving it.'"

Conference of Australasian Friends.—The course of people from all parts of Australasia expected to attend the International Exhibition in Melbourne, on the Centenary of the founding of New South Wales, led to the proposal to hold a conference of Friends at that time and place. Delegates were appointed from all of the Meetings. There were three Friends from Auckland and Lockhampton, who made journeys of 1500 miles to be present; some half-dozen others had come 500 miles from Sydney, nearly a dozen had come an almost equal journey from Adelaide; and half a dozen from Melbourne and Hobart.

The Conference commenced on Eleventh Month 8th, and was continued for four days. Among the subjects before it, was the advisability of establishing an organized meeting to embrace all the Meetings of Australasia, with supervisory powers. It is concluded that the time had not yet arrived when such a meeting would be effective in disciplining. The convening of members from such widely scattered meetings gave an opportunity for their becoming personally acquainted, and for an exchange of views, which seems to have been appreciated and enjoyed.

Hired Pastors.—The following information is clipped from *The Independent* of New York. A correspondent, referring to what we have published in this issue concerning a hired pastorate among our Friends, says:

"There are in New York State at least ten located pastors, who are wholly supported by Friends' churches: James C. Adams, Brooklynn; Ferrin Reynolds, Yorktown; S. Adelbert Wood, Milton; Wm. Bennett, Glass Falls; Chas. Sweet, Elba; Wm. L. Dean, Batavia; Mary S. Knowles, Farmingdale; Edward Mott, Macedonia; Barclay Jones, West ranch; Francis H. Pierce, Collins, and others who are being partially provided for by the churches to whom they minister. No official action regarding this object has been taken by the New York Yearly Meeting except to refer to the Representative meeting in consideration, where it has been debated for two years. But the subordinate meetings are settling the question by locating ministers as ways and means allow."

A Mormon Defeat.—At a late election in Ogden, a second city in Utah for size, there was a warm contest for the control of the city between the Mormon element, and those who were not members of that society. The result was the defeat of the Mormon candidates by a decided majority. The effect of this election will probably be practically to destroy the "Church" control in municipal affairs in Ogden; and it is to be hoped that it will hasten the day when Mormonism will cease to have any political influence.

High-Licence in Chicago.—The Chicago Daily Press made the following statements of the results of this system in that city:

1. High-Licence is a success as a revenue, but it an undisguised failure as a temperance measure.
2. It in no way checks the consumption of intoxicating liquors as a beverage.
3. Nor does it, in the least degree, lessen the evils crime from the use of alcoholic liquors.
4. It increases saloons and dens, the barrel houses, and a thieves' resorts are as bad and as frequent in this city to-day, after five years of High-Licence, as ever were.
5. "Call High-Licence what it is—an easy way raise a revenue from vice—but let there be an end indorsing it as a temperance or reform measure."

ported to the House by a conference report, but was not acted upon.

In America there are 62,000 women engaged in the cultivation of fruit, and they include some of the most successful of the California orchardists.

The bill to re-establish the prohibitory amendment has passed the Rhode Island House of Representatives by a vote of 41 to 25.

On the 8th instant, the Senate of New Jersey, by one majority, passed a bill repealing the Local Option law of last winter.

The Minnesota House of Representatives, by a vote of 59 to 39, after an all-day debate, last week refused to submit to the people an amendment in favor of prohibition of the liquor traffic.

Diphtheria, of a violent and malignant type, is prevailing at St. Petersburg, Franklin County, Pennsylvania, to such an extent that the Town Council has issued an ordinance closing all places of public worship, schools and singing classes, and forbidding the holding of any public meeting. St. Petersburg is an oil town, 24 miles from Oil City.

A box of eleven, crated by cigarette smoking, has been taken to an insane asylum in Orange Co., New York. He is considered a violent and dangerous maniac, and displays some of the symptoms peculiar to hypochondria.

Among the wonderful inventions of the present day are phonograph dolls, which really talk and sing and laugh and cry, as naturally as a human being. The talking is not merely saying "Papa," or "Mamma," like the old-fashioned mechanical dolls, but the repetition of long sentences in a perfectly natural tone of voice. Thomas Edison, the noted electrician, is the inventor. The phonographs are quite small, weighing only about a pound and a half apiece, and are wound up by means of a key placed in a small opening in the doll's back. They can be removed easily, and a new one inserted, and they will also work on other playthings, such as dogs that bark and ask plaintively for meat, cats that mew and call for milk, horses that neigh and demand to be fed with oats, besides sheep, roosters, cows, and other animals, each of which makes its own peculiar noise. These curiosities are not yet in the market, and can be seen only in Thomas Edison's laboratory.

Deaths in this city last week numbered 435, an increase of 10 over the previous week, and an increase of 56 compared with the corresponding period of last year. The chief causes were: Consumption, 105; pneumonia, 64; died of the heart, 21; typhoid fever, 18; of convulsions, 18; of old age, 18; of Bright's disease, 15; of debility, 15; of apoplexy, 13; of inflammation of the lungs, 11.

Markets, &c.—U. S. 12 1/2, 1081; 4s, reg, 129; coupon, 130; currency 6s, 143, a 131.

Cotton sold in a small way to spinners at 103 cts. per pound for middling uplands.

Wholesale sugars.—White granulated prices were 71 cts. for cubes, 73 cts. for powdered, 74 cts. for granulated, 7 cts. for crystal A, and 6 1/4 cts. for confectioners' A.

Feed.—Winter bar, choice, \$16 a \$16 25; do, fair to prime, \$15 25 a \$15 75; spring bar, \$14 75 a \$15.

Flour and Meal.—Western and Pennsylvania super, \$3.00 a \$5.50; do, do, do, \$2.50, \$3.50 a \$4.00; No. 2 winter family, \$4.00 a \$4.30; Pennsylvania family, \$4.70 a \$4.85; Pennsylvania roller process, 55 a 55 25; Ohio, clear, \$1.75 a \$5.00; do, straight, \$5.00 a \$8.25; Iowa, clear, \$1.75 a \$5.00; do, straight, \$5.00 a \$8.25; St. Louis and Southern Illinois, clear, \$4.75 a \$5.00; do, do, straight, \$5.00 a \$5.25; winter patent, fair to choice, \$5.50 a \$6.00; Minnesota, clear, \$4.25 a \$5.00; do, do, straight, \$5.25 a \$6.00; do, patent, \$6.40 a \$7.

Beef cattle.—Extra, 43 cts.; good, 4 a 41 cts.; medium, 31 a 33 cts.; common, 3 a 31 cts.

Sheep.—Extra, 54 a 6 cts.; good, 51 a 55 cts.; medium, 44 a 55 cts.; common, 4 a 43 cts.; culls, 3 a 31 cts.; Texas and Kansas sheep, 3 a 51 cts. Lambs, 43 a 45 cts.

Hogs.—Extra Chicago, 71 cts.; good Western, 7 cts. Milch cows were not much sought after, even at \$25 a \$50.

Fat cows were hard to dispose of, even at 2 a 3 cts. Fish market.—Five hundred codlin under 10 years of age, says the London *Weekly Times and Echo*, were taken into custody last year in London "drunk and incapable."

Last week has closed without the *Farmers' Commission*, or showing any intention to issue an annual report on the inquiry, embracing the outrageous *Parnell* letter forgeries.

Dr. Tanner, member of Parliament for Cork, who was arrested for violating the Crimes Act, has been tried at Tipperary. He was convicted and sentenced to three months' imprisonment without hard labor. He has appealed from the sentence.

In reference to the difficulties of the French Comptoir d'Escompte, or Cash Exchange, of Paris, correspondent of the *N. Y. World* says:—"The copper crisis has brought a new financial principle into play, which will probably be indorsed by America. It is that, in the case of an acute crisis threatening widespread financial ruin, the bank should stand by one another. It was felt that if the Comptoir d'Escompte stopped payment, even for a few hours, the worst consequences would ensue to other banks. On the proposal of Gustave Rothschild and Joubert, seconded by the Minister of Finance, the bankers agreed to be taken by the Comptoir d'Escompte for 100,000,000. None but the Bank of France could find such a sum of specie. So a syndicate was formed on the spot among the bankers present, and on their guarantee the \$20,000,000 were transferred from the vaults of the Bank of France to the Comptoir d'Escompte."

The French Cabinet has rescinded the decree of exile against the Duc d'Aumale.

The attempt to form a new Panama Canal Company has failed.

Emigration statistics published in Berlin show that 2,500,000 emigrants have left Germany since 1871, of which 2,000,000 have gone to America.

Belgrade, Third Month 6.—King Milan issued a decree this afternoon formally abdicating the throne of Servia in favor of his son Alexander, who will reign under the title of Alexander I. The decree appoints Ivan Kitchich and Generals Protitch and Belinarkovic, Regents, during the minority of Alexander, who is thirteen years old.

The *New York Times* says: "The abdication of King Milan is a natural sequence of his estrangement with Russia, which rendered his rule impossible. King Milan's turn arrived after that of Alexander, late Prince of Bulgaria. Konmania's turn may come soon."

Ancient Damascus is on the high road to becoming modernized. An imperial grant has been given for the construction of a street railway in the famous city. Gas also is to be introduced, and the inhabitants are eagerly awaiting the promised innovations, which will be immediately introduced. After making the road trip the box was opened at Adelaide, and the contents found to be in a most encouraging state of preservation. Eighty of the oranges were afterwards exhibited at a meeting of the Australian Bureau of Agriculture.

The presidents of the Orange Free State and the Transvaal are invited to hold a conference to discuss the advisability of forming a federal union of the two States.

Farmers in Southern Australia, who are anxious to find a market in England for their fruit, recently shipped a box of oranges to London, and asked that it be immediately returned. After making the round trip the box was opened at Adelaide, and the contents found to be in a most encouraging state of preservation. Eighty of the oranges were afterwards exhibited at a meeting of the Australian Bureau of Agriculture.

The gold excitement in Lower California, near Escondido, is increasing, and many people are flocking from San Diego to the fields. Work on the Cuyamaca, San Diego and Eastern Railroad is stopped, and the workmen are leaving to look for the mines. Steamers between San Diego and Escondido have doubled their rates, but the rush continues, and the stages are now running overland, carrying many persons direct to the mines.

About one thousand people are encamped at Tinjama, where the customs clearance is being made. The camp is put at 3,000, with 2,000 on route. Teams are paid \$50 a day to haul provisions in. Flour sold for \$50 a sack last week, and canned goods are said to be worth their weight in gold. The last stage was probably sooner or later exhausted.

The Canadian Government will soon adopt a policy of hostility toward immigration. All alien laborers, except British, will be prohibited from coming to Canada, and the funds which the Dominion Government has granted to assist immigration, amounting in the aggregate to a quarter of a million sterling, will be withdrawn.

A resident of Montreal has patented in the United States and Canada, a process for making ice, by which he claims a year's supply can be manufactured at a cost of seventy-five cents.

NOTICES.

WESTTOWN BOARDING SCHOOL.—The Committee having care of the institution, at a recent meeting, decided to change the time of vacation from Spring and Autumn to the Summer months; it changed to be made the present year. In order to effect this, it is concluded to open the School for the next Term, on Fourth Month 1st, instead of Fourth Month 30th, which will be the regular time of opening under the present arrangement, and to continue a session till Seventh Month 23rd, a period of three weeks, and for which short Term, the charge for Board and Tuition will be \$60.

Parents wishing to enter their children, will please make early application to

JONATHAN G. WILLIAMS, *Supr.*,
WESTTOWN P. O., Chester Co., Pa.

The Annual Meeting of the TRACT ASSOCIATION of FRIENDS will be held in the Committee-room of an A.M. Meeting-house, on Fourth-day evening, the 27th instant, at 7 1/2 o'clock.

Friends generally are invited to attend.

EDWARD MARIS,

Third Month, 1889. *Clerk.*

The Annual Meeting of the "FRIENDS' ASYLUM for the INSANE" will be held in the Committee-room of Arch Street Meeting-house, on Fourth-day, Third Month 20th, 1889, at 3 o'clock.

THOS. SCATTERGOOD, *Secretary.*

WESTTOWN BOARDING SCHOOL.—A Stated Meeting of the Committee on Admissions will be held in the Committee-room of Arch St. Sch., on Seventh-day, the 10th inst., at 10 A. M.

JOHN W. BIDDLE, *Clerk.*

DIED, on the 27th of Eleventh Month, 1888, at the residence of his parents, near Frankford, JAMES THORP, in the 25th year of his age, a member of Frankford Monthly Meeting of Friends.

—, Second Month 8th, 1889, at his residence Salem, Ohio, WILLIAM FISHER, in the 89th year of his age, a member and elder of Salem Monthly Meeting. In younger and middle life, this dear Friend was active and useful in matters concerning the affairs of the Church, and many important stations of propriety and acceptance to his friends. About 3 years ago he had a stroke, which impaired not only his health but also his faculties, especially his memory, from which he never fully recovered. But aware of the change that had overtaken him, he gave up the management of his affairs almost entirely to others, and became an instructive example of patience and cheerful submission to those who cared for him. For a number of years he continued to regularly attend meetings; and his becoming and weighty deportment thereon, his struggling to his friends. Though not in the frequent practice of referring to his religious exercises, his occasional pertinent remarks evinced that even in the shade of his mental power he was mindful of the need of a preparation for the day of his departure from this life.

His friend he spoke very feelingly of the importance of such a preparation. Not long before his death he expressed to the same friend a hope, in his own quiet language, that "He might be favored to hit the mark, and so, it should prove so, it would be of unnumbered mercy."

The following is a letter written to his friend, which he spoke very feelingly of the importance of such a preparation. Not long before his death he expressed to the same friend a hope, in his own quiet language, that "He might be favored to hit the mark, and so, it should prove so, it would be of unnumbered mercy."

FOR "THE FRIEND."

Historical Review of the Society of Friends.

(Continued from page 258.)

The principal points of doctrines involved in the controversy referred to in the preceding number of this article, were the Divinity and atonement of Christ; and the authority of the Holy Scriptures. It has sometimes seemed to the writer, that the rejection of the views formerly held by the Society of Friends on these subjects by Elias Hicks and others, arose from too much dependence on the power of human reason. The Old Testament furnishes abundant evidence of the goodness and mercy of our great Creator; and gives many assurances that the forgiveness of sin to those who will turn from evil is one of his attributes: "Let the wicked forsake his ways, and the unrighteous man his thoughts; and let him turn unto the Lord, and He will have mercy upon him, and to our God He will abundantly pardon," is but one of many similar passages. How easy is it then to reason, that if the Lord is thus kindly disposed towards his creatures, there was no need for anything more than that enlightening and guiding influence of his own Spirit which has, in a greater or lesser measure, been bestowed upon man in all ages; for as the Apostle declares, the saints of old "drank of that spiritual Rock that followed them, and that Rock was Christ." Hence those who trust to reason alone, may easily explain away many of the declarations of Scripture respecting the divinity and offices of our Saviour; and for want of exercising simple faith in the Divine promises and declarations, may fail to receive the fulness of the blessing which is designed to attend the Gospel of Christ.

It is very easy for the mind to become bewildered in pursuing such speculations, unless it is kept closely attentive to the illuminating power of the Light of Christ. For as the Apostle instructively declares—"What man knoweth the things of a man, save the spirit of a man, which is in him? even so the things of God knoweth no man, but the Spirit of God." And he further remarks, "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him; neither can he know them, because they are spiritually discerned." This was in accordance with the language of our Saviour himself, who, on one occasion, returned thanks unto God, because He had hidden the mysteries

of his kingdom from the "wise and prudent," and had revealed them unto babes, and it illustrates the importance of the advice given in an epistle issued in the year 1795, by the three Monthly Meetings in Philadelphia: "Here let us caution all to beware how they suffer their minds to be drawn away by the vain philosophy of this world, from the glorious, Divine, and most consolatory faith in our Lord Jesus Christ, the only Mediator and Redeemer."

Growing out of the separations of 1827 and 1828, there naturally arose disputes respecting the right of possession of trust funds belonging to the Society of Friends, and which in some cases were claimed by rival parties. Out of such a dispute arose the celebrated law case of Hendrickson and Decou, which was a trial before the courts of New Jersey to determine the legal ownership of a school fund belonging to Chesterfield Preparative Meeting. The amount of money at issue was comparatively insignificant; and the expenses of the suit were necessarily great, probably several times greater than the value of the fund; but the feeling that principles were involved in it produced a willingness to encounter the labor and cost. Several of the most prominent members of both bodies were produced as witnesses, and some of them examined at great length, not only as to the occurrences connected with the separation in Philadelphia Yearly Meeting in 1827, but also as to the doctrines which were involved. The record of their testimony, published in two octavo volumes, under the title of *Foster's Reports*, contains much interesting information, and many valuable statements of the Christian doctrines ever held by the Society of Friends. The witnesses for Orthodox Friends were especially full in their testimony as to questions of doctrine. Those on the other side avoided, in a general way, committing themselves on such subjects, taking the position that it was beyond the province of a secular court to inquire into matters of religion. This plea was set aside by Chief Justice Ewing, who stated in his decision—"While I utterly disclaim the idea that this court, or any court, or any human power, has the right to enforce a creed, or system of doctrine or belief, on any man, or to require him to assent to any prescribed system of doctrine, or to search out his belief for the purpose of restraining or punishing it in any temporal tribunal, I do most unqualifiedly assert and maintain the power and right of this court, and of every court in New Jersey, to ascertain by competent evidence, what are the religious principles of any man or set of men, when, as may frequently be the case, civil rights are thereon to depend, or thereby to be decided."

The decision of the court was in favor of Orthodox Friends, and this decision was concurred in by Associate Justice, Drake, who stated, in his opinion, that the testimony presented satisfied his mind, that the Society of Friends regarded the divinity and atonement of Jesus Christ, and the inspiration of the Scriptures as essential doctrines of religion; and that the Or-

thodox party insisted on these doctrines. But the other party protested against all creeds or public declarations of faith as an abridgement of Christian liberty, and their counsel in the argument of the case, "most explicitly, and may I add, most ingeniously and eloquently insisted, not only that these doctrines do not belong to the faith of Friends, but that they cannot; because they must interfere with another acknowledged fundamental principle of the Society—the guidance of the Light within." The decision of the Court was confirmed by the Court of Appeal.

At Philadelphia Yearly Meeting of 1828, a proposition was received from Ohio Yearly Meeting, that a conference of committees from the different Yearly Meetings in America should be held, to consider the condition of the Society of Friends. This was united with, and a committee appointed to represent it in the proposed Conference. Similar committees were appointed by all the American Yearly Meetings, and they met in Philadelphia in the summer of 1829. The result of their deliberations was the adoption of a "Testimony" setting forth the faith of the Society on several points of doctrine, especially those which had recently been called in question. This was submitted to the Yearly Meetings, united with by all of them, and published for general distribution in 1830; so that the doctrines contained in it may fairly be regarded as representing (so far as the statements go) the views of Friends of America at that time. This pamphlet was stereotyped, and is among those publications kept in stock at Friends' Book Store, No. 304 Arch Street, Philadelphia, where copies of it may be gratuitously obtained by any who desire to examine its contents.

A proposition had also been before this Conference looking towards a closer agreement of the Rules of Discipline of the different Yearly Meetings; but way did not open to take any step in that direction. Similar proposals have been made at several times since that period, but have never met with much success; so that the position of the Yearly Meetings as independent bodies, so far as respects their internal affairs, is now well recognized among Friends—subject however to the fundamental condition, that they adhere to those doctrines and testimonies, a belief in which first drew our forefathers together to be a separate people, and which constitute the reason for our existence as a religious organization.

The space which has been given in this review to the separation of 1827, and to the incidents associated with it, seems to the writer to be justified by the importance of the event. He has endeavored candidly and dispassionately to state the case, as it seemed to him; and that with no unkind or hostile feeling towards the members of that body, who, for distinction's sake, are sometimes denominated "Hicksite Friends." There probably exist among its members many shades of belief as to the points discussed in 1827; and, in accordance with the position taken by their counsel in the New Jersey lawsuit, a much larger

degree of liberty as to doctrinal belief is permitted among them than we have deemed compatible with the best interests of our Society.

J. W.

(To be continued.)

For "THE FRIEND."

Paul unto Timothy, his own son in the faith, says this: "The end of the commandment is charity, out of a pure heart, and of a good conscience, and of faith undefined, from which some having swerved, have turned aside unto vain jangling—desiring to be teachers of the law, understanding neither what they say, nor whereof they affirm. But we know that the law is good, if a man use it lawfully. Knowing this, that the law is not made for a righteous man, but for the lawless and disobedient, for the ungodly and for sinners, for unholly and profane, for murderers of fathers, and murderers of mothers, &c., and if there be any other thing that is contrary to sound doctrine, according to the glorious Gospel of the Blessed God, which was committed to my trust. And I thank Christ Jesus our Lord, who hath enabled me, for that He counted me faithful, putting me into the ministry, who was before a blasphemer and a persecutor and injurious, but I obtained mercy, because I did it ignorantly in unbelief, and the grace of our Lord was exceeding abundant with faith and love which is in Christ Jesus. This is a faithful saying and worthy of all acceptation, that Jesus Christ came into the world to save sinners, of whom I am chief. Howbeit for this cause I obtained mercy, that in me first Jesus Christ might show forth all long-suffering, for a pattern to them which should hereafter believe on Him to life everlasting. Now unto the King eternal, immortal, invisible, the only wise God, be honor and glory, for ever and ever, Amen."

Now in all this the Apostle says nothing about a "literary qualification to maintain principles." Then let us turn from the teachings of men and their set time to speak on Scripture, to that grace of our Lord which so abounded in faith and love, which is in Christ Jesus, and is able to preserve all those who look steadfastly to it. For God will have all men to be saved, and come unto the knowledge of the truth, for there is one God, and one mediator between God and men, the man Christ Jesus, who gave himself as a ransom for all to be testified in due time. "Whereunto," says the Apostle, "I was ordained a preacher and an Apostle, a teacher of the Gentiles in faith and verity."

"A bishop then must be blameless, one that ruleth well his own house, having his children in subjection with all gravity." Read the chapter through (3rd of 1st Timothy) and it needs not the wisdom of man to explain it. It is so simple, the child that reads can understand.

A friend to all,

ROBERT KNOWLES.

WEST BRANCH, Ia., Second Mo., 6, 1859.

Does not every serious self-observer recollect instances in which a temptation, exactly addressed to his passions or his habits, has prevailed in spite of the sternest interdict of his judgment, pronounced at the very crisis? Perhaps the most awful sanctions by which the judgment can ever enforce its authority, were distinctly brought to his view at the same moment with its convictions. In the subsequent hour he had to reflect that the ideas of God, of a future account, of a world of retribution, could not prevent him from violating his conscience.—*John Foster.*

For "THE FRIEND."

Settlement of Meetings in New Jersey.

SALEM.

The original meeting-house at Salem, that was formed by an addition to the hewn log dwelling of Samuel Nicholson, on "Wharf Street," now Broadway, and noted as being the first meeting-house of Friends in West Jersey, and probably the second one in the State (1681) has already been described.

In 1698 a committee was appointed to have a new meeting-house erected, of brick, and to be 30 by 40 feet in size. It was completed in 1700, and is believed to have stood nearly upon the site of the old one, or a few rods east of the great oak tree now standing in the burial ground on Broadway.

In 1702 a much larger brick house was built on Fenwick Street, where it now stands.

About 1829 a smaller brick house was built on Broadway, not far from the former location, but on the opposite side of the street.

The first Yearly Meeting held in Salem 15th of Second Month, 1684.

In 1678 a number of Friends settled about Alloways Creek (or Monmouth River) and held meetings at John Denn's (or Dennis') house, until 1685, when a meeting-house was built on the north side of the creek, on ground given by Edward Champneys and John Smith.

About 1717 another house was built on the south side of the creek, near the first location, on ground given by Joseph Ware. It continued here until about 1755, when the house was built in the village of Hancock's bridge, on ground given by William Hancock. This house was enlarged in 1784.

PILES-GROVE.

A meeting was established by David Davis and others at Woodstown, and called Piles-grove Meeting.

By a minute of Salem Monthly Meeting, held in the Eighth Month, 1719, we learn that "Friends of Pilesgrove did request that they should have a First-day Meeting at the house of Roger Higgins, which was allowed for the winter season only. In the Third Month following, leave was given that the Friends of Pilesgrove have a meeting every other First-day during the summer time. And again in the Eighth Month, leave was given to hold a First-day Meeting at Aquilla Barber's house this winter time."

A week-day meeting was established the 25th of Fourth Month, 1722.

A frame meeting-house was built in 1725, on land bought of Joseph White, for a burial ground, &c.

In the Eighth Month, 1735, a Preparative Meeting was appointed to be held at Pilesgrove, and in the Ninth Month, 1737, it was concluded that they have liberty to keep their meetings every First-day, both winter and summer.

On the 25th of Seventh Month, 1785, Pilesgrove Friends "informed Salem Monthly Meeting they had engaged in building a meeting-house, agreeably to the advice and consent of that meeting, and as it was large, requested some assistance from that meeting." The house was completed, and with some improvements or additions, is standing at the present time, now over a century old.

Pilesgrove Monthly Meeting was established the 24th of Fourth Month, 1794, as is indicated by a minute of the Quarterly Meeting, viz: "At a Quarterly Meeting held at Haddonfield, 21st of Third Month, 1794, Salem Monthly

Meeting proposing for consideration, the dividing of that meeting, and holding one at Pilesgrove, it is approved."

In Second Month, 1789, "Report was made that meetings had been held in Upper Penn's Neck, and leave was granted to continue them under the care of Elisha and Isaac Pedrick. In the Eleventh Month they were again continued for three months."

The indicted meetings had been held at Upper Penn's Neck since 1789, but in 1796 the meeting was regularly established, and a meeting-house built at Pedricktown, and the Preparative Meeting opened the same year. The house has since been rebuilt.

The meeting at Woodbury was first held at the house of John Wood, in the Sixth Month, 1696, and a meeting-house built soon after; another was erected in 1715-16, and the present one in 1783, which has since been enlarged. The first Monthly Meeting was held the 11th of First Month, 1785.

UPPER GREENWICH.

About 1740 a small frame meeting-house was built on a lot of ground granted for the purpose, by Solomon Lippincott, and a Preparative Meeting was established there in 1775. It was a branch of Haddonfield Monthly Meeting until 1785, when it became one of the branches of Woodbury Monthly Meeting.

In 1798 a large brick meeting-house was erected about one and a half miles east of this, and called Upper Greenwich Meeting, and the old site abandoned.

The lot is still kept well enclosed and used as a burial ground for the neighborhood.

In 1797 "liberty was granted to Friends of Woolwich to hold a meeting in the School House at Mullica Hill, to commence on First-day, the 11th of Eleventh Month, 1797," which was continued until the meeting-house was established and the meeting-house built. The Preparative Meeting was established Eleventh Month, 17th, 1800, and joined to Pilesgrove Monthly Meeting.

Friends settled very early at Greenwich, or Cohansy, as it was called, and held meetings as early as 1684. In 1694 a meeting was established there. Through the influence of Mark Reeve and others, a meeting-house was built in 1698. It stood facing the Cohansy, quite near the site now occupied. A frame structure, upon the same ground, was burned about 1810.

The present substantial brick house was built soon after.

In the Eighth Month, 1735, "a Preparative Meeting was appointed to be held at the last weekly meeting before the Monthly Meeting. And in the Ninth Month, 1737, "it was concluded that Friends at Pilesgrove and Cohansy may have liberty to keep their meetings every First-day, both winter and summer."

The Monthly Meeting organized the 27th of First Month, 1770, and was composed of the Preparative Meetings of Greenwich and Alloways Creek, and held alternately at the above named places. Afterwards, Maurice River and Cape May were attached to it.

MAURICE RIVER.

"A meeting was established at Port Elizabeth, on Maurice River, about 1760." A meeting-house was built about 1791.

"In the early part of this century a large tract of meadow land lying on Maurice River, was banked in, (and reclaimed) and a number of families of Friends settled there, by which

the meeting of Port Elizabeth was greatly increased. In the Ninth Month, 1819, a terrible storm and great swell of the ocean, swept away miles of the tide banks along the bay shore, and the inhabitants barely escaped with their lives. This disaster nearly broke up the little settlement, but the meeting was kept up a number of years."

The meeting-house was standing in 1881, though in a very dilapidated condition. It has since been removed; the burial ground is still kept enclosed.

Maurice River Monthly Meeting was established in 1805, and laid down many years since.

Samuel Smith says: "The first convincement of Friends about Great Egg Harbor, was about 1702, since which meetings have been settled and meeting-houses built."

For many years there seemed to be a great openness on the part of the inhabitants to receive the doctrines of Friends, and a number of Friends settled along the shore at various places, several meetings were established, viz: Egg Harbor, Galloway, Tuckahoe and Cape May. These formed Great Egg Harbor Monthly Meeting. Friends having died and others removed, none were left to sustain the meetings, and they have all been laid down or abandoned, and the properties sold or devoted to other uses, with a single exception, that of Cape May, near Seaville, in that county. The meeting was established soon after 1700, and the meeting-house built in 1716, by the Townsends, Leamings and others. It was rebuilt some years ago on a much smaller scale than formerly, and is still kept in repair, but like the others mentioned, it has no congregation. The old burial ground is still kept up.

It is a melancholy reflection, that where less than a century ago there existed so many prosperous settlements of Friends, and such thriving meetings, where the pure doctrines of the Christian religion were promulgated and faithfully upheld, there is now nothing left of their once teeming congregations but their nameless graves.

In a former number of this article, on page 243, an error in date has been discovered as to the time of building Moorestown meeting-house, it should be 1829, instead of 1837, as stated. Also on page 244, Haddonfield Quarterly Meeting began to circulate as now, in 1838, instead of 1831. J. W. L.

The Tent and the Veil.—With our Western ideas of churches and chapels, the descriptions of the compartments of the tabernacle separated by veils have no such vividness as they present to the Oriental mind, familiar as it is with the tent (or tabernacle) form of both common and sacred habitations, divided into compartments by separating veils. The writer was entertained by an Arab chieftain in the principal tent of a village of tents. As he sat in the outer compartment of that chieftain's tent, a veil concealed from his view the inner compartment of the tent, where the wives and children of the chieftain had their home. The idea of a stranger's passing behind that veil into the compartment beyond, was an idea that would not be tolerated for a moment in an Oriental mind. With such a training, it was easy for an Oriental to realize that only a peculiar relation of oneness with God could justify even a chosen high-priest in passing beyond the tabernacle veil into the inner dwelling-place of the God of gods.—S. S. Times.

For "The Friend."
A Visit to the Cornwall Iron Mines of
Lebanon County, Pa.

(Concluded from page 260.)

Our examination of the Bird-Coleman Furnace having been completed, our kind friend next took us to his own dwelling where we were treated to a good dinner, that lacked nothing to recommend it. This, over, there followed a close inspection of the ore banks, which were the principal object of our visit. There is a complex system of railroad tracks winding among the ore hills to the different faces where quarrying is going on. The labor of reaching the more distant points was rendered easier by an invitation to take a seat in one of the small locomotives which run hither and thither throughout the workings. At one place our locomotive passed through a cut in the dyke of trap and entered a bed of ore where men were busily at work. For a certain distance along the trap, all the ore had been removed which lay above the level on which they were working. This removal showed the sloping position of the wall of the trap which was thus exposed. The ore itself in many parts showed a slaty structure, the dark oxide of iron being interlaced with thin layers of a lighter color. This seemed to confirm the theory, that in its original condition it was a bed of slaty stone, from which much of the more soluble parts were afterwards removed; and that the light colored bands we saw were some of the silica and other materials which had resisted the solvent powers of water, and remained to mark the positions of the original layers.

When I first began to examine the subject of iron deposits I was puzzled (as perhaps some of my readers may be,) to understand how such quantities of it ever came to be collected in particular spots. But this difficulty was partly removed when I found how abundantly iron is diffused through many of the rocks in the regions where it is found. The Red Sandstone of which we have been speaking, owes its color to the iron which it contains; and which must have existed in the older rocks from which the sandstone was formed. The trap rock so often mentioned in this narrative, contains on an average about one-tenth of its weight in iron combined with oxygen. About the same proportion of iron exists in the older rocks which cover much of southeastern Pennsylvania, and which underlie the Red Sandstone—or in other words, on the top of which the sandstone was deposited when in the form of sand and mud. Then in many places there is a darker-colored rock, sometimes spoken of as iron-stone, in which the iron is still more abundant. All that is needed to make accumulations of iron ore in such regions is, that these rocks should be exposed to chemical forces such as the solvent power of water, which would either remove the iron from the other ingredients of the rock, or would remove them in a state of solution from the iron. It is by gradual changes of this kind that many of the metallic ores, which are profitably worked by man, have been separated from the rocks through which they were originally thinly scattered, and gathered into deposits where they could be appropriated to the use of man. This work of separation and gathering, which was beyond man's power to perform, has been done for him through the operation of those laws of nature given to matter by the beneficent Creator of all things.

The presence of a portion of copper in the Cornwall Mine, adds to the number of interesting minerals that are found here. We enriched

our collection by selecting some characteristic specimens from the banks—the most improving and agreeable way in which a student can form a cabinet—and others, which we could not procure in this manner, were kindly added to our store by the young man who superintended the operations, and who had conveyed to the office those specimens met with in mining, which were of peculiar rarity or beauty. The capacity of a carpet-bag, and the degree of muscular strength necessary to carry it comfortably, put a limit to my accumulations; and I was fain to set myself on the porch, spread my treasures before me, and after selecting such as would illustrate the peculiarities of the place, leave behind me others which I would gladly have carried home to share with friends interested in such things.

We were informed that about 25 iron furnaces are now drawing ore from the Cornwall banks. In many of these, however, the ore is mixed with that obtained from other localities, and differing more or less in composition. The kind of iron which a furnace yields depends largely on the kind of ore used; and as iron is wanted for various mechanical purposes, one kind is found to be best adapted for a special use, and another kind for another use.

As evening came on, we prepared to leave this interesting place, where we had been treated with kindness and hospitality. The day had been one unusually fruitful in information, and in suggestions leading to further study and instruction. The only return that we could make for the unselfish attentions shown to us, was to forward to some of those with whom we had mingled, copies of a work calculated to turn the thoughts of the readers to those spiritual truths which are of more importance to each individual than any outward wealth or any degree of literary or scientific knowledge. This was done after returning home.

That night we lodged with a friend who has the charge of a large tract of land on the southern slope of the South Mountain—all of it lying within the boundaries of the Red Sandstone. Of about 4000 acres under his care, there are perhaps not much more than 1000 which are cleared and cultivated. His description of his labors on this large farm, showed one of the difficulties attendant on the management of land in such large blocks. The fields are so remote from each other (in some cases miles apart), that there is a sad waste of the time both of man and teams, in going from one part to another to perform the needed labor and the necessary hauling. So great is this waste as sometimes to absorb much of the profits of the produce of the soil. J. W.

A One-armed Printer.—The *New Haven Register* describes the visit to its printing office recently of a young man who had learned the trade of a printer, and afterwards lost an arm in a railroad accident, but determined that this should not prevent him from following his trade. He set at work and got up a simple arrangement, which, when placed on the case holds the stick [the metal frame in which the types are set up] at the proper angle. By continuous practice he learned to drop in the type so gently that there was no danger of making "pi" in an uncompleted line, and finally reached that point where he could set type as fast as he used to before he lost his arm. It is an interesting sight to watch him standing at a case and filling up a stick. He can also empty a stick without trouble, and, in a word, can get along as well as anybody.

For "THE FRIEND."

The Blessing of Enduring Temptation.

(Concluded from page 261.)

The disciples, after they had been illuminated, endured a great fight of afflictions; as they had the enemy still to contend with; but many of them endured the temptations, and received the crown of life. And Paul said, "I endure all things for the elect's sake." So he continued faithful until the time of his departure was at hand; and he could say, "I have fought a good fight, I have finished my course, I have kept the faith;" so he knew there was a crown of righteousness laid up for him. But he had first to endure temptations, and many buffetings of Satan, before he could finish his course with joy, and receive the crown immortal. So it is with all the dedicated followers of our crucified but risen Redeemer. We have to come up, by the merciful assistance of our Saviour, out of great tribulations, and have our robes washed and made white in the blood of the Lamb; which is a great mystery to the carnal, reasoning faculties of the unenured man.

Good old Jacob had to wrestle for the blessing. Yet he did not receive it until his natural or bodily strength was reduced, so as to show him that it was not by the power or strength of the natural man that he was to overcome, or prevail, but by the Spirit of the Lord. But he had to use his bodily strength while it lasted; and we have to wrestle, spiritually, for the blessing, and use our bodily strength while it lasts; but it is the Spirit that quickeneth or gives spiritual life, for the flesh profiteth nothing, only as it is made use of as an instrument in carrying out the Divine will. So we must not be slothful in business, either temporally or spiritually, but fervent in spirit, serving the Lord in whatsoever He wills us to do. And it takes the co-operative powers of body, and soul and spirit, to enable us to resist the tempter, and to endure his temptations so as to overcome him. The flesh of itself profiteth nothing; but it may be made use of, in the hands of the Lord, to carry out his works of righteousness. It is the fleshy nature in man that the enemy works upon by his temptations; so, we must resist him steadfast in the faith, and patiently endure all his many and plausible temptations, before a full overcoming is experienced, or a crown of life received.

We nowhere read any thing in the Scriptures that will warrant a belief that we shall be accepted, unless we are first "purified and made white and tried." But we do read enough to make us believe that he which is unjust, will be unjust still; and he which is filthy, will be filthy still; and he that is righteous, will be righteous still; and he that is holy, will be holy still. And that nothing impure or unholy will be permitted to enter the mansions of holiness.

The temptations, tribulations and trials which seem almost or quite daily to come upon us, I think form a part of the daily cross of Christ, which He says we must bear if we would become his disciples. We must bear it daily, and continue patient in well-doing, and follow Him, though He leads us through the washings of regeneration, until the lust of the flesh, the lust of the eyes, and the pride of life, will no longer have dominion over us. For they are not of the Father, but of the world which lies in wickedness. So, if we follow Him we shall no longer follow the world, nor the flesh, but endure the temptations of the evil one, and be led on from glory to glory, by the Spirit of the Lord, unto salvation.

This view of salvation by Christ need not lead

us to undervalue the offering that He made of himself upon the cross, for the sins of the world. It will only lead us in the light as He is in the light, and as we walk in it, through faith and obedience, his blood will cleanse us from all sin. And we shall have fellowship one with another, and with the Father, Son and Holy Spirit, one God blessed forever. For it is the Lamb of God which takes away the sins of the world out of every humble, obedient heart. So now, since we have a chance to enter into the holy of holies, by the blood of Jesus, a new and living way, and by enduring the temptations of Satan,—where will the fault be if we neglect or miss so great a salvation? I believe our salvation depends much upon ourselves—on our obedience or disobedience. But "this is the will of God, even our sanctification." And we are "chosen to salvation through sanctification of the Spirit, and the belief of the truth;" and as Peter says, "elect through sanctification of the Spirit, unto obedience, and sprinkling of the blood of Jesus Christ."

But now I will close this lengthy article by a brief allusion to myself. I have lived long upon earth, and have been slow in growth in becoming a child of the Lord's. Never experienced any sudden change; but have made many a wayward step. But I can say, as Paul did, "It is by the grace of God that I am what I am." And when the time of my departure comes, I hope to feel that I have so kept the faith as to receive the crown of righteousness, which will abundantly compensate for all the sorrows of life.

D. HUBLESTON.

DUBLIN, IND., First Month 19th, 1889.

FOR "THE FRIEND."

Liberty.

"Where the Spirit of the Lord is there is liberty." Friends have ever recognized the priesthood of believers; that, in any of our meetings, any one had liberty to minister whom the Master called to that service; and that if anything was revealed to another that sitteth by, the first should hold his or her peace. And they have believed that in matters pertaining to his Church, the Head thereof has promised to be a spirit of judgment to them that sit in judgment.

Highly as they prize a rightly called ministry, they have maintained that meetings can be held to the honor of Truth without vocal preaching and praying; that where the two or three are met together in Christ's name, there He will be in their midst, to bless them. So, if we are faithful to our principles, looking unto Him, the Minister of ministers, we will know of being fed with the living bread and water of life, to the satisfying of the hungry and thirsty soul; "for they that wait upon the Lord shall renew their strength; shall mount up with wings as eagles, shall run and not be weary, walk and not faint."

I trust, as a people, we may be preserved from a one-man ministry; ever remembering that Christ is head over his Church, and has a right to call whom and when He pleases; and also teach by his Holy Spirit in the secret recesses of the heart.

GEORGE BRIGGS.

NEW SHARON, IOWA.

To pour out money to build a house to the Lord, and not pour out the lives of the contributors on his altar, would be to miss the highest good. To rejoice in the beauty and splendor of the outer temple, while the temple of the heart is marred and in ruin, would be strangely inconsistent.

SELECTED.

SPEAK GENTLY.

BY D. EATES.

- Speak gently! It is better far
To rule by love than fear;
Speak gently—let no harsh words mar
The good we might do here!
- Speak gently! Love doth whisper low
The vows that true hearts bind;
And gently Friendship's accents fond;
Affection's voice is kind.
- Speak gently to the little child,
Its love be sure to gain;
Teach it in accents soft and mild;
It may not long remain.
- Speak gently to the young, for they
Will have enough to bear,
Pass through this as best they may,
'Tis full of anxious care!
- Speak gently to the aged one;
Grieve not the care-worn heart,
The sands of life are nearly run,
Let such in peace depart.
- Speak gently, kindly, to the poor,
Let no harsh tones be heard;
They have enough they must endure,
Without an unkind word!
- Speak gently to the erring—know,
They may have toiled in vain;
Perchance unkindness made them so:
Oh! win them back again!
- Speak gently!—He who gave his life
To bend man's stubborn heart,
When elements were in fierce strife,
Said to them, "Peace, be still."
- Speak gently! 'tis a little thing
Dropped in the heart's deep well;
The good, the joy, which it may bring;
Eternity shall tell.

THE LESSON OF THE WATER-MILL.

- Listen to the water-mill
Through the livelong day,
How the clinking of its wheel
Wears the hours away,
Languidly the autumn wind
Stirs the greenwood leaves;
From the fields, the reapers sing,
Binding up their sheaves;
And a proverb hant's my mind
As a spell is cast,
"The mill cannot grind
With the water that is past."
- Autumn winds revive no more
Leaves that once were shed,
And the sickles cannot reap
Corn once gathered,
And the rippling stream flows on
Through the mill-race deep and still,
Never gliding back again
To the water-mill,
Truly speaks the proverb old
With a meaning vast,
"The mill cannot grind
With the water that is past."
- Take the lesson to thyself,
Loving heart and true,
Golden years are fleeting by,
'Tis but passing time,
Learn to make the most of life,
Loss no happy day,
Time will never bring thee back
Chances swept away,
Leave no tender word unsaid,
Love while love shall last;
"The mill cannot grind
With the water that is past."
- Work while yet the daylight shines,
Man of strength and will,
Never do the streamlet glide
Useless by the mill,
Wait not till to-morrow's sun
Beams upon thy way,
All that thou canst call thine own
Lives in thy "To-day."

Power and intellect and health,
 May not always last,
 "The mill cannot grind
 With the water that is past."

Oh! the wasted hours of life
 That have drifted by;
 Oh, the good that might have been,
 Lost without a sigh;
 Love that we might once have saved
 By a single word,
 Thoughts conceived, but never penned,
 Perishing unheard.
 Take the proverb to thy heart,
 "Take, and hold it fast;
 "The mill cannot grind
 With the water that is past."
 Oh! love thy God and fellow-man,
 Thyself consider last,
 For come it will, when thou must scan
 Dark errors of the past.
 And when the light of life is o'er,
 And earth recedes from view,
 And heaven in all its glory shines
 Amid the pure, and the good, the true,
 Then thou'lt see more clearly
 The proverb deep and vast—
 "The mill cannot grind
 With the water that is past."

SELECTED.

HOMELY COUNSEL.

It isn't worth while to fret, dear,
 To walk as behind a hearse,
 No matter how vexing things may be,
 They easily might be worse,
 And the time you spend complaining
 And groaning about the load
 Would better be given to going on
 And pressing along the road.
 I've trodden the hill myself, dear—
 'Tis the tripping tongue can preach,
 But the silent heart sometimes golden, child,
 As oft there is grace in speech—
 As I see from my higher level
 'Tis less the path than the pace
 That wears the back and dims the eye
 And writes the lines on the face.
 There are vexing cares enough, dear,
 And to spare, when all is told;
 And love must nourish its blossoms grow old,
 And the cheek's soft bloom grow old,
 But the spell of the evanescent spirit
 Turns blessing into curse,
 While the bold heart needs the trouble
 That easily might be worse.
 So smile at each disaster
 That will presently pass away,
 And believe a bright to-morrow
 Will follow the dark to-day.
 There's nothing gained by fretting;
 Gather your strength anew,
 And step by step go onward, dear,
 Let the skies be gray or blue.

—M. E. Svingter.

In the city of Pittsburg, last month, a few minutes after the fall of the Willey Building, a stranger who was gazing at the wrecked structures from the opposite side of Wood Street entered into a conversation with a *Dispatch* reporter. He looked a good deal agitated and said: "For about five years on every week-day I have passed along that side of Wood Street at about the hour this terrible disaster occurred. To-day I was on my way to Fifth Avenue, and had reached the Chamber of Commerce building when a sudden impulse came upon me to take the other side of the street. I crossed over, and before I reached the sidewalk the crash came. Had I kept along as I was going I would have been in front of the Willey Building just in time to be crushed by bricks and falling timber. I can no more account for the action which probably saved my life than you can; I simply felt that I must do it, and I do not know that I felt even a premonition of danger."—*Independent*.

FOR "THE FRIEND."

How Ministers were Raised up Among the Early Friends.

(Concluded from page 259.)

Christopher Story, in continuing his narrative, says:—

"After several meetings amongst us, and divers convinced, we were advised to keep a meeting to wait upon the Lord, though there were none to speak words; so we agreed to have a meeting at my house in the year 1672. Being but a few, we concluded to have it in an upper room of mine; and when we sat down together, I may say I was hard beset to keep my mind from running hither and thither after the transitory things of this world; and a great warfare I had for the greatest part of the meeting. Yet near the conclusion, those vain thoughts vanished, and the Lord was pleased to bring to my remembrance, *how that men who had great possessions in this world, had their day, and were gone; and I saw clearly, in a little time that my day would soon pass over.* I was comforted in my spirit, and my inward man renewed in a sense of the Lord's nearness; and being thus encouraged, we kept to our silent meetings, and report went abroad that we had settled a meeting; and several came and sat down among us.

"When there was a public Friend, we mostly had the meeting without doors; but when only ourselves, we still met in that upper room. In about a quarter of a year, there was as many as thirty or upwards, most of them of good repute and conversation; then we agreed to settle the meeting at four Friends' houses, and go by turns; and abundance were convinced, that stood at a distance to see what would become of us. For the enemy began to rage and persecution to arise; and because we could not pay tithes, or put into the priests' mouths, there was war prepared against us; and a hot time of persecution there was. Gilbert Atkinson, who had been of repute formerly, but giving way to temptation and immorality, afterwards became an informer, made spoil of Friends' goods, especially Christopher Taylor's; and not only so, but was instrumental to cast Friends into prison. At this time he was much exalted, and many were ready to think we should be ruined. Many eyes were over us, some for evil, and some for good. This informer was so hot, that nothing would serve him but for Friends to be wholly ruined. And though he was one that had been afraid to go to Carlisle, lest his body should be arrested for debt; yet now he looked upon himself to be so much the king's servant, that he might go any where; and boasting appearing at the sessions at Carlisle, lest Friends should get their liberty, said to the neighbors who were come upon Friends' account, that it should be either his day, or the Quakers', for ever. And when he had thus spoken, the sheriff called for him; he supposed it had been to prosecute Friends, but it proved that himself was arrested on a judgment for debt, and was sent to prison. After awhile Friends were released; but he remained for many years, and was much afflicted other ways, as well as with poverty and want; because of which Friends often relieved him, till he died in prison at last.

"Here the church was at rest for a time, and they that had stood at a distance for seven or eight years, came and joined with us. There were some who thought they might live so as to find acceptance with the Lord, and not come under the scornful name of Quaker; but many came to see at last, that nothing would do short

of confessing Christ Jesus before men; and all things wrought together for good to them that loved God. When they that had stood at a distance for years, thinking to have lived such a life that they might have been equal with us, saw our innocency and how the Lord had preserved us, many of them came and joined with us; and among the rest, John Scott of Highberies, who had been convinced for seven or eight years, and his life and conversation had so preached among his neighbors, that many were ready to say 'If John Scott cannot be saved unless he become a Quaker, what must become of us?' Many relations and neighbors followed him, and became honest Friends, and he himself a pillar in the church. The Lord's loving kindness continued in sending his servants and hand-maids amongst us, building us up in the most holy faith, and to the convincing of others. As our love to the Lord increased, so our care increased in keeping to our silent meetings. Glorious and heavenly times we had, when no words were expressed.

"Some years after our conviction, being met in the house of Christopher Taylor to wait upon the Lord, his power and presence in a wonderful manner overshadowed us in our sitting together; and there was much brokenness and tenderness on the spirits of Friends, which spread over the whole meeting, except three or four persons who sat dry, and they proved not well. I being near the door, saw many in the room filled, before the power of the Lord reached me; yet the Lord, in his free love and mercy, was pleased to give me such a share among my brethren, that my heart is always glad when I remember that season of God's love, though now upwards of twenty years ago.

"And though we were at times plentifully fed with that bread which came down from heaven, and sat together at the Lord's table, where the wing of his power was known to overshadow us; yet at other times the Lord tried us with want; and at a certain time it entered my mind as a weighty consideration why it should be thus, we being the same people, and sometimes had very good and comfortable meetings, and were sometimes very dry and barren in our meetings together. As I was thus concerned in my mind, it opened to me, that there should be seed-time and harvest, summer and winter, unto the end of the world. So I saw clearly there were times to abound, and times to suffer want; and I desired to rest satisfied in the will of God.

"As we sojourned here, desiring nothing more than to follow the Lord fully, he not only led us out of the gross evils which are in the world, but out of the customs and fashions that are evil. So that we were singled out from the world in everything we saw to be needless and superfluous; and the fame of truth spread, and our meetings were large, and the exercise of the faithful was to draw nearer and nearer to the Lord. And when a little child's state was witnessed in our meeting together to wait upon the Lord, having the mind retired for a considerable time, until the Lord was pleased to appear and fill our hearts with life and power, it made some of us to say, a little child's state is a good state, and we greatly desired to remain here, where the glory of the Lord filled the temple. This made us beautiful, though we were not come so far as to have a word given us to speak unto others by way of testimony publicly; and though it was the desire of some to have remained here, yet the Lord, in his own time, gave them to experience, that the Gospel, which is the power of God, is not received but by the revelation

of Jesus Christ; neither is this Gospel to be preached in the will of man, or in man's time, but in the Lord's time. And though it is written, 'Quench not the Spirit, despise not prophesying,' yet many have been unwilling to speak the word of the Lord, though it hath burned as a fire in their bones, and they have been filled with it as a bottle with new wine, lest they should offend the Lord, or burthen his see in the hearts of his people. This hath made some say, 'Lord, let me never speak a word in a meeting while I live in this world, rather than I should speak that which might offend.' And though some may have been too backward for a time, and there may have been a sense of trouble for it, and judgment from the Lord, yet it being in a godly fear and awe, lest it might prove an untimely birth, the Lord hath been merciful unto such, and hath again and again appeared and not only brought to the birth but enabled to bring forth; and as the work is his, the praise and glory belong to his great name. In the Lord's time, to us that had been under the region and shadow of death, light sprang up; and our mouths were opened, and tongues loosed, to speak well of the Lord. The Lord raised up planters and waterers, and made several as useful instruments for carrying on his great work in the earth."

Natural History, Science, &c.

Hatching Fish-eggs.—There are some very interesting peculiarities in the care and hatching of the eggs, which have been observed among the fishes. The marine catfish of our Southern coasts deposits ten or twenty eggs about the size of Malaga grapes in a depression in the sand. The male takes these into his mouth and places them between the leaves of his gills where he keeps them until the young are hatched and able to take care of themselves. At this time his throat is enormously extended and presents a very curious and comical appearance. Several other species have the same habit. In one, which inhabits the Sea of Galilee, in Palestine, the female lays about two hundred eggs. The male takes these into his mouth, one after another, and retains them there, distending the cheeks in an extraordinary manner. The eggs hatch in a few days and the young fishes are pressed one against the other like the seeds of a ripe Pomegranate. The mouth of the father becomes so distended that his jaws cannot meet. Some of the young do not quit their shelter until they are four inches long.

In a South American fish, described by Prof. Wynnan, of Boston, the male fish is provided during the breeding season with a numerous series of little stalks on its under side, upon which the eggs are carried until hatched. Several species of fish develop pouches, by a fold of the skin in the male, in which the spawn is placed, and where it is carried and protected until the young are hatched.

In the Lamp sucker the male digs a pit between the stones at the bottom of shallow parts of the sea, in which the female deposits the spawn. This is carefully tended by the male, until the young are hatched, when they fasten themselves by their suckers to his body, and are carried about by him until they are able to care for themselves.

Steam-tracks in the Volcanic Islands of Hawaii.—All through the woods there are clefs of all sizes, from one vast fissure, thirteen miles in length, which suddenly burst open in 1868, to quite small pits, perhaps one hundred feet deep,

and completely hidden by rank vegetation—chiefly by ferns which love the warm steam.

That thirteen mile fissure split the land right across the main travelling-road; so now the track has to make a wide circuit so as to head around the farthest end of this great *crevasse*, whence columns of steam continue to rise ceaselessly.

My landlord tells me that upwards of thirty horses have been killed within the last twelve months, by falling into steam-cracks close to the Volcano House. This is without counting cattle of whom a considerable number fall in. This very morning two calves were observed suddenly to disappear. On rushing to the spot, they were seen at the bottom of a crevice, about sixty feet below the surface. Strong ropes were brought, and a man was lowered, who adjusted the ropes so as to allow the poor beasts to be drawn up one by one, and then his turn came. The calves did not seem much the worse, but of course it was ten to one that they had not gone down one of the bottomless fissures.—*C. F. G. Cummings.*

The Puff-adder of Africa.—"One of the most beautiful and ornate of all the tropical animals is the puff-adder. This animal, the bite of which is certain death, is from three to five feet long, and disproportionately thick. The whole body is ornamented with strange devices in green, yellow and black, and lying in a museum its glittering coils form a most striking object. But in nature the puff-adder has a very different background. It is essentially a forest animal, its true habitat being among the fallen leaves in the deep shade of trees by the banks of streams. Now, in such a position, at the distances of a foot or two, its appearance so exactly resembles the forest bed as to be almost undistinguishable from it.

"I was once just throwing myself down under a tree to rest when, stooping to clear the spot, I noticed a peculiar pattern among the leaves. I started back in horror to find a puff-adder of the largest size, its thick back only visible and its fangs within a few inches of my face as I stooped. It was lying concealed among fallen leaves, so like itself that, for the exceptional caution, which in African travel becomes a habit, I should certainly have sat down upon it; and to sit down upon a puff-adder is to sit down for the last time. This reptile lay lengthwise, concealed, all but a few inches, among the withered leaves. Now, the peculiarity of the puff-adder is that it strikes *backwards*. Lying on the ground, therefore, it commands, as it were, its whole rear, and the moment any part is touched, the head doubles backward with inconceivable swiftness, and the poison fangs close upon their victim. The puff-adder in this way forms a sort of horrid trap, set in the woods, which may be altogether unperceived, till it shuts with a sudden spring upon its prey."—*H. Drummant's Tropical Africa.*

Items.

A Protestant Movement in Cuba.—The *Independent* publishes an interesting account of a religious movement in Cuba, in which Alberto J. Diaz has been one of the most active agents. He "was an officer of the insurgent forces in the last uprising in Cuba. One night he and some comrades were surrounded by the Spaniards, and could escape capture only by pushing out to sea on some logs of wood. Picked up by a passing vessel, he made his way to New York. An abnatus of the University of Havana, one of the most able and medical departments, he pressed continuing his studies there, but stricken down by pneumonia, he lay at his boarding-house

for a long time at the point of death. Pity for the young stranger led a kind-hearted Christian woman to watch over him, and as he became better, gratitude to her as well as the solemnity of the experiences through which he had passed opened his heart to her Christian counsel."

After returning to Cuba as aporteur of the American Bible Society, he pursued his work with success in spite of opposition and persecution. He soon became a preacher of recognized power and great influence.

"At the end of but two years the church has some seven hundred members. Five other churches have been organized and a half-score of Cuba ministers-survey up some of them men of remarkable ability. These churches have over eleven hundred members."

Liturgical Forms in Worship.—For some time past there have appeared occasional references in *The Presbyterian* to a desire felt by some of the members of the denomination it represents, to introduce into their public worship something of the order and spirit of the Church of England. A writer in that paper of First Month 12th vigorously opposes any such change. His remark indicates an appreciation of the spiritual nature of Divine worship, which it is pleasant to notice from the article, the following is condensed:

All know that worship, like many other things, has an outer form and an inner principle; the value is in the principle, the form has at best only a secondary use. There are only three directions in which outward forms can have any value, viz: to please God, to aid the worshipper, or to attract others to the service of God. Leaving the worship of the heart the same in each case, are we to suppose that we make it more acceptable to God, if we elaborate God is better pleased; or that, if we make it still more artistic, we please the Almighty in it still greater degree? We doubt whether any one will be willing to take that ground. Most Christians will admit that God is not interested in forms. Christ said, 'The true worshippers shall worship the Father in spirit and in truth; for the Father seeth such to worship Him.' Both place and form are here ignored, when the worship is 'in spirit and in truth' there is no concern about the forms.

"Since outward forms do nothing toward pleasing the Almighty, or making Him more kindly disposed to us, and since the only way in which we can benefit the worshipper himself? Does it make him more spiritual? or more useful? or more ready, it need be, to lay down his life for the Lord Jesus? Will the elaborate service develop a more holy, useful and devoted man than will be developed by a simple service? The Greek and Romish churches have services that are very elaborate; are they more spiritual than the Methodist Episcopal Church with its simple service? The Romish Church and the Methodist stand side by side in this land, and they are engaged in the same work—which church is most useful? Which church is making the best citizens? Which church is doing most for the good of the world? The answer is, the church in which people will say the church with the simple service is the most spiritual and useful.

"Often, in the history of the church, men have been tried to the utmost. At such time to what did God's people resort to secure strength for the exigency? Did they gather spiritual strength to engage in the struggle, or did they resort to outward forms? Indeed, they did not, but they received strength by the simple preaching of the Word. What was it that moved England, in the days of William Tyndal, as with an earthquake? Was it the forms of the English Service Book? No, indeed, but it was the Bible in the English tongue, read over and talked over in the night, and the earnest reading and preaching in secret that made England what it is. Forms did not count for much in those days. And if you cross over to the Netherlands, about the same time, when men were breaking loose from Rome at the peril of their lives, they did not seek for strength from outward forms. Motley says they gathered their faith, armed, only to bear solemn and stirring hymns in the open air." And there seems to have been worship in those old sermons, for he tells of one preached by a monk that solely touched the

hearts of the people. "As the slender monk spoke to the simple audience of God's grace, and of faith in Jesus, who had descended from above to save his lowliest and most abandoned, if they would put their trust in Him, his hearers were alternately excited with fervor or melted into tears: If we have had church history aright, it tells us that when piety is deepest the outward forms of service are the most simple."

Teaching and Training.—It has been said that the essence of teaching is causing another to know; (it may similarly be said that the essence of training is causing another to do. Teaching gives knowledge, Training gives skill. Teaching fills the mind, Training shapes the habits. Teaching brings to the child that which he did not have before. Training enables a child to make use of that which is already his possession. We teach a child the meaning of words. We train a child in speaking and walking. We teach him the truths which we have learned for ourselves. We train him in habits of study, that he may be able to learn other truths for himself. Training and teaching must go on together in the wise upbringing of any and every child. The one will fail of its own best end, if it be not accompanied by the other. He who knows how to teach a child is not competent for the oversight of a child's education unless he also knows how to train a child.

Training is a possibility long before teaching is. Before a child is old enough to know what is said to it, it is capable of feeling, and of conforming to or resisting, the pressure of efforts for its training. A child can be trained to go to sleep in the arms of its mother or nurse, or in a cradle, or on a bed; with rocking, or without it; in a light room, or in a dark one; in a noisy room, or only in a quiet one; to expect nourishment and to accept it only at fixed hours, or at its own fancy,—while as yet it cannot understand any teaching concerning the importance or the fitness of one of these things.—*S. S. Times.*

THE FRIEND.

THIRD MONTH 23, 1880.

In the year 1873 the subject of indulging in the use of music by its members was brought before the Yearly Meeting of Philadelphia, and referred for consideration to a Committee; that Committee made a report reaffirming the ancient rules of the Society on that subject, which was adopted by the Yearly Meeting, with a very full expression of unity. The following paragraphs, adopted at that time, were introduced into the Book of Discipline, where they now stand—a portion of those directions which subordinate meetings are bound to enforce:

"We would renewedly caution all our members against indulging in music, or having instruments of music in their houses, believing that the practice tends to promote a light and vain mind, and to disqualify for the serious thoughtfulness, which becomes an accountable being, hastening to his final reckoning."

"The spirit and language of the discipline forbid the use of music by Friends without any exception in favor of that called sacred; and in order to produce harmonious action on this subject throughout the subordinate meetings, the Yearly Meeting instructs them, that those members who indulge in the use of music, or who have musical instruments in their houses, bring themselves within the application of this second clause of the Discipline, above referred to, viz:

And if any of our members fall into either of these practices, and are not prevailed with, by private labor to decline them, the Monthly Meetings to which the offenders belong should be informed thereof, and if they be not reclaimed by further labor, so as to condemn their conduct to the satisfaction of the meeting, it should proceed to testify their disunity with them." (*Discipline, Ed. of 1881, p. 63, 4.*)

Music is one of a pretty extensive class of amusements, which are not necessarily violations of the moral law, but the dangers or the evils connected with which are so numerous and prevalent, that the Church has believed it safest for its members to refrain from indulging in them; and many of those who have been brought under the government of Christ in their own hearts have felt that it was their duty to take up the cross and deny their own inclinations in these matters; and have found peace and safety in so doing. It stands on the same platform as fashionable parties, balls, dances, operas, theatrical exhibitions, &c.—for the indulging in all of which, within certain limitations, many professors of religion are found to content, as being only allowable recreations or indulgences. Yet, it is hard to believe that those who allow themselves so much liberty, are living in obedience to the advice of the Apostle—"Be not conformed to this world; but be ye transformed in the spirit of your mind, that ye may prove what is that good, and acceptable, and perfect will of God." Is there not reason to believe that, on the contrary, they belong to that class of whom William Lewis speaks as giving ground for the sarcastic strictures of the enemies of the Lord Jesus, who say:

"These pilgrims and strangers seem to get a little reconciled to this foreign clime, though so far from their native country and their Father's House; this howling wilderness, as they call it, appears somehow or other, to have received a manure that hath so enriched the soil as to render it capable of producing very pleasant fruits, even to their refined tastes; and like us, who know of no better portion than our good things in this life, they seem to sit down, each under his own vine and under his own fig tree; so that, though it seems we are to be forever separated at the end of the journey—they raised up to everlasting glory, for having followed, as they phrase it, a crucified Lord; and we consigned to shame and everlasting contempt for having denied Him; yet we really appear to be travelling in the same direction; at least, we go in great harmony together, and walk through this vale of tears as friends."

Are there not many of the burthen bearers in the Church, who can adopt the language of William Lewis, which immediately follows the preceding extract? "Oh how long! how long! shall the enemies of the cross of Christ have cause thus to triumph? How long shall such speak grievous things proudly and contemptuously against the Lord and his Anointed, through the occasion given by those who profess adherence to doctrines which enjoin and demand the crucifixion of the flesh, yet, are at the same time seen to be making full provision for the gratification of its desires?"

If these lines should reach the sight of any of our members, whom the love of music or the example of others has tempted to disregard the advice and concern of the body on this subject, we earnestly desire that they may be willing to manifest their loyalty to our Society, by giving up an indulgence, against which it has cautioned them. We believe such a sacrifice would be

well-pleasing to their Father in Heaven; and it will be in accordance with the advice given in the Epistle to the Hebrews, and enforced in that of Peter: "Obey them that have the rule over you, and submit yourselves; for they watch for your souls as they that must give account." For assuredly the Church in its collective capacity has the authority to watch over and direct the individual members; and it is the duty of these to submit to its counsels.

In referring to a period of suffering through which our Society passed in its early days, George Whitehead remarks, "Earnest prayers with tears [were] then the Church's very great concern; which the Lord our God, in his own time, graciously heard and answered." And is not the present a period where there is cause for those who desire the preservation of our members from the inroads of worldliness, and the maintenance of our Society as a true testimony bearer for the principles of the Gospel—should earnestly seek to the same everlasting source of help, with weeping and with supplication?

The discipline of Philadelphia Yearly Meeting, makes it the duty of subordinate meetings to labor with those who neglect its advice on the subject of music; and to disown those who, after patient labor, cannot be induced to comply therewith. Unpleasant as such a duty may be, we do not see how it can be avoided by those who are *loved* members of the body. According to the discipline, Monthly Meetings and overseers cannot properly refuse to enforce the rules in this respect, any more than they can permit any other violation of the discipline to pass unnoticed. To exercise an option of this kind, is virtually to disown the authority of the Yearly Meeting, and to enter upon a course which may eventually lead to disintegration. If the officers of a meeting feel themselves at liberty to ignore certain offences, and to take official notice of others, which are not more clearly violations of our disciplinary rules, "are they not *partial* in themselves?" Do they not make their own judgment the standard of their actions instead of carrying out the discipline? What can be the final result of such a course, but the destruction of all authority? If one Monthly Meeting permits its members to introduce music into their families, why may not another permit the attendance of theatres? Another, the preaching of Unitarian doctrines? Another, the practice of the outward ordinances? Although we might feel that some of these had departed from the Quaker standard more widely than others, yet no one of them would be in a position to censure an erring brother—for those who would labor effectively in the cause of Christ, must first be clean-handed themselves.

We feel it to be the more needful to call attention to this subject, because the use of music is being rapidly introduced into many parts of the Society of Friends, and is very common among those who are not of our profession. The enforcement of our discipline in reference to it, may have the effect of preventing some persons from joining or continuing in membership with us. But we believe the loss of members on this account, would be far more than compensated by the strength derived from a faithful maintenance of our testimony against conformity to the world. The influence of the Society of Friends is not to be estimated by the number of its adherents, but by the purity of its practice and the spirituality of its doctrines, which heretofore have made it as a Light in the world; and which, as they are preserved, will still make

it an instrument in the Divine Hand, in pointing out to many the way to salvation. It is undoubtedly a cause of rejoicing, when others are convinced of the truths we profess, and become prepared to join with us in maintaining them, but it would be a source of weakness instead of strength to lower our standard of truth and righteousness for the sake of drawing into our communion those who are not prepared to adopt the principles which have ever distinguished our people.

SUMMARY OF EVENTS.

UNITED STATES.—The President has nominated and the Senate has confirmed as Commissioners to the Samoan Conference at Berlin, John A. Kasson, William Walter Phelps and George H. Bates.

The Republican party for the second time in fourteen years, has secured a majority in the House of Representatives.

Congress has granted an appropriation of \$200,000 to purchase land in the District of Columbia for a Zoological Garden.

It is announced that telegraphic communication with the United States has been established by cable from Santiago de Cuba to Hayti and San Domingo; thence to the Island of Curacao, thence to Laguayra and Caracas, Venezuela, where connection is made with the Government land lines for places in the interior.

From the forthcoming edition of Rowell's Newspaper Directory, it appears that the newspapers and periodicals of all kinds in the United States and Canada now number 17,497, an increase of 67 being during the last twelve months, and 7,885 in ten years.

There is a movement among the colored people of North Carolina to emigrate to, and colonize in, Arkansas. The colored preachers are especially active in the matter, saying the whites do not want them in their country. It is said that the election, school and other laws passed by the last Legislature were intended to crush them out. Several thousand persons have already gone. Indications point to an extensive movement. Many large plantations are almost deserted. Negro drummers are paid \$5 for each family secured. The cost of transportation to Little Rock is paid by the agents. The negroes say they are promised 40 acres of land, a brick house, a cow and \$1.50 a day for labor, and are told that corn sells for 19 cents a barrel, and meat at one-quarter of a cent a pound. They know nothing of their destination.

Henry Campbell, M. P., arrived at Lansing, Michigan, on the 18th instant, to endeavor to induce the Legislature to grant a charter for a proposed ship canal across the Upper Peninsula connecting Lakes Michigan and Superior. The route selected is 36 miles long, and begins at Bay an Train, about 15 miles east of Marquette. Its southern terminus will be Little Bay de Noc, near Gladstone, Mich. It will be necessary. It will save to ship commerce a distance of 271 miles between Chicago and Duluth. W. H. Morrell says that he has an abundance of New York and Chicago capital interested, and that the company will be organized within 60 days after a charter is granted.

It is proposed to build a canal to be graded in Pomona Valley, Cal., by a syndicate of Illinois and Iowa capitalists. It will be the largest in the world.

A company has been formed to build passenger tunnels under N. Y. City, with a capital of \$15,000,000.

The Senate of Rhode Island, by a vote of 22 to 15, has passed a resolution recommending the prohibitory amendment to the Constitution to a vote of the people.

The majority against the prohibitory amendment in New Hampshire, is about 5,000.

Deaths in this city last week numbered 405, a decrease of 30 from the previous week, and an increase of 25 compared with the corresponding period of last year. Of the foregoing 209 were males and 196 females; 62 died of consumption; 59 of pneumonia; 27 of diseases of the heart; 17 of convulsions; 16 of inflammation of the brain; 14 of old age; 13 of marasmus; 13 of bronchitis; 12 of debility, and 19 of cancer.

Wheat, No. 1, 82 1/2 cts.; do., No. 2, 82 1/2 cts.; No. 3, conop., 12 1/2; currency 65, 120 a 151.

Cotton was in limited request from spinners at 10 1/2 cts. per pound for middling uplands.

Feed.—Winter bar, choice, \$14, do., fair to prime, \$13 1/2 to \$13 7/8; spring bar, \$14 50 a \$15.

Flour, No. 1, 82 1/2 cts.; do., No. 2, 82 1/2 cts.; do., No. 3, 82 1/2 cts.; do., No. 4, 82 1/2 cts.; do., No. 5, 82 1/2 cts.; do., No. 6, 82 1/2 cts.; do., No. 7, 82 1/2 cts.; do., No. 8, 82 1/2 cts.; do., No. 9, 82 1/2 cts.; do., No. 10, 82 1/2 cts.; do., No. 11, 82 1/2 cts.; do., No. 12, 82 1/2 cts.; do., No. 13, 82 1/2 cts.; do., No. 14, 82 1/2 cts.; do., No. 15, 82 1/2 cts.; do., No. 16, 82 1/2 cts.; do., No. 17, 82 1/2 cts.; do., No. 18, 82 1/2 cts.; do., No. 19, 82 1/2 cts.; do., No. 20, 82 1/2 cts.; do., No. 21, 82 1/2 cts.; do., No. 22, 82 1/2 cts.; do., No. 23, 82 1/2 cts.; do., No. 24, 82 1/2 cts.; do., No. 25, 82 1/2 cts.; do., No. 26, 82 1/2 cts.; do., No. 27, 82 1/2 cts.; do., No. 28, 82 1/2 cts.; do., No. 29, 82 1/2 cts.; do., No. 30, 82 1/2 cts.; do., No. 31, 82 1/2 cts.; do., No. 32, 82 1/2 cts.; do., No. 33, 82 1/2 cts.; do., No. 34, 82 1/2 cts.; do., No. 35, 82 1/2 cts.; do., No. 36, 82 1/2 cts.; do., No. 37, 82 1/2 cts.; do., No. 38, 82 1/2 cts.; do., No. 39, 82 1/2 cts.; do., No. 40, 82 1/2 cts.; do., No. 41, 82 1/2 cts.; do., No. 42, 82 1/2 cts.; do., No. 43, 82 1/2 cts.; do., No. 44, 82 1/2 cts.; do., No. 45, 82 1/2 cts.; do., No. 46, 82 1/2 cts.; do., No. 47, 82 1/2 cts.; do., No. 48, 82 1/2 cts.; do., No. 49, 82 1/2 cts.; do., No. 50, 82 1/2 cts.; do., No. 51, 82 1/2 cts.; do., No. 52, 82 1/2 cts.; do., No. 53, 82 1/2 cts.; do., No. 54, 82 1/2 cts.; do., No. 55, 82 1/2 cts.; do., No. 56, 82 1/2 cts.; do., No. 57, 82 1/2 cts.; do., No. 58, 82 1/2 cts.; do., No. 59, 82 1/2 cts.; do., No. 60, 82 1/2 cts.; do., No. 61, 82 1/2 cts.; do., No. 62, 82 1/2 cts.; do., No. 63, 82 1/2 cts.; do., No. 64, 82 1/2 cts.; do., No. 65, 82 1/2 cts.; do., No. 66, 82 1/2 cts.; do., No. 67, 82 1/2 cts.; do., No. 68, 82 1/2 cts.; do., No. 69, 82 1/2 cts.; do., No. 70, 82 1/2 cts.; do., No. 71, 82 1/2 cts.; do., No. 72, 82 1/2 cts.; do., No. 73, 82 1/2 cts.; do., No. 74, 82 1/2 cts.; do., No. 75, 82 1/2 cts.; do., No. 76, 82 1/2 cts.; do., No. 77, 82 1/2 cts.; do., No. 78, 82 1/2 cts.; do., No. 79, 82 1/2 cts.; do., No. 80, 82 1/2 cts.; do., No. 81, 82 1/2 cts.; do., No. 82, 82 1/2 cts.; do., No. 83, 82 1/2 cts.; do., No. 84, 82 1/2 cts.; do., No. 85, 82 1/2 cts.; do., No. 86, 82 1/2 cts.; do., No. 87, 82 1/2 cts.; do., No. 88, 82 1/2 cts.; do., No. 89, 82 1/2 cts.; do., No. 90, 82 1/2 cts.; do., No. 91, 82 1/2 cts.; do., No. 92, 82 1/2 cts.; do., No. 93, 82 1/2 cts.; do., No. 94, 82 1/2 cts.; do., No. 95, 82 1/2 cts.; do., No. 96, 82 1/2 cts.; do., No. 97, 82 1/2 cts.; do., No. 98, 82 1/2 cts.; do., No. 99, 82 1/2 cts.; do., No. 100, 82 1/2 cts.

Grain.—No. 2 red wheat, 94 a 94 1/2 cts.
No. 2 mixed corn, 40 a 40 1/2 cts.
No. 2 white oats, 33 1/2 a 33 1/2 cts.

Beef cattle, 4 1/2 to 5 cts.; do., 4 1/2 cts.; medium, 3 1/2 to 4 cts.; common, 3 to 3 1/2 cts.

Sheep.—Extra natives, 4 1/2 to 6 cts.; good, do., 5 1/2 to 6 cts.; medium, do., 4 1/2 to 5 cts.; common, do., 4 a 4 1/2 cts.; culls, do., 3 1/2 to 4 cts.; extra Kansas, 5 1/2 to 6 1/2 cts.; good, do., 4 1/2 to 5 cts.; medium, do., 4 1/2 to 5 cts.; common, do., 3 1/2 to 4 cts.; culls, do., 3 a 3 1/2 cts. Lambs, 4 to 4 1/2 cts.

Hogs.—Western, 7 a 7 1/2 cts.; State, 6 a 6 1/2 cts. Milch cows \$25 a \$45.

FOREIGN.—The Parnell Commission resumed its sitting on the 12th instant. Sir Henry James, counsel for the Government, applied for an order for examination of Parnell's private account with the National Bank. Parnell gave his assent to such an examination.

Coffee, a reporter from Cork, testified that he had made a statement to a policeman, who promised him that he should be paid beyond his greatest expectations. The evidence for that statement was absolutely false. This evidence created a sensation in the courtroom.

Coffee further testified that he purposely made the statement which he gave to the policeman sensational because he knew it would take. He received £115 from the *Times*. The Court ordered the witness to be arrested.

On the 13th, a man named Levy, who was a member of the Feanix Supreme Council, testified as to his experiences while a member of that body. On cross-examination he admitted that he had been imprisoned for a year for embezzling his employer's money.

At 3 29 P. M. the Attorney General announced that the case for the *Times* was finished.

An election was held in the Kennington division of Lambeth on the 15th instant to fill the Parliamentary seat made vacant by the resignation of R. G. Davis, a Conservative. The election resulted in a victory for Mr. H. Beaufoy, of Gladstonian candidate, who polled 4069 votes, against 3439 for Beresford Hope, the Conservative nominee. At the last election, Davis, the retiring member, received 3222 votes and Beaufoy 2792. This election was hotly contested, both parties straining every nerve to achieve success.

Henry Campbell, M. P., private secretary of Parnell, has brought suit for libel against the *London Times*. The case has been set for a hearing, and the trial will probably take place in Fifth Month. The suit is founded partly on the opening speech made by Attorney General Webster in the case of O'Donnell vs. Walter, and partly on a leading editorial published by the *Times* on the 10th of the 11th inst., which was the first of a series of suits to be brought against the *Times*.

The New York *Herald's* Paris correspondents, under date of the 16th instant, say:

"The Chamber of Deputies and the Senate have simultaneously authorized the prosecution of Laguerre, Laisant, Turquet and Naquet. Legal proceedings against the leaders of the Ligue des Patriotes will now be instituted without delay.

"The prosecution and the action of the Government are diversely appreciated by the Paris press. The Boulangists have issued strong protests, in which a certain amount of anxiety is apparent.

"Nearly all the Conservative organs give unqualified approval to the line of conduct the Government is pursuing. They point out that the articles of the Code under which the prosecution is to be instituted have never been repealed; they insist that existing circumstances authorize their application for the purpose of defending republican institutions."

At a meeting of the Directors of the Bank of France it was decided to make an additional advance of 20,000,000 francs on condition that a similar sum be subsequently made in order to cover any judicial liquidation of the Comptoir d'Escompte's affairs.

The Rothschilds subscribed 3,000,000 francs, and the Credit Foncier 2,000,000, and the subscriptions of others bring the aggregate up to 30,000,000 francs.

The Syndicate Chamber of Stockbrokers has agreed to contribute 2,000,000 francs to the Comptoir d'Escompte. The necessary amount, 40,000,000 francs, is now subscribed.

The tower of Eifel is now finished, at least so far as height is concerned. The latter is just 925 feet from the ground, and simply dwarfs Washington's Monument.

Private letters received in Berlin from Zanibar say that Stanley, according to native reports, is marching rapidly toward the East Coast of Africa.

Russia demands the exclusive right to navigate rivers flowing into the Caspian Sea, and to build rail ways throughout Persia.

The Chilean Government has issued a decree prohibiting the immigration of Chinese into the Republic. The Government has sent orders to its immigration agents in Europe, authorizing them to give free passage to all who desire to emigrate to Chili, where, on arrival, they will receive board and lodging for 15 days.

NOTICES.

BRICKS QUARTERLY MEETING will be held hereafter as follows:—At Langhorne in the Fifth Month, A Buckingham in the Eighth Month. At Falls in the Eleventh and Second Months. The day of the month and the hour for assembling, remaining as heretofore.

WESTOWN BOARDING SCHOOL.—The Committee having the care of this Institution, at a recent meeting, decided to change the time of vacation from the Spring and Autumn to the Summer months; the checks, and for which no present arrangements exist, it is concluded to open the School for the next Term, on Fourth Month 23rd, instead of Fourth Month 30th, which would be the regular time of opening under the present arrangement, and to continue the session till Seventh Month 23rd, a period of thirteen weeks, and for which short Term, the charge for Board and Tuition will be \$60.

Parents wishing to enter their children, will please make early application to

JONATHAN G. WILLIAMS, *Supt.*,

WESTOWN P. O., Chester Co., Pa.

The Annual Meeting of the TRACT ASSOCIATION OF FRIENDS will be held in the Committee-room of Arch Street Meeting-house, on Fourth-day evening, the 27th instant, at 7 o'clock.

Friends generally are invited to attend.

EDWARD MARL,

Third Month, 1889.

WESTOWN, Pa.

WESTOWN BOARDING SCHOOL STATE.—During the Winter term the schedule will be at Westown Station on the 10th inst. at 8:30 and 8:45, and at Falls on Philadelphia, to convey passengers to the school, and at other times on time notify to J. G. WILLIAMS, *Supt.*, Westown, Pa.

DIED, at her residence, near Coal Creek, Iowa, on the 27th of First mo. 1889, RACHEL, wife of David James, in the 70th year of her age, an esteemed member of the West Monthly and Particular Meeting of Friends, and a regular attendant thereof when health would permit—an unassuming disposition, and a firm believer in the doctrines of Friends as set forth by our worthy predecessors. Her close seemed peaceful, and we reverently believe she has been gathered into rest.

On the 6th of Second Month, 1889, at his residence, near Newtown, Bucks Co., Pa., AARON EASTBURN, in the 85th year of his age. On the 17th of First Month, 1885, SARAH C., wife of Aaron Eastburn, in the 70th year of her age. Both esteemed members of Falls Monthly Meeting of Friends.

On the 17th of Second Month, 1889, at her residence near Berlin, New Jersey, MARTHA N., wife of Ezra Stokes, in the 68th year of her age, a member of Upper Evesham Monthly, and Cropwell Preparative Meeting. She was an affectionate wife, a tender mother, and one whose kindly sympathies went out strongly to all those around her. But there is cause for thankfulness in the belief, that when suddenly the cry came, she had oil in her vessel, with her lamp and her light burning; and through adorable mercy was permitted to hear the welcome message: "Well done, thou good and faithful servant, thou hast been faithful over a few things, I will make thee ruler over many, enter thou into the joy of thy Lord."

—, in Media, Pa., on the 18th of Second Month, 1889, MARY ANNA, wife of George R. McCluen, in the 76th year of her age, a member of Media Particular, and Chester Monthly Meetings, Pennsylvania.

For "THE FRIEND."

Historical Review of the Society of Friends.

(Continued from page 264.)

Perhaps the readers of this series of articles may think it appropriate, that the subjects spoken of in the two last numbers, should be followed by some extracts from the writings of the early and approved members of our Society, showing the views that they entertained on these important doctrines.

In the Testimony which George Fox and his companions presented to the Governor of Barbadoes, he thus speaks of the Divinity and offices of our Saviour:—

"We own and believe in Jesus Christ, God's beloved and only begotten Son, in whom He is well pleased; and who was conceived by the Holy Ghost, and born of the Virgin Mary; in whom we have redemption through his blood, even the forgiveness of sins; who is the express image of the invisible God, the first-born of every creature; by whom were all things created that are in heaven and in earth, visible and invisible, whether they be thrones, dominions, principality, or powers; all things were created by Him. And we own and believe that He was made a sacrifice for sin, who knew no sin, neither was guilt found in his mouth; that He was crucified for us in the flesh, without the gates of Jerusalem; and that He was buried and rose again the third day, by the power of his Father, for our justification; and that He ascended up into Heaven, and now sitteth at the right hand of God. This Jesus, who was the foundation of the holy prophets and apostles, is our foundation; and we believe there is no other foundation to be laid but that which is laid, even Christ Jesus; who tasted death for every man, shed his blood for all men, is the propitiation for our sins, and not for ours only, but also for the sins of the whole world; according as John the Baptist testified of Him, when he said: 'Behold the Lamb of God, that taketh away the sin of the world.'"

"He is now come in Spirit, 'and hath given us an understanding, that we know Him that is true.' He rules in our hearts by his law of love and life, and makes us free from the law of sin and death. We have no life but by Him; for He is the quickening Spirit, the second Adam, the Lord from Heaven, by whose blood we are cleansed and our consciences sprinkled from dead works, to serve the living God."

In proving from the Holy Scriptures the Divinity of Christ Jesus, William Penn adduces the following passages:—

"In the beginning was the Word, and the Word was with God, and the Word was God. All things were made by Him, and without Him was not anything made that was made. (John i. 1.—3. For by Him were all things created that are in Heaven and that are in earth. He is before all things, and by Him all things consist. (Col. i. 16, 17.) Upholding all things by the word of his power, &c. (Heb. i. 3.) Wherefore I am still confirmed in the belief of Christ the Saviour's Divinity; for He that made all things, and by whom they consist and are upheld, because before all things, He was not made nor upheld by another, and consequently is God. . . . He that is the everlasting Wisdom, the Divine Power, the true Light, the only Saviour, the Creating Word of all things (whether visible or invisible), and their Upholder by his own power, is without contradiction God; but all these qualifications and Divine properties are, by the concurrent testimonies of Scripture, ascribed to the Lord Jesus Christ; therefore without a scruple, I call and believe Him to be really the Mighty God."—Works vol. 1, p. 268.

In his *Primitive Christianity* reviewed, William Penn expresses the belief of our Society in the blessed effects of the coming and sufferings of Christ. "We do believe that Jesus Christ was our holy sacrifice, atonement and propitiation; that He bore our iniquities, and that by his stripes we were healed of the wounds Adam gave us in his fall; and that God is just in forgiving true penitents upon the credit of that holy offering Christ made of himself to God for us; and that what He did and suffered satisfied and pleased God, and was for the sake of fallen man that had displeased God."

"This faith in Christ's outward appearance is inseparably connected, in the doctrinal system of our Society, with faith in Christ as He reveals himself in the heart of man. In *Vo Cross no Craen*, William Penn says: "Unless thou believe that He that stands at the door of thy heart and knocks, and sets thy sins in order before thee, and calls thee to repentance, be the Saviour of the world, thou wilt die in thy sins, and where He is gone, thou wilt never come. For if thou believest not in Him, it is impossible that He should do thee good or effect thy salvation. Christ works not against faith but by it. 'Tis said of old, He did not many mighty works in some places, because the people believed not in Him. So that if thou truly believest in Him, thine ear will be attentive to his voice in thee, and the door of thine heart open to his knocks. Thou wilt yield to the discoveries of his Light, and the teachings of his grace will be very dear to thee."

Concerning the Holy Scriptures, George Fox says: "We believe they were given forth by the Holy Spirit of God, through the holy men of God, who (as the Scripture itself declares, 2d Pet. i. 21), 'spake as they were moved by the

Holy Ghost.' We believe that they are to be read, believed and fulfilled. (He that fulfils them is Christ;) and they are 'profitable for doctrine, for reproof, for correction, and for instruction in righteousness, that the man of God may be perfect, thoroughly furnished unto all good works,' (2d Tim. iii. 16, 17.) 'and are able to make wise unto salvation, through faith which is in Christ Jesus,' (1b. 15.)"

Very similar to this is the testimony of William Penn, who, in his *Advice to his Children*, declares that the Holy Scriptures "were given forth by holy men of God in divers ages, as they were moved of the Holy Spirit; and are the declared and revealed mind and will of the Holy God to mankind, upon divers dispensations; and they are certainly able to make the man of God perfect, through faith unto salvation, being such a true and clear testimony to the salvation that is of God, through Christ, the second Adam, the Light of the world, the quickening Spirit."

Numerous passages might be produced from many of the early writers in our Society, confirming the doctrines contained in the passages above quoted; but this does not seem necessary, as probably few of the readers of this article will be disposed to deny that they truly represent the faith of Friends on those points. But it seems proper to make further reference to the inspired origin of the Holy Scriptures, which indeed is the foundation of that reverence for them which our Society has ever felt.

Robert Barclay in the Proposition of his *Apology* which treats of the Scriptures, speaks of the disputes which existed in the early ages of the Church as to what books should be received into the canon of the Scriptures, and what rejected—a difference of opinion which exists even to this day, for the Catholics admit the authority of the Apocryphal books, which most Protestants reject; and he queries, "What then should become of Christians, if they had not received that Spirit and those spiritual senses, by which they know how to discern the true from the false?" The true evidence of their inspired origin, and that alone on which the mind can safely and securely rest, he maintains is that conviction of their truth and value, which the Spirit itself impresses on the mind of the well-disposed reader, who has so yielded himself to the Divine government as to be prepared to perceive and follow the pointings of God. "We confess indeed there wants not a majesty in the style, a coherence in the parts, a good scope in the whole; but seeing these things are not discerned by the natural, but only by the spiritual man, it is the Spirit of God must give us that belief of the Scriptures which may satisfy our consciences." "The Scriptures' authority and certainty depend upon the Spirit by which they were dictated; and the reason why they were received as truth is, because they proceeded from the Spirit."

Although the Society of Friends thus value the Scriptures and regard them as the most excellent and important of all writings, setting forth, as they do, a history of the most important

events that have affected the spiritual interests of the whole race of man, and "a full and ample account of all the chief principles of the doctrine of Christ," yet their recognition of the source to which they owe their authority, *i. e.*, the moving of the Spirit on the hearts of his servants who wrote them—preserves them from undervaluing those declarations and writings, which have proceeded from the influence of the same Spirit in succeeding ages. This is forcibly expressed by Isaac Pennington, who says: "The message that God sends in any age hath a peculiar reference to the state of the world, and the state of the people of God in that age; and none can slight it (whether it be signified by word or writing) without clashing against God's authority, and despising Him that speaketh in these latter days. Yea, the immediate word of the Lord, spoken and declared at this day, by any man to whom it pleaseth the Lord to commit the same, is of no less authority nor more to be slighted now, than it was in his servants in the days past, by whom the Scriptures were given forth."

True and important as these sentiments are, Friends have always recognized the liability of men, especially those of little experience, to mistake their own imaginations for "the immediate word of the Lord;" and have unsubstitutedly stigmatized as delusions all such supposed messages which conflict with the clear statements of the Holy Scriptures. J. W.

(To be continued.)

FOR "THE FRIEND."

Samuel Fothergill, at a Quarterly Meeting in the north of England, narrated the following anecdote, which is well worthy of preservation:—

He had called to visit an Elder of the Society on his death-bed, and found him in great trouble and anguish of spirit. He was a man who had borne a good character among men, and in the days of his youth had been zealous in the discharge of the duties devolving on those who are rightly called to the station he held in the Church. As he grew older, the ardor of his devotedness had declined, yet, as he retained the form of godliness, his estimation in the judgment of his fellow-members was not materially affected; but now, on his death-bed, the good opinion of others could not satisfy his soul, on which a horror of great darkness rested. He told Samuel that in the days of his youth he had a vision, in which was represented a well-enclosed field of green pasture, well watered and abounding in flocks of sheep. They were in excellent condition, and remarkable for the whiteness of their fleecy coverings. This fold he was to watch over. He was to care for the flock, see after the hedge, and keep the fountain head of the water clean. Now, in his old age, he had had the vision renewed. He had again beheld the fold committed to his care; but Oh! the awful change. The hedge was broken down, the pasture was burnt up, the sheep and lambs, who remained in the enclosure were poor, weak and sickly, and a venomous serpent lay in the fountain and poisoned the water. While he considered the change, he heard a voice, saying, "All this will I require at thy hand."

After narrating this, he told Samuel that in looking to the future he could see nothing but gloom and darkness.

If there is not enough of the Christian religion in Europe and America to stop war forever between the nations, there certainly ought to be common sense enough.—*J. Hemmenway.*

Joseph La Fleesche.

SKETCH OF THE LIFE OF THE HEAD CHIEF OF THE OMAHAS.

The following sketch published in the *Bancroft (Nebraska) Journal* was furnished that paper by one who has known La Fleesche for many years, and who is thoroughly acquainted with the history of the Omahas as a tribe:—Joseph La Fleesche was descended upon his father's side from an old French family that reached America at an early date. The first missionary to the Indians of the Northeast was a La Fleesche. In the beginning of the present century the Indian trade was controlled by corporations. The Hudson Bay Company of England, and the American Fur Company were the most important.

Joseph La Fleesche, Senior, entered the employ of the latter, and made his headquarters among the Omahas, then living where the present town of Homer now stands. He acquired the language, and traded with the tribes living between the Nebraska and Platte Rivers. These included the Poncas, Omahas, Iowas, Otoes and Pawnees.

In 1822 his son Joseph was born. His mother was a Ponca, a relative of the head chief of the Omahas, the well known Big Elk.

The boy early showed talent, growing up in the midst of Indian life and lore. From the time he was ten years he accompanied his father upon his trading tours, visiting St. Louis, and the various tribes, learning their languages, as well as the French, and becoming versed in trade.

When about sixteen years of age his marked capacity won recognition from the American Fur Company, and he was regularly employed in its service until about 1848. During this year the Omahas were removed to the consolidated agency at Bellevue, Nebraska, and there Joseph La Fleesche settled with them.

It was during his residence here that the Mormons passed through Nebraska on their way to Utah. To meet the demands of the emigrants Joseph La Fleesche and Logan Fontenelle established a ferry over the Platte near the present site of Columbus, and another ferry over the Elkhorn where Fremont now stands. They built flat boats which were large enough to take over two wagons and teams at a time. These ferries proved lucrative, and after a year or more were purchased by some Englishmen. Later, during La Fleesche's residence at Bellevue he was for a time clerk to the late Peter A. Salpy.

The tribal career of Joseph La Fleesche dates from about the year 1843. He then began to seriously study and observe the customs of his tribe, and to prepare the way for his entrance into the chieftainship.

It is impossible to state these customs briefly; they are a part of the history of the Omaha tribe, which is strictly organized and officered, having elaborate and clearly defined social and religious rites.

In accordance with his fulfilled obligations, taken in connection with his established character for honesty, physical and moral courage, and self control, he was made chief about 1849, and upon the death of head chief Big Elk in 1853, succeeded to his place.

Joseph La Fleesche was the only person having any white blood who has been a chief in the Omaha tribe. While living in Bellevue he built him a house and worked on his farm, gathering some of the young men about him and teaching them to sow and reap.

He sent his children to school. His own active nature and his father's indulgence had

prevented his securing the advantages of an education. Later he realized the mistake and his children all bear testimony to his appreciation of schools.

When the Omahas as a separate tribe made their first treaty in 1854, selling their hunting grounds and reserving for their future home the tract known as the Omaha and Winnebago reservation they intended to include this old village site near Homer.

The history of the making of this treaty is full of interest. Some of its wisest provisions are due to the thoughtfulness and perseverance of head chief La Fleesche, to whom Indian Commissioner Mannyenty wrote under date "Washington, March, 20, 1854:"

"Having completed the business which brought you here, I deem it my duty on your departure for your home to express to you my approbation of your official conduct while here, and to commend the interest you have shown for the Omaha people."

When the tribe came up to their reservation in 1856-7 they built a village of sod lodges in the ancient form, that of a circle, each clan occupying its tribal place; the site was between the mouths of the North and South Blackbird Creeks. The Agency was established upon the old military road, the only highway in those days. The Presbyterian church erected its mission house on the bluffs overlooking a wide bottom where the mills and shops were built and where the steamboats landed, bringing tidings of the outside world. Toward this latter locality in 1859, Joseph La Fleesche led forth over twenty families and established a new village.

He built for himself a large frame house, fenced a garden, planted an orchard and opened a farm. The other men built houses and bridges, and took up farms on the bottom where the head chief broke for them over 100 acres.

Here the first wheat was planted and in winter the people hauled their crops on the ice to Sioux City. Their children attended the mission school. In the midst of their labors and prosperity the men cared little for the derivative name of "The make-believe white men" given to them by the non-believing Indians.

His observation of men and events taught him that if the Indian was to survive in the midst of the incoming civilization he must possess his land individually and become a citizen. The old organization of the tribe was incompatible with these demands, and the old customs must yield to the methods of the white race. He, therefore, urged upon the U. S. Government the division of the land into individual farms, and was the principal mover for the abrogation of chieftainship, getting up a petition to that effect in 1875, four years after the first allotment of land was made.

This remarkable move to abolish chieftainship on the part of the man holding, by virtue of Indian requirement and the authority of the United States, the office of head chief, in order to secure the future good of the people, is characteristic of Joseph La Fleesche.

His ambition transcended the desire of mere personal honors. He believed in the truth, that greatness is found only in unselfish labor to uphold and advance his fellowmen. It is to his persistent effort that the abolishing of chiefs among the Omahas is due. This radical act made it possible for the tribe to abandon many ancient customs, which, if persisted in under their changed conditions incident to the loss of the game, would have retarded their acceptance of civilization and Christianity. While he yet

held the position of head chief he used it to inflict severe penalties upon those addicted to drunkenness and gambling. The results of his vigorous action are felt to-day after the lapse of more than twenty years.

When the final allotment was made in 1883-4 for the purpose of patenting the land, Joseph La Flesche, true to his character as leader, and in spite of his three score years, once more led his people forth. He left his farm of 60 acres nestled amid the wooded bluffs and singing streams, where he had fought so bravely in behalf of education, industry and Christian living, and took up his 160 acres on the unbroken prairie, gathering his children and friends about him. The railroad passed through his land but there was then no other sign of the prosperity which is now everywhere to be seen.

The bottom where "the make-been white men" farmed and where the steamboat landed thirty years ago, has long since disappeared in the Missouri River, but the men who worked there and their children have to-day broken nearly 2000 acres in the Logan Valley, which they are farming.

This victory for peace, won by Joseph La Flesche, is far greater than his valiant fights to save his people from their enemies, when by his valor he won the name of "In-sta-ma-zue," Iron-eye.

He has fallen asleep in the midst of his 100 acres of ripened corn and his tall wheat stacks waiting for the thrasher, having in his old age built him a house and barn, cultivated 200 acres of land and lived to take rank among the white farmers and to exercise with his people the privileges belonging to citizens of the United States.

FOR "THE FRIEND"

On some of the cattle ranges in the West, the cattle are watered in an ingenious way, so as not to waste water when it is scarce. An enclosed plane is laid with planks up to the watering trough, with a spring attached under it. On this the cattle are taught to walk up to the trough, and when they reach it their own weight on the platform settles it so as to open the valve through which the water pours into the trough, and then they can drink and be satisfied; and when they go down, it springs up and shuts again.

But we are told that some of the cattle have no faith in it; yea, it is almost impossible to train them to it. But they keep quite busy running all around it, and trying hard to get a drink from the further end or the opposite side; but to them the trough is dry, and will remain so; unless they walk to the only appointed way, they will assuredly perish of thirst.

And are there not many of the human race acting just like this latter class of cattle? They are trying every way to reach the water of life, in order to quench their burning thirst for happiness; but will not try the alone way of coming to Jesus Christ, from whom the healing water flows in abundance to every thirsty soul that comes unto Him.

T. D.

SAN LEANDRO, Cal., Second Mo. 24th, 1889.

It seems hard to be blamed for our best doing; but the hearing of such blame as this is the real test of our characters. "For what glory is it, if when ye sin, and are buffeted for it, ye shall take it patiently? but if, when ye do well, and suffer for it, ye shall take it patiently, this is acceptable with God." A trial of this kind ought, therefore, to be a means of grace to any one of us. And it is pretty sure to come.

FOR "THE FRIEND."

The following remarks of that obedient servant of our Lord, Job Scott, are so in unity with my own feelings, that I thought it well to revive them for perusal.

A. M. W.

"I am on this occasion renewedly confirmed in a sentiment I have long been settled in, that is, that there never was, and never will be but one true religion in the world, to wit, the work of the Spirit of God in the souls of mankind; that some of all denominations have something of this true religion, even though some of these through the prejudice of education may disallow it in profession; and that no man has any religion, but what he comes to the knowledge and experience of, through the alone influence of this Holy Spirit of God. This it is that begins and carries on the work—this it is that, by its own Divine influence operating in the minds of mankind, reveals Christ in them, the hope of glory; or so operates from time to time, on reading the Scriptures or other good books; or hearing the gospel preached; on meditating on the works of creation and providence; on God's judgments in the earth; or his dealings with themselves as individuals; or whatever other occasion, circumstance or thing, is ever made a means of conviction or conversion; the Holy Spirit so operates, I say, in all these cases, as to produce the happy effect; and without the inward operation thereof, all these other opportunities and things would be utterly in vain as to salvation, and never able to produce the least degree of true religion, or sanctification in the soul. So that, though there are many opinions, many creeds, professions and denominations, and some truly religious persons in them all, yet there is and can be but one true religion; all true religion is of one kind—all springs from one source. And blessed and adored forever be the Lord, in order that all men may, if they will, be benefited experimentally by this one true religion, "the manifestation of the Spirit is given to every man to profit withal;" he that rightly profits thereby, and continues so to do, will live in the exercise of the one true faith; will witness the one true Christian baptism; will know and obey the one living Lord; will, by the Holy Ghost, in word and deed, acknowledge and call Him Lord; and so will be saved with an everlasting salvation. And on the other hand, seeing a measure of the Holy Spirit is given to every man; seeing the Grace of God that brings salvation hath appeared to all men; seeing the light and life of the holy Word, which in the beginning was with God, and was God, hath enlightened every man that cometh into the world, and seeing moreover Christ Jesus has tasted death for every man, how shall we excuse if we neglect and reject so great salvation? How great must be the condemnation of every soul, thus highly favored, which stands out and rejects the stringings of the Spirit, the teachings of Grace, the shnings and convictions of this Divine Light! Now this Light, Grace, and Spirit of God, is all one thing under different appellations,—it is called spirit, because it is quick, lively and operative, and quickens the soul to a sensibility of its state and condition,—it is called grace, because it is the free unmerited gift of God,—and is called light, because it makes manifest as, 'whatsoever doth make manifest is light,' saith the Scriptures. And as this grace or light is attended to, it will bring the soul into a state of grace and favor with God. Well, therefore, might the Apostle, with holy reverence, break forth in these expressions, "thanks be unto God

for his unspeakable gift!" And all who obey the light will be brought out of darkness into God's marvellous light; for though the hearts of fallen men are grossly darkened, yet the light shineth in their dark hearts, and though the darkness comprehends it not, if it is taken heed to, will shine more and more to the perfect day, even until the whole body be full of light; but those who rebel against the light, will grow darker and darker, until they know not the way thereof, nor understand the paths thereof, and become vain in their imaginations, and their foolish hearts become wholly darkened; having loved darkness rather than light because their deeds were evil."—*Job Scott, 1789.*

From Richard Jordan to Joseph C. Swett, on a Journey in Pennsylvania.

Near Philadelphia, Twelfth Month 13th, 1811.

Dear Joseph:—I have been thinking so often about thee since thou left home on the present expedition, that I have several times been almost ready to take the pen and endeavor to send thee word of it, but did not know where to find thee for one part of the discouragement, and another was I did not know what to say, save that I felt particular unity with thy undertaking, and wanted thee encouraged; so at length I concluded, if I only said that much, and sent it by way of letting thee know that thou had my sympathy and regard, it might be of some little use in some discouraging moments—for such moments do at times in such undertakings occur; and having myself had some experience of what I am speaking, when separated from my home, friends and connections, I remember how glad I have been to get, if it were a very few lines, by way of remembrance from any who I apprehended were in sympathy with me, and a well-wisher to the cause in which I was engaged. And when very far distant, so that I got no new letters from my friends, I have at times sat down and gone over some of my old ones, and have found them a great deal better than none. Now, by the time Joseph reads on thus far, perhaps he may be ready to reply and say, "Ah! but why does he speak to me as if I was in any service." But while I was anticipating this reply, Jonathan's armor-bearer came in my way, whose heart being one with Jonathan's in the cause, was ready to go with him wherever he thought proper, though it were to show themselves unto a mighty host; and though, to the human eye, they seemed to form but a very small, poor band, yet, as it was the Lord's cause, they were embarked in, He not only strengthened and emboldened them, but caused a trembling in the enemy's host; for the earth began to shake under them, so that the host began to melt away presently, and (as if it were to encourage other poor little bands to put their trust in God while engaged in his work) by those two a salvation was wrought for Israel. For, by their success, others were encouraged to come forward, until the victory was completed.

Well, my dear friend, because I apprehended so little, I took this small paper, but since my pen has got a-going, if I had a little more paper I believe I should say something about my often discouraged mind, respecting prospects of things nearer home. Ah! gloomy prospects indeed, unless the number should increase who are disposed to disentangle themselves from the affairs of this world, and the corrupting maxims and spirit of it, and then, I believe, it would soon be discovered that there would be more devotedness, and our consolation would be sweet, in the evidence that our devotions were accept-

ble to God through Jesus Christ, to whom he glory both now and forevermore. I am quite willing that thy female companions may share in this, if they think it worth sharing or any part of it. Mine salute you.

Grace, mercy and peace be with you all, amen. Thy sincere friend, who wishes the best things for these always.

RICHARD JORDAN.

Our Monthly and Quarterly Meetings are over, and I think have been pretty solid seasons, and I sometimes have a hope that my prayers may in due time be heard on account of the sheep.

R. J.

Stepping-Stones Upward.—The price of strength, mental or muscular, is exercise. No man grows strong in body who does not train his muscles daily and tax them to their utmost headful limit; no man can grow strong in mind who shrinks from intellectual contests, who lets others do his thinking for him, who fears to face the truth, who does not conquer for himself ignorance and prejudice, and lay hold on the fruits of knowledge and of wisdom. The glory of a man is in his strength. To be weak is miserable, doing or suffering; and strength can come only by persistent and continuous labor.

The conditions of labor we cannot always or often control, and herein lies the secret of the discontent with labor so widely felt. Men and women, boys and girls, are perpetually clamoring for work they would like to do, and despising the opportunities and necessities within their reach. The sewing-girl, instead of giving her thoughts to making her seams even and strong, to fastening the ends so that they won't rip, to putting work into the garment that will last as long as the fabric of which it is made, lasts, wastes her enthusiasm in dreaming what she would do could she be a fine lady. Suppose blind Fortune should give her to ride in her own carriage she might be to the cultured eye more an object of pity and compassion than when she was a poor sewing-girl.

The best preparation for promotion is fidelity in the discharge of trusts already given. "Thou hast been faithful over a few things; I will make thee ruler over many things." It seems to be necessary to most people, whether their success is financial, professional, or of whatever sort it may be, to work their way up through difficulties. As gold must pass through the fire to be refined, so must character pass through the fire to be refined. This refining of gold may as perfectly take place in a rude cabin as in an elegant laboratory; given the crucible, the gold, the fire, all other accessories are of secondary importance. We find that from all humblest positions men and women who accept these positions, and use them as a means of showing what good work they can do, climb up continually higher and higher, and have so firm and broad a structure beneath their feet there is not a possibility of a fall. Thus they are able to command the happiest conditions for their labor.

To all of us, rich and poor alike, comes the word: "Work while it is day, for the night cometh when no man can work." To all of us is given work to do. In reaching after that at a distance we should not neglect what is near at hand. The most mental duties, when performed in the right spirit and with the right motive, cease to be mental in their nature, and become stepping-stones to greatness.

"Who sweeps a room as for Thy laws,
Makes that and the action fine."

—Ereching.

FOR "THE FRIEND."

**GOSPEL LIGHT AND TRUE MINISTRY
INSEPARABLE.**

A preacher of God must be taught of the Lord,
And then to the hearers new life he'll impart;
Which comes not from the head, for the letter is dead,
And cannot give light to the sin-darkened heart.

A sermon without light, can never be right,
Because it comes not from the life of the Lord!
And if only from man, it never then can
Raise the listening hearers to heaven and God!

So let our lights shine, with a glory Divine,
That others around, our good works may behold;
And be prompted to move in the same boundless love
That adorned and impelled our fathers of old.

But now we're so wise, that we look for supplies
From the schools and the training that earth can
afford.
As if proud mortal man, by his wisdom could scan,
Or out vie, the wisdom and teachings of God.

A preacher may grow in head-knowledge and show,
But, not strictly heeding the heavenly call,
Be exalted quite high; yet see no danger nigh.
So let him in time take heed lest he fall.

The words preached may be right, but not having the
light,
They profit no more than high sounding brass,
Which makes a nice sound to please all around,
But brings nothing soul-saving to pass.

To sit and keep still is surely God's will,
When nothing is given to the preacher to say.
And how dare he to stand, without God's command?
Or kneel in pretence, and mockingly pray?

The longer I live the more I believe,
That our faith stands too much in the works of the
head:
We find we are weak, but vainly we seek
To find spiritual life in the realms of the dead.

We need a true light, to guide us aright,
Lest we fall o'er the blocks that are strewn in the
way,
For a transformed light, may dazzle the sight,
Till by following it, we are led far astray.

God's servants should preach, and also should teach,
As freshly received from their baptizing Lord.
They freely receive, and they freely should give
Without looking to men for earthly reward.

But some preachers now seem to think they can bow
Without being endowed with power of God:
From the training they have, they think they can give
A supply, and not wait on the speaking Word.

We often now find, we are too much inclined
To follow false lights, instead of the true;
But they lead us astray, from the strait narrow way,
To leave the old ways and to seek something new.

A preacher of God must have light from the Lord,
To give him to see the great work he must do;
And help him along, with a life clear and strong,
To perform the high task God is prompting him to.

The churches have now far too many that bow
In bodily attitude, seeming quite low;
While the heart that's within is not free from sin,
So they cannot teach others the way they should go.

But the false and the true are both brought to view
By the teachings of Christ to the people of old;
For false prophets then appeared among men,
As true sheep of the flock, though not of his fold.

As the light is denied, and much laid aside
By those who depend on the wisdom of man,
So the beauty of speech, too many now preach,
Instead of the simple and pure gospel plan.

But where preachers have found the high holy ground,
And walked on it themselves, as they journeyed
below;
They then in the light, can teach others aright,
And show them more plainly the way they should
go.

Perhaps now I might close the subject of light,
With a wish that we all more earnestly heed
The light of that ray, which leads to the day
Where we love, not only in word but in deed.
DAVID HEDDLESTON.

Twelfth Mo. 11th, 1858.

SELECTED.

A WONDERFUL WEAVER.

There's a wonderful weaver
High up in the air
And he weaves a white mantle
For cold earth to wear
With the wind for his shuttle,
The cloud for his loom,
How he weaves, how he weaves,
In the light, in the gloom!

O! with finest of laces
He decks bush and tree:
On the bare, flinty meadows
A cover lays he.
Then a quaint cap he places
On pillar and post,
And he changes the plump
To a grim, silent ghost!

But this wonderful weaver
Grows weary at last;
And the shuttle lies idle
That once flew so fast.
Then the sun peeps abroad
On the work that is done;
And he smiles: "I'll unravel
It all, just for fun!"

—Our Dumb Animals.

SELECTED.

WHY?

Why do we suffer? Why should God,
Who loves his creatures, scourge them so?
He hath the right—we need the rod;
This is enough for us to know.

We search and question, to what end?
No providence hath made it plain;
The finite cannot comprehend
The infinite mystery of pain.

Shall earth-worms burrowing in the soil,
Aspire to gauge creator's plan?
Or strive to measure, mid their toil,
The strange complexities of man?

As well may we, earth-born and low,
Stretch upward from our mole-hill clod,
And ask, with daring front, to know
The "wherefore and the why" of God!

Margaret J. Preston, in *The Independent*.

FOR "THE FRIEND."

An article in *THE FRIEND* of Third Month 2nd, in regard to the lapse of our members into certain habits and observances common in the world, brings up some serious reflections.

Among those who drift with the current in social life there may be nothing specially harmful in complying with modern usages at the time called "Christmas." That some make the day an occasion of gross dissipation, might have little weight as an argument against the general design of devoting it to purposes of plausible conviviality. With those whose springs of moral conduct are no deeper than worldly interest and pleasure, such occasion for festivity has its uses that for them may be both consistent and innocent. The mass of mankind, church-goers and others, in the days of George Fox, could see no evil in these things. They devoted not only this one day in the year, but many others, mainly to purposes of amusement—all which was quite in unison with their mode of life and lax ideas of religious duty.

But we well know that early Friends took no part in these scenes of frivolity; and further, that they were led to proclaim openly against them as the nurseries of many evils. Their testimony against the observance of these days so far impressed the habit of the Society, that in parts of our country, where Friends formed the main body of the people, the day called "Christmas" would come and go without being noticed or even thought of. Some Friends, of upright and religious discernment, have avoided using the term "Christmas," to indicate

the 25th of Twelfth Month. It had been supposed that the nativity of Jesus of Nazareth occurred about that time of year.

I have been lately reading a concise history by Backhouse and Tylor, in which the progress of the Christian Church for the first three centuries is viewed more especially from our standpoint. From this it appears that there is no evidence that the birth of Christ occurred anywhere near the winter solstices. The Roman people had certain set days for games and hilarious enjoyments, and the professed Christian part of the population were strongly drawn to participate in those heathen pastimes. Harmony among the people seemed desirable, and a community of interest in some common source of enjoyment, was a plausible remedy for the difficulty. Hence the authorities, that by this time were Christian in name, devised an entertainment in which all might participate.

As the Saturnalia of the Romans occurred about the time of winter solstice, it was concluded to assume that this was the period of Christ's nativity, and let the more pious of his followers observe the day on that account, and the rest of the people as would most contribute to their enjoyment.

With such an account of the origin of this festivity, the data for fixing the day, and the avowed purposes for thus setting it apart, we need not wonder that early Friends felt required to decline its observance, nor that Friends of religious sensibility from that time to the present have felt restrained from giving it the appellation, "Christmas."

We well know how the customs of the present age have cast their toils around us. We know when those in our employ are not willing to carry on the regular work on that day, it may be better to yield to them for the sake of peace and good feeling. We know also, that when the general arrangement for business is thrown out of its course to suit that day, we must arrange our business to meet the emergency.

But then, there is a well-defined difference between passive compliance and active participation. This difference is readily distinguished by those of anointed eyes. For those who can not see the distinction, a compliance with custom may bring no condemnation; but those of us who assume to be walking in the Truth, should be unfaithful in our testimony to all its requirements. We may decline using the appellation "Christmas," and in many other ways show our allegiance to Him who prayed that his followers should be kept from the evils that abound in the world.

Third Month 4, 1889.

FOR "THE FRIEND."

Rock of Ages.

Although I do not find this phrase in the Holy Scriptures, yet I believe it is correct in the meaning that Christ the Word, as testified of in St. John 1st chapter, is the rock and sure foundation on which believers in all ages of the world have, through true repentance and faith in Him, been established; even those that had not the Scriptures, nor ever known of Christ's coming in the flesh. This I believe to be the faith of Friends, as shown by Robert Barclay in his Apology, in the Proposition on "Universal and Saving Light."

Care is needed that we do not rest satisfied with anything short of that thorough change of heart, so necessary to be known, and which only can be known by submitting to the effectual operation of the Spirit of Christ in the soul;

which Divine spirit or grace of God will not only show us our sins, but will give strength to the sincere seeking soul (that seeks Him within where He is to be found) to overcome sin; and to know of a truth as we follow Christ in the regeneration, our hearts to be cleansed from all unrighteousness.

"He that died for us, the just for the unjust, that He might bring us unto God," is touched with a feeling of our infirmities, being tempted (when in that body of flesh in which He came to do his Father's will) in all points as man is, yet without sin," and is able to succor them that are tempted. Then let us be encouraged above all to look to Him, the source of all saving strength, and to wait often upon Him in the true silence, wherein all that is of the creature will be hushed within us, and God alone exalted in our hearts, and in the assemblies of his people, when met together for the solemn purpose of worshipping Him. "They that worship the Father must worship Him in spirit and in truth, for He seeketh such to worship Him."

The advice of William Penn to his children, *Friends' Library*, vol. 5, p. 291, is worthy of our serious consideration: "Keep close to the meetings of God's people, and wait diligently at them, to feel the heavenly life in your hearts. Look for that more than words in ministry; and you will profit most. Above all, look to the Lord, but despise not instruments, man or woman, young or old, rich or poor, learned or unlearned."

Let me conclude with the fervent prayer of my soul, that those who are in anywise entangled by the enemy of souls in any other than the good way, our forefathers in the Truth walked in, may be favored to escape his snares. He was a deceiver from the beginning, and the father of lies; and is as busy now as he ever was, seeking to lead us astray from the true fold, where only there is rest and safety.

With the salutation of love, your friend and brother,
CHARLES WOOD.

JACKSONVILLE, N. Y. Second Mo. 27th, 1889.

FROM "THE AMERICAN."

A Cold Wave.

During the night, the cold wave came. As I write, we are having the first ice-making weather of the season, although February is well advanced. The chill, gray clouds scarcely concealed the sun as it rose; and later, when the sky was clear, a rosy blush tinted the drifted snow upon the fields. What now of the busy birds, the spiders, and humming flies of yesterday? Have they folded their tents like Arabs and silently disappeared?

Facing the north wind, I pushed through brake and briar, listening at every step for the chirp of a startled bird. For some time I neither saw nor heard a living creature—nor indeed, did I wonder at their absence. At last, a solitary crow struggled against the fierce wind, and uttered at times a most melancholy plaint. It was all but sufficient to send me home, and I stood for a moment pitifully undecided; but the crow, I saw, did make some headway, and I took a hint from it. The icy gusts that swept the hillside soon forced me, however, to seek shelter, and I crept for some distance along the bed of a deep, dry ditch, covering by blackberry-canec and smilax. Here I found a more spring-like temperature, and was not surprised when from the clusters of dead grass, blue-jays hopped before me. They were evidently startled at my appearance in their

snow retreat, but still were not timid, as when in the open woods. I often approached within a few paces, and they hid, I am sure, in the tangled vines and bushes on the banks of the ditch, instead of flying out into the meadow. But if jays, there should be other birds, I thought, and I stopped again and again to listen. It was the same old story: nothing was to be heard but the roar of the wind overhead. Weary at last, with creeping through such cramped quarters, I sat down to rest at a convenient point, and never have I been so fortunate in the choice of an outlook.

It is clearly evident that our resident birds and mammals soon know every nook and corner of their chosen haunts, and more, that they pass from point to point in accordance with fixed plans, and do not wander aimlessly about. If you overtake, in broad daylight, as sometimes happens, any animal larger than a mouse, it is not likely to be confused, not knowing which way to turn. Such indecision would invariably prove fatal. Their actions under such circumstances, indicate full knowledge of their surroundings, and convince one of this fact. If not true, then every surprised animal must take in at a glance every tree, burrow, ditch and path, and select between them, in the twinkling of an eye. My own observations lead me to conclude that our mammals, which are largely nocturnal, survey, at night, the whole country, and know every inch of the ground. Every tanglewood is to them a city with its main thoroughfares and side alleys, and it is this knowledge that enables them to outwit their foes. Within a few days a skunk came boldly into the yard, in broad daylight; defied the dog by assuming a bold front, and was making for the only near place of safety within easy reach, when in the yard, an opening under a side porch. By mere accident only, it was run down and killed. This dreaded creature had evidently been belated and coming home after sunrise, used wonderful tactics when it encountered the dog. It played with him. It ran this way and that, but never far, and always faced the half-timid mastiff. It shook its huge tail, bristled its long fur, snapped, squeaked, and all the while approached in short stages the porch. At last, seeing more than an even chance of reaching it, the cunning creature bolted, and I am almost sorry that it did not escape.

Before many minutes had elapsed, the expected chirping of winter finches was heard—at first, in the distance, but directly, almost overhead, then everywhere about me. A moment later, and a dozen were in full view. Myself a shapeless mass upon a mossy log, the birds mistook me for a part of it, and I had but to look and listen. Foxy sparrows threaded the tangled maze of vine and cane, singing a few sweet notes at times, as the wind lulled and the warm sunshine flooded the shelter with a brighter glow; white throats warbled in their listless way, and one fearless winter wren peered into every cranny of the hollowed earth, spider-hunting wherever the waters of the last freshet had covered the overhanging banks. As it drew near, I almost held my breath, hoping it would venture to creep over me. Once it came very near, stopped and looked me squarely in the face, but without its suspicions being aroused. Probably I needed but a few cobwebs to have brought it to even closer view.

One interesting feature of bird-life was to-day very apparent. Never did two or more individuals meet upon the same twig or low, a

scarcely audible, twitter was uttered. I could often see a slight movement of the beak, without hearing a sound, and notice a gentle tremor of the wings, that doubtless meant much to them, but cannot be interpreted by us. Then away they would go, following the line of the long ditch without grazing the tiniest twig that bent above them. Why many a sparrow, apparently in reckless haste, did not come to grief, is indeed a puzzle; for never, I thought, had I found thorns so sharp, so slender, and so thickly set.

But not birds alone had sought shelter here; the mice also had been driven from the wind-swept meadows, and these ventured into the sunlight, but were cautious to a marked degree. None came very near, and when I was in full view they stopped, sat upon their haunches, and felt sure, if I correctly read their thoughts, that all was not quite right. Not one passed by me. Their keen noses detected what the proverbially keen sight of the birds had failed to discover—that I was not a harmless bit of driftwood. Or did the sense of hearing catch the sound of my breathing? Explain it as one may, meadow mice were never before so knowing, and I recall the charge that I have often made—that they are stupid.

So here I sat for two whole hours, yet not aware that so long a time had elapsed. It mattered nothing that the fierce wind raged above me; that the bending oaks echoed its heartless boast:

"I come from the fields of the frozen north,
 O'er the waste of the trackless sea,
 Where the winter sun looks wearily forth,
 And yieldeth his strength to me."

This lessened not my comfort, nor quickened my homeward steps. Wrapping my cloak the closer, I recalled the day's adventures as I withdrew, thinking how true it was that pleasant surprises are ever in store for the earnest rambler, and many a loss for him who is faint-hearted. It is not well to judge the world through a window.

CHARLES C. ABBOTT.

Near Trenton, N. J.

Natural History, Science, &c.

Washing a Tiger.—When Pezon, the lion-tamer, was at Moscow with his menagerie, he had occasion to employ a *monjik*, a fine specimen of a Cossack, to clean out the cage of the wild beasts. The Cossack did not understand a word of French, and the terms of the contract were settled in dumb show. By way of instructing him in his new duties, Pezon went through a set of pantomime with the broom, sponge and water bucket.

The *monjik* watched him closely, and appeared fully to understand the details of the lesson given. Next morning, armed with a broom, a bucket and a sponge, he opened the first cage he came to, and quietly stepped in, as he had seen his master step on the previous day into two cages of harmless brutes; but this one happened to be tenanted by a splendid but untamed tiger, that lay stretched on the floor fast asleep. At the noise made by opening and closing the door the creature raised its head and turned its green eyes full on the man, who, all unconscious of his danger, stood in a corner, dipping his big sponge into the bucket.

At that moment Pezon came out of his caravan, and was struck dumb by the terrible sight that met his gaze. What could he do to warn the man of his danger? A sound, a movement

on his part might enrage the great beast, and hasten its attack on the defenceless Cossack. So Pezon stood, awaiting developments, ready to rush to the scene when the crisis came.

The *monjik*, sponge in hand, coolly approached the tiger, and made ready to rub him down with the stolidity of a military bootblack polishing his captain's boots. The sudden application of cold water to his hide evidently produced a very agreeable effect on the tiger, for it began to purr, stretched out its paws, rolled over on its back, and complacently offered every part of its body to the vigorous treatment of the *monjik*, who went on scrubbing with might and main.

All the while Pezon stood there with his eyes wide open, and as if nailed to the spot. When he had finished the job, the Cossack left the cage as quietly as he had entered it, and it required the most energetic and expressive gestures on the part of the lion-tamer to prevent his repeating the experiment on a second wild beast.—*La France du Nord.*

Influence of the Sun.—Professor Tyndall says:—"Every tree, plant and flower grows and flourishes by the grace and bounty of the sun. Leaving out of account the eruption of volcanoes and the ebb and flow of the tides, every mechanical action on the earth's surface—every manifestation of power, organic and inorganic, vital and physical, is produced by the sun. Every fire that burns, and every flower that glows, disposes light and heat which originally belonged to the sun. The sun dries the ore from our mines, he rolls the iron, he rivets the plates, he boils the water, he draws the train. Thunder and lightning are also his transmitted strength. And remember, this is not poetry, but rigid mechanical truth. Look at the integrated energies of our world. Who and what are they? They are all generated by a portion of the sun's energy, which does not amount to one two thousand three hundred millionth of the whole.

A Barricade Against Flies.—When visiting a friend last summer, he called my attention to a curious plan for preventing the plague of flies in his house. The upper sash of one of the windows in his sitting-room being open for ventilation, there was suspended outside a piece of common fishing-net. My friend told me that not a fly would venture to pass through it. He has watched for an hour at a time, and seen swarms fly to within a few inches of the net, and then, after buzzing about for a little, depart. He told me the flies would pass through the net if there was a thorough light—that is, another window in the opposite wall. Though the day was very warm, I did not see a single fly in the room during my visit, though elsewhere in the town they were to be seen in abundance. I suppose they imagine the net to be a spider's web or some other trap intended for their destruction.—*Notes and Queries.*

Typhoid Fever.—In a talk on the poison of typhoid fever, Dr. Cyrus Edson said to the New York Academy of Medicine recently that the prevalence of the disease was a disgrace to the century. It is seldom spread except by polluted water, ice, milk or meat. Bad water in the country is the commonest cause. Contamination of the atmosphere by the poison is impossible. A patient in a hospital has never been known to catch typhoid fever from another sick with that disease.

In connection with this subject, Dr. Edson read a parody on "The Old Oaken Bucket," written by Dr. J. C. Bayles, President of the Board of Health, which somewhat humorously

portrayed the dangers which modern scientists have discovered in wells, the water of which is not guarded against pollution:

THE OLD OAKEN BUCKET.

With what anguish of mind I remember my childhood,
 Recalled in the light of a knowledge since gained;
 The malarious farm, the wet, fungus-grown wildwood,
 The hills then contracted which since have remained;

The scum-covered duck-pond, the pig-sty close by it,
 The ditch where the sour-smelling house drainings
 fell;

The damp, shaded dwelling, the foul barn-yard night it
 But worse than all else was that terrible well,
 And the old oaken bucket, the mold-crust'd bucket,
 The moss-covered bucket that hung in the well.

Just think of it! Mess on the vessel that lifted
 The water I drank in the days called to mind,
 Ere I knew what professors and scientists gifted
 In the water of wells by analysis find.

The rotting wood-fibre, the oxide of iron,
 The algae, the frog of unusual size,
 The water impure as the verses of Byron,
 Are the things I remember with tears in my eyes.

And to tell the sad truth, though I shudder to think
 of it,

I considered that water uncommonly clear;
 And often at noon when I went there to drink it,
 I enjoyed it as much as I now enjoy beer.

How anxious I seized, with hands that were grimy,
 And quick to the mud-covered bottom it fell;
 Then reeking with nitrates and nitrites, and slimy
 With matter organic, it rose from the well.

O! had I but realized, in time to avoid them,
 The dangers that lurked in that pestiferous draught,
 I'd have tested for organic germs, and destroyed them
 With potassic permanganate ere I had quaffed;
 Or perchance I'd have boiled it, and afterwards
 strained it.

Through filters of charcoal and gravel combined;
 Or, after distilling, condensed and regained it
 In potable form, with its fifth left behind.

How little I knew of the dread typhoid fever
 Which lurked in the water I ventured to drink;
 But since I've become a devoted believer
 In teachings of science, I shudder to think.

And now, far removed from the scenes I'm describing,
 The story for warning to others I tell;
 As memory reverts to my youthful milking,
 And I see in the sunlight of the morning well—

And the old oaken bucket, the fungus-grown bucket—
 In fact, the slop bucket that hung in the well.

—*Christian Advocate.*

Tornadoes.—A paper read by J. P. Finley before the National Geographical Society at Washington, gives some facts and conclusions drawn therefrom regarding tornadoes. In the United States the greatest number of tornadoes and cyclones occur in the months of April, May, June and July. Missouri has had the greatest number of these visitations since reliable record has been kept; Iowa and Alabama come next in order on the list. An approximation to the number of persons injured by the tornado during eighty-eight years of record in this country places the number killed at 4,000; injured, 6,000. Finley regards the gradual setting-in and prolonged opposition of northerly and southerly currents over considerable areas, as the source of violent atmospheric disturbances. Some idea of the incredible violence of the air in the vortex of a cyclone is given by the writer in the following words: "Weight and size are conditions which generally present immaterial values to the power of the tornado; persons are stripped of clothing; fowls and birds are decapitated of feathers and killed; trees are whipped to bare poles; long and heavy timbers are driven to considerable depths in the solid earth; the vortex is completely filled with flying debris; timbers are driven through the sides of buildings; sand and gravel are driven into wood; the strongest trees are uprooted, or

twisted off near the roots; men and animals are terribly mangled by contact with flying debris and by being rolled over the ground for a considerable distance; the largest railroad engines are lifted from the tracks on which they rest; all objects, whether metal or non-metallic, magnetic or non-magnetic, simple or compound, animate or inanimate, are acted upon in a similar manner."—*The American*.

Items.

Discussion on Poverty and Degradation.—At a meeting of Yorkshire Quarterly Meeting, held at York, England, on the 31st of First Month last, the subject was taken up, in accordance with a minute of the previous Quarterly Meeting. The special question referred by this minute for consideration, was, "How far our duty as members of a Christian Church is concerned in relation to the deep poverty and degradation in which large masses of our countrymen exist."

It had been thought desirable to consider in advance how the discussion might proceed most conveniently and profitably; and that certain friends would be called upon to present their views on certain branches of the general subject. This was accordingly done.

This manner of proceeding does not seem to be in accordance with the custom of conducting the meetings of Friends for the transaction of the business of the Church—in which it has been usual to feel after the openings for service which the Lord might present to those who were waiting upon Him for guidance and direction. Whatever advantages may be thought to attend the study and discussion of certain topics, in the prosecution of philanthropic movements, we regret to see such methods introduced into the meetings of our Society.

It was stated in the meeting that the present rate of wages of a very large number of the working classes does not afford sufficient food for a family, and that the former custom of the degradation of the poor were enumerated, drink, vice, extravagance, thriftlessness, and the demoralizing effect of bad dwellings. In Glasgow alone, no fewer than 40,000 families lived in single rooms; and in many other large towns, rents were so high, that a similar state of things prevailed. The cause of this was traced to the excessive use of sources of evil was thought to be intemperance—the use of intoxicating drinks.

One of those who spoke during the discussion said, he believed the religious aspect was the most important part of the question; that at the bottom, Christianity was the only radical cure that would avail at all. He found encouragement in the fact that many persons were bringing their practical Christianity to bear upon the laws of the land, and the administration of those laws.

Finally, a minute was adopted laying the whole subject before the approaching Yearly Meeting.

Pool-Selling in Pennsylvania.—At a Meeting for Sufferings, held in Philadelphia on the 15th of Third Month, the bill now before the Legislature of Pennsylvania designed to legalize betting on horses, at agricultural fairs, &c., claimed the attention of those convened; and was referred to the care of a committee, who were requested to watch the proceedings of the Legislature in regard to it, and if there should appear to be any necessity, to take what steps they could to prevent its becoming a law.

Arbitration.—*The Independent* quotes the remark of President Harrison in his Inaugural Address—"The offices of an intelligent diplomacy or of friendly arbitration in proper cases, should be adequate to the peaceful settlement of all international difficulties." And it adds this approving comment: "There is not a conceivable difficulty among nations that may not be settled in this way, provided the parties are governed by the principles of equity and justice."

Statistics of Divorce in the United States.—The Report of C. D. Wright, Commissioner of Labor to Congress, contains some statistics which show that

taking periods of five years, from 1847 to 1856, inclusive, the number of divorces in the United States has steadily increased, being 117,311 in the last five years, in place of 53,574 in the first five years. The population of the country probably has not increased during that time in more than half the ratio. The increase in the number of divorces has extended to most parts of the Union. In Maine, Vermont, and New Hampshire, there has been a decrease, owing to the restrictive legislation secured by the National Divorce Reform League; and in South Carolina, during the last five years of the period embraced in the report, there were no divorces, the Legislature of that State having returned to the old position which allowed of no divorce for any cause.

Europe. Militarism.—"The present condition of Europe, which is but one immense camp, in which a mere indiscretion of some too ardent agitator or aspirant for power may set the nations in a blaze, accentuates these remarks.

"Common-sense repudiates the suggestion that the most effective precaution against fire is to collect and pile up large quantities of the most inflammable materials, which a single spark may kindle into a terrible conflagration. The mere possession of a costly and reputedly effective war instrument becomes a temptation to test its capabilities and efficiency at the first opportunity. The surest way to bring about a great European war is to assume that it will be, and to take measures accordingly."

—*Herald of Peace.*

Foundation of British Power.—Lord Wolsley recently said on a public occasion—"Very few people in this audience probably realize the fact that the glorious possessions which we inherit from our forefathers has been built up bit by bit, little by little, by the glorious deeds, by the courage and valor of Her Majesty's Army and Navy." Of this sentiment, we find the following criticism in *The Herald of Peace* (London):

"A more arrogant, a more unjustifiable claim was never advanced. The enterprise of our merchants, the daring of our explorers, the industry of our workmen, and the unselfish enthusiasm of our missionaries are all calmly ignored.

"It is this part of our Empire in which the preposterous boast of Lord Wolsley is even plausible, is India; and India is the one possession which has cost us hundreds of thousands of British lives, and hundreds of millions of British treasure. But even in India the army has played quite a subordinate part. Nothing could be more absurd than to suppose that a handful of soldiers, however brave, could hold down the millions of India. Our tenure of India would cease to-morrow if it rested only or mainly on the sword. It reposes really upon the justice of our rule, the influence of our missionaries, and the fact that we have established the *pax Britannica* throughout that vast continent. It is peace, our Indian Empire is essentially an empire of peace that it is so stable. The only persons who endanger the Empire are the military party who despise the Hindoos and pour scorn upon their legitimate and constitutional aspirations.

"There was a profound truth in Napoleon Bonaparte's sneering description of us as 'a nation of shopkeepers.' We are a nation of shopkeepers, and it is the shopkeepers, and not the soldiers, who have created and who still sustain the British Empire. Impartial history gives the credit, not to 'Her Majesty's soldiers and sailors,' but to our travellers, our explorers, our merchants, our philanthropists, and our missionaries. Indeed, it is these who have done the most. We had been a great deal less active, our Empire would have been much larger and much more prosperous. A peaceful and humane Empire would grow as a legitimate and beneficent business growth. Our merchant princes have not built up their great establishments by threats and violence, but by honestly serving their customers."

ADAM SMITH was once in a company where a person present was finding palliations for some villainous transaction. After he left the room, Adam said, "Now I can breathe more freely. I cannot bear that man; he has no indignation in him."

THE FRIEND.

THIRD MONTH 30, 1889.

We have received a letter dated Third Month 1st, from Isaac T. Gibson, of Salem, Iowa, formerly one of the Indian Agents, calling our attention to an article published by him in *The Christian Worker*, the object of which was to describe the effect which dividing their lands and holding them in severalty had upon the Kansas Indians. The letter, in alluding to this article, says:—

"I write it under a sense of duty, which I thought would be met by sending it to the *Christian Worker*, but since, I feel pressed to ask thee to reprint it, if it appears right for thee to do so."

The substance of the article is as follows:

"About thirty-seven years ago several Indian tribes, living mostly in Kansas, had made good progress in civilization, mainly through the efforts of Christian missionaries—having good farms and houses, schools and church [buildings] on their reservations, the title to which being held in common by the tribe.

"The friends of the Indian thought these tribes were fitted for citizenship, and honestly induced them to permit the government to sectionize their reservations, and receive their homes in severalty, and to sell the surplus tracts to white people.

"Before ten years had passed it was evident to every one that these tribes had been pushed into the rapid and turbid current of our civilization too soon. In ten years more nearly all of them had sold their homes at a nominal price, or abandoned them and had gone to the bottom, or rather taken refuge on unoccupied lands of other tribes in the Indian Territory.

"About this time President Grant adopted the policy of caring for and civilizing all the Indians through the various religious denominations, and assigned to the Orthodox Friends the tribes in Kansas and the Indian Territory. One of the saddest and most perplexing of our duties was caring for and providing homes for those civilized Indians, the Government for a time refusing to recognize them as Indians, and they begging to be accounted as such, and to be relieved of the incubus—citizenship—which hung around their necks like a millstone. They were finally permitted to select small reservations in the Territory, or to join other tribes already there.

"For several years I was with or in the vicinity of those Indians, and know of their unhappy and destitute condition. Intemperance and other vices of the whites had so diseased, degraded and demoralized them, that they were more hopeless as material from which to make a moral and self-supporting people, than the wild tribes help their neighbors; but the Lord wonderfully helped them by sending missionaries to them in their distress, and again by industry and economy they have comfortable homes, good schools and church [buildings], and are a happy and progressive people, because they have been isolated on reservations.

"I have written the above to call attention to the fact that some of these and other tribes, some of whom are Friends, are being persuaded to take their land in severalty and to assume citizenship."

Isaac T. Gibson believes that if these efforts are successful, the same results will again follow.

and the citizen Indian will abandon or quitclaim his allotment to his white neighbor.

We are aware that many of the friends of the Indian look upon the abolition of the tribal relationship, and the holding of their lands in severalty by the Indians, as essential to their permanent welfare,—indeed, we suppose this is the view of most of the advocates of the interests of the Indians; and that the differences between the conflicting policies urged, are more as to the times and the methods, than as to the final result aimed at. We have no sympathy with the acrimony which has marked the discussions among the friends of the Indians; and have no desire at present to enter into their controversies; so long as injustice, force and fraud are avoided, for against these we believe all lovers of mankind have a right to protest. But, believing that the testimony of I. T. Gibson is entitled to respect, from the position which he held as Indian Agent, we do not think it best to refuse his request. It emphasises the need of caution in carrying out reforms and changes, even when these are desirable in themselves.

SUMMARY OF EVENTS.

UNITED STATES.—The President has nominated and the Senate has confirmed, Whitelaw Reid, Editor of the *New York Tribune*, to be Minister to France, and Frederick D. Grant, son of the late President Grant, Minister to Austro-Hungary.

Stanley Matthews, Associate Justice of the United States Supreme court, died in Washington on the 23d inst. He was born in Cincinnati in 1821. His appointment as Associate Justice was in 1881.

Great damage has been done by a northeast storm along the New Jersey coast, on the 21st instant. The greatest destruction was at Brigantine and Peters Beach, and on the coast fronting Atlantic City. The New Jersey Legislature Representatives has passed the Werts bill, repealing the local option law, and it has since been signed by Governor Green.

The colored people in Raleigh, North Carolina, have organized the North Carolina Emigration Association, the object of which is to colonize all their people of the State in Arkansas. A convention is to be held on the 22d of next month, to fully organize the State.

The *San Francisco Chronicle* says that nearly the entire earnings of the Round Valley Indians, amounting to \$15,000 a year, are spent for whiskey unlawfully sold to them by white men.

Claus Spreckels arrived at San Francisco last week in the steamship *Australia*, from Honolulu. He had been visiting his sugar plantations in Hawaii. He stated that the crop of the plantations will exceed the estimates by about 3000 tons. The crop of the islands, if it is proved, will be about 125,000 tons, or the largest in their history.

In an article on crime in the large cities, published in the *Philadelphia Press* last week, occurs the following: "Samuel H. Ashbridge, one of the Coronors of Philadelphia, contributes this interesting information: 'The way in which the case of Philadelphia, in 1887, is deaths due directly to the influence of alcoholism. This was due to the High License, because, while there are fewer places at which liquor can be procured, it is now purchased in much larger quantities and taken home, where it is drunk whenever the inclination turns that way, as having the material at hand.' Times on hand naturally increases the desire. This state of affairs exists to a very great extent among the poorer classes, who provide for Sunday drinking by Saturday night purchases, and then gorge or soak themselves with the liquor at home.' These people are seldom arrested for drunkenness, but death carries off half of them."

London capitalists have formed a company for the completion of the Hutson River tunnel. It is estimated that the cost of completing the tunnel will be about \$2,150,000. With this sum the tunnel can be opened to traffic in about eighteen months.

The State Convention of the Fourth party—the Law Enforcement party, or the Anti-Rehabilitators in they are called—was held in Providence, Rhode Island, last week. A full ticket was nominated, headed by James H. Chace, of Lincoln, for Governor. The platform opened with a recital of the adoption of the

Prohibitory amendment in Fourth Mo. 1888, the laws sold to carry into effect the purposes of the amendment, claiming that no earnest effort has yet been made to enforce the law in the State as a whole, and that the laws on the statute books are just beginning to be operative. The platform further declares against the re-issuance of the fifth amendment—a popular vote—demands the enforcement of the law already enacted.

The statement in No. 31 of THE FRIEND, that *Seventh-day* the 23d of Second Month, was the coldest day of this and the previous winter, should have been *First-day* the 7th of Second Month was the coldest day, according to the city last week numbered 412, an increase of 7 as compared with the previous week, and a decrease of 62 as compared with the corresponding week of last year. Of the foregoing 213 were males and 199 females; 46 died of consumption; 14 of pneumonia; 26 of diseases of the heart; 24 of inflammation of the brain; 14 no convulsions; 17 of inflammation of the stomach and bowels; 17 of old age; 16 of bronchitis; 14 of typhoid fever; 12 of marasmus; 11 of paralysis; 11 of Bright's disease; 10 of cancer; 10 of congestion of the lungs, and 10 of inanition.

Markets, Dec.—U. S. 4's, 108½; 4's, reg. 128½; common, 129; currency, 120; a 4's, 117; of inflammation of the stomach and bowels; 17 of old age; 16 of bronchitis; 14 of typhoid fever; 12 of marasmus; 11 of paralysis; 11 of Bright's disease; 10 of cancer; 10 of congestion of the lungs, and 10 of inanition.

Markets, Dec.—U. S. 4's, 108½; 4's, reg. 128½; common, 129; currency, 120; a 4's, 117; of inflammation of the stomach and bowels; 17 of old age; 16 of bronchitis; 14 of typhoid fever; 12 of marasmus; 11 of paralysis; 11 of Bright's disease; 10 of cancer; 10 of congestion of the lungs, and 10 of inanition.

Feed.—Winter bran, choice, \$15; do., fair to prime, \$14 a \$14.75; spring bran, nominal.

Flour and Meal.—Western and Pennsylvania super, \$5.00 a \$5.25; do., extra, \$3.25 a \$3.75; No. 2, \$4.00 a \$4.25; do., No. 1, \$4.50; Pennsylvania family, \$4.50 a \$4.75; Pennsylvania roller process, \$4.50 a \$5.00; Ohio, clear, \$4.60 a \$4.90; do., straight, \$4.30 a \$4.50; Indiana, clear, \$4.60 a \$4.90; do., straight, \$4.10 a \$4.30; St. Louis and Southern Illinois, clear, \$4.60 a \$4.80; do., do., straight, \$4.30 a \$4.50; winter wheat, \$4.00 a \$4.25; do., do., straight, \$3.60 a \$3.80; Minnesota, clear, \$4.00 a \$4.25; do., do., straight, \$3.60 a \$3.80; do., patent, \$6.10 a \$6.60. Rye flour was scarce and firm at \$3 per barrel for choice.

Grain.—No. 2 red wheat, 94½ a 95 cts.

No. 2 mixed corn, 40½ a 41 cts.

Beef cattle.—Extra, 4½ cts.; good, 4 a 4½ cts.; medium, 3½ a 3¾ cts.; common, 3 a 3½ cts.; fat cows, 1½ a 2½ cts.

Sheep.—Extra naturals, 5 a 6 cts.; good, do., 4½ a 5 cts.; medium, do., 4½ a 5 cts.; common, do., 4½ a 4½ cts.; culls, do., 4 a 5 cts.; medium, do., 4½ a 5½ cts.; good, do., 4½ a 5 cts.; culls, do., 4½ a 4½ cts.; cts.; common, do., 3½ a 4 cts.; culls, do., 3 a 3½ cts. Lambs, 4 a 7½ cts.

Hogs.—Western, 7 a 7½ cts.; State, 6 a 6½ cts.

Milch cows \$25 a \$45.

FOREIGN.—The most important events of the week in the British Parliament were the votes on the proposals to reduce the salaries of Sir Richard Webster, Attorney General, and Balfour, Secretary for Ireland. In both these instances the Government won by nearly its usual majority of the previous session, and prior to the collapse of its case against C. S. Parnell, before the Commission.

Joseph Chamberlain, in a letter to his electors, says he thinks that the time has arrived when the Government should prove its readiness to propose a substitute for Gladstone's rejected Irish bills. He thinks that if a large and final land-purchase measure were passed with the consent of all parties, it would immensely lessen the difficulty of giving Ireland a liberal local government measure. This matter, he says, will be openly discussed at the coming Easter conference.

Attorney Lewis, Solicitor for the Parnellites, has secured Richard Pigott's diary, and will produce it before the Commission.

Floods, said to be the greatest known in the present generation, have been prevailing in the west of England. Railway traffic has been suspended, bridges have been swept away, and lives lost by drowning.

England is to have a fire-brick trust, a syndicate will buy up all the works of the kind, and negotiations to buy up all the works. A five shilling increase in the price per 1,000 is to be the first result of the scheme.

The Ministry of New South Wales has been defeated on the question of protection, and in consequence has resigned.

The London *Chronicle* states that there have lately been 60 sudden deaths in a hospital at Florence; all preceded by intestinal disturbance. Some papers attribute the deaths to bad food, others to cholera.

The *Journal des Debats* says the French Government has abandoned the prosecution of Deputy Laguerre for his connection with the Patriotic League.

The number of deaths caused by the famine in Shantung, in China, is appalling. Many of the inhabitants are committing suicide through despondency, there being still three months to wait for the harvest.

A telegram from Panama says that commercial matters all over the Pacific business doing. The Colon storekeepers and dealers have united in petitioning for a reduction in all kinds of taxes, owing to the complete stoppage of trade in the city. In the city of Panama things are in much the same condition. This state of affairs is due to the stoppage of work on a bad canal and there is little business doing. The canal question in the Canada Parliament to provide for the return to the United States, upon demand, of all criminals in Canada, guilty of specified offenses, has alarmed the American "hoodlers," staying there to such a degree that they have subscribed among themselves \$100,000 for defeating the measure.

A sensation has been created in Ottawa, Ontario, by the issue of President Harrison's proclamation declaring Behring Sea a closed sea. The action of the American Government proved a complete surprise to the members of the Canadian Government, who decline to be interviewed. It is stated that the Cleveland administration and the British Government had been negotiating for two years past in regard to the claim for compensation for the seizure of three British sealing vessels in Behring Sea.

NOTICES.

A meeting will be held under the auspices of the Executive Committee of the Temperance Association of Friends of Philadelphia Yearly Meeting, on second-day afternoon, Third Mo. 30th, 1889, at 3 o'clock, at Friends' Meeting-house, Twelfth Street below Market, Philadelphia, to stimulate an organized effort among Friends to promote the adoption of the Prohibitory Amendment to the State Constitution to be voted upon on the 10th of Sixth Mo. next.

Friends are earnestly invited to attend the meeting.

WESTTOWN BOARDING SCHOOL.—A Stated Meeting of the Committee having charge of the Boarding School at Westtown, will be held in Philadelphia on Sixth-day, Third Month 29th, at 11 A. M.

A Committee on Instruction meet the same day, at 9 A. M., and the Committee on Admissions at 9:30.

Wm. Evans, Clerk.
Philada., Third Mo. 1889.

A meeting of FRIENDS' TEACHERS' ASSOCIATION, of Philadelphia, will be held at 140 North Sixteenth Street, Fourth Month 6th, 1889, at 2 P. M.

Program:
1. The Art of Questioning.—Mattilda S. Cooper, (late of Oswego Normal School.)

2. Manual Training.—Professors SAYNE and THORPE. Friends will please assemble promptly.

WESTTOWN BOARDING SCHOOL.—The Committee having the care of this Institution, at a recent meeting, decided to change the time of vacation from the Spring and Autumn to the Summer months; the change to be made the present year. In order to effect this, it is concluded to open the school for the next Term, on Fourth Month 23rd, instead of Fourth Month 30th, which would be the regular time of opening under the present arrangement, and to continue the session till Seventh Month 23rd, a period of thirteen weeks, and for which short Term, the charge for Board and Tuition will be \$60.

Parents wishing to enter their children, will please make early application to
JONATHAN G. WILLIAMS, *Sept.*,
Westtown P. O., Chester Co., Pa.

WESTTOWN BOARDING SCHOOL STATE.—During the Winter term the stage will be at Westtown Station on the arrival of the 8:55 and 2:47 trains from Philadelphia, to convey passengers to the school, and at other times on timely notice to J. G. WILLIAMS, *Sept.*

Westtown, Pa.

FOR "THE FRIEND."

Historical Review of the Society of Friends.

(Continued from page 274.)

The writer has a distinct impression of the strong feelings of sympathy with the oppressed, and of indignation towards the oppressor, which were awakened in his mind when a boy of eleven years of age, by the accounts then published in THE FRIEND of the arbitrary measures pursued by the State of Georgia towards the Cherokee nation of Indians, a portion of whose lands were claimed. This subject is only incidentally connected with the history of our Society, but as Friends have, for many generations, taken a conspicuous part in defence of the rights of these people, some notice of the matter seems appropriate in this place.

Originally, the Cherokees possessed an immense tract of country on both sides of the Alleghany Mountains, extending from Virginia into Georgia. Much of this was sold to the whites by successive treaties or agreements, until the land in their possession was reduced to less than 8,000,000 acres. Of this the State of Georgia, about the year 1829, claimed some 5,000,000 acres, on the strength of an old claim of the Creek nation, which had been abandoned many years before. It also asserted its right of sovereignty over the Cherokee nation, and that they must be amenable to the laws of the State. The Cherokees had had for many years a well-organized domestic government, and they strenuously opposed both its destruction and the loss of their lands. They had at this time made considerable advances in civilization. Confiding in the faith of treaties, they had cultivated their farms, established schools and organized a representative government. They owned 2600 houses, 50 grist and saw mills, and a large amount of stock and other personal property.

A treaty of peace made in 1791, contains the following article: "The United States solemnly guarantee to the Cherokee nation, all their lands not hereby ceded."

At the close of the Revolutionary war, several of the States which entered into the Union had large and somewhat indefinite claims to land and jurisdiction beyond their then limits. Foreseeing that future trouble might arise from this circumstance, Congress recommended to the several States that these claims should be transferred to the United States for the general bene-

fit. New York, Virginia and Massachusetts, made such cessions; and after some year's delay, Georgia, in 1802, entered into a similar agreement, for which it was stipulated that she was to receive in payment \$1,250,000. The United States also agreed to extinguish the Indian title to all lands within the State of Georgia, "as early as the same can be peaceably obtained on reasonable terms."

As land became more valuable, and the population of the State increased, the desire to obtain possession of these lands increased. In the meantime, the Indians were becoming more civilized, and their attachment to their homes does not appear to have lessened. There is a significant paragraph in a report made by a Georgia Committee in 1827, which complains that the United States have managed "So to add to the comforts of the Cherokees, and so strict them in the business of husbandry, as to attach them so firmly to their country and their homes, as almost to destroy the last ray of hope that they would ever consent to part with the Georgia lands."

Much pressure was exerted to induce the Indians to remove west of the Mississippi, into what is now termed the Indian Territory. A portion of the Cherokees and several of the other tribes in the Southern States, were prevailed upon to make this change of residence. But the great mass of the Georgia Cherokees refused to do so. In reply to a proposal to meet with United States Commissioners to consider the question of their removal, the Cherokee officials replied: "It is a subject that has often and long since been submitted for consideration, and been deliberated on by the councils of the nation with all that solemnity its importance deserves, and the conclusion and result of these deliberations have been expressed in soberness and sincerity to the Government of the United States, adverse to a removal. We declare that those sentiments and dispositions remain the same, and are unchangeable."

Finding that the Cherokees could not be persuaded to emigrate, the State of Georgia threatened to bring them under the jurisdiction of her State laws; which would destroy the system of government which they had established, and be an intolerable hardship to a people many of whom knew not the language in which they were written. Against this, vigorous appeals were made to the Government of the United States, and, when no redress could be obtained there, to the people at large. Some of these documents were ably written, and showed that there existed among the Cherokee people a good degree of education, and much vigor of intellect. A few extracts from these will elucidate more clearly the position in which they stood.

In 1829 a Memorial was addressed to Congress, which was signed by more than 4000 of the Cherokee men, probably by nineteen-twentieths of the adult males of the Nation. In this, after mentioning the refusal of the President to interfere on their behalf, they say: "The land on which we stand, we have received as an inheritance from our fathers, who possessed it from

time immemorial, as a gift from our common Father in heaven. We have already said, that when the white man came to the shores of America, our ancestors were found in peaceable possession of this very land. They bequeathed it to us as their children, and we have sacredly kept it as containing the remains of our beloved men. This right of inheritance we have never ceded nor ever forfeited. Permit us to ask, what better right can a people have to a country, than the right of inheritance and immemorial peaceable possession?"

"In addition, we have the faith and pledge of the United States, repeated over and over again, in treaties made at various times. By these treaties our rights as a separate people are distinctly acknowledged, and guarantees given that they shall be secured and protected."

"As we have never ceded nor forfeited the occupancy of the soil and the sovereignty over it, we do solemnly protest against being forced to leave it, either by direct or indirect measures. To the land of which we are now in possession we are attached—it is our fathers' gift—it contains their ashes—it is the land of our nativity, and the land of our intellectual birth. We cannot consent to abandon it for another far inferior, and which holds out to us no inducements. We do moreover protest against the arbitrary measures of our neighbor, the State of Georgia, in her attempt to extend her laws over us, in surveying our lands without our consent, and in direct opposition to the treaties and the intercourse law of the United States; and interfering with our municipal regulations in such a manner as to derange the regular operation of our own laws."

This was followed by a Memorial to Congress from the Legislature of the Cherokees, in which, after the usual reference to treaty obligations, complaint is made of the neglect to remove from their lands the white settlers, who in defiance of law had been intruding in increasing numbers. In allusion to this they say: "Arguments to effect the emigration of our people, and to induce us to escape the troubles and disquietudes incident to a residence contiguous to the whites, have been urged upon us, and the arm of protection has been withheld that we may experience still deeper and ampler proofs of the doctrine; but we still adhere to what is right and agreeable to ourselves; and our attachment to the soil of our ancestors is too strong to be shaken. . . . We rejoice that our Nation stands, and grows a lasting monument of God's mercy, and durable contradiction to the misconceived opinion that the aborigines are incapable of civilization."

As no relief could be obtained either from the Executive or from Congress, the "Committee and Council of the Cherokee Nation in General Council convened," issued an address to the people of the United States, in which they refer to some of the oppressive laws passed by the State of Georgia. In this ably written and touching appeal, they speak of their previous futile efforts to obtain justice and protection, and say, "Thus we have realized with heavy hearts that our sup-

plication has not been heard; that the protection heretofore experienced is now to be withheld; that the guaranty, in consequence of which our fathers laid aside their arms and ceded the best portions of their country, means nothing; and that we must either emigrate to an unknown region, and leave the pleasant land to which we have the strongest attachments, or submit to the legislation of a State, which has already made our people outlaws, and enacted that any Cherokee, who shall endeavor to prevent the selling of his country, shall be imprisoned in the penitentiary of Georgia not less than 4 years! To our countrymen this has been melancholy intelligence, and with the most bitter disappointment has it been received."

"We have been called a poor, ignorant and degraded people. We certainly are not rich; nor have we ever boasted of our knowledge, or our moral or intellectual elevation. But there is not a man within our limits so ignorant as not to know that he has a right to live on the land of his fathers, in the possession of his immemorial privileges, and that this right has been acknowledged and guaranteed by the United States; nor is there a man so degraded as not to feel a keen sense of injury, on being deprived of this right, and driven into exile."

"There are doubtless many who would flee to an unknown country, however beset with dangers, privations and sufferings, rather than be sentenced to spend six years in a Georgia prison, for advising one of their neighbors not to betray his country. And there are others who could not think of living as outlaws in their native land, exposed to numberless vexations, and excluded from being parties or witnesses in a court of justice. It is incredible that Georgia should ever have enacted the oppressive laws to which reference is here made, unless she had supposed that something extremely terrific in its character was necessary, in order to make the Cherokees willing to remove. We are not willing to remove; and if we could be brought to this extremity, it would not be by argument, not because our judgment was satisfied; not because our condition will be improved—but only because we cannot endure to be deprived of our national and individual rights, and subjected to a process of intolerable oppression."

The whole address, which may be found in the third volume of THE FRIEND, pp. 356 and 363, is well worth perusal at this day as an historical document.

J. W.

(To be continued.)

ONE may measure his own growth by looking back upon his own record of his likes and dislikes, his thoughts and convictions, his moods and humors. Have you an old scrap-book of your own making? Have you a once favorite volume which, five, ten, twenty, forty, years ago you pencil-marked? How many passages that pleased you then please you now? How many statements that you disagreed with then do you agree with now? How many that you agreed to then do you agree to now? How many of those scraps that you thought worth pasting in a book seem puerile and as so much rubbish now? Few of us there are who have not some such record of our past selves; and there are few of us who are not half ashamed of our own measure as thus disclosed. In the light of such revelations of one's past self to his present self, it would seem that one would have no room for over self-confidence, lest the future should pass like judgment upon the present, when the present shall have become the past.—*Sunday School Times.*

FOR "THE FRIEND."

"Sun Fast" and "Sun Slow."

A friend asks the meaning of "sun fast" and "sun slow," as given in the Almanac; also, whether in setting a time-piece by the sun, we are to make the allowance there indicated, for the given day.

The answer to his direct question is, Yes. If we have a sun-dial accurately set, we note the moment when the shadow is on the noon mark, then we add the minutes *slow*, or subtract the minutes *fast* of the sun, as given in the almanac for the day on which we are observing, and we have correct local "mean" or "clock" time. The reason for this is not obscure. The earth's yearly revolution around the sun, makes the sun *apparently* revolve eastwardly through the heavens, performing its revolution in a year. For simplicity of illustration we will suppose this annual circuit of the heavens to be made by the sun, while we attribute the daily rising and setting of the sun to its true cause; the rotation of the earth on its axis. Now this rotation is toward the east, as the apparent motion of the sun is. If the sun had no apparent eastward motion, the earth would, after making one complete rotation, present the same side again, to the sun, and the interval would be a solar day. But while the earth thus turns over once, the sun advances eastwardly nearly one degree, so that the earth must make one complete rotation, and about one degree more, before it presents again the same side to the sun. This interval, then, instead of the other, is the "true," or "apparent" solar day. This, divided up into hours and minutes (24 hours) is "true" or "apparent" solar time—the time kept by an accurate sun-dial. The days thus indicated by the sun, are, however, not of equal length, and as clocks and watches cannot conveniently be made to vary in their rate, to correspond with the varying day, the civilized world many years ago adopted the plan of taking the average length of the days in a year, and calling it the "mean solar day," which divided up into twenty-four hours and their subdivisions, gives us our ordinary "mean" or "clock" time; that which is kept by a clock running *uniformly*, at the right rate. Hence, in setting the clock by the sun-dial, on any day of the year, we must make the correction.

If the reader would go further and know why the true solar days are not uniform in length, that, too, may be answered in a few sentences. The earth's rotation on its axis is perfectly uniform. If it revolved around the sun in a circle, with its axis at right angles to its orbit, it would move through exactly equal parts of its orbit day after day, and the sun would consequently have the same amount of eastwardly motion any one day, that it would have *any other day* in the year. This would be very nearly $\frac{1}{365}$ of 360°, or a little less than one degree. As it is, however, the earth's orbit is an ellipse, and the earth moves more rapidly when *nearest* the sun (about First Mo. 1st) than it does when *furthest* from the sun (about Seventh Mo. 1st). The effect on the sun is to make it *appear* to move more rapidly, and more slowly at those times. The earth then, in turning over on its axis about the beginning of the year, has to turn *further* than the average to bring the sun to the meridian, and the sun loses time, or becomes *slow*. The accumulated loss between the 1st of Eleventh Month and the middle of Second Month, is about a half hour; the sun being about 16 minutes *fast* on the former date, and about 14 minutes *slow* on the latter. This result is partly due to the inclina-

tion of the ecliptic. The sun moves parallel with the equator about Twelfth Mo. 22d, *gains* position eastwardly, and adds to the effect of the earth's rapid perihelion motion. At the equinoxes (Third Mo. 22d, and Ninth Mo. 22d) the sun is crossing the equator at an angle of 23½°, is *losing* time in his eastward progress, comes to the meridian *early*, and makes short solar days, consequently sun time becomes fast, or gains what it had previously lost. At the time of the summer solstice, when the sun is again moving parallel with the equator and should be *slow*, the effect is nearly balanced by the earth's slower aphelion motion in its orbit, so that there is not so much discrepancy between "true" and "mean" solar time in summer, as there is in winter.

As most localities in this country now keep "standard" time, an observer should know his distance east or west of the standard meridian, so that he may make the required correction after determining his local time as above. The standard meridians are the 75th (Philadelphia), 90th (St. Louis), 105th (Denver), and 120th (Carson City). The difference in time between the consecutive meridians in this series is just one hour. An observer must allow 4 minutes for each degree he is from the standard meridian, *adding* the time if he is *west* of it, and *subtracting* if *east*. C. C. B.

FOR "THE FRIEND."

With the near approach of the time for holding our Yearly Meeting comes a feeling of anxiety and concern which words may not describe, but which is well known to the faithful burden-bearers, who have often been made to tremble for the safety of the precious cause committed to us by the great Head of the Church. These dedicated servants have long borne the burden in the heat of the day, and are indeed "weary and heavy-laden." Many of them are nearing the close of their earthly labors, and are anxiously looking to the rising generation to take up the fallen mantles, and go forth in the spirit and power which has kept, and preserved alive in our beloved Society, unto the present time, a seed which the Lord hath blessed, and will continue to bless.

Dear aged fathers and mothers in our Israel! my heart salutes you, in a measure of that love which knows no bounds, and which cements and unites in the sweet fellowship of the Gospel of Christ.

I would have you lift up your heads in hope. Can we not thankfully acknowledge, the visitations of our most merciful Father in Heaven have indeed been renewed to this people; and have we not reason to believe there are those in the younger walks of life, to whom *that* cause is precious which you love so well? The blessed Head of his Church is still watching over it "by night as well as by day." He is still calling, anointing and sending forth, those who will be made bold to declare the precious truths of the everlasting Gospel, as you have been enabled to declare them; and the same Divine power which gathered, kept and preserved our Society, will still qualify these to uphold the standard given to this people "to display because of the Truth," though many turn back in the day of battle. Should not this hopeful prospect, in the midst of much to sadden and discourage, animate and comfort you? May your faith—your confidence—your hope be renewed; and may you be enabled to still trust in that Almighty power which has been the strength of your day, and will support to the end.

PHILADELPHIA, Third Month 26th, 1859.

FOR "THE FRIEND"

Some Account of the First Places of Worship of Friends in Philadelphia.

The few Friends who had settled on the west side of the Delaware River previous to the arrival of William Penn in 1682, attended the Monthly, Quarterly, and Yearly Meetings of Burlington, &c., the former being held at various places to accommodate the more distant members. Thus by a minute of Burlington Monthly Meeting we find stated, "At a Monthly Meeting held at Upland (Chestertown) at the house of Robert Wade the 15th of Ninth Month, 1681, &c."

The adventurers under the patronage of Wm. Penn set up the first Friends' meeting in his colony in the Third Month, 1681.

The first meetings for worship and business held in the County of Philadelphia were kept at Shackamaxon, in the house of Thomas Fairman, where it was continued for more than a year.

A six weeks' meeting for the accommodation of these Friends, and those of "Pine Point" was established in 1682, viz:

"At a general meeting held at Salem, in the province of West Jersey the 11th of Second Month, 1682, it was ordered that a six weeks men's and women's meeting for the ordering of the affairs of the Church be kept the 24th day of the Third Month at William Cooper's, (at Pine Point) and the next six weeks at Thomas Fairman's at Shackamaxon, and so in course."

This meeting, however, did not continue, for "Soon after the arrival of William Penn at the intended site of Philadelphia in 1682, it was ordered that notice be given to Friends the next First-day, that as many as can conveniently, may meet at Shackamaxon, in order to appoint other meetings where it may be thought meet." Accordingly, "Friends belonging to the meeting in Philadelphia, in the province of Pennsylvania, being met in the fear and power of the Lord at the present meeting-place in the said city, the 9th day of the Eleventh Month, the Third-day of the week, in the year 1682, did take into consideration the settlement of meetings therein, for the affairs and service of Truth, &c., and did then and there agree, that the first Third-day in the week in every month shall hereafter be the Monthly Meeting day for the men's and women's meetings for the affairs and service of Truth in this city and county; and every third meeting shall be the Quarterly Meeting for the same."

The next subject considered was for "a fit place to build a meeting-house in this city, as also the manner and form of building; being taken into the consideration of Friends, the whole was referred to the care and management of Thomas Holmes, John Songhurst, Thomas Wynne, and Griffith Jones, or any three of them, and that the charge thereof shall be borne by this meeting, consisting of Friends belonging to the said city."

Richard Townsend, a primitive settler and public Friend, observed, "Our first concern was to keep up and maintain our religious worship; and in order thereto we had several meetings in the houses of the inhabitants, and one boarded meeting-house was set up near the Delaware."

"The subject of a proper place, and suitable houses for worship, was one that exercised the early settled Friends in no small degree, as is evidenced by the foregoing. In order to show their care and concern still further in that direction, and the progress made, copious extracts have been made from the early minutes, viz:

"Second meeting [held] the 6th day of Twelfth Month, 1682. The overseers appointed for the building of the meeting-house brought their answer, that according to order, men were all ready set to work in order to that building."

At the Quarterly Meeting held the 5th day of Fourth Month, 1683, the following minute was made. "Proposed by Friends that the meetings of the county be settled. Agreed that there be a public First-day meeting of Friends at Tackony, and a First-day public meeting at Pognessin, and that they both shall make one Monthly Meeting. Agreed that there be a First-day public meeting at Philadelphia and a First-day public meeting at Skuykill. Agreed that two meetings be continued in Philadelphia every First-day, and one public meeting every Fifth-day. Agreed that every other First-day there be a public meeting of Friends for the worship of the Lord, at the house of Thomas Duckett, on the other side of Skuykill, and that the meetings in these two places make one Monthly Meeting, which, quarterly, with the other Monthly Meeting, shall make up a Quarterly Meeting."

"Agreed that Thomas Duckett give notice at Skuykill, Thomas Fairman at Tackony, and Samuel Allen at Pognessin, to the Friends there of the Quarterly Meeting's resolutions for the service of Truth in those parts, that all things may be done carefully and savourily to the glory of God and welfare of his people."

On the 3d of Fifth Month, 1683. "Agreed that the Friends appointed to take care for the building of a meeting-house do immediately request the Governour to advise with Friends touching a convenient place whereon to build the same. Agreed that £60 be raised towards the building of the said meeting-house, and the residue to be paid in goods, and that John Songhurst, John Day and Henry Jonson be the carpenters appointed to undertake the building of the said meeting-house."

Second day of Eighth Month, 1683. "Agreed and concluded that Thomas Lloyd, Christopher Taylor, Griffith Jones and John Goodson be the undertakers for repairing the present meeting-house of Friends, and to pay the workmen, the meeting promising to reimburse them their charges. Christopher Taylor, whose the present meeting-house is, refers himself to the discretion of Friends, as touching his satisfaction for the general use of it. Agreed that Henry Jonson and John Day do take an account of the timber fallen for the building of the new meeting-house, and mark and number it."

Second day of Eighth Month, 1683. "The meeting having consulted with the Governour touching a burying-place, it was by him appointed (and by the meeting adopted) that the burial-place shall be in the middle of the city, in the same ground where the meeting-house is appointed. Agreed and concluded that Christopher Taylor, Thomas Lloyd, and Thomas Wynne do undertake to see the ground for the meeting-house and burying-place forthwith surveyed."

First day of Eleventh Month, 1683. "Agreed that for the convenience of Friends on this side of Skuykill there be a public meeting every First-day at the house of Francis Fincher or Henry Lewis."

At the Quarterly Meeting held the 5th of Eleventh Month, 1683. "A Women's Meeting was proposed and unanimously agreed upon. Agreed that a place be appointed for women Friends to meet at, and that it be for the

present at the house of Christopher Taylor, it being his own offer."

"In the Monthly Meeting held the 6th day of Third Month, the subject of building the meeting-house was again brought up and several Friends appointed to take the matter into consideration; and in the Quarterly Meeting following, it was again mentioned and referred. "The Governour was pleased freely to contribute towards the said building 2000 feet of boards and 3000 cedar shingles, as also the stone already dug up at the quarry."

Fifth day of Sixth Month, 1684. "Agreed that the said meeting-house be builded at the centre, being the middle way betwixt Delaware and Skuykill, according as it is already designed and pitched upon, and the building to be of brick. Its dimensions being in length 60 feet, in breadth 40 feet, and the height referred to further consideration." Agreed and concluded that the persons formerly appointed for the supervising of the building of the meeting-house should take care that with all speed a shed be built in the city, at the centre, of the same dimensions as the meeting-house."

(To be concluded.)

FOR "THE FRIEND."

Ministration of Angels.

When our holy Redeemer was personally among men, the devil was permitted to tempt Him. So the devil took Him up into an exceeding high mountain, and showed Him all the kingdoms of the world, and the glory of them, and said unto Him, "All these things will I give thee if thou wilt fall down and worship me. But Jesus said unto him, "Get thee hence, Satan; for it is written, thou shalt worship the Lord thy God, and Him only shalt thou serve." Then the devil left Him, and angels came and ministered unto Him.

So, if our holy Head was permitted to be tempted, we need not look to be exempt; for the servant is not above his master, nor the disciple above his lord. We find the tempter was then expert in quoting Scripture; so he is now. And we find that Jesus was taken up and set on a pinnacle of the temple, and into an exceeding high mountain; and we may be exalted above measure, into the airy regions of speculation, and above the true knowledge of God, where we can have a splendid view of the kingdoms of the world delusively spread before us, by the same tempter. And he may tempt us to believe, that these we shall have as if we will follow him.

We are told to resist the devil and he will flee from us. And I do believe that many a humble, penitent, seeking soul, has experienced, that when we have overcome him then he has fled from us, or left us for a season at any rate. And such have experienced something comparable to the joyous ministration of angels, to comfort them; as a reward for obedience in resisting the evil one, and in following the leadings of the Holy Spirit, that had been striving with them, to preserve them through the temptation. For "the angel of the Lord encampeth round about them that fear Him and delivereth them." (Ps. xxxiv. 7.) And the Scriptures abound with passages showing the protecting care and help of angels, sent forth to minister for them who shall be heirs of salvation." (Heb. i. 14.) "For He maketh his angels spirits, and his ministers a flame of fire." He redeemed Israel of old, and "the angel of his presence saved them." (Isa. lxiii. 9.) When they cried unto the Lord, He heard them, and his angel brought them out of

Egypt. (Num. xx. 16.) His angel went before the camp in a pillar of cloud by day, and a pillar of fire by night, to lead and protect them. (Exo. xiv. 19, &c.) The angel of the Lord shut the lions' mouths, that they hurt not Daniel. (Dan. vi. 22.) And quite a number of other places in the Old Testament might be referred to, where angels were used by the Lord as ministering spirits. But I will cite a few places from the New.

When the apostles were imprisoned, the angel of the Lord opened the prison doors and brought them out. (Acts v. 19.) And again, the angel of the Lord came to Peter, while in prison, saying to him, "Arise up quickly; and thy chains fell off from his hands." And the angel said, gird thyself and follow me, and so he did; but he did not know that it was done by an angel. (Acts xii. 7, &c.) Neither do we know what is often done by angels for us. But we are told that the angel of the Lord smote Herod, because he gave not God the glory; so he was eaten of worms, and gave up the ghost. So we see that angels have been made use of as ministering spirits, under both the old and the new dispensation—ministering consolation to the heirs of God's salvation; but "wrath against the day of wrath, and revelation of the righteous judgments of God," who will render to every man according to his deeds, "when the Lord Jesus shall be revealed from heaven, with his mighty angels." But when He shall come in his glory, and all the holy angels with Him, and sit upon the throne of his glory, and He shall send his angels with a great sound of a trumpet, and gather together his elect, we need not enquire how many of this vast multitude have been employed as ministering angels, for secret things belong to God. But Daniel, in allusion to the same great day, says: Thousand thousands ministered unto Him, and ten thousand times ten thousand stood before Him: the judge was set and the books were opened.

So we see that the ministration of angels is spoken of then, when time to us shall be no longer. But we know not to what extent they have been employed in the restoration of man, since the fall. But we do know from sad experience, that the devil has his angels also. And that there is a warfare going on between the two opposing powers: as represented by Michael and his angels fighting against the dragon and his angels. But the dragon prevailed not. For greater is He that is in the Christian, than he that is in those who are ruled by the prince and power of this world. For such are under the law of sin and death.

The law which was outwardly written on tables of stone, that might be broken, and which was given upon Mount Sinai, by the disposition of angels, pointed to Christ as the Mediator of the new covenant, which was established upon better promises. For the old law made nothing perfect; but the law of the spirit of life in Christ Jesus is given immediately by Christ, without the mediation or disposition of angels, and is written on every heart. And as it makes all perfect who live in obedience to it, so it supercedes and does away with the old law of sin and death. And we come away from a dependence on outward sounds, and from "the voice of words," which belong to the old dispensation, and come spiritually to mount Zion, and unto the city of the living God, the heavenly Jerusalem, and to an innumerable company of angels, &c.

God, who in many ways spoke to the holy men of old, has, in this new dispensation, spoken to us more intimately by his Son, inwardly. So

that now Christ within is the Christian's main hope of glory. But we may have faith also in outward instrumentalities, such as the Scriptures, the ministration of angels, the ministry of the gospel, &c.; for they tend to draw attention to the internal work of regeneration by the Spirit, through which we gain an admittance into the heavenly kingdom, even while here upon earth, and are made partakers of the inheritance of the saints in light, whilst this side the grave. So, I do not understand that a dependence on the inward operations of the Spirit excludes the use of outward means of reformation or salvation. For it does seem to me, that the ministrations of angels are still made use of, as initiatory steps to lead us into the holy of holies; and that the Book of God is the best outward help we have. But that all outward helps are but secondary, as compared to the work of the Holy Spirit; for they only point us to the Spirit that quickeneth, and who is the Lamb of God that taketh away sin out of the heart; and prepares us for an inheritance with the saints in light, when the conflicts of time are over. But we have, by the assistance of ministering spirits, to wrestle with flesh and blood, and with spiritual wickedness in high places, until the victory is won, and we have overcome. Then He will give us to eat of the tree of life, which still grows in the midst of the paradise of God.

But we first have to pass under the crucifying operation of the flaming sword, which turns every way upon the transgressing nature within, until all is destroyed or burnt up by the fire that burns inwardly like an oven; for our God is a consuming fire, and He maketh his angels spirits, and his ministers a flame of fire. But the fire is designed to purify, and has no effect on the body more than the flames had upon the three children of God that were cast into the fiery furnace. For they trusted in God, and He sent his angel and delivered them; and He will deliver his children now, though they may have many fiery trials to pass through in upholding the true worship of the God of our Israel.

What we now most need is a more full obedience to the law of the spirit of life in Christ Jesus, as inwardly revealed, which sets us free from the law of sin and death. And then we would no longer have need to come outwardly to the mount that might be touched, and that burned with outward fire; because we would have come inwardly to mount Zion, and unto the city of the living God. And now we must see that we refuse not Him that speaketh. For if the word spoken by angels was steadfast, and every transgression and disobedience received a just recompense of reward; and if they escaped not who refused Moses, when he spake on earth, much more shall not we escape, if we turn away from Him that speaketh from heaven, whose voice then shook the earth, but now He shakes not only the earthly nature in us but also the false rest, or imaginary heaven, which I fear many are contending themselves with, under a delusive hope, and so remain at ease in Zion. So now a shaking is needed to purify us. And surely a time of great shaking has come upon Christendom, and upon us as a people, in which many are already shaken off of the old tried foundation. And all who yet remain will be shaken, so that nothing but that which cannot be shaken will remain. But the foundation of God stands sure; and the remnant that remain on it are alone worthy of the dear-bought name by which we are called. And I believe that if we still stand as a people, we shall have to stand upon the same foundation that our forefathers

built upon, Jesus Christ himself being the chief corner-stone, and the spiritual leader of his Church and people; to whom all the glory of salvation belongs, and not to man, or to any outward instrumentalities. For it is by grace we are saved through faith, and that not of ourselves, for all that belongs to salvation is the free gift of God. DAVID HUBLESTON.

DUBLIN, IRE., Second Month 14th, 1889.

SELECTED.

AT HOME ON THE FARM.

FARMER JOHN.

"If I'd nothing to do," said Farmer John,
"To fret or bother me—
Were I but rid of this mountain of work,
What a good man I could be!"

"The pigs get out, and the cows get in,
Where they have no right to be,
And the weeds in the garden and the corn,
Why, they fairly frighten me."

"It worries me out of my temper quite,
And well-nigh out of my head;
What a curse it is that a man must toil
Like this for his daily bread!"

But Farmer John he broke his leg,
And was kept for many a week
A helpless man and an idle man—
Was he therefore mild and meek?

Nay; what with the pain, and what with the fret
Of sitting with nothing to do—
And the farmwork botched by a shiftless hand,
He got very cross and blue.

He scolded the children and cuffed the dog
That fawned about his knee;
And snarled at his wife, though she was kind
And patient as a wife could be.

He grumbled and whined, and fretted and fumed
The whole of the long day through.
"Twirl run me quite," said Farmer John,
"To sit here with nothing to do!"

His hurt got well, and he went to work,
And a busier man than he,
A happier man, or pleasanter man,
You never would wish to see.

The pigs got out, and he drove them back,
Whistling right merrily;
He mended the fence, and kept the cows
Just where they ought to be.

Weeding the garden was jolly fun,
And ditto hoeing the corn.
"I'm happier far," said Farmer John,
"Than I've been since I was born."

He learned a lesson that lasts him well—
"I'll last him his whole life through;
He frets but seldom, and never because
He has plenty of work to do.

"I'll tell you what," said Farmer John,
"They are either knaves or fools
Who long to be idle—for idle hands
Are the devil's chosen tools."

—Christian at Work.

LOSS AND GAIN.

I sorrowed that the golden day was dead,
Its light no more the country-side adorning.
But while I grieved, behold!—the East grew red
With morning.

I sighed that wreaths of glory were forced to go,
And dust the wreaths that did so well become her.
But whilst I murmured at her absence, lo!—
'Twas summer.

Half broken-hearted, I bewailed the end
Of friendships than which none had once seemed
nearer;
But whilst I wept I found a newer friend,
And dearer.

And thus I learned old pleasures are estranged
Only that something better may be given,
Until at last we find this earth exchanged
For heaven.

—Good Words.

FOR "THE FRIEND."

The Approach of Spring.

As the milder weather of Spring gradually approaches, the observer of Nature sees many evidences of its effects, both on plants and animals.

In our section of the country (Eastern New Jersey) we have had less severe weather than usual during the past winter, and in consequence more of the hardier plants have ventured to bud and blossom. The beautiful yellow stars of the *Jessamine* expanded as early as the Twelfth Month, and have ornamented the long, slender, limbing stems of the vine almost ever since—excepting when the flow of the sap was checked by a fall of temperature to the neighborhood of zero. The common Chickweed, delicate and frail as it seems, has been growing and blooming during the most of the winter.

Some of the Silver Maples in our village opened their buds in the early part of the Third Month; and the well-known Skunk Cabbage pushed its curious hood-like floral envelopes above ground probably quite as early. The drooping spikes of the common Alder, which hang at the extremity of the twigs like a bunch of tallow candles which the housewife is "dipping," have swelled and lengthened, and are nearly ready to send out their clouds of pollen when agitated by the wind. A few mild, spring-like days will greatly increase the number of plants in bloom.

Another evidence of activity in vegetable life was furnished by some Maple trees which had been cut down in our village about the 7th of the Third Month. They had been very evenly cut off, at the level of the foot-walk. Two or three days afterwards, I noticed that the top of the stumps was moistened as if by a slight rain; yet no rain had fallen. The moisture had increased, until in a few days the water lay on the surface, filling up the slight depressions. Then I saw that it proceeded from the flow of the sap, taken up by the rootlets, and sent upward through the vessels of the trunk, and designed to furnish material for the growth of the buds, but which had now been removed by the woodman's axe. I remembered that it was now about the time of year in which farmers, in the North and West tap the trunks of the Sugar Maple, and from the abundant flow of its sap make the maple syrup and sugar whose peculiar flavor is so delightful to many persons.

The English sparrows which have been around our dwelling during the winter, have for a long time been visiting two bird-boxes fastened to a maple tree in the yard; and now, after the usual contests of these pugnacious little birds, a pair have taken possession of each of them; and from their frequent visits to their interiors, seem to have been arranging them for house-keeping duties.

The habits and movements of these sparrows have often interested us. During the cold weather, as evening approached, one of them would snugly stow itself away on the top of each of the columns that support the roof of the piazza, in a nook out of the reach of wind or storm, and there spend the night. The window where my desk is situated, and where I spend many hours writing and reading, looks out on the side of a neighbor's house. A ledge under the overhanging cornice of his roof projects sufficiently to make a resting-place for these birds; and there, during easterly storms, many take refuge and spend much of the day sheltered from the chilling rain. Some will spend considerable time in deliberately dressing their

plumage—apparently well-pleased to find something with which to employ their leisure; others will quietly settle down and remain almost motionless; others, of a more nervous temperament, seem restless and uneasy, and will soon tire of such a monotonous way of spending the day, and dart out into the storm. So I concluded that among these little creatures there is to be found a diversity of character, similar to that which prevails among ourselves.

On the 8th of Third Month I noticed the fresh upheavals of the earth, "made by the mole, that miner of the soil"—an indication that the frost had disappeared, and that the earth-worms, which are supposed to form a large part of its sustenance, had approached the surface from the deeper burrows in which they pass the cold season. Indeed, a few days afterward, I saw abundant evidence of the presence of the worms in the little mounds of earth, which they had made on the top of the ground everywhere over the lawn.

The movements of our migratory birds are thought by some naturalists to be influenced quite as much by the supply of food as by a desire to escape the severity of the cold. It was interesting in this connection to notice the simultaneous appearance of the worms and of the Robins which feed on them. Of this favorite bird my memoranda note the arrival on the 14th, although I believe it was observed by some a few days earlier.

The Blackbirds, both the common or Crow Blackbird, and the Red-winged, came about the same time. The fondness of these birds for worms and grubs is such, that they will follow the ploughman, walking along the furrow that he leaves, and picking up the insects which have been exposed.

The 13th of the month was a mild, spring-like day, and I was pleased to see one of my old favorites, the little Nut Hatch, whose general color is a bluish ash, with a black head, and white on the under side. According to a frequent habit, it alighted on the upper part of a tree, and gradually descended, head downwards, examining the crevices in the bark, and I suppose, picking up here and there a spider or other insect to appease its hunger. I had noticed on the same day several varieties of insects, which, the warmth of the day had drawn forth from their retreats—such as spiders, mosquitoes, and wasps. So I thought that it was another illustration of the general principle, that the birds come when their food is ready for them. And does it not also illustrate the language of the Psalmist, who, in speaking of the care of the Great Creator over his works, thus addresses the Ruler of the Universe: "The eyes of all wait upon Thee; and Thou givest them their meat in due season. Thou openest Thine hand and satisfiest the desire of every living thing."

Flitting about among the bushes were a little company of Snow-birds, of a uniform lead-color above, and lighter beneath. As they flew, a white feather on each side of the tail was conspicuous. These winter residents have fed on the seeds and berries which adhered to the grasses, weeds, and bushes; and ere long will move on to the northward, to the regions they select for building their nests and rearing their young. Bluebirds were also seen, whose arrival, Wilson, the ornithologist, associates with the fishermen hauling the shad to the shore.

I know well that these notes are very simple in their character; and may seem to some of little value, but I would gladly encourage my younger readers to form the habit of closely

observing the operations of Nature, which may often be to them a source of both interest and instruction.

J. W.

FOR "THE FRIEND."

The Religious Novel.

There have been lately issued two works of fiction, deeply steeped in a certain sort of fictitious theology, which have been greatly read, much commended upon in the religious papers, and which withal are doubtless calculated to do a great deal of moral damage. The author of one of these books is a grand-daughter of that Christian of excellent repute, Thomas Arnold, of Rugby. The writer of this has not deemed it required of him to read the book, but is content to accept the general estimate as to its prevailing sentiment that, if its teaching be accepted, "belief in the incarnation, in miracles, and in the resurrection, must be abandoned." Alongside of this mistaken view, it is instructive to place the following determinate declaration of Thomas Arnold upon these very important matters. He says:—

"The evidence of our Lord's life and death and resurrection, may be, and often has been shown to be satisfactory; it is good according to the common rules for distinguishing good evidence from bad. Thousands and tens of thousands of persons have gone through it piece by piece as carefully as ever judge summed up on a most important cause. I have myself done it many times over, not to persuade others, but to satisfy myself. I have been used for many years to study the history of other times, and to examine and weigh the evidence of those who have written about them, and I know of no one fact in the history of mankind which is proved by better and fuller evidence of every sort, to the understanding of a fair inquirer, than the great sign which God hath given us, that Christ died and rose again for our sakes."

A writer in the *Christian Weekly*, Helen E. Smith, has within a few weeks narrated a little incident which convincingly shows the danger to be apprehended from dipping into this new sort of religious romancing. "She speaks of one whom she had known for four or five years as a happy girl of unusually bright intellect, who was a faithful attendant of her religious meeting, 'Presbyterian' and First-day school. But, for some weeks her friends noticed that she had become nervous, almost hysterical, and that both appetite and strength seemed failing her. A little conversation developed the fact that she had been reading of late too much talked-about works of fiction wherein are statements and alleged proofs that our Saviour was in reality a mere man, a good man, even a holy man, it is true, but nothing more than human. To this young mind, unversed in sophistry, unused to weigh and compare evidence, these books had seemed to open the doors not only to an empty but a noisome sepulchre. Her every look and accent repeated the sad cry, 'They have taken away my Lord!' The account explains, further, that this girl was an orphan, to whom the union beyond the grave with loved parents from whom she had been so early severed, was a consoling thought, which now seemed in danger of being shattered by the hapless reflection that if 'Jesus never rose from the dead then no one will arise.' The narrator continues: 'Could stronger and sadder testimony be given to the power of such reading to cause unhappiness? Formerly, books of a similar tendency were clothed in sober, dull, argumentative garbs, or in invective's unattractive hues, and it was not necessary to trouble one's

self so much about the effects they might have upon young minds, because the young did not care to read them. But now that works presenting a false show of learning and having a tendency to take away our Lord, giving us nothing to fill the hearts they have bereaved, are appearing in the guise of attractive tales, what is the duty of Christians in regard to them? She counsels their careful exclusion from families and libraries, not specifically to notice them, and warns against substituting popular lesson-helps for the study of the Bible.

Phillips Brooks, of Boston, referring to the stir concerning these books, tersely advises—"Study your Bible, and let your novel go," while the *Watchman* staunchly defines its position in saying: "We stand with those who do not accept novels as the best accredited teachers and instructors of a Christian people. Albeit to say so much may not be popular."

But the readers of THE FRIEND will doubtless generally incline to the view that our need of the present and hope for the future, lies in a more general acknowledgment in life and conversation, of the immediate guidance of God's Holy Spirit, and a consequent nearer approach to Him who is the Way, the Truth and the Life, and away from all untruths and "oppositions of science falsely so-called." Unquestionably true was the opinion lately quoted in this journal, as advanced by John Foster, the essayist, "That whenever the world is favored with a more general and efficient revival of religion, it will be the result of a fresh outpouring of the Spirit of Christ."

That was not a reassuring statement which I lately met with, that, of the several thousand consecutive articles which had appeared during quite a number of years in a religious periodical of note, published in Great Britain, not one had had for its definite theme the Holy Spirit and his work. With good reason, therefore, may we accept the sentiment which the writer lately saw quoted as from a new work, "The Spiritual Life and other Sermons," by Pastor Weldon, headmaster of Harrow School: "If it were asked me what is the doctrine of God's Word which this present age most deeply needs, and yet, perhaps, is in most danger of forgetting, I could only answer, the Doctrine of the Holy Spirit."

JOSIAH W. LEEDS.

For "THE FRIEND."

Notes of a Visit to Italy.

There is certainly a feeling of pleasure arising from a review of the scenes and incidents connected with the travel and sojourn of a few months in the old countries of the eastern world, amid the old populations and the civilizations of the many past centuries. The contrast is seen and impresses one, when we contrast our own new country and the new improvements we are making on every hand, with the works of by-gone centuries, many of them unique and striking, which we find in Europe. A keen relish for the sights and scenes of these old countries was considerably sharpened by a cherished desire of more than two score of years to witness them.

In speaking of them we may be allowed to pass over the oft-repeated notice of the six or seven days of ocean travel on one of the fast steamers; the landing at Liverpool on the 7th day; and then on to London, and through Kent to Dover, Calais and Paris; next day to Lyons; then to Coloug and Malone, the borderline between France and Italy; through the

Mount Cenis tunnel, 7½ miles, on to the plains of Lombardy. In climbing the Alps, before entering the tunnel, we rise 3800 feet, and then we have 4093 feet of mountain heights above the top of the tunnel; then a succession of short tunnels for 50 or 60 miles to get down the mountain into the plains on the Italian side, within 25 or 30 miles of Turin. Snow in considerable quantities lay all along the mountain route on either side of the railroad. We were kept passing from one side of the cars to the other to view the grand and enchanting scenery. But such struggling with the rugged slopes and valleys by the inhabitants, to secure a living, none would believe unless they saw. Every little patch of ground is utilized and planted in strips, and often terraced on the slopes of the mountain, away up 40 or 50 degrees of an angle, planted mostly with the grape-vine in different styles,—all done by hand. Women as well as men are equally engaged in the work, as no cattle of any kind could reach these slopes to assist the peasants in the work of cultivation. The sight of this scenery would not have been missed for twice its cost.

In 1100 miles from Liverpool we come to Turin, in northern Italy, the capital of Lombardy, and the former residence and capital of Victor Emanuel, before he and Garibaldi succeeded in expelling the Austrians and uniting Italy, and taking and occupying Rome, unseating the Pope and despoiling him of his temporal power. Turin reminds one very much of our own model city of Philadelphia, with straight streets crossing at right angles. These are wide, and well shaded with noble trees. There are long, high colonnades, with marble pillars in front of the shops; extending both sides of the avenue, 18 or 20 feet wide—where ladies can go shopping without being exposed to either sun or rain. Trees also planted in the centre of the avenue, affording a delightful shade. It has noble public buildings. We were quite interested in a drive through and about the city, and in a visit to the museum of Egyptian antiquities. The people were very friendly and attentive to Americans (a name which seemed to be a passport to their favors) and seemed to be of a different class from those imported into America, or those of the common people further south.

We had a very pleasant interview with a minister of the Waldensian Church (Charles Albert Tryon) who informed me that their people were upholding their Protestant principles, inherited from their forefathers many centuries ago; not only in the Piedmont Valleys, but they had missions and organized churches in the cities of Italy, including Rome, and were promulgating those doctrines of New Testament Christianity for which their forefathers suffered so much at the hands of the Papal Hierarchy all along through the centuries beginning with the usurpation of the Bishop of Rome, and the Romish Church apostasy. This sturdy, patient but long-persecuted people still live, and promise good for evil to their present persecutors by spreading the pure gospel truths among them. I was extended a friendly invitation, with a note of introduction to some of the Christians in the Piedmont Valleys 30 or 40 miles by rail; but in consequence of the rain the next day, was deterred from taking the trip, and was very much disappointed at having to forego the pleasure of seeing this Protestant community, whose forefathers were Protestants before the name was known or used in the Christian world, perhaps

1000 years before Luther's day. We were in a hurry to get to Rome before the hot weather set in; and so left Turin with some regrets that we could not see more of the beauties and curiosities of this city, so much like, in many things, an American city: with its numerous tramways—some of them steam—wide streets, shops, and polite people with more Protestantism and less papal usages than some of the other Italian cities.

Leaving Turin by rail for Genoa, 100 miles, we pass through mountainous regions and fertile valleys, cultivated mostly by hand-labor. The vineyards were quite enchanting, and the tunnels quite numerous. We first saw the Mediterranean at Genoa, the ancient port of Italy, doing the carrying trade of the world at one time.

G. R.

Third Month 20th, 1889.

(To be continued.)

Natural History, Science, &c.

Boring Sponges.—How sponges bore into solid limestone or shells is as yet an unsolved problem. Nassonoff has investigated a new species of *Cliona* which tunnels oyster and mussel shells, and he believes that the boring of the canals and galleries is performed solely by the soft parts of the sponge. The penetration of the prolongation of the body of the sponge into the shell appears to be accomplished by the secretion of a corroding liquid—probably an acid.

The Distribution of Plants.—Mud on the feet or even scraps of growth on the feathers of aquatic birds are excellent dispersers of aquatic plants, and hence plant hunters may never despair of finding new localities for water-plants even in the most unlikely places. A very curious aquatic plant, not far removed from ferns and lycopodiums—*Salvinia natans*—was said by Pursch to have been found by him in small ponds in western New York. No specimen was found in his herbarium, and it has been thought he was mistaken. But it may have been brought by birds, have flourished for a year or two, but failed to establish itself in so high a northern region, and so died out in a few years. At any rate, another unlikely spot has been found in a small bay in Bois Brulé Creek, Perry County, Missouri. Dr. Asa Gray identified it as the genuine *Salvinia natans*. Now that an American specimen has been found, there is a doubt about its being a genuine native of that part of our country: no one has found it before. Its introduction by birds is probable. The effort to find other localities will give zest to the work of plant-hunters. It is furnished above with fern-like sub-elliptic, floating entire leaves, and below with long rootlets and futed, bladder-like fruit on short, leafless branches. The upper surface of the leaves is studded with warts, each bearing a little crown of bristles.—*The Independent.*

Excavating Frozen Ground.—A German engineer has published some observations on the most efficient method of excavating streets in frosty weather. Every one knows the difficulty of making any impression with ordinary tools on frozen ground. Much of the labor incidental to such work may be saved by considering that the ground does not freeze all at once into a homogeneous mass, but by successive stages, which produce a stratified condition, something like that of sandstone or limestone. If the work is carried on vertically downward from the surface, the material, whether of stratified stone or frozen earth, must be removed in small

articles, while, by taking advantage of the stratification, and working horizontally from a shaft or an exposed face, the material may be split off in large pieces through the seams between the strata. After a pit has been sunk in the spot where the excavation is to begin, the operation may be continued rapidly and successfully by means of iron wedges, long and short, which are driven horizontally as the work advances, and lift and break up the frozen earth in large sheets until the necessary depth is attained.—*American Architect.*

Disease Germs.—Persons sometimes hold in their mouth pieces of money when they are making change. It is quite possible in this way to imbibe the germs of disease, which will adhere to silver and other coin.

Items.

Public Meetings, &c.—Under the pressure of a concern which was felt by some of the members of the Committee of Burlington Quarterly Meeting, a public meeting was held in Jersey City on the evening of the 6th of Third month; and one in Newark, N. J., the following day. On the evening of that day a similar meeting was held in the southern part of the City of Philadelphia, which was attended by several hundred people. In this the spiritual nature of true religion was set forth, and attention called to the characteristic feature of the new covenant which the Lord promised to make with his people—even that He would put his law upon their hearts, so that there should be no indispensable necessity for one man to teach another, and that the Lord himself would be their teacher. All alike in the visitations of this Grace of God, this gift of Christ, this Holy Spirit, this Divine anointing, which points out the way in which we should walk. It is only under its command and influence, that man can profitably preach unto others; that the ministry depends on this anointing, and not on any outward ordination; and as the gift is freely bestowed of God, it must be freely exercised, and not for the sake of any outward return.

On the 10th, an appointed meeting was held at Archon in Chester, Pa., and one also in the city of Archon, Ark. At Archon, the latter was a large and comfortable meeting; and it the attention of the people was called to the necessity of obeying the commands of Christ, if they could be his friends; and to the blessed privilege it is to have his Spirit abiding in man, pointing out the path in which he should walk.

On the 17th, a public meeting was held at Langston, north of Philadelphia; on the 18th one in the southern part of that city; and on the 21st one at Frankford, a suburb of Philadelphia.

Visits were paid during the Third Month to the mills of Friends and London Britain Meetings. Friends whose minds had been drawn to rest upon these services; and a number of visits were made to meetings in different parts of a Yearly Meeting. Of these different services, it believed it may be said in general, that those engaged in them were favored with a measure of vine health.

The Doctrine of Indulgences in the Church of Rome. In the *Independent* of Second Month 28th, were published communications on the doctrine of indulgences, both written by members of the Roman Catholic Church. One of these, who signs his title "An Experienced Observer," describes the pernicious views held by the common people—a more uneducated masses of that communion.

Following: "An Experienced Observer," one who has had rare knowledge, from within, of the actual belief of the Catholic multitude, we went the Catholic Publishing House, 5 Barclay Street, and bought for thirty cents the "Rosary and Scapulars," published by Patrick J. Kenedy. It is the approval of Archbishop Hughes, and so many thousand copies have been printed, and are in their thirty-four years that the plates are nearly run out.

Wishing to know what a scapular is worth,

for thirty cents more, one of these objects. The scapulars are patches of fannel of different colors; a brown and a blue sewed together with a loose button-hole stitch, then a black and a white, and then a red, backed with a cotton patch, on which is printed a figure of an adoration of the sacred hearts of Jesus and Mary.

"The advantage of these scapulars may be learned from the 'Scapular Book.' When the first one was given to St. Simon Stock, the Virgin told him that

"Whoever shall be so happy as to die wearing this garment shall not suffer in the eternal fires of hell."

Accordingly the 'Scapular Book' tells us this story: "M. de Gage, comat of a company of horse, was wounded at Tefin, in the year 1639; by a cannon ball, which, passing through his left side, had torn his heart to pieces, so that naturally he could not live a moment. Nevertheless, Almighty God, by the intercession of the glorious Virgin, gave him time to repent, for he had sinned in sin (as he afterward declared), and prolonged his life for three or four hours, during which time he made his confession; which being done the surgeon came to search his wounds, and found that the bullet had drawn out the scapula into his heart. On its being brought out he presently expired, making many acts of adoration to the Virgin, and to the Father who prolonged his life in a miraculous manner, and preserved him from eternal death."

"This story is told to prove that the scapular assures the intervention of Mary to save a soul in deadly sin from hell. She will somehow manage to secure his repentance before death."

"But this virtue of the scapular does not relate from purgatory, and the vision granted to Pope John XXII, related by him in his Sabbatine Bull of 1322, gives this promise to the brethren of the holy scapular:

"If . . . there shall be any who for their sins have been cast into purgatory, I, thy glorious mother, will send thee on the Saturday after their death; I will deliver those whom I shall find in purgatory, and take them up to the holy mountain of eternal life."

"Now it is a most remarkable fact that the story of the scapular, the vision of St. Simon and the Sabbatine Bull of John XXII, and the confirmatory bull of Alexander V. are all declared in the 'Catholic Dictionary' to be *forgeries*, known to be such for over a century; and yet these forgeries are taught to-day as truths to the ignorant believers of the Arch-diocese of New York by authority of its late Archbishop, and without a word of censure from the present prelate. Nothing to compare with this can be produced in the literature of Protestantism."

The other correspondent of *The Independent* is "A Catholic Priest," who rejects these superstitions, and says, that a good Catholic is not obliged to believe that indulgences have any effect in the next world. The Editor says, he is glad to publish his views as an illustration of the variety of thinking that exists in the Roman Catholic Church, and of the influences at work there which tend to bring it back towards its pristine purity. From the progress of these reforming influences within its borders, he derives hope for the future.

THE FRIEND.

FOURTH MONTH 6, 1858.

It is a cause of encouragement to those who conduct *THE FRIEND*, that their efforts to encourage our members in the faithful upholding of the principles of our religious Society, meet with the approval of honest-hearted Friends in many parts of our country.

A letter received by the editor a few weeks since from an aged friend in Indiana, after expressing satisfaction and interest in the paper, makes some statements in reference to the condition of the meetings of Friends with which he is connected, which show that there is still need for concern and labor on the part of those who

retain their confidence in the principles and practices which the Society of Friends believed in and upheld in former times. The letter says:—

"I want to say to thee that I am a member of the Larger Body of Western Yearly Meeting, and was a member when this Yearly Meeting was established in 1858. Since that date, strange changes and innovations have taken place among us here. I have always felt that schisms and separations are the bane of Society, and ought to be generally avoided.

"Western Yearly Meeting has encouraged and adopted many innovations within 30 years past, that I have no unity with. But what can I do? I do not feel that I ought to unite myself with any other denomination.

"Western, Indiana, Iowa and Kansas Yearly Meetings have largely adopted the Pastoral system of employing and paying ministers for their services, all of which I believe to be wrong. A pulpit has recently been made in the meeting-house where I belong, that the Pastors may be better accommodated than to sit on gallery benches with other ministers. Congregational singing is often practised in our meetings, and Friends have recently employed a singing teacher, that their children may know just how to modulate their notes according to the most approved style of modern fashion.

"I am now far advanced in life, but I would be glad to once more enjoy the privilege of sitting in a good old-fashioned Quaker meeting.

"I know of several others besides myself who entertain these views, but what can we do? I am very sure the Yearly Meeting will not turn its course, but is bound to carry out the programme of its plans that we now have before us."

Surely such a statement as the above is calculated to awaken strong feelings of sympathy for those Friends who are so situated,—who retain their love for the original principles of Friends, and yet see many of their fellow members entering upon paths which will lead from them. It brings to remembrance the condition of our branch of the Church in its early days, when exposed to severe outward persecution, which its members seemed powerless to resist. But their place of refuge was the arms of Omnipotence; and the cries and prayers of his people went up to the Lord, that He would in his own time and way arise for their deliverance. The place of prayer is still a safe habitation; and those who maintain their allegiance to the Lord, and steadily look to Him for guidance and help, have firm grounds to hope, that He will care for them, show them the way in which they should go and give them strength to bear a faithful testimony for Him and his righteous cause.

SUMMARY OF EVENTS.

UNITED STATES.—The public debt statement shows a reduction of \$13,605,655 during Third Month. Total cash in the Treasury, \$617,591,690.

The following nominations by the President have been confirmed by the Senate: Robert T. Lincoln to be Minister to Great Britain; Allen Thorndyke Rice, Minister to Russia; George E. Loring, Minister to Portugal; John Hicks, Minister to Peru; Thomas Ryan, Minister to Mexico; Patrick Egan, Minister to Chili; Robert Adams, Jr., Minister to Brazil; and James N. Huston for Treasurer of the United States. Mount Halstead, of Cincinnati, who was nominated for Minister to Germany, was rejected.

Advices have been received from Samoa to the effect that in a terrific hurricane there, the American men-of-war Trenton, Vandalia and Nipsic, and the German men-of-war Alder, Otter, and Elber, who were driven on a reef during a violent storm and totally wrecked.

Of the American crews, four officers and forty-six men were drowned, and of the German crews, nine officers and eighty-seven men lost their lives.

The President has issued a proclamation, in accordance with the acts passed at the last session of Congress, forbidding the killing of any other mink, marten, sable or fur seal, or other fur-bearing animal within the limits of Alaska Territory or in the waters thereof, except under such regulations as the Secretary of the Treasury may prescribe, and the protection of the seal and fur fisheries of Alaska. The proclamation warns all persons against entering the waters of Behring Sea within the dominion of the United States for the purpose of violating the provisions of said acts, and proclaims that all persons found to be, or to have been, engaged in any violation of the said acts, and whose said waters will be arrested and punished as provided by law, and that all vessels so employed, their tackle, apparel, furniture, and cargoes will be seized and forfeited.

The President has issued a proclamation opening the Oklahoma lands to settlement on and after Fourth Month 22nd. They embrace about 1,800,000 acres of land. The country affected by the proclamation is bounded on the south by the Canadian River to a point below Fort Reno; thence north to the Cimarron River; along that river in a northwestern direction for some distance, and then to a point near the United States reservation, thence south to the Cimarron River again, along that river due west to the Indian meridian, thence due south along that meridian until the Canadian River, the starting point, is reached.

A dispatch from Wichita, Kansas, says the proclamation for the opening of Oklahoma was received with great demonstrations of great joy. The boomers have been encamped along the line and are making ready to move. The cattle men are hurrying on to Oklahoma to get their cattle, as they fear violence from the boomers. Fights are daily occurring. Men have already sold their rights to claims for \$500 and \$1,000. The President has issued the Oklahoma proclamation, officials of the Rock Island Railroad and a corps of engineers started from Topeka, Kansas, to make the final survey for the extension through the Indian Territory. The road is built as far south as Pound Creek, some twenty-five miles from the Cherokee strip, at which point construction will begin.

Captain Platt, of the United States Fish Commission steamer, at Charlotte Harbor, Florida, has successfully hatched 3,500,000 eggs of the sheepshead. This is said to be the first successful hatching of that important fish.

Local Option was voted upon in Botetourt County, Virginia, on the 28th ult., and the county went "wet" by over 200 majority.

A dispatch from Eagle Pass, Texas, says that Colonel Holliday, an experienced miner, has found a paying deposit of tin ore in the city last week numbered 289, a decrease of 23 from the previous week, and a decrease of 28 compared with the corresponding period of last year. Of the foregoing 205 were males and 184 females; 55 died of consumption; 42 of pneumonia; 29 of diseases of the heart; 18 of typhoid fever; 18 of inflammation of the lungs; 10 of marasmus; 12 of convulsions; 12 of old age; 10 of scarlet fever; 9 of apoplexy and 7 of diphtheria.

Markets.—U. S. 4 1/8, 108 1/2; 4 1/2, reg; 129; coupon, 120; currency 67, 120 to 121.

Cotton was in limited demand from spinners on a basis of 10c, with a falling market.

Flour.—Winter bran, choice, 15 1/2; do, fair to prime, \$14 a \$14 1/2; spring bran, nominal.

Flour and Meal.—Western and Pennsylvania super, \$5.00 a \$5.25; do, do, extras, \$3.25 a \$3.75; No. 2 winter family, \$4.00 a \$4.20; Pennsylvania family, \$3.75 a \$4.25; Pennsylvania roller patent, \$4.50 a \$5.00; Ohio, clear, \$4.00 a \$4.20; do, straight, \$3.80 a \$4.15; Indiana, clear, \$4.00 a \$4.20; do, straight, \$4.00 a \$4.20; St. Louis and Southern Illinois, clear, \$4.00 a \$4.20; do, do, straight, \$4.00 a \$4.15; winter patent, fair to choice, \$5.20 a \$6.00; Minnesota, clear, \$4.00 a \$4.20; do, straight, \$5.00 a \$5.00; do, patent, \$6.00 a \$6.50.

Grain.—No. 2 red wheat, 93 a 94; do, No. 2 mixed corn, 40 a 41 cts.

No. 2 white oats, 33 a 34 cts.

Beef cattle.—Extra, 4 1/2 a 4 3/4 cts.; good, 4 a 4 1/2 cts.;

medium, 3 1/2 a 3 3/4 cts.; common, 2 a 2 1/2 cts.; fat cows, 2 a 3 cts.

Sheep.—Kansas shear, 3 a 5 1/2 cts.; native sheep, 3 1/2 a 4 1/2 cts.; 300s, 4 a 7 1/2 cts.

Hogs.—Western, 7 1/2 a 8 cts.; State, 6 1/2 cts. Milk cows \$25 a \$45.

FOREIGN.—John Bright died at his home in Birmingham, on the morning of Third Month 27th. He was in the 78th year of his age. The interment took place on the 30th.

The French Cabinet has unanimously resolved to prosecute General Boulanger.

The great Eiffel Tower, which will be one of the principal features of the coming Paris Exhibition, was opened formally on the 31st ultimo. Premier Tirard delivered the address.

A despatch from Ostend, Belgium, of Third Month 31st, says: The steamer Countess of Flanders was run into off Dunkirk, at 2 o'clock yesterday afternoon, by the Belgian mail boat Princesse Henriette. The collision occurred during a dense fog. The Countess of Flanders sank, and her captain, first lieutenant, nine of the crew and three of the passengers were drowned.

The Hague, Third Month 28th. Parliament will assemble on Fourth Month 2nd for the purpose of receiving a communication from the Ministry, in which a formal announcement will be made of the king's incapacity for governing.

The Swiss Federal Council, suspecting that, in the event of a Franco-German war, Germany would violate the territory of Switzerland, has recommended to Parliament the adoption of a credit for the purpose of fortifying St. Gothard's Pass.

The reports of gold discoveries in Lower California are proven to be greatly exaggerated. The new mines said to contain immense treasure are simply old mines known to the Mexicans and Indians for many years.

Trouble is reported from the new mining camp near Sacramento. A quarrel claim is held by armed Mexicans, whose rights are disputed by American prospectors. Governor Torres has been asked for troops, and officers are hastening there with a squad of Mexican cavalry.

The U. S. Consul at Pernambuco, Brazil, says the printing of Ceara has lost 12,500 inhabitants on account of the drought. Most of them emigrating to the northern and southern provinces.

NOTICES.

Arrangements have been made with the Pennsylvania Railroad Company, by which Friends attending our approaching Yearly Meeting can obtain excursion tickets to Philadelphia and return, from any station on the road, at a rate of 2 cents per mile, each way; except that no such tickets will be issued at a less rate than 25 cents, viz: Pennsylvania Railroad (main line) as far west as Pittsburg, Philadelphia and Erie Railroad Division, Northern Central Railway, United Railroads of New Jersey Division, West Jersey Railroad, Baltimore and Potomac Railroad Company, or Philadelphia, Wilmington and Baltimore Railroad Company. On any day from Fourth Mo. 10th to 29th, 1889, inclusive, and make the return coupon good until Fourth Mo. 22d, 1889, inclusive.

Application should be made either personally or by mail, to Jacob Smalley, 204 Arch Street, Philadelphia, or to Thomas C. Hogue, West Street, Philadelphia, on the Ticket Agents,—one of which must be delivered to the agent whenever a ticket is obtained. These orders inform the Ticket Agent at whatever station they are presented on the above railroads, that the bearer is entitled to a ticket to Philadelphia and return, at a rate of 2 cents per mile, each way, and that each neighborhood would ascertain the number likely to be needed, and obtain them and distribute among the Friends, it would make less work for those having the care of them. When they are to be forwarded by mail a cent stamp should be sent to pay the postage. These orders are ready, and Friends will please obtain them as early as they conveniently can.

The Twentieth Annual Meeting of The Indian Aid Association of Friends of Philadelphia Yearly Meeting, will be held at Twelfth Street Meeting-house, Philadelphia, on Fifth-day, Fourth Month 18th, 1889, at 8 P. M.

Friends generally are invited to attend.

EDWARD CABREY, Clerk.

WESTWON BOARDING SCHOOL.—A Stated Meeting of the Committee having charge of the Boarding School at Westwton will be held in Philada. on Seventh-day, the 15th inst., at 2.30 P. M.

WM. EVANS, Clerk.

Friends attending the Yearly Meeting can be furnished with simple meals, both before and after the sittings of the meeting, at moderate charge (15 cents in the second story of the central part of the Fourth Street Meeting-house. Meals will also be furnished for those attending the Meeting for Sufferings and the Select Meeting, the previous week.

The Annual Meeting of The Association of Friends of Philadelphia and its vicinity, for the Relief of the Freedmen," will be held at Twelfth Street Meeting-house, on Second-day, Fourth Month 15th, at 8 o'clock P. M.

Friends generally are invited to attend.

WM. H. HAINES, Secretary.

TEMPERANCE ASSOCIATION.—The Annual Meeting of the Temperance Association of Friends of Philadelphia Yearly Meeting, will be held in the meeting-house on Twelfth Street, on Fourth-day Evening, Fourth Month 17th, at 8 o'clock.

A cordial invitation is extended to all interested Friends.

ALFRED E. MARIS, Secretary.

WESTWON BOARDING SCHOOL.—The Committee having the care of this Institution, at a recent meeting, decided to change the time of vacation from Spring and Autumn to the Summer months; thus Spring and Autumn to be made the present year. In order to effect this, it is concluded to hold the Select Meeting of the Term, on Fourth Month 25th, instead of Fourth Month 30th, which would be the regular time of opening under the present arrangement, and to continue the session till Seventh Month 23rd, a period of thirteen weeks, and for which short Term, the charge for Board and Tuition will be \$60.

Parents wishing to enter their children, will please make early application to

JONATHAN G. WILLIAMS, Supt., Westwton P. O., Chester Co., Pa.

DIED, at her residence at East Sandwich, Mass. Eleventh Month 6th, 1888, MARY H., wife of Joseph Hoxie, aged seventy-eight years and ten days. She was a member of Sandwick Monthly Meeting of Friends an overseer of the same for many years, and a consistent and sincere believer in the teachings of her own religious Society. Those who knew her best can most truthfully bear witness to the following testimony taken from a public Journal at the time of her decease, and which is a most precious source of consolation to her wedded life she and her husband have gathered unto themselves and household, friends whose love on earth, has never failed. With a large family to claim her care and strength, she possessed a rare grace and ability to welcome and entertain their friends at her home, sensitive to her weaknesses, confident of her Heavenly Father's mercy and grace, she only waited for the summons that came the day before she passed beyond the gates, as plainly to her ears as the call of loved one on earth, as she told them that her Father had called her. She hath rested from her labors, and her work will follow her.

Third Month 18th, 1889, at his residence near Downingtown, Pa., JACOB ERBE, in his 81st year, beloved elder of Bradford Monthly Meeting of Friends

at her residence near Union Grove, Hamilton Co., Indiana, on the 23rd of Third Mo., 1889, LYDIA BARRETT, wife of John Barre, who died on the 7th of year, member of Union Grove Monthly Meeting. She was a daughter of Solomon and Phoebe Cox, of Holly Springs, Randolph Co., N. C., and removed to Indiana in the fall of 1865. She was a consistent Friend.

at the residence of her son, Joshua Dewey, near Barnesville, Ohio, on the morning of Third Mo. 2th, 1889, SARAH CRAFT, in the 79th year of her age a member of Somerset Monthly Meeting of Friends. She resided for more than fifty years within the limit of what is now known as Pennsylvia Quarterly Meeting. This dear Friend was strongly attached to the principles of the Society of Friends, and was well-taught by Fox, Barlay, and Penn; and, as we believe, was concerned to work out her son's salvation with fear and trembling. Her friends have a comfortable hope that, through mercy, she has been cared as a sheet full ripe, to join the just of all generations. Her bodily infirmity was great, but a considerable time, but a patient resignation to the Divine will clothed her mind.

FOR "THE FRIEND."

Historical Review of the Society of Friends.

(Continued from page 292.)

The next important step taken by the Cherokee in defence of their rights was to file a bill in the Supreme Court of the United States, praying that body to enjoin the State of Georgia from executing her laws within the boundary of Cherokee territory as prescribed by the treaties existing between the United States and the Cherokee Nation; and from interfering in any way with the property or persons of Cherokees for or on account of anything done by them within their own limits.

The decision of the Court was delivered by Chief Justice Marshall. The following paragraphs taken from it clearly recognize the justice of the claims of the Cherokees:

"If courts were permitted to indulge their sympathies, a case better calculated to excite them can scarcely be imagined. A people once numerous, peaceful, and truly independent, found by our ancestors in the quiet and uncontrolled possession of an ample domain, gradually sinking beneath our superior policy, our arts and our arms, have yielded their lands by successive treaties, each of which contains a solemn guarantee of the residue, until they retain no more of their former extensive territory than is necessary to their comfortable subsistence."

"So much of the argument of the counsel for the plaintiffs as was intended to prove the character of the Cherokee as a State, as a distinct political society, separated from others, capable of managing its own affairs and governing itself, has in the opinion of a majority of the judges, been completely successful. They have been uniformly treated as a State, from the settlement of our country. The numerous treaties made with them by the United States, recognize them as a people capable of maintaining the relations of peace and war, of being responsible in their political character, for any violation of their engagements, or for any aggression committed on the citizens of the United States by an individual of their community. Laws have been enacted in the spirit of these treaties. The acts of our government plainly recognize the Cherokee nation as a State, and the courts are bound by those acts."

Notwithstanding the views and feelings above expressed, the Court declined to interfere, on the

ground that it did not come within the classes of cases which by the Constitution it had authority to decide; and therefore it had not power to redress past wrongs or prevent future ones. This implied that the executive department of the government ought to have taken and ought to take whatever action in the case was necessary to enforce the treaties into which the United States had entered. But that department was then under the control of Andrew Jackson, whose official career probably did more to demoralize American politics than that of any other President; and he had already refused to listen to the cry of the distressed Cherokees, for justice and right. So that now they seemed to be left a prey to the devourer, without refuge or help.

It is no wonder that the sympathies of those who loved right, and believed that there was a God who visiteth for iniquity, were awakened; and that remonstrances from various quarters were made against these unrighteous proceedings. Among these THE FRIEND was outspoken in its condemnation of them. Undeterred by any fear of being charged with meddling in politics, in an editorial on the subject, dated Sixth Mo. 6th, 1829, it says: "THE FRIEND is no political journal, but we have human hearts that feel for the oppressed and the weak; and, we trust, shall never fear to plead the cause of the victims of tyranny. It is our privilege and our duty, as American citizens, to watch the career of public functionaries, and the swell of popular opinion and prejudice; and whether it be from the injustice of the former, or the violence of the latter, we shall not hesitate to appeal against any attack or infringement of the great obligations of morality and religion."

"The Cherokee Indians have been for many years an agricultural people, and are rapidly improving in all the arts of civilization. Their present territorial limits have been secured to them by the most solemn pledges. Yet all motives for kindness and forbearance are unavailing with their white neighbors. The Indians have land and Georgia wants it. The right of the strongest is to be legalized, and the most solemn treaties must be broken to propitiate the fierce spirit of the State.

"If ever there was occasion for the friends of humanity and religion to arouse the action, this is surely one; for it is by such acts of unprovoked aggression as the one now perpetrating that the vengeance of the Almighty is called down."

In pursuance of its despotic course, the Legislature of Georgia passed a law, making it a penal offence for any white man to reside in the part of the Cherokee country over which the State claimed jurisdiction, without first taking an oath of allegiance to the State. This was probably aimed principally at the missionaries, a number of whom had been for years laboring among the Indians, and who believed the un-settlement and loss attendant upon their removal from their homes, would be greatly to their injury. In carrying it into execution a number

of persons were arrested, treated with harshness, conveyed from 60 to 80 miles from their homes, being chained in pairs at night; and eventually eleven of them sentenced to imprisonment at hard labor in the penitentiary for four years, for residing in the Cherokee country without taking an oath of allegiance to Georgia, which they believed had no right of jurisdiction in that country! Several of these sufferers were missionaries.

An appeal to the President from the American Board of Foreign Missions on behalf of its employees, produced nothing more than a reply that the President had no authority to interfere under the circumstances. The case was then brought before the Supreme Court of the United States on an application from Samuel A. Worcester, one of the imprisoned missionaries. An elaborate opinion was delivered by Chief Justice Marshall, which declared that the laws of Georgia had no force in the territory of the Cherokee nation; that its acts had been repugnant to the constitution, laws and treaties of the United States; that they were "in direct hostility with treaties repeated in a succession of years, which marked out the boundary that separates the Cherokee country from Georgia, guarantee to them all the land within their boundary, solemnly pledge the faith of the United States to restrain the citizens of Georgia from trespassing on it, and recognize the pre-existing power of the nation to govern itself;" and that the judgment of the Court in Georgia condemning Samuel A. Worcester to imprisonment ought to be reversed and annulled.

This decision was given in the "January Term" of 1832, but the imprisoned missionaries do not appear to have been released until about a year later, when they were *pardoned!* by the Governor of Georgia.

In pursuance of its policy of obtaining possession of the Indian lands, Georgia passed a law making it a penal offence for an Indian to dig gold, under which many Cherokees were arrested, tried, imprisoned, and otherwise abused. She caused their country to be surveyed and divided into lots. Then a law was passed authorizing a lottery for the land so divided,—but securing to the Indians those lots which were touched by their improvements. At the next session of the Legislature an act was passed, limiting the Indian right of occupancy to the lot on which he resided, and his actual improvements adjoining. Many of the Cherokees resisted the dispossession of their property by appeals to the courts; but to remove this barrier to their plans, the Legislature in 1833 and 1834, deprived the courts of equity jurisdiction in Cherokee cases; and the Indians were thus left at the mercy of an interested State agent, who, without trial, simply notified them to remove from their homes, when possession was demanded by purchasers under the Georgia laws. A Memorial to Congress from the Cherokee Nation enumerates many cases of great hardship. One of these was that of John Ross, the principal chief of the nation—"He was at Washington

City, on the business of his nation. When he returned, he travelled till about ten o'clock at night, to reach his family; rode up to the gate; saw a servant, believed to be his own; dismounted, ordered his horse taken; went in, and to his utter astonishment, found himself a stranger in his own house, his family having been some days before, driven out to seek a new home."

A prominent object in these oppressive proceedings was to induce the Cherokees to consent to a removal beyond the Mississippi. In pursuance of this object, the United States Commissioner visited the Legislatures of Tennessee and Alabama, in which States the Cherokees held lands, and impounded those bodies to pass laws prohibiting any of those who had been turned out of their Georgia possessions from taking up a residence in those States.

Some of the Cherokees, becoming wearied of the difficulties they encountered, thought it would be the best policy to yield to the pressure, and remove; and a portion of these, who appear, however, to have acted without legal authority, assented to a treaty with the United States Commissioner, who, although he bore the title of "Reverend," appears to have been an unscrupulous politician, and agreed to cede their lands and rights east of the Mississippi for \$5,600,000. Against this so-called treaty, the legal representatives of the nation, in a memorial to Congress, dated 21st of "June," 1836, protested as "fraudulent," and negotiated "over the heads and remonstrances of the nation." Notwithstanding this protest, the Senate ratified the treaty; and the Government announced its "unalterable determination" to carry it into effect, and to remove the Indians by force if they would not otherwise leave their country.

The Cherokee Nation then addressed a memorial to Congress, praying that body to interfere for their relief. This document was signed by 15,655 of their people—almost the whole nation, excepting infants. It is a most touching paper, such as could only emanate from men who felt that all their rights were at stake. But it was without effect.

As the Cherokees refused to go voluntarily, armed troops were sent into the country, who gathered the unresisting inhabitants together as prisoners; and sent them into the territory assigned to them across the Mississippi. Of this crowning act of the long series of iniquitous proceedings, THE FRIEND of Seventh Month 21st, 1838, thus speaks: "All the accounts in the newspapers agree in stating that the poor, peeled, scattered, forsaken and unresisting Indians, have been hunted like the beasts of the forest, like sheep having no shepherd, collected into groups, and hurried away from their cherished homes to a strange and wilderness country." J. W.

(To be continued.)

THE place and the value of silence in the house of prayer is more and more widely recognized. In many a Sunday-school the first tap of the superintendent's bell is a call to silent prayer; and the lush of that moment of prayer is felt in the heart of teacher and of scholar as no words of prayer could be. So, again, in many a non-liturgical church in America, a brief season of silent prayer is the first part borne by an incoming worshipper in the service of worship with the great congregation. It would be well if more frequently the intervals of silence in a prayer-meeting were reckoned, not as *lost* time, but as time *gained*—for holiest communings with God.—S. S. Times.

FOR "THE FRIEND."

This morning my attention was directed "by my ever-present guide," to the people of Israel when first settled in Canaan. Then the Lord alone was their God, and blessing and peace of every kind was theirs to enjoy.

But just as soon as they began to affiliate with the heathen around them, this blessed peace and protection was withdrawn, and distress of many kinds became their portion. Yea often, after their crops were ready to harvest, did the Moabites and the Children of the East, come and do the reaping.

And just so it is yet; yea, and will so continue to the end of time, that whenever the Lord's people in a body, or any child of his, turns aside to love and adore anything earthly, then will the Lord raise up Chushan-rishathaim (see Judges iii. 7-8) against them, and sore distress will follow. This the writer has always found to be so; and now blesses the name of the Lord because it is so. It is because He loves us that we are thus chastened. No chastening for the time being is joyous but grievous; nevertheless, afterwards it yieldeth the peaceable fruits of righteousness to those who are exercised thereby.

FOR "THE FRIEND."

Notes of a Visit to Italy.

(Continued from page 286.)

From Turin to Genoa over 100 miles by rail, through numerous tunnels probably thirty or more, crossing the Maritime Alps, and meeting a spur of the Apennine Mountains, we find Genoa on the Mediterranean Sea, a port of considerable importance, with a splendid harbor and mole stretching out seaward a long distance, affording protection to the numerous vessels both sail and steamers. The new section of the city, built on the hill, overlooking the older and business parts of the city and harbor, has some fine and costly dwelling houses, showing the possession of wealth among some of its merchants. Our drive through some of its principal streets showed some activity and business life among its people. We drove about two miles out to the beautiful cemetery; I say beautiful, because of the richness of its adornings in sculpture and pure white statuary. It contains a large hollow square of several acres, surrounded on the four sides with outer walls and corridors, inside with vaults on either side of the wide avenues leading around the enclosed grounds; and in front of each vault, even the unoccupied ones, stands a white marble statue of life-like size, chiselled and modelled with the skill and perfection for which Italian statuary is noted. They could be numbered by hundreds. We walked around and through these long avenues of the dead, admiring the beauty and adornings of even a cemetery.

Being pressed for time we quite reluctantly passed hurriedly through the heights of the city, noting the old parts with marks of age, probably of centuries; but the new showing taste and wealth. Our Jehu drove us to one of the monasteries on the outskirts of the city to view its inmates, pictures, &c. The Italians are noted for love of pictures. We were shown two that especially attracted our attention. One was Mary treading the serpent under her feet; the other Mary chaining the ugliest Satan I ever saw. Mary is usually magnified with a life-like size, and Jesus manifested as a child. The honor and worship bestowed on Mary the Creature, seems to be of more importance than

the worship and honor bestowed on Christ, the Son of God. May I say that Rome has misled her people in order to fill her coffers? But light is surely dissipating these errors, even among the Italian people.

We viewed the old antiquated walls, gates and fortifications, and thought of the Genoa of eight or ten centuries ago when she was mistress of the seas, or shared this power with the Venetians; still she is now no mean city, when in one year, 1884, she entered and cleared from her port 4155 ships with 3,514,000 tons of merchandise.

We realized the convenience of the Railroad ticket and hotel coupons issued by Cook & Son, London, and although we spoke neither French or Italian, yet we generally found at the hotels English-speaking waiters and porters, who would represent us at the Railroad stations and get our tickets stamped and secure for us from the Guard on the train his attention, and a separate compartment if we wished, for a small gratuity of two or three francs.

The route from Genoa to Pisa was along the shores of the Mediterranean Sea, where the Apennines put down into the sea, all the way to Pisa, some 130 miles; passing through over 80 tunnels. Some of these are one to two miles in length, and alternating with openings and views of the blue waters of the sea, keeping the traveller continually on the alert, and interested in the varying scenery, all the way to Pisa. Such labor in Railroad building through such a rugged and mountainous region of country can hardly be calculated, but then the low price of labor in Italy at 1½ francs per day helps to reduce the cost of building their roads, at the expense of the laboring class by reducing them to the pauper standard of living, which thoughtful Americans regret to see anywhere.

Arriving at Pisa and Hotel Victoria, with good accommodations and attention, we take in some of its places of note; and at first sight, age seemed stamped on most of them, especially its Cathedral, Baptistery and Leaning Tower, all fronting on the same open piazza; the tower built in 1174 is eighty stories high, 179 feet; and leaning 13 feet out of perpendicular, whether built so with design of the architect, or become so by the settling of one part of the foundation is a disputed point. Galileo availed himself of the oblique position of the Tower in making his experiments, regarding the laws of gravitation; 294 steps lead to the top where seven bells are hung, one weighing six tons. A grand view of the city and surrounding country is to be had from the summit by persons able to climb the steps. The Cathedral and Baptistery are old and dingy, bearing evidence of great age, but also of being once bright, rich and beautiful.

In this neighborhood are the rich marble quarries that supply Europe and America with its purest white qualities, and also giving employment to thousands of skilled artisans in the manufactory of statuary and marble ornaments to meet the demands of European as well as the American markets. The guides there are not slow in enticing travellers into the different establishments where all kinds of marble and alabaster ornaments are for sale. Americans are supposed to have plenty of money to spend, and are urgently pressed to make purchases. We noted here that travellers stop off on their way to Rome for only a few hours or a day or two to examine the few places of note, but it seems their short stay increases the appetite of the waiters, porters and guides to press their services on you, and expect their fee long or short as the time of their stay may be; and a

liberal one too from Americans. We drove through some of the principal streets and along the quay, but the shops did not present so attractive an appearance as Wanamaker or Strawbridge & Clothier. We can commend the Hotel Victoria with its apartments and attentive waiters to the travelling community. After a short stay we start for Rome, 209 miles, still skirting the shores of the Mediterranean Sea, with tunnels continuing nearly half way there.

FOR "THE FRIEND."

The Priesthood of Believers.

Friends have ever held the doctrine of the priesthood of believers—that Christ is Head over the Church, and has a right to call into service when He sees fit, any of his adopted children in our meetings for worship and discipline. There will never be anything gained by lowering our standard as to the right call to public service. "If anything is revealed to another that sitteth by, let the first hold their peace." "Let him that ministereth, minister with the ability that God giveth."

It is quite interesting to see those that have been members amongst us but a short time, so interested to find they have the great privilege of being led and guided by the Holy Spirit. It is something wonderful that poor finite man is so privileged as to be instructed where to go, when to speak, and when to keep silence. May the Friends' branch of the Church live up to their privileges,—first placing themselves fully in the Master's hands; then, by his help, filling the different positions in the body as He appoints, so that we may be a living Church, using our influence in gathering to the truth, and spreading those testimonies that are peculiar to Friends, and ought to be secured to every true Friend.

GEORGE BRIGGS.

NEW SHARON, IOWA.

FOR "THE FRIEND."

When Thomas Shillitoe was in attendance at North Carolina Yearly Meeting, in 1829, that meeting was brought into exercise on account of "departure in plainness of dress, and address." In reference to this T. Shillitoe's Journal says:

"The following circumstance was related in the meeting, by a Friend who was an eye and ear witness, and who had acted as one of the jurors in the case: four men were called to be witnesses in a trial before the court, and required to take the oath; all were dressed alike fashionably. On being directed to put their hands on the book, all were sworn but one, and they departed, leaving the one standing; which the judge observing, he addressed this individual in nearly the following language: 'Do you affirm?' He answered, 'Yes.' 'Are you a Quaker?' He said, 'yes.' 'Do you belong to that Church or Society?' He said, 'yes.' After a little pause, the judge replied, 'The time had been, when the members of that Society were known by their peculiar dress and appearance, but it is not so now; you could not be known by your dress, you are like a ship on the sea or privateer sailing under false colors, that it may not be known.'

"I felt best," says Thomas, to give this circumstance a place in these memoirs, should they ever meet the public eye, in hopes it may prove as a watchword to such, who may be tempted to gratify their natural inclination by departing from that simplicity into which the Truth first led its followers."

FOR "THE FRIEND."

A Quarry at Avondale.

Finding myself, on the 22nd of First Month, in the neighborhood of Avondale, in Chester Co., Pa., with an hour or two of time to spare, I devoted it to the examination of a stone quarry at that place, which had frequently attracted my attention as I passed it on the railroad.

The stone was the usual *gneiss* rock, which covers so much of the area of south-eastern Pennsylvania, composed of Quartz, Feldspar and Mica, and very evidently deposited in layers or strata. The quarry is at the western end of a point of high land, which there ends at the valley of White Clay Creek. The railroad company, which works it for ballasting stone and other purposes, have exposed the rock for a considerable distance along the face of the bluff, without penetrating very deeply into the hill, or going much below the level of their tracks.

One of the first things which arrests the attention of the observer is the manner in which the layers of rock slope downwards in either direction from the central part of the quarry. If the reader will take a quire of paper, or an unbound pamphlet, and hang it over the back of a chair or any edge which will allow the two ends to droop a little, he can form a pretty clear conception of the way in which the layers of stone in this quarry are disposed. To make this comparison more complete, he must imagine his paper of paper to be composed of sheets of very different thicknesses—for in the quarry he will find layers both thick and thin. Indeed, as we approach the bottom of the excavation we come first to massive rock, which is so thick that if it is in layers like those above it, the quarrymen have not yet gone deep enough to expose their under surface.

One interesting feature in this quarry is the marked difference in the character of the stone obtained from different parts of it. In some of the layers, the Mica so predominates that but little else is visible. Picking up a piece of this stone from a pile that was lying by the side of the track, it appeared to be almost entirely a mass of small black, shining scales of Mica, with but little adhesion among them; so that it was easy to break with the hands thin fragments of it.

In some specimens the three ingredients of the *gneiss* were more uniformly distributed; and in others, the Quarts and Feldspar were gathered into masses of greater or less magnitude—showing that there must have been a marked difference in the influences to which the different layers had been exposed, while the process of crystallizing had been going on, and the elements which entered into the constitution of the rock had been combining together, under the power of that attractive force which drew them together. Penetrating the Quartz were a number of black crystals, looking like pipestems, of uniform thickness, and of varying lengths. These, in my school-boy days, I had been taught to call *Schorl*, but the accepted name for them at present is Tourmaline. This mineral is found in various parts of the world, generally in granite, *gneiss*, or mica slate. It is of various colors, black, blue, green and red. The principal ingredients in its composition are Silica and Alumina, and in the black varieties oxide of iron. This latter substance is almost absent in the green and red Tourmaline.

Some magnificent specimens of red and green Tourmalines have been found at Paris, Matine,—transparent crystals of more than an inch in diameter, of a clear red color, internally surrounded with green. The red and green Tour-

malines when transparent, and free from cracks or fissures, admit of a high polish, and form beautiful and costly gems. The word Tourmaline is a modified form of the name of the mineral in Ceylon, from whence it was first brought to Europe.

Another mineral which interested me much in this quarry, was the Garnet, crystals of which were imbedded in the stone, of the size of an unbulled walnut—two inches and more in diameter. I had before found these crystals abundantly in the *Gneiss* rock, but never of the size which were here presented. Yet such large garnets are found in different parts of the world, especially in Sweden and Norway. Those at Avondale were a red color, somewhat translucent on the crystalline faces; mostly irregular globes, with the meet of the adjoining rock closely adhering to parts of them, and thus preventing one from seeing the symmetrical form of the regular crystal. Some varieties are a dark blood red color, and so translucent as to form beautiful gems. All the varieties of Garnet contain Silica and Alumina combined with varying proportions of Lime, Iron and Manganese.

The layers or strata in which the rock of this quarry are disposed were probably deposited at the bottom of an ancient ocean, in a position horizontal or nearly so; and the bending of them into the form exhibited here, was one of the effects produced by the slow contraction of the solid crust of the earth, as explained in a former one of these geological articles.

Although the rocks of the Avondale quarry are considered by geologists to be of later age than the *Laurentian* rocks, yet they are among the older rocks of the globe, and no traces of animal and vegetable life are found in them. From this circumstance they are called *Azoic*, which means without life. Yet it is possible that some forms of living beings may have existed on the earth when they were deposited, all traces of which have disappeared in the changes to which these rocks have been subjected by heat and chemical action. Even in more recent rocks, such as the red sandstone, described in the visit to the Cornwall iron mine, which there is indisputable evidence were formed when life was abundant; it is only in certain favored spots that the circumstances were such as to preserve the remains of former animals or plants. It is so in the strata that are now forming on the earth's surface. Of the infinite numbers of plants and animals that live and die, what a very small part will leave remains which will be preserved for the examination of geologists in a future age! Probably not more than one in a million will escape the destructive agencies which are ever at work reducing the lifeless forms into dust and preparing the inanimate particles of matter to again enter upon a cycle of living existence.

There are some interesting remarks bearing on this subject in one of the late Hugh Miller's writings when he speaks of his observations on the shores of his native Scotland. He says:—

"In middle autumn, at the close of the herring season, when the fish have just spawned, and the congregated masses are breaking up on shallow and skerry, and dispersing by myriads over the deeper seas, they rise at times to the surface by a movement so simultaneous, that for miles and miles around the skiff of the fishermen nothing may be seen but the bright glitter of scales, as if the entire face of the deep were a blue robe spangled with silver. I have watched them at sunrise at such seasons, on the

middle of the Moray Frith, when, far as the eye could reach, the surface has been ruffled by the splash of fins, as a light breeze swept over it, and the red light has flashed in gleams of an instant on the millions and tens of millions that were leaping around me, a hand-breadth into the air, thick as hail-stones in a thunder-shower. The amazing amount of life which the scene included, has imparted to it an indescribable interest. On most occasions the inhabitants of ocean are seen but by scores and hundreds; for in looking down into their green twilight haunts we find the view bounded by a few yards, or at most, a few fathoms; and we can but calculate on the unseen myriads of the surrounding expanse by the seen few that occupy the narrow space visible. Here, however, it was not the few, but the myriads that were seen—the innumerable and inconceivable whole—all palpable to the sight as a flock on a hill-side; or at least, if all was not palpable, it was only because sense has its limits in the lighter as well as in the denser medium—that the multitudinous distracts it, and the distant eludes it, and the far horizon bounds it. If the scene spoke not of infinity in the sense in which the Deity comprehends it, it spoke of it in at least the only sense in which man can comprehend it.

"Now we are much in the habit of thinking of such amazing multiplicity of being—when we think of it at all—with reference to but the later times of the world's history. We think of the remote past as a time of comparative solitude. We forget that the now uninhabited desert was once a populous city. Is the reader prepared to realize, in connection with the lower old red sandstone—the second period of vertebrated existence—scenes as amazingly fertile in life as the scene just described—occurs as thoroughly occupied with being as our friths and estuaries when the herrings congregate most abundantly on our coasts. There are evidences too sure to be disputed that such must have been the case. I have seen the ichthyolite beds, where washed bare in the line of the strata, as thickly covered with oblong spindle-shaped nodules as I have ever seen a fishing-bank covered with herrings; and have ascertained that every individual nodule had its nucleus of animal matter—that it was a stone coffin in miniature, holding inclosed its organized mass of bitumen or bone—it's winged, enamelled, or thorn-covered ichthyolite."

The same pleasing writer gives an illustration of the manner in which such remains are preserved. In his description of a spring on the shores of the Moray Frith, which escapes by two openings to the shore, where it is absorbed among the sand and gravel. "A storm about three years ago swept the beach several feet beneath its ordinary level, and two little moles of conglomerate and sandstone, the work of the spring, were found to occupy the two openings. Each had its fossils—communitated sea shells and stalks of hardened moss; and in one of the moles I found imbedded a few of the vertebral joints of a sheep. It was a recent formation on a small scale, bound together by a calcareous cement, and composed of sand and pebbles, mostly from the granite gneiss of the neighboring hill and organisms, vegetable and animal, from both the land and the sea."

J. W.

A MAN in an angry passion rarely accomplishes anything, except such things as he is afterwards sorry for.

BEN HAZZARD'S GUESTS.

BEN HAZZARD'S bed was smoky and cold,
Ben Hazzard, half-blind, was black and old,
And he coddled shoes for his scanty gold.
Sometimes he sighed for a larger store
Wherewith to bless the wandering poor,
For he was not wise in worldly lore;
The poor man's guests, he knew as no more.
One that but cry from the window came—
Ben Hazzard was sleepy and tired and lame—
"Ben Hazzard, open," it seemed to say,
"Give shelter and food, I humbly pray."
"Ben Hazzard lifted his woolly head
To listen to," "His usual cry," he said,
And his old bones shook in his ragged bed,
"But the wanderer must be comforted."
"Come in, in the name of the Lord," he cried,
And he opened the door and held it wide.
A milk-white kitten was all he spied.
Ben Hazzard, amazed, stared up and down;
The stout house-dogs were ever fully shut,
Safe bolted were all but Ben's hut.
"I thought that somebody called," he said,
"Some dream or other got into my head!
Come then, poor puss, and share my bed."
Then out from the window, wind, and the sheet,
Puss joyfully lay at old Ben's feet.
Truly it was a terrible storm,
Ben feared he should never more be warm.
But just as he began to be dazy,
And puss was purring soft and cozy,
A voice called loudly to be let him in,
"Ben Hazzard, Ben Hazzard, help, I implore!
Give drink, and a crust from out your store."
Out from his bed he stumbled again;
"Come in, in the name of the Lord," he said;
"With such as I have, thou shalt be fed."
Only a black dog he let in,
Whining and shaking a broken paw.
"Well, well," he cried, "I must have dreamed;
But verily like a voice it seemed.
Poor creature," he added, with husky tone,
"Thou shalt have the whole of my marrow-bone."
He went to the cupboard and took from the shelf
The loaf he had saved for his own self.
Then, after binding the broken paw,
Half dead with cold wet back to his straw,
Under the ancient blue belltop he crept,
His conscience was white, and again he slept.
But again a voice called, both loud and clear,
"Ben Hazzard, for Christ's sweet sake come here!"
Once more he stood at the open door,
And looked abroad, as he looked before;
This time full sure "twas a voice he heard,
But all that he saw was a storm-tossed bird.
"Come in, in the name of the Lord," he said,
Tenderly raising the drooping head,
And, tearing his tattered robe apart,
Laid the cold bird on his own warm heart.
The sunrise flashed on the snowy thatch,
As an angel lifted the wooden latch.
Ben awoke in a flood of golden light,
And knew the voice that called all night,
"Thrice happy is he that sleazeth the door,
The humblest ev'ner than thou hast here,
For Christ's sweet sake thou hast comforted."
"Nay," twas not much," Ben humbly said,
With a rueful shake of his old gray head,
"I have received all thy sweet sake come here!"
In Christ's dear name, can do no more,
Behold the Master who waiteth for thee,
Saith: "Giving to them, thou hast given to Me!"
Then, with heaven's light on his face, "Amen,
I come in the name of the Lord," said Ben,
"Frozen to death," the angel said,
When at last he found him in his bed.
With a smile on his face so strange and bright,
He wondered what old Ben saw that night.
—Anna P. Marshall, in the *Congregationalist*.

KNEELING AT THE THRESHOLD.

I'm kneeling at the threshold weary, faint, and sore;
Waiting for the dawning, for the opening of the door;
Waiting till the Master shall bid me rise and come,
To the glory of his presence, to the gladness of his home!

A weary path I've travelled, mid darkness, storm and strife;

Bearing many a burden, struggling for my life;
But now the morn is breaking, my toil will soon be o'er,
I'm kneeling at the threshold, my hand is on the door!

SELECTED.

Methods I hear the voices of the blessed as they stand,
Singing in the sunshine in the far-off sinless land;
Oh, would that I were with them, amid their shining throng,
Mingling in their worship, joining in their song!

The friends that started with me have entered long ago;
One by one they left me struggling with the foe;
Their pilgrimage was shorter—their triumph sooner won,
How lovingly they'll hail me, when all my toil is done!

With them the blessed angels that know no grief or sin,
I see them by the portals, prepared to let me in.
O Lord, I wait Thy pleasure; Thy time and way are best;
But I'm wasted, worn, and weary; O Father, bid me rest!

Conscience Among the Heathen.

A letter addressed to the Editor gives an interesting testimony of Bishop Abraham to the universality of the Light of Christ—for it is to this Divine and heavenly gift that we understand the remarks of the Bishop to refer, although the language he uses does not discriminate between this and the natural conscience.

The distinction between the natural conscience and the Light of Christ is clearly drawn by Robert Barclay in his Apology, in the 16th section of Proposition 5 and 6. He shows there how the conscience may be defiled or corrupted, when the mind becomes blinded with a false belief; whereas the Light of Christ, like Him from whom it comes, is pure and holy, and witnesses against all evil.

The letter is subjoined.

"In the life of Richard Bethel, Lord Westbury, Lord Chancellor of Great Britain, 1865, I find the following, which I think will interest thee. Bishop Abraham, in some reminiscences, says: 'I think it was in the year 1870, soon after I had returned from New Zealand, that I met a distinguished party at Lord W's house. The company at dinner consisted amongst others of Archbishop, now Cardinal, Manning, and others.

"From this the conversation turned to the more general question of the natural conscience as seen amongst the heathen, and it was very pleasant and instructive to hear the Archbishop discourse on this, especially so to me, because I have had large opportunities for twenty years past of observing the varied degrees of light in the hearts and minds of the natives of New Zealand, and the heathen of Melanesia; and I told how Bishop Selwyn and Bishop Patterson always assumed and appealed to this "Light that lighteth every man that cometh into the world."

"Thou wilt remember that Bishops Selwyn and Patterson were missionary Bishops of the Church of England, among the heathen—the latter losing his life in the service."

ALFONCANTO, RICHARD CADBURY.

Third Month 17th, 1889.

True to God.—Never lower your principles to this world's standard. Never let sin, however popular it may be, have any sanction or countenance from you, even by a smile. The manly confession of Christ, when his cause is unpopular, is made by himself the condition of his confessing us before God. If people find out that we are earnestly religious, as they soon will if the light is shining, let us make them heartily welcome to the intelligence.

Successful Failures and Prophetic Lives.

An Address to the Graduating Class at Westtown Boarding School, Third Month, 28th, 1889, by John H. Dillingham.

We mark you now, my friends, as going forth several ways, to be planted in this spot and in that as centres of influence; an influence all the more conspicuous and telling, for the culture of mind, body, and soul which you have gathered up here. As messengers sent into the world, each on his and each on her Divine errand, you are to fail and to succeed according as you are exposed to, or of Him who has called you to glory and virtue. And He who would make you perfect in every good work will, for that very purpose, often let you make your work very imperfect; let your work be unsuccessful, that you may be successful.

For the true object of life is character—Divine character; and to be successful in going on unto perfection, sometimes it will be essential that our work should be frustrated. For if the pride of success creeps into your characters, it is but a prelude to their failure. Far better will it be for you to be perfect in every good work, than that the works themselves should turn out perfect; better that all one's doings should be accounted as failures in life, than that he himself should not be a success.

If, then, you are to make failures, which most of us do, we desire that they may be successful ones; successful in reducing self-sufficiency, and fixing your dependence on the Giver of every good and perfect gift; successful in shaping that harmonious conformity of your wills with his, which is harmonious happiness; successful in that triumphant testimony, "Nevertheless I live—yet not I!" successful in love, joy, peace, and in every fruit of the Spirit.

But to this end, the success of character—it is not your duty to court failure in any piece of work, or to be indifferent to the perfection or success of whatever your hands find to do. It is your part to try to do your best at every point. A lower aim would lower you with the aim. How shall you be made perfect in every good work, unless it is good work that you try to do? The instrument will be elevated to conform himself to the excellence of the work set before him; and the rising excellence of the instrument, by the time he has reached his first aim will have outgrown it in the process, and in demanding a higher aim to satisfy his higher standard will himself go up higher. So character if faithful is led on and upward, created unto good works which are ordained for you to walk in. The object of immediate pursuit may be attained to successfully, or it may be failed of successfully;—either way, so that success in yourselves is developed, and you are adapted to the places which in the courts of eternity is prepared for you.

Many, perhaps too weak to bear adversity or poverty, are granted the success of achievement as a strength to themselves, and as an incitement to others. Others, perhaps too weak to bear prosperity, or else because hardest lessons are often given to best scholars, are offered the grace which comes through failed plans, even corrective and educating failures, for the establishment of undying success. And the sublime courage of disappointment will rise in the earnest of the stored up victory, as you rightly listen for the sure word which says: "What I do thou knowest not now, but thou shalt know hereafter."

But do not let us assume that all our failures are chargeable to that higher wisdom, rather

than our own lack of wisdom. Probably some of our plans deserve to fail, because we do not seek and obtain best Counsel in entering upon them, or else best Guidance in our modes of prosecuting them; and so the failure is the legitimate outcome of self-will and folly. But even so, though chargeable to our folly instead of to His wisdom, the same love would overrule the chastisement, to correct our infirmities by our mistakes.

For how terribly imperfect would any one of you be who should be allowed to be made perfect to do *his own will!* By that which some call *education*, completely trained, equipped, and disposed in mind, body and spirit to do his own will and completely successful in accomplishing it, a phenomenon of powerful and perfect selfishness—what a hero to this world, and what a scourge! Fulfilling the will of the flesh and of the mind, having no hope, and without God in the world,—what a signal failure to himself, and disaster to others, is such a success?

And so, if any one benediction of Holy Writ more than others has seemed to me to express the concern and effort of this Institution towards its children, and especially now towards you, it is: "May the God of peace make you perfect in every good work to do his will, working in you that which is well pleasing in his sight, through Jesus Christ."

And to this consummation alone we look for your finished education, even perfection to do his will by doing it. He that will do it shall know the teaching.

And as for this fostering institution—did George Fox know when he came to eleven years of age, and "knew pureness and righteousness," and was inwardly "taught to be faithful in all things," what walls he was rearing here; what marks he was making on your characters; or what leaven in him of primitive Christianity revived was beginning to permeate and purify the church of the future? As little do you know what message in your lives and characters you are to telegraph down the long line of the ages; what ripples you start to swell to eternal shores; or what shall be the responsibility of what you speak in the ear, in closets, when it shall be proclaimed upon the housetops.

Did Abraham Lincoln dream, when he was splitting rails, that he was preparing for the Presidency; that through one who had been faithful in the little, the word of emancipation might find a mouthpiece? Did Thomas Lee foresee when he proclaimed at Oxford the words: "There is a faith which overcomes the world, and there is a faith which is overcome by the world," that in the conversion of William Penn he was an instrument of pressing forward that "Holy Experiment," the founding of Pennsylvania?

Did the aged maid-servant who trained the little girl Monica in habits of self-restraint, know that in the mother of the future Augustine she was preparing the way for the rising of among men of the fourth century, of so celebrated a Christian teacher? Of whom it was said to her in his wild and wayward years: "It is not possible that the son of these tears should perish."

Such instances show how little you realize what prophetic steps you tread as you go forth from here, and in every act sow your seed, not knowing which shall prosper, nor how great a future of weal or woe for mankind is wrapped up as a germ in every deed that you are going to do. The motive of each deed is the germ of its life, the determinant of its species, whether for bane or for blessing. You need not be so

careful of your deeds as of their motives. Their life-principle, and so their fruit throughout future history, will be of the nature of the living source and spring that generated them in your hearts, whether that source shall be Christ on the one hand or self on the other.

But you go forth as prophets. You cannot stop the onflow of what you do. You cannot stay it by dying. "The good that men do lives after them." I wish I could say, "The evil is interred with their bones." The evil goes on too. It never ever overrules it for good, it is that saving life which should have had place with you at the inception of the deed, rather than without you at the end. Prophets of evil, prophets of good? Which are you determined to be, as your farewell step from Westtown's door launches you on the irreversible tide of time? I will pour out of my spirit, and your sons and your daughters shall prophesy: What prophets of blessing shall you be in your works as their motives are submitted to that Spirit? "He that doeth truth cometh to the light."

All the educational influences which have contributed to your make-up, are factors in the great prophecy of your lives. It is not for nothing that you were born of honest-hearted parents, set among surroundings which should savor less of show than of substance, nurtured in an atmosphere more or less instinct with reference to Truth instead of custom. If you ask why this country and not Afghanistan—why this period and not the middle ages—why this church and not the Armenian, Roman or Baptist was chosen for your native environment; I trust there comes to your faith the swift assurance that you were ushered into your scene of responsibility neither unseasonably or out of place; and that to this church it was said in your case, "Take this child and nurture it, and I will give thee thy wages;" that, while it was not your arrangement, it was one of Providence, that you should be so placed that the Christian principles committed to the Society of Friends, should become sensibly or insensibly a part of you and of the outcome of your lives.

Whatever situations others may have been placed in, this is your outfit; a quarter of a good lifetime has been spent in bringing you thus far; go forward and justify your membership as loyal friends of Truth, and when in living experience you have exhausted the truth there is in the principles committed to your birthright, then, and not till then, will you be ready for a new departure. Why it was put for you rather than others to be so associated, it is useless to ask except by the interrogation mark of faithfulness. Work the question out, by working the principles out from truth to truth, receiving grace for grace.

There will be conflict all along between the bottom truth of things and the pleasure of the majority who are bound—and with what a bondage! to live on the surface; who will call you liberal if you look at truth rather than custom. "Why?" saith their spirit "Custom is truth. Usage is the law. Folks are doing so and so now. If you are going to look at the nature of ways and doings, it will make you odd." But "greater is He that is in you than he that is in the world," and let Him be your greater authority. He is still, and will be throughout your day, despised and rejected of men." But it is sweet to be unpopular with Him, and, in its sure fruit, it is bitter to be popular without Him.

I do not say that it is every child's and man's duty, because he is born into association with

any system whether good or corrupt, servilely to copy it and conform his life to it, as pursuing the meaning of Providence for him or her. But I am willing to say, he was placed in that system for a purpose—which purpose he will best realize by following the witness for Truth manifest to his own heart. In corrupt systems this, if followed out, would make him a martyr; in true systems, a soldier; in mixed systems, a reformer. And as this rule of loyalty to the Truth is applied to your membership in a society whose especial concern is that men should follow the light of Truth into its perfect day, I do not fear the result for the system you were born under; or for your loyalty, under increasing enlightenment, to your membership.

But if you say this association also is in the mixture, let the light, life, and love of Truth purify first you, and thus it through you, that the things which cannot be shaken may remain. But be loyal to the *Divine* meaning of your membership, till from truth to truth and from grace to grace you graduate from the militant to the triumphant.

And so we would bless your diverging paths as you go forth bearing precious seed, on your several missions prophetic of unceasing history. Choose well the life of that seed—choose ye that truth whom ye will serve, whether sin unto death or obedience unto glory. Posted as so many mission-centres you know not where over this broad earth, may you leave the world better than you found it, not because you have followed the world, but rather its Redeemer.

Some of your names may linger in obscurity, but your faithful lives cannot. They will shine to men's lives, if not to their eyes; and in heavenly places as the stars forever and ever. To-day a vacant place in your little band so reminds you, as our united sympathy goes out unto your class mate who has missed this closing scene, by reason of another forever more sacred, "There is no discipline like a noble sorrow"; there is no sorrow like an ignoble discipline; there is no joy like the joy of that salvation in which we would that your "whole spirit, and soul and body may be preserved blameless."

Natural History, Science, &c.

Wharf-building at Hampton Roads.—A wharf now building by the U. S. Government in Hampton Roads upon a plan said to be the only one of the kind yet adopted, possesses features of interest, particularly in the ingenuity of the apparatus used in the construction. The only form of wharf admissible at the location is that of resting upon piles, which are commonly of wood and ordinarily quite lasting; but in this location, owing to the attacks of the teredo, are said to last but one or two years at best.

As wooden piles continuously under water are practically imperishable when no destructive worms can reach them, the wharf now building is intended to rest upon piles part of wood and part of cast-iron.

Sound pine wood piles are first driven from 18 to 30 feet into the sandy bottom until a driver weighing over 2000 lbs., falling 16 or 20 feet, fails to make much further impression upon them. A long vertical shaft attached to the pile-driver is then lowered into the water, carrying at its lower end a clamp which slides over the circumference of the pile, and a circular saw just above the clamp.

When the proper depth is reached, for which the error must not exceed one-fourth of an inch, and which requires skillful handling of special

instruments of precision, the clamp is securely bound to the pile by a cog-wheel and ratchet united by a rod reaching above water. The circular saw is then started, being steadied by another ingeniously devised appliance to prevent it from choking, as its motion tends to force it into the pile, and, in a few seconds, the pile is cut off, be the depth under water what it may, whether 20 feet or more. Occasionally the pile is cut off below the sand line, the sand being washed and kept free from the saw by a powerful stream of water from a force-pump and pipe, discharged near the saw.

The cast iron pile consists of three sections—the top sections being of uniform lengths of 6 ft. 9 inches, and the lower sections about 8 feet; but the intermediate sections vary from 7 to 17 feet according to their positions and the consequent depth of the water. The lower sections are much larger in diameter than the upper ones, being hollow enough on the inside to pass over the wooden pile, and they have on the outer edge a broad screw flange for screwing into the sand.

The sections being bolted together, are raised by the tackling of the pile-driver, and lowered until the lower section encloses the top of the wooden pile and the flange rests on the sand. A cap piece, with a cast-iron like frame arch, is now screwed to the top of the pile. A heavy stream of water is forced through the iron pile, there being a continuous bore through the upper sections though only a few inches in diameter, and 20 to 30 men begin screwing the iron piles into the sandy bottom—the stream of water forcing through the pile greatly assisting them. When the pile is screwed down until the open end of the bore of the lower section rests on the head of the wooden pile, the centres of the top are all on a level and in perfect lines if the work has been successfully done and the iron is firmly screwed several feet into the bed of the waters, protecting the wood from any efforts of the worms, as they do not burrow into the sand.

At the junction of the upper and middle sections the iron piles are firmly braced by angle iron beams—and the tops are firmly bound by diagonal rods—and the piles are then ready for the joist and planking.

The extreme outer line of the wharf will be an apron of wooden piles to present some elasticity for the blows of vessels and boats in time of heavy seas and winds.

A Curious Encounter with a Snake.—One bright summer's evening, a short time before sun-down, my father and I were strolling over a grassy hill not many miles from Philadelphia, accompanied, or more properly speaking, preceded by my dog, who usually ranged ahead, trying to rake up some excitement with a mouse or ground mole. This dog would be termed a mongrel by most persons, though there was a preponderance of black and tan terrier blood in him; hence arising his propensity to be ever on the lookout for game. We had not proceeded far on our walk when our attention was attracted by the sharp barking of the dog, and upon arriving at the spot where he was, we found quite a large garter snake lying on the ground, keeping a sharp watch on the dog, which was running around it, and barking in a most excited manner.

Now I was surprised that he did not attack the snake after his usual method, which was to rush at it, seize it about the middle of the body and shake it so violently, that its head, and sometimes the tail too, would be snapped off. In this case he acted differently. After barking

at it awhile, he suddenly laid down and rolled upon it. This he repeated several times; the he got up and waited to see what the snake would do next. He did not have to wait long for the snake, as soon as it was relieved of the weight of the dog, partially rose up on its body and opened its mouth until I thought it would spew and ejected first one and then another large toad, either of which was considerably larger than the natural circumference of the snake's body. After it had thus been relieved, it started to run off through the grass; but my dog was too quick for it, and performed the whip-snapping operation, beheading the poor snake before my father or myself could interfere.

Why the dog did not at once kill the snake, has been a question quite beyond my mind. I never saw a dog with such an antipathy for snakes. They seemed to excite him more than anything else; and he has frequently spent half a day barking at a stone-pile into which he has chased one. He met his master one day however. I heard him barking most excitedly one morning, and, upon hunting him up, found him in the middle of the creek, and on a large flat stone in front of him, coiled up, with its head following the motions of the dog, was the largest water snake I ever saw. I was quite small boy, and must own that I felt a little afraid of it myself, so I advised the dog to give up the battle—which he did, though rather reluctantly. When he came out of the creek the snake slid off of the stone, and disappeared in a hole on the bank. Since then I have seen many large and dangerous snakes, but none that have impressed me as did that one.

Items.

Prohibition in Rhode Island.—A letter from a esteemed friend in Rhode Island gives some information respecting the effort now being made to repeal the prohibition amendment to the State Constitution, adopted a few years since. A bill to re-submit the question to the popular vote has been passed by the present Legislature; and if a similar bill passes the Legislature just elected, it must be voted upon by the people—when a three-fifths vote will be necessary to change the constitution. If a recent change in the Rhode Island laws, many persons of foreign birth, who were formerly disfranchised have now the privilege of voting, and this adds another element of uncertainty to the issue. The letter says that this attempt to repeal an amendment has created the people of the State as never before." It is sincerely to be hoped that this retrograde movement will fail of success.

Oklahoma Lands.—The tract of about 2,000,000 acres, expected soon to be opened for public settlement, is part of a large tract ceded by the Indians in 1866, to the United States for the use and occupancy of other Indians and freed men of the Indian Territory. In 1873, Congress passed an act stopping further settlement of Indians on these lands and so it has remained unoccupied to this time. The 2,000,000 acres recently purchased by the United States, belong to the Creeks and Seminoles. The *Council Fire* gives the following explanation of political affairs among the Creeks, and the causes which led them to make this sale:

"For ten years and more, Captain Payne, Captain Crouch, Pawnee Bill, and other white adventurers, have kept the Indians in a state of uneasiness by organizing colonies to invade Oklahoma. In the meantime these Indians stood by the treaty, and demanded that the United States respect it. In this they were sustained by the other civilized tribes and by their white friends.

"During the late war between the North and South, the Creeks divided, those holding sway going with the South, as a rule, and the others, a rule, joining the Union army. The secession element comprised a large majority of the half-breeds

and white men married to Indian women, while a large majority of the full-blood Indians were loyal to the Union. At the close of the war both parties returned to ruined homes; their whole country had been laid waste. The negroes, being the only ones who had remained at home, and were better off than the whites, were not so much in need of aid, but were given full citizenship and equal rights. Being very numerous, they have been a political power from that time. They hold the balance of power, and, by alliance with either of the parties, can achieve victory and divide the spoils. This complexity of races—red, white, and black—renders the politics of the State very difficult and even dangerous. It was the chief cause of the civil war in that tribe a few years ago over the question of who had been elected chief—Spiecher, the full-blood Indian, or Checotah, the half-breed; and he debt resulting from that war has been a burden upon the Creek nation ever since. The public debt mainly held by wealthy white men and half-breeds, who bought it up at heavy discount on speculation. These have for years been in favor of selling the Oklahoma lands, and with the two or three millions of dollars to be got from them, pay off the public debt."

Prohibition in Iowa.—The following letter from Governor Larrabee, of Iowa, to Dr. C. C. McCabe, full of valuable information:

"IOWA EXECUTIVE OFFICE,
Des Moines, Feb. 26, 1889.

"Dear Sir: Your communication of recent date at hand and noted. In reply, I desire to say that the Prohibition law in Iowa has much more than answered the best expectations of its former most ardent adherents. It has driven the saloon and prohibition has driven people out of the State. I think not a person has left the State on account of prohibition whom it is desirable to have return, any of those engaged in the saloon and liquor business, and such persons as are usually attracted to these interests, have left, and the State is largely better off thereby. The cheap lands of the States and Territories west of us have induced a great many enterprising and valuable citizens to emigrate, independent of any influence of Prohibition. There has been a steady growth in our population, and the census of 1880 will probably show in Iowa, nearly 2,000,000 inhabitants. The vote at the last general election was 63,229 for prohibition, and the residential election of 1884—a larger increase than the election of 1884 showed over that of 1880. "As to depreciation of value of real estate occasioned by Prohibition, it is the sheerest nonsense. Values have, I believe, been sustained in Iowa, as well as in adjoining States where Prohibition is not so strict. The same causes that have affected values elsewhere have undoubtedly had their effect here. Crops grow, herds multiply, and the markets of the world continue open to us the same as before, and why should business suffer? Money is now spent in the necessities of life and for the legitimate uses instead of being spent at the saloon.

"The business of the State is, perhaps, far a bumper of business as can be found, the number of banks in the State has increased from 186 in 1883, to 244 in 1888; deposits have increased from \$27,231,719.74 to \$89,935,362.88 in 1888.

"I think more than half of the jails of the State are almost empty at the present time. There are less convicts in our penitentiaries than there were three years ago, notwithstanding the growth of our population. Expenses in Criminal Courts have decreased very largely during the last few years. I send you with this a copy of a collection of letters from the District Judges of our State, in which you will find the testimony is overwhelmingly in favor of the law. More recent statistics from them would no doubt show still more favorable results.

"Tramps are very scarce in Iowa. There are evidently very few attractions for them here. Probably more than 3,000 of the State recruiting stations have been closed in Iowa during the last five years. The lives and mothers of the State, and especially those small means, are almost unanimously in favor of the law. The families of laboring men now receive

the benefit of the earnings that formerly went to the saloons. There is no question in my mind but what the law is doing good work for our people.

"My views, heretofore advanced in favor of the law, are strengthened and confirmed by added experience. Our people are more determined than ever to make no compromise with the saloon. The law has more friends in the State than it ever had before, and I am satisfied that no State can show results more gratifying.

W. LARRABEE.

—*Christian Advocate.*

THE FRIEND.

FOURTH MONTH 13, 1889.

A letter recently received from a beloved friend, who resides in the State of New York, expresses the unity felt with some articles that have recently appeared in THE FRIEND, recommending the reading of the Holy Scriptures in our families. A portion of the letter refers to the personal experience of the writer; and this is quoted below with the hope, that the testimony it bears to the blessing that attends the reverent perusal of such a service may stimulate others to faithfulness therein.

"It is among the sweet remembrances of my early life—my childhood days—the morning readings. The solemnity there was in those moments was impressive to me, a child; and there were times when I would shed tears, though I hardly knew why; but now I believe it to be the influence of the Spirit of Truth. My father ever read the Bible with feeling; and the weight that attended the spirit of both my father and mother is still a legacy to their children.

"William Penn in his advice to his wife, says, 'Gather on the children three times a day for reading on the Lord, and read the Scriptures.' Would they were more often read in some families who are bearing the name of Friends. Though I know the letter killed, yet there is no need for any to so trust to the letter, that it would have the precedence in the heart; but as there is a desire to do as William Leddra encouraged; 'Friends,' said he, 'open wide the door of your hearts, that the Son of Righteousness may come in like a dove.' However much such an one reads, they will not be found trusting in ought, save the One that is mighty to save."

Since the publication of an article on First-day schools by Robert Knowles, of Iowa, in our issue of Third Month 2nd, we have received communications on the same subject from Indiana, Iowa and California, showing that it is one in which a wide-spread interest is felt. We purpose taking some further notice of these, when the pressure of the approaching Yearly Meeting of Philadelphia has passed over.

SUMMARY OF EVENTS.

UNITED STATES.—The Postmaster General is officially informed that the Government of Trinidad, one of the West India Islands, has established a subsidized semi-monthly line of steamers to ply between New York and Port of Spain, for the convenience of the fruit trade and direct mail service.

The commissioners recently appointed to negotiate with the Cherokee and other Indian tribes for the cession of their lands in the Indian Territory, will meet in Washington early next week to receive their instructions from the Secretary of the Interior. The Commission has already first directed their attention to the Cherokee strip, which contains about 6,000,000 acres.

A telegram from Bismarck, Dakota, says the report

that the Commission would soon be appointed by the President, to confer with the Indians for the opening of the great Sioux reservation, is received with much interest among the Indians at Standing Rock, who are headed by Sitting Bull, Gull, John Grass and other notorious chiefs. The Indians are pleased with the action of the Government in increasing the price to be paid them from 50 cents per acre to \$1.25, and many of them have expressed their willingness to accept the terms of the treaty.

Army officers in Oklahoma, Indian Territory, say that thousands of boomers are still concealed in the brush, and that if the whole United States army was there it could not drive them out. A party of four boomers, with a balloon, are camped near Antelope Hill. They will make an ascent on the morning of the 22nd, and drift in mid-air till noon, and then descend hours in advance of teams and speedy horses. State officials fear trouble, and say the country will be an Eldorado for good land office lawyers. Settlers taking claims will find it difficult to describe the same when they go to the land office to make a filing, and this will give rise to contentions.

The prairie fires in South Dakota last week, have been fanned by high winds, and have caused great destruction. The towns of Volin, Olivet, Pukawana, Leola, Lesterville, and Mount Vernon, have been almost completely destroyed by the flames. Many frame buildings have been wrecked, and there has been a heavy loss among live stock. Travel was suspended on some of the railroads, so great was the force of the wind, and clouds of dust rose from the ground, obscuring the track. The latest accounts mention that the spring rains have commenced, which it is hoped will soon extinguish the fires.

Worcester County, Massachusetts, has voted for license for the first time, giving a "wet" majority of 152.

The State election held in Rhode Island on the 3rd instant, resulted indecisively, excepting that the Democratic District Attorney General was elected. In a number of districts new elections will have to be held, or which the complexion of the Legislature will be decided.

In the Pennsylvania House of Representatives, on the 4th instant, a bill was passed prohibiting the sale of cigarettes to persons under the age of sixteen years. The bill prohibits the sale of cigarettes to minors under seventeen years of age, without the written consent of their parents and guardians, has been passed to third reading in the Michigan Legislature. It will be followed by a bill prohibiting the sale of cigarettes in any form, but not in any quantity less than ten. It is much to be wished that William Smith's failure to sign his last bill does not put an end, as it was reported it would, to the establishment of the Free School of Mechanical Trades which he projected for Philadelphia. The sum of \$2,500,000 is still available for the purpose as the matter now stands, and a tract of land 180 acres in extent has been purchased for the institution.

There were 372 deaths in this city last week, which is 17 less than the previous week, and 55 less than the corresponding week last year. Of the foregoing 191 were males and 181 females; 45 died of pneumonia; 44 of pneumonia; 24 of diseases of the heart; 22 of inflammation of the brain; 16 of diphtheria; 14 of convulsions; 12 of bronchitis; 12 of old age; 11 of inanition; 11 of inflammation of the stomach and bowels and 10 of debility.

Markets.—C. S. 4 1/2's, 108 1/2; 4's, 129; currency 6's, 120 a 132.

Cotton was a shade firmer; small sales of middling uplands at 107 1/2 cts. per pound.

Feed.—Winter bran, choice and fancy, \$14.75 a \$15; do, fair to good, 13 1/2 a 14 1/2.
Flour and Meal.—Western and Pennsylvania super, \$3.00 a \$3.25; do, do, extras, \$3.25 a \$3.75; No. 2 winter family, \$4.00 a \$4.40; Pennsylvania family, \$4.50 a \$4.75; Pennsylvania roller process, \$4.30 a \$5.00; Ohio, clear, \$4.00 a \$4.80; do, straight, \$4.90 a \$5.15; Indiana, clear, \$4.60 a \$4.80; do, straight, \$4.90 a \$5.15; St. Louis and Southern Illinois, clear, \$4.90 a \$4.90; do, do, straight, \$4.90 a \$5.15; winter patent, fair to choice, \$5.25 a \$6.00; Minnesota, clear, \$4.00 a \$4.75; do, straight, \$5.00 a \$6.00; do, patent, \$6.00 a \$6.50.

Grain.—No. 2 red wheat, 92 a 92 1/2 cts.; No. 2 mixed corn, 42 a 42 1/2 cts.; No. 2 white oats, 32 a 33 cts.

Beef cattle.—Extra, 44 a 5 cts.; good, 41 a 47 cts.; medium, 44 a 47 cts.; common, 41 a 37 cts.; fat cows, 21 a 24 cts.

Sheep.—Extra wool, 61 a 61 cts.; good, do, 51 a 6 cts.; medium, do, 51 a 52 cts.; common, do, 41 a 5

cts.; extra dip, 5 1/2 cts.; good, do, 4 1/2 cts.; medium do, 4 1/4 cts.; common, do, 4 cts.; and 3 1/2 cts.

Lanins.—Fall stock inactive and weak at 7 1/2 cts.; while spring lambs sold easily at 8 1/2 to 9 1/2 per head.

Hogs.—Western, 7 to 7 1/2 cts.; State, 6 1/2 cts. Milch calves active at 5 1/2 cts.

Milk cows in better demand at \$25 a \$30.

FOREIGN.—In the House of Commons on the 8th instant, the Lord Advocate introduced a bill providing for local government in Scotland. The bill creates a new form of the borough system, and the electors of a population of less than 7000 will be merged into counties; the others will be self-governed. The powers of the Councils extend to private-bill legislation. The right of legislating on private bills has hitherto been vested in Parliament. The measure is therefore a step in the direction of Home Rule. The functions of the Councils are otherwise similar to those of the English Councils.

The Parnell Commission resumed its sitting on the 2nd instant. Sir Charles Russell opened the case for the Parnellites. His remarks were far from being characterized with singular moderation. He declared that the testimony of three hundred and forty witnesses, produced by the Attorney General Webster, leading counsel for the *Tines*, was irrelevant. He admitted that crime prevailed in Ireland to a greater or lesser degree, and said that the only remedy was to be found in the measure of the alleged Parnell bills abolished the pith and marrow of the inquiry. The court was asked by Burke to indict a whole nation, a proceeding which Burke had declared to be infeasible. Judicial rules were invalid when a whole people moved. He declared that thoughtful minds were convinced that the time had come to try the experiment of Home Rule in Ireland.

Henry M. Stanley, the African explorer, has at last been heard from. He left Yanbuca, on the Arwani, on Sixth Month 25th, 1887, with 750 men, armed, through six leagues of the most desolate and barren, most of them almost dense and unbroken forest, to the Albert Lake (Nyansa), and after being compelled to make a retrograde march occupying nearly four months, got back to Yanbuca, within ten days' march of his starting point, Eighth Month 17th, 1887, with 200 men. It is reported that he would have been the rear column of his expedition left with Major Bartlett in Sixth Month, 1887—then numbering 257 men—of whom only 71 remained. Of the two columns, containing at the outset 646 souls, only 261 continued in the ranks. Except a comparatively small number, who were killed, and a few killed in fighting with the natives, all the rest were dead from disaster, disease and starvation.

The recent hurricane in the South Pacific Ocean swept over one thousand two hundred geographical miles, embracing in its track the Hervey and Society groups of Islands. The American ship *Kiel Cross*, from New South Wales to San Francisco, was driven ashore at Heratonga and wrecked. The crew was saved. A baronship and a week's pay was offered to the American ship *Ada Owen*, was wrecked at Onara. Her crew was saved. Wreckage from the British ship *Saikin*, from New South Wales for San Francisco, was seen at Mitakaki. It is supposed that the crew perished, and that the ship was wrecked on the island of Onara. Parts of the island was submerged and many persons were drowned. On the island of Tonga the hurricane created great havoc. Thirty persons perished there in the storm.

On the 2nd instant it was discovered that General Boulanger had gone to Brussels. In a manifesto he says that he would resign his command by the Senate, if he is not willing to be tried before magistrates or a jury. He adds that he will await the elections, which will make the Republic half honest and free, and that he will continue his struggle for a revision of the Constitution.

The French Chamber of Deputies on the 10th inst., Premier Tirard called upon the Chamber to authorize the prosecution of Boulanger. He said: "We desire to prosecute a man who is seeking to overthrow the Republic. It is our duty to defend the institutions of our country against the intrigues of a man who, by every means, is endeavoring to draw from the horrors of civil war. I am convinced that the people will justify the action of the Government."

After speeches by other members, a vote was taken on the question of sanctioning the prosecution of General Boulanger. The result was adverse to Boulanger, the Chamber deciding by a vote of 257 to 207 in favor of prosecution.

Count Dillon and Henri Rochefort will be prose-

cuted by the Government for their connection with the Boulanger movement. Addresses have been received in Rome from Massorah to the effect that King King of Abyssinia was defeated and slain in a recent battle, and that the whole country is in a state of anarchy.

In the Italian Chamber of Deputies, Signor Crispien, the Prime Minister, stated that the death of King Alexander of Elymania, would enable Italy to extend her possessions in that country. The Government, however, did not intend to be drawn on by the enticing prospect of an easy operation, and would not take advantage if it was seen to be in its clear advantage to enlarge its empire by the death of Elymania. An extensive nihilist printing establishment has been discovered in Warsaw, and many persons connected with it have been arrested.

The Dominion of Canada Government has decided to renew the issue of fishery licenses to American fishermen.

NOTICES.

Arrangements have been made by the Pennsylvania Railroad Company, by which Friends attending our approaching Yearly Meeting can obtain excursion tickets to Philadelphia and return, from any station on the following railroads, at the rate of 2 cents a mile each way; except that no such tickets will be issued on the Truck Agents'—one of which must be delivered, and Erie Railroad Division, Northern Central Railway, United Railroads of New Jersey Division, West Jersey Railroad, Baltimore and Potomac Railroad Company, Cambridge and Annapolis, and York and Susquehanna Railroad, inclusive, and make the return coupon good until Fourth Mo, 22d, 1889, inclusive.

Application should be made either personally or by mail, to Jacob Smalley, 304 Arch Street, Philadelphia, or to Thomas C. Hague, West Chester, Pa., for orders on the Ticket Agents—one of which must be delivered, to the ticket whenever a ticket is obtained. These orders inform the Ticket Agent at whatever station they are presented on the above railroads, that the bearer is entitled to a ticket to Philadelphia and return, at the rate of 2 cents per mile. If a friend has an neighborhood, and would like to obtain the number of tickets to be needed, and obtain them and distribute among the Friends, it would make less work for those having the care of them. When they are to be forwarded by mail a 2 cent stamp should be sent to pay the postage.

These orders are ready, and Friends will please obtain them as early as they conveniently can.

The Executive Committee of the Temperance Association of Friends of Philadelphia Yearly Meeting, has established a temporary work at 401 1/2 West Chester Street, West Philadelphia. The first evening after the sign "Free Reading Room" was placed in the window, 60 boys appeared, since which there has been an average attendance of 35, ranging from 6 to 16 years.

It is not without regret that as many more are required admittance for want of additional workers to attend to the service, as well as by contributions in the work. A variety of material is needed to make the rooms comfortable and attractive.

Donations of money for the purchase of these supplies, or towards the payment of rent, \$10 per month, if notified, by W. W. Booth, 106 West Chester Street, will be gratefully received; old ones which have been laid aside will answer the purpose. Illustrated books, especially of animals; sewing materials of any kind; innocent and improving games; stereoscopic and views; scrap picture books; magazines, chairs, tables, carpets, &c. If notified, by W. W. Booth, 106 West Chester Street, will send the express for articles too large to be handled. Smaller articles can be delivered either at 101 1/2 Haverford Street, or to Emma Calhoun, 1530 Cherry Street.

WESTWON BOARDING SCHOOL. A Stated Meeting of the Trustees having been held at the Boarding School at Westwton, will be held in Philada. on Seventh-day, the 14th inst., at 2.30 P. M.

WM. EVANS, Clerk.

Friends attending the Yearly Meeting can be furnished with simple meals, both before and after the sittings of the meeting, at moderate charge (15 cents) in the second story of the central part of the Arc Street Meeting-house. Meals will also be furnished to those attending the Meeting for Sufferings and the Select Meeting, the previous week.

WESTWON BOARDING SCHOOL.—The Summer Short Term, will open on Third-day, the 23rd of Fourth Month.

Conveyances will be at Westwton Station, on the West Chester and Philadelphia Railroad on that day to meet the trains that leave the Broad Street Station of the Pennsylvania Railroad Company, at Broad and Filbert Sts., Philadelphia, at 7.25, 8.55 A. M., and 2.45, 5 and 5.51 P. M.

The Union Transfer Company will send for baggage to any place in the built-up part of Philadelphia, notice is left either at No. 835 Chestnut St., at the South East corner of Broad and Chestnut Sts., at the Baggage-room Fifteenth St. above Market, or at Market St. Ferry (north side); and will have boxes, trunks, or baggage, sent to the Pennsylvania Railroad Company, at a charge of 25 cts. per trunk, to be paid either when the order is given, or when the trunk is called for. For the same charge they will collect baggage from any of the other railroad depots, if the railroad checks held for such baggage are left at one of the offices of the Transfer Company above designated. In all cases it must be stated that the baggage is to go to Westwton Boarding School, Westwton Station, of the West Chester and Philadelphia Railroad.

The Annual Meeting of "The Association of Friends of Philadelphia and its vicinity, for the Relief of the Freedmen," will be held at Twelfth Street Meeting-house, on Second-day, Fourth Month 15th, at 8 o'clock P. M.

Friends generally are invited to attend.

WM. H. HAINES, Secretary.

Philada., Fourth Mo, 1st, 1889.

TEMPERANCE ASSOCIATION.—The Annual Meeting of the "Temperance Association of Friends of Philadelphia Yearly Meeting," will be held in the meeting-house on Twelfth Street, on Fourth-day Evening, Fourth Month 17th, at 8 o'clock.

A cordial invitation is extended to all interested Friends.

ALFRED E. MARIS, Secretary.

The Twentieth Annual Meeting of "The Indian Association of Friends of Philadelphia Yearly Meeting," will be held in Twelfth Street Meeting-house, on Fifth-day, Fourth Month 18th, 1889, at 8 P. M.

Friends generally are invited to attend.

RICHARD CABOURY, Clerk.

DEED, at her residence, Horsham, Montgomery Co., Pa., the 9th of Third Month, 1889, HANNAH W. daughter of the late Jacob T. and Jane R. Lukens, the 40th year of her age, a beloved member of Abinon Monthly and Horsham Particular Meeting.

Third Month 15th, 1889, ELIZABETH W., wife of Elisha Roberts, in the 70th year of her age, a member of Chester Monthly Meeting, Moorestown, N. J. The most of her connections and associates, in life, were not of the Society of Friends, but by submitting to the operations of the Holy Spirit on her heart, she was enabled to take up the cross in her youth. In after life several trials in the death of children were her portion, and during the last few years disease, attended with much suffering, arrested her life, yet believing that these afflictions were permitted in best wisdom, she was enabled to bear them with patience, and Christian resignation. She had great regard for the feelings of others, and life and conversation, was careful that her conduct should be void of offense, and thus, by a most industrious hand, yet believing that these afflictions were permitted in best wisdom, she was enabled to bear them with patience, and Christian resignation. She had great regard for the feelings of others, and life and conversation, was careful that her conduct should be void of offense, and thus, by a most industrious hand, yet believing that these afflictions were permitted in best wisdom, she was extended to her early life, continued with her unto the end; and humbly trust she has been permitted to enter into the joy of her Lord.

FOR "THE FRIEND."

Historical Review of the Society of Friends.

(Continued from page 290.)

The history of the removal of the powerful Indian tribes in the Southern States—the Creeks, Choctaws, Chickasaws, Cherokeees, &c., to the Indian Territory, is one full of interest; yet painful to the feeling mind, from the misery and loss of life accompanying its practical execution; as well as from the fraud, injustice and oppression which were used to effect it. It is a chapter in our national history, which brings "blushing and confusion of face" to the patriot; and which here is reason to believe was one of the national sins which, in addition to that of slavery, led to that awful visitation of Divine judgment through which the United States passed in the war of the rebellion. In connection with this, it is worthy of remark, that the destructive march of Sherman and his army through Tennessee and Georgia, in which everything was burnt and destroyed that came in their path, lay in large part through the very section of country which had been unrighteously wrested from the Indians. This retribution illustrates a remark made more than 30 years before by one who was pleading for justice and right: "The Great Arbitrator of nations never fails to take cognizance of national delinquencies. He has in many forms, and with awful solemnity, declared his abhorrence of oppression in every shape; and especially of injustice perpetrated against the weak by the strong."

Abundant details of the Cherokee expulsion will be found in the early volumes of THE FRIEND, from the second to the ninth inclusive, and I will now pass from the subject, after quoting a brief statement of it from an eloquent speech made by John Quincy Adams, ex-President of the United States, in the House of Representatives, in 1836, on a resolution to distribute rations to suffering fugitives from Indian hostilities in Alabama and Georgia. In this speech he says that Georgia "by trampling upon the faith of our national treaties with the Indian tribes, and by subjecting them to her State laws, had defiance to the authority of the government of the nation; she nullified your laws; she set at naught your executive and judicial guardians of the common constitution of the land. To what extent she carried this policy, the dungeons of her prisons, and the records of the Supreme Judicial

Court of the United States can tell. To these prisons she committed inoffensive, innocent, pious ministers of the Gospel of truth, for carrying the light, the comforts, and the consolations of that Gospel to the hearts and minds of these unhappy Indians. A solemn decision of the Supreme Court of the United States pronounced that act a violation of your treaties and of your laws. Georgia defied that decision: your executive government never carried it into execution; the imprisoned missionaries of the Gospel were compelled to purchase their ransom from perpetual captivity by sacrificing their rights as freemen to the meekness of their principles as Christians; and you have sanctioned all these outrages upon justice, law and humanity, by succumbing to the power and policy of Georgia; by accommodating your legislation to her arbitrary will; by tearing to tatters your old treaties with the Indians, and by constraining them, under *peine forte et dure*, to the mockery of signing other treaties with you, which, at the first moment when it shall suit your purpose, you will tear again to tatters, and scatter to the four winds of heaven."

The writer can well remember when a large part of the offices on Third Street, Philadelphia, between Market and Chestnut Streets, were occupied by persons whose business was to sell lottery tickets. It was one of his boyish amusements to wander along the street, and examine the pictures on the signs—such as that of the Goddess of Fortune, blindfold, and holding in her arms an inverted horn, out of which was pouring a flood of gold coins; and the conspicuously displayed lists of prizes, ranging from a few dollars up to many thousands, by which the foolish were tempted to invest their money in the purchase of tickets. Lotteries were then a well-recognized means of raising funds for various purposes—sometimes even for benevolent objects; and lottery schemes were authorized in many, if not all, of the States of the Union—as they still are in some European countries. Dealing in them was not regarded as so disreputable as it became when the ban of the law was placed upon it. The Society of Friends had never countenanced any form of gaming; and one of the Queries, which for a long period has been annually read in its meetings, asks whether "Friends are clear of encouraging lotteries of any kind?"

The first notice of a vigorous effort to abolish the lottery system, which appears in the columns of THE FRIEND, was in the Twelfth Month of the year 1831; when a strong article was published, endorsing the efforts of one Daniel B. Shriver. It required much moral courage on his part to attack this giant evil, respecting which the daily papers were almost silent, because the lottery dealers were heavy advertisers in them. It appears from this that the Legislature of Pennsylvania in 1811, passed an act authorizing the Union Canal Company (to connect the waters of the Susquehanna with the Delaware) to raise an annual sum by lottery

until the tolls on the canal were sufficient to pay the interest on the subscriptions. The company sold the lottery privilege to a firm which so managed the business as to make it immensely profitable. They became proprietors of lottery grants from other States also. It was computed that during the year 1831, there were 440 lottery schemes drawn, of an average value of \$150,000 each, making the whole amount of lottery gambling for the year upwards of 832,000,000; from which the managers' profits were estimated to be more than \$11,000,000! Such was the perfection of iniquity to which the business had been brought, that in some of the schemes, fractions of a ticket could be bought for as low a price as twelve and a half cents, thus bringing the luxury of gambling down to the level of sweeps and paupers.

The result of the movement against lotteries was a strongly-worded memorial to the State Legislature, praying it "to adopt prompt and efficient measures for the entire abolition of lotteries—the evils of which, it declares "are insufferable;" and then which "there is no more fruitful and certain source of corruption." The memorialists say that they "do not pain from imagination," when they state that the effects of the lottery system "are to be traced in the records of our insolvent courts,—in our almshouses and prisons,—in the tears of deserted wives, of destitute widows, of helpless orphans,—and in the ruined characters and broken fortunes of unhappy men" who have been tempted to abandon the paths of useful and respectable employment, and follow the unholy temptations of the lottery."

In the Second Month following, a committee of the Legislature reported a bill, utterly abolishing all lotteries, and making it penal for any person to sell or buy lottery tickets. This appears not to have become a law at that session.

Job R. Tyson, a Friend of Philadelphia, well known for his literary attainments and extensive historical information, was requested by a public meeting of citizens of Philadelphia to prepare an essay on the Lottery System in the United States. This he did, in a pamphlet of about 50 pages, octavo, of which 5000 copies were ordered to be printed and distributed gratuitously throughout the United States.

In this pamphlet, the author gives a history of the Lottery, which he traces from a remote period in ancient Roman history; its growth in the United States, the evils which led to its extinction in England, and subjoins many striking illustrations of its effects among the citizens of Philadelphia. One of these may suffice, as related by Joseph Watson, formerly Mayor of Philadelphia.

"Sometime, I think in 1827, a gray-headed old man of gentlemanly appearance and acquisitions, was brought into the police office, charged with picking a pocket; his trunk was searched, and in it were found lottery tickets, plans and schemes for many past years—the product of his lottery dealings for the last 12 or 15 years, within which period he had actually squandered or

expended for tickets as many thousand dollars, without at any time being successful, except in trifling prizes. He had recently spent his last dollar, his last ticket had come out a blank, and to prevent starvation, he had made the attempt for which he was brought up. This man, it was believed, had piously maintained an irreproachable character. I think he died a convict in Walnut Street prison."

The appalling facts set forth in this pamphlet, no doubt had much effect in more fully arousing public attention to the evils of the system; and prepared the way for its prohibition. In Pennsylvania this was effected by the passage of an act early in '33; and in Massachusetts, the same happy object was accomplished a few weeks later. Since that time State after State has adopted similar laws, until now the condemnation of the system is nearly or quite universal. Whether Louisiana has fallen into line with her sisters, I do not know. J. W.

(To be continued.)

FOR "THE FRIEND."

A New Creation, Before Salvation.

It appears from the divinely inspired writings, that at the beginning, or in the creation of our wonderful world, all things, including man, the noblest work of God, were made good; as they sprang from God, the source and fountain of all good. And that they remained good while man walked in obedience to the Divine law. But the life and immortality which was designed for the enjoyment of man, had he stood the designed test, were lost by his disobedience. For he had lost his right to the tree of life, and became dead to good, but alive, by sad experience, to evil. For sin thus entered into the world and death by sin. So it was by disobedience that life and immortality were lost; and it is by obedience that they are again brought to light by the Gospel of Christ, who is a quickening Spirit, and is able to make us new creatures in Him, if we are obedient to his light. And if any man is in Christ, he is a new creature. The old sinful nature has passed away; and all things are of God. And if all is of God, there is no sin in the heart, for sin is not of God. All bitterness, and wrath, and anger, clamor, and evil-speaking, with all malice, will be put away. And the lust of the flesh, the lust of the eyes, and the pride of life, which are not of the Father, but of the world that lies in wickedness, will no longer have dominion over us; but all will be overcome and slain by Him who came to destroy the works of the devil, and to make an end of sin, and to bring in an everlasting righteousness into every individual soul. Not a transient or fitful righteousness that has no solid foundation, and which may be compared to a "moving cloud, or as the early dew, which goeth away, as it has no sure foundation.

Such as accept the stone, the tried stone, which is laid in Zion, (the Church) for us to build upon, will find it a sure foundation, that the storms of time cannot remove. And such as build upon it, in the new creation, will have a building of God, an house not made with hands, eternal in the heavens, when eternity will be absorbed in one eternal now, and time to us will be no longer. But we must, by the grace of God, while here on earth, put off the old man, with the corrupt deeds, which belong to the old creation; and put on the new man, which is renewed in knowledge after the image of Him who created him; being born again, not of corruptible seed, as now in first birth; but of incorruptible seed, by the

Word of God which liveth and abideth forever. This is the Word which by the Gospel, is inwardly preached to every intelligent creature under heaven; and outwardly preached, also, by those who are called to it in the new creation, by the qualifying power of the Holy Spirit. And when it comes thus, in the ability that God giveth, it is the power of God that brings salvation to all who receive and obey it. For it comes from the new creation in man, and it tends to draw others to it. It bruises the serpent's head, and helps to keep down evil. And the more the serpent's head is bruised, and the beastly life subdued, the better chance the Divine life, or the immortal seed, has to grow.

But there was enmity put between the two seeds of good and evil at the beginning, or when the evil seed first entered the heart of man. And the enmity will still exist until one or the other is overcome and destroyed. But the Spirit of the Lord will not always strive with man. Though if we are co-workers with the Spirit, and continue steadfast in the faith, and in the conflict, until the victory is won, we shall again have right to the tree of life, and to that immortality which was lost in the fall. For we shall be created anew in Christ Jesus, unto good works, instead of evil; being born again, not of the corrupt birth which belongs to the old creation; for the law of the spirit of life in Christ Jesus has set us free from that. But we will have temptations, and the infirmities of flesh and spirit to contend with. And though the spirit may at times be made willing, yet we see that the flesh is weak. It was so with our first parents while they were yet in purity, and it is so now. Eve had a fleshly propensity, or infirmity, and through it was tempted. And when she saw the tree of forbidden fruit "was good for food, and that it was pleasant to the eyes, and to be desired to make one wise, she partook of it." So lust, when it is conceived or embraced, brings forth sin; and sin, when it is finished, brings forth death. So they lost their Divine life, and brought death into the world, and all our woe; for the very ground they trod upon was cursed for man's sake. Every fallen son and daughter of Adam, needs to have a new and spiritual creation formed within them. For as in Adam, all are spiritually dead, so in Christ, all will have to be made spiritually alive, and created anew in Him unto good works, before salvation is completed in them. So now, our greatest need is, to be more obedient to the teachings of the second Adam, who never fell; that the life and immortality which were lost by the transgression of the first Adam, may be again brought to view by the Gospel of Him who came to seek and to save that which was lost in the fall. And now it becomes our duty, in order to stand fast in Him, to deny ourselves, and to take up our daily cross and follow his leadings, and the teachings of his Spirit, that we may become steadfast, immovable, and finally as pillars in the temple of our God that shall go no more out; and even here, at times, while this side the grave, be made partakers of the inheritance of the saints in light. But this great and happy change will only be brought about by a willing cooperation of our part, with the strivings of the Holy Spirit within us, and by faith in the effectual workings of Him who said, "Behold, I make all things new." The same power that created man outwardly, is able to re-create or regenerate him inwardly; and to breathe in him the breath of Divine life, and make him again a living soul. David saw and felt the need of a new creation, when he prayed to God that He

would create in him a clean heart, and renew a right spirit within him.

D. H.

DUBLIN, IND., Third Month 1st, 1889.

FOR "THE FRIEND."

Notes of a Visit to Italy.

(Continued from page 291.)

At Rome, among the many objects and places of interest, the tourist and stranger hardly know where to begin. Months and years are needed to thoroughly explore this ancient city, with its numerous works of these men of centuries ago; but where the stay is confined to only a few days or weeks the visitor must be satisfied with a cursory visit to some of the most prominent places of interest, and be content with the superficial view and knowledge of Rome, that his limited stay will enable him to get. The ruins of old Rome, that this mighty people have left, some above, and some under ground, these we were anxious to see first; also the noble church buildings of the Italians under the Popes, who succeeded the Roman power under the Emperors, as well as to inform ourselves of the present status of the Italians in Rome under their change of rulers from Pope to King Emmanuel and his son Humbert. So with a good guide book published in Rome by S. Russell Forbes, we started with an English speaking guide and cab at two francs per hour, and sought the old Roman ruins first; the Coliseum, Arches, Walls, Castles, Forums, Baths, Tombs, Roads, &c, taking the Coliseum first.

This vast Amphitheatre of the ancient Romans, erected in 72-80 by Vespasian with the labor of captive Jews after the fall of Jerusalem, 157 feet high, and 1900 feet in circumference, of oblong shape, is now a noble wreck in ruins. It had eighty arches of entrance, and had eight stories of seats accommodating 87,000 spectators, and standing room for 13,000 more. For five hundred years it was the resort of the populace of both upper and lower classes, at the fêtes and games given by the Roman Emperors, and devoted to the exhibition of wild beasts fighting together, and gladiators fighting with them and each other in deadly strife, and to the slaughter of the Christians by these beasts or men. Hundreds of beasts and men perished during these cruel and bloody displays; over 5000 beasts were exhibited at one of these fêtes, which lasted for many days. The projections from the inside walls of these eight stories are still intact, but all the rich adornings are gone to crumble over and especially church buildings in Rome, (who was left after the Goths and Vandals had seized what they could carry off). These exhibitions of cruelty and sacrifice of life to amuse and gratify the low tastes of the people were viewed with rapturous plaudits of delight, amid the shouts of the masses, the groans and dying of hundreds of men and animals. While such scenes were witnessed at the Coliseum the people were being educated to undervalue life, and delight in blood and carnage; morals were being undermined, and the road to ruin accelerated; loss of power was sure, and national life would not survive long. This once noble Coliseum is now only the resort of peddlers for the sale of pictures, photographs, and fancy articles to tourists. Such was the fate of this magnificent and costly building. It was devoted to lawless, cruel and bloody purposes, and used; and it went down to neglect, decay and ruin, with the nation and people practising such inhuman pastimes.

Several noble arches are to be seen in a pretty good state of preservation, each commemorative

of some great event or victory. Over the top of the archway in bas-relief carved figures represented the captives in procession on the return of the conquerors. On the arch of Titus is also shown the vessels of the Temple of Jerusalem borne aloft along the procession, with a pretty plain mark of Jewish type on the face of the bearers; all however, bearing the marks of age. The arch of Constantine also stands out in bold relief with its bas-relief figures commemorative of his victories, as the first Christian Emperor. Arches of Septimius Severus and Augustus, each one have their history, and are of interest to the tourist and stranger; also the arches that supported the Aqueduct, bringing the water some forty or more miles on elevated piers for the supply of the inhabitants of the city. These are seen in their upright position, stretching out many miles outside the walls. The remains of the old walls and gates with their solid arch gateway, are yet remaining in different directions within the old city limits, reminding one of the fortified cities and castles of the ancients.

The tomb of Cecilia is on the Appian way, and the catacombs of the early Christians on this same road. The passage ways through these underground regions of the Christian dead, extend more than a score of miles, with tens of thousands of the bodies of the martyred and persecuted followers of the lowly Saviour—"Jesus of Nazareth," deposited on the niches on either side of the passage ways, (4000 bodies buried in one mound). The tombs of the Cæsars and of the nobility of Rome are on the line of this Appian way. These were visited, also the acres of ruins of the Bath of Caracalla, that would accommodate 1600 bathers at one time. These ruins are immense; the walls of great height and thickness, roofs and adornments all gone, only the bare walls left, and occasionally a piece of the mosaic floors to be seen in the passage ways. A young city might be built with the materials scattered over the 1840 by 1476 yards of space, nearly a mile square.

We can only hint at the Forums; the one used by the people called the Roman Forum adjoins the Arch of Septimius Severus, and is of great extent, but now in total ruins with only a few columns and caps standing in isolated parts of the vast area that the buildings once occupied. Half columns and stumps of columns with their bases in scattered parts of the ruins only are left to tell the story of their ancient glory and beauty. It is hard to describe the total wreck and desolation as it appears to the visitor; most of the materials must have been carried off to erect and adorn other buildings in Christian times. A terrible contrast may be drawn between the Forum now in ruins and the Forum of a mighty, proud, warlike, and conquering people of eighteen centuries ago. The Tower of Adrian, now the Castle of St. Angelo, was erected A.D. 120, and up to 1871 used as a fortress and a prison to confine political and heretical prisoners under the absolute control of the Pope. Our visit here was under the direction of our intelligent guide. We were shown the dungeons where the inmates were confined, the Halls of Judgment where they were put on trial; condemnation usually followed. Instruments of torture where shown us, and all the paraphernalia of the Inquisition used there; also the private vault with two huge iron chests where the Pope's treasure was deposited, and where the Books of Record of the doings of the Inquisition were kept. Both the treasure and the books have disappeared, the books not being able to stand

the light of day under a free Italy; but the light of the great Judgment day will reveal them. A covered archway leads from the Vatican, the Pope's residence, directly into the Castle, showing it to have been under the entire direction and control of the man on the papal throne; and a reliable Italian priest informed me that the same abominable cruelties that were practised in the Inquisition during the middle ages, were continued in their worst forms in this Castle by the rulers in the Vatican up to the time that Victor Emanuel entered Rome in 1871 and broke the Papal power, and liberated all the prisoners then in the dungeons. This Priest was then a member of the Pope's household, and don't hesitate now in free America to witness to the truth of this statement. It is now a barracks, and occupied by Italian soldiers. Our visit there was with a guide who knew the use and usages of this place; we were conducted by one of the King's guards, with keys to unlock every separate apartment, and look again when we were in. Our companion, a Congregational Minister from Worcester, Mass., became quite nervous when the guard continued to lock us in. However, we came out safe, because the temporal power of the Pope was lost, (never to be found again), and King Humbert reigned in Rome and Italy.

G. R.

Fourth Month, 1st, 1889.

FOR "THE FRIEND."

A Precocious Babe.

[The following remarkable instance of precocity furnishes an additional proof of the well-established fact, that such premature development of intellect is sure to be followed by rapid decay. The only hope for life and usefulness in such cases lies in the cultivation of physical health and strength, and the careful avoidance of all effort to stimulate the brain, until the lapse of years has brought the different parts of the system into a better balanced condition.—Ed.]

On the 6th of Second Month, 1721, was born in the city of Lubeck, Germany, Christian H. Heineken, who was, perhaps, the most precocious infant of which the world has any record. He could talk at the age of ten months; and when a year old had read the Pentateuch, and became well versed in the history of Creation as given in the first five books of the Bible. At the age of 18 months he had read and was well acquainted with the Old Testament, and in another month understood well the contents of the New Testament. He soon went through Sacred History, then Ancient and Modern History; so with universal Geography; he was master of all these at the age of two-and-half years. And besides his native German, the Latin language and the French were his own before he was three years old.

This wonderful acquisition of knowledge with his fine ability as a conversationalist enabled him to talk with much intelligence, and thus greatly entertain the many persons who came to see him. Theology and Church History occupied his attention in the early part of his fourth year. But now his health began to give way, and it became necessary for the little student to rest.

The fame of the infantile prodigy reached other nations than its own; and the King of Denmark expressed a wish to have Christian visit him and lecture before his Court. Then the little boy said, "I will go to Copenhagen and make a present of my colored maps to the King, then I shall be all right again." So in the

Seventh Month, 1724, the learned infant of Lubeck, with two or three of his household, sailed across the Baltic Sea, nearly 200 miles to the capital of Denmark. They had rough sailing, and the little fellow was badly sea sick; but the mild rose above the "ills of the flesh," and when the lurching of the ship destroyed food and drink, he would say in Latin, "No calamity comes alone." And when the crew were discouraged he manned them to new efforts by repeating Scripture suitable to the occasion. On landing at Copenhagen he was so weak that it was necessary to occupy a quiet resting place for some time before visiting the Danish Court.

The idea of meeting the potentate of Denmark caused the little savant, in the simplicity of child-nature, to hide his face in the bosom of his mother. He was still ailing, yet he nerved himself for the occasion, saying "Remember in adversity to hope for better things." On entering the audience chamber with a spontaneous charm of childhood, he hastened to meet the advancing King. Then followed a display of little Christian's powers of oratory in the delivery of a long recolite lecture to the entire satisfaction of his stately audience.

After a stay of nearly three months in Denmark the party returned to Lubeck. Heavy wind was again greatly in the way of fine sailing; and once more the little philosopher tendered encouraging council by saying, "He only is truly wise who accommodates himself to all circumstances."

He resumed study soon after returning to his Lubeck home. But, early in his fifth year, the diminutive body became so weak and suffered so much pain that it could hardly be expected to survive much longer. Yet the patient spirit was not broken. In his younger days the boy was not known to laugh aloud; neither was he ever heard to cry over his miseries.

During the last ten days or so of his life, little Christian was confined to his bed. But his brain appeared sound and active, and overflowed with the accumulations of his studious life. He repeated texts from the Bible and other historic writings with entertaining profusion, much to the pleasure of those who watched and listened around his bed. And yet the instincts of childhood were not entirely gone. At times he would ask for a basin of water, and have some one to move tiny ships over it and represent the sea voyages, islands and ports on his way to and from Copenhagen, which were still vivid in his mind. One day he asked for the skeleton which he had used in his anatomical studies, and rapidly named the bones of the human body. Then Christian calmly said, "Death is common to every age." And thus the soul took its flight for other habitation than the frail body of the little boy, where it had dwelt during four years, four months, and twenty-one days; the departure being on the 27th of Sixth Month, 1725.

W. DAWSON.

SPELCEAN LIND, Third Month, 1889.

The Wrong Excuse.—Two workmen were talking about a comrade who had lately "got into trouble," as the saying is.

"He oughtn't to say he was led into it," said one; "he *lent* himself to it."

The remark struck me as a thoughtful one. When a man, open-eyed, goes into dangerous places, associates with questionable characters, surely he lends himself to evil—he is not led into it.—*Selected.*

For "THE FRIEND."

A Visit to a Porcelain Factory.

The interest awakened by inspecting the process of powdering Quartz in the flint mill at Conowingo, as described in the Geological excursion into Maryland, led to a visit to one of the Porcelain Factories at Trenton, N. J. I noticed the care that was taken to exclude any of the Quartz colored with iron, from the material shipped to the potteries, and in consequence addressed a note to a friend who was interested in one of them, inquiring as to the effect which the iron had on the ware they manufactured. The reply contained a kind invitation to inspect the operations for myself.

Both Quartz and Alumina are infusible, by themselves, by any heat of our furnaces; but when finely powdered, mingled in the right proportions and intensely heated, they form a compound which is more easily melted than either of them separately. This is the theory of the manufacture of porcelain, and indeed of pottery in general, which may be regarded as a Silicate of Alumina. But in practice, other alkaline substances are added, in order to make a still more fusible compound, or are present in the material used, such as lime, potash, &c. Dumas gives as the ingredients of "hard porcelain," silica, alumina, and potash.

In the Trenton China Factories, Quartz (Silica), Feldspar, and Kaolin clay are the constituents of the ware. Each establishment has its own formula for mixing these; the proportions probably varying with the kind of ware designed to be produced—but these proportions are among the secrets of the trade which are jealously kept from the knowledge of rival manufacturers.

On going into the apartments where the materials are mixed, I saw large bins, each filled with a fine powder like flour or meal. One of these contained the Silica, such as I had seen the workmen preparing at the Conowingo Flint-mill. Another had Feldspar, reduced to a similar condition; and a third contained Kaolin clay.

The proper quantity taken from each of the three bins, is thoroughly mixed in a vat with water, till it forms a liquid of the consistence and nearly the color of cream, which flows through a shallow trough thickly set with strong magnets, whose office is to arrest every stray particle of iron which may have escaped the vigilance of former inspection. This mixture is called Slip. Much of the water is filtered from it by pressure in layers of cloth, and the pottery paste thus prepared is stored away in large balls or rolls, to ripen for use. During this ageing, as it is termed, a kind of fermentation is said to take place, in which some gaseous matters are disengaged, and the mass improves both in color and texture. So important is this ageing process considered, that in China a store of clay is sometimes prepared 15 or 20 years in advance, and sometimes a potter will prepare sufficient porcelain clay for the use of his son during his lifetime! Our manufacturers think that a few months' supply locks up as much capital as it is convenient to have in an unproductive shape.

Feldspar contains the Potash which Dumas mentions as one of the constituents of Porcelain. In 100 lbs. of Feldspar, such as is obtained from the veins that are found in the Gneiss rocks of southeastern Pennsylvania, there are about 64 lbs. of Silica, 29 of Alumina and 14 of Potash, with small amounts of other matters. Kaolin, or Porcelain Clay, is the result of the decomposition of Feldspar, and has lost the Potash. It is composed, when pure, of about 45 parts of

Silica, 40 of Alumina, and 15 of water in 100. In both the Feldspar and the Kaolin, Silica is the predominant element, and as a portion of pure Silica is mixed with these in making the pottery paste, which is afterwards converted into the finished porcelain, it is evident that Silica is the main ingredient, and that it is rendered fusible by the Alumina and Potash. In other words, our china and porcelain may be regarded as made of Flint (Silica) to which enough of other matters have been added, to enable the workman to manage this otherwise intractable material.

The manipulation of the pottery paste; and the marvellous skill of the trained workmen in shaping the plastic masses thrown down on the tables before them into cups, vases and dishes of many beautiful forms, are very interesting to the beholder; but as my visit was paid mainly on account of the connection of the manufacture with my geological investigations, I will not attempt to describe these in detail. After the articles into which the moist clay has been formed, are sufficiently hardened by drying to be safely handled, they are baked in a furnace, at a high degree of heat. This causes the Silica, Alumina and Potash, of which the plastic material was composed, to enter into chemical union with each other, producing as the result the china or porcelain. In this state, the product is termed *biscuit*, and is porous and without gloss. To give it the smooth glossy appearance which the finished ware presents, each of the articles is dipped into a vessel containing oxide of lead, powdered Feldspar, or other articles suspended in a fluid. A portion of this mixture adheres to the surface and is absorbed into the pores of the dishes dipped into it; and when these are a second time exposed to the heat of the kiln, this adhering mixture melts into a glass, which entirely covers the surface and makes the glaze which we see on all finished ware. The composition of this glaze varies for different kinds of pottery, and that which is used in any one establishment is among the trade secrets, which is not willingly divulged. The principle which governs the glazing process, is to find a mixture of materials which will firmly adhere to the *biscuit*, will melt into a gloss at a temperature so low as not to soften or injure the shape of the articles on which it is spread, and which will expand and contract equally with it in the changes of temperature to which the vessel is likely to be exposed. Where this last point is not secured, the glaze will in time become marked with a series of cracks, which is technically termed, "crazed."

Occasionally, on a finished cup or plate, a small brown spot may be seen, caused by a particle of iron which had remained in the original materials, and which thus shows its unwelcome presence. It is a larger amount of the same metal in the clay around Philadelphia, Baltimore, &c., which gives the red color to the bricks made from it.

The statement made above, that the Kaolin Clay is produced by the decomposition of Feldspar, and the subsequent removal from it of the potash which Feldspar contains, calls attention to the important subject of the decay of rocks. This has gone on to a great extent, and indeed was a necessary preliminary to the full development of vegetable and animal life on the earth's surface. For it is evident that where the land is covered with hard crystalline rocks, there is neither support nor nourishment for many forms of plants—and without plants, most of our animals could not exist. But the action of air and water and other agencies, has effected great

changes; so that a covering of earth, often many feet in thickness, has been formed by the softening and decay of the former rocks. This process it is probable, went on more rapidly in former ages than it has done since man appeared on the earth, because in those primitive times, it is supposed that the greater warmth of the earth's surface, and the more abundant existence of free acid and alkaline material in the waters, favored such chemical changes as attended the breaking down of the rocks and the combining of their elements into new compounds.

T. Sterry Hunt, in his geological essays, says, that in the Blue Ridge, in North Carolina, he has observed places where this decay had extended through a thickness of former rock, of from 50 to 100 feet.

The Feldspar is the most easily decomposed of the three ingredients of Gneiss and Granite—Quartz, Feldspar and Mica—and from it is mainly derived the Alumina which gives its peculiar characteristic to clay—that of mixing with water and forming a mud or tenacious mortar. Near Anby in New Jersey, the disintegrated Gneiss has been sorted by the action of water, and the materials deposited in separate beds of Clay, Sand (Silica) and Mica.

It is from the Feldspar then, that the Kaolin clay is derived. That which I saw at the Trenton China Factory came from several points in the Gneiss formation of south-eastern Pennsylvania and adjacent places. I also saw there a beautifully white imported clay, known in the trade as China, which I suppose came from Cornwall, England; for that country produces an unusually pure article of the kind, which has been formed by the decomposition of a fine white Granite which abounds there. This is often found "disintegrated to an extraordinary depth, and the rock altered to a substance resembling soft mortar. By washing, this finely divided matter is separated from the Quartz and Mica, and the milk-like liquid being collected in tanks and suffered to stand, deposits the suspended clay." J. W.

Losing and Forgetting.—A successful business man said there were two things he learned when he was eighteen, which were ever afterward of much use to him, namely:—"Never to lose anything, and never to forget anything." The old lawyer sent him with an important paper, with certain instructions what to do with it.

"But," inquired the young man, "suppose I lose it, what shall I do then?"

"You must not lose it."

"I don't mean to," said the young man, "but suppose I should happen to?"

"But I say you must not happen to; I shall make no provision for such an occurrence; you must not lose it!"

This put a new train of thought in the young man's mind, and he found that if he was determined to do any thing, he could do it. He made such a provision against every contingency that he never lost any thing. He found this equally true about forgetting. If a certain matter of importance was to be remembered, he pinned it down in his mind, fastened it there and made it stay. He used to say, "When a man tells me he forgot to do something, I tell him he might as well say, 'I do not think enough of my business to take the trouble to think of it again.'"

"I once had a young man in my employ," said another gentleman. "Who deemed it sufficient excuse for neglecting any important task to say, 'I forgot.' I told him that would not answer. If he was sufficiently interested, he

would be careful to remember. It was because he did not care enough that he forgot. I drilled him with this truth. He worked for me three years, and during the last of the three years he was utterly changed in that respect."—*Selected.*

THE FADED STARS.

BY HORACE GREELEY.

I mind the time when Heaven's high dome
Woke in my soul a wondrous thrill—
When every leaf in Nature's totem

Bespoke creation's marvels still;
When mountain cliff and sweeping glade,
As morn undosed her rose bars,
Woke joys intense; but night e'er bade
My heart leap up, like you, bright stars.

Calm ministrants to God's high glory!
Pure gons around his burning throne!
Mute watchers o'er man's strange, sad story
Of crime and woe through ages gone!

'Twas yours the mild and hallowing spell
That lured me from ignoble gleams—
Taught me where sweeter fountains swell
Than ever bless the worldling's dreams.

How changed was life! a waste no more
Beset by want, and pain, and wrong;
Earth seemed a glad and fairy shore
Vocal with hope-inspiring song.
But ye, bright sentinels of Heaven!
Far glories of Night's radiant sky!
Who, as ye gemmed the brow of Even,
Has ever deemed man born to die?

* * * * *

'Tis faded now,—that wondrous grace
That once on Heaven's forehead shone!

I read no more in Nature's face
A soul responsive to my own;
A dimness on my eye and spirit
Stern Time has cast in hurrying by;
Few joys my harder years inherit,
And leaden dullness rules the sky.

Yet mourn not I. A stern high duty
Now nerves my arm and fires my brain;
Perish the dreams of days of beauty,
So that this strife be not in vain;
To war on Fraud entrenched with Power—
On smooth Pretence and specious Wrong;
This task be mine, though fortune lower,
For this be banded sky and song.

—*Southen Literary Messenger, 1850.*

SELECTED.

MOTHER'S WAY OF RESTING.

I often marvel why it was I gave so little thought
To all the helpful lessons which my patient mother
taught.

Now older grown, and she has gone, I often long
to tell
Her how they all come back to me, each one remembered
well.

For in my work and cares of life that come from day
to day

I find I stop to ask myself, "What was my mother's
way?"

When sitting in her rocking-chair, her lap with mending
piled,

She used to say, "I want to rest, now read a psalm,
my child."

I learned by heart about "the hills" and "lifting up
my eyes";

Those "pastures green" and "waters still" the Shep-
herd's love supplies;

And all about "abiding" "neath the shadow of his
wings,"

For "God our refuge is, our strength," I read in every
thing.

Sometimes I hurried through the psalm, taking but
a little heed,

And then her thanks, so kindly said, encouraged me
to read

Some of the words that Jesus spoke, for that was
my mother's way—

To read from Psalms and Gospels both upon the
busiest day;

For at such times she needed a much longer rest,
and so,

While not a child, I learned her favorite passages to
know.

These precious words of quiet come to my own soul,
now I.

A busy woman, full of work, my daily duties ply.
I sing her hymns when fretted with my ceaseless
rounds of care;

I repeat the Psalms and Gospels when in my sewing
chair.

I wonder if she knows it, and how glad I am each day
That my mother's way of resting was such a helpful
way.

—*Susan T. Perry, in Congregationalist.*

FOR "THE FRIEND"

Some Account of the First Places of Worship of Friends in Philadelphia.

(Continued from page 283.)

It seems difficult to determine at this distance
in point of time, whether the "boarded meeting-
house" alluded to was the same as the house
belonging to Christopher Taylor or not, although
it seems probable, as the First Assembly con-
vened in Philadelphia the tenth of First Month
1683 "at the boarded meeting-house;" but in
any case it is plain that Friends were poorly
accommodated, as indicated by the following
minutes:

Twenty-first Meeting, Second day of ye
Seventh Month, 1684. "Agreed that in regard
of ye straightness of room in ye present meeting-
house, there be a meeting at the Governour's
house every fifth day of ye week in the fore-
noon, about the ninth hour."

Twenty-third Meeting. "Friends being met
in the feare of the Lord in the Governour's
house, and waiting awhile, proceeded to
business the 4th of the Ninth Month, 1684.
Friends having considered about a place whear
the Quarterly Meeting should be kept; and at
present not knowing of a place convenient, do
appoint Thomas Lloyd, Ralph Howell, (and
others) to provide a place."

At a monthly meeting the fourth of Third
Month, 1685. "William Frampton acquainted
this meeting that he is going to divide his house,
and desires Friends that some other place be
considered of, and provided against the Quar-
terly Meeting. The meeting appointed John
Sanghurst, William Frampton, (and others) to
consider of and provide a place, and make it
public to Friends against next meeting."

"Friends taking into consideration the busi-
ness of the old meeting-house by Thomas
Hooton's, and seeing that it was fitted for the
Assembly, it was afterwards made use of for a
Court; for the use and charge of fitting up
thereof Christopher Taylor doth demand five
pounds, of which this meeting is willing to allow
four shillings; and the rest they leave for the Court
to defray, and those Magistrates who are
members of this meeting are desired to take
notice of the same when the County assessment
is laid."

Friends were now in good earnest to have
the meeting-house erected at the Centre Square,
Broad and High (Market) Streets, as already
concluded upon, as we observe by the succeeding
minute of the Monthly Meeting held, the 4th of
Fourth Month, 1685. "It is unanimously agreed
by this meeting that there shall be built with
all expedition a meeting-house in the Center, of
brick, to be 50 foot long and 35 foot wide. The
timber work whereof Andrew Griscom offers
himself to do, and William Preston the mason
and bricklayer work."

6th of Fifth Month, 1685. "This meeting
doth appoint Thomas Duckett and John Red-
man to join with William Preston in carrying
on the brickwork of the meeting-house in the
Center, and also doth appoint Samuel Carpenter

(and others) to go to the Center with the work-
men above said, and get the place where the
meeting-house shall stand set out, and to get
bricks and stone to the place to begin work.
This meeting agrees that the meeting-house in
the Center shall be 50 foot long, 35 foot wide,
and 10 foot high.

5th of Eighth Month, 1685. "It is advised
that all Friends that have subscribed towards
building the meeting-house in the Center do
answer the same that the meeting-house may be
finished before this winter. Andrew Griscom
hath undertaken to carry on and finish the
carpenter work—that is to say, the floor, roof,
and to cover it."

2nd of Ninth Month, 1685. "Philip England
is desired to speak to Thomas Duckett to finish
the well at the Center, less far want of doing
it, it may be unfit for use."

Although the work on the building had been
pushed forward as rapidly as possible for a time,
it appears to have been suspended entirely for
some months, probably for want of funds: we
find that one Friend subscribed one pound, and
another one bushel of corn, towards the building.

At a Monthly Meeting, 27th of Sixth Month,
1686, it was "Agreed that the Center meeting-
house be now taken care of. Barnabas Wilcox
offers to speak to workmen that are fit to be
concerned, to cover the Center meeting-house.
Griffith Jones offers to give credit to provide
shingles, and B. Wilcox the nails, and is desired
to speak to Thomas Duckett that he go on with
the brick work of the meeting-house."

29th of Eighth Month, 1686, "Thomas Fitz-
water hath undertaken to send a man to the
Center meeting-house to be an assistant to Thos.
Marl for the carrying on the boarding and
shingling the roof."

At our Monthly Meeting on Delaware side,
31st of Tenth Month, 1686. "At the request of
Andrew Griscom (the following) Friends were
pitched upon: Thomas Bradford, John Masters,
John Day and Thomas Jaques, to take a survey
of the carpenter work on the Center meeting-
house, and give their judgment of the value
thereof."

25th of Twelfth Month, 1686. "Whereas
John Redman proposed the buying of the timber
of the old meeting-house at the Center,
Friends have left to Anthony Morris to dispose
of the same to him."

25th of First Month, 1686-7. "According to
an order of last month, Anthony Morris hath
sold John Redman the wood of the old meeting
shed for 25 shillings.

24th of Fourth Month, 1687. "Ordered that
William Southerly and John Jones do agree
with a workman about making forns, and
doors, and a seat for public Friends, at the
meeting-house in the Center."

From the foregoing extracts the "Center
Square meeting-house" appears to be finished;
and it is evident that to build such a place of
worship, in those times and with such surround-
ings, was indeed a great work. We have no
positive information as to the exact time when
meetings were first held therein. It is plain,
however, that meetings had been held upon the
ground for some time in the meeting shed above
alluded to, that was directed to be built "with
all speed," in 1684. The minute of the Quar-
terly Meeting, held 7th of Tenth Month, 1685,
says, "It is agreed that the meeting at the
Center on First-days begin between the hours
of nine and ten."

Although this house was erected in what was
designated to be the centre of the city, its location

there seems to have been a mistake, and is one of those rare instances in which Friends made an error in judgment in such matters. It was then supposed that the city would expand from the Centre toward both rivers, but it was soon found that the commerce of the Delaware engrossed all.

Watson says, "This house was so far in the wild forest, that a Friend by the name of Morris stated that when they used to go out to Center Square meeting she had often seen deer and wild turkeys cross their path. At that time they had a resting-seat under a fine shade, at the corner of High and Sixth Streets, then so far out of town that they called it the half-way rest."

Eighth Month 28th, 1687. "Ordered by this meeting that Samuel Carpenter and Robert Turner do make inquiry if there be anything to be found by the surveyor or any other means, to have a title to be made to the ground belonging to the Centre meeting-house, and if there can be no good title made at present, then for the same persons to write to England to Governour Penn in the behalf of this meeting, for a confirmation, in order to a patent for the same.

The committee reported the next month, that "at present they can give no satisfactory account as to Title."

JOSEPH W. LIPPINCOTT.

Natural History, Science, &c.

Electricity and Plant Life.—In experimenting on the influence of electricity on plant life, Professor Woolley, of Munich, took patches of ground 12 or 13 feet square and separated by boards penetrating to the earth to the depth of a foot. To these he applied different forms of electrical apparatus, so as to produce currents of electricity through them. Peas, potatoes, carrots, &c., were planted on these patches, and on others where there were no electrical appliances. The electricity either had no influence on the growth of the plants, or an unfavorable one.

Dosing Trees with Sulphur, &c.—Professor C. V. Riley, U. S. Entomologist, pronounces as fallacious the popular idea that insects may be prevented from attacking the leaves or fruit of trees by boring a hole in their trunks and introducing a roll of sulphur. A belief in the efficacy of such remedies, he says, "is founded on the supposition that the poison passes with the sap into general circulation, and with it into the foliage, and is destructive to leaf-eating insects. It is an entirely unfounded idea, and is based upon ignorance of the fact that the substance remains intact, and is not taken up in the circulation. Instances where it has seemed to succeed have been recorded, and in such cases its apparent efficacy was due to a coincident disappearance of the insect from some other cause. Sulphur which I plugged up in such holes many years ago was found to be perfectly unchanged after many months. All such remedies may be stamped as nonsense."

Migratory Quail.—The island of Anacapi, in the Mediterranean, has long been famous for the number of quail caught there during the migrating season. The islanders fasten to high poles great numbers of nets 25 or 30 feet high, with a kind of sack or bag attached. The wretched quail, flying over the sea, strike against these nets, fall into the sacks and are caught before they can extricate themselves. The time of passage is about fifteen days, and a

correspondent of *Forest and Stream* says the greatest catch in one day was 12,000, and for the season 150,000.

Saftening Water.—The water in limestone districts is often hard, owing to the salts of lime dissolved in it. It may be rendered fit for washing purposes by adding the right proportion of caustic soda. When it is attempted to wash a garment in it without this precaution, the lime combines with the soap that is used, forming an insoluble lime soap, which is a greasy, sticky compound, hard to be removed.

Volcano Fish.—In the year 1803, Von Humboldt was fortunate enough to witness an eruption of Cotopaxi, a well-known peak in the northern Andes, during which a large number of fish were ejected. The inquiries immediately instituted and the investigations of more recent travellers have brought to light the astounding fact, that from time to time, though at irregular periods, fishes are cast up from the interior of the mountain during volcanic eruptions. The phenomenon is not confined to Cotopaxi, but has been observed also in other centres of volcanic action in the same range. From the craters of these volcanoes, or from fissures in their sides, fish are vomited to a height of some 16,000 feet above the level of the sea, and about half that height above the surrounding plains. The animals all belong to the same species, the *Argus Ceylanum*. Nor is it a mere chance fish or two that find their way to the outer world through this strange opening. They are ejected in such countless shoals, that on more than one occasion, the fetid exhalations proceeding from their putrid bodies have spread disease and death over the neighboring regions. This fish is known to exist in some lakes on the sides of these mountains.—*Scientific American*.

Animal Instincts.—I have seen the common dog-fish, *Spinax Acanthias*, hovering in packs in the Moray Frith, some one or two fathoms away from the side of the herring boat, from which, when the fishermen were engaged in hauling their nets, I have watched them and have admired the caution, which, with all their ferocity of disposition, they rarely failed to manifest,—how they kept aloof from the net, even more warily than the cetacea themselves,—though both dog-fish and cetacea are occasionally entangled; and how, when a few herrings were shaken loose from the meshes, they at once darted upon them, exhibiting for a moment, through the green depths, the pale gleam of their abdomen, as they turned upon their sides to seize the desired morsels,—a motion rendered necessary by the position of the mouth in this family; and how next, their object accomplished, they fell back into their old position and waited on as before. And I have been assured by intelligent fisherman, that at the deep-sea white-fishing, in which baited hooks—not nets—are employed, the degree of shrewd caution exercised by these creatures seems more extraordinary still. The hatred which the fisher bears to them arises not more from the actual amount of the mischief they do to him, than from the circumstance that in most cases they persist in doing it with complete impunity to themselves. I have seen, said an observant Cromarty fisherman to the writer of these chapters, a pack of dog-fish watching beside our boat, as we were hauling our lines, and severing the hooked fish, as they passed them at a bite, just a little above the level, so that they themselves escaped the swallowed hook; and I have frequently lost, in this

way, no inconsiderable portion of a fishing. have observed, however, he continued, that when a fresh pack of hungry dog-fish came up and joined the pack that had been robbing us so coolly, and at their leisure, a sudden rashness would seize the whole, the united pack would become a mere headless mob, and, rushing forward, they would swallow our fish entire and be caught themselves by the score and the hundred. We may see something very similar to this taking place among even the shrewd mammalia. When pug refuses to take his fish, his mistress straightway calls upon the cat, an act sanctioned by the dread of the coming rival, he gobbles up his rations at once.—*Hugh Miller*.

Items.

German-town Free Library.—The annual report of this valuable institution shows that during the past year 543 volumes were added to the stock of books making the whole number 14,282. During the year 1,537 volumes were loaned; and there were 22,098 visitors.

Louisiana Outrages on Negroes.—The New Orleans *Tribune* says, on the outside of the paragon of Iberia, where the whipping and murder of negroes had been practised, there are only nine of the country newspapers of Louisiana which justify those lawless outrages, while 23 have come out squarely for the suppression of such crimes.

Inter-collegiate Athletics.—At a recent meeting of the alumni of Princeton College, Dr. Cochran, President of the Brooklyn "Polytechnic" set forth his views upon the subject of inter-collegiate athletics as now conducted by the students. He reproached the entire custom and enlarged upon the reasons with such clearness and force as to bring the conviction of every one present, so we infer by the decided way in which approbation was expressed. The Doctor attacked the system because it actually hindered the physical development of the majority (who are mere spectators), because it injures the health of the contestants, frightfully leading to bodily hurts, to serious accidents and to early death because it constitutes a temptation to the students to be quoted for their reputation in producing scholars, but for their champion ball players and oarsmen—and worst of all because of the injury to character—lowering the moral tone which is the inevitable accompaniment of such contests—betting, drinking and bodily violence, so that a noted pugilist claims, with reason, that fewer deaths and less demoralization are produced by pugilism than by inter-collegiate athletics.—*The Presbyterian*.

Letter of Joseph J. Neave.—Joseph J. Neave, who has recently returned from a visit to Great Britain, has his home at Australia has written a letter to the *British Friend*, from which the following passages are taken:—"In returning to Australia it seems with me to express the exercise and longing of my soul for my dear friends in England and Ireland specially for those who have been called to the Lord to the work of the ministry, on whose heads the anointing oil has been poured, that they be careful and watchful not to meddle much in politics in their present mixed and unsatisfactory condition. I was sensible that some whom I love and esteem highly had injured their service for the Lord in certain quarters by this thing, and I thought I was sensible that the brightness of former days was somewhat departed, and the 'single eye' to the Lord's glory dimmed thereby, and I think that shortly there will be a great strife among the 'shards of the earth,' and that many will be broken. I think I see the ground on which many are standing swept from under them. I see an underlying power and principle that will ultimately triumph, that they only who are on the Rock can understand and these at present but dimly, respecting this thing; and that every 'refuge of lies' will fail, and every 'cage of unclean birds' be removed from the land."

"Dear friends, keep very near the Source of your Strength, the Giver of Wisdom, the only Guide and

teacher of his people. In his keeping we are safe, not only there. He is the King of Salem, the Prince of Peace, and under His rule the people, and is owned by Him. He is owned as Lord and King, the yoke of the oppressor will be broken, prison doors will be opened, and the drink shops closed: "a man will be more precious than fine gold," and will be no longer the slave or toy of wicked and designing men. He will be the ruler at the end, and is deluding and destroying the peoples for whom Christ died. May 'Friends' everywhere stand in his name and power, for peace, for truth, for righteousness, for judgment, and for mercy; and not strike hands with the man of impure heart and lips; for his sake, however, apparently just, must fall, and the good neither honoreth him, nor is honored by him."

A Naval Peace in England.—The Peace Society of England have issued an address to their countrymen against a demand for large additions to the navy of England, involving an immense outlay of money. In this they state that about \$1,000,000,000 have been spent on the navy in the last twenty years, and that the expenditure has been constantly increasing during that period.

They call attention to the fact that naval expenditure, hastily incurred because of a naval race, has invariably led to a mere waste of the public money; and sum up much sound truth in the following short paragraph:—

"All the best material interests of peoples and of States, all the doctrines of morality, all the receipts of religion, point to peace. All that is destructive to the well-being of mankind urges untimely preparations for war."

We would that a conviction of the importance of these truths could be so fastened on the hearts of the American people as to stop the expenditure of money on fortifications and ships of war, which is now being so lavishly made; and which we believe to be worse than useless—calculated to produce the very evil it is designed to guard against.

THE FRIEND.

FOURTH MONTH 20, 1859.

PHILADELPHIA YEARLY MEETING.

The Yearly Meeting of Ministers and Elders convened on Seventh-day, Fourth Month 13th. The principal business that claimed attention was the consideration of a concern of Samuel Morris (which had previously received the sanction of his Monthly and Quarterly Meetings) to attend the approaching Yearly Meetings of London and Dublin; to perform such services within their limits as may might open for; and to visit the few meetings of Friends in France, Germany, Denmark and Norway.

Some hesitation was felt at first, lest the liberating of this dear Friend for that service might in any measure conflict with the position assumed by Philadelphia Yearly Meeting, which year ago had suspended correspondence with the meetings in question; or might lead any to suppose that Friends here were at all disposed to withdraw from the faithful upholding of the principles of Quakerism for which they had so long contended. But this hesitation seemed to be very much removed by the statement, that the minutes granted by the inferior meetings were not directed to any organized body, but simply to Friends and others, where he might go in the course of his travels. There followed a full expression of unity with the concern; and the Friend was set at liberty to perform the service.

We believe the last man Friend who paid a religious visit to Great Britain from Philadelphia Yearly Meeting was Christopher Healy, who went over to England in 1831. Since that

time Sarah Emien in 1844, and Hannah Rhoads in 1850, paid similar visits.

The Yearly Meeting itself met at the usual hour on Second-day morning, the 15th.

After the opening business was disposed of, a report was read from the committee appointed a year ago to visit sub-ordinate meetings, &c., stating that they had visited all the meetings of the Yearly Meeting, some of them several times, had visited the families in some neighborhoods, and had held a considerable number of meetings among those not members of our Society—many of which had been favored opportunities.

A proposition was embraced in it to hold a meeting at 3 o'clock the next afternoon, for the ministers, elders and overseers of all the meetings of the Yearly Meeting, and for the committees appointed by the different Quarterly Meetings to co-operate with the Yearly Meeting's committee.

This proposal was united with, and the meeting directed to be held.

The further consideration of the report was referred to another sitting.

The minutes of the Meeting for Sufferings contained less matter of general interest than in some preceding years.

Its committee to watch legislative proceedings, in the Seventh Month of last year, had delivered an address to President Cleveland encouraging him in general terms to exercise forbearance and consideration towards the Indians, in the use of the large discretionary power with which he was entrusted by the laws of the United States. This effort to strengthen his hands in the promotion of justice and equity appeared to be kindly received.

A proposition introduced into the Legislature of Pennsylvania to legalize betting on horse-races, had claimed a care; and a committee had been instructed to watch the course of legislation on this subject, and to use such efforts as might seem needful to prevent the bill becoming a law.

Out of the funds in the hands of the Trustees of the Charleston Estate, \$500 had been appropriated to aid Friends of Holly Springs Monthly Meeting, N. C., in building a meeting-house; \$175 to Spring Monthly Meeting, N. C.; and \$400 to Ashton Monthly Meeting, Maryland.

The Report of the Book Committee showed a distribution during the past year of 2485 volumes, and 3050 pamphlets, being an increase of about 400 volumes and 600 pamphlets over that of the preceding year. It contained a recommendation that our members should make themselves familiarly acquainted with the lively narratives of the religious experiences of Friends of early and of later days. Many can feelingly bear witness to the deep interest which such records have awakened in their own minds; and to their tendering and instructive effect.

The Report of the Trustees of the legacy of Charles S. Willits, stated that they have issued a monthly edition of 6000 copies of *The African's Friend*, which has been distributed among the colored people of the Southern United States, and of Liberia in Africa. It appears to be much appreciated by those who receive it. The Trustees had had some difficulty in finding suitable channels for distribution of the copies sent to Africa; while the demand in the South was beyond their ability to supply.

The Committee on Property suggested that the Yearly Meeting authorize the appropriation of the interest of the money received from the sale of the meeting-house at Shrewsbury, N. J., to the repair and maintenance of meeting-houses

in other parts of Burlington Quarterly Meeting, to which Shrewsbury Meeting belonged when it was laid down.

A lively Memorial for our deceased friend Henry Wood, a minister, prepared by Chesterfield Monthly Meeting, had been approved and directed to be forwarded to the Yearly Meeting.

The proceedings of the Meeting for Sufferings appeared to be satisfactory to the Yearly Meeting; and it approved of the proposed use of the Shrewsbury Fund.

We hope to present the remainder of the proceedings in our next issue.

The *Friends' Review* of last week, contains a reference to an Editorial article which appeared in *THE FRIEND* of Third Mo. 23rd, calling the attention of Friends to the fact that the indulgence in music in the families of its members was contrary to the advice and discipline of Philadelphia Yearly Meeting.

The *Review* says, "We make no plea for instrumental music among Friends;" but it expresses "regret" that the article referred to should have been published so near to the time of the annual assembling of the Yearly Meeting. We infer from this that the Editor of the *Review* must have supposed that it was written with the purpose of in some way affecting the action of that meeting on this subject. We hope it will be relieving to him to be informed, that the article was written without reference to the assembling of the Yearly Meeting; and was the expression of a deeply-felt concern lest a neglect of the discipline on this subject should open the way for further departures from our testimonies, and for the spread of an increased degree of worldliness within our borders.

The *Review* further says; "We especially lament that such a theme should be brought out for discussion, at a time when, under the recent assiduous labors of the Yearly Meeting's Committee, there has been a renewal of that work which is most appropriate for the church; the evangelization of the community around it."

In reference to this remark, we may say, that the fact that such efforts had been used to spread a knowledge of the principles of the Gospel among others, and to persuade them to walk in the light of the Spirit of Christ, was felt to be an additional reason, for inciting our own members to faithfulness. For if any had been seriously affected in the public meetings that had been held, and were drawn to come amongst us, it would be a pity for such to be stumbled and discouraged by seeing that our own members were not living up to their profession.

We have received from *Laidlaw Bros. & Co.*, 139 W. 41st Street, N. Y., a copy of *The Declaration of Independence and the Constitution of the United States*, in German, French and English, in parallel columns. Historical notes have been added, and blank pages introduced for the insertion of appropriate clippings and for references.

SUMMARY OF EVENTS.

UNITED STATES.—The steamer *Denmark*, of the *Thyngville* line, bound southward, left Christiansand on the 29th of last month. On the 8th instant she was sighted by the City of Chester, having the appearance of having been abandoned. No tidings having been received respecting her passengers and crew up to the 16th, it is feared that all have perished. A severe storm passed over Baltimore on the 6th instant, and on the 7th swept along Chesapeake Bay. Over a dozen seamen lost their lives, and thirty or

forty vessels, some small and others large, were wrecked.

The lightness of the snow and rain in a paper Michigan last winter, resulted in a rapid accumulation in the lumber woods of that region. Over one billion of logs, stacked up and ready for the mills below, cannot be floated because there is not enough water in the streams. Heavy and continued rains will be deemed to release the winter's crop.

Explosions strikes were caused at Findlay and Tiffin. The wells were drilled at Findlay last week, one of which is said to have a daily capacity of 30,000,000, and another of 20,000,000 feet. At Tiffin the pressure of an old well increased suddenly blowing out the casings of the well, and bursting pipes in a factory which manufactures gas. The well has an estimated capacity of 28,000,000 feet per day.

Fifty thousand grape cuttings have been planted on a desert section on the Pacific Coast, that is to be irrigated by the Inyo Canal.

A prospector who crossed Seventeen-mile Desert, in Nevada, reports to the *Virginia Chronicle* that hot springs have lately developed about 10 miles west of Hagonow. One of the springs is very active, throwing a column of boiling water nearly eight inches in diameter to a height of about 30 feet.

A syndicate of capitalists from New York, New Orleans, Memphis and St. Louis, have consummated the purchase of 65,000 acres of land in Sequachee Valley, adjoining South Pittsburg, Tennessee. The price paid for the property, which contains coal, iron and timber, was \$540,000. It is to be developed on a great scale.

Chinamen in New Haven have organized to blow the opium joints kept by their countrymen in that city.

The Michigan House of Representatives on the 11th instant, passed the Jackson Cigarette bills which prohibit the "manufacture, sale, keeping for sale or giving away of any cigarettes, or any imitation thereof, or the use of any wrapper, label or any other device or emblem in the form of the cigarette containing narcotic elements, or any rice paper or any paper designed for cigarette wrappers."

The Illinois House of Representatives has adopted a resolution providing for the commission of a Prohibition Convention to the Constitution to the people.

Archbishop Ryan has written a letter which he hopes will be accepted as a general answer to the various inquiries that have been made relative to his views on prohibition. In this he says, "we have been misled in the past by an unmet social question, and it is unable to see the need of a Constitutional amendment on the subject. In any case, he feels that more legislation can but regulate overt acts, the external manifestation of the evil. The true remedy must be found in appeal to the individual conscience, as in our Catholic temperance societies, which are also religious organizations."

In the freight yards at Kansas City, Missouri, are about thirty trains loaded with stores for the Oklahoma country. There are houses in sections, ready to be bolted together, and entered for habitation sixty minutes after the arrival of a delivery. There are complete stores of every conceivable sort of merchandise, and with each load of stock is packed away the building required to harbor it. In this manner drug stores, dry-goods stores, boot and shoe stores, saloons and groceries have been provided. It is believed that the opening of the country will mean a great deal of violence. Troops will be sent there to do police duty.

Deaths in this city last week numbered 421—214 males and 207 females—an increase of 49 over the previous week, and 26 over the corresponding period of last year; of these 76 died of consumption; 28 of pneumonia; 21 of disease of the heart; 22 of all other ages; 19 of convulsions; 17 of marasmus; 14 of infantile; 13 of inflammation of the brain; 13 of apoplexy; 13 of debility; 11 of cramp; 11 of Bright's disease; 11 of typhoid fever; 10 of inflammation of the stomach and bowels.

Market Report.—U. S. 4½, 108; 4½, 129; currency 65, 120 to 131.

Cotton advanced 2c per pound. Small sales of middling uplands at 10 15-16 cts.

Fuel.—Winter bran, choice and fancy, \$1.475 to \$1.50; do, fair, 1st prime, \$1.4 to \$1.50; do, 2d prime, \$1.35 to \$1.40; and \$1.30 to \$1.35; Pennsylvania super, \$2.75 a grain; do, do, extras, \$3.25 to \$3.75; No. 2 winter family, \$3.75 a \$4.25; Pennsylvania family, \$3.50 to \$4.75; Pennsylvania roller process, \$1.50 to \$5.00; Ohio, clear, \$1.50 to \$1.80; do, straight, \$1.30 to \$1.50; Indiana, clear, \$1.50 to \$1.80; do, straight, \$1.30 to \$1.50; do, No. 1, and No. 2, \$1.20 to \$1.50; do, No. 3, \$1.00 to \$1.20; do, do, straight, \$1.00 to \$1.45; winter patent,

fair to choice, \$2.25 to \$3.75; Minnesota, clear, \$4.00 a \$4.75; do, straight, \$3.00 to \$3.75; do, patent, \$3.50 to \$3.25. Rye flour moved slowly at \$2.80 a \$3.00 per bushel.

Grain.—No. 2 red wheat, 41 a 92 cts.
No. 2 mixed corn, 11 a 12 cts.
No. 2 white oats, 33 a 33 1/2 cts.

Beef cattle.—Extra, 4½ a 4½ cts.; good, 4 a 4½ cts.; medium, 3½ a 3½ cts.; common, 3 a 3½ cts.; Steers.—Wool, 67 a 67 cts.; do, 5½ a 5½ cts.; medium, do, 5 a 5½ cts.; common, do, 4 a 4½ cts.; extra clipped, 4½ a 5 cts.; good, do, 4½ a 4½ cts.; medium, do, 3½ a 4 cts.; common, do, 3 a 3½ cts.

Lambs.—Wool lambs were scarce at 4 a 7½ cts., while spring lambs were wanted at \$3.87 per head. Hogs.—West, 60 to 75 cts. \$1 a 6½ cts.
Milk cows were dull at \$25 a \$50.

FOREIGN.—The House of Commons, by a vote of 200 to 79, rejected Clarke's Scottish Home Rule motion. Gladstone opposed the motion in an animated speech, in which he said that the question was not ripe, and would do more good pressing measures. He did not doubt, however, that when Scotland unanimously demanded Home Rule, Parliament would accede to her desires.

The *St. James Gazette* announces that Wm. Henry Stirling, Esq., Lord of the Treasury, has been appointed to the Peerage and that he will accordingly resign the Government leadership in the House of Commons and take his seat in the House of Lords.

On the 12th instant, Sir Charles Russell concluded his speech in defence of the Paracellics. Justice Hannen passed a note to him, in which he said: "I have listened to your speech with great interest and worthy of a great occasion." It was the conclusion of his hearers that he never made a better speech. On its conclusion the Court adjourned until Fourth Month 30th.

Dr. Albert Bright, the candidate of the Liberal Unionists, has been elected to succeed his father, the late John Bright, as representative of the Central Division of Birmingham in Parliament. Bright received 5610 votes, against 2560 votes for William C. Beale, the Gladstonian nominee.

Sunday, N. S. W., Fourth Month 10th.—The committee appointed to investigate the discovery of Pasteur for the extermination of the rabbits, have made a report of the result of their inquiries. They state that upon experiment they found that rabbits which had been inoculated with the virus of chicken cholera, or with the virus of the rabbit, and were infected with the virus, died, but that the disease was not communicated by one rabbit to another.

When the French Senate met on the 12th instant, the President read the decree constituting that body a tribunal for the trial of General Boulanger, Count which are for which. A motion from the Right declaring that there was no ground for a judicial inquiry into the conduct of Boulanger was rejected by a vote of 209 to 56. The Senate then resolved, by a vote of 200 to 55, to proceed immediately with his trial. Seventeen members of the Boulangist party will deny the jurisdiction of the Senate to try him.

The Belgian Government has informally warned General Boulanger to abstain from political agitation, which the Government will not tolerate. The General has been informed that if he complies with the wishes of the Government in this respect, he will not be expelled from Belgium.

The *Tamps* says that the Government is disposed to agree to Germany's proposal for an international conference on the slavery question.

France and China have agreed to connect the China and Peking telegraph lines, and thus establish communication between Canton and Peking.

A new Cabinet at Bucharest, is announced, with Catargi President of the Council and Minister of the Interior. It is believed the Cabinet will adopt the anti-Austrian policy.

NOTICES.

Hulah H. Bonwill is willing to take charge of any part of our printing, binding, compositing, etc., which may be sent to her care; and attend to their distribution among Friends who are in want. All such packages should be distinctly marked for H. H. BONWILL, and sent to No. 20 North Third Street, Philadelphia.

FRIENDS ASKED FOR THE FINE USE.—An Assistant Resident Physician wanted. Please apply promptly to Dr. JNO. C. HALL, *Super.*, Frankford, Philadelphia.

WESTWON BOARDING SCHOOL.—The Summer of Short Term, will open on Third-day, the 23rd of Fourth Month.

Conveyances will be at Westwton Station, on the West Chester and Philadelphia Road, on that day, to meet the train that crosses Chestnut St., at the Westwton of the Pennsylvania Railroad Company, at Broad and Filbert Sts., Philadelphia, at 7.25, 8.55 A. M., and 2.47, 4.55 and 5.51 P. M.

The Union Transfer Company will send for baggage to any place in the built-up part of Philadelphia, 1 notice is left either at Nos. 828 Chestnut St., at the South East corner of Broad and Chestnut Sts., at the Baggage-room Fifteenth St. above Market, or at Market St. Ferry (north side); and will deliver it at the Broad St. Station of the Pennsylvania Railroad Company, at a charge of 25 cts per trunk, to be paid to the driver of the baggage car, or to the station agent called for. For the same charge they will collect baggage from any of the other railroad depots, if the railroad checks held for such baggage are left at one of the offices of the Transfer Company above designated. In all cases it must be stated that the baggage is to go to Westwton Boarding School, or to the station, on the West Chester and Philadelphia Railroad.

DEED, in Philadelphia, Second Month 15th, 1889, HANNAH B., wife of Samuel Betts, aged 63 years and 8 months, a member of Buckingham Monthly Meeting of Friends, Bucks Co., Pa., after a lingering illness of great suffering of three years, which she was enabled through the Grace to endure with much Christian patience and resignation. We trust through infinite love and mercy she has been permitted to enter the mansions of peace and rest.

—, suddenly, on the 3rd of Third Month, 1889, MARGARET STROUD, a beloved elder and overseer of Wilmington Monthly Meeting of Friends. This dear Friend, early in life submitted to the Divine admonitions of her Heavenly Father, and by giving constant heed thereto, was enabled to become a bright example of Christian patience, cheerfulness and resignation, both in her family, and in the Society of which she was a useful and active member throughout her life. While they deeply feel their great loss in this sudden departure, they are comforted and encouraged by the assurance that, through adorable mercy, her purified spirit has entered into everlasting rest.

—, on the 9th of Third Mo. 1889, at the residence of her mother, Mary E. Branson, Phila., ELIZABETH B., wife of Dr. Wm. C. Stokes, a member of Woodbury Preparative and Monthly Meeting of Friends, N. J., aged 72 years. In her early womanhood, she was much engaged in labors of love for the afflicted and the humanity. Her cheerful Christian spirit endeared her to a large circle of relatives and friends. She bore her long and suffering illness, with patience and resignation, and her family and friends have the blessed assurance that He, whom she delighted to honor on earth, hath taken her home to be forever with her Lord.

—, at her home at Sunrise, La Salle Co., Illinois, on the 20th of Third Mo. 1889, HANNAH STEVENSON, widow of John Stevenson, in the 87th year of her age. They were members of Plainfield Monthly Meeting, New Jersey, and removed to Illinois in 1863. She died of old age, and was a truly pious and God-fearing woman, on the 20th of Third Month, 1889, at Pasadena, California, MARY T. FRAMER, daughter and only child of Thompson Framar, aged 21 years and 4 months, a member of Kennett Monthly Meeting of Friends, Pa. The interment occurred at Pasadena on the 20th. She was attacked with hemorrhage of the lungs in Seventh month of the year, and she peacefully recovered. She remained in delicate and generally declining health. In the early stages of her illness she was anxious and hopeful of recovery, but as the end approached she became fully resigned, and said that the will of her Heavenly Father was her will. The afternoon before her death she said to her spiritual friends: "Do not grieve on my account for I am going where never more no birth nor rust doth corrupt, and where thieves do not break through nor steal." And again: "We have a loving Saviour who is willing to forgive our sins if we ask Him in sincerity." And later on she said: "I am now ready to go, and am anxious to the end, and I view the approach of death with calmness, ease, cheerfulness; and as the extremities grew cold she said, with a smile, "It makes little difference." Her friends have the comforting belief that she has been mercifully granted an entrance into a mansion of rest and peace.

FOR "THE FRIEND."

Historical Review of the Society of Friends.

(Continued from page 298.)

The Anti-Slavery separation which took place in Indiana Yearly Meeting in 1842-3, was an outgrowth of the public excitement on the question of slavery, which at that time agitated the people of the United States. The Society of Friends had for many years borne a steady and well-known testimony against the evils of that unrighteous system; and had time after time appealed to the consciences of those in authority—basing its protests largely on religious grounds. When the American Anti-Slavery Society was formed, about the year 1833, which boldly proclaimed the duty of immediate emancipation of the slave, its principles and objects naturally met with favor among many of the members of our Society, not a few of whom took an active part in spreading its publications, and in organizing auxiliary associations.

On the other hand, there were many others, and probably by far the greater number of the more experienced members among Friends, who believed it was a safer course to refrain from actively joining in the new movement, however strongly they might sympathize with the object at which it aimed. This judgment was probably founded on two considerations. In the first place, they thought that the influence of our Society for good would be more effective by being exercised in a collective capacity, under the constraining power of religious concern, than by the action of separate associations, which might more easily be led into injudicious movements.

And besides this, they thought there was a danger of our members being drawn into an undue excitement of feeling, which would be hurtful to their own religious welfare; or of their being in other ways unfavorably affected by their surroundings, as members of such Anti-Slavery Societies. The need of caution in these respects was probably the more strongly felt, from the intense excitement caused in the community by the open opposition to the arbitrary and determined course pursued by the slave power; which, as the controversy proceeded, became more and more exacting in its demands, until finally these became so excessive as to be inconsistent with the freedom of speech and the personal privileges of the inhabitants of the free

States. An illustration of the extravagant language used by the advocates of slavery in those days, is furnished by the message of Governor MacDuffie to the Legislature of South Carolina, in 1835, in which he denounces the statement that domestic slavery "is a moral and political evil," as proceeding from "a mischievous and misguided spirit of sickly sentimentality"; affirms that the institution "is the corner-stone of our Republican edifice"; expresses his opinion that those who send anti-slavery publications into slave States should be punished "by death, without benefit of clergy, as enemies of the human race"; and urges that a demand should be made on the States where the authors of such publications reside, to prevent their interference with slavery, either by inflicting condign punishment upon them, "or by delivering them up to the justice of the offended community." A refusal to do this, on the part of the free States, he says "furnishes a just cause of war."

In accordance with the advice given by Governor MacDuffie, several of the Southern Legislatures adopted resolutions respecting "Abolition Societies," which were forwarded to the Legislatures of the Northern States. In the ninth volume of THE FRIEND, p. 287, may be found a Report to the Legislature of Pennsylvania, presented in 1836 by a committee to whom several such resolutions had been referred. This Report quotes a Resolution from Virginia (substantially the same as those from other States), which says: "That the State of Virginia has a right to claim prompt and efficient legislation by her co-States to restrain, as far as may be, and to punish those of their citizens, who, in defiance of their social duty and that of the constitution, assail her safety and tranquillity, by forming associations for the abolition of slavery, printing, publishing and circulating seditious or incendiary publications," &c.

In reply to this demand the Report states:—"Every citizen of the non-slaveholding States has a right freely to think and publish his thoughts on any subject of national or State policy. Without regard to the place of his residence, he may attempt to show that the usury laws of New York or Pennsylvania, or the laws regulating negro-slavery in Virginia or Mississippi, are immoral and unjust, and injurious to the prosperity and happiness of the respective States; his arguments may be weak, foolish and false, but it would be tyranny to prohibit their promulgation. Could any other State maintain the right to claim from us such legislation, we and our citizens would be reduced to a vassalage but little less degrading than that of the slaves whose condition we assert the right to discuss."

In looking back on that period of our national history, it seems strange that any community should have been wrought up to such a pitch of excitement as to receive with approval such unreasonable and abominable sentiments as those of Governor MacDuffie. But it is no wonder that the citizens of the Free States began to feel that the question at issue concerned not only the poor slaves, but their own personal liberties; and

that the violent language of southern politicians intensified their hatred of the system, and added vehemence to their denunciations of it and everything connected with it.

Those who can remember the feelings that prevailed in that day, can appreciate the force of the indignant query which found expression in the vivid language of Whittier—

"Asks our haughty neighbor more?
Must fetters which his slaves have worn
Clank round the Yankee farmer's door?
Must he be told, beside his plough,
What he must speak, and when and how?"

And they can recall too the determination expressed in those other lines of the same earnest poet—

"If we have whisper'd truth,
Whisper no longer;
Speak as the tempest does,
Sterner and stronger;
Still be the tones of truth
Louder and firmer,
Startling the haughty South
With the deep murmur of
God and our Charter's right,
Freedom forever!
Truce with oppression?
Never, oh! never!"

It is by no means surprising, that those who in that day, as fathers in the Church, watched over the flock for its preservation, should have been anxiously concerned lest their more excitable members should enter too deeply into the warmth of political contests, and become imbued with feelings inconsistent with the peaceable and loving spirit of Christ; nor that they should have issued advices and cautions from time to time, which those who might have needed them were not always prepared to receive; and which they were sometimes ready to attribute to a want of sufficient zeal in the anti-slavery cause.

Differences of sentiment, from this source, existed in many parts of the United States, but in Indiana they finally culminated in an open rupture,—about 2000 (including their families) of the members of that Yearly Meeting forming an organization which they called "Indiana Yearly Meeting of Anti-Slavery Friends." In their published documents, they justify this course by referring to the action of the ruling part of the Yearly Meeting, which, without any breach of discipline on their own part, ejected at one time from their position eight members of the Meeting for Sufferings, who were believed to be in sympathy with the anti-slavery movement; and proceeded to carry out in other departments the same process of excluding from official position, all who were regarded as out of harmony with the advices which had been issued. Hence, they felt that they were in measure looked upon as aliens in the commonwealth of Israel, and deprived of their rights; and so were induced to form a separate body.

The difference between them and their brethren was not one of doctrine, for all professed to hold the same views in regard to slavery as well as on other points. It was a difference of judgment on a point of practice. So far as we can

determine at this period of time, it does not seem probable that this separation would have occurred, if there had been more condescension and courtesy shown towards the Anti-Slavery Friends. Neither does it seem to us that they acted wisely in withdrawing from their connection with the others. If they had patiently endured, in a Christian spirit, what they regarded as unjust treatment, it could not have failed to have had a wholesome effect on the minds of their fellow-members; and we believe the irritation that existed would gradually have subsided, and all would have been enabled to work harmoniously together in promoting the common interests of the Church.

"Indiana Yearly Meeting of Anti-Slavery Friends" was organized on the Seventh-day of Second Month, 1843, and continued to hold its sessions annually until the year 1857, when its members, finding themselves much reduced in numbers, concluded to disband. For some years there had been little if any difference in the position of their Society and that of the regular Indiana Yearly Meeting on the subject of slavery; and as the older members were removed by death, many of the younger ones had drifted back into fellowship with the regular meeting.

J. W.

A Lincolnshire Rector on the Ordinances.—A believer in Jesus eats truly of that bread and drinks of that cup in remembrance that Christ died for him, though he may not partake of any visible communion. The believer, I repeat, feeds not on what he puts into his mouth, but on Christ in his heart, by faith with thanksgiving. His living soul has fellowship with the Father and with the Son; having access by faith into that grace wherein he stands, and rejoicing in the hope of the glory of God. Who dares to say that members of the Society of Friends, commonly called Quakers, have no communion with Christ, because they have no visible ordinances usually called Sacraments? The teaching of the Church of England on this point, when rightly interpreted, is strikingly set forth by a comparison of the twenty-ninth Article with the Rubric in the Communion of the Sick. Two suppositions are made: one of a person void of a lively faith, who receives the bread and wine, the other of a person possessing a lively faith but who does not receive the elements. Concerning the first, the Church pronounces that he *in an use is a partaker of Christ*. Concerning the second, the Church pronounces that he *doth eat and drink the body and blood of Christ to his soul's health*. It is impossible for words to distinguish more decisively between the consecrated bread and wine, and the body and blood of Christ. *Either may be where the other is not.*

It is an undoubted fact that there are Christians—amongst the Society of Friends for instance—who never receive the communion at all, and have never been baptized, yet in whom Christ is manifestly formed as fully and completely as any Christian that ever lived.

As I write on this subject, the sin and folly of the uncharitable sacramental theory is more manifest. Here are living souls, feeding daily on the "hidden manna," who never partake of the Lord's Supper; and their children, "walking in the truth" but who have never been regenerated in baptism according to the notion of sacramentarians. One might readily suppose that the calm "living epistles" as exhibited by the Society of Friends or Quakers, were permitted as a standing, visible refutation of high

sacramentalism.—*Extract from "ROMANISM AND RITUALISM THE SAME THING, AND BOTH ANTI-CHRISTIAN."*—*From the British Friend.*

Saving Faith, God's Gift.

"The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh, and whither it goeth: so is every one that is born of the Spirit."—John iii. 8.

In passing along in life, there are occurrences that impress the mind with the lesson of the utter inability of man, apart from Divine illumination, to understand the things of God; and that prove beyond the possibility of doubt, that unless the understanding is opened we cannot know God, so as to take hold of Him by faith, cleave unto Him, and obey.

It is now twenty years since some circumstances led me to quote the above verse, and to put on paper the sense that then dwelt with me of the source from whence flows the power that alone can quicken the mind and heart of man into a true reception of the saving knowledge of God. The lapse of time has but deepened and confirmed the conviction of the truth of the Scriptural declaration, "That by grace we are saved, through faith, and that not of ourselves, it is the gift of God."

To some this will appear to savor of the doctrine of election. And of a truth, it is by the election of grace, and by that only, that we can stand accepted before God. And this election of grace is not at our command, any more than the winds or the waves, but is at his command who can and doth control by his Divine law both wind and waves.

The question may then be asked, "to what purpose then is all teaching and instruction in knowledge of heavenly things, seeing it is only by Divine illumination man can know or understand the things of God?" He who ordained man to till the ground, to sow and to plant, knew also it was only as the face of the ground was watered by the refreshing showers, and warmed by the rays of the genial sun that anything could grow. So, in like manner, He hath pleased to call and send forth from time to time those who should call the people off from unrighteousness and impurity, to come to a knowledge in themselves of the working of his own pure life and nature, which He causes to spring in man's inner nature, giving a sense of sin; and where this is heeded, causing sorrow and true repentance thereby. And then it is that the need is felt of a Saviour, who can deliver not only from the guilt of sin, but also from its power and pollution.

When man is made to feel his incapacity to deliver his own soul, he is led to apply by the faith thus stirring in him, to God, from whom by sin he feels himself separated, that He would draw him toward himself by the power of His Spirit; and that he might know pardon and reconciliation by the blood or life of Christ imparted unto him. For it is no believing on what Christ has done that can take away our sin, but it is knowing the resurrection unto life in us, in some measure, of his life that doth remove sin, by which we become partakers of the benefits of his sufferings, being willing to suffer with Him in his leading and teaching, by denial of sin.

Ah, how vain are the strivings of man apart from the striving of the Spirit of God and of our Lord Jesus Christ in the soul. How necessary to man to wait in spirit to know those stirrings by the Lord, and attentively to obey, for as the wind bloweth not at our command, so neither

can man command the heavenly dew to descend upon his soul; but as the husbandman doth wait for the early and the latter rain, so ought we in spirit to wait for the renewings of his mercy to us, by a diligent attention to those secret whispers in our souls, which are comparable to the wind in its hidden nature, and like it too when yielded unto, in its powerful effects.

There is need therefore for instructors who shall move as instructed by the Great Master, to direct men to that hidden life in the soul, which is the kernel and spring through which and by which doth flow into the soul the healing virtue of God's own nature, revealed and made manifest through Christ Jesus. To the indolent, to the formal, to the lukewarm professors of God's truth, is due the deadness and barrenness of the professing Church of Christ. How will such as these at last stand before the great and terrible Judge of the whole earth, seeing they have been untrue to the keeping of the great trust committed to them, even of being as way-marks and finger-posts to point to the Great Teacher; not by word only, but by living exemplification of the truth,—it is not I that live, but Christ that liveth in me, that enables to move along with acceptance in our Heavenly Father's sight.

God hath given his people a field and garden to cultivate, it is wide and broad as the earth, but the tillers must be trained men and trained women, in the school and college that Christ doth keep. His life is submission and obedience. He doth lead and send forth each to his place and work, and He goes before them and shows them the way. They are his sheep and they follow Him, for they know his voice, and a stranger will they not follow, for they know not the voice of strangers.

O that men would praise the Lord for his goodness, for his wonderful works to the children of men! How often, O man, is his wonder-working power in thy soul neglected and overlooked; and a multiplicity of things allowed to take up thy mind and fill it, so that the good seed sown there is choked or parched, and is suffered to wither and die; whilst thou art trying to fill its place with soul-destroying pleasure or gain!

Mercy pleadeth, grace entreateth, while the lamp of life doth burn. O ye simple ones, be wise and turn at his bidding; for He woos and calls you to hearken to his voice, and to do your first work of repentance toward God and faith in your Saviour, Christ Jesus.

The wind of God's mercy and tender love hath blown upon many a heart and soul in the day of merciful visitation, but it has been put by; it may be so again, and if the last, how awful the summons when it comes, that time for repentance shall be to thee no more, and there remains nothing but a fearful looking for and dread of an eternal doom.

My soul craves for each and all, attentiveness to that inner call in the soul for preparation or for labor, that the Lord's garner may be full, and that we be not wanting in the filling up of the measure allotted by the Master, so that at his coming there may be joy and not grief; thanksgiving and praise, and not sorrow and wailing; even as becometh those that wait for their Lord, at whatever hour He may come.

So, my brethren, my sisters, my fellow-laborers in the great harvest-field, let us not get weary in well doing, neither let us fall out by the way; we shall reap if we faint not. Therefore, may we double our diligence in watchfulness and in prayerfulness; for the hand of the diligent maketh rich in spiritual as well as in temporal

things, where there is whole-heartedness unto the Lord, ever remembering that our fresh-springs must be in God from day to day, and unto Him must the heart and the soul be uplifted, for He heareth the cry of the poor, and for the sighing of the needy will rise again.

So, with tender love to Zion's travellers, seeking to encourage them by the way, and to stir up the lukewarm and indifferent, if it may be an entrance may be found by the Word of Life in their souls, I will say farewell.

CHARLES W. THOMSON.

The Manner of Salutation and Dinner Parties in the East.

In the East the people are encreased by religious ideas. We see this in the simple meeting of two persons in the street. They convey—in a form of prayer—an earnest wish that the other may enjoy peace. Throughout the Bible, this blessing forms the staple of salutation. Salem or Shalem means peace. The Bedouins of our time have the same idea embodied in their salutation. The Arab meets his friend with "May God grant you a happy morning;" "May God grant you his favors;" "If God wills it, you are well;" "May your shadow never be less." The difference here is very considerable, according to the rank of persons saluted.

The most common mode is merely laying the right hand on the bosom, and a little inclining their bodies; but when to a person of great rank, they bow almost to the ground and kiss the hem of his garment. Inferiors, out of deference and respect, kiss the feet and knees, or the garments of their superiors.

Oriental Dinner comprises about thirty dishes. Soon after the first dish comes lamb, roasted on the spit, which must never be wanting in any Turkish or Arab banquet. Then follow dishes of solid and liquid sour and sweet, in the order of which a certain kind of recurring change is observed to keep the appetite alive. The pillau of boiled rice is always the concluding dish.

The externals to such a feast as these are: a great round plate of metal with a plain edge, of three feet in diameter, is placed on a low frame, and serves as a table, about which five or six people can repose on rugs. The left hand must remain invisible; it would be improper to expose it while eating. The right hand is alone permitted to be active. There are no plates, no knives or forks. The table is decked with dishes, deep and shallow, covered and uncovered; these are continually being changed, so that little can be eaten from each. Some remain longer—as roast meat, cold milks, and gherkins and are often returned to. Before and after dinner they wash their hands. An attendant or slave kneels with a metal basin in one hand and a piece of soap on a little saucer in the other. Water is poured by him over the hands of the washer from a metal jug; over his arm hangs an elegant-ly embroidered napkin for drying the hands upon. If a Turkish or Arab sheikh, effendi, or emeer, invites, he always sends a servant to call you at the proper time. This servant often repeats the very formula mentioned in Luke xiv, 17, "Come for the supper is ready."

The fact that the custom is mainly confined to the wealthy and to the nobility is in strict agreement with the parable.—*Selected.*

A BAG of gold stolen from a Western steamer was found bound to the neck of the robber, his treasure having sunk him.—*Van Doren.*

Early Meeting-houses of Friends.

THE BANK MEETING.

The Bank meeting-house on Front Street was especially designed to be for an afternoon meeting; and although there was some diversity of opinion about the use to be made of it when completed, the Quarterly Meeting decided that was to be its use.

At a Monthly Meeting, held 1st of Second Month, 1684, "Agreed and concluded that every first day of the week, that there be two meetings at the publique meeting-house in Philadelphia: the morning meeting to begin about the ninth hour, and the afternoon meeting about the third hour, so to continue until otherwise ordered."

14th of Fourth Month, 1685. "Some Friends proposing that some place be prepared on the front of Delaware for an afternoon meeting on First-days, the meeting did condescend that the said Friends may prepare a place accordingly."

In the same year a frame building was erected for the purpose on the west side of Front Street, north of Mulberry (Arch) Street, situated on an elevated plateau overlooking the river. One writer says the advantages for prospect, and river scenery must have been delightful, there being nothing to obstruct the view.

Robert Turner, in a letter to William Penn, says, "besides the brick meeting-house at the Centre, another one 50 by 38 feet is going on, on the front of the river."

12th of Seventh Month, 1685. "Forasmuch as a difference hath arisen, more especially about the meeting-house and burying-ground, to set it open, to the dissatisfaction of many good Friends, which hath caused grief and trouble that there should be any cause of strife among the Lord's people * * therefore, from this meeting, for the time to come, we have considered the use of the aforesaid meeting-house on the Front Street of Philadelphia, to be for afternoon First-day meetings; and further, as shall be ordered from time to time by the Monthly and Quarterly Meetings. The morrow week is agreed upon as the beginning of the service; at that place 20th of Seventh Month, 1685, the meeting to begin between the hours of two and three in the afternoon."

5th of Second Month, 1686. "John Goodson, Benjamin Chambers and Thomas Fitzwater are desired to procure a title for the land belonging to the meeting-house on front of Delaware, from Thomas Hone to John Goodson, Benjamin Chambers (and others) in behalf of this meeting, who will consider a way to raise money to pay for the same."

The building above alluded to seems to have been hastily and poorly built, and soon requiring repairs, &c. It was without a cellar, for we find directions given some three years later, to have it "underpinned and secured."

3rd of Third Month, 1686. "The weakness and insufficiency of the meeting-house on the front of Delaware for want of supporting and bracing, was spoken of, and considering there was a present necessity for doing something about it, the meeting proposed the strengthening of it, to John Parsons and Thomas Bradford."

5th of Fifth Month, 1686. "This meeting proposed that there be a general subscription by Friends belonging to this meeting to pay for the meeting-house ground on Delaware side; likewise for palung it in, and that Thomas Fitzwater (and others) do go from house to house

among Friends belonging to said meeting, and receive their contributions for that purpose."

A few months later that committee reported that Friends had subscribed, and they hope to have effects in order to clear the same by next meeting."

It appears that both Monthly and Quarterly Meetings were regularly held in this house for some years, for minutes read "at our Quarterly Meeting, held at the meeting-house upon the front of Delaware, &c., and our Monthly Meeting on Delaware side" and "the front of Delaware, at our usual place," &c., until about 1694, when for some cause they were held at the house of Robert Ewer, until 1696.

It seems probable that Friends found it inconvenient to attend the Centre Meeting on First-days, for by a minute of 27th of Eighth Month, 1693, "It is agreed that there be one meeting upon each First-day during the winter, or as long as the meeting may see occasion; beginning betwixt ten and eleven in the forenoon, on the front of Delaware. It is desired that henceforth the Monthly Meeting gather precisely at the eleventh hour, and that Fifth-day meetings may begin at the same hour." And on the 24th of Second Month, 1696. "This meeting agrees that there be two meetings on First-days: one at the Centre, and the other at the Bank meeting-house; to begin at the Centre at the ninth hour in the morning, and at the meeting-house on the bank, to begin at the third hour in the afternoon."

After the completion of the Market Street meeting-house in 1696, and the transfer of the afternoon meetings to that place, the Bank meeting seems to have been abandoned, as will be observed by the following minute of sixth Month, 1698: "Whereas the old Bank meeting-house is much decayed, and in great danger of falling down, this meeting hath taken the same into consideration, and it is agreed that William Southerly, Anthony Morris (*et al*) do endeavour to get it sold at a public auction, sometime between this and the next Monthly Meeting." And on the Eighth Month following, they reported, "we have sold the old meeting-house to James Cooper for £16, 5 shillings, and he is to take it off the ground in three months."

In the Eleventh Month, "John Austin proposed to this meeting that he had a mind to rent the ground that the old meeting-house stood on; whereupon the meeting hath this day let the said ground for three years, he to pay 30 shillings yearly."

There now seemed to be but little use for the Centre meeting; so that Friends looked forward to its entire abandonment, as we find by a minute of 7th of Tenth Month, 1700: "It having been sundry times desired that the Governour might be consulted with about disposing of the Centre meeting-house, this meeting appoints Edward Shippin, Nathan Stambury, Anthony Morris and others to view and appraise the same, and to dispose thereof to the best advantage, for the service of Friends."

31st of Eleventh Month, 1700. "The committee to view and value the Centre meeting-house, report they have done it, and find it to be no more than £100, for which sum they have sold it to our Governour; which sale this meeting doth unanimously consent to and confirm."

During the following year Friends were fearful lest they could not accommodate the Friends attending the Yearly Meeting, and again looked toward the Centre meeting-house; and two Friends were "desired to view, and see

whether the Centre meeting-house be in condition to entertain a meeting, and if it be, that they endeavor to obtain it of the Governor, if the Quarterly Meeting approve. But it did not appear to be in a suitable condition, as we learn by the Quarterly Meeting's minute of First Mo. 2nd, 1791-2: "Philadelphia Friends having before this meeting, that it will be much more for the service of Truth, and Friends, to have the Centre meeting-house, which is ready to fall, taken down and set up in the city, on the lot belonging to Friends on the Front Street, where a meeting-house formerly stood, this meeting gives its concurrence."

At the following Monthly Meeting a subscription was begun "towards moving the Centre meeting-house and setting it up on the lot in town belonging to Friends." Edward Shippen and John Kinsey are desired to agree with the workmen and oversee the work.

"Some Friends being appointed to speak with our Governor William Penn to know if he was willing to resign the Centre meeting-house to Friends again, he readily consented thereto, judging it might be much to Friends' advantage to have the materials to be used towards building another meeting-house."

(To be continued.)

The late John Bright.

In a eulogy on this distinguished Englishman, delivered in the House of Commons on Third Month, 29th, William E. Gladstone bore the following testimony to his character:—

"Though J. Bright came to be separated from the great bulk of the Liberals on the Irish question, on no single occasion has there been any word of disparagement. I acknowledge that I have not through my whole political life fully embraced the character of J. Bright, and the value of that character to the country. I say this because it was at the particular epoch of the Crimean war that I came more to understand than before the position held by him and some of his friends, and the hold they had laid upon the confidence of the people. I was one of those who did not agree with the particular views he took of the Crimean contest, but felt profoundly and never ceased to think what must have been the moral elevation of men who, nurtured all their lives in the temple of popular approval, could, at a moment's notice, consent to part with the whole of that favor they enjoyed, which opponents might think the very breath of their nostrils. They accepted undoubted unpopularity, for that war commanded the enormous approval of the people. It was at that time that, although we had known much of J. Bright, we learned more. We learned of his great mental gifts, his courage, his consistency and his splendid eloquence. We had not known how high was the moral tone of those popular leaders, and what splendid examples they could set their cotemporaries."

Another circumstance of his career is better known to me than to any other person present. Everybody is aware that office had no attraction for him; but few can be aware what extra efforts were required to induce him to become a servant of the Crown. In the crisis of 1868, when the fate of the Irish Church hung in the balance, it was my duty to propose to J. Bright that he become a Minister. I never undertook so difficult a task. From 11 o'clock at night until 1 o'clock in the morning we steadily debated the subject. It was only at the last moment that he found it possible to set aside the repugnance he felt at doing anything that

might, in the eyes of any one, even of the most ignorant class of his countrymen, appear to detract in the slightest degree from that lofty independence of character which I have mentioned, and which never throughout his career was held in doubt.

"His sympathies were not strong only, but active; his sympathies awaiting calls to be made upon them, but sympathies of a man seeking objects upon which to bestow the inestimable advantages of eloquence and courage. In Ireland, when support of the Irish cause was rare; in India, when support of the native cause was rarer still; in America, at the time when John Bright, foreseeing the ultimate issue of the great struggle of 1861, stood as the representative of an exceedingly small portion of the educated community of the country, although undoubtedly representing a large part of the national sentiment. In all these cases John Bright went far outside the necessities of his calling. Whatever touched him as a subject, obtained unasked his sincere, earnest and enthusiastic aid. All causes having his powerful advocacy made a distinct advance in the estimation of the world, and distinct progress towards triumphant success. Thus it has come about that he is entitled to a higher eulogy than is due to success. Of mere success, indeed, he was a conspicuous example. In intellect he might claim a most distinguished place. But his character lies deeper than intellect, deeper than eloquence, deeper than anything that can be described or that can be seen upon the surface. The supreme eulogy that is his due is that he elevated political life to the highest point—to a loftier standard than it had ever reached. He has bequeathed to his country a character that can only be made a subject for admiration and gratitude."

NATURE'S WORSHIP.

SELECTED.

BY JOHN G. WHITTIER.

The harp at Nature's advent strung
Has never ceased to play;
The song the stars of morning sung
Has never died away.

And prayer is made, and praise is given,
By all things near and far;
The ocean looketh up to heaven
And mirrors every star.

Its waves are kneeling on the strand,
As kneels the human knee,
Their white locks bowing to the sand,—
The priesthood of the sea!

They pour their glittering treasures forth,
Their gifts of pearls they bring,
And all the listening hills of earth
Take up the song they sing.

The green earth sends her incense up
From many a mountain shrine;
From folded leaf and dewy cup
She pours her sacred wine.

The mists above the morning hills
Rise white as wings of prayer!
The altar-curtains of the hills
Are sun-set's purple air.

The winds with hymns of praise are loud,
Or low with sounds of joy;
The thunder organ of the cloud,
The dropping tears of rain.

With drooping head and branches crossed
The twilight forest grieves,
Or speaks with tongues of Pentecost
From all its sunlit leaves.

The blue sky is the temple arch,
Its transept earth and air,
The music of the starry march
The chorus of a prayer.

So Nature keeps the reverent frame
With which her years began,
And all her signs and voices shame
The prayerless heart of man.

THE SOUL'S ALTERNATIONS.

BY CHARLOTTE FISKE BATES.

If God, who gave the ether world its light,
In his large wisdom also gave it night,
Why should the world of soul have constant day,
Nor need withdrawal of the heavenly ray?

And yet, through all the centuries have rung
The wondering plaints of many a holy tongue:
"What?" do they question, "have we done amiss,
That God should leave us in a dark like this?"

Mistaken children! thus to think the dark,
Of his displeasure the unfiling mark,
To fear God could not hide his light from them,
Unless some way of theirs He would condemn.

Oh, gracious alternations of the night!
How the soul glims in absence of the light!
God rests his children in the dark awhile,
To wake them stronger with his morning smile.

—S. S. TIMES.

THE MOTHER'S CRADLE SONG.

The following beautiful hymn is a translation from the "Home Songs" of Sweden. It is credited by the mother as she is singing, to her little one to sleep.

O, little child, lie still and sleep;
Thou art so near, thou needest not fear;
No one need fear whom God hath kept
By day or night,
Then lay thee down in slumber deep
Till morning light.

O, little child, be still and rest;
He sweetly sleeps whom Jesus keeps;
And in the morning wake so blest
His child to be,
Love every one, but love Him best—
He first loved thee.

O, little child, when thou must die,
Fear nothing, then, but say "Amen"
To God's demand, and quiet lie
In his kind hand,
Until He say, "Dear child, come, fly
To heaven's bright land."

Then when thy work on earth is done
Thou shalt ascend to meet thy friend;
Jesus the little child will own,
Safe at his side;
And thou shalt dwell below the throne.
For He hath died.

—American Messenger.

Remarkable Testimony of a Wesleyan Minister on Silent Worship.—About the year 1798 William Bramwell was traveling in the Nottingham Circuit. At one of the villages near Nottingham several persons had left the Methodist Society and joined the Quakers. William Bramwell heard with pain that they had withdrawn themselves. The next time that he went to preach at that place, it occurred to him that it, perhaps, might be profitable to deviate a little from the usual mode of public worship; and, therefore, after the sermon, he said to the congregation, "Sit down, friends, and we will hold a Quaker's meeting." He then exhorted them to lift up their hearts to God, and earnestly, though silently, to pray for the descent of the Holy Ghost. Whilst he and the congregation were thus engaged, the Spirit of the Lord was poured out upon them; several fell from their seats, some in great distress of mind, whilst others felt the overwhelming power of grace divine, so that William Bramwell himself seemed to be quite overpowered, and cried out—"Oh, my Lord, I never thought of this!"—*Memoir of William Bramwell.*

The Relations of Moab and Israel.

BY H. B. TRISTRAM, CANON OF DURHAM.

It is difficult for the traveller, standing on the Mount of Olives, and looking eastward at the long and almost even line of mountains which bound the not very distant horizon, with a gauzy belt of intervening haze that somewhat exaggerates the distance to the eye, to realize the practical isolation of that mountain range from the rolling hills of the Judean wilderness, which fill the nearer landscape. Yet there have been from the earliest ages to the present age obstacles, both physical and political, which have kept asunder the regions of Palestine and Moab.

That fertile plain in front of the mountain range is the evaporation from the calm pool of the Dead Sea. That mysterious lake, sunk three hundred feet below the surface of the Mediterranean, and buried far below our line of vision, is walled, rather than bounded, by parallel lines of precipice on either side, rising almost sheer from two thousand to four thousand feet. For an extent of forty miles on the west side, from Jericho to Jebel Usdum, only two or three precipitous and dangerous passes afford an access to its shore. On the east side there is but one track available for a baggage animal along the whole extent of the lake; and on neither side is it possible for horses or camels to follow the shore, excepting on the southern half of the west and on the northern half of the east side. To reach the Moab of Israelitic history from Judah, the only route was to descend the cliff of Hazziz over Engedi, and skirt the lifeless and waterless shore of the lake for twenty miles to the salt mountain of Jebel Usdum; then cross the dreary salt plain which forms its southern boundary for twenty miles; and then follow the east shore up to the pass, which leads through narrow defiles for three thousand feet up to Kir Moab, the modern Kerab. The approach from northern Palestine was less difficult, being from the fords of Jordan, above Jericho, down the plain of Sittim, and for nearly twenty miles by a narrow, rock-strewn track along the sea-shore to the mouth of the Arnon, from which a few steep paths, hardly practicable for mules, lead up to the highland plateau of Moab.

The relations of Moab toward the chosen people seem more generally to have partaken of the character of unfriendly neutrality than of actual hostility. When Moses led the nation, in the thirty-eighth year of the wanderings, by the circuitous detour round Edom towards the Jordan Valley, he carefully avoided the southern territory, still held by Moab, but attacked Sihon from the east, above the headwaters of the Arnon. But so recent had been the Amorite conquest, that Moab felt as though not Sihon, but Moses, had driven her south of the Arnon, and appropriated her land.

A feud continued between Moab and the northern tribes of Israel down to the reign of David. Benjamin, from its territory abutting on the fords of Jordan, bore the brunt of the struggle; and it was at Jericho that the Moabite king, Eglon, received tribute for eighteen years, and was finally slain by the Benjaminite Ehud. Saul, as a Benjamite, did not forget the hereditary hostility, and warred against Moab, though, as far as appears, without success. In these struggles, Judah, whose intercourse with Moab was only by the southern route, took no part; and it was probably its rivalry with Benjamin which cemented the friendship, illustrated by

the episode of Ruth, between Moab and at least one city of the southern tribe. The marriage of Boaz and Ruth was clearly looked upon as honorable and in accordance with the Mosaic law, which it could not have been unless Ruth had renounced the false gods of her people and embraced the worship of Jahveh, which the Targum affirms she had already done. Remembering that the great-grandmother of David was thus a Moabite, we can easily understand how, when hard pressed by Saul, the vindictive enemy of Moab, he had no hesitation in passing round the southern end of the Dead Sea, and leaving his parents under the protection of the Moabite king. "The trust was, so far as we know, faithfully kept; nor does history give us the slightest clew to the reason for the sudden change which, twenty years later, caused the horrors of David's campaign and the partial extermination of the nation. Probably Moab had united with Ammon in some act of insult or perfidy such as that described in 2 Samuel 10. From this time down to the captivity of Moab by Assyria, its relations both to Israel and Judah were never friendly, unless when held in thralldom and under tribute by the northern kingdom.—S. S. Times.

FROM "THE BRITISH FRIEND."

Our Duty Towards Animals.

It will soon be the time of the singing of birds and the bleating of lambs, and it may be well at this season of the year to consider our relation to the wild animals which inhabit our islands. They are God's creatures as well as we, and we have duties to do towards them as well as towards each other. They have their proper place in God's creation, and we have ours; and if they and we do our duty towards our one Creator, we shall live in harmony with Him and with each other also.

But how are we at present related to the beasts and birds? If we take a walk in the country, the wild animals all flee from us as from their enemy. This, we say, is natural. So it is, in the sense that all creatures try to escape from what will hurt or injure them, and so the wild animals act quite naturally when they run or fly away from man. But the important question for us is, do we act according to nature when we give our harmless and innocent fellow-creatures reason to regard us as their enemies? No, we do not; that is, we do not act according to Christ's nature, which is the nature of goodness, but we act according to the nature of evil, which is contrary to that Divine nature which man had at the beginning, and to which Christ came to restore us.

Were there no sin in the world it is hard to say what our relations to other animals would become, but there are some beautiful prophecies which declare that when the earth is full of the knowledge of the Lord, then all the creatures of God shall dwell together in love and peace, and none shall hurt or destroy; men shall not learn war any more, and the wild beasts shall lie down together in peace.

None of you perhaps have ever seen wild beasts or birds that were not afraid of man, but travellers tell us that in places where the animals have not got acquainted with men, they are not afraid of them.

Far away to the north and far away to the south, in those cold regions where men are seldom seen, the birds do not fear them, but allow men to come among them, and, as they do not dread any harm, they are easily caught and killed.

But it is not only in cold climates that the birds and beasts are not afraid of men. When the late Charles Darwin took his voyage round the world in the *Beagle*, he found the birds on the Galapagos Islands quite tame. Thrushes, finches, wrens, fly-catchers, doves and buzzards could be approached so near as to be killed with a switch or caught with a cap or hat. He writes:—"A gun here is almost superfluous; for with the muzzle I pushed a hawk off the branch of a tree. One day, while lying down, a mocking-thrush alighted on the edge of my pitcher, made of the shell of a tortoise, which I held in my hand, and began very quietly to sip the water; it allowed me to lift it from the ground whilst seated on the vessel: I often tried, and very nearly succeeded, in catching these birds by their legs." C. Darwin states also that formerly these birds were even tamer than they were when he saw them, and used to alight on men's hats and arms.

You will not be surprised to hear of the birds getting more shy and wild when you read how cruelly their trust is betrayed. The same writer states: "In Charles Island (one of the Galapagos group) which had then been colonized about six years, I saw a boy sitting by a well, with a switch in his hand, with which he killed the doves and finches as they came to drink. He had already procured a little heap of them for his dinner; and he said that he had constantly been in the habit of waiting by this well for the same purpose."

It is not only the birds that are so tame and confiding. Darwin mentions that the animals peculiar to the islands which he visited, and which had not got acquainted with man, were also tame. The only quadruped native to the Falkland Islands was a species of wolf. These wolves were very tame and curious. They would enter tents and steal meat from under the heads of seamen, and could be killed by holding out a piece of meat in one hand as bait, and sticking them with a knife held ready in the other hand. Darwin also tells a story of how he himself, when in San Pedro, killed one of a species of fox said to be found only in that island. It sat on the rocks, watching the work of the officers of the ship; and Darwin walked quietly up behind it and knocked it on the head with his geological hammer. This fox is now mounted in the museum of the Zoological Society.

E. C. Agassiz, a lady who made a cruise through the Galapagos Islands in the summer of 1872, mentions that the seals there were quite tame. "Though they looked at us with inquiring wonder, they were perfectly unconcerned at our approach; I allowed us to sit close by them and pat them, and they would even smell of the bread and crackers with which we tried to tempt them to feed from our hands." The "happy family," so often represented in menageries, was to be seen here in nature. Small lizards crawled over the mother seal and ate flies from her back, and little birds hopped close over her head and between her and her little ones without the slightest fear.

It takes a long time to educate these simple animals in the fear of man, but they are gradually getting to know how cruel and destructive he is, and so are getting to be afraid of him, and in time will likely get as wild as those we see in our own land. It is worthy of remark that the tame habits to which I have referred, are peculiar to those animals that have not inherited the fear of man. Migratory birds, or those that went to and fro between those islands and other places where man was known and

feared, were also afraid of him when he made his appearance on the islands. The tame birds and beasts were those whose ancestors did not know anything about man, and so could not instruct their offspring who he was and how much he was to be feared.

Natural History, Science, &c.

Forms of Lava in the Crater of Kilauea, Hawaii.—The larger part of this immense crater is covered with hardened lava—which must be traversed by the visitor, before he can reach the border of "The house of everlasting burning"—the part where active volcanic movements are ever present. The forms which the lava has assumed in cooling are graphically described by Lady Cumming, who visited the place in 1879.

"I have already explained that, as seen from above, the bed of the outer crater resembles a dark bluish-grey lake, being apparently a level surface. But on a nearer approach, we found it to be a bed of extremely irregular black lava contorted into all manner of forms, such as huge coils of rope, folds of rich black satin drapery, waves of glistening black glass forming a thin iridescent coating to a sort of bubbly red lava.

"And here and there the lava had flowed over ridges so steep, that in cooling it had assumed the appearance of a perfectly petrified waterfall. We saw plainly where successive lava-flows overlapped one another—the currents, after flowing in opposite directions, showing where the fires had found temporary vent by some newly formed lake or chimney.

"We climbed up and down over undulations which on ordinary ground would be accounted little hills, lava-waves whose crests rose perhaps a hundred feet or more above the general level. A smoothly wrinkled expanse is crossed by a stream of blackest angular blocks, tumbled together anyhow—a chopping sea petrified.

"In many places large lava-bubbles blister the surface of the smooth lava. They look like thin bottle-glass, and appear as if blown by escaping gases. Everywhere the lava-crust cracks crisply under foot, breaking into sharp fragments.

"Here and there yawn deep splits and fissures. Some are mere narrow cracks, scarcely to be observed but for an occasional puff of white steam. Others are broader, and horribly suggestive, for a hot breath of poisonous sulphureous fumes rises there, half choking one, and acts as a mirage, making the eye tremulous, so that every thing around seems to quiver. Through some of these cracks fresh lava has oozed out and lies in black glossy rolls, as if the old flow were sealed with pitch.

"On one high ridge, which seemed to have stood as an island during the more recent flows, the lava had begun to disintegrate, and already a few delicate ferns had—as if by a living instinct—found their way thither, and nestled in this rude cradle, their tender green contrasting strangely with their surroundings. I gathered a few ferns as memorials of the day; and as I looked on this earliest effort of vegetation in the great desert around, I thought me of such mysterious spots as those strange pits in the Australian Blue Mountains, where, in a deep sunken abyss, untrodden by foot of man, tall tree-ferns and all their beautiful kindred, reign undisturbed—and I wondered whether, in some far-back time, these cups into which we now look down on the fern-crocks far below us, were dreary and bare as Kilauea.

"At one place we came to what seemed like a petrified waterfall, where a lava-stream had poured over a cliff when almost exhausted, and had quickly cooled, retaining all its distinctive curves and forms. Even the individual particles of spray lay tossed about like congealed rain-drops. It was a most curious and beautiful sight.

"Sometimes, as we toiled along, the thin crust of fibrous lava gave way beneath our feet, and we landed in hollows below, at no great depth. These brittle places seemed to be surface bubbles or tubes which have contracted in cooling, and they never let us in more than knee-deep. But of course, every such plunge was a startling reminder of what we might do should we chance to sink through a fissure, and made me more ready to obey my guide's injunction, and walk in his footsteps. Sometimes we crossed suspicious-looking tracks, which sounded hollow beneath our feet, and still more vividly suggested possible doom.

"Over one steep bank the lava had flowed so gently that it hung in folds like rich drapery—you might have fancied a velvet curtain caught up for effect, in an artist's studio.

"Below it lay what looked like many nests of snakes coiled up in intricate convolutions, as if hata-constrictors, and great pythons, and little rattlesnakes, and reptiles of every size, had here congregated.

"Just beyond lay an almost level expanse of something which gleamed like a rainbow. As we approached it, the fairy-like play of prismatic colors was altogether dazzling; and on nearer inspection we found that it was produced by myriads of minute flakes of black glass, each iridescent, forming a perfect prism. The thin crust broke beneath our steps, and we perceived that the vitrified lava forming these miniature rainbows, was but a scum formed on the surface of a reddish honey-comb, a substance resembling the refuse or slag of iron works.

"Then we came to smooth waves that were really like ocean billows; but beyond these lay a succession of great rollers that had in cooling been forced back, one over the other, so as to form ridges, suggesting huge coils of rope, all twisted and contorted—mighty hawsers laid in long lines ready for use; a likeness which is the more striking, inasmuch as each several rope is seamed with innumerable cracks, leaving raised lines exactly like the twisted strands of hemp—an impression further conveyed by the filaments of stringy brown lava, like spun glass, which lie scattered here and there, having been caught by the wind (when thrown up) in mid-air in a state of perfect fusion, forming fine lava-drops—a rain of liquid rock, so and drawn out in slender threads, like fine silky hair.

"In fact, this filmy, finely-spun glass is known as Pélé's hair. It is of a rich olive green or yellowish-brown color and is glossy, like the byssus of certain shells, but very brittle to handle. Sometimes when the great fire fountains toss their spray so high that it flies above the level of the cliffs, the breeze catches it sportively, and carries it far away over the island; and the birds line their nests with this silky volcanic hair. Sometimes you can collect handfuls, clinging to the rocks to which it has drifted generally with a pear-shaped drop still attached to it."²

² I am told that an artificial substance, precisely similar to this strange filamentous glass, is manufactured at iron-works, by passing jets of steam through the molten slag and refuse from the furnaces. A material in this produced, soft as asbestos, and admirably adapted for packing fragile articles.

Intelligence in a Dog.—A writer in *Forest and Stream* says:—"In 1884 I was located in St. Louis, and on several occasions had noticed fine St. Bernard dog stalking with dignity y Chestnut Street. He was owned by a lawyer who regularly sent him on errands to his home. On one occasion I saw him coming up the street with a basket full of something—probably me—and at his heels was a small cur of low degree which was persistently snapping at him, as if endeavoring to get him to drop his charge, who the little dog could come in for a division of its contents. The large dog stopped twice on the block, turned round and looked at his tormentor and resumed his pace until he reached me, when looking up into my face with an expression the aloud said, 'Please mind this for a moment he laid the basket on my feet, turned, and with one bound had the cur by the neck, shook him most unmercifully, rolled him in the gutter, and dropped him. The cur took very little time in getting out of sight, not even stopping to shak himself. The St. Bernard then picked up his basket, and with a satisfied air went on his way."

Items.

In New York Graving Berth.—Under this head *The Independent* has grouped the written opinion of a number of prominent men in that city, who generally answer the question in the affirmative. The one who most strongly dissents from this view is, we think, Anthony Comstock, the efficient Secretary of the New York Society for the Suppression of Vice. He states that the laws protecting purity are more rigidly enforced than formerly; he believes that the city is now reaping the bad more effects of the vice literature and other demoralizing agencies which for years with little restraint has sowed "the seeds of corruption, dishonesty, criminal living, irreverence, irreligion, licentiousness and impurity." He says: "We are in the midst of a harvest of irreligion, skepticism and immorality resulting from the seed-sown of the past."

Notwithstanding this, *The Independent* thinks the moral condition of the city is better than it was formerly; and it regards this as a great encouragement to further labor. It says: "Vice does no flout itself as it did. It is kept in restraint. The dens and dives are less openly vicious than they were. The purities of theaters are less vile. The Bowery boy is extinct, and the gangs of ruffians are nearly broken up. The dangerous quarters of the city have been cleaned out, and there is nothing that remains which quite corresponds to the old Five Points. The elections are carried on with quietness and fair honesty, and a riot on election day is unknown. There is much less drunkenness proportionately, than there was. The police are much better organized, and they patrol and control the city thoroughly. Judge Kilbuck's figures are very encouraging. With a considerable increase in population, the number of arrests in the city have absolutely decreased in the last fourteen years, and that notwithstanding that the number of arrests for selling liquor illegally have increased from 130 to 350. The number of arrests for juvenile delinquencies have decreased in this period thirty-five per cent, a most gratifying indication that efforts to elevate the character of our youth have not been made in vain. Vice being less obtrusive, being driven into secret places, our children are less troubled by it."

School-boy Soldiers.—The *Herald of Peace* publishes the correspondence between the Head Master of a school, near London, who had decided to form the elder lads into a Cadet Corps for drill; and a minister whose son was one of the pupils. The following is part of the letter from the parent to the master:

"With regard to your circular on the subject of what you call the physical training of the pupils, allow me to say I have read it with great pain. I sent my boy to your school to be fitted for life as a

villian, not as a soldier, and I did so in the belief that the school was, and would continue to be, a purely civil school, and not a semi-military school. Had I no child under your care, it would still have given me great pain to hear that your school was to be a certain recruiting ground for the army, and that your boys were to be under the demoralizing and degrading influence of the men whose trade it is to kill their fellows. Give boys a military training, let them come under the influence of soldiers, and grow up in a school where a soldier's life is set before them as a desirable object of ambition, and a certain recruiting ground for the army, choose that life. You know this as well as the Horse Guards, and this movement is, on your part, deliberate attempt to draw boys into the army.

"How much nobler, in my judgment, would it have been for you, as a guide and trainer of boys, and you quietly taking every opportunity to enlighten the pupils how foolish and unwarrantable is the use of physical force, by a nation, as well as by an individual, for the settlement of a difference. You might, in your position, do much to discourage this brutal love of violence, which is a reproach to our modern civilization, and to give us a generation of Englishmen who should be peaceably working righteously. Even the occasional argument should involve any one piece before he adopts a method by which he will buttress up a bad system; for out of every 20s. paid in taxes, 16s. is spent upon the army and navy, two of the rottenest and most disgracefully managed institutions in the country.

"Is it too late to hope that you will withdraw your unfortunate arrangement?"

Murder Culture by the Pictorial Art.—No fact is more potent to science than the direct effect of influences exerted through the medium of the organs whose functioning we call "mind." Darwin, Huskin, and all the great students of development, are laboring to bring this fact within cognizance of the general thinking public; that they have killed is only too painfully evidenced by the persistence and surprising ingenuity of the practice of murdering innocent personalities, and, laterally, murder, by a refined use of the art of mural decoration. While we empower the police to put down with a strong hand the exhibition in shop windows, and the censor of stage plays and spectacles to interdict the parade in theatres of pictures and scenes of an immoral character, because it is recognized that these have a tendency to corrupt the mind of youth—and age too—nothing whatever is one to restrain the daily increasing evil of pictorial lacards displayed on every boarding, and of highly-touted scenes produced at nearly all the theatres, which not only direct the thoughts, but actively stir the passions of the people in such way as to incite them to average murder in all its forms, and to break down that protective sense of horror which nature has given us, with the express purpose, doubtless, of opposing an obstacle to the evil influence of the exemption of homicide. It does seem strange—passing strange—that its murder-culture, by its incantatory way, is recognized that these have been checked by public authority. We have no wish to make wild affirmations; but knowing what we do, as observers of development, we can have no hesitation in saying that the increasing frequency of horribly brutal outbursts is by no means unaccountable. The viciously defined are, in a sense, the weaker; and it is recognized that they are especially susceptible of influences moving them in the direction their passions incline them to take; and when the mind (or brain) is impressed through the senses, and particularly the sense of sight, in such manner as to produce mental pictures, either in waking thought or dreams, or in a state of somnolence, or in a state of reverie, or in the performance of the deeds which form the subjects of the consciousness. We are, of course, writing technically; but the facts are indisputable, and we trust they will be sufficiently plain. It is high time that this ingenious and persistent urder-culture should cease.—*London Lancet.*

Indian Hemp.—W. S. Caine writes from Lucknow, India, to the *London Nonconformist*:—"I have written 'Here and there, all through the bazaar, are little

shops whose entire stock consists of a small lump of greenish pudding, which is being weighed out in little squares. This is majoon, a preparation of the deadly 'bhang,' or Indian hemp, known in Turkey and Egypt as 'hashish,' the most horrible intoxicant the world has yet produced. In Egypt its sale is forbidden, and special gunboats employed to suppress its smuggling by Greek and Turkish adventurers, and in India it is a 'Government monopoly,' and when a Hindoo wants to commit some terrible crime, such as wife-murder or mutilation, he prepares himself with two pennyworth of bhanga, purchased from a majoon shop, of which three halfpence goes into the State Exchequer and a halfpenny to the shopkeeper."

W. S. Caine states that not only the Indian Hemp, but the liquor shops and the opium dens of Lucknow are government monopolies. "It is a bad policy to fold the hands of the Government from that which tends to the impoverishment and degradation of the people.

An Orthodox Deed.—The *Albany Law Journal* quotes from the *Legal Intelligencer*, the description of a deed in the records of Northumberland County in Pennsylvania, drawn by a quaint old lawyer of the last century. The deed conveys Lot No. 51 in the town of Lewisburg, and contains the following recital of title:

"Whereas, the Creator of the earth, by parole and livery of seizin, did endow the parents of mankind, to wit, Adam and Eve, of all that certain tract of land, called and known in the planetary system by the name of the Earth . . . to have and to hold to them, the said Adam and Eve, and the heirs of their bodies, lawfully to be begotten, in fee-tail general forever, as by said feoffment recorded by Moses, in the first chapter of the first book of his records, more fully and at large appears."

The deed recites that Adam and Eve died seized of the premises in fee-tail general, leaving issue, sons and daughters, who entered into the same premises, and became seized as tenants in common; that in process of time they multiplied their seed on the earth, and became very numerous; that they found it to be inconvenient to remain in common; that they "bethought themselves to make partition of the lands to and among themselves;" that the tract known on the general plan of the earth as America was allotted to certain of the heirs eventually (now deemed time immemorial) a certain united people called the Six Nations of North America, heirs and descendants of said grantees of America, became seized of a part of the tract now called Pennsylvania.

The deed from this point then proceeds to give an accurate recital of the conveyance by the Six Nations to the Penns, and from them down to the grantor. It omits all reference to the Royal grants to William Penn. The scrivener was either a very good lawyer, or intensely anti-British. It is more than likely that he was both.

The lawyer who drew up this deed evidently did not believe that this race of men started with a protoplasm, or a series of protoplasms, and finally worked its way up to humanity. He believed in the record of Moses and the title of man to the earth as given in that record. He makes out a first-class title to "Lot No. 51 in the town of Lewisburg," tracing it back to Adam and Eve, and from them to the great Creator of the earth and giver of the same to Adam. We think the title to "Lot No. 51" a good one, and the deed to be perfectly orthodox. Anybody who wants a better title to land must be hard to please.

THE FRIEND.

FOURTH MONTH 27, 1889.

PHILADELPHIA YEARLY MEETING.

(Concluded from page 303.)

At the meeting on Third-day, the former Clerk and Assistant, Joseph Walton and Joseph Scattergood, were re-appointed.

The business which occupied the sitting was the consideration of the first four of the Queries. During this, there was evidently much religious concern felt for the increased faithfulness of the members in the attendance of week-day meetings, and the performance of their other duties; and especially for their deepening in religious life through obedience to the Spirit of Christ, which is the foundation of all growth in grace and advancement in the way of salvation. Many lively exhortations were delivered, tending to stir up the pure mind in the hearers. It is to their individual faithfulness and dwelling in communion with Christ that the Church must look for its restoration and growth; and no adoption of outward means, independent of this, can effect such happy results.

The answers to the 3rd Query indicated that our members generally are in the habit of frequently reading the Holy Scriptures. This practice was encouraged by those who spoke on the subject, and attention was called to the importance, when so engaged, of having the mind turned to the Spirit of Christ, who only holds the "Key of David," so that spiritual instruction might be received from Him.

A caution was extended to those about to marry not to follow the fashion of inviting great companies of people to attend the meeting at such times, and to avoid needless display on such occasions.

In the afternoon was held the meeting for ministers, elders, overseers, &c., which had been authorized by the Yearly Meeting the previous day. It was largely attended. Sympathy was expressed with overseers in the responsible duty which devolves upon them (as well as in degree upon all the members of the Church) of watching over the spiritual welfare of their fellow-members; and they were encouraged to faithfulness in endeavoring to check the growth of the spirit of worldliness, which tends to destroy the life of religion.

On Fourth-day morning, the remaining queries and answers were read. Those Friends who may seek recreation by going to places of summer resort were advised to bear their testimony to the nature of true spiritual worship, and against those human arrangements which interfere with the headship of Christ over his church, by declining to attend places of worship where such arrangements are carried out; but instead of this they were encouraged to retire to their own rooms, either alone or in company with such persons as might incline to sit with them, and there wait upon the Lord for the renewal of their spiritual strength.

A departure from our testimony against an hiring ministry, it was said was a fruit of views respecting the nature of Gospel ministry, inconsistent with those held by our Society—which had ever believed that the ministry could only be rightly exercised under the fresh command of the Almighty, and with the ability which He gives.

The list of deceased ministers and elders in-

cluded the names of ten (?) Friends, whose ages varied from 72 to 100 years.

It was concluded to continue for further service the committee appointed last year to visit meetings, &c., and authority was given for it to be incorporated with subordinate meetings in cases where it might deem it advisable.

The Report of the Westtown School Committee contained a pretty full statement of the building operations at Westtown. The new buildings, which form a continuous line on the ground floor of more than 500 feet, had been completed. They, with the steam heating and electrical lighting apparatus and separate boiler house and laundry, &c., had cost a little more than \$330,000, which had been provided for by the contributions or guarantees of interested Friends.

The Committee had concluded to make 11 years the lowest limit of age at which pupils should be admitted to the institution; and they had decided to shorten the school year to 40 weeks, and to divide it into two sessions of unequal length—the longer one to commence on the first Third-day of the Ninth Month. The effective manner in which the Committee had gone through with the arduous labors they had undertaken was much appreciated by the meeting. A concern was also felt that they might continue to keep in view the religious welfare of the pupils; and be on their guard against the introduction of any changes which might undermine the simplicity which has heretofore marked this school.

The Report of the Indian Committee spoke encouragingly of the progress of civilized habits and manner of life among the Indians under their care, and mentioned that efforts were being made by the Legislature of New York to induce the Congress of the United States to remove the claim of the Ogden Land Company to the right of pre-emption of the Seneca Reservations, claimed by it—a claim which has long been an obstacle to the progress of the Indians. The school at Tunesassa had been successfully conducted during the year, with an attendance of 25 girls and 12 boys.

The Reports from the Quarterly Meetings showed that of the 791 children of school age, 611 had been receiving their school education under the care of the Society.

The result of the inquiries made of their members as to the use of intoxicating drinks for a beverage, by the different Monthly Meetings, was that 191 had so used them during the year—most of them in the form of cider or other fermented liquors—and many of those, but a few times.

The Memorial for our beloved friend, Henry Wood, awakened tender remembrances of his consistent and conscientious manner of life, of his close walking with God, and of his love and watchful care over his younger friends.

The Yearly Meeting closed on Sixth-day—and was felt to have been, on the whole, a comfortable and favored season.

SUMMARY OF EVENTS.

UNITED STATES.—The passengers and crew of the steamship *Danmark* have been heard from and all of them are safe. They were taken off by the steamship *Missouri*, from London for Philadelphia and Baltimore. The *Missouri* was obliged to jettison a part of her cargo to make room for the rescued. She then made for the Azores, where a portion of them were left to be conveyed to Lisbon, Portugal. The remainder, 129 in number, were conveyed by the *Missouri* to this port.

It is authoritatively stated at the Department of State, that the Hull treaty powers concerned in the Sauson affairs—England, Germany and the United States—have reached an understanding by the terms of which they will each keep one war vessel at Sauson pending the termination of the Berlin Conference.

Rear Admiral Kimberly has forwarded to the Navy Department a report from Chief Engineer Kierstedt, stating that the engine of the *Nipsic* has been tried, and worked well. The propeller is considerably bent and its effective area much reduced. The report says that the ship can be moved by steam if required.

Mason, the Commissioner of Internal Revenue, has decided that, under the recent act Congress and the proclamation of the President in relation to Oklahoma, it ceases to be "Indian country," and that special tax stamps may be sold to wholesale and retail liquor dealers, to engage in business there, under the same terms and regulations as other States and Territories of the United States. By a previous act of Congress it was provided that no ardent spirits should be introduced into the "Indian country," except by the authority and under the control of the Secretary of War. This mischievous decision has been nullified by Secretary Mason, who has directed a suspension of the order of the Internal Revenue Commissioner. The Secretary's decision is based on the opinion that it would be a palpable violation of the law to transport liquor through Indian Territory, and that it would be impossible to get liquor into Oklahoma without crossing the line into the Indian Territory.

The Oklahoma country was opened to settlers on the 22d instant, and thousands of "booners" entered. The *St. Louis Republic* prints reports on the prospect of the wheat crop from 60 counties in Missouri, 49 in Illinois, 48 in Kansas, 40 in Indiana, 33 in Kentucky and 18 in Tennessee. The average yield in the six States, compared with last year's at this time, is 125 per cent., the average acreage 1061 per cent., indicating a tremendous yield of winter wheat this year, barring untoward accidents.

Returns of the election held on the 22nd in Massachusetts on the prohibition Amendment to the State Constitution, indicate that the amendment has been defeated by over 40,000 majority. The vote of Boston is: Yes, 11,090; no, 31,075.

The greatest surprise occurred in the city of Quincy where the vote was yes, 1039; no, 491; the city having had "no license" last Eleventh Month, by 936 plurality.

The Michigan House of Representatives has passed the Liquor Tax bill, which requires retailers to pay \$600 a year; distillers, \$1000; brewers, \$200; wholesale liquor dealers, \$800; wholesale beer and wine dealers, \$500, and prevents druggists selling liquor except upon written application, which must be recorded in a public book. Under no circumstances can they sell by the drink or mix liquors with soda water or any other beverage to be drunk on the premises. The bill passed by the narrow margin of six votes. The law will not go into effect this year.

A despatch from Jersey City, New Jersey, says work has been resumed on the North River Tunnel, and it is believed that there will be no further stoppage until the work is finished.

On the evening of the 19th instant, New York City was visited by a conflagration which, starting at Fifty-ninth Street, on the North River, destroyed Fairbanks' lead refinery, Rossiter's stores, two grain elevators of the New York Central Railroad and dock property of that road, extending beyond Sixty-fifth Street. The total loss is estimated at nearly \$4,000,000. One man was killed, and four others are known to have been severely injured.

Deaths in this city last week numbered 423, an increase of 2 over the previous week, and 52 over the corresponding week last year. Of the whole number 215 were males and 208 females; 61 died of consumption; 45 of pneumonia; 27 of convulsions; 27 of diseases of the heart; 17 of delirium; 15 of cancer; 14 of inflammation of the brain; 13 of infantile; 13 of old age; 12 of marasmus and 10 of peritonitis.

Markets, &c.—U. S. 4½s, 108½; 4s, 129½; currency 6½, 120 a 131.

Wheat was firm, and 1c. per bush higher. Sales of midwinter wheat, at 1c. discount, 11c. per bush.

Feed.—Winter bran, choice, \$14.75; do., fair to prime, \$14 a \$14.20.

Flour and Meal.—Western and Pennsylvania super, \$27.5 a \$28.25; do., do., extras, \$25.25 a \$27.5; No. 2 winter family, \$27.5 a \$28.25; Pennsylvania family, \$1.50 a \$1.75; Pennsylvania roller process, \$1.50 a \$1.75; Ohio, clear, \$1.50 a \$1.25; do., straight, \$1.40 a \$1.10;

Indiana, clear, \$1.50 a \$1.90; do., straight, \$1.49 \$1.90; St. Louis and Southern Illinois, clear, \$1.45 \$1.90; do., do., straight, \$1.40 a \$1.90; winter put, fair to choice, \$2.25 a \$2.75; Minnesota, clear, \$2 a \$1.50; do., straight, \$1.50 a \$1.50; do., patent, \$2 \$1.60.

Grain.—No. 2 red wheat, 90 a 91 cts.

Wheat.—An election was held in Rochester, N. Y. No. 2 white oats, 32½ a 33½ cts.

Beef.—Market fair, prices ranging same as 1 week; best selling from 63 a 63½ cts.; good, 61 a 61½ medium, 61 a 61½ cts.; fair, 59 a 6 cts.; common, 55 52 cts.

Button.—Market dull; prices firm; best selling for 95 a 10 cts.; good, 93 a 94 cts.; medium, 91 a 92½ fair, 91 a 94 cts.; common, 83 a 9 cts.; lambs, 12 14 cts.

Hogs.—Choice Chicago, 73 a 74 cts.; good Western 74 a 7 cts.; country hogs, 61 a 63 cts.

Foreign.—An election was held in Rochester, F. England, on the 16th instant, to fill the Parliament seat made vacant by the resignation of Colonel Hugh Hallett. The balloting resulted in favor of Huggess, the Gladstonian candidate, who polled 1655 vote, against 1580 votes for Davies, the Liberal-Union candidate.

Charles Stewart Parnell has instituted a suit against the London *Times* for libel, claiming £100,000 damages.

A despatch from London, dated Fourth Month 17, says: An Englishman named Harrison, a student of Balliol College, Oxford, has been arrested at Gwo dare, Ireland, for supplying food to besieged towns. He was handcuffed immediately upon being taken into custody.

The rushing of emigrants from the southwest of Ireland is causing alarm. The country is being rapidly depopulated.

General Boulanger has left Brussels and gone to England. It is believed the French Government was dissatisfied with his stay in Belgium.

The *Gaulois* says that the Princess of Sagan, a not leader of fashion, was bitten a short time ago by a monkey, which has since died from hydrophobia. The Princess, the paper says, is about to visit Paris for the purpose of putting herself under the care of Pasteur.

The Prefect of Police has discovered the existence of a Nihilist plot to assassinate the Czar while he was attending the funeral of General Pancker, Minister Roads. The Czar was immediately warned not to attend the funeral. A number of persons charged with being implicated in the plot have been arrested. The Nihilists intended to use dynamite in their attack on the Czar. The Czar is suffering from extreme nervous excitement, being in constant dread of attempts upon his life.

Hayti is being badly shaken up by earthquakes. Several buildings have been wrecked but nobody killed.

The British steamship *Pine Branch*, arrived at Baltimore on the 21st, and reports the yellow fever very serious at Santos and Rio Janeiro, the number deaths at the latter port reaching 700 a day.

NOTICES.

NEW PUBLICATIONS.—The Tract Association's Friends has just published the following new Tracts

"The Effects of Worldly-mindedness Exemplified in a leader."

"Elizabeth, a Colored Missionary of the Gospel; or, bondage in slavery," 16 pages.

Old Tracts printed from new plates:

"Address to those who have the Care of Children A girls."

"Address to those in Humble Life," 16 pages.

WANTED.—Numbers 59 and 64 of the *Tract Repository*, for Friends' Library.

Address J. NO. H. DILLINGHAM, Librarian, 142 NORTH SIXTEENTH STREET.

FRIENDS' ASYLUM FOR THE INSANE.—An Assista Resident Physician wanted. Please apply promptly to Dr. J. C. HALL, *Super.*, Frankford, Philadelphia.

FOR "THE FRIEND."

Historical Review of the Society of Friends.

(Continued from page 396.)

Let us now return to the general condition in which the Society of Friends was left after the separations of 1827-8. The light esteem which many at that time had manifested for the outward offering of our Saviour, the value of the atonement, and the authority of the Holy Scriptures, naturally led others to press the importance of these subjects more constantly and earnestly; and many years had not elapsed, before it was manifest that some members of our Society were in danger of so depending on these as to undervalue or neglect in measure the internal work of the Spirit of Christ, which is essential to the experience of salvation.

Thus a fresh cause of uneasiness and disension arose. Many in our borders who retained a lively remembrance of the bitter trials and sufferings they had endured in the struggles through which the Society had recently passed, looked with sad foreboding at the spread of doctrines which they foresaw must occasion renewed disturbance; and viewed almost with dismay, the rise of disputes and alienation of feeling.

As early as the year 1831, John Wilbur, a minister from New England, in the course of a religious visit to England, was brought under great concern on account of the evidences which he there met with of departures from our original principles. So great was his affliction on this account that after the conclusion of the Yearly Meeting of London in 1832, he retired to his chamber "where," he says, "my head was as waters and mine eyes as fountains of tears, in weeping for the backsliding of the sons and daughters of my people." A subsequent entry in his journal is as follows: "So I continued to mourn, and to feel like adopting the prophet's subsequent language of grief as I pass through this land, 'How is the gold become dim! How is the most fine gold changed!' " Again he remarks: "A disposition is making its appearance in divers places in this nation, and among Friends, to think very little of the cross of Christ practically, and to plead for liberality both of faith and practice; the perceptible influence of the Holy Spirit is mournfully deprecated by many members of our Society; some of them in conspicuous standing are now disposed to put the Scriptures in the place of the Spirit, and

seem ready to hold them as the only rule of faith and practice or guidance of Christians," &c.

The result of this exercise was the preparation of a series of letters addressed to his friend George Crosfield, of Liverpool, and published by him, in which the true principles of our religious Society are maintained, as opposed to the views of those who deny the atonement and Divinity of our Saviour; and of those also who too much neglect "the continual extension and operation of his power and spirit, light and grace, perceptibly working in the hearts of men for their preservation and safe guidance through the whole course of their lives." This publication was a timely exposure of the influences at work to lead our members away from our long settled doctrines; and it, and the other labors of its author, met with a hearty response from some valued and clear-sighted Friends in Great Britain. The late John Barclay, of Croxden, writing to him in 1834, says: "Oh, how often have I remembered thee and thought of thee, as one whom the Lord has made use of in an eminent manner, while on thy visit to these islands, to uncover and bring out to view the working of the wily enemy, as it is this day, and to manifest the path of the Just One, and the work of God in and among his people." Similar expressions of unity and sympathy were made by Sarah Lynes Grubb, James Backhouse, Ann Jones, and others. These were no doubt very comforting and confirming to him, particularly as his honest, faithful and open testimony brought upon him much censure and reproach.

About four years after the publication of John Wilbur's Letters to George Crosfield, the withdrawal from the meetings of Friends in England of Isaac Crewdson and others, and the setting up of separate meetings by them, showed that there was ample cause for the uneasiness that had led to the preparation and issue of the warning; and vindicated the clearness of vision of this watchman on the walls of Zion. Those who took part in this separation are often referred to as *Bevanites*, from the name of a work, *The Beacon*, which was an exposition of their views.

The pages of THE FRIEND show that at an early period some of those who contributed to its columns were sensible of the impending danger. In the Fourth Month of 1833, a caution is extended by one of these, that, "in endeavoring to defend the Holy Scriptures and the great doctrines they teach, against the assaults of infidelity, cloaked under a refined spirituality, we do not undervalue the influence and guidance of that blessed Spirit or Grace of God, which only can lead us in the path of peace and safety." "Since we have been delivered, through the Lord's mercy, from the flood of libertinism and unbelief which so lately threatened the very existence of the Society, it behoves us to take great care lest our abhorrence of these evils should carry us to extremes on the opposite side." Vol. vi. p. 213.

Similar cautions appear in the pages of THE FRIEND, from time to time. Thus in the follow-

ing year, a writer says: "We cannot be too grateful for the preservation of the sacred writings, which are able to make wise unto salvation, through faith which is in Christ Jesus, but they are not designed to supersede the immediate revealing power of the Holy Spirit, by which alone the soul can see and feel its corruptions, receive saving faith in the Redeemer, and experience translation out of the kingdom of Satan into the kingdom of the dear Son of God." Vol. vii. p. 205.

One of the writers of that day portrays in a manner which, in the light of subsequent experience, seems almost prophetic, the fruits of a lessened regard for the doctrine of the immediate revelation of the Divine will to man: "If the members of this Society renounce their faith in the sensible influence and direction of the Divine Spirit, they will become enemies of the cross of Christ, and despisers of the foolishness of its requisitions. Worldly prudence and propriety will be substituted as the standard to decide questions of religious duty—the sentiments of our forefathers respecting many practices which they deemed fruits of the Spirit will become obsolete—our mode of worship will be irksome and formal—learning will be considered necessary to give point and interest to the ministry—our meetings for discipline, if any discipline should then be thought necessary, will be conducted in the same spirit and wisdom in which temporal business is managed, and religious concerns must come to an end, as they can have no other origin than the immediate communications of the Holy Spirit." Vol. vii. p. 366.

The Beacon was published in 1835, and called forth several replies from members of the Society in Great Britain, who showed that some of the doctrines advocated in it were not consistent with the views of Friends. Warnings against its teachings were also issued to their members by most of the Yearly Meetings of Friends on this continent; who were concerned that they should not lose sight of the spiritual views that had ever distinguished our Society, that their faith should not be weakened in the immediate guidance and influence of the Holy Spirit, and that they should not regard the Holy Scriptures as the primary source of faith and knowledge; but should esteem them as deriving their authority from the Spirit which had inspired their writers, and which therefore must be looked up to as the fountain of all spiritual knowledge. In the 8th and 9th volumes of THE FRIEND, I find such warnings reprinted from the minutes of New England, Philadelphia, Ohio, Indiana and Baltimore Yearly Meetings; most of which mention *The Beacon* by name. The minute of Indiana Yearly Meeting says of this book: "The author has taken the liberty of extolling and setting the Holy Scriptures above what they say of themselves, and above what we, as a Society, have always held them; placing them as a rule paramount to the Holy Spirit; invalidating or denying our Christian and Scriptural testimony to the universality of the gift of grace, or spiritual teacher," &c. This minute may be taken as

an indication of the nature of the concern which, at that time was felt in many parts of America. For the Beaconite movement was believed to be an effort to escape from "the duty of patiently waiting upon Christ, to know Him to take the government of the heart, humble it by his fiery baptism; and instruct it in the mysteries of his Gospel;" and to substitute for this, human effort, study and accomplishments.

After considerable labor had been extended, Isaac Crewdson, the author of *The Beacon*, was displaced from his position as a minister, by Hardslaw East Monthly Meeting, held at Manchester, and soon afterwards, in the Eleventh and Twelfth months of 1836, about fifty others sent in their resignations as members of our Society, and established a new meeting, calling themselves "Evangelical Friends." Silent meetings were dispensed with, and the usual order of their service was said to be, "reading the Scriptures, expounding them, and prayer."

About a year afterwards (in the First Month of 1838) Isaac Crewdson administered the rite of water-baptism to several of their number in one of their meetings. Some joined the Episcopalians, others the Plymouth Brethren, and their organization soon ceased to exist.

FOR "THE FRIEND."

"The Root Principle."

Brethren, I count not myself to have apprehended; but one thing I do: forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus. Let us therefore, as many as be perfect, be thus minded: and if in anything ye be otherwise minded, God shall reveal this unto you. Nevertheless, whereto we have already attained, let us walk by the same rule.—Phil. iii: 13-16.

The phrase, "the root principle," familiar to those conversant with the literature of the Society of Friends, as one used by our honored predecessor, William Penn, has been forcibly recalled to my mind during the proceedings of our Yearly Meeting, which has just closed. "If the trumpet give an uncertain sound," wrote an apostle, "who shall prepare himself to the battle?" It has seemed to me especially incumbent on the members of our highly professing Society, whose "root principle" is a single-eyed devotion to the individual manifestation of the Word and Grace of God, to be strictly on our guard against any such perversion of "the things which were written aforetime," as may at all tend to vitiate or weaken our testimony thereto. There is one in particular of "the things written aforetime," respecting which I believe this caution may be now needed. When the same eminent apostle, in his Epistle to the Philippians, made the statement, "Brethren, I count not myself to have apprehended," I think it is evident that he meant that he was conscious of himself falling short of his own ideal of this single-eyed devotion, the realization of which would fill "his whole body" with light; or, in other words, would make his whole individuality or character consistent in itself and luminous to beholders. He seems to have meant that he was conscious that his views were still so far restricted, if not deranged, by tradition, habit, or other comparatively external influence, that his faith was not yet that ideal or mature faith "to himself before God," which, as he in another place, (Romans xiv: 22) taught, could alone bring the crowning grace of entire consistency. He is accordingly in still another

place (1 Cor. xiii) very careful to distinguish the stage of education in the life of the soul, with its dependence on external influences, or, the "foolishness of God" and "of preaching" from that of edification, with its consummation of and essential emancipation from such influences. But he is firm in his assurance of the "glad tidings" of the "Wisdom of God" and the "Power of God" in "the kingdom of heaven at hand," and he will not slacken his pursuit of them. He accordingly puts in practice his own doctrine that "we are saved by hope," and after making that humbling confession and not having apprehended, he proceeds: but one thing I do: forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus. "For the prize," that is, of kingship and priesthood in Christ, as the rich reward of persevering and enduring to the end, with the patience of hope, in that single-eyed devotion to the individual manifestation of the grace and truth" which "come by Jesus Christ."

Though he may not have found that unbroken "state of recollection" in which fixity of purpose ensures coherency of action (because therein even the most habitual actions remain under the government of consciousness) yet he was conscious that his ruling purpose was a perfect one. Having the witness of the Spirit in his own heart to that effect, he could profess that there was to him no condemnation. (Rom. viii: 1, 2) and that he was "free from the law of sin and death." Therefore in the passage which we are now more particularly considering, he could proceed to say, "Let us therefore, as many as be perfect, be thus minded" (i. e., let us unite at least in this pursuit); and if in anything ye be otherwise" (i. e., differently) "minded, God shall reveal even this unto you." That is, the difference of sentiment in minor matters which must more or less prevail while we are still only in pursuit of the mark and prize aforesaid, must disappear in God's own best time as we draw nearer and nearer to one another, in approaching on our several lines of individual revelation and guidance, to the full radiance of that glorious goal.

But, remembering that it is the office of true hope to instil patience and not impatience, he cannot admit the warning not to be in a headlong haste to realize this rich coalescence of feeling and vision by any superficial uniformity of profession or performance. Such haste, in leading to a neglect of the individual Divine guidance, and to a neglect of the well-spring of life in themselves, could only defeat itself. In the solid and substantial work of mutual edification, each individual must, in the measure of his own gift and calling, be the ruler of society, so reversing the rule of mere edification in which society rules the individual. Or, to be more explicit, in which God rules the individual through society.

If therefore must be regarded as addressing his hearers or readers individually, as simply and emphatically commending them with himself to the rule of individual experience (See Rom. v: 4, Old Version) when he adds, "Nevertheless, whereto we have already attained, let us walk by the same rule" ("the same thing" being omitted in the now corrected text). That is, as it applies to us in our day, let us adhere to the "root principle" of William Penn and of all his true follow-believers, as that by which the things of Christ in their due order and useful fulness will be made known unto us.

What else, indeed, is this, than that which George Fox so rejoiced that he was enabled and commissioned to proclaim to the people, that; they must seek within themselves for the principle and power of their salvation, at least beyond the rudimentary stage of listening to words such as his? May we be true to the responsibilities of our spiritual heritage!

PHILADELPHIA, Fourth Mo. 20th, 1880.

FOR "THE FRIEND."

Notes of a Visit to Italy.

(Continued from page 293.)

After visiting some of the many works of the ancient inhabitants of Rome, now in ruins, but still calling forth a lively interest from the tourist, we were compelled from the lateness of the season and the approach of warm weather to turn aside from other ruins of equal interest to sight seers, and seek out the works of the Italians succeeding the old Romans, beginning with the fall of their Empire, and the establishing of the Papal power in the fifth century; and here we found the noble buildings and churches so numerous in all parts of Rome, that it was difficult to decide where to begin. Churches are said to be numbered by hundreds, so we could only select a few of those of the most note. St. Peter's, St. Paul, St. John De Lateran, and a few others of less prominence. The first, St. Peter's is not easily described; it was built or re-built, about 1500, by Julius 2nd, at a cost of fifty million dollars, taking 100 years to complete it. It is approached by a semicircle on each side, with a piazza and 4 rows of lofty columns 70 feet high, leading up, by three successive flights of marble steps, 379 feet long, with an Egyptian Obelisk in the centre of the area 130 feet high, of one solid piece of granite. The front of this majestic Basilica is supported by a single row of Corinthian columns, adorned with pilasters, and thirteen colossal statues; five lofty portals open into the vestibule 468 feet long 50 in breadth and 66 feet high, paved with variegated marble. Ceilings covered with gilding, vaults adorned with pillars, pilasters, mosaic and bas-relief figures and statues of Constantine and Charlemagne. These five porches open into the body of the Cathedral; there are interminable niches with statues, and in the curves of the numerous arches. Reaching the foot of the altar, you survey the grandeur of the scene with the magnificent dome in the centre of other smaller cupolas, 10 or 12 in number, all adorned with gilt and mosaic pictures and portraits of the various dignitaries of the Church through the past ages. The dome from the pavement to the lantern is 440 feet, and 139 feet in diameter—it is like a firmament over your head. The cupolas are from 139 feet to 277 feet, the whole adorned beyond the power of pen to describe. The whole length of the building is 613 feet, by about 200 feet wide; or nearly the size of the area or space the new public buildings in Philadelphia occupy, including the hollow square, and full of rich adornings of statuary, paintings in mosaic, and polished marble, probably the richest and most extensive hall ever erected by human hands.

On the right hand nave, as you pass up towards the high altar, is a bronze statue of Peter the Apostle, lying with outstretched limbs, with the toe of the right foot much worn away by the kisses of the faithful (if not to Christ) to the memory of Peter. My companion was allowed only to pass her hand over the much worn toe, and her husband playfully sprinkled her with

FOR "THE FRIEND."

the so-called Holy Water, even after so light a touch of the idol. A fuller description of the majestic and costly building might be given, but enough has been said to show that it could not have been built to accommodate true Gospel ministers to preach the Gospel of Christ, and a company of true worshippers to worship the Father in spirit and in truth.

St. Paul's Church, outside the old city wall some two miles, rebuilt after the fire in 1823, and reopened in 1854, is beyond comparison if not in size yet in its beauty of finish, the most perfect gem and richly adorned building our eyes ever beheld, and admitted to be the finest in Rome. Its graceful columns are 80 in number, of highly polished marble; walls and ceilings also of marble of probably fifty different shades of color, plain and variegated—all parts highly polished—producing certainly a thrilling effect on the beholder. Its size is 396 feet by 222, built on the site of the martyrdom of the Apostle Paul; and to commemorate this event under Nero, the then Emperor, and to be a monument to his memory. On either side of the statue of Christ is one of Peter and Paul, with many other portraits and statues of notable worthies; and around the church, above the columns, are portraits of all the Bishops and Popes, from Peter down to the last one, Pius the 9th; these portraits are in mosaic, four niches only are left to be filled with the present living one, and three others to follow; and then, the whispering of the populace is (and rather loud too) that the papacy ends, and a simple Bishop, without princely claims, is to take his place.

Nowhere, in all our round of sight-seeing, did we discover such a display of skill, taste and beauty; marble of such a variety of colors; walls, ceilings, columns, all so fresh and shining with polish; and its pictures in mosaic added to the attractions of the place. As a monument to the memory of the noble Apostle and servant of the Lord Jesus, it might by some persons be let pass; but, as a building for the accommodation of a company of Christian worshippers, one of less pretensions would be far preferable.

We paid visits to several other churches, but our friends must remember that those buildings in Rome are so numerous that only a few of the most noted ones can be seen and noted, unless one has plenty of time to spare. St. John's of Lateran, the mother church of the early Roman Christians, attracted our attention, built in the early centuries, before the time of Constantine, is not as large as either St. Peter's or St. Paul's, but dating back to a period before Christianity became corrupted by innovations; it existed one thousand years before it was destroyed by fire in 1308, and was then rebuilt by Clement 5th. It was originally the Bishop of Rome's church, and has been, and is now considered by right, the church from which he takes his title of Pope, or father of the Roman Church, and takes precedence over all the other churches. It has a beautifully adorned interior of altar, fluted columns, statues, paintings, mosaics, arches and chapels, and a large tub, said to have been used in the baptism of Constantine. One chapel dedicated to John the Baptist, with a statue of the evangelist and two spiral columns taken from the Temple of Jerusalem; no woman is allowed to enter this chapel, because John was betrayed to the loss of his head by a dancing girl. Notwithstanding this prohibition, one American woman took the liberty to enter.

Adjoining this church is the bishop's residence and belonging to the Bishopric, where our guide informed us he would be retired to,

when he was notified to vacate the Vatican-Close by the church building of Scala Santa, "holy stairs," consisting of a flight of 28 marble steps leading up to the Sancta Sanctorum—a chapel open only to the Pope, who alone may officiate once a year. These steps are said to have been brought from Jerusalem by the mother of Constantine, as the veritable stairs Jesus came down after his examination before Pilate; these steps may be only ascended by pilgrims and believers on their knees. Two of these steps are now partially covered to preserve the stains of blood drops said to be on them. This going up on the knees is to insure plenary pardon and indulgence for an indefinite period of time. Dickens puts this performance in its ridiculous colors, which may not be given here—"to offend polite readers;" but Luther, when in Rome, made the ascent half-way up, when he said he heard a voice whispering to him these words, "The just shall live by faith!" and he turned and went down without reaching the summit. This ridiculous performance is still practised by duped priests and people, more so by pilgrims and visitors than by the Italian people.

A visit with a guide to the Vatican, the present residence of the Pope, was afforded us. It is a vast collection of palaces and gardens of 25 acres, with galleries of paintings and sculpture. We were taken through parts of these three and five story buildings, by our intelligent guide. The galleries of paintings and sculpture are superb: canvas paintings of enormous size and great beauty, including also mosaic work in abundance, are so numerous as to defy description—can only be realized by seeing. We visited the rooms where the artists were working on mosaic pictures, putting the small stones of various shades and colors together, to produce pictures and portraits in perfection without either canvass or paint. Two men were working at a picture of not more than twenty square feet in size, and on enquiry they informed us that it would require six years to complete it; such, however, is a specimen of the time and labor given to the production of these works of art; and they are found in great abundance all through the churches and public buildings in Italy. St. Mark's, in Venice, contains no less than 45,700 square feet of this adorning on its walls and ceilings. But then labor of all kinds is cheap in Italy. We did not see the series of rooms in the Vatican filled with presents of almost every imaginable kind, from all parts of the Catholic world, made to the Pontiff on the occasion of his jubilee. These rooms were open to visitors on "Sunday," but we did not choose to be among their number.

Fourth Mo. 10th, 1858.

MANY a housekeeper suffers for the lack of room in garret and cellar, and in closet and drawer, which can be supplied by the destruction of the worthless things that have been unwisely spared through a morbid shrinking from the work of wise destroying. Many a business man, or professional man, is unable to find valuable papers when he needs them, or to know what papers before him call for immediate attention, because of the burdensome accumulation of papers upon his desk, or in his pigeon-holes, which ought to have been destroyed. Many a garden or grove is lacking in beauty because of the lack of the destructive element in him who spares stalks and branches that are not worthy of saving. And many a path of duty is barred by obstacles that have been spared when they should have been destroyed.

The Fall and Restoration of Man.

All who read and understand the Bible aright, must believe that man has lost the life of innocence and purity which he had when he first came from the hands of his beneficent Creator. And whether we read and understand the Bible or not, we find by our own experience, that we are prone to evil; and by nature the children of wrath, with a deceitful heart which often proves to be desperately wicked. And however much we may long to be freed from the evil nature which troubles us, we find we are not sufficient of ourselves to free ourselves from the defilements of sin. For Satan cannot cast out Satan, neither is he willing to do it. So the sinful or fallen nature that so easily besets the heart of man, must of course remain in us, until it is overcome and cast out by Him, whose power is over all the powers of Satan.

This redeeming power or grace will be given to such as have sufficient faith in it to receive it. So that we must have an ear to hear it; and when we hear the Lord's voice, and open the door of the heart, and let Him in, then He will give us a sufficient portion of his power to enable us to become his sons and daughters; and if his children, then heirs with Him, and joint heirs of that glory which He will abundantly reveal in us, and thus make us partakers of the inheritance of the saints in light. Here is full salvation, or a restoration from the effects of the fall. But it is not of ourselves, lest any man should boast of good works. But all that pertains to salvation is the gift of God. While all that comes under the ministration of condemnation is from the enemy of all righteousness, who has ruled and reigned in the hearts of the children of disobedience ever since the fall of man.

That which now "leteth will let," or hinder, the growth of the seed of righteousness until it be taken out of the way. So, blessed are they that do his commandments, that they may have right to the tree of life, and enter again into the city, and into the paradise of God, because they have withstood the temptations of the enemy. These are they who have gotten the victory over the beast, and over its image in all its various forms. Therefore they can sing, not only the song of Moses, their outward leader, law-giver and deliverer, but the song of the Lamb, their spiritual deliverer, and law-giver, and leader, that has led them beyond Jordan, to an inheritance incorruptible and undefiled, and that fadeth not away.

The song which they sing, and which many now are vainly trying to imitate, is a song which none can learn but such as are redeemed from the earth. And the standing that they stood upon was figured out to be a critical standing; as a sea of glass mingled with fire,—the devouring elements ready to swallow up and devour, in case of a slip or fall. So they had to watch their steps, until they became steadfast and immovable. Then they could have the harp of God, not the harps of men, and their song was, "Great and marvellous are thy works, Lord God Almighty," &c. (Rev. xv. 3.) But their song did not need the tune or art of men to make it musical. For it was transcendently glorious and unspeakable, as some of the redeemed children of the Lord can bear witness to, when they are favored to hear it in the silent watches of the night, when all earthly sounds are hushed in stillness.

These are not defiled, for they are virgins. These are they which follow the Lamb without.

soever He leads them. These were redeemed from among men, being the first fruits unto God and the Lamb. And in their month was found no guile, for they were without fault before the throne of God. They had come out of great tribulations, and did not sink under them, or faint by the way; but continued the conflict with the enemy until they got the victory over the beast, or beastly nature in all its various forms. (See Rev. xv. 2.) Therefore are they before the throne of God, and serve Him day and night in his temple.

If holiness or a restoration to primitive purity, is attainable here on earth, it must be, I think, an individual work. But this idea need not interfere with the saying of Peter, where he speaks of the "times of restitution of all things which God hath spoken of by the mouth of all the holy prophets since the world began." "Because God hath appointed a day in which He will judge the world in righteousness by that man whom He hath ordained." And as to the time and manner in which this great work of restoration will come, we need not to know. For it is one of the secret things that belong to God. But such as are revealed, I do believe belong to us and to our children. And many of them were revealed to holy men of old, and left for our learning, that we, through patience and comfort of the Scriptures, might have hope. So "Tis not for us to question, but to praise the great Creator, wise in all his ways.

In this state of mutability, we only "know in part, and prophesy in part," &c. But I do believe that a state of perfection, as far as freedom from sin is concerned, must be attained before that perfect restoration is enjoyed that was lost in the fall. And in order for a restoration, we need to build upon a sure foundation, instead of the sinking sand. And we need to build with materials that will stand the fire. For every trial will come upon us to try us. Else we may, like the Babel-builders, erect an airy structure, whose top we may suppose will reach to heaven, and thus make to ourselves a name. And have we not Babel-builders now, who are building lofty, airy structures to make to themselves a name? Are not too many contenting themselves by holding on to the name, and to the form of Godliness after the power has left it? But all this Babel-building leads into confusion and ends there. So what we need is a restoration on a sure foundation, that we may have the good, without the fall to evil.

It is written, "Thus saith the Lord, behold I lay in Zion for a foundation a stone, a precious corner-stone, a sure foundation." And he that buildeth on it will not be confounded like the Babel-builders were. But we may remember that Babylon was built by a different spirit, and is in bondage; while the Jerusalem which is above, is free, and the mother of all the free, or new-born children of God. So, what we want while in this probationary world, is so to pass the time of our sojourning here, as to be prepared to join the general assembly and church of the first-born, when time to us shall be no longer. But this happy restoration will only be by submission, through the cross, unto the law of the spirit of life in Christ Jesus, which will set us free from the law of sin and death, and reunite us to Him who is the Light and Life of men.

DAVID HULLSTON.

DUBLIN, IRE., Third Month 11th, 1859.

"NO MAN," once said Sir Benjamin Rudgard, "is bound to be rich or great; no, nor to be wise; but every man is bound to be honest."

AN ADVERTISEMENT.

BY JULIA M. LIPPMANN.

She's put her next advertisement in every vine and tree;
"Spring Opening!" Madam Nature begs that you will come and see
Her stock of gorgeous evening skies; her quantities of sun;
Her hosts of buds and blossoms. Come! its free to every one.

And Madam Nature gives away her goods—you needn't pay.
She only begs you'll come prepared to like her grand display
Of sunsets and of floating clouds, of blossoms red and gold.
Come soon into the woods, kind friends, before the stock grows old.

—The Independent.

MY WORK.

I come to Thee, O Lord, for strength and patience
To do thy will.
Help me, O Father, in this world of duty
My place to fill.

I may not go and labor in Thy vineyard,
Where, through long hours,
Brave men and women toil, and from Thy presses
The red wine pours.

My work at home lies with the olive branches
Thou'st planted there.
To train them neatly for the heavenly garden
Needs all my care.

I may not in the woods and on the mountains
Seek Thy lost sheep;
At home a little flock of tender lambskins
'Tis mine to keep.

Thou givest to Thy servants each our life's work;
No trumpet tone
Will tell the nations, in triumphant pealing,
How mine is done.

But 'twill be much if when the task is ended
Through grace from Thee,
I give Thee back undimmed the radiant jewels
Thou gavest me.

—M. P. Handy.

GIRLS WHO ARE IN DEMAND.

The girls that are wanted are good girls—
Good from the heart to the lips;
Pure as the lily is white and pure,
From its heart to its sweet leaf tips.
The girls that are wanted are home girls—
Girls that are mother's right hand,
That fathers and brothers can trust to,
And the little ones understand.

Girls that are fair on the hearthstone,
And pleasant when nobly seen,
Kind and sweet to their own folks,
Ready and anxious to please.
The girls that are wanted are wise girls,
That know what to do or say,
That drive with a smile or soft word
The wrath of the household away.

The girls that are wanted are girls of sense,
Whom fashion can never deceive;
Who can follow whatever is pretty,
And dare what is silly to leave.
The girls that are wanted are careful girls,
Who count what a thing will cost;
Who use with a prudent, generous hand,
But see that nothing is lost.

The girls that are wanted are girls with hearts;
They are wanted for mothers and wives,
Wanted to cradle in loving arms
The strongest and frailest lives.
The clever, the witty, the brilliant girls,
There are few who can understand;
But O! for the wise, loving home girl,
There's a constant, steady demand. —Lyon.

Early Meeting-houses of Friends.

(Continued from page 368.)

MARKET STREET MEETING.

Friends finding that the Centre meeting was inconveniently located for most of them, took into consideration the propriety of having a meeting-house in a more central situation; and afterwards took steps in that direction, which perhaps cannot be better followed than by some extracts from the minutes of the time, viz:

"At a Monthly Meeting held at Robert Ewer's house the 28th day of the Tenth Month, 1694. This meeting requested Anthony Morris and Samuel Carpenter to speak to Governour Markham about his lot of land that lyeth on the High Street near the market place, and enquire the length and breadth; and if it may be thought convenient, to erect a meeting-house thereon."

The Friends reported that "they had him ready to serve Friends therein; and Friends agree to present him with 50 pounds, and acknowledge his kindness therein, which they are desired to pay the Governour for the ground to build the meeting-house upon, and desire him to make a title therefor to Edward Shippen, Sam'l Carpenter and Anthony Morris, for the use of Friends as aforesaid. David Lloyd is desired to draw a Deed to confirm the lot of land bought of Governour Markham, also another Deed to declare the use of it."

Having secured a desirable lot at the S. W. corner of Second and High (Market) Streets, they proceeded in the next year to make arrangements to build upon it.

Ninth Mo. 1695. "The meeting taking into their consideration the necessity of a new meeting-house, the said matter is left to the consideration of the next Quarterly Meeting.

2nd of Tenth Month, 1695. "At a Quarterly Meeting held at the house of Robert Ewer, the matter of building a new meeting-house in Philadelphia was mentioned at this meeting and unanimously agreed to, and several Friends subscribed for the carrying of it forward, and further was recommended to the Monthly Meetings of this County for their assistance. The meeting desires John Lineham and Robert Ewer to get Friends about Philadelphia to subscribe towards the building, and desires Edward Shippen, Sam'l Carpenter, John Line and John Jones to provide materials and agree with workmen to build a meeting-house 60 feet long and 40 feet wide, and as high as may be convenient in proportion to the length and breadth."

31st of Eleventh Month. "The deed for the lot of ground in the Second Street that was purchased of Governour Markham, was read in this meeting and delivered to Sam'l Carpenter, Edward Shippen and Anthony Morris, Trustees."

The building committee "doe report they have agreed with Thomas Duckett and William Harwood for the building of the said meeting-house, which is to contain 50 foot square, with cellars underneath; and they deem the charge to be about 1000 pounds."

In describing this building, one author says, "It was built of brick and nearly square in shape; the roof rose on each side to a central lantern, which gave light to the interior." Another says, "It was surmounted on the centre of its four-angled roof by a raised frame of glass work, so constructed as to pass light down into the meeting below."

The construction was probably much the same as that of the "Great meeting-house" at Burlington described in a former paper; a

representation of which has been handed down to the present generation.

The house was near enough completion toward the end of this year for meetings to be held in it, but was not fully finished until some time during the next year, as the following minutes will show.

"At our Monthly Meeting held at the New meeting-house the 29th day of Eleventh Month, 1696-7, and at our Monthly Meeting-house in High Street in Philadelphia, the 30th of Second Month, 1697, 'tis agreed by this meeting that henceforward there be two meetings at this place upon a First-day during the summer time: the morning meeting beginning at the ninth hour, and the other about two in the afternoon. Also it is agreed by this meeting, at the request of the Friends on Schuylkill side, that there be a morning meeting at the Centre meeting-house during the summer season, beginning at the ninth hour, and that John Lineham give Friends notice next First-day, that the Fifth and Friends' meeting following, be held at the Centre while this place is plastering."

Their next concern appears to have been to extinguish the debt, viz:

Second Month, 1699. "Whereas several Friends are at Salem Yearly Meeting, this meeting thinks it convenient to defer a subscription for discharging the debt of the meeting-house until the next Monthly Meeting, when Saml Carpenter and Anthony Morris are desired to assist Pentecost Tague and John Zubly in getting subscriptions presented for paying the debts due for building the meeting-house."

Friends desiring to hold the Yearly Meeting in Philadelphia, it was found that this house had not sufficient seating capacity, therefore they set about increasing it.

28th of Fifth Month, 1699. "It was proposed to this meeting the necessity of enlarging this meeting-house by erecting a gallery; upon which it is agreed that it be done between this and the next Yearly Meeting, and that William Harwood shall prepare stuff for the same."

The gallery was promptly erected at a cost of about £16. "The deeds for the ground whereof the meeting-house stands are in this day delivered into the hands of Anthony Morris."

(To be continued.)

From "THE RED MAN."

Both Sides.

(A FACT.)

"I know them root and branch," the speaker went on, "my duties have made me thoroughly familiar with their character and ways. They're a bad lot, and you'll make nothing out of them. You can hold an eel as easily as you can an Indian, if you try for any moral sense in him. I've been sheriff here for twelve years, as I told you, and if I don't know the race and all it's worth, and nobody does."

His listeners were New England people traveling in Alaska a year ago this winter.

"But you have seen only the savages and the worst specimens of those," answered one of these three ladies.

"All the specimens there are," laughed the sheriff.

"But the civilized Indians, the school at Sitka—we are going there—have you ever seen that?" asked another, the daughter of the lady who had spoken first, a young girl whose bright eyes and smile had won her many a pleasant thought on the way.

"Why don't you come and see for yourself?"

asked the third. "That's the only way to be sure."

"Oh, no, it's not," returned the sheriff.

"Don't you believe you would say about this same thing that you are saying of the Indians if you could be set down in the midst of your own ancestors a thousand years ago?" questioned the first speaker. "We are very proud of being descended from Normans and Saxons and Danes, but their way of living couldn't have been quite what we should endorse to-day."

The practicalness of the assertion seemed to make an impression, for the disbeliever in Indian possibilities admitted the truth of it, and was silent a moment.

It was during this silence of his that the third lady persisted, "Come up to Sitka now with us, and you or we will be convinced."

He stood thinking.

"I believe I'll go," he answered at last, smiling. "And then I shall have another proof of what I am saying now."

He did go to the Indian school at Sitka. It was after a thorough examination of it in all its details that he thanked the ladies for having brought him. "I confess," he said, "that my opinion of the Indian has changed. I didn't dream that there was this in him. He will never seem the same to me again."

If everybody would only be as wise, and take the trouble to look on both sides of that great shield of fact which we have a way of fancying that we have thoroughly seen from one point of view alone.

F. C. S.

For "THE FRIENDS."

A Dredging Excursion.

In response to a kind invitation to accompany two of my friends on a dredging excursion in the waters about Atlantic City, N. J., I left home on the 3d of Fourth Month.

We reached Longport, the southern extremity of the beach on which Atlantic City is situated, before noon, and went on board the Flirt—a small sailing vessel especially designed for making excursions with sailing parties.

The West Jersey Rail Road leaves the solid land at Pleasantville, passes over several miles of salt marsh, which is so nearly the level of the ocean as to be overflowed when the tides are higher than usual; and crossing the bridge over the channel, cutters upon the sand of the beach proper. This structure of an outlying sand beach, separated from the main land by a lower lying interval filled with water or marsh, is common along the whole of the New Jersey coast, and extends even to Florida.

I was interested, as I walked by the edge of the ocean at low tide, to observe a similar formation on the beach itself. The receding waters had left long stretches of sand-bank slightly elevated above the surface, with strips of water, mostly quite shallow, intervening between these and the shore. These sand-banks and the inner lower spaces, were a reproduction on a small scale of the beach itself and of the marsh that lay between it and the shore. The constant beating of the waves appears to have the effect of piling up the sand on the edge of the sea, to a certain height, somewhat above the average level of the tide. This sand is moved by the action of the winds, and thus are formed the ridges of low sand hills, or *dunes*, as they are called, which formerly lined this beach, and still line the greater part of it for miles south of Atlantic City.

A heavy storm a few weeks ago had washed away the ocean face of many of these sand-

dunes, and the surface thus exposed showed the sand to be in regular strata or layers, deposited by the wind at different times. The edges of these layers projected slightly from the exposed surface, showing that there was a slight difference in the degree of consolidation or hardness of the different layers. In some places, buried beneath a great number of such layers, were multitudes of the shells of the common sand clam (*Mya solidissima*), which is so exceedingly abundant on this coast. If by any of the processes of nature these sand-hills should become consolidated into stone, we would then have a reproduction of the rocks and fossils similar to those which are now found in many parts of the world; and which unfold to the geologist the operations of Nature in ages long since past.

The sand on the sea-shore of New Jersey is almost pure Silice (*Quartz*), with a slight admixture of lime derived from the shells of the marine animals which inhabit the adjacent waters. This sand has been derived from the destruction of the pre-existing rocks, which have been dissolved, worn away and rolled into fine particles, principally by the chemical and mechanical action of air and water. The whole of southern New Jersey is covered with layers of sand, gravel or clay, which have been thus formed. The water has, to a large extent, sifted out, or separated, those materials from each other. The clayey portions, in the shape of mud, remain longer in suspension, and are carried by the waves until they find a quiet place for subsidence.

As I was examining the effect of the storm on the sand-dunes or hillocks, I noticed a number of holes about two inches in diameter, running obliquely into the sides of these hillocks. Some of them were deep enough to receive my cane to its full length. I supposed they had been made by a species of sand crab which inhabits the New Jersey beaches, and which digs its holes above the reach of high tide. I had not met with any of those crabs myself, but a naturalist friend, who is familiar with this part of the coast, described to me a little adventure with one of them. He was sitting one day near a hole, eating his lunch, when a crab made its appearance. Wishing to secure it for a specimen for his cabinet, he hurried a pork steak which he had by him at the animal, hoping to knock it over, so that he could catch it before it could regain the entrance. He missed his aim, but the nimble crab darted after the steak, seized it, and carried it safely into his subterranean home!

In connection with the layers or strata of the sand-dunes, it may be well to mention, that while at Atlantic City, I visited a well which a water company is boring in the salt marsh adjoining the city, to procure a supply of fresh water for the use of the inhabitants. The same company had previously sunk a similar well, from which their supply is now drawn. The engineer in charge informed me that water free from salt can be obtained almost anywhere on the beach by sinking a shallow well of only a few feet. The fresh water derived from the rains filters into such wells, and the sand appears to prevent the access of the water of the sea. But as the well deepens the water becomes salt, and they do not again meet with fresh water until a depth of about 800 feet is reached. The strata of clays, sands and marls which underlie southern New Jersey, have a gentle slope downward towards the ocean; so that a particular stratum of clay or sand which appears on the surface in

the western part of the State, say about Burlington or Camden, will be found perhaps hundreds of feet down when the ocean beach is reached. When the borings for the well reaches such a layer, the water which rises from it is that which entered the ground near Burlington or Camden, and has followed the layer from that place to the point where it is tapped. The well which is now used is about 1100 feet deep, and the water, which appears to come from a layer of white sand, rises to the surface. It furnishes about 700 gallons of water per hour. The well which the company is now sinking has reached a depth of 1000 feet and the work is still progressing.

The people at Atlantic City have recently been much interested in a whale of a rare species which had been caught by the crew of a life-saving station below the city a few days previously. It had probably come near the shore in pursuit of the fish on which it feeds, and as the tide receded, found itself cut off from the open ocean by one of those sand-bars, which I have mentioned as being often formed along this coast, with deeper water between them and the shore. In its efforts to escape, it was stranded on one of these bars. It was about 13 feet long—one of the Bottle-nosed Whales. After being exhibited for some days to the curious, it was transported to Washington for the benefit of the Smithsonian Institute. The skin was described as remarkably smooth and shiny, resembling the polished surface of "patent leather."

The sea-clams, which are so abundant on the coast, abound on these low sand-bars, which are under water during part of the tide. In walking along the beach I noticed the upturning of the sand made by them in their motions, and occasionally pried one out with my cane. I noticed also that the gulls had been similarly employed, for the three-pronged tracks made by these birds were thickly clustered around the small depressions marking the spot whence the clams had been taken. The friend whom I was visiting told me that the day before, he had twice seen the gulls carry a clam up to the height of 20 or 40 feet and then drop it to the wet sand. The shock is sufficient to break the shell, which is rather thin (much thinner than that of the kind commonly used by the people for food), and then the gull descends and eats the flesh which it has so ingeniously contrived to obtain access to. I found the gull tracks also around a hole in the sand, from which one of the boat shells (*Natica*) had been dug up. But this globular shell would be much harder to break than the flatter sea-clams, and the gulls had left it unharmed.

We landed from our boat to inspect some works, where in the summer that boy fish, the Menhaden, is converted into oil and fertilizers. The proprietor informed us that their factory consumes from four to 5,000,000 fish in a year. They are about the size of a herring, but thicker and heavier. The Menhaden swim in huge schools near the surface of the water. When a school is seen from the fishing vessel, now usually a steamer, the net is dropped half in one boat and half in another, which load the middle of the net in front of the advancing school, and carry the ends around either side and bring them together in the rear, so as to enclose the fish. A bottom net is slipped under so as to prevent the escape of the fish. Sometimes as many as 200,000 fish will be caught at a single haul. The fish when brought to land are heated in great boilers which separates the oil,

and the refuse is converted into fertilizers by mixing with potash and other materials.

The schools of Menhaden appear along the coast in the Fifth Month, and are found in different parts in different years. Last year they were very abundant to the northward, and one establishment caught and manufactured 96,000,000 fish! About 175 fish yielded a gallon of oil. J. W.

(To be concluded.)

Natural History, Science, &c.

Outings for Children and Invalids.—The best time for children and invalids to be out-of-doors is in the middle of the day; in winter between 10 A. M. and 2 P. M.; as the days grow longer they may be out between 9 A. M. and 4 P. M., and in midsummer till dark, unless malaria infests the neighborhood. Even then, if one is wrapped warmly enough, he may escape malaria. It is said by wise ones that no one catches the "chills" without first feeling chilly.

Upon coming in from out-of-doors, if any garment upon the body feels damp, it should at once be removed. On the Atlantic sea-board the air is often saturated with moisture, which penetrates the clothing of outgoers, and we all know how dangerous to health is sitting down with damp clothing on. One may ride or walk, if thoroughly protected from chilliness, through damp woods or wet grass with impunity, if when coming into the house and ceasing muscular exercise, warm and dry clothing is at once put on. Vigorous exercise should be kept up until this is done.

Children liable to attacks of croup should be kept in the house except only during the middle of the day, unless there is a piazza with southern exposure, where they may be warm and dry until the sun begins to decline. If at the very first sign of croup a warm shower is closely fastened about the chest and arms, great relief will be obtained. The piazza above mentioned is a boon to all mothers. It makes daily outings for the children safe and easy. The mother can keep them under her eye all the time, and yet permit them the delight of open air. Children accustomed to spending much of their time out-of-doors when not asleep are likely to escape contagious diseases, or if attacked by them to suffer comparatively little from such attacks. The victims of scarlet fever, measles, whooping-cough, if they have been in the habit of freely taking the air, suffer far less from these maladies than do those children who are kept all the time in-doors.—*Selected.*

The Vanilla Plant.—The vanilla bean, as it is called, is becoming an important article of commerce, the value of the marketed crop, last year, approaching a million dollars. It is one of those cases in which the common question, What is the use of science? has met with a very practical answer. Only for science—only for the knowledge which has flowed from the labors of those who have investigated the relations of insects and flowers, would this enormous amount have been produced for the pleasure of man. The plant is an orchid, *Vanilla planifolia*, growing wild in the tropics, and the "bean" is the immature seed vessel. Like many other orchids, the plant is incapable of fertilizing itself. Its own pollen is as good as foreign pollen, but the structure is of such a nature that neither its own pollen nor any other pollen can reach the stigma until the obstacle is removed either by the aid of insects that visit the flower, or by some extraneous means. It so happens that it

is only in a limited area that the plant produces seeds freely, and it is assumed that some specific insect had secured the exclusive patent right of adaptation for this flower. In the absence of this insect the plant produces no seed-vessel. The insect, whatever it may be, does not seem to have a wide distribution. Since, however, a this has become known, man can do just as we and better, the work that the plant had become adapted for the insect to do. A sharp piece of bamboo, about as thick as a lead-pencil, is thrust into the column of the orchid's flower, removing the obstruction and allowing the flower's own pollen to act at the same time. An adept workman can thus fertilize a thousand flowers in half a day. A crop of beans can, in this way, be secured whether the specially favored insect be about or not. The plant grows in the ground, but attaches itself by rootlets, as our ivy does, to trees, rocks or fences—and those who are now cultivating them have regular gardens, as we have hop-gardens, or gardens for Lima beans. They commence to bear at two years from the planting of the cutting, but their full crop is at the third or fourth season.—*The Independent.*

Baby and the Beast.—Instances are known of leopards rescuing their keepers from other animals in the menagerie, and a very pretty story is told of one case, when, through the instrumentality of a cage of leopards, a man and his baby girl were saved from the attack of a jaguar, one of the most untamable of animals. The man travelled with the menagerie and its attached circus as a gymnast in the summer but when the animals went into winter quarters he was retained as a keeper, and lived with his family in a little cottage near by. Scarcely a day passed that he did not take his baby daughter to see the animals, and they, according to their custom, grew so fond of her, that as her coming, most of them would make some signs of pleasure. Only one, a sullen brute of a jaguar, refused to make friends, and always flattened down his ears and snarled when she was taken before his cage. With the leopards on the other hand, she was particularly friendly, and they liked nothing better than having her put her tiny hand through the bars to pat and stroke them. The thought of putting her in the cage with even the leopards had never occurred to him, however, and probably it never would have, had not the jaguar forced it into his mind very suddenly one day. He had been cleaning the cages, and the process being an unpleasant one to the jaguar, that ferocious beast was in such a very ugly mood that the man thought it best not to anger him any more by holding the baby before his cage. Consequently he hurried past the cross animal, and thereby failed to notice that the cage fastening was so slipped that the door might easily be opened. He had reached the leopards and was holding the baby so that she could reach through the bars, when he heard a slight thud on the floor behind him, and looking around, saw to his horror that the jaguar had escaped, and with blazing eyes, slow-waving tail, and crouched body, was stealthily moving toward him.

His first feeling was a sickening fear, but he quickly recovered, and with the marvellous rapidity the mind is capable of in emergencies, sought for means of escape. If he knew he could not escape by either door, for the lithe, active animal would overtake him before he had gone ten paces. A pulley rope, used for hoisting quantities of meat or feed into the room, dangled from the ceiling to the floor, and offered

him safety had he not been encumbered with the baby: he could not climb the rope with her; he would not desert her. And yet to stay here meant death to both. The desperate chance suggested itself to throw the baby among the leopards, and trust to their friendship, while he would reach the rope, if not then too late. Almost as he thought it he slipped the bolt, lifted the fastening, opened the door, pushed his baby in, shut the door, and then leaped for the rope. It was well for him that he was a gymnast and could hand-over-hand up a rope, for he was barely out of reach when the jaguar bawled through the air, and with its terrible claws caught the rope just under one of his feet. After making several futile attempts to reach the man, the enraged animal tried to get into the leopards' cage, where the baby had been welcomed, and fortunately was kept in safety until help came and the jaguar was shot. You may be sure those leopards never lacked daily bits of food after that.—*Harpers' Young People.*

Items.

Peace Policy in Hawaii.—The Sandwich Island government is conducted on peace principles—there being no soldiers or ships of war for defence against invasion. Harris Knight in the *Massachusetts Free Press*, gives the following account of the practical working of the policy:—

"These peace principles have been put to a severest test, for on three occasions the French government has attempted to exact unjust demands by military force. To protect their people from intemperance the Hawaiian government wisely prohibited the importation of intoxicants, and as the law interfered with the ill-gotten gains of some French merchants, and as Hawaii was a weak kingdom, a French force came to demand the repeal of this law, and also of another law that was distasteful to them. They too terrified the people by barbarous threats that they paid \$20,000 as a compensation for supposed injuries and signed a treaty agreeing to repeal the laws that had given offence. The commander of the expedition probably did not threaten any more than the rules of war would allow; but some irresponsible persons made many of the more ignorant portion of the people believe that their little children would be fired from the cannons, and other outrages inflicted. The consequence was that sufficient influence was brought on the government to induce a compliance with the unjust demands made of them.

"The French, however, soon broke their part of the obligation, which released the Hawaiians from theirs; and they accordingly re-enacted the laws which were so necessary to the peace and prosperity of the people. The French again sent a force to demand the repeal of the new laws, but this time the Hawaiians refused to submit to their tyrannical enemies, and the French destroyed several thousand dollars worth of property in hopes of enforcing compliance. The Hawaiian government, however, rigidly adhered to their position, and would neither repeal the law nor make forcible resistance to the aggressors. There were some who did not give up their armed resistance, but the government (prompted by the missionaries) sent a proclamation throughout the group of islands calling upon the churches and people to pray for deliverance and avoid fighting. The French soon became discouraged in continuing a contest which would be sure to result in their own defeat, and did not appear likely to accomplish the object they had in view, so they retired. Any resistance would probably have much increased the destruction of property, and would have decreased the disgrace of the aggressors.

"The British, at another time, took possession of the islands with a small frigate, but there was no resistance. The invader was monarch for five months, and the British flag floated over custom-house, fort and post. But public opinion in the islands and Europe brought down the British flag and sent up the royal Hawaiian signal."

Religion in Spain.—In speaking of the condition of religion and morality in Spain, J. M. Buckley, Editor of the *Christian Advocate*, who has recently visited that country, says that in that country, Roman Catholics are the most intolerant and cruel form that Christianity ever assumed. From 1481 to 1808, the Holy Tribunal of Spain burned 34,612 persons alive, 18,048 in effigy, and imprisoned 288,109. "the goods and chattels of every one being first strictly confiscated. As late as 1781, a female saint was burned at Seville." The Inquisition, in the *Auto-da-fe*, and the insatiable appetite for the blood of heretics have made it the type of the persecuting spirit.

"I had been led to hope that it had undergone material improvement, as some recent travellers have spoken very indulgently of it, and went to Spain with the purpose of confirming their views, if, on as close an examination as possible, they should appear well founded. But for the honor of human nature, to say nothing of Christianity, I regret to find evidence, all too abundant, that it is as superstitious and intolerant as ever it was.

"In Seville, every year in Holy Week, ceremonies the most superstitious are performed. Richard Heber, on a close examination every year possible, he has expressed in Spain, says of them: 'I find no firmer ground than any mere question of Papist or Protestant, the most liberal-minded traveller will set down the entire performance as a pure piece of paganism, with the substitution of one set of names for another.'

"In Madrid, at one of the most popular chapels there, I purchased of a Roman Catholic priest the exact measurement of the Virgin's sandal.

"In the center, in Spanish, is the statement that the original is preserved in a monastery in Spain, and an account of the benefits to be derived from the measurement. Of this monstrous statement a literal translation is herewith given:

"Long live the holiest Mary, mother of God. This is the true measure of the sandal of the holiest Virgin, which is preserved with great veneration in a convent of Spain. The Pope John XXIII. granted three hundred years of indulgence to all who kiss three times this measure and pray three *Ave Marias*. "This indulgence confirmed Clement VIII. in the year 1603, and it can be gained as often as you wish for the blessed works of the Purgatory and for the greater glory of the Queen of the Angels. "It is intended to take from this measure others, and all shall have the same indulgence.

"Mary, Mother of Grace, pray for us.

"The influence of Romanism on morality in Spain is, after all, the question of deepest significance. Making all allowance for many devout and conscientious persons in that Church who are earnestly trying to serve God according to the light they have, and whose consciences are only sophisticated upon the ceremonial requirements of Romanism, it is a question of the most positive influence for good upon the morality of the Spanish people is exerted by the Church. Priests, as a class, are notoriously frivolous and profligate. The hardest things we heard said of them came from *Catholics*, and no Protestant would dare to speak publicly of them as they are spoken of by their own people. In one great city the wife of a foreign consul, herself a Catholic, declared that "there were but three or four priests in the entire church in that city to whom an honest woman could confess. The people consider the Confessional, chiefly frequented by women, as an organized institution for the destruction of the family."

"Some years ago a freethinker, named Garcia Vao, edited a paper in Madrid, largely devoted to the publication of authentic cases of immorality committed by priests. He was very particular to have facts, and the record was extraordinary and awful. It revealed in many of the remotest villages of Spain, where no papers are published, a multitude of immorality being belied. He named the villages there are few besides the priest who can read and write. The people are crushed, and there is no one of sufficient influence to protest against these immoralities.

"Observe that it is not *denied* that there are many moral men in the Roman Catholic Church, and it

is not *affirmed* that all priests in Spain are corrupt. But that the institution does not promote morality, does promote licentiousness and looseness of all kinds, I am compelled to believe, though more than willing to perceive the contrary if it existed."

In connection with this subject, it may be added, that there are said to be now about 100 Protestant missionaries at work in Spain, who have organized 60 or 70 congregations, with a membership of 12,000.

THE FRIEND.

FIFTH MONTH 4, 1859.

True religion is the only universal remedy for the evils that afflict mankind—obedience to the restraints and leadings of the Spirit of our gracious Redeemer is the appointed means not only for procuring peace and happiness in the world to come, but for enabling man to pass through this life with a good degree of comfort and enjoyment. One who has never reflected much upon the causes which lead to trouble and misery among men, would be astonished to find how large a proportion of these are to be traced either immediately or more remotely to transgressions of the Divine law.

We believe, therefore, that the most effective of philanthropists are those who strike at the root of evils, and endeavor to promote among men a reverence for religion and a willingness to bear the yoke of Christ. Those who come under his holy government will gradually be redeemed from the sway of all those appetites and passions, the unrestrained indulgence in which is hurtful to themselves and renders them instruments of evil to others. And not only will they be made as lights in the world by the holy, self-denying lives which they lead; but in the Lord's own time and way they will often be made testimony-bearers, and feel it a duty to labor for the promotion of truth and righteousness in the earth.

From an honest concern arising from such a good source it is charitable to believe has sprung much of the zeal manifested in this country at the present time to restrain the evils that are flowing from the use of intoxicating drinks. These evils are open, notorious, and generally admitted to exist.

The Legislature of Pennsylvania has enacted a law by which the people of that State, at an election to be held on the 18th of the Sixth Month next are required to decide by their votes whether the manufacture and sale of intoxicating liquors for *drinking purposes* shall be permitted or shall be prohibited within its borders. It is a very favorable circumstance that no other political issues, no party or personal preferences are involved in this decision; but that the voters may go to the polls and cast their ballots simply in accordance with their belief as to whether the proposed prohibition will be for the general good or not.

One of the strong arguments in favor of such prohibition is that it will prevent the open sale of such liquors, and thus remove temptation from thousands of those who are weak and easily drawn into the use of intoxicating drinks, although they know that it is to their own disadvantage. Our Saviour taught his disciples to pray, "Lead us not into temptation;" and surely it is the duty of his servants to shield their fellow-men so far as they can from temptations which they would find it difficult to resist.

It is no valid objection to the proposed pro-

hibition, that many of those who have contracted a strong love for alcoholic drinks, will probably find means in some way or another to gratify their longings; and that unprincipled men for the sake of gain, will surreptitiously supply this demand. As well might we object to a law which makes stealing a criminal offence, because some persons will steal notwithstanding the law. The condemnation placed on any evil practice by law has an educational influence on the community; and certainly tends to its repression, even if it cannot entirely eradicate it.

We feel, too, that if liquor could only be obtained by secret and illegal means (which in itself would render its use disreputable), that the probable effect would be to save many of those now growing up to manhood from acquiring a fondness for it—a fondness which might lead to their own destruction.

The general testimony of the public papers in Philadelphia, as to the good effects produced in that city during the past year by the enforcement of the present license law, seems to us an additional reason for extending the principle of prohibition. The decrease of disorder and public drunkenness which has been observed in Philadelphia, is due solely to the care exercised by the Judges in greatly diminishing the number of places where liquor could be sold, and in refusing licenses to persons of bad character. It was this *partial* prohibition which produced the good result; and this would probably have been quite as effective if the sellers of liquor had not been required to pay any license fee. That the amount of license fee required has no influence in discouraging the opening of saloons, is evident from the fact that the applications for permission to open saloons now being made to the Judges of Philadelphia, are in excess we believe by some thousands of the number granted by them the previous year. It is not to the amount of the fee, but to the conscientiousness of the Judges, that Philadelphia has been indebted for whatever measure of reform it has experienced in this matter.

As this subject is one of great importance, we hope those of our readers who are entitled to a vote in Pennsylvania, will so exercise their power as to promote, to the best of their judgment, the cause of morality and the public welfare.

SUMMARY OF EVENTS.

UNITED STATES.—The celebration of the centennial anniversary of the inauguration of Washington as the first President of the United States, begun in New York city on Fourth Month 29th, and was expected to last to the 31st, 1858. The *Ledger* says: "New York city is in a whirl of festivity and crowded with a visiting multitude."

The total value of our exports for the twelve months which ended Third Mo. 31st, 1858, was \$723,757,858, against \$694,158,815 during the twelve months which ended Third Mo. 31st, 1857. The total value of our imports for the same period was \$723,571,195, against \$723,228,144.

Returns have been received of the vote on the Prohibitory Amendment in all the cities and towns in Massachusetts. The total vote for the amendment is 88,046; against, 135,195; majority against the amendment, 41,899.

In Boston there were over 2000 applicants for liquor licenses and, as the law limits the number to 780, there are nearly 1500 places that must close by Fifth Month 1st. An estimate of the loss to those who have been refused a license in fixtures and income, places the sum at \$5,000,000. About 3500 barkeepers will be thrown out of employment.

Judge White, of the Common Pleas Court in Pittsburg, has handed down his decision in the liquor license applications of Allegheny County. He granted but 65 retail and 43 wholesale licenses in Pittsburg,

against a total of over 700 two years ago and 274 last year. Thirty-nine retail and 15 wholesale licenses were granted in Allegheny. The total number of wholesale and retail licenses granted in the County was 100.

The Senate of New York on the 25th ult., passed the Saxon Electoral Reform bill by a vote of 18 to 11. After a long debate the High License bill recently approved by the Assembly was passed.

The Senate of Connecticut, by a strict party vote, has rejected a Prohibition Amendment resolution, which was defeated in the House one week before. The House then voted to recede from its former vote, and concur with the Senate in submitting the amendment to the people.

E. B. Cowgill, the Kansas State Sugar Inspector, has reported a number of new sugar factories started in that State this year, and that the sugar product of the State will be many times greater than it was last year.

Surgeon General Hamilton, of the Marine Hospital Service, has been informed by the President of the Board of Health of Sandford, Florida, that a case of yellow fever existed in that city. Every precaution has been taken to prevent a spread of the disease.

Indianapolis is reported to be flooded with counterfeit \$10 greenbacks, which are part of a lot printed on an island near St. Louis in 1878.

A case of leprosy has been discovered at Spring Lake, Wisconsin. The victim is a woman. The character of the disease is well marked.

A storm on Lake Superior last week broke up a number of booms of logs and scattered the timbers out in the lake, causing a loss to lumbermen estimated at \$100,000.

Deaths in Philadelphia last week numbered 295, a decrease of 28 as compared with the previous week, and of 14 as compared with the corresponding period last year. Of the entire number 227 were males and 108 females; 48 died of pneumonia; 46 of consumption; 27 of convulsions; 24 of diseases of the heart; 11 of typhoid fever; 14 of old age; 14 of cancer; 12 of inflammation of the stomach and bowels; 12 of bronchitis; 12 of debility; 11 of congestion of the brain, and 10 of cerebralitis.

Markets, &c.—U. S. 4½'s, 108½; 4's, 129½; currency 68, 104 1/2.

Corn.—Winners bought sparingly on a basis of 11 cts. per bushel for middling uplands.

Flour and Meal.—Western and Pennsylvania super, \$2.50 a \$3.00; do, do, extras, \$3.25 a \$3.75; No. 2 winter family, \$3.75 a \$4.25; Pennsylvania family, \$4.00 a \$4.50; do, do, extras, \$4.75 a \$5.00; Ohio, clear, \$4.50 a \$4.75; do, straight, \$4.75 a \$5.00; Indiana, clear, \$4.50 a \$4.75; do, straight, \$4.75 a \$5.00; St. Louis and Southern Illinois, clear, \$4.50 a \$4.65; do, do, straight, \$4.75 a \$5.00; winter patent, fair to choice, \$5.15 a \$5.50; Minnesota, clear, \$3.90 a \$4.00; do, straight, \$4.75 a \$5.00; do, patent, \$5.50 a \$6.00. —The flour was scarce and firm, at \$5.00 per barrel for choice.

Grain.—No. 1 red wheat, 92½ a 91 cts.

No. 2 mixed corn, 42½ a 43 cts.

No. 2 white oats, 31½ a 32 cts.

Beeswax.—No. 25 cts.; fair, 91 a 93 cts.; common, 3 a 3½ cts.

Sheep.—Best wool, 6 a 6½ cts.; medium, 5½ a 5½ cts.; fair, 5½ a 5 cts.; clipped, best, 4½ a 4½ cts.; good, 4½ a 4 cts.; medium, 4 a 4 cts.; common, 2½ a 3 cts. Live.—Hogs.—Choice Chicago, 71 a 73 cts.; good Westerns, 61 a 67 cts.; country hogs, 61 a 63 cts.

FOREIGN.—A Unionist conference was held at Birmingham on the 25th of Fourth Month. Resolutions were adopted affirming that the land question was the most important of the present hour, and urging the Government to introduce in the House of Commons a bill to delay a measure to enable tenants to become owners of the land.

General Boulanger, Count Dillon, and six other members of the Boulanger party, arrived in London on the 14th ult. They are expected to arrive in Birmingham on the 25th ult. A crowd outside the station is estimated to have numbered 2000 persons. They greeted and kissed the General as well as hoisted and cheered him. The public generally are apathetic concerning Boulanger's presence in the city.

The provisional directors of the Comptoir d'Escompte have signed a deed constituting a new company. The deed gives to the present holders of shares 40,000 francs' shares, besides a right to 20 per cent. of the profits. A syndicate of bankers guarantees the entire amount of the capital in the event of the shares not being taken.

The Conference of representatives of the United States, Germany and England, to consider Samoa affairs, opened on the 29th ultimo, in the Congress Hall of Prince Bismarck's residence. The session lasted an hour and fifteen minutes. On the proposal of Count Herbert Bismarck it was decided that the strictest secrecy should govern the deliberations of the Conference.

The Conference adjourned without fixing a date for the next session. The sentiments expressed by the Count in a letter of a confidential character, which has been reported from St. Petersburg, that in addition to revolutionary pamphlets, menacing letters have been found on the Czar's table.

In consequence of compromising discoveries affecting the Chiefs of the secret police, Pontifex, the head of that department, and several high officers, have been dismissed.

Terrible land slides have occurred in Peru from the perpendicular walls through which the tunnels on the Orvra route were cut in order to enable the Verrugas bridge to be thrown across the chasm from tunnel to tunnel. A cloud-burst caused a mass of rocks and earth to crash down and sweep away the bridge. The bridge, which cost \$500,000, was 575 feet long and 266 feet high, the highest in the world with one exception.

It is reported that the sea has been exceedingly rough in the bay of Callao, Peru, "in consequence of a peculiar agitation, the cause of which has never been satisfactorily explained."

Several cases of yellow fever have recently occurred in Callao, Peru.

On the morning of the 28th ultimo, the limited express on the Grand Trunk Railway was wrecked near Hamilton, Ontario. The cars jumped the track and ran into a water tank. Two cars were telescoped and took fire. Eighteen persons were killed, and about twenty injured. The latter are doing well, but of the killed only two have been identified, the others having been burned beyond recognition. Most of the passengers were on their way to the centennial celebration in New York city.

NOTICES.

The Committee on Public Meetings of the Temperance Association of Friends of Philadelphia Yearly Meeting, is desirous of entering into communication with one or more Friends in each Particular Meeting in the United States, the object being to take such means as may seem advisable to stir up a more general interest among Friends and others in the election of the Prohibitory Amendment, which is to be held on the 18th of Sixth Month next. Friends should bear in mind that this is a moral and not a political question, and that in which their influence for the right will be felt in the communities in which they live more than it is. Will not those who may take an interest in the subject promptly address

GEORGE VAUX, Jr.,
404 Locust Street, Philadelphia.

WESTTOWN BOARDING SCHOOL.—During the Summer term the stage will be at Westtown Station to convey passengers to the school on the arrival of the 7.25, 8.55, 2.47 and 4.55 trains from Broad St. Station.

J. G. WILLIAMS, *Supt.*

WANTED—A competent Friend to teach in a Christian-Field Preparative Meeting school at Crosswicks, N. J. Address—MRS. MARY S. MIDDLETON, Crosswicks, Burlington Co., N. J.; or WM. BISHOP, Walnutford, Monmouth Co., N. J.

WANTED—Numbers 59 and 64 of the *Tract Repository*, for Friends' Library, in the following places:—Address—JNO. H. DILLINGHAM, *Librarian*, 142 North Sixth Street, N. Y.

FRIENDS' ASYLUM FOR THE INSANE.—An Assistant Resident Physician wanted. Please apply promptly to Dr. JNO. C. HAAL, *Supt.*, Frankford, Philadelphia.

DIED, at Poplar Ridge, N. Y., Second Month 7th, 1858, in her 34th year, M. KENNEDY HAZARD, wife of William W. Hazard, an esteemed member of Scipio Monthly Meeting, who was a member of the Society very exemplary in life and conversation, having in her young years yielded to the inward Teacher, she was made willing to bear the cross in obedience; and it is believed that she has entered into the joy of her Lord. She was born in Germantown, Third Mo. 11th, 1824, and was a widow of William H. Hazard, Spencer, in the 89th year of her age, a member and elder of Abington Monthly, and Horsfall Particular Meeting of Friends.

FOR "THE FRIEND."

Historical Review of the Society of Friends.

(Continued from page 314.)

As the number of those who took part in the Beaconite separation was comparatively small, and their organization soon collapsed, the reader may think that I am devoting too much space to this movement, and perhaps he might justly so conclude, were it not that it was merely an outgrowth—a temporary development from a root of error which was more deeply implanted, and which continued to survive and to spread after this one of its offspring had withered, and disappeared.

While Friends had ever reverently esteemed the Sacred Scriptures, the preaching of anointed ministers, and all other outward helps in the Christian journey, as blessings to be prized and used, yet they had placed special emphasis on those declarations of Holy Writ, which show that under the Christian dispensation, God is to be the great Teacher of his people—that as the Apostle John says: "The anointing which ye have received of [God] abideth in you, and ye need not that any man teach you; but as the same anointing teacheth you of all things, and is truth and is no lie, and even as it hath taught you, ye shall abide in Him." It is this *anointing*, or the Spirit of Christ, through which man must receive all true knowledge of spiritual things,—which he cannot receive nor understand by his own natural and unaided powers. This Teacher, nigh in the heart, is the Fountain of Divine wisdom to which we have ever directed people as the *primary* rule of faith and practice, and an ever-present Guide and Helper.

It is evident, therefore, that when some began to teach, that it is from the Scriptures *alone* we are to obtain a knowledge of heavenly mysteries; and to encourage the people to study and collate these as the means of obtaining Divine knowledge, to the neglect of that which is far more important to every individual, even the waiting upon and obeying those impressions which the Lord's Spirit makes upon the mind for instruction, and for guidance in the way of righteousness—that these had departed from one of the most fundamental principles of vital religion; and from a deeply cherished doctrine of the Christian faith as held by the Society of Friends.

John Wilkinson, one of the ministers who afterwards joined in the Beaconite separation, in a meeting at Tottenham, near London, in

1835, spoke of the "belief in Christ as an inward principle" as a *deceptive belief*. Thomas Shillito, with whose extensive travels as a minister of the Gospel many of my readers are probably familiar, arose afterwards and said: "I feel constrained to say, that if by an 'inward principle,' is meant the insinuating of the Light of Christ in the heart, which is his second coming without sin unto salvation, and this is not to be believed in and depended upon, then I am in a most deplorable state! Now, at my advanced age, at this solemn period, and in the prospect of being soon called to stand before the judgment-seat of God, to receive the reward of my works, then where shall I be? And if there is no 'inward principle,' then, for sixty years past, I have been following a 'Jack of the lantern,' a 'Will of the wisp!' For it is now more than 60 years since I became acquainted with the principles of this Society. Oh, no! my friends, the evidence in my mind at this time is, that as I have followed the leading and guidance of this inward principle, this insinuating of the Light of Christ, it has led me safely along through all the dangers and perils of the way, and will continue to lead me to the end. And it is the chief corner-stone on which I build all my hopes, and shall do to the end of my days; and I crave that during the remainder of my life, nothing I may ever hear, nothing I may ever read, nothing any man may say, may jostle me from off this foundation. And I warn you to take heed how you receive any other doctrine than this."

For want of following "the leading and guidance of this inward principle;" and through trusting to their own reason and their own interpretations of Scripture, unaided by the revelations of the Spirit of God; much unsettlement of mind was experienced by some of those who left our Society. A striking instance of this is recorded by Elizabeth Knott, whose account was published in the *British Friend*, and thence transferred to the columns of THE FRIEND of Philadelphia, for Second Mo. 1st, 1873. It refers to one who had been a fellow-member with her, and who was esteemed for his kindness of disposition, but who had wandered so far from the truth as to state to E. Knott his belief, that the doctrines of early Friends were "nothing short of the delusions of the devil." She says:

"I watched him for years; striving from one mountain to another." He left, saying he expected the Society of Friends, and joined the "Plymouth Brethren," having unity with them for a good while—met them in breaking of bread, grieved among them, and seemed to have found an ark of refuge in communion with the 'saints.' But eventually he became dissatisfied, and went to the Wesleyan body, to find food for his unsatisfied soul. For a time he rested in that ark of refuge, but here he did not remain. Strange to say, he who proclaimed in town and in the country, by wayside and on the seashore, 'the unsearchable riches of Christ'—told of the great atonement on Calvary, of the Lamb slain for the sins of mankind,—should by some new light he thought he had received, go

to the Unitarians and receive their doctrine—to what extent I cannot say, for there are degrees even in this way—but in this profession of religious belief he was found when the angel of death was sent to hover over his dwelling, and in the fluttering of his wing to tell him his earthly race was nearly run.

"I went to his house to inquire how he was, hearing he was ill. I sent up my name to his chamber, and was immediately invited to go to him. I found him in an agony of soul—his arms beseechingly uplifted. He gave me his hand, saying: 'Pray for me; oh, pray earnestly for me!' My sympathy and distress were so great that I could not reply for some time. I then said, 'Oh, pray thyself; the door is open for all to come boldly to the throne of grace!' He turned quickly upon me with a fixed gaze, saying: 'Hear me; mark what I say, and tell it; tell it as my dying testimony. The Society of Friends hold the Truth, the very truth; their doctrines are the very truth of God; if they are *only carried out*.' This he repeated twice, 'If they are *only carried out*.' He paused, and then, with a loud voice, said: 'O God, look down in thy wondrous mercy, and pardon, or receive me!' He then signified to his wife that I might leave the room for a short time, but to come back to him again. I parted from him in agonized silence, with a warm pressure of his hand and a look of deep sympathy. I went home to my own house, and to my bed chamber, where on bended knees I supplicated for him, as if for my own life. Suddenly, like a flash of lightning, all access of words or spirit was withdrawn, and I rose from my prostrate condition and sat down amazed at my feelings. Not long was I left in uncertainty. A knock at my door by a servant revealed to me that the spirit of my friend had left its earthly tabernacle. It has ever appeared to me a most remarkable thing, that on his death-bed he should so solemnly revoke his assertions respecting the Society of Friends and their doctrines, and to the very person to whom his words of deprecation were addressed."

Although *Deaconism* as an organization had but a temporary existence, yet some of the same doctrines as held by its advocates from time to time appeared in the writings of members of our Society, especially in Great Britain. These were often mingled with much that was sound and instructive; and might therefore more easily pass unchallenged, and prove assents from which future error and trouble were to spring. Yet they were sufficiently prominent to awaken the uneasiness of concerned Friends on both sides of the Atlantic. Publications of this character are frequently referred to in the correspondence between the Meetings for Sufferings of Philadelphia Yearly Meeting, and that of London: In an epistle from the former body, written in 1842, it is stated, that much exercise had been caused to many brethren by "the introduction of some works into this country containing sentiments not in accordance with the principles which our religious Society has held and promulgated from the beginning."

To counteract the effect of these, the Yearly Meeting of Philadelphia issued a statement of principles, entitled "The Ancient Testimony Revived," based on the writings of our early members, and re-affirming the doctrines which they proclaimed to the world. Of this valuable pamphlet a large edition was printed and circulated; and it is still kept on hand, and may be gratuitously obtained by application to Friends' Book Store, No. 304 Arch Street, Philadelphia.

In an epistle sent to the London Meeting for Sufferings in 1846, reference is made to the divided feeling among Friends in America produced by works issued from the English press; and an earnest appeal is made to English Friends to provide a remedy for this evil. The epistle says: "True unity is a precious, but a very delicate bond, and there is perhaps nothing that so quickly and so effectually severs it as the evidence that persons occupying the highest stations in the Church, are putting forth and maintaining doctrinal opinions at variance with the hitherto established testimonies of the Society." "Such different views must render Friends a divided people in feeling and in object, until what is unsond in these discordant opinions can be testified against, and our Society be brought to oneness of purpose."* J. W.

FOR "THE FRIEND."

Notes of a Visit to Italy.

(Continued from page 315.)

Rome on the 3d of Sixth Month was in the best of humor: although the first day of the week, the Italians seemed to unite, all classes of them in celebrating the day in commemoration of the consummation of Italian unity and liberty, and the taking possession of Rome by Victor Emmanuel and Garibaldi, and ending Papal rule (or *misrule*, as some of the people termed it). There were soldiers on parade, people dressed in their Sunday attire, King and Queen riding out among the populace, giving and receiving their salutations, riding in open carriage without guards of either soldiers or police—all seeming intent on enjoying the day to celebrate the event of Italian unity of all the provinces into one kingdom.

While their popular rulers were monopolizing the attention and affection of the people, the man at the Vatican was indulging in a sour and sulky spirit, saying he was "a prisoner," but a self-imposed one who had forfeited the confidence and respect of the people who had rejected him and his claims as a prince and a ruler. Now he stays in his nest, and closes up all avenues of the people's sympathy, and pouts over the loss of what he calls the patrimony of Peter, viz. "his ruling power as a prince," which Peter never had to give or bequeath, as if the people had no say in the choice of their rulers. But they have really taken notes out of the American book. We had located ourselves at the Hotel Continental, fronting the railroad station and an open plaza or square; and it being a great thoroughfare, from our front window and balcony, we were enabled to witness the joyous parade and mingling of ruler and people on this occasion, with no instances of drunkenness or disorder of any kind, as if a community of interests dominated in their midst, without fear of arrests as practised under the previous rule.

* For more copious extracts from this correspondence, and fuller details on the subject, see "A Brief Narrative of the Position of Philadelphia Yearly Meeting," which may be obtained by applying to Friends' Book Store, No. 304 Arch Street, Philadelphia, by any one who desires to investigate it further.

We were out some seven miles on the Appian way, where Paul met the brethren as a prisoner on his way to Rome. The road itself remains an evidence of the stability of the work of these old Romans—straight for scores of miles, and solid and substantial still, after 1800 years of use. We were in other directions about the city, amid its ruins and excavations; but not much rebuilding going on. The people were poorly paid for labor—one and a half francs per day—but they live cheaply and clothe correspondingly, and seem content with meals without luxury—a cup of wine, sopped with brown bread. Liberty of speech is now allowed and freedom to entertain, practice and preach Protestant doctrines, and erect and worship in Protestant churches (forbidden under Papal rule), also to erect monuments in public places in Rome to the memory of heretics that in 1600 were condemned and publicly burnt at the stake by order of the then Pope, for adherence to the Bible and the Protestant faith. The voice of the people demanded this liberty, and recently, by their votes secured this right, among other fruits which the overthrow of Papal tyranny had for centuries forbidden and punished with death in its cruellest forms if only the utterance for this freedom was muttered. Now a monument to Giardini Bruno is to be erected on the spot where in 1600 he suffered for the truth, and was a witness and martyr for Christ. The people of Italy and Rome are not godless, but are disposed to be religious, had they (as was hinted to us) been offered a religion worthy of their acceptance or worthy of having, and we believe are ripe and ready to accept the Lord Jesus and his Gospel of salvation by faith, without the intervention of bishops, priests, Peter or Mary, and useless numeraries.

Rome had many other attractions, which our limited stay and the approach of the hot season deprived us of seeing and making record of; and even our desired visit to Naples and Pompeii, with its numerous objects and places of interest, with the ancient ruins of that old overthrown city—these we had to forego the pleasure of seeing, as we had hoped to do; and although so near—120 miles—we were compelled to deny ourselves this boon, as our strength had already begun to wane, under the pressure of undertaking too much sight-seeing in too short a time; so with some reluctance we prepared to take our departure on the 5th of Sixth Month for northern Italy and by car to Florence—180 miles through a delightful country of rugged mountains and plains, through numerous tunnels, vineyards and grain fields; women making hay and cultivating the vines, and saluting the train as it passed.

Vines were planted in rows, with rows of trees between, and the vines trained from tree to tree, entangled together in festoon style—quite a ride through enchanting scenery. The trees in many places are denuded of their leaves, presumably to feed the silk worms, Italy being noted for its silk culture; and these trees stripped of their leaves two or three times a year, continued to strike our attention, after we had got pretty far up into Northern Italy, even as far as Como, on the ascending spurs of the Alpine region. Arriving at Florence at 7.15 p. m., found good accommodation at Hotel De Europe too late and too unwell for any exploration of the city, except to dine. These late diners don't suit our acquired habits at home.

Florence is on both banks of the Arno and connected by bridges. Anciently it was a

walled city; the walls are now destroyed, having only the gates left. It has 154,000 inhabitants and was once a great centre of trade in wool, cloth, silk and money changers. It occupied a proud position in the cultivation of the arts and sciences, and retains an amazing profusion of the treasures of art. The incidents of its history are perpetuated in its galleries, museums and imposing monuments, and it is now the centre of the manufacture of beautiful marble statuary and alabaster ornaments—an energetic and industrious people, alive to trading with its numerous visitors, especially Americans. Their galleries of sculpture, statuary and paintings are nobly represented, and of unusual interest to visitors. Through its suburbs and surroundings we had the pleasure to ride, and around the park on the hill overlooking the city, giving us a fine view of Florence. Our bankers were close by our hotel, so we had no trouble in replenishing our purse. Our guide then conducted us to an establishment where a large business was done with our American houses in the sale of fine marble statuary and alabaster ornaments, seen in the show windows of our own city. A few purchases were made, to be sent home in the usual way, and through the New York Custom House—as these establishments don't expect a visitor to merely examine their goods and make no purchases. Without being able to take in all the galleries of art and other attractive sights of Florence, we, after a short stay, took the route to Venice—about 160 miles through the continuous Apennines, with its spurs and some 30 tunnels—passing through the cities of Bologna, Ferrara, Rovigo and Padova, all of them places of note, and through a well cultivated country of vineyards and fields of grain and hay, and as usual, plenty of female laborers in the fields at work; the tunnels alternately changing the scene and the scenery from the gloom of the tunnel to the cheering aspect of the open fields and vineyards. This journeying through such varying landscape and mountain keeps up a continual interest and curiosity to take in all that may be learned in these old regions of civilization, but new to the tourist. So after eight hours' ride, with stoppages at the different cities and time for lunch at Bologna, we arrive over a long peninsula at the noted and ancient city of Venice, the city of canals and gondola, and landing from the compartment cars on to the Grand Canal, we were conveyed by gondola to the Hotel Victoria, close by the piazza of St. Mark's Cathedral, noted for its age and once for its beauty. G. K.

PHILADELPHIA, Fourth Mo. 20th, 1889.

An easy and habitual yielding to the passion of anger is fatal to that coolness of judgment and calmness of temper which are indispensable qualities of strong characters and truly successful lives. Select out of any community the hot-headed men who are frequently heard raving at events and berating their fellow-men, and you select the essentially weak men, who neither win great respect nor carry great weight in the community. Strong men are men who know how to keep cool, or to restrain themselves when excited. Their coolness, or their calmness, is a part of their strength. The man whose temper controls him, incapacitates himself by blind passion for the exercise of that shrewdness and judgment with which the man who keeps a calm and steady mind and manner will surmount difficulties, conquer opposition, and defeat injustice.—Exchange.

FOR "THE FRIEND."

Temptations of Satan.

It appears that Satan has power to assume a variety of images or transformed appearances, in order to draw away disciples after him; or to turn man from the upright, innocent image in which God created him. But he preferred to appear to our mother Eve, in the form of a serpent, which was said to be more subtle than any beast of the field—so he tempted her to partake of forbidden fruit. And we have many forbidden things now which he tempts us to partake of. And she gave to her husband; and they thus lost their upright life of innocence and purity, and in this fallen and sinful condition they brought forth children in their own fallen and sinful likeness. And now it would be wise for each of us to examine our own hearts. "Lest by any means, as the serpent beguiled Eve through his subtlety, so your minds should be perverted from the simplicity that is in Christ." For all the evil propensities that we have by nature must be restrained and overcome by obedience to the indwelling spirit and power of Immanuel, which being interpreted, is God with us. And when God is in us and with us, greater is He that is in us than he that rules in the man of the world, or the natural man.

Such as have the spirit of Satan in them, and are actuated by it, cannot, with all the enticing words of man's wisdom, cast him out of others; for Satan cannot cast out Satan, neither does he want to. And no man can redeem his brother, nor give to God a ransom for him. So we must remain under the power of the deceitful tempter until his head is so bruised by the seed of the woman co-operating with our spirits, that he has no longer dominion over us. We must in order for salvation, be turned from the power of the tempter to the power of God. The Apostle James says, "Let no man say when he is tempted, I am tempted of God. For God cannot be tempted with evil; but every man is tempted when he is drawn away of his own lust and enticed." But temptation is not sin until it is embraced.

Of all the varied forms of evil which now beset mankind, are not those which flow from the use of intoxicating drinks among the greatest? When the devils entered the herd of swine, that we read of in the New Testament, it seemed to set them crazy; so that they went headlong to their own destruction. And when the fascinating cup, with its bewildering contents, is received and suffered to enter the swinish nature in man, it seems to set him crazy; and he loses the restraining power of reason to guide him; so that he is ready for all the abominations of sin and uncleanness. And now the grave and momentous question arises: How is this great evil to be overcome? Must we not look to a higher power than earth can give? Even to Him whose power is over all the powers of the enemy? Yet man has his part to do in all reforms. And as a large portion of such as are beset with the temptation for strong drink have not yet been set free from the law of sin and death, but are still struggling under the yoke of bondage and temptation, would it not be wise, partly through pity on them and also for the general good of suffering humanity, to place the temptation out of their way by prohibiting the distillation or manufacturing of all alcoholic drinks? Let us be willing to bear with the inconveniences that might arise from prohibition, for the sake of the preponderating weight of good that would result from it.

It seems evident that the evils resulting from

the use of alcoholic drinks, far overbalance the good which they in any way can do. When we see that thousands of men unprepared for death are annually losing their lives, and others are suffering deep degradation and woe from their use, why should we not prohibit the perpetuating of the evil? If the tempting drink could be removed from the sight of a weak brother, it would be more effectual in saving him, than to hold out the caution "touch not, taste not, handle not," while the glass was before him.

DAVID HUDDLESTON.

DUBLIN, IRE., Third Month 23rd, 1859.

FOR "THE FRIEND."

A Dredging Excursion.

(Continued from page 318.)

I have made a rather long introduction to the dredging part of our excursion—which may perhaps be accounted for by the fact that it was not on the morning of the 4th, after a rather unsuccessful attempt to dredge in the muddy bottom of Somers' Bay, at the southern extremity of the Atlantic City beach. We obtained plenty of dark colored mud, but not being provided with a suitable sieve to wash it in, probably missed seeing most of the sea-worms which inhabit such places.

In the afternoon of the 4th, we tried the northern extremity of the island, and with a pleasant, accommodating captain explored one of the creeks that ran in towards the main land, till we reached a place where he said we would find a shell bottom.

Here we found a dozen small boats each with a man and a pair of long-handled tongs, grappling the bottom for the hard-shelled or Quobach clams, which live in the mud at the bottom. The water was about 12 feet in depth. It was laborious work, and I thought the fishermen fairly earned the \$2 per thousand which they received for the shell-fish they caught. These are the ordinary clams of the Philadelphia and New York markets; and they are found along the coast from Cape Cod to Florida. The shell is thick and strong, and from the purple margin of it the Indians were in the habit of cutting out the dark beads used in making the purple wampum or shell-money. In the New England States another species of clam—the soft-shelled—is more valued for food purposes.

One of the clam-dredgers had brought up a Horse-shoe or King-Crab, which he kindly transferred to our vessel. It is the largest of the crab family found on our coast, and differs so much from the others in some of its anatomical details as to raise the question among naturalists—whether or not it really belongs to the same class of animals. It is covered all over with a crust which seems more horny in its composition than the common crab's, whose shell is of lime. Under the broad, rounded and arched crust of the head, or forepart of the animal, are grouped the legs, the organs of digestion, &c. It lives in the bays and inlets along the coast, just burying itself beneath the sand and mud which coats the bottom. There it finds the worms on which it feeds. At the spawning season, it is in the Fifth and Sixth months, it comes up to the beaches to lay its eggs. It is unusually abundant in Delaware Bay, and in some seasons the number of them which come to the shore to spawn is very astonishing. The Geological Report of New Jersey for 1858 says:

"The whole strand for many miles is covered with them—sometimes two or three deep; 750,000 have been taken on about half a mile of the strand; and one year 1,200,000 were taken on

about a mile. They deposit their eggs and then leave the shore entirely, till the same season next year. The number of eggs is very great. They are so thick along the shore, that they can be shovelled up and collected by the wagon-load. Great numbers are thus gathered and carried away to feed chickens. When they hatch, the sand is fairly alive with the little creatures. A year or two since a vessel took in a load of sand on the shore, and in two or three days, so many of these young king-crabs appeared in it, that they were obliged to throw the whole overboard."

King-crabs are often fed to hogs and ducks; and their bodies are composted with earth and other materials, and form a valuable fertilizer or manure for crops.

I was especially interested in the fact, that our polite clam-dredger brought up this live king-crab from the mud at the bottom, because it showed us where the animal resorts to, and spends its time, after the spawning season is over.

After passing a short distance beyond the clam-dredgers, we hoisted overboard our dredge, and allowed it to scrape along the bottom for one or two hundred yards. It was then hauled in and emptied on the deck of our little vessel. Out poured a multitude of shells, living and dead, and other curious objects, eliciting exclamations of delight and surprise from the eager group that surrounded it. "Oh, just look here!" "What is that?" "See that sea-urchin!" "Here is a star-fish!" "Look at that ugly, long-legged spider-crab!" Truly we found it a very productive dredging ground; and added largely to our store of marine specimens.

The most interesting to our party of all the various objects brought from the bottom, were the purple sea-urchins, of which we obtained about ten, and which none of us had before seen in a living state. The sea-urchin consists of a little globular box of about one inch in diameter, made of many hundred plates of thin lime shell, each of which is coated with a skin or membrane. From these project in every direction hundreds of spines, the longer of which are about an inch in length. The whole animal, was thus about three inches in diameter, and looked like a somewhat flattened ball of spines. We transferred some of these to a vessel of sea-water; and were delighted to notice the numerous thread-like organs enlarged at the lip, which were mingled with the spines swaying to and fro. In the centre of the sea-urchin on the upper face was the mouth, where were placed five converging teeth.

Circumstances did not admit in my case of the examinations, such as many naturalists have made of the structure and functions of the different organs of these curious animals. The strangest of these are multitudes of tiny threads, almost as numerous as the spines, each surmounted with a three-beaked head, which can open widely and close with considerable force, like the beaks of birds. What their use is to the sea-urchin appears to be not certainly known to naturalists, though doubtless the animal itself is wiser in that respect.

The spines are moveable, each one having a hollow at the base, which fits on the top of a small rounded projection or knob on the central box, so as to form a ball and socket joint. The spine is held in its position by a delicate film of flesh. When this decays, after death, the spines soon drop off—so that it requires care to avoid handling or jarring, if one would retain the spines on the specimens in his cabinet.

Nearly all the dead shells which our dredge

from the bottom, were covered with other forms of marine life. The most conspicuous of these consisted of small tubes of limestone, sometimes winding over the face of a shell, and at others twisted together like the strands of a rope, but in a very irregular and confused manner. These were the homes of a species of worm which secretes this stone case for its protection. "When disturbed or frightened," says Heilprin, in his *Animal Life on the Seashore*, "the animal withdraws itself into its tube, which it closes by means of a plug, and thus places itself in a position removed from its enemies. When extended it presents a beautiful appearance, with its distended crown of brilliantly-tinted branchiae—red, yellow, purple and brown—consisting of some 50 or more delicate feathery filaments." This curious worm belongs to the family of *Serpula*, and some of the genera are interesting occupants of marine aquaria. The motion of the animal is slow and cautious when protruding its gills, but the retreat, when alarmed, is with lightning like rapidity. The heaps of contorted tubes which it forms are compared by Gosse, to a batch of tobacco pipe-stems which had become agglutinated together, and strangely twisted in the baking.

One of the finest specimens of *Serpula* tubes which I secured grew on a valve of a dead Quog clam. But I was not well pleased with its apparently dirty condition. The white tubes of the *Serpula* seemed to be covered with sand, closely adhering to them. I endeavored to wash it, but without much success. But on placing it before me, in its present dry condition, so as to describe it more accurately, I see that another form of animal life has made its home on the tubes of the *Serpula*, just as it did on the valve of the clam. In fact, many of the tubes are completely covered with colonies of Moss-Polyps, or Lace Corals, which consist of tiny pits, clustered together in regular lines in thousands. Each of these pits—often not larger than a pin's point—contained during life a minute polyp, crowned with tentacles, somewhat similar to those which build up the corals of our tropical seas.

Another fine specimen of *Serpula*, I thought for a time might be a different species from the others, for the tubes were bright red. They were growing on the outside of a valve of a dead shell; and the inner valve was covered with a thin coating of the same red material. I soon ascertained that the red substance was one form of sponge, which is often washed up on the Atlantic City beach, as a mass of small entangled red branchlets. This sponge assumes two forms—not only with branches of its own, but also as a fleshy covering over other substances.

An irregularly nubbled mass of rather soft texture, and easily broken—very porous, and which might be compared in its texture to tough bread, of a dull yellowish color, which was turned out of our dredge on the deck of the yacht, our captain told us was known to the fishermen as "whealer's bread"—though it is very doubtful whether a whale ever ate of such food. It proved to be a peculiar species of sponge—very different however from those useful articles which have been introduced into household use.

On referring to my note book, I find a memorandum of about two dozen varieties of sea animals—shell-fish, crabs, sponges, &c.—which our excursion yielded. Of these, perhaps I have already described enough—but the reader may readily conceive that our excursion proved a time of both interest and instruction.

FOR "THE FRIEND."

DAILY BURDENS.

"Blessed be the Lord, who daily beareth our burden,"
It is, Psalms lxxviii. 1b.

So complete our Father's care,
And thoughtful his providing,
He will daily burdens bear,
As we trust his guiding.

When we feel by these oppress,
It is not his willing;
He would carry, while we rest
In his kind fulfilling.

"Cast thy burden on the Lord,
And He will sustain thee."
Bring to Him with glad accord,
Whatever *oe* hath pain thee.

PINE KNOLL, Fourth Mo. 1889.

LIFE PICTURES.

A glow at noon,
The rose half tempted into blooming red;
Bright hopes just born,
That ere the eve must shed
Their petals, though we never dream them dead.

A warmth at noon,
Full-souled and odorous; and life all fair
As summer moon,
When stars lace beams as rare
As laughter which hath not behind some care.

A rest at eve;
The ardor and the heat of day are o'er;
Hope can deceive
No longer; life no more
Can weave romances from a poet's lore.

A hush at night;
We fold our wings as birds that seek the nest.
Earth is bedight
With rose no more. The zest
Of life sinks with the sunlight in the west.

It is no dream,
No castle-building time, that we call life;
To catch the gleam
Of heaven in the strife,
Our toil must tend to reach the better life.

There is much room
For gratitude, much room for tenderness,
In all the gloom
Of sorrow, much to bless,
If we will labor more and murmur less.

Let us not turn
To seek in clouds our happiness, but try
Each day to learn
That near home blessings lie;
Those die to live who first have lived to die.
—The Quicer.

AT EVENTIDE.

It is so little, and so poorly done,
This work of mine, yet now the evening sun
Is low out in the west,
And I must give a truthful record in,
Of all I strove to gain, and failed to win;
Ere I may ask for rest.

I had so many dreams when first the light
Broke in the waiting east, and now 'tis night,
Still they are dreams unwrought;
I would have made them deeds, all strong and true,
But I grew tired, and the hours were few,
So they remain but thought.

I had strong purpose toward a noble end,
A woman's faith, all failing hope to mend,
A loving trust in God,
But only woman's longings lie;
Proud, weighty burdens, for that broken reed,
That strength misunderstood.

So now through falling mists that cling and chill,
And deepening, purple shadows, long and still,
Groping my way I roam;
Within sweet meadows where the bloom is dim,
I hear the laborers chant an evening hymn,
But, Lord, my lips are dumb!

For I have failed; my day is fast and spent,
Thy sorrowing look, reproachful gives assent,
I know my shame at length,
Thy pardon, Lord? "My child, thy faith was meek,
Thy aim was good—thou in *thyslf* was weak.
Daughter, I had the strength."
—J. C. Marsh.

FOR "THE FRIEND."

To all dear Friends whoever may read this article, and to such it is intended for good. But more especially it is written to those who, like myself, have lived to advanced age, and have enjoyed the privilege and great blessing, too, of attending religious meetings of the Society of Friends, where we have been privileged to enjoy sweet communion together, where the banter over us was love, and our hearts were contrited together in sweet communion with the Holy Spirit.

Ah, lovely days gone by! Yet there remains a precious promise to all, that we may have the fullest confidence in, that all things work together for good to them that love God; and that promise no others can lay claim to. How greatly to our advantage to be in possession of it ourselves, when hard things will be made easy and bitter things sweet, and we can even rejoice in tribulation, that it is the will of our Heavenly Father that we should be thus exercised. Doubtless there are many elderly persons who like myself are suffering from infirmities common to old age, or who else cannot give their attendance for conscience sake at meetings, the members whereof call themselves Friends, but repudiate the principles and usages of the same. To such the word of encouragement is extended. We know of no better way than cheerfully to submit to our situation and strive to increase our diligence in the discharge of our duty to our Heavenly Parent. In my confinement for some months past, our dear Lord has been pleased at different times to give me the assurance that his love and tender mercy are yet extended towards me; which I appreciate above all things else. And may my spirit ever be thankful for his continued favors. Let us all, who for conscience sake, have shown our allegiance to the pure principles of the Gospel, as professed by the Society of Friends, from the first period of its existence, be very watchful over our words and conduct, that we give no occasion for the truth to be evil spoken of in any way.

I pass many sleepless nights with bodily suffering, and at times when not so ill, they are enjoyable seasons for meditation and thankfulness to our blessed Lord. I have read with hopeful interest the article in THE FRIEND on "Epistolary Correspondence," in Vol. 60, page 229. The kind manner in which it was written and the correct information which it contained, is well worthy of the thoughtful attention of every reader of THE FRIEND, and calculated to be of great benefit to the Society at large. It has been of great comfort to me, and doubtless many others.

I scarcely know how to close this article without again referring to the condition of the aged and infirm—of those for whom this article especially is intended, situated as myself—that we be thoughtful, hopeful and thankful, and leave our cares entirely behind. It will be but a short time at the longest with some of us; and if deep trials are permitted to assail us, let our requests be made known to God in great sincerity and confidence, for He will assuredly hear and deliver us. Affectionately,

JOSEPH MORRIS.

CALEDONIA, Ohio, Fourth Month 21st, 1889.

FOR "THE FRIEND."

What motives have members of the Society of Friends for keeping *Musical Instruments* in their houses?

The various religious bodies are held in contact by a religious unity in what they understand to be Scripture truth. For a portion of its members, however, fond to adopt and propagate other sentiments, works schism in the body. A foundation principle with the Society of Friends is, that "God is a Spirit and they that worship Him must worship Him in spirit and a truth." Such an engagement cannot be performed by proxy nor by machinery. Nothing can be gained from a musical instrument but sound. However varied the sound may be, it finds no sentiment. Its use is to please the ear for a shorter or longer period, without edifying the mind.

Musical instruments are expensive and useless ornaments of household furniture; for which at its period there are millions of money expended. The rich will purchase them, and the poor will imitate as far as they are able—many beyond their ability in the matter.

How can Friends be faithful stewards in the disposal of temporal trusts by such outlets? Or can they properly spend hours of precious time in the cultivation of, and listening to mere sound?

ADAM SPENCER.

SPRINGFORD, ONTARIO.

FOR "THE FRIEND."

The leading of the young generation in the ure way, in which the wisdom of this world abhors no place, where parents and tutors, humbly waiting for the heavenly Counsellor, may exemplify them in the truth, as it is in Jesus, hath on several days been the exercise of my mind. Oh! how safe, how quiet is that state, where the soul stands in pure obedience to the voice of Christ, and a watchful care is maintained, not to follow the voice of the stranger! Here Christ is felt to be our Shepherd, and under his leading people are brought to stability; and where he doth not lead forward, we are bound in the bonds of pure love, to stand still and wait for him. In the love of money, and in the wisdom of this world, business is proposed, then the agency of affairs push forward, and the mind an not, in this state, discern the good and effect will of God concerning us. The love of God is manifested in graciously calling us to one out of that which stands in confusion; and if we bow not in the name of Jesus, if we live not up to those prospects of gain, which, in the wisdom of this world are open before us, we are in our heart, "I must needs go on, and I going on I hope to keep near the purity of truth as the business before me will admit of; but my mind remains entangled, and the shining of the Light of life into the soul is obstructed."—*John Woolman, 1772.*

Natural History, Science, &c.

Nervous Exhaustion.—In a treatise on this subject, edited by Dr. Rockwell, he states as the result of his observations that many persons who suppose themselves to be suffering under his affection do not belong to that class of patients. "Many of them are unintellectual, phlegmatic and intolerably intolent, and are pleased at diagnosis which touches the nerves rather than the stomach, bowels, and liver. Instead of rest, and cooling draughts, they need mental and physical activity, less rather than more food, ejection rather than retention."

The Trans-Caspian Railway.—An interesting description of the physical features of the great Trans-Caspian Railway, recently built by Russia, was given at a recent meeting of the Royal Geographical Society, London. The line is a single one from beginning to end, except the short sidings at stations; every piece of timber and iron used was brought from Russia. The country through which the road passes is almost level, the engineering difficulties presented being of an unusual kind. The chief of these are scarcity of water and the abundance of sand. On wide stretches no vegetation is to be found and the sand is piled in loose hillocks and swept here and there by strong winds. Various means are employed to keep the track clear. Near the Caspian sea the road-bed is kept well soaked with sea-water; in other places it is protected with an armor of clay. Palisades are erected sometimes to stop drifting. Another method employed is the cultivation of hardy plants, such as are used for the same purpose in the Danish coast. Many parts of the country traversed by the road are described by the lecturer as being something appalling in their loneliness and desolation.

A Canine Thief.—An officer on the Cincinnati police force, named Smartwood, lately met with a peculiar species of criminal. He told it to a reporter of the city. "Recently when I was walking on my beat, that was then in the western part of the city, a paper-carrier came to me and said that somebody was stealing the papers left over morning on a certain day-ep before the subscriber a chance to see them. The gentleman had lectured the carrier, so I determined to watch the house. The next morning I concealed myself opposite and saw the carrier leave his papers. In a few minutes a big black Newfoundland dog from the adjoining yard vaulted the fence and picked up the papers in his mouth. He then jumped the fence and disappeared in the back yard. The next morning I gave him a tip with my club; and after that he left the papers severely alone. The dog's master, whom I could not trace, must have taught the animal the smart trick.

Results of Epizootic.—It is said that not less than 1000 cases of pneumonia and 24 deaths, occurred from exposure to the storm on the day of President Harrison's inauguration, Third Month, 4th.

The Blue Paint of Pompeii.—The blue pigment which has been found in the fresco paintings of Pompeii and elsewhere, and attracted attention from its freshness and durability, has been reproduced very successfully by Professor Fonqué, of the *College de France*. The pigment remains on the walls as bright to-day as when first applied, the color being a deep sky-blue on the surface, and pale rose when viewed from the side. It is a compound of copper and silica. The ancients appear to have followed no exact rules or proportions, although the preparation of the compound is a matter of some delicacy of manipulation. Prof. Fonqué considers it would be a great advantage to the manufacturing arts for the blue to be produced commercially, the means now at the disposal of manufacturers making the difficulties trifling.

A Dangerous Ravine.—According to Walter H. Weed, in a late number of *Nature*, there is a ravine five miles from Soda Butte P. O., in the northeast portion of the Yellowstone National Park, which is truly a "Death Gully" to wild beasts or to any air-breathing animals. It was discovered last year. In form it is a V-

shaped gulch, seventy-five feet deep, and carbonic acid gas accumulates in it up to a certain height, when the air is still, so that animals immersed in it become asphyxiated. The gas was observed issuing freely from a boiling pool some thirty feet in diameter, and it may possibly come from crevices that were not located. The party found the remains of elk, bears, squirrels and an immense number of insects, who had lost their lives by inhaling the deadly gas. It is easy to imagine that hunters or explorers might lose their lives in a similar manner, if they were not upon their guard. The case reminds one of the famous *Grotto del Canè* near Naples, where a dog is utilized to illustrate to visitors the process of asphyxiation.

Artificial Globe.—Among the objects of large size which are expected to be features of interest at the French Exposition, will be an immense terrestrial globe. It will be one millionth of the size of the earth, and consequently will have a diameter of something less than 100 feet. On this scale it will be possible in most cases to give geographical details their true proportionate dimensions. All the great lines of communication by land and sea can be shown in detail. The globe is to be poised, and arranged so that the diurnal revolution of the earth can be exactly imitated by means of clock-work. The work, it is announced, is well forward to completion.

Typhoid Fever in Vienna.—In that city, from 1851 to 1874, well water of an impure character was used to a large extent in addition to a systematized supply from the Danube. During this period the deaths from typhoid fever ranged from 100 to 340 annually in every 100,000 of the population. In the last-mentioned year a spring water was introduced, and the death rate from typhoid fever fell immediately to 50. Since then, by the disuse of impure wells and the extension of the new supply, the rate for the past three years has fallen to 11; and inasmuch as the sewage system was in existence during the high rates, the fall since 1874 is necessarily referred to the use of a water which is free from sewage. The fall in the typhoid rate, experiencing an interruption in 1877, when, owing to the freezing of some of the sources of the spring supply, the water of the Danube had to be pumped into certain of the mains; and it is of importance to observe that the sections of the city which were chiefly affected by this epidemic were those in which the Danube water was distributed.

A Ghost Story.—A ghost story on scientific foundations is rather a good thing in real life, because we look for the science and philosophy of even our stories in these days.

F Street has some old, handsome houses still standing on it, and one of those was the Meade house. Commodore Meade and his mother lived there a great many years. After they died, the house was rented for a while. Then for years it stood empty—nobody would take it. Among the black people it had a reputation for being haunted—"Fore de Lawd sah, I see 'em de old Commodore lookin' out 'at dat window in de back parlor, as stern and sot as if he'd caught me sneakin' off with a loaf of cake for we-us to make merry in the kitchen. I just seen him, sah, and de ain't no use talkin' to me about it."

When a black servant says that, you will have to give it up, and the probabilities are that he will say it to the other servants, and that they will clear out in a body, and that they will in-

fect every other servant so that you cannot persuade one to come into your kitchen. That was the way with the Meade house. It stood empty so long, however, that even the reasons began to be forgotten. So it fell that a certain business man, on the eve of financial troubles, and with a large family, looked about him for a large house at a moderate rent, and his eyes fell on the breadth and length of the Meade house. He inquired about it. The rent was fabulously little; he examined it; the plumbing was all right. That is the main question with a family of children—the healthiness of a house. Then he moved in, and spread out in the broad, handsome old rooms, and thanked his stars, and yet wondered at his luck. Then an old inhabitant said one day, "You've got the haunted house, have you; how do you like it?"

"Do not breathe it to my children," said the father; "they will fall down in fits; we have just enough Southern in us to still be a little superstitious. But tell me what you mean?"

"I'll show you," said the other, and took him to the piazza that ran along at the back of the house, upon which the windows of the back parlor opened, looking also down the length of the yard to the servants' quarters at the end. He moved to a certain point, looked, changed his position, and then said: "Come here and stand just where I am." He did so, and there in the window-pane he saw a stern, set face, looking out at him; for a moment it was exactly as if it was looking at him; then, as he involuntarily made a movement, he saw it was shadowy and flickering, although clear.

"Move a step or two farther," said his friend, "and look again." He did so, and then he saw the face of an old lady with a cap on; the face of the man bearing a resemblance to it. "Move again," said his friend, and then he saw the two faces superimposed upon each other, as they are in those composite pictures which have amused us in the magazines within two or three years. The faces were plainly seen and had also a little iridescent look at certain angles of view and at other angles one did not see them at all.

"That is Commodore Meade and his mother. Do you wonder the servants fled as they went down the back steps with untidy acquired provisions in their hands?"

Then both the gentlemen examined the glass and made inquiries of men learned in the business of manufacturing glass. The panes of glass in that house are old French plate, brought over more than a hundred years ago, and made from a flint sand of a peculiar sort. It has a soft lustre after it is washed, finer than the best plate glass of the present day, and the supposition is that the Commodore and his mother must have been, as they often were, sitting by the window and he near it during a thunder storm, and some flash of lightning photographed them in the glass, to the despair of the servants.

"How can we cut out the pane, said the gentleman, "and replace it with a modern glass, and so if your ghost does not disappear." He did so, and there has been no more trouble since. He carried away the ghosts on that old French plate glass.—*The Independent.*

Orange Culture in Florida.—The orange tree is supposed to have been introduced by the Spaniards. Much care is needed in marketing the fruit. This is sorted into "Brights," "Russets," and "Golden Russets." The Russet appearance is caused by a small insect which sinks up the pores of the skin and prevents the juice from escaping. The russet oranges are preferred to all others. An orange tree in Alachua

County, supposed to be 72 years old has borne 18,000 oranges in one season.

Terapin.—Colonel Tilghman and M. T. Goldsborough are largely engaged in the propagation of terapin on the Eastern shores of Maryland, and have about 3,000 confined in a pond, where they are fed and prepared for market. The terapin are caught by the fishermen and sold to Tilghman & Goldsborough. In winter they lie dormant and do not eat at all, but in summer time they seem to have ravenous appetites. The principal food given them is hard crabs, and it takes about 500 to 600 crabs a day to feed them.—*Selected.*

Items.

The Yearly Meeting's Committee.—Philadelphia Yearly Meeting having concluded to continue its Committee to visit subordinate meetings, &c., that was organized on the 27th of Fourth Month, and revised the arrangement of the sub-committees, which are assigned to the different Quarterly Meetings. The line of service which it may be right for these to follow was left for each sub-committee to feel after and decide upon; but it was concluded, that if any of them felt there was a need for the exercise of the additional duty which the Yearly Meeting had imposed on the Committee—of being incorporated with any of the meetings so as to assist in the exercise of the discipline—that the case or cases should be referred to the large Committee, and its concurrence obtained before taking such a step.

Salvation Army.—The wife of Ballington Booth, in addressing a meeting of Baptist Ministers, said that the organ of the Salvation Army, the *War Cry*, is now published in 35 different languages, and has a circulation of 31,000,000. Supposing this to be the yearly circulation, it would give about 600,000 to each number!

Protest Against the Opium Trade.—The London Meeting for Sufferings, at a meeting held the 1st of Second Month last, addressed a minute to the Quarterly Meetings of Friends in Great Britain, in which it said:

"This Meeting has been led afresh to consider its duty with regard to the important subject of the Opium traffic in India and China, which was committed to the Meeting for Sufferings by the Yearly Meeting of 1880.

"Since that time the question has assumed a somewhat different aspect, as the opium clauses of the *Charter Convention* have since been accepted by the British Government. Yet the fact remains that, on the average of the last five years, upwards of 90,000 chests of opium, selling for 110,000,000 rupees (about £7,400,000), are yearly shipped from India to China. The poppy crop is grown in British India with Government money; and the manufacture and sale of the opium are Government monopolies, prohibited to all who have not received a license. The amount manufactured is not substantially decreasing.

"It may be said that the larger proportion of opium now consumed in China is home-grown. But we first compelled its introduction; and, having introduced it, we continue to pour into China the poisonous drug. Missionaries from all parts of the world, and all denominations, write of its terrible effect upon the Chinese. They are unanimous in their condemnation; and they consider that the fact that our nation is connected in the minds of the natives with the introduction of the drug is one of the greatest hindrances in the way of their acceptance of the Gospel.

"In view of these facts, and of the misery and ruin which this traffic is daily and hourly producing in India and China, we feel bound to reiterate our opinion that it is wholly immoral, and that our national responsibility in respect of it is great. If it is persisted in, the results to our own country cannot fail to be very serious, seeing that the works of inspiration are true alike for nations as for individuals. 'Whatsoever a man sows, that shall he also reap.'

Worldliness in the Church.—Bishop Hunt of Central New York, in commenting upon the growth of a worldly spirit in the professing Church of Christ, said the following remarks:

"In prosperous times like ours, and in affluent communities, Antichrist goes himself to church; patronizes preaching, buys a pew, gets himself elected to the vestry, and takes a hand in shaping the policy of the establishment, and, by blandishment or bluster, in pitching the keys of the pulpit. All that you may hear said of the mischief of this sort of corruption in disordering Christ's face, violating doctrine, ennobling the manhood of the ministry, and lowering the standard of personal righteousness, rather understates than exaggerates the fact. It is not scientific doubt, not atheism, not pantheism, not agnosticism, that in our day and in this land is likely to quench the light of the Gospel. It is a proud, sensuous, selfish, luxurious, church-going, hollow-hearted prosperity."

Licensing Evil.—The fact that a crime is tolerated is permitted for a stipulated sum, even though that be but one man able to pay the sum, debauches the public mind, and, in the opinion of the writer, is regarded as a crime. It becomes a question of more or less of right or wrong. That is the fallacy of the whole license system as applied to evil. It debauches conscience, and then, in the end, most inevitably fail in yielding the good results aimed a Judge Sprague says:

"It is a profound observation that the morality of no people can be maintained above the morality of their laws. . . . Extraordinary efforts or the impulses of a particular occasion may, for a time, carry up public sentiment on a elevation above that of legal institutions; but the laws must either be changed to come up to public sentiment, or public sentiment will be brought down to a level with the laws."

That is the true philosophy of Prohibition, an of the opposition of Prohibitionists to every form of license or "continued legalization." The legalization of an evil in order to restrain it is a method that "is vicious in principle" and must in the end prove "powerless as a remedy."—*Selected.*

Indian Treaties.—A treaty between nations on equal terms, and on equal ground, is something like a bargain between honest men, which is to be honestly carried out, and a violation of it on the part of one of the treaty making powers is held to be justifiable cause of war. But when one of the parties to the treaty is greatly preponderant in power, or believes itself to be so, the obligation is held to be binding only so long as it is for the advantage of the stronger, and to the weaker it is kept up, like a bribe, or coin given to a child to keep it quiet, but which the parent or nurse takes away as soon as they want it themselves. Thus the United States made the Burlingame treaty, which welcomed the Chinese equally with the emigrants from the most favored nation, then modified the treaty, and then, under pressure from the Pacific coast enacted the Chinese exclusion bill in plain violation of existing treaties. The President has refused to sign it at the same time pointing out that it was a violation of treaty rights.

The lands of the Cherokee Indians are secured to them by treaties with the United States under the most solemn promises. Under this security the Cherokees have undertaken the experiment of civilization, and have succeeded beyond some of the most prominent of the communities on the frontier. But their lands are rich and desirable. The white man wants them as eagerly as Abal wanted Naboth's vineyard, and he is equally determined to have them whether the Cherokee is willing or not, treaty or no treaty. Congress has ordered a Commission, and the President has appointed it to treat with the Cherokees on the matter of not only equal terms, since the white men are able to pay the price for the land, nor even to fix the price at which they will part with their nor to offer them as much as they have already been offered, but to urge them to sell at a price fixed below the lowest estimate of their value, and to threaten them that if they refuse to sell at the price fixed by the buyer, that Congress will take the land at its next session without their consent. Not one

of the commissioners would do such a thing in his private business. He would consider himself a rascal and a cheat. But different rules of honor and morality prevail in public agreements from those which govern individuals, and the weaker party has no rights which the stronger is bound to respect. The lands will be occupied, more will be taken and occupied, and the Cherokee nation will disappear, and its experiment of civilization by itself will become a reminiscence. The dealings of white men with the red are not such as they can point to with pride. They have been treated far less fairly than the negroes, who were partially civilized under slavery, then made free and given the rights of citizenship. The Indian has been treated to broken promises, and to bullets and sabre thrusts if he resisted the wrongs done to him. Perjury will be inevitable, but it was not creditable to human nature or to modern civilization.—*Newburyport Herald.*

An Incident.—On a railway train the writer noticed the entrance of a mother and little son who were unexpectedly greeted by a friend of the mother's. The friend was only going from one way-station to the next, while the others were on a long journey. There happened to be but one vacant double-seat in the car; and into this the boy slipped, taking the seat next to the window. His mother, asked to improve the ten minutes with her friend, coger her son to give up his seat and take another for that little time, so that she could sit with her friend. "No, I won't; because I want to sit by the window, and all the other seats have people already at the windows."

"But, darling, only for ten minutes, and then you can get by the window all day."

"No, I won't go. I want to sit by the window now."

"But, dear, not to give mamma pleasure?"

"No."
"Not for just ten little minutes, when mamma wants so much to talk to her friend, and you can sit by the window the whole day long?"

"No!"—with impatient emphasis. And in spite of humble entreaty from the mother, and good-natured urging from the friend, that home-cultured bit of selfishness kept his place, the mother never dreaming of insisting on the right and courteous thing, but murmuring gently that "Bobby did so enjoy looking out of the window." When seven-year-old Bobby becomes Robert the husband, his sad little wife will wonder, "Why is it that men have so little tenderness for their wives?"—*Century.*

THE FRIEND.

FIFTH MONTH 11, 1889.

Some weeks ago we received a letter from a Friend in Iowa, commenting on a communication written by our aged friend, Robert Knowles, of that State, on the subject of First-day schools, which appeared in our paper under date Third Month 2nd.

This letter expresses the opinion that if "First-day schools had been started in the early history of the Society, un-sound and unscriptural doctrines never could have got foothold and divided and subdivided the Friends' church."

We do not think the experience either of our own Society or of the Christian world, will sustain this opinion. We see the Bible held in great reverence and its contents diligently studied among the professors of Christianity; and yet how many different and even opposing views of doctrine are embodied in the creeds of

the different sects—all professing to be founded on the same Holy Scriptures. Is not this variance a confirmation of the apostolic declaration, "What man knoweth the things of a man, save the spirit of man, which is in him: even so the things of God knoweth no man, but the Spirit of God?" Divine truths are to be "spiritually discerned." The Holy Scriptures are to be read with reverence, but in their perusal the mind should be turned to the Lord, who desires that He will make them instrumental in promoting our religious growth, and open to us, as He sees fit, the spiritual instruction they are adapted to convey. This was the method of using them which Friends in the beginning practised and advised. Abundant evidences of this are furnished by their writings. One such may be sufficient. Isaac Pennington, in one of his letters, gives this advice:—

"Truly it is great presumption in any man to read the Scriptures boldly, and without fear and reverence to Him who penned them, or to put any of his own meanings and conceivings upon God's words; which it is hard for him to forbear to do, who reads them in the liberty of his own spirit, out of the light of God's Spirit, which is the limit and yoke of the true readers, and of those who understand the Scriptures."

Friends in the beginning were preserved in a remarkable uniformity in doctrinal belief; and this was due to the fact that their chief dependence was placed on the enlightening influence of the Spirit of Christ; which was indeed, "the root of the goodly tree of doctrines" which grew from it. On the contrary, we believe a principal cause of the disagreement on such subjects among the professors of Christianity arises from men putting their "own meanings and conceivings" upon the language of Scripture—trusting more to their own intellectual powers than to the revelations of the Spirit in explaining the mysteries of religion. The effect of this always has been and always will be, to lead to controversy and disagreement.

It is very difficult to prosecute the formal study of the Scriptures without gradually coming to trust in our "own meanings and conceivings." This is one of the tendencies which those who enter upon First-day school work should ever guard against. But the tendency is so strong, that we are almost ready to adopt the opinion expressed by an intelligent and observing Friend in Iowa many years ago; which was, that the First-day school system would prove one of the most powerful instrumentalities in destroying uniformity in doctrinal belief in those parts of our Society where it prevailed. Because the conduct of the classes being often entrusted to those who were comparatively inexperienced in religious matters, the probability was that the doctrinal explanations of the texts that were read would be very different in different schools.

On the general ground above stated, many Friends have long felt that it was needful to exercise much caution in entering upon First-day school work; and have believed it should not be permitted to take the place of that home training which it is the duty of parents to bestow upon their families. Of the importance of this parental concern, an epistle of Philadelphia Yearly Meeting issued in 1863, thus speaks:—

"We are convinced that *home* is the proper place for the moral and religious training of youth—that if ever rightly accomplished, it must be begun and carried on *there*, under a real concern for the well-being of the children;

and that no school training, however unexceptionable, can excuse parents from the solemn responsibility which rests upon them, to perform this imperative duty.

"The family is a Divine institution, designed for the mutual help and comfort of parents and children. We believe rightly concerned parents will appreciate and approve the many opportunities it affords for imparting useful lessons; will strive to have their children as much as possible with them and under their own care and instruction; and watch against whatever would unnecessarily deprive them of their company, or interfere with Christian care and oversight, especially on the first day of the week."

We trust none of our readers will infer from what we have said, that we are not fully in unity with the advices of our Society: to be frequent in reading the Holy Scriptures—as Wm. Penn said was his daily practice—which are able to make wise unto salvation, *through faith* which is in Christ Jesus—but our desire is, that in reading them, the attention should be turned to the Divine power which is able to make them helpful for our instruction and edification; which at times reveals to the babes in Christ mysteries which are hidden from the wise and prudent of this world.

We believe it would be profitable to many of our members to spend more of their time in the serious perusal of the Bible. The advantages of such a course are strongly set forth in a communication from another Iowa Friend, received since the above remarks were written, from which the following is taken:

"Although many Friends are earnestly engaged to teach their children the precepts and promises of the Gospel, and the way of life and salvation, yet the fact remains that vast multitudes are growing up to manhood and womanhood almost or entirely unacquainted with these truths as contained in the Scriptures; unacquainted with the plan of salvation as set forth in them by God himself, for they were written by holy men of old, who wrote as they were moved by the Holy Ghost, and are profitable for doctrine, for reproof, for correction and for instruction in righteousness, that the man of God may be perfect, thoroughly furnished unto all good works. They are also declared to make wise unto salvation through faith in Christ.

"By and through them we learn of God's dealings with his children, through all ages of the world. How He blessed and prospered them when obedient to his Divine commands, and punished them when they transgressed his law. How He upheld and comforted them in all their trials and afflictions and delivered them from their enemies. Making a way of escape by his Divine might and power even when there was no way, causing them to sing songs of praise on the banks of deliverance.

Where else do we learn who it was that shut the mouth of the lions, quenched the violence of fire, out of weakness made strong, and declared that they should not hurt nor destroy in all God's holy mountains? Where else do we learn of the promises and prophecies concerning Christ our Saviour but in the Scriptures; of his miraculous conception and birth, of his journeyings up and down in the land doing good to the souls and bodies of men, of his miracles, of his suffering, death and resurrection from the dead, rising triumphant over death, hell, and the grave, and has become our advocate with the Father; having been in all points tempted like as we are yet without sin, having become a

merciful high priest, a compassionate Saviour, able to succor all those who are tempted, who declared that it was expedient that he should go away or the Comforter would not come, but if he went away he would send him. Where else but in Scripture do we get a knowledge of these and many other things to encourage and help us on our Zion-bound journey? Where but in Scripture do we learn that at the name of Jesus every knee shall bow and every tongue confess that He is Lord to the glory of God the Father? Where else do we learn that there is no other name given under Heaven or among men whereby we must be saved?"

The same mail which brought the communication just quoted from, brought another from a California correspondent, who gives her views as follows:

"I have felt it to be hurtful in my own experience, to have the mind occupied before meetings with the prescribed lesson, and of entering into the reading and discussing of the same immediately after meetings. And I can say with R. K., of Third Month 2nd, in THE FRIEND, I have never known a Friend to become more a Friend, who has advocated and supported scripture schools amongst us. Much has been said through the columns of THE FRIEND on our views on these things, which have been encouraging to those of us who are standing measurably alone, greatly desiring the waste places of our Zion may be builded up on the everlasting foundation, as advocated by our worthy predecessors in the Truth."

Still more recently there has come to hand a communication from a Friend of Kokomo, Ind., dated Fourth Mo. 2nd, which corrects the statement made by R. Knowles as to the date of the introduction of First-day schools in England and America—and states that they had been established many years before R. K. supposed. In this he is, we believe, correct; R. K., however, referred to the introduction of the system into our Society, and not into other branches of the Christian church; but as he neglected in his communication to limit his remarks to Friends, the correction of our Indiana Friend is timely and appropriate.

To publish all of these communications in full would require considerable space in our columns; but we think enough has been inserted to enable our readers to appreciate the different points of view from which they look at the question of First-day schools.

The attention of some has been turned to the want of knowledge of the Scriptures which exists among many both young and old; and they are disposed to look favorably on these schools as a means of partially remedying the evil.

There are others who are impressed with the belief that the chief source of spiritual knowledge is the operation of the Spirit of Christ on the heart of man; and that although, by the exercise of our own mental powers, we may acquire a knowledge of what is recorded in Scripture, yet that this is only a knowledge which puffeth up, unless it is sanctified by Divine grace. To them, "the fear of the Lord is the beginning of knowledge," and they feel that it is needful, in the use of the Scriptures of outward ministry, and of other secondary helps in the way to salvation, that none of these things should be allowed to take the place of that primary duty, of watching the inshining of the Light of Christ, and listening in spirit to his teachings.

SUMMARY OF EVENTS.

UNITED STATES.—The official statement shows that the reduction of the National debt during the Fourth Month amounted to \$18,973,274.

The *Lehigh* of this city says: "Travel to Europe by mere pleasure seekers has grown enormously of late years, partly as a result of reduction in the cost and time required for such trips. It is said that 100,000 transatlantic passengers have been hooked to go from New York to Europe every season. If that be true the steamship companies ought to make out pretty well, for they have plenty of living freight the other way."

The War Department officials do not anticipate any trouble in Oklahoma. They think that the local government is sufficiently strong to preserve the peace. A despatch from Oklahoma states that in the first 1000 wagons were counted going into the new country, and 800 coming back with destitute and disgusted settlers. A vastly important matter is that no whiskey is allowed to be taken into Oklahoma, and to this is attributed the infrequency of serious quarrels and bloodshed.

Missouri has just granted school suffrage to women, being the 10th State to do so. She has also passed the Australian ballot bill.

The Senate of Illinois has passed a bill providing that physiology and hygiene shall be taught in the public schools, except in reference to the effect of alcoholic stimulants on the human system.

Prohibitionists in Western Pennsylvania are sanguine in their expectations of carrying the Constitutional amendment, next month. The greatest apathy and strongest opposition seem to be in this city. Let it not be said our Friends that they are indifferent.

Deaths in this city last week numbered 402, which is 7 more than the previous week and 2 more than during the corresponding period last year. Of the whole number 194 were males and 208 females; 50 died of consumption; 45 of pneumonia; 26 of heart diseases; 19 of old age; 18 of debility; 17 of convulsions; 14 of cholera; 13 of inflammation of the stomach and bowels; 12 of cancer; 11 of innation and 10 of typhoid fever.

Markets, &c.—U. S. 4½'s, reg., 107½; coupon, 108½; 4's, 129½; currency 6's, 120½ 1/2.

Cotton was in small supply and firm at 11½ cts. per pound, including sundries.

Flour and Meal.—Western and Pennsylvania super, \$2.50 a \$3.00; do, do, extras, \$3.25 a \$3.75; No. 2 winter family, \$3.75 a \$4.25; Pennsylvania family, \$4.25 a \$4.50; Pennsylvania roller process, \$4.50 a \$5.00; Ohio, clear, \$4.50 a \$4.75; do, straight, \$4.75 a \$5.00; do, extra, \$5.00 a \$5.25; do, straight, \$5.25 a \$5.50; St. Louis and Southern Illinois, clear, \$4.50 a \$4.75; do, do, straight, \$4.75 a \$5.00; winter patent, fair to choice, \$5.00 a \$5.50; Minnesota, clear, \$3.75 a \$4.25; do, straight, \$4.50 a \$5.25; do, patent, \$5.35 a \$5.85. Rye flour was scarce and firm, at \$3.00 per barrel for choice.

Grain.—No. 2 red wheat, 90 a 91 cts.

No. 2 mixed corn, 42½ a 43 cts.

No. 2 white oats, 31½ a 32 cts.

Beeves.—Prime steers, weighing from 1400 to 1500 lbs., 4 a 4½ cts.; good, weighing from 1200 to 1300 lbs., 3 a 4 cts.; common, weighing from 1000 to 1100 lbs., 4 a 4½ cts.; fair, weighing from 800 to 900 lbs., 3 a 4 cts. Best fresh cows, \$45 a \$50; good, \$35 a \$38; fair, \$28 a \$33; springers, \$20 a \$30; fat cows weighing 800 to 1000 lbs., 21 a 25 cts.; weighing from 1100 to 1300 lbs., \$2.60 a \$3.00 cut; slippery cows, \$1.6 a \$2.00; broken cows, \$8 a \$10; bulls, 21 a 35 cts.

Sheep.—Best clipped, 4½ a 5 cts.; good, 4 a 4½ cts.; medium, 4 a 4½ cts.; 3 a 3½ cts.; common, 2½ a 3 cts. Lambs, best clipped, selling from 61 a 64 cts.; good, 61 a 63 cts.; medium, 51 a 64 cts.; fair, 51 a 61 cts.; common, 4½ a 5½ cts.; spring lambs, 4 a 6 cts. 4 a 4½ cts.; 3 a 4 cts.; 2 a 4 cts.; good Westerns, 61 a 7 cts.; country hogs, 61 a 7 cts.

FOREIGN.—Orders have been issued to the prison authorities for the release from jail of William O'Brien and Timothy Harrington.

Charles S. Parnell was under examination last week before the Commission. While undergoing cross-examination by Attorney-General Bowen, the latter quoted a statement made by Parnell in the House of Commons during the debate on Forster's bill in 1881, suspending the writ of habeas corpus, to the effect that secret societies had then ceased to exist in Ireland. Parnell was asked if he believed the statement when he made it. He replied that he did not. On further questioning he admitted that he had declared as a truth something he knew at the time to be untrue with the deliberate intention of deceiving Parliament.

In the House of Commons, on the evening of Fourth

Month, 30th, a motion of Samuel Smith (Liberal) censuring the Government for fostering spirit drinking in India, was carried by a vote of 113 to 85.

On the 31st instant, a man who gives the name Perrin, and who says he is a marine storekeeper, fired a blank cartridge at President Carnot, when the latter was leaving the Elysée Palace to attend the Centena celebration at Versailles. Perrin was promptly arrested. It was taken to a police station, where he made a statement, in which he said he would like to kill him, but that he had no desire to kill the President; he merely wished to expose the fact that he (Perrin) was the victim of injustice. The man it has since come to light is known to be insane.

It is stated in Berlin, that a sub-committee of the Samoan Conference is projecting a plan for the future government of Samoa under a native ruler, and appointing a tribunal to consider and adjudicate the question of land tenure.

It is probable that the Conference will decide to appoint a tripartite body, with a Minister to supervise Samoa and act as counsel to the native sovereign.

It is also stated that the liberation of Malacca, the deposed king of Samoa, has been voluntarily announced to the Samoan Conference. It is supposed that the action on the part of Germany is the prelude to the reinstatement of Malacca.

It is stated that the Germans have discovered stores of explosives which were to be used in an attempt upon the life of the Czar.

Marquis De Mores, who has been in China making preparations for the construction of a railroad from Tsinpin to points in the territory acquired by the Samoan Conference, has arrived in Paris. The railroad, which will be built by French capital, will, it is said, open up a territory containing a population of over a hundred million persons. Marquis De Mores is the son-in-law of L. von Hoffman, the banker.

MARRIED, at Friends' Meeting in Moorestown N. J., on the 11th of Fourth Month, 1889, JOHN A. ROBERTS and MARY J. STOKES, both of Moorestown.

NOTICES.

The Committee on Public Meetings of the Temperance Association of Friends of Philadelphia Yearly Meeting, is desirous of entering into communication with one or more Friends in each Particular Meeting in Eastern Pennsylvania, the object being to take such means as may seem advisable to stir up a more general interest among Friends and others in the election of the Prohibitory Amendment, which is to be held on the 18th of Sixth Month next. Friends should bear in mind that this is a moral and not a political question, and one in which their influence for the right ought to be felt in the communities in which they live more than it is. Will not those who may take an interest in the subject promptly address

GEORGE VAUX, Jr.,

404 Locust Street, Philadelphia.

WESTWON BOARDING SCHOOL.—During the Summer term the stage will be at Westwton Station to convey passengers to the school on the arrival of the 7:09, 8:55, 2:35 and 4:55 trains from Broad St. Station
J. G. WILLIAMS, Supt.

WANTED—A competent Friend to teach in Chesterfield Preparative Meeting School at Crosswicks, N. J.
For information apply to JOSEPH S. MIDDLETON Crosswicks, Burlington Co., N. J.; or WM. BISHOP Walnford, Monmouth Co., N. J.

WANTED—Numbers 59 and 64 of the *Tract Repository*, for Friends' Library.

Address Jno. H. DULLINGHAM, Librarian, 112 North Sixth Street.

FRIENDS' ASYLUM FOR THE INSANE.—An Assistant Resident Physician wanted. Please apply promptly to Dr. Jno. C. HALL, Supt., Frankford, Philadelphia.

DIED, Third Month 28th, 1889, after a brief illness, ELIZA F., wife of Wm. L. Ashon, of Plushing, Ohio, in the 35th year of her age, a member of Flushing Monthly Meeting. Watch, therefore, for flying news of her death on the day nor the hour wherein the "Son of man cometh."

—suddenly, at his residence near Jacksonville, N. Y., Fourth Mo. 20th, 1889, GEORGE F. WOOD, in the 62nd year of his age, a beloved member of Hector Monthly Meeting of Friends.

FOR "THE FRIEND."

Historical Review of the Society of Friends.

(Continued from page 322.)

In the last number of this article reference was made to the efforts used by Philadelphia Yearly Meeting to induce their brethren in Great Britain to take some effectual steps to check the spread of sentiments inconsistent with our doctrines. As these efforts did not meet with the success that was desired, that Yearly Meeting in the following year (1847) issued what was called *An Appeal for the Ancient Doctrines of the Religious Society of Friends*,* in which various extracts from the writings which had given uneasiness were contrasted with the statements of doctrine made by George Fox, Robert Barclay, and other Friends who had always been regarded as true exponents of our principles.

An examination of this Appeal shows that many of the passages criticised by it were such as tended "to produce an undue reliance on the reading and study of the Holy Scriptures; in the work of salvation;" and did not sufficiently direct the attention to the teachings of the Holy Spirit, which shows to each individual his own condition, leads to repentance, gives strength to forsake sin, and which alone can impress on the mind a living sense of those truths set forth in the Scriptures.

George Fox says: "I directed them to the Divine Light of Christ, and his Spirit in their hearts, which would let them see all their evil thoughts, words and actions, that they had thought, spoken and acted; by which Light they might see their sin, and also their Saviour, Christ Jesus, to save them from their sins. This I told them was the first step to peace, even to stand still in the light that showed them their sins and transgressions."

Before this *Appeal* was issued, the writings referred to, and the discussions which grew out of them had sadly marred the harmony of our Society in some parts of America. Those who saw and exposed their erroneous tendency were looked upon as too censorious by others whose attention had been more drawn to the nonobjectionable portions of the treatises. The practical result was to make a line of division between Friends who had formerly been united in feel-

ing, and who, in some cases, it is probable, were still really attached to the same principles.

In New England, this alienation proceeded so far, as to divide the Yearly Meeting into two bodies. This division commenced in an attempt to prevent an expression of uneasiness by those who were dissatisfied with some of the writings of a minister from England, then travelling in that country. John Wilbur, the same Friend who had sounded an alarm some years before, at the approach of Beaconism, when he was in England, was one of those who was uneasy, and feeling himself religiously bound to defend the original doctrines of our Society, which he believed to be menaced, maintained his right to bear a protest against error, with patient firmness. Unhappily a party spirit was awakened, and in the effort to silence such protests, measures were resorted to which those affected believed to be in violation of the discipline of the Society, and of their rights as members. Without entering into the sorrowful details of this controversy, it may be sufficient to say, that the result was the division of New England Yearly Meeting, in 1845, into what have since been known as the "Larger" and the "Smaller" body—the latter containing that portion of the Yearly Meeting which condemned the harsh proceedings referred to.

Epistles having been received by Philadelphia Yearly Meeting from each branch of the bodies in New England, it directed its Meeting for Sufferings to examine into the circumstances of the case. That body accordingly prepared an elaborate report in which they express the belief that in the proceedings referred to, "wrong opinions have received support, and the discipline and rights of members have been violated; and that it was the course pursued by them in these transactions which led to the separation." They say, in reference to the Smaller Body, "we believe that they continue to be entitled to the rights of membership, and to such acknowledgment by their brethren as may be necessary for securing the enjoyment of those rights." This report was adopted by the Yearly Meeting, which directed a copy to be sent to each of the bodies in New England, with a minute expressing a "sincere desire that under the heavenly influences of Divine Love, all parties may be favored to be brought into true fellowship on the only sure foundation, so that we may be enabled to unite as brethren in the promotion of the blessed cause for which the great Head of the Church raised us up as a people."

No official step has since been taken by it which modifies that action, so that *periodically*, Philadelphia recognizes as branches of the Society of Friends both of these bodies in New England. All of the other Yearly Meetings then existing, gave their support to the "Larger Body," excepting Ohio, which assumed nearly the same position as Philadelphia.*

* It is proper to note that since that time, other events have transpired which have altered the relationship of Ohio to the New England meetings.

The discussion which grew out of the separation in New England was widely spread; and in many places the members of meetings became divided in feeling—some siding with one "body" and others with the opposite. This divergence led to much exercise and difficulty in many sections of our country.

After the separation in New England, Ohio Yearly Meeting had ceased to correspond with either of the sections of the Society there, and had not been in the practice of reading the certificates of travelling ministers coming from either of those bodies; but the members of both had been permitted to attend its sittings. In 1854, there were in attendance two Friends from the Smaller Body, to whose presence strong objections were made by some of those who were in sympathy with the Larger Body. At the close of the first session, the Representatives as usual were requested to meet and propose to the Yearly Meeting persons to act as Clerk and Assistant. Of the 42 representatives, 40 met and 12 of these were in favor of bringing forward the names of two Friends, who were not satisfactory to the other 28; and accordingly one of their number was requested to inform the meeting on the opening of the next session, that they had been unable to agree on any names to be offered. The established practice of Ohio Yearly Meeting, as well as of other Yearly Meetings, had been that the old Clerks remained in office till new ones were appointed. Accordingly, when such a report was made on behalf of the representatives, the Clerk made a minute of the report, and continued the former clerks in office, as had several times been done in previous years. Another of the representatives had previously brought forward the names which had been favored by 12 of their number, and those who united in this movement organized a meeting and thus effected a separation in Ohio Yearly Meeting; which lost about one-third of its members in this manner. Jonathan Binns acted as Clerk for the meeting thus established, and from his name it has often been designated, to distinguish it from the other, as the "Binns Meeting."

If it had not been for the excited state of feeling that existed, such a disorganizing step could not have been taken, with so little apparent cause for it. As an intelligent member of those who then withdrew remarked to the writer—the separation had practically been effected before.

When the claims of the two bodies in Ohio were brought before Philadelphia Yearly Meeting, it recognized as the section of the Society with whom it could hold official intercourse, the Larger Body there for whom the old Clerk had continued to act. The action of the others was regarded as disorganizing in its nature, and as having no sufficient justification in the condition of things which existed. Most of the other Yearly Meetings decided that the Smaller Body in Ohio was the one whom they would regard as representing our Society in that section of country. The influences which led them to come to this conclusion may be gathered from

the detailed accounts published in the *British Friend* and elsewhere, of the discussions in the London Yearly Meeting, in 1855, on this subject. It was fully acknowledged there by the Clerk of London Yearly Meeting, by Josiah Forster who was looked up to with great regard as one expressed in Discipline, and by others, that as a witness by the *London Friend* as its own conviction, "It was clear that the body represented by J. Binns were in fact the seceders." But the irregularity of its proceedings was overbalanced by the belief that it was more nearly in unity with the prevailing sentiments in London Yearly Meeting than the other, and this belief set aside the claims of order and justice.

J. W.

FOR "THE FRIEND."

A Variety of Sketches.

CARNALITY.

By yielding to carnal inclinations, we become carnally minded, and to be carnally minded is death to the Divine life of innocence and purity. For an immediate death of the spiritual life was pronounced upon Adam if he, by yielding to his carnal inclinations, partook of that which was forbidden. And this same Divine law still stands for our observance. And as by disobedience in the first Adam all died, spiritually, and lost their right to the tree of life, so now, by obedience to Christ, the second Adam, all are made alive, and have a right to the tree of life.

CHRIST'S KINGDOM.

If Christ's kingdom is never to come, and if his will cannot be done here on earth as it is in heaven, why does He teach his disciples to pray for it? If holiness were not attainable here on earth, why did God say to the Israelites "Be ye holy, as I the Lord your God am holy?" For He does not require impossibilities of any of us. But we are told that without holiness no man shall see the Lord.

FAITHFULNESS.

The man of God is not slothful in business, but fervent in spirit, serving the Lord faithfully in what-soever He calls him to do; both in relation to the things of this life, and the life that is to come. And as he proves to be faithful in the few spiritual things which he may at first be entrusted with, he is made ruler of more; and at times enabled to enter into the joys of his Lord. For there is a rest which the weary Christian traveller may enjoy as a glorious foretaste of that sabbath which awaits the righteous in full fruition in the world to come. For thus saith the Lord our Redeemer, "Be thou faithful unto death, and I will give thee a crown of life." And I have faith to believe that if we carry out this injunction in all its fulness, we shall have to be faithful unto the death of all our fallen or sinful propensities, and then to be faithful until the death of our mortal bodies. Then, when this mortal shall put on immortality, we shall be crowned with a crown of life as a glorious reward for our faithfulness.

REFINER'S FIRE.

All pure gold must pass through the refiner's fire, or furnace of affliction; for all have to be purified and tried. And such as abide the day of his coming, when He comes as a refiner and purifier, will be prepared to offer in worship, offerings in righteousness, whether vocally or silently. And their offerings will be pleasant unto the Lord, and refreshing to the people, as in days of old. For they will be filled with heavenly wisdom instead of earthly, and thus

turn many to righteousness, and shine as the brightness of the firmament and as the stars for ever and ever.

LABOR.

The natural man labors outwardly, for outward reward, which the earth can give him. But the spiritual man labors inwardly, "not for that meat which perishes, but for that meat which endureth unto everlasting life, which Christ alone can give." The one labors for the food which the body wants, to make it strong in outward things; the other labors inwardly for the inward and spiritual food which he needs in order that he may grow strong in the Lord and in the power of his might. So both outward and inward labor is needed—the one for the body, the other for the soul.

We are so constituted by our all-wise Creator, that both can be carried on harmoniously together. For our heavenly Father knows that his children need earthly things. So the word is extended to all the able-bodied children of men, both in a temporal and spiritual point of view, "work while it is called day, for the night cometh when no man can work." And while I do not believe in the human activity and labor and zeal which so predominates in a large part of the religious world, yet I do not believe that the Christian's life is a life of idleness. It seems evident that the life and power of Godliness is low in many meetings; yet that does not justify us in substituting a human life and power to fill the lack of the Divine. We may have a zeal for God, and be prompted to work for Him, as we think, and yet our zeal may not be according to an experimental knowledge of Him whom to rightly know is life eternal. And if we believe the Scriptures as set forth in 2d Thess. 2d chapter, we must believe that there will come, or has come, a falling away wherein the mystery of iniquity will work, with all deceivableness of unrighteousness, and that strong delusions should come on such as should believe a lie. But the language of Christ to such as thought they were casting out devils in Christ's name, and in his name doing many works, was "depart from me ye workers of iniquity, I never knew you." So we have workers of righteousness, and we have workers of iniquity under the cloak of righteousness. But I am thankful in the belief that we still have Christ's workers and his ministers who are humbly and in the simplicity of the Gospel, laboring to build up his cause amidst a crooked and perverse generation, who are sent forth as sheep amongst wolves, and are often led to suffer and to tremble for the ark of the testimony. But as a worldly religion has got to be so popular that Satan can carry on his work and his ministry under the guise of religion; so it is no great marvel if his ministers should be transformed as ministers of righteousness, whose end shall be according to their works. And as their works are according to the kingdoms and the glory of this world, which he holds up in splendor before them, so they all work in harmony together in the broad way of the world.

DAVID HUDDLESTON.

PUEBLA, IUD., Fourth Month 8th, 1859.

My advice to young workmen, desirous of bettering their circumstances, and adding to the amount of their enjoyment, is a very simple one. Do not seek happiness in what is unusual pleasure; seek it rather in what is termed study. Keep your consciences clear, your curiosity fresh, and embrace every opportunity of cultivating your minds. — Hugh Miller.

FOR "THE FRIEND."

Notes of a Visit to Italy.

(Continued from page 322.)

We had long entertained a desire to see Venice, the Unique City of the sea, with its streets or canals in place of paved roadways; whose history dates back to, or before the Christian era, and whose inhabitants were a mixture of the old Elyrian and Celtic tribes who had emigrated from the East to Venetia: a city built on the islands in the Adriatic sea, with its foundation on three large and a hundred or more of smaller ones, and once contained 200,000 inhabitants but now reduced to 130,000, with a heavy percentage of paupers. Its semi-circular or Grand canal is intersected by some 150 smaller ones leading in all directions over and through the city, of seven miles in circumference, and crossed by 370 bridges, the Grand canal sweeps around, on one side until it joins the waters of the open Adriatic on the other side. Venice has 15,000 houses and palaces, and is noted for its many factories of fancy, costly and ornamental articles. We approach it by rail from Padua over an elevated mole of some three or four miles from the mainland, through a Lagoon (or low bog) which laded us at the edge of the Grand canal: we were soon seated in a black painted gondola, hundreds of them waiting at the landing to convey passengers or freight to any part of the city. Black is the color allowed by law and the present inhabitants follow the custom of their forefathers when the dark skinned African and slavery were domiciled in Venice. The Gondolier uses his singularly constructed cat boat to propel and steer his craft, standing on the bow and using an elevated row-lock some two feet high for this purpose. The Gondolier is called Poppe, and the peculiar note given in turning a corner in the canal strikes you peculiarly. "Jaic," pass to the right. "Preme," pass to the left. We were taken to the Hotel Victoria and landed on a narrow wharf on the edge of the canal, and up a flight of steps into the reception room, and provided with good apartments, and dinner at 6.30 P. M.

Visitors to this old city are impressed with the odd and antiquated appearance of the buildings and the narrow alleyways in front of the dwellings and shops, except the Piazza of St. Mark's and the absence of either horses, carriages or jacks and no noise from either cart, rick or wagon or any kind of wheel vehicles. Water and all kinds of—even heavy articles, were carried on the heads and shoulders of both men and women. It seems as if Venice is, and has been for centuries, a finished city, and the people follow on in the old ruts of their forefathers of centuries ago. We saw no new buildings being erected or any alterations going on. The open square of St. Mark's, 759 by 270 feet, is a noted place in Venice. On three sides lined with stores occupied mostly by Jews for the sale of fancy articles of jewelry, statuary, pictures in Mosaic and on encaustic, and almost every imaginary article to suit the taste of the tourist. At the upper end of the Piazza is the very ancient church of St. Mark's, built not later than the tenth century and many additions made since. In front of the church are elevated the four Bronze Horses once taken away by Napoleon the First, but on his downfall they were restored and erected in the place they formerly occupied; they claim the tomb of St. Mark to be within its walls. It has highly embellished ceiling and walls, elaborate adornings in Mosaic work which must have taken scores of years for hundreds of artists to complete; the church, however, outside

So we were now quite hemmed in by trees, and so overgrown was the path that once or twice we had to bend low, in order to pass beneath the branches and briars overhead. Here it was that one of our number discovered a *Crataegus flavo*, quite a tree, with tall, slender form and pretty white flowers. "Necessity, ever the mother of invention," prompted one of us to use one of the large thorns for a pin, and this proved so effectual, that another of our party followed the example set.

Another pretty bush was the *Viburnum prunifolium*, with its clusters of white flowers with rich marble finish, and two-storied portico in front. It was once the residence of the almost despotic, princely Doges or Dukes, who have now given place to a series of galleries and halls of splendid paintings and sculpture, and many specimens of art—the productions of the masters of the tenth to the sixteenth or seventeenth century, when Venice, in her wealth and power, controlled a large share of the maritime trade of the world, and with her fleets and armies fought and conquered among the nations, and exercised a powerful influence by her industry and arts in shaping the civilization of her time. We noted the shops in Venice having statues representing the African race, in memory of the time when they were so largely represented as slaves in the Venetian Provinces.

At 2 o'clock every day a numerous flock of geese come to bathe, and afterwards stroll on the bank; it was not without some persuasion, and a little help in the shape of an additional board from a dilapidated fence near by, that all the number were induced to cross the stream and penetrate again into the woodlands, along a path at the other side which, if followed, led to another way home.

We did not meet any new flowers there, with the exception of the well-known *Lonicera sempervirens*, trumpet honeysuckle, which grows freely here, and a pretty white bell-shaped flower, probably one of the Ericaceae, whose name we could not find in Gray's "Manual." Its objectionable odor renders it disagreeable to many; and so it is in life, for outward comeliness of form can in no wise atone for the absence of sterling qualities.

We met some very pretty and delicate ferns, also some rather wild pigs, but a thought of the bears which are sometimes found in this neighborhood never once crossed our minds; and hasty a branch of the stream or swamp, which it happened to be, cut off our hopes of pursuing the woodland path. The rail fence and some fallen logs for a few moments offered a chance of further progress, but on investigation proved ineffectual. So we retraced our steps.

On reaching home we found we had not been fortunate enough to escape from our enemies, the wood ticks, which abound in such quantities in our woods during the summer, as to render travelling there at that time rather unpleasant, for they bite sharply and cause soreness and itching for some time after.

On the whole, in spite of this one disagreeable feature, we enjoyed ourselves and had indeed a pleasant walk.

N. CAROLINA.

THE Seed is come that bruised the head of the Serpent, and was crucified, and is risen. He was made sin for us, that knew no sin. Was Christ made sin? Yes. How? By death He made the debt to be his; He paid it, and sat there at liberty.—George Fox.

FOR "THE FRIEND."

A Faithful Fireman.

Late in the year 1886, the Temple Theatre, situated on the north side of Chestnut Street, near Seventh, in the city of Philadelphia, was totally destroyed by fire. Two firemen, John Gibson and John Johnson, when in the act of dragging a hose under the heavy arched ceiling, were crushed and carried down by the fall of the ladder through the floor into the cellar, where their dead and frozen bodies were finally found after a long, painful and dangerous search. Concerning the first named of these two men, Moseley H. Williams, of the American Sunday School Union, has published a narrative entitled, "The Philadelphia Fireman." The following abridgment of his sketch is of interest and value. As witnessing to the fact that the salvation of God may be found of all who turn not away from the pleadings of his gracious spirit, notwithstanding their surroundings may seem to be such as to interpose signal difficulties to their progress in the Zionward journey.

In the pocket of the dead fireman's overcoat there was found a folded paper, which had been carried so long that it was almost worn through at the creases. This paper, endorsed by the wife as "Found in John's pocket," was brought to the rooms of the American Sunday School Union and proved to be the imprint of a simple comprehensive prayer, which had been written out by the venerable Enoch Pond, of Bangor, Maine, and had been copied into a child's paper, "The Sunday Hour." It appeared, according to the wife's statement, that this paper had been brought home by one of their children, when John, picking it up, read it aloud as he sat upon his bed. The language of the prayer impressed him much, and, being suitable to his then frame of mind, and that of his wife, they repeated it solemnly and prayerfully together. This was the turning-point in John's life. He copied upon a slate the prayer which had so reached him and kept it at the engine house, where it was found at the time of his death. And yet, as will further appear, he was far from being bound by the letter.

What kind of a man was John Gibson after he became a Christian? A minister who knew him well writes that he was "A consistent Christian, who, in his daily work, honored the Saviour whom he loved." Testimonies to his faithfulness came from many sources. We may mention various duties of the Christian life in which his example may stimulate those who read this brief sketch.

He was a man of prayer. After having been at the engine house all night he would never sit down to breakfast at home until he had his half hour of prayer and reading the Bible. When he came home to dinner and supper, half an hour of the hour allowed for meals was given to communion with God. When the family were all ready for the "Christmas" supper at his father's house, two days before his death, John was missing. The sister first, and then the wife, went in search of him and found him praying; he would rather, he said, lose the ample supper than he would his prayer.

John read his Bible diligently. He had "chosen the better part," and would neither waste the precious hours nor soil his mind by reading the harmful trash not infrequently found in the hands of those in the like employ with himself. In the engine house, on a shelf against the wall, is a Bible which was given to the fire department by the Philadelphia Bible

Society. The visitor who opens this Bible will find many passages marked by John Gibson, and his fellow-firemen say that he often took the volume to the cupola of the engine house, where he would spend hours at a time in studying its pages. Taking this as his guide book, he thought it furnished medicine for all forms of evil. A man given to swearing found a paper containing the Divine prohibition, "Swear not at all." One who was prone to give way to a quick temper and utter hasty words felt the gentle rebuke of a paper, left conveniently in his way, containing such a golden truth as this from Holy Writ: "A soft answer turneth away wrath, but grievous words stir up anger." Thus the Lord was made to speak, bringing a quiet rebuke to those in temptation, without the sting which human words might inflict.

He observed the First-day of the week. He never would touch a "Sunday newspaper." If there was a fire late on Seventh-day night John was always willing to work until 12 o'clock, washing the hose; when midnight struck he would stop. So, too, if a fire occurred First-day he would do his duty in striving to put it out, for he rightly felt that that was a work of necessity, but the after washing of the hose he asked to be excused from, unless it were left to be done until the following day.

He was careful to attend religious meetings on the First-day of the week. While it is required of the firemen as a body, to be on duty every day, yet as each one of them is allowed to be absent one day in the week, John's companions would frequently permit him to be away on the day when he could attend public worship—which was to him a willing and grateful service.

John endeavored to bear a faithful testimony to his Master before his companions, to whom he would call attention to their dangerous occupation, and point them to the necessity of being prepared to meet their God. His mother saying to him—"When I hear the engines going up, I am always anxious," he responded, "Don't be afraid, mother, I never get on the hose cart to run to a fire without offering prayer." While it is true that death came to him suddenly and violently, it is believed that he was found not unprepared for the change; and moreover that it may have been thus providentially permitted by Him (without whose notice not even a sparrow falleth to the ground), the more impressively to show forth the faithful record of the latter days of this God-fearing Philadelphia fireman.

J. W. L.

CONVICTION is in itself a power. The man who is sure of what he says, gives assurance to those who hear him. With the world as it is, most men do not know what to believe, nor do they care to be at the trouble to find out for themselves what they ought to believe. When, therefore, a man comes before others with a conviction of his own, and asserts it with a positiveness akin to inspiration, those of his hearers who are hesitating, or who are unconcerned, are likely to be swept along by his intensity, and to believe what he believes, because he more than believes it. A man may have a wrong conviction, and so do harm by his power of impressing it upon others; but if a man has no strong convictions, either right or wrong, he must not expect to inspire others to a belief any stronger than his own. The elemental power of a preacher is an overpowering conviction. Unless a man believes a truth so firmly that he is willing to live or die for it, he has no fitness to be a preacher of that truth, whatever it be.—Selected.

Natural History, Science, &c.

Poison of Wasps, &c.—M. G. Carlet, in investigating the poison injected into the wounds made by the stings of different species of wasps, bees, &c., finds that the poison coming from those insects which have a barbed sting, is different in its nature from that produced by those who have a smooth sting, such as the Digger wasps and other species which store up spiders or grubs for the food of their young. The effect of their venom is to paralyze rather than to kill the victim of the sting. The venom of the barbed-sting species is a mixture of two liquids—a acid and an alkali, each secreted by a special gland. In the smooth-sting species, no alkali secreting gland is present.

Trapping Beetles.—In experimenting on the best means of protecting corn crops from the ravages of wire-worms, Prof. J. H. Comstock, of Cornell University, found that by placing in a field which was badly infested with them, traps consisting of small bunches of fresh clover or sweetened dough, covered with a piece of board, he could catch large numbers of the black beetles, which are the parents of these worms. A series of twelve traps yielded him in three days, 482 beetles. Where the clover or dough was poisoned, the beetles were found to be dead.

The Food and Habits of the Owls.—A communication in *The American Naturalist*, from Dr. W. S. Shadé, contains some interesting observations on the habits of owls, especially of the Great-horned owl, which lead him to the conclusion before reached by ornithologists, that the hawks and owls render more service than injury to the farmer. The Great-horned owl is somewhat abundant in central Illinois, and its principal food consists of meadow mice or other small rodents and rabbits. In several nests which he examined, and which contained young owls, there were found rabbits or parts of them. The following is an extract from his note book for 1887:

"Located a *Bobo's* nest in an elm-slug 14 feet high, standing on a creek bank. Found in the nest three young owls snapping their bills wrathfully and looking the very personification of fierceness."

"In the cavity was one whole rabbit, the hindquarters of another, a flying squirrel and a quantity of fish scales. While I was sitting on a limb by the side of the cavity, watching the little fellows, the parent owls suddenly appeared upon the scene, and I had a cyclone about my ears for a few minutes. Such a whirl of feathers, claws, fierce eyes, snapping beaks, hootings and screechings about my head was calculated to terrorize one unaccustomed to the actions of this, the greatest of all the owls."

"After continuing these demonstrations for a few minutes, one of them settled upon a limb a few feet from the ground just over the creek. Swaying to and fro for a short time, he fell off the limb to the ground, and then tumbled about in the leaves in an apparently very crippled and helpless condition. My dog, that had been sitting all this time in a perfect frenzy of excitement at the foot of the stub, watching the owls, now forgot his training and made a headlong rush through the creek for the owl, but it was up and away, leaving him disappointed and crest-fallen. I returned to the ground and departed, leaving this interesting family to the enjoyment of their well-furnished board."

"One day as I was riding leisurely through heavy timbers my attention was arrested by the

noisy cawing of a large flock of crows. I at once guessed the cause of all this tumult to be a Great-horned owl, for of all the denizens of the forest none other will so arouse the uncontrollable indignation of the family Corvidæ. Suddenly a regular pandemonium of shrieks, and directly the scurrying by of a number of the sable birds plainly told me that something terrible had happened. Turning my horse loose, I went noiselessly up the hillside on a tour of investigation. Presently a large *Bubo* flew up from the ground in front of me, and on going to the spot I discovered the cause of the sudden constriction of the crows. The owl had wreaked summary vengeance upon one of his tormentors, and the smoking body lay upon the ground in two halves."

About the Squirrel.—The squirrel as a pet is almost as well known and as great a favorite as the rabbit. It can never be so thoroughly domesticated, however, as the rabbit, and cannot safely be permitted the same freedom. The squirrel family is very large and contains many species. Some of these are found in Australia. Among the principal species are the gray, red, ground, black, cat, prairie, fox and flying squirrels. The three first-named varieties are about the only ones which thrive in confinement. The ground squirrel is generally called the chipmunk. The fox squirrel, which is most numerous in the South, is the largest of the species. The flying squirrel is found throughout the country east of the Rocky mountains.

Squirrels hibernate in the cold months, and begin in the early part of autumn laying in their supply of nuts for use during the cold weather. Wherever its home is found, whether in a hollow tree, in a crevice in a rock, or in a hole in the ground, it is always seen to be arranged conveniently and neatly. Most squirrels keep two or more stores of food, apparently with the idea that the encroachment of men or some of its other enemies may make it handy to have more than one place of refuge. Although the snow may be deep over these holes in winter, yet the squirrel, if it finds it necessary to vacate one hole, can tell where the others are situated, though all the ordinary landmarks may be obliterated.

Wood, the British naturalist, tells of a friend who found one of these reserve stores which a squirrel had provided for an exigency, and the friend, in a moment of thoughtlessness, determined to play a joke on the squirrel. He accordingly replaced the nuts by small stones and carefully concealed all evidences of his visit. One cold day in winter, several weeks later, he passed the spot, and found that the squirrel had called there a short time previously. This he knew by the fact that ten inches of snow had been scratched from the top of the hole, outside of which the stones had been cast by the disappointed animal. This struck the joker with remorse. He said, "I never felt the folly of practical joking so much in my life. Fancy the poor little fellow nipped with cold and scanty food, but forseeing a long winter, resolved to economize his little hoard as much as possible. Fancy him at last determined to break this—perhaps his last—magazine, and cheerily brushing away the snow, fully confident that a good meal awaited him as the reward of his cold job, and after all, finding nothing but stones. I never felt more mean and ashamed in my life, and really would have given a guinea to have known that injured squirrel's address. He should have had as fine a lot of nuts as would have put him beyond the reach of poverty had

he lived to be as old as Methuselah.—*Pittsburg Christian Advocate.*

Items.

Post Office Reform.—There is a provision in the United States laws which forbids the establishment of a Post office in any room in which liquor is sold or in any room from which there is an entrance into another where it is sold. This regulation has frequently been overlooked, and in many countries Post offices have been established in taverns, bar-rooms, and groceries, which dealt in liquor. The Postmaster-General Wanamaker has determined that this provision of the law shall be rigidly enforced.

but now reduced to 100,000, with a heavy percentage of paupers. Its semi-circular or Grand canal is intersected by some 150 smaller ones leading in all directions over and through the city, of seven miles in circumference, and crossed by 370 bridges, the Grand canal sweeps around on one side until it joins the waters of the open Adriatic on the other side. Venice has 15,000 houses and palaces, and is noted for its many factories of fancy, costly and ornamental articles. We approach it by rail from Padua over an elevated mole of some three or four miles from the mainland, through a Lagoon (or loy bog) which landed us at the edge of the Grand canal: we were soon seated in a black painted gondola, hundreds of them waiting at the landing to convey passengers or freight to any part of the city. Black is the color allowed by law and the present inhabitants follow the custom of

the wood, awake; to the dumb stone, arise, it shall touch. (Hab. ii. 13.) There is always a subtle danger in an attempt to give art its proper place in connection with religion. It has been said, "The introduction of art into religion ended, not by art becoming religious, but by religion becoming art." Another writer observes, "The spirit of Christianity and the spirit of figurative art were opposed, not because such art was immoral, but because it could not free itself from sensuous considerations." If figurative art be employed for devotional purposes, contrary to the commandment which forbids the use of images in the worship of God, the more lovely and charming the art, the nearer and the more certain the idolatry. A cultivated and refined taste will scorn any thing in the shape of reverence for gilt, tinsel, deformity. The worst prostitution of art is not coarseness, but idolatry; and the very moment art thus degenerates, let the chisel break it, and the roller crush it, and the feet stamp it to powder, not in wantonness, nor in a spirit of row-minded bigotry, but in righteous indignation, and in the name of the living God. "Little children," wrote St. John to Christians, "keep yourselves from idols." Long, long ago the Jewish people had put away idols of wood and of stone. It was not natural that converts from heathen idolatry through Jewish mission should be warned against their old sin. But all idols are not material. They may be enthroned, as the prophet Ezekiel teaches, in the heart. A civilized people may repudiate idolatry or deny its existence even when there are images of wood, or stone, or silver, or ivory, before which devotees bow, and kneel, and pray; but civilization cannot kill inordinate affection, nor close a man's mind against the material those common affairs of life which are made the primary ideas of existence, and put God into a secondary place, if they do not banish Him altogether from consideration. And who knows the special idol of each individual? Who can tell the precise time and manner in which love for the creature eclipses love for the Creator?—*Schofield.*

Friends' Asylum for the Insane.—The 72nd annual Report of the Managers of this Association, show that the average number of patients for the year ending 31st Mo. 1887, was 114—the largest in the history of the institution. During the past year it has received from the Court of the city of Philadelphia, a Charter of Incorporation; under which it has been organized with the title of

nd inside bears evidence of age, though without build was once a beautiful structure. We cannot go into particulars about the attractions of this old church here, without doubt, a purer form of 'Christian worship was practised than that of the present day, or since the Papal church substituted the half' Pagan performances for a pure form of Christian worship practised by the Apostles and their immediate successors.

On one side of this open square is the Palace of the Doges, who ruled in Venice for 600 years. It has a front on the square of 240 feet and was founded in the year 800, was several times destroyed by fire and rebuilt and adorned with rich marble finish, and two-storied porticoes in front. It was once the residence of the almost despotic, princely Doges or Dukes, who have now given place to a series of galleries and halls of splendid paintings and sculpture, and many specimens of art—the productions of the masters of the tenth to the sixteenth or seventeenth century, when Venice, in her wealth and power, controlled a large share of the maritime trade of the world, and with her fleets and armies fought and conquered among the nations, and exercised powerful influence by her industry and its increasing the civilization of her time. We noted the shops in Venice having statues representing the African race, in memory of the time when they were so largely represented as slaves in the Venetian Provinces.

At 2 o'clock every day a numerous flock of pigeons come to be fed at the square at the public expense, in commemoration of the deliverance of their armies from a defeat in 1308 under Admiral Dandolo, by means of carrier pigeons. Our guide, with a gondola, at six francs per day for the guide and one franc per hour of the gondola, conducted us to several places of note: the church of St. Moses, St. Mary of Salutation. These guides think Americans must needs see all their churches, tired though they may be of seeing so many of the same style. We, however, diverted him in another direction, and directed our Gondolier to the Grand canal to be Chief of Police's office, Palace of Justice, Lord Byron's residence, where he wrote much of his poetry (some not much to his credit); also the house and office of Shylock, where he required a name that the English language has stereotyped and stigmatized. We also viewed the Bridge of Sighs over which, if a criminal went, "whether guilty or not," he never returned, and either a dungeon life or a speedy decapitation surely awaited him.

The glass works we visited were indeed a curiosity, all kinds of fancy and ornamental articles of glass work of rich and attractive colors are made here to meet the demands of the European and American markets. We were conducted through the various working departments and viewed the process going on in the production of these unequalled Venetian glass wares. The owners (Candiani, Palace Iron Grand Canal), were profuse in their attention to us and wished to show us everything about the establishment, so much so, that we had not the heart to leave without making a purchase to bring home to America.

There were omnibus steamboats plying on the Grand canal between the city and the Island of Lido, a noted watering place some four miles from our hotel; so in order to have a good view of the Adriatic and the islands on the way, we engaged, together with a gentleman just from India, a larger sized gondola with two Gondoliers, one at the bow and the other at the stern, with a nice canopy and seats for six persons; we

which is suited to these varied conditions in different congregations, known *only* to the Lord.

"May the blessed experience of the past year be regarded in its true light by the members of that Yearly Meeting. If any have become restless and uneasy on account of the 'views and practices' of Friends not giving such liberty as some are asking and claiming, may they be willing to listen to a word of warning brought out by Christopher Healy during his visit to Great Britain, in 1831.

"At a Monthly Meeting where he was present, he spoke pretty fully on the dangers which attended Friends joining with persons of other religious denominations in associations for promoting benevolent objects: using such texts as 'Strangers have devoured his strength and he kneweth it not.' The Clerk of the Monthly Meeting was a youngish man of great natural abilities. After meeting he requested an interview with Christopher, saying their views were not alike on some points. At this interview he proceeded at some length and with much eloquence to set forth the public benefits, and the opportunities of disseminating Friends' doctrines, &c., that would arise from the course some were pursuing.

"When he had finished, Christopher asked him a few questions: 'Are the views and practices of the Episcopalians the same now they were in the days of George Fox and our early Friends?' 'They are.'

"'Dost thou believe that George Fox and our early Friends were led out from these things by the Spirit of Truth?' 'Yes, I do.'

"'Dost thou believe the same Spirit of Truth would lead us into that *now*, out of which it formerly led us?'

"The man's head dropped and he sat without answering. They parted pleasantly, and after Christopher returned home he received a letter from the Clerk stating that the few words uttered by him at that interview were the first thing that had opened his eyes and led to a change in his views.

"Solomon said, 'A man's ways are right in his own eyes.' It will be known from above, though says the light of Christ within them, which would lead them to God if they followed it; and William Penn writes: 'The light of Christ within, who is the Light of the world, leads all that take heed unto it, out of darkness into God's marvellous light.' Why was it that Friends preached so much and wrote so much about this particular name of Jesus? One reason was that this was the name by which He made himself known to them. As the Light, Christ first showed to them their sinful state and their need of a Saviour; then when they walked according as his light showed them, they found that He who was the Light was also the Way; and as they journeyed on, He who was the Way was shown to be also the Power by which they were able to walk in the way and to overcome all temptations to depart from it. Thus they went on to know Him more and more, and He became to them Truth and Wisdom and Righteousness and Peace and Love and Life. He became everything to them. Yet He was unknown to them apart from the light, for it was by the light that they first saw their own sinful condition and Him to be the promised Saviour who was sent into the world to save them from sin. You see, therefore, that while Christ is the light, He is also much more than the Light, and that they who know Him as the Light and walk in his light, come to know his other names. Thus it was that Friends were so

desirous to turn all men to the light of Christ, because they knew from their own experience that if they came to the light and brought their leads to the light, the light would show whether their deeds were good or evil, and would also show them where the way of righteousness lay and where power was to be had to enable them to walk in it.

Let us, then, dear young friends, turn to that holy light which comes from God and which leads to Him. Let us cherish that which it shows to be good, and forsake that which it shows to be evil. If we do this we shall not do unkind things or say unkind words, but shall be kind to all and love all, whether friend or stranger, bird or beast; and we shall come to know, as our early Friends knew, that He who is the Light, is also the way, the Truth, and the Life; that it is no goeth to the Father but by Him, and that he who follows Him becomes like Him, and earns to find all their pleasure in doing his will.

FOR "THE FRIEND."

Early Meeting-houses of Friends.

MARKET STREET MEETING.

(Continued from page 317.)

The title to the lot of ground obtained of Governor Markham, at Second and High Streets, upon which the meeting-house was erected, was found to be imperfect; which gave Friends considerable uneasiness, as we may observe by the following minutes:

"At a Monthly Meeting held at our meeting-house on High Street to inspect the affairs of Truth, the 23rd of Twelfth Month, 1704.

"David Lloyd, Richard Hill and Anthony Morris, are desired to get a further confirmation of this High Street meeting-house ground; and the house bought for the use of the school."

The Committee reported in the following Third Month that, "They have been with the Commissioners about it, and their answer is, they are willing to confirm the ground that was bought of William Markham, but not as by right from him; but by way of gift from William Penn.

"This meeting thinks it hard, that after they have bought and paid for it, it should come under the name of a gift.

"The Committee is desired to see if they can find any footsteps of William Markham's right; that if possible we may have it confirmed the right way."

29th of Fourth Mo. 1705. "It is the sense of this meeting that the persons appointed endeavor to get a Patent with all speed for the ground which was bought of William Markham; and that Friends concerned will give their obligation to the value of 40 pounds, for the use of Government, unless if he will not be satisfied without it; that so we may have the aforesaid lot confirmed by a patent."

In the Fifth Month report was made that "The Commissioners have done their part, and they are now ready for the seal. Also the patents for the Lots and Legacy that was given Friends by George Fox, are ready likewise."

The legacy of George Fox, alluded to, were a "Front Lot, a High Street Lot, a Bank Lot and 20 acres of Liberty land."

The meeting-house thus completed, and the title thereto firmly secured, seems to have well answered the purposes of Friends for about half a century, when we find them considering alterations, additions, and repairs, and finally deciding to build a new and much larger house upon the same ground, which in after times was long known as "the Great Meeting House."

A committee appointed to examine the house reported in Twelfth Month, 1754, that "the lower floor should be wholly new, and the whole roof new shingled." And in the First Month, 1755, we find the following Report: "The Friends appointed to consider of a plan, and calculate the cost of a building proposed to be added to the west-side of this meeting-house," &c. In the following month they proposed "to take the old house down and build a new one, to extend as far as our ground westward." "This meeting agrees that a committee shall now be appointed, who shall have power to procure materials for a new meeting-house to extend as far westward as our ground goes; and immediately after our General Meeting in the spring, to employ workmen to get this house taken down, and to be so expeditious in building the new one, as to have it ready for meeting in by the time of our Yearly Meeting in the fall.

"The new meeting-house to be 55 feet wide, and so contrived as to contain in the west end of it, on the lower floor, two apartments for holding our meetings of business in.

"The Committee is to agree upon a plan, and to collect money to defray the whole expense."

Third Month. "It is now agreed that the rooms designed for the meetings of business shall be placed at each end (of the house) as proposed by the Committee, and that during the time of building the new meeting-house, there be three meetings held on First-days at the Bank, and at Pine Street; and a meeting on Fifth-days at Pine Street meeting-house."

3rd of Tenth Month, 1755. "The Great Meeting-house having been ready for service and used at the time of our late Quarterly Meeting. It is now agreed that there be three meetings kept in it on First-days: one in the morning at the Bank, and one at Pine Street meeting-house in the afternoons.

"The meeting on Third-day to be held as usual at the Bank, and the meeting on Fifth-day to be held at this house."

Second Month, 1756. "It being agreed that it will be necessary to have some more convenient room to hold our meetings of business in, Anthony Morris (*et al*) are desired to meet in the Great Meeting-house to confer thereon,—(they) agreed to finish the room in the garret of the Market Street meeting-house for the purpose."

This plan does not seem to have been carried out immediately, if it ever was, for in the Eighth Month we find this allusion to the matter.

"The Committee appointed to direct the manner of finishing the chambers of the meeting-house on Market Street, report they have ordered the workmen to desist for the present.

"The cost of the Great Meeting House is found to be £2145, 19s. 6d."

In course of time this commodious meeting-house became shut in by buildings, and the meetings so disturbed by the street noises of an ever increasing population, that it was deemed expedient to seek a new location.

Accordingly, in 1804 a new meeting-house was built on Mulberry (Arch) Street, below Fourth, upon a lot that had been used as burial place from the commencement of the City, or since 1690.

The premises at Second and Market Streets were sold in 1808, for business purposes, and the "Great Meeting House" so long the centre of attraction for Friends disappeared forever.

J. W. LATTINGFORD,

(To be continued.)

noisy cawing of a large flock of crows. I at once guessed the cause of all this tumult to be a Great-horned owl, for of all the denizens of the forest none other will so arouse the uncontrollable indignation of the family Corvidæ. Suddenly a regular pandemonium of shrieks, and directly the scurrying by of a number of the sable birds plainly told me that something terrible had happened. Turning my horse loose, I went noiselessly up the hillside on a tour of investigation. Presently a large *Bubo* flew up from the ground in front of me, and on going to the spot I discovered the cause of the sudden consternation of the crows. The owl had wreaked summary vengeance upon one of its tormentors, and the smoking body lay upon the ground in two halves."

About the Squirrel.—The squirrel as a pet is almost as well known and as great a favorite as the rabbit. It can never be so thoroughly domesticated, however, as the rabbit, and cannot safely be permitted the same freedom. The squirrel family is very large and contains many species. Some of these are found in Australia. Among the principal species are the gray, red, ground, black, cat, prairie, fox and flying squirrels. The three first-named varieties are about the only ones which thrive in confinement. The ground squirrel is generally called the chipmunk. The fox squirrel, which is most numerous in the South, is the largest of the species. The flying squirrel is found throughout the country east of the Rocky mountains.

Squirrels hibernate in the cold months, and begin in the early part of autumn laying in their supply of nuts for use during the cold weather. Wherever its home is found, whether a hollow tree, in a crevice in a rock, or in a hole in the ground, it is always seen to be arranged conveniently and neatly. Most squirrels keep two or more stores of food, apparently with the idea that the encroachment of men or some of its other enemies may make it handy to have more than one place of refuge. Although the snow may be deep over these holes in winter, yet the squirrel, if it finds it necessary to vacate his hole, can tell where the others are situated, though all are covered with snow.

REST.

BY ALEXANDER R. THOMPSON.

What rest is there for him who knows no labor!

Hands idly folded all the livelong day,

Never a thought to give to friend or neighbor,

No toil to share, no load to lift away.

How can resting come to him who has no sorrow!

Life drifting smoothly and serenely by,

Each bright day followed by his to-morrow,

And not a cloud within his sunlight sky.

What rest for sinners that are never weary!

For life that falters not beneath the strain,

For eyes that weep not in the darkness dreary,

Heart that goes not alone in smothered pain!

But rest, at length, how sweet to them who under

The heavy burden, tremulous and faint,

Can neither pause nor turn, and yet who wonder

If ever peace will soften sorrow's plaint!

And rest how passing-sweet, when to love's waiting,

Weary and sore, forevermore is given

Love's fair fond treasure, its long pain abating,

Once and eternally, in the glad heaven.

When toll-wear's feet, the last lone reaches making,

'Up to the Father's door of life have come,

And out of lips the fairest, dearest, breaking,

Welcome forever greets the weary home.

Then, nevermore can sin or sorrow seize us;

Hath He not promised: "I will give you rest?"

At rest, at home, in Paradise, with Jesus,

Could weary heart be more supremely blest!

—S. S. TIMES.

A LETTER.

BY J. S. FLETCHER.

And so, my child, your heart is almost weary,

And life has nothing that is fair to you?

Because, you say, with exclamation dreary,

"There is so little that a girl can do!"

And yet, I think, that somewhere in your city

Many there are who need a helping hand;

Or, at the least, some word of love and pity

That they will prize, and suitably understand.

Be not cast down because of earthly treasure;

Little you have in silver and in gold;

These, too, are not to excite but greater pleasure

In the heart's riches, which are manifold.

Do what you can, and let the Lord's increasing

Make of it more until the harvest come;

And meanwhile strive and labor without ceasing,

Hearing Christ's voice above the city's hum.

Never a day within the crowded city,

Never an hour from morning until eve,

But that his voice is heard to plead for pity,

But that his heart is known to pain and grieve.

Go, then. But if your heart is sad and broken,

And to be helpless is your heaven-sent fate,

Take comfort, and be comforted, his well spoken

That they, too, serve who only stand and wait!

—Chambers's Journal.

FOR "THE FRIEND."

A Southern Rambler.

We had been waiting for a pleasant day to ramble in the woods in search of the many wild flowers which the recent warm weather rains have caused to blush into beauty. And when just such a day as we wanted came, not too warm, not too cool, a little colloquy ensued among us before we started, as to which wild would combine dressness under foot with enjoyment.

Then we strolled leisurely along the bank of a ditch which is dignified by the name of canal, being a large ditch nearly eight feet across and the same depth. Soon its waters left almost all traces of a civilization behind as they flowed gurglingly through the woods.

We were not long in discovering an abundance of the *Gelsemium sempervirens*, yellow jessamine, so called, though belonging to the *Logania* family. Its lovely and deliciously fragrant blossoms climbed around many a sapling, covering it with golden beauty. Besides having several ornamental qualities it furnishes the homoeopathic remedy gelsemium.

It is almost a wonder where northern florists raise so many of our native flowers, that this one should be neglected. But I have heard from somewhat doubtful authority that it will not grow in the Northern States.

Growing on the banks of the stream but not in profusion, we gathered some of a species of Hawthorn, *Crataegus spathulata*, also sweet scented.

Further on, leaning over the water too, were the yellow perfumed blossoms of the horse-sugar *Symplocos tinctoria*, its tiny flowers in dense clusters, more conspicuous than the few large yellowish-green leaves.

Far more lowly, but more beautiful than either of these was the little dwarf iris, *Iris verna*, scarcely six inches high, the flower itself must be fully two inches, and is a pretty bluish-purple. It has a most delicate odor, of which I think I could never tire: this and its lovely though fragile blossoms, make it quite a favorite. Further on in swampy ground we came across a larger kind of iris which showed no signs of flowering.

Friends' Asylum for the Insane.—One of the bills appended to the Report shows the cause of insanity in 1230 cases—of these 137 were the use of stimulants, and 47 from mental causes, and 94 from ill-health, or other physical causes.

The Blessings of Quietness.—There are many haunts of quietness which it were well for us to consider and seek to bring into our lives. We should learn to do good quietly. Our Lord's counsel is that we should not even let one hand know what the other hand has done. That is, we should not even ourselves think about our good deeds after we have done them, glorying in them, feeling pride in our achievements, but should leave them in God's keeping and forget them, while we pass on to new and still better things. The secret of such living lies in doing our good deeds for God's eye and not for man's. If we want human praise and eclat and "the ray of brass," we can be satisfied. It is the easiest thing in the world to get one's self talked about, and one's generous acts and fine doings reported in the newspapers. The other way of living has little care for human praise, if only God be pleased and give his commendation. It does not seek applause, nor does it even demand personal recognition; it prefers, indeed, to work in quietness, hiding away, that Christ only may be seen and honored. This is the life that gets Heaven's benediction.

True faith also gives a quietness which is in itself life's sweetest benediction. It gives the quietness of peace, a quietness which the wildest storms cannot break. The artist painted a sea, swept by tempests, with mad waves, overhung by black clouds from which fierce lightnings flash. There in the midst of the troubled waters he puts a rock that rises high above the billows. In the rock far up is a cleft, with flowers and herbage, and amid the flowers and herbage as you look closely you see a dove sitting in undisturbed quiet in her nest. It is a picture of Christian peace. That is the quietness which God gives to resting faith. It is better than all the world's wealth or power. It makes the poor man happier than he the millionaire.—*The Presbyterian.*

THE FRIEND.

FIFTH MONTH 18, 1889.

A letter to the Editor, from a Friend in Kansas, dated 1st of Fifth Month, makes some comments on the late Yearly Meeting of Philadelphia, a part of which is here inserted, as they seem to be intended for general circulation, and not exclusively for the eye of the one to whom they were addressed.

"The work and report of the Committee of the Yearly Meeting to visit subordinate meetings, &c., gave a fresh evidence that it is not necessary for us to deviate from the true order of the Gospel, recognized by the Society in its formation, in order to carry 'glad tidings' to those not in membership with us. There is room enough along the line of the true 'Friend' to preach the preaching that the Lord commands—which never fails to give the reward of peace to laborers, and to reach whereunto the true was sent, building up the believer in the true faith, stirring up the lukewarm to more diligence, warning the wicked and the disobedient of the wrath to come; calling sinners to repentance as the preacher is baptized into these different states and commanded to hand forth that

which is suited to these varied conditions in different congregations, known *only* to the Lord.

"May the blessed experience of the past year be regarded in its true light by the members of that Yearly Meeting. If any have become restless and uneasy on account of the 'views and practices' of Friends not giving such liberty as some are asking and claiming, may they be willing to listen to a word of warning brought out by Christopher Healy during his visit to Great Britain, in 1831.

"At a Monthly Meeting where he was present, he spoke pretty fully on the dangers which attended Friends joining with persons of other religious denominations in associations for promoting benevolent objects: using such texts as 'Strangers have devoured his strength and he kneweth it not.' The Clerk of the Monthly Meeting was a youngish man of great natural abilities. After meeting he requested an interview with Christopher, saying their views were not alike on some points. At this interview he proceeded at some length and with much eloquence to set forth the public benefits, and the opportunities of dis-sinuating Friends' doctrines, &c., that would arise from the course some were pursuing.

"When he had finished, Christopher asked him a few questions: 'Are the views and practices of the Episcopalsians the same now they were in the days of George Fox and our early Friends?' They are.

"'Just that believe that George Fox and our early Friends were led out from these things by the Spirit of Truth?' 'Yes, I do.'

"'Just thou believe the same Spirit of Truth would lead us into that *now*, out of which it formerly led us?'

"'The man's head dropped and he sat without answering. They parted pleasantly, and after Christopher returned home he received a letter from the Clerk stating that the few words uttered by him at that interview were the first thing that had opened his eyes and led to a change in his views.

"Solomon said, 'A man's ways are right in his own eyes.' It will be happy for those whose ways have led them to take such a stand as had that British Clerk, if they are as open to conviction and as ready to let their eyes be opened to see the end of that 'way that has seemed right' to them, to be the 'way of death,' and then when they see change their minds.

"Are the 'views and practices' of the different religious denominations of the present time, the same they were in the days of George Fox and our early Friends, as to a 'hired ministry,' the 'ordinances of bread and wine' and 'water baptism,' and the common mode of public worship? You must say, 'They are.'

"Do you believe that George Fox and our early Friends were led out from these things by the Spirit of Truth? No other answer than 'Yes, we do,' can be given.

"Do you believe that the same Spirit of Truth would lead us into that, *now*, out of which it formerly led us?

"May every one who has been deceived away by 'showy appearances' be as honest to their convictions and the new light given them, as was that Monthly Meeting clerk. No well-informed person will undertake to deny or reason these things away.

"God, by the hand of Moses, led the children of Israel out of Egypt and through the Red Sea; 'signs and wonders' were the evidence that it was his Arm that led them. But soon some of the people had desired to go back to that land

of bondage. Did the same God that had led them out, lead them to desire to return?

"It is scarcely less evident that the same God who led his *then* chosen people out of that bondage, led our early Friends, George Fox and others, out of bondage to the ritualistic ceremonies of their day—for their deliverance was attended by 'signs and wonders,' making them his *now* 'chosen and peculiar' people.

"And though two hundred years and more have elapsed, is it credible that this same 'I am that I am,' has led us, in *these our days*, into the things out of which He formerly led us. No, no, dear Friends, it *cannot* be so. No 'new wine' for 'old bottles, nor any 'new cloth for old garments.'"

When a minister of the gospel, under a feeling of religious concern for the welfare of the people in any particular neighborhood, feels an impression of duty to invite them to meet with him for the purpose of waiting upon and worshipping the Almighty, it is necessary that some place should be provided wherein the proposed meeting may be held. It has often been the case, when our own ministers have been under the weight of such a concern, that there was no suitable building for the purpose, over which our Society had any control; and they have been dependent upon people of other persuasions—Methodists, Baptists, &c., for the use of their places of worship. Very often, such use has been liberally granted, after proper explanations have been made as to the object intended, and the kind of meeting it was proposed to hold.

It is no marvel, that in some such cases, a considerable degree of caution has been felt by those who had the control of the houses; and who felt that they incurred a degree of responsibility by opening the way for the spread of doctrines and sentiments among the people, which might not in all respects coincide with their own. It has been our experience to meet with such caution in several instances; and it has commended itself to us as a prudent reserve, which was not displeasing, where it was associated with a willingness to properly weigh the subject.

When John Pemberton was paying a religious visit in Scotland, he had several meetings in one of the 'kirks there,' which was freely opened for him by the minister in charge. In the evening after one of these meetings, a daughter of the minister, in the freedom of conversation thus addressed him, 'You see, Mr. Pemberton, father has given you his kirk, and attended you several times; suppose you go to church on Sunday and hear father; we have some elegant preachers in the Highlands.' To this, John gravely replied, 'We have a testimony to bear against a hired ministry.' This sincerity and plain dealing did not seem to give offence; and the minister and his daughter subsequently remarked—'We never had guests whom we more regarded, on account of their general character, their disinterested profession, and unwearied endeavors in promoting the happiness and most valuable interests of mankind; and wish, if it was consistent with the will of Heaven, to have a reputation of the same agreeable intercourse.'

A simile, similar to that which prevented John Pemberton from attending the preaching of this Scottish minister, would prevent Friends from reciprocating the kindness of a Methodist, Baptist or other stated ministers, by opening their meeting-houses for services to be performed at the will of man, or according to a prearranged plan. While a refusal thus to accommodate would be trying to a Friend who desired to be

kind and liberal; yet he would feel, as J. P. did, that he "had a testimony to bear" against whatever would take from the Head of the Church his prerogative to order all things according to his own will.

SUMMARY OF EVENTS.

UNITED STATES.—On the 13th instant, the Supreme Court of the United States affirmed the validity of the law excluding Chinese laborers from the country, known as the Scott Exclusion act. The Court holds that Congress has the power to exclude aliens from the country whose presence is deemed inimical to our interests. The Court also rendered a decision in the famous case of Myra Clark Gaines, from New Orleans, awarding the executors of the will of M. C. Gaines the sum of \$756,000 against the city of New Orleans for the use of property sold by the city, not recovered by her, after long litigation. The judgment of the Lower Court awarding the executors \$1,300,000 for the use of the unimproved property sold by the city was not concurred in.

Extract from Tablequah, Indian Territory, says Chief Mayes refuses to convey to the Cherokee Legislature to consider the sale of the Cherokee strip to the Government. A majority of the Indians are said to be opposed to the sale and sustain Mayes, but a powerful minority is urging him to convene the General Assembly and settle the price to be paid for the land. It is understood that the amount offered is \$1.75 per acre, but the Cherokees hold that \$4 or \$6 per acre would be no more than the land is worth. There are 6,000,000 embraced in the strip.

The steamer City of Paris, of the Inman Line, which arrived at Sandy Hook at 11.15 on the morning of the 28th instant, made the passage from New York to London in 25 hours and 7 minutes, corrected time. The best previous record, which was made by the Etruria, was 6 days, 1 hour and 59 minutes.

A sensation has been made by Bishop Potter's sermon delivered in "St. Paul's Church" at the time of the celebration of Washington's inauguration, in the presence of the President, all the prominent members of the Government, and as many others as could possibly be crowded into the edifice. Bishop Potter, instead of simply devoting himself to laudation of our country and the present age, seized the occasion to utter a warning of national matters in these latter days with the purity of the times of Washington. He indirectly rebuked those who were directly or indirectly interested in having caused this decline of public morality, and to utter a solemn warning to those who love their country to resist with all their strength that heinous and tyrannical tendency of the age—the domination of the money power.

Governor Hill, of New York, has vetoed the Sexton Ballot bill, which provided for secret voting.

The Legislature of Minnesota has passed a law making it a misdemeanor for newspapers to publish articles about the merits and demerits of the fact, and the only witnesses allowed are the friends of the condemned man, the surgeon, and the sheriff, and a jury of six.

The Senate of Michigan has passed the Rogers bill, prohibiting the sale of tobacco to minors under 17 years of age, and the Jackson bill, prohibiting the manufacture and sale of cigars. Both of these bills have passed the House, and only require the signature of the Governor to become laws.

The Kansas Legislature has passed a bill prohibiting the sale of tobacco or other narcotics to minors under sixteen years of age.

Morris Amerman, a farmer, went to Auburn, New York, in Tenth Month, 1887, and after disposing of his produce, got drunk. In driving home his horses ran away and he was killed. His widow brought suit under the civil damage act against H. B. Perry, owner of the building in which the saloon is located where the American bought his whiskey, for \$3,000. Damages. The jury has brought in a verdict in favor of the widow for \$7,000.

A freight train on the Chesapeake and Ohio road which was transporting the famous Libby Prison train in Chicago, was wrecked near Masonville, Ky., on Second day of last week, by the breaking of an axle of one of the cars. The remains of the wreck were profusely scattered about and people flocked to the scene all day to secure old bricks and lumber as mementos. No one was hurt.

There is in the number numbered 267, which is less than the previous week and two less than during the corresponding period last year. Of this

whole number 202 were males and 195 females; 45 died of consumption; 41 of pneumonia; 28 of diseases of the chest; 15 of convulsions; 17 of inflammation of the stomach and bowels; 17 of inflammation of the brain; 12 of inanition; 11 of peritonitis; 10 of marasmus; 10 of old age; 9 of apoplexy; 9 of cancer; 9 of typhoid fever and 8 of diarrhoea.

1876—87, 415, reg. 107; coupon, 108 1/2; 47, 123; currency 68, 121.

Cotton was steadily, but quiet, at 11 1/2 cts. per pound for middling uplands.

Feed.—Winter bran, choice and fancy, \$14.50 a \$14.75; do., fair to prime, \$13.75 a \$14.25.

Flour and Meal.—Western Pennsylvania Super, \$2.50; do., extra, \$3.00; do., extra, \$3.50; No. 1 winter family, \$3.50 a \$4.00; Pennsylvania family, \$4.25 a \$4.50; Pennsylvania roller process, \$4.50 a \$4.75; Ohio, clear, \$4.25 a \$4.50; do., straight, \$4.60 a \$4.85; Indiana, clear, \$4.25 a \$4.50; do., straight, \$4.60 a \$4.85; St. Louis and Southern Illinois, clear, \$4.25 a \$4.50; do., do., straight, \$4.60 a \$4.85; winter patent, fair to choice, \$4.85 a \$5.25; Minnesota, clear, \$3.75 a \$3.85; do., straight, \$4.50 a \$5.25; do., patent, \$3.75 a \$3.25. Rye flour was scarce and firm, at \$3.00 per barrel for choice.

Grain.—No. 2 red wheat, 91 a 92 1/2 cts.

No. 2 mixed corn, 42 1/2 a 43 cts.

No. 2 white oats, 32 1/2 a 33 cts.

Beef cattle.—Best, 4 1/4 a 4 1/2 cts.; medium, 4 a 4 1/4 cts.; fair, 3 1/2 a 3 3/4 cts.; common, 3 a 3 1/2 cts.

Sheep.—Best clipped, 4 1/4 a 4 1/2 cts.; good, 4 1/4 a 4 1/2 cts.; medium, 3 1/4 a 4 cts.; fair, 3 a 3 1/2 cts.; common, 2 1/2 a 3 1/2 cts.; 1/2 a 1 cts.; 1/2 a 1 cts.; good, 6 a 6 1/2 cts.; spring lambs, 3 1/2 a 4 cts.

Hogs.—Choice Chicago, 7 1/2 a 7 1/2 cts.; good Westerns, 6 1/2 a 7 cts. State hogs, 6 1/2 a 6 1/2 cts.

FOREIGN.—The International Novelties Exhibition will be inaugurated in London on the 29th instant. The exhibitors have undertaken with the object of introducing and bringing directly before the public the most meritorious novelties in the arts, sciences and manufactures which have recently been invented, discovered and produced, not only in Great Britain, but also in Europe and the United States of America.

A London agent has offered the British Government an immense sum of money for the use of the national postage stamp for advertising purposes. The advertisement is to be printed on the back of the stamp before the gum is put on, so that the purchaser of every stamp must see the announcement before he hoists the gum. This is an Avignonian idea.

Before the Parnell Commission, on the 7th instant, J. N. Parnell, upon taking the stand, said that he desired to correct that part of his evidence in relation to the statement made by him in the House of Commons concerning the non-existence of secret societies in Ireland. In referring to the Hansard reports of that his remarks, which had been quoted by the Attorney General Webster, referred particularly to Filibbin and not to secret companies generally. His remarks therefore were a fair accurate statement of the facts, as Filibbin at that time certainly did not exist in Ireland.

The strike in Westphalia has extended to various collieries, until ninety thousand men quit work on the 1st instant. The Prussian ministry has the matter under consideration.

Billicent and unexpected details are prolonging the Suman Conference. None of the parties have presented a definite scheme.

The Temps says the French cabinet has decided to submit to Parliament its new scheme in aid of the Pacific Ocean.

Don Jose Zorrilla, called the Spanish Victor Hugo, is to be crowned Poet Laureate of Spain, at his approaching sixtieth birthday. The ceremony is to take place at the Alhambra Palace, which is to be decorated in ancient style, at a lavish expense, and an official representative of Queen Victoria will preside at the banquet. The butchery of Medina Cell is to face the hills, which are estimated at over \$25,000.

A conspiracy has been discovered among the military officers stationed at St. Petersburg. A large number of its conspirators have been arrested. In their possession were letters which prove that they intended to make an attempt to assassinate the Czar. A number of bombs were also found.

The commander of the British cruiser *Rapid* has hoisted the British flag over the Seavarrow Islands, which lie in the Southern Pacific Ocean, northwest of the Cook Islands.

Damien, widely celebrated as the Leper Priest at Molokai, died at Kilauea, Hawaii, on Fourth Month 16th, inst. It was long known that he had arrived in Hawaii in 1844. For the last 10 years, the laborers have been confined to the leper settlement at Molokai, where he contracted the dread disease which cost him his life.

The Edison Extradition bill has been passed by the Senate. It was long known that the Government that the retro-active clause had not struck on. He said it was not desirable to deliver up America visitors who had settled up the amount of their defalcations after reaching Canada, the majority of whom were now leading respectable lives. The amendment was passed July 18, 1887. The bill also added. It provides that the government to which an offender is extradited must give a guarantee that the prisoner will only be tried for the offense for which he is extradited. Fraud committed by bankers and corporation embezzlers was also added to the schedule of offenses.

NOTICES.

The Yearly Meeting's Committee in connection with the Committee of Concord Quarterly Meeting, appointed to co-operate with them, have appointed three meetings to be held as follows: At Wilmington on Fifth and Sixth months, 1887; at West Chester on Sixth Month 4th and 5th, 1887; at Philadelphia on Sixth and Seventh A. M. These meetings are especially for the year's Concord Quarterly Meeting; but other members, and also attenders, will be welcome.

The Committee on Public Meetings of the Temperance Association of Friends of Philadelphia Yearly Meeting, is desirous of entering into communication with one or more Friends in each Particular Meeting in Eastern Pennsylvania, the object being to take such means as may seem advisable to stir up a more general interest among Friends and iners in the election of the Prohibitory Amendment, which is to be held on the 15th of Sixth Month next. Friends should bear in mind that this is a moral and not a political question, and one in which their influence for the right ought to be felt in the communities in which they live more than in its. Will not those who may take an interest in the subject promptly communicate?

GEORGE VANCE, JR.,
404 Locust Street, Philadelphia.

WANTED.—A competent Friend to teach in Chesterfield Particular Meeting School at Crosswicks, N. J. For information apply to Mrs. W. B. BROWN, Crosswicks, Burlington Co., N. J.; or Wm. BISHOP, Wainford, Monmouth Co., N. J.

DIED, on the 26th of Second Mo. 1889, SARAH T. wife of David Stephen, and daughter of Robert and Eunice Todd, a member of Guernsey Particular and Fishing Monthly Meetings, aged 58 years 7 months and 15 days. About twenty years ago she felt the need of a right faith for her to make a change in her dress and attire, and she has since that time followed the true fashions of the world; and was faithful in bearing the cross in many things that are considered by some to be of little moment. She was a firm believer in the ancient doctrines of Friends, having read many of their writings.—Daniel Wheeler being particularly a favorite author. She was afflicted with a lingering illness with patience and composure, being conscious to the end; and her relatives and friends have the consoling hope that, through Infinite love and mercy, she has been permitted to enter the mansion of peace and rest.

DIED, on the 6th of Third Mo. 1889, in Pasadena, California, MARY J. WITSON, only daughter of the late William C. and Esther Wilson, aged 24 years and 6 months, a member of Stillwater Monthly Meeting, Ohio. This dear Friend naturally possessed a kind and cheerful disposition that endeared her to a large circle of relatives and friends. She was in declining health over a year, and continued to the house about two months, in which time she was an example of patience and resignation to the Divine will, and was seldom heard to utter a word of complaint, though many times her sufferings were severe. All fear of death seemed to be removed, and she said, "I see in one, a few weeks before her death, that she felt there was nothing to keep her here in this world; then added: "All I ask is that I may be prepared when the summons comes." Although suddenly removed by hemorrhage of the lungs, we trust, through Infinite love and mercy, she has been permitted to enter the mansions of rest and peace.

FOR "THE FRIEND."

Historical Review of the Society of Friends.

(Continued from page 390.)

Although differences in doctrinal belief lay at the foundation of those dissensions, whose bitter fruits have been referred to, yet it would not be safe to conclude that *all* those who took part with one side or the other, did so because they had clear views of the principles in issue, and united with those who were endeavoring to uphold the principles in which they believed. In all such cases, there are large numbers who are influenced by the course taken by those to whose guidance they have been accustomed to trust in religious matters; and by other considerations. This truth is well illustrated by a conversation which took place soon after the separation of 1827, and which was recently related in my hearing by one of those who took part in it. A neighbor had professed his unity with Elias Hicks because, as he said, their doctrinal belief was the same. My informant endeavored to make use of the opportunity to ascertain what the views of E. H. were on several subjects which he mentioned. But to all his inquiries, the same answer was returned,—that his friend really did not know what the sentiments of E. H. were on the questions proposed. Finding himself in an embarrassed situation, his neighbor finally stated with much candor, that the real ground of his decision was the fact that the party to which he was attached retained possession of the old meeting-house to which he had always been accustomed to go; and he added that he would as willingly meet with the other party if that had been their place of meeting.

This series of articles was commenced with the intention of attempting to give such an enumeration of the various bodies now in existence which claim the name of Friends, and such an explanation of their relative positions, as would enable the reader to form a clear and intelligent conception of the present trying and confused state of our religious Society. This information seemed to be needed by many who have not had the means of fully knowing the occurrences of the past 60 years, and, in preparing it, the desire has been felt to avoid everything which might needlessly give offence or wound the feelings of any. Indeed, the tracing out of error and dissension is a painful and humiliating employment, and most heartily can the writer wish,

that never again in our records may the future historian find such events to employ his pen.

When the Ohio question was brought before Baltimore Yearly Meeting, it led to a separation in its limits. The great body of the Meeting connected itself with the Biens' Meeting in Ohio; and a portion, principally Friends who resided near Deer Creek and Nottingham, refused to take this course. A part of these have since become members of one of the adjacent meetings belonging to Philadelphia Yearly Meeting.

A few years after the separation in Ohio, some of the members of Philadelphia Yearly Meeting, who had fully united with its decision in that case, insisted that it was a logical sequence of that conclusion, to refuse to receive or send certificates, or otherwise recognize as co-ordinate branches of the common Society those bodies who had affiliated themselves with the Biens' body in Ohio; and when they found Philadelphia Yearly Meeting unwilling to take so radical a step, they withdrew from connection with it, and organized a meeting for discipline, called a "Conference." Their number was not large, but it embraced several very worthy and conscientious people.

In Ohio Yearly Meeting a small proportion of the members withdrew from fellowship with their brethren, from motives similar to those which actuated the "Conference" Friends in Philadelphia Yearly Meeting. Many of these, however, have since become convinced that those whom they had left were sincerely attached to the principles of our Society; and have returned to the fold they had deserted. A very few still net separately.

Prior to this, a considerable portion of the members of Scipio Quarterly Meeting in New York refused to accede to the directions of their Meeting for Sufferings, endorsed by the Yearly Meeting, to enter on their records a list of correspondents who belonged to the "Larger Body" in New England. The attempt by the Yearly Meeting to enforce its directions led to a separation in Scipio Quarterly Meeting in 1847. Some years after, a difficulty arose among the "Scipio Friends," not however of a doctrinal character, which since has been partially healed.

A similar dissension sprang up in the Smaller Body in New England,—a portion of the members convening in what is termed an "Annual Meeting"—a term apparently adopted to avoid confusion with the "Yearly Meeting" from which they had separated.

In England, a few Friends withdrew from London Yearly Meeting on doctrinal and disciplinary grounds. They are generally known in America as the "Fritchley Friends," so called from their place of meeting.

The "Conference Friends" of Philadelphia, the little remnant in fellowship with them in Ohio, a part of the "Scipio Friends," and those belonging to the "Annual Meeting" in New England, may be grouped together as affiliated bodies. The whole number of their members is small.

Perhaps it may tend to give my readers a clearer understanding of the recent history of the Society of Friends, briefly to review the ground traversed in the preceding parts of this article, so far as concerns the present century.

During the first 30 years, we have seen the gradual introduction and spreading of views respecting the Divinity and Atonement of our Saviour, and the inspired character of the Holy Scriptures, which were different from those which had been held by its founders; and which led to disputes and dissensions that culminated in the separations of 1827 and 1828—by which the Society of Friends lost more than 50,000 members.

In the 30 years which followed, from 1830 to 1860, the reaction from the previous Unitarian drift, and the tendency nudly to exalt the importance of a knowledge of the Scriptures, and to give too little place to the immediate work of the Holy Spirit, as the source of all true spiritual knowledge; were the under-lying causes, which produced a divided feeling among our members, and rendered possible the most of the separations enumerated in this and the preceding numbers of this article.

The columns of THE FRIEND during the second period above referred to, contain many articles, pleading for the ancient doctrines of our Society, and pointing out the defects in the views which were then attempted to be introduced amongst us. From one of these (see THE FRIEND vol. 10, page 22,) the following paragraphs are selected:—

"The immediate revelation of the Holy Spirit, and its universal appearance in the hearts of all mankind, as a light to discover sin and lead out of it, is assailed; and the Holy Scriptures are held up as the primary and *only* rule of faith and duty. Thus those who have the Scriptures are taught to regard the convictions of the Spirit of our Holy Redeemer upon the visited soul as uncertain and fallacious; and that where the Scriptures are not known, we have no reason to believe in the knowledge of the true and living God is at all communicated by the Light of Christ shining into the heart.

"In denying that the Holy Spirit is any rule at all, the tenderly visited children of our Heavenly Father are urged to overlook the clear discoveries of Divine light in their own hearts,—to regard all belief in it as a 'mysticism,'—a religion of 'feelings' and 'impressions,'—and to turn away from all confidence in such feelings, and depend upon studying the Bible in order to find out what the will of God concerning them as individuals may be.

"The true and saving knowledge of God and his Son, Jesus Christ, which is life eternal, is derived from Him, both as He is the Mediator between God and man, and as He is the true light enlightening every man that cometh into the world. Those who have the Holy Scriptures, and whose advantages and responsibilities are greatly increased thereby, are saved by Him, as they are obedient to his Divine will, manifested by his saving light; either directly in the heart

by applying the Scriptures, the preaching of the Gospel, or any other means. And the heathen or Gentiles are saved precisely in the same manner, as they are obedient to the convictions of the Light of Christ in the heart, whether it be dispensed in smaller or greater degrees."

In an article published in volume 11, page 14, allusion is made to the rejection of the divinity, and atonement of Christ, and of the authority of the Holy Scriptures, which had caused trouble in former years; and the remark is made, "There is a strong tendency in the human mind to pass from one extreme to another." The following paragraph will indicate the line of argument of the article: "Is it not equally anti-scriptural to deny that Jesus Christ, the true Light, enlightens every man that cometh into the world, as to deny that He was God manifest in the flesh? And is it less dangerous to lay waste the faith in that Divine light which He sheds in the heart to effect the work of regeneration, than to impair the belief that Jesus Christ of Nazareth was the promised Saviour? Can we draw any distinction in the danger of the two erroneous positions? If God, who commanded the light to shine out of darkness, hath shined in our hearts, to give us the light of the knowledge of his glory in the face of Jesus Christ, is it not heretical to deny that there is an inward light? And if the grace of God which came by Jesus Christ, and which brings salvation, hath appeared unto all men, is it not a universal and saving light?"

In 1858, the late Charles Evans, then editor of THE FRIEND, published in its columns (vol. 31, page 405) a carefully prepared statement of the course of events in our Society, and of the principles involved in the controversies through which it had passed. It is too extended to quote here, but the reader who has access to a file of THE FRIEND may find in it much that will repay him for its perusal. J. W.

The Prohibition Amendment in Pennsylvania.

A Friend who now resides in another State, writes to us as follows:

"My heart is so in sympathy with the coming contest between good and evil in the State of my birth, I felt like sending these few lines to THE FRIEND, hoping they may be the means of some good, by the blessing of the Lord."

The lines referred to, are those which follow.

FOR "THE FRIEND."

THE COMING CONFLICT.

"Righteousness exalteth a nation, but sin is a reproach to any people."

As it is with a nation so it is with any integral part of it, be it State, county, village, hamlet or home.

Many eyes, in this vast Union, are now turned toward the Keystone State. Prayers arise from thousands of hearts and homes throughout our land that she may prove herself worthy of the name she bears.

Could her illustrious founder but arise to-day, his advice would most surely be: "Onward against this giant evil." This is a conflict in which all his posterity can rightly engage. In this white shower of ballots they are waging a war against the greatest crying evil of the day, (a legalized liquor traffic.) May God grant victory to these loyal men in their fight for truth and right. I humbly pray that no one who bears the name of Friend, may shrink from doing his whole duty in this grand opportunity for the people to express their will.

In the late effort in Massachusetts it was a lamentable fact that many who could have gone to the polls and voted "Yes," quietly stayed away. My prayer is that this may not be so in Pennsylvania; but that ye who love righteousness and peace, may arise in your night, and hurl this monster from his throne. The power of example is such that I believe were this great State of Pennsylvania to declare against the iron rule of rum, soon others would follow in her wake, and then would come the Union. Arouse! then, "quit you like men, be strong," and if all will do their duty, if all will vote as they know their God would have them vote, victory shall be yours.

J. H. Y.

FOR "THE FRIEND."

The Abomination of Desolation.

Daniel the prophet speaks of the abomination that makes desolate the true Divine life, to which some of the apostles also allude; but none of them point to any one particular thing. So I see no better way than to sum it up like Paul does, and call it the man of sin, (2 Thessalonians chapter 2) as the abomination that makes the greatest desolation in the world, and which he says will be revealed after a falling away from the true God. And which will exalt itself so as to sit, as it were, in the temple of God, and be worshipped as God. But he speaks of it as the mystery of iniquity which doth already work, and will continue to work and make desolate the Churches of God, until it is taken out of the way. For that which letteth or hindereth the exaltation of the Divine life, and makes our meetings so desolate, will remain while it is worshipped by so many, above the true God.

So it looks to me that the man of sin, or the power of sin, with all the deceivableness of unrighteousness, is that which we might call the abomination which is making so many of the so-called churches in Christendom so destitute and lifeless and formal. So that Ichabod might be inscribed on many of our houses of worship. For the former glory has abundantly departed, like it had from the Temple of Jerusalem, though it was still thronged with worshippers, so that Christ could say in weeping over it, "How often would I have gathered you even as a hen gathereth her chickens under her wings, but ye would not." "Behold your house is left unto you desolate, and the things which belonged to your peace are hid from your eyes." For the god of this world had blinded their eyes; or "their eyes had they closed; lest they should see with their eyes, and hear with their ears, and understand with their hearts, and should be converted, and He should heal them." So they loved darkness rather than light because their deeds were evil. And it is not strange that amidst all the abominations which beset the Jews, that their house of worship should be left desolate. Where are we drifting?

Is there not danger that the language of the Poet might justly be applied to us as a people?

"O Israel, of all nations most undone!
Thy diadem displaced, thy sceptre gone.
Thy Levites once a consecrated host,
No longer Levites and their lineage lost;
And thou thyself, o'er every country sown,
With none on earth that thou canst call thy own."

Has not spiritual wickedness got into high places? Do we not love the uppermost seats in our meetings, and the praise of men? And do we not seem to think we shall be heard for our much speaking and many prayers, and the sweetness of song? But that which is highly es-

teemed among men, may be an abomination in the sight of God; and may make our meetings desolate and dry.

To such as may think that I am too hard on spurious or anti-christian ministry, I will say, that I think I have enough Scripture, together with my own observation, to bear me out in my views. Christ himself says, "Beware of false prophets which come to you in sheep's clothing." "For many shall come in my name, and shall deceive many; and shall show great signs and wonders, so that if it were possible they shall deceive the very elect." And Peter speaks of "false prophets" and "false teachers;" and "many shall follow their pernicious ways, by reason of whom the ways of truth shall be evil spoken of." So no wonder that Christ says, beware of such. And I also say, "beware," for they are going about under the guise of a religious concern, and making high profession of revealed spirituality. So I fear that the deceivableness of unrighteousness is making more desolation now in this way than in any other, so far as the profession of Christianity is concerned. And Paul, in writing to the Corinthian Church, expresses a "fear lest by any means, as the serpent beguiled Eve through his subtlety, so your minds should be corrupted from the simplicity that is in Christ." For the Christian religion has not enough of the pomp and glory of the world in it to suit the wise and prudent; so the things which belong to their peace are hid from their eyes, and revealed to the babes, or little ones in Christ, and the places of worship belonging to the high professing Israel are left desolate.

But have we not some false pretenders who have grown so high, that in their own strength and cultivated ability, they think they can supply this desecration or lack of Divine life? So they come boldly forward, and like Goliath, of Gath, defy the armies of the living God, and thus add sin to sin. So we might justly tremble, and say, "The fathers, where are they, and the prophets, do they live forever?" The efforts which are now so actively made to revive the true life, so far as they are prompted by the will and strength of man, only increase the poverty and desolation. But when they are prompted and aided by the ability that God gives, they add glory to glory, and greatly advance the Redeemer's kingdom.

I perfectly agree with Peter, where, in speaking of the writings of Paul, he says that in all his epistles are some things hard to be understood, which the unstable and the unlearned in the school of Christ, wrest or pervert to their own destruction. And I, while examining this deep subject of the abomination of desolation, admit that I find many things far beyond the reach of my limited comprehension. But Paul himself says, that while here we only know in part, and see as through a glass darkly, but when that which is perfect is come, then that which is in part shall be done away. So let the true and practical believer thank God and take courage; and look to the end for the crown immortal.

DAVID HUDDLESTON.

DUBLIN, IND., Fourth Month 20th, 1859.

MUCH admiration was lavished on a man who employed himself very earnestly in throwing small peas through the eye of a needle, which he would do at a considerable distance, and without once missing. Alexander, seeing him thus engaged, ordered him, as we are told, a present suitable to his employment—a basket of peas.—Rollin.

For "THE FRIEND."

A Visit to the Mica and Feldspar Quarries of Chester County, Pa.

After visiting the works of the Trenton China Co., as described in a late number of THE FRIEND, I felt a desire to examine the deposits of Feldspar, whence are derived one of the materials of which is made the beautiful ware which that company manufactures. Those who read the former article may remember that china was spoken of as principally composed of Quartz and Alumina—chemically speaking a *Silicate of alumina*—to which enough of potash or other alkali had been added to enable those very refractory materials to partially melt in the intense heat of the kiln, and thus enter into a chemical union. There is none of this alkali either in the powdered quartz or in pure clay, but it is contained in the Feldspar, which is, therefore, one of the essential ingredients in the manufacture of China and Porcelain. Feldspar obtained from different localities varies considerably in its composition. From 80 to 90 per cent. of its weight is made up of Silica and Alumina, and the remainder either of Potash, Soda, or Lime and Soda.

Having occasion to be in the southern part of Chester County on the 23d of Second Month, I made arrangements with a kind friend to convey me to some of the quarries which had been opened in that section of Pennsylvania. On leaving the cars at Kennett Square soon after 7 o'clock in the morning, I found my friend awaiting my arrival. We first travelled a few miles in an easterly direction. The weather was very cold, but we were well provided with wraps; and after an hour's ride, we stopped at the residence of the widow of Dr. Stebbins, where we had an opportunity of becoming well-warmed; and also of examining a valuable collection of minerals gathered by her late husband, who was much interested in the study of such things. I was especially impressed with some hexagonal plates of Mica, about a foot in length, but not quite so broad, which came from a pit near Fairville, which was the next point we aimed to reach. It was a curious feature in these Mica crystals (and one that is said to be universal in them), that the six sides which bounded their outline were unequal in length. These plates were thin cross sections of large prisms. My kind hostess gave me a beautiful specimen of such a prism about four inches in diameter and one inch in height, nearly perfect in its outline. The individual scales or plates of which such prisms are composed may be compared to the leaves of a book lying closely in contact with each other. So thin they are, and so easily separated, that my *Mica book* I suppose could easily have been separated into a thousand leaves. One of the mineralogical curiosities of the place was a small summer house situated in a grove of trees that surrounded the residence, and which was roofed with refuse plates of Mica. A rough board roof had been coated with hot pitch, on which the plates of Mica had been cemented. Although the natural form of the crystals of Mica is a six-sided prism, yet it is not often that they are found in a perfect shape. Much more frequently the outline of the leaves or thin plate is irregular, showing that in the act of crystallizing something has interfered with the perfect development of the crystal.

We found that the quarry near Fairville, from which came the specimens we had admired, was not now in operation, and that the earth on the sides had slid in so as to fill up

the bottom to the depth of several feet. This prevented us from obtaining a perfectly satisfactory view of the arrangement of the strata, &c., but enough was exposed to sight, to show the nature of the vein. Originally, some Quartz exposed to view on the surface of the ground had been found to be so free from other ingredients, that it had been collected and shipped for the making of China. As the excavations for Quartz were continued, the Mica vein was struck; and blocks of it were met with large enough to be split into the thin plates for the windows in coal stoves. The price which perfect plates of this kind commanded in the market led to the further development of the quarry. It is evident that the veins of Mica extend for a considerable distance; and like the Feldspar deposits in that section may be found at intervals of some miles. On going a distance of a few hundred yards from the quarry in descending the hill, we came to a place where the Mica appeared to crop out on the surface, so that in digging post holes, masses of it were thrown up. I picked up there some very interesting specimens, in which the small crystals of Mica were confusedly clustered, at every angle with each other.

I have already mentioned the presence of Quartz or Silica in the quarry. Feldspar is there also. The reader of this series of geological articles may remember that it has been before stated that the essential ingredients of the Gneiss rocks which cover the greater part of south-eastern Pennsylvania and the adjacent lands of Delaware and Maryland are these two substances and Mica; and that the proportions of these three substances vary very much in different places. It seemed to me on examining the quarry, that it differed chiefly from other Gneiss quarries in that region, such as that described at Avondale, in that the Mica being crystallized in unusually large masses, instead of being disseminated through the rock in minute grains. In a series of Granite and Gneiss rocks from different localities, such as gradually accumulate in the hands of one interested in their study, I find a wonderful difference in the fineness of the granulation. In some, the associated crystals of Quartz, Feldspar and Mica are so small that the unassisted eye can scarcely distinguish them, and the whole stone has a uniform appearance like a piece of sandstone—yet under the microscope the different elements are seen to be all there. This was the case in some dark-colored rock which I met with in this trip, which was abundant in great masses along the valley of Red Clay Creek, below Kennett Square, and some of which made its appearance in one of the quarries which we visited. In this rock black Hornblende had taken the place of the Mica; and the granulation was very fine.

The Granite from Westery, R. I., now extensively used for building purposes in Philadelphia, and that from Port Deposit, described in the visit to Maryland in this series, are examples of much coarser granulation. Some idea of the difference between the two may be found by comparing the one to a quantity of mustard seed compressed into a solid mass, and the other to a similar mass formed of peas or other bodies of similar size. When we come to such rocks as we met with on this trip, the coarseness of the granulation was such that we have no seeds large enough to carry on the comparison.

If the reader should ask, what is the cause of such great difference in the size of the crystals, and in the manner in which they are grouped

together in different specimens of similar rocks, I would find it impossible to give him a full and satisfactory answer. Yet some light is thrown upon it by what we observe in certain manufactures. When sugar is allowed quietly and slowly to separate from a saturated solution, it forms the large and regular cubical crystals which are known as rock-candy. When it is agitated during the process of separation, it is broken up into small crystallized grains such as we see in granulated sugar. Similarly, by slow and undisturbed crystallization are formed in the laboratories of manufacturing chemists, magnificent crystals of Alum, Rochelle Salts, and other substances. It is therefore a reasonable supposition that when the coarser rocks were assuming the forms in which we find them, there may have been lengthened periods of repose in which the elements present were permitted to follow undisturbed the attractive forces which drew them into crystallized masses of the dimensions which we found in the Mica and Feldspar quarries. Nor is there any difficulty in imagining that the convulsive tremors, which are almost constantly present in some portions of the earth, or other disturbing causes, may have operated during other periods of time when the finer-grained Granites and Gneisses were assuming their present forms, and so have led to smaller and more mingled crystallizations.

We can have little knowledge, except what the rocks themselves disclose, of the operations of nature in those remote ages, when, under the government of the laws prescribed to matter by our benevolent Creator the earth was continually being prepared to be the abode of the countless myriads of animated beings, which have since inhabited it. But the rocks may be compared to a volume, inscribed with "hieroglyphics elder than the Nile," sometimes difficult to decipher, but whose study certainly tends to elevate the mind, and to give grand conceptions of that Almighty Power and wisdom, which originally planned, brought into its present shape, and still upholds our beautiful world.

J. W.

(To be continued.)

For "THE FRIEND."

Abide in Christ, That You May Bear Much Fruit.

"He that abideth in me, and I in him, the same bringeth forth much fruit. Herein is my Father glorified, that ye bare much fruit."—John, xv, 5, 8.

We all know what fruit is. The produce of the branch by which men are refreshed and nourished. The fruit is not for the branch, but for those who carry it away. As soon as the fruit is ripe, the branch gives it off, to commence afresh its work of beneficence, and anew prepare its fruit for another season. Beautiful image of the believer abiding in Christ! He not only grows in strength, the union with the Vine becoming ever surer and firmer, he also bears fruit, yea, much fruit. He is in his circle a centre of life and of blessing, and that simply because he abides in Christ, and receives from Him the spirit and the life, of which he can impart to others. Learn thus, if thou wouldst bless others, to abide in Christ; and that if thou dost abide, thou shalt surely bless. As surely as the branch abiding in a fruitful vine bears fruit, so surely, yea, *much more surely* will a soul abiding in Christ with his fulness of blessing be made a blessing. "From Me is thy fruit found." These words derive new meaning from our parable. The soul need not have one cure—to abide closely, fully, wholly. He will give

the fruit. He works all that is needed to make the believer a blessing.

Abiding in Him, you receive of Him his spirit of love and compassion towards sinners, making you desirous to seek their good.

By nature the heart is full of selfishness. But abiding in Jesus, you come into contact with his infinite love; its light begins to burn within your heart; you see the beauty of love, you learn to look upon loving and serving and saving your fellow men as the highest privilege a disciple of Jesus can have. With Christ you begin to bear the burden of souls, the burden of sins not your own. As you are more closely united to Him, somewhat of that passion for souls which urged Him to Calvary begins to breathe within you, and you are ready to follow his footsteps and devote your life to win the souls Christ has taught you to love. The very spirit of the Vine is love. The spirit of love streams into the branch that abides in Him.

The desire to be a blessing is but the beginning. As you undertake the work you speedily become conscious of your own weakness and the difficulties in your way. Souls are not saved at your bidding. You are ready to be discouraged, and to relax your effort. But abiding in Christ you receive new courage and strength; you understand that you are but the feeble instruments through which the hidden power of Christ does its work, that his strength may be perfected and made glorious through your weakness. It is a great step when the believer fully consents to his own weakness, and the abiding consciousness of it, and so works faithfully on, fully assured that his Lord is working through him. He rejoices that the excellency of the power is of God and not of us. He has yielded assent to the blessed agreement between the Vine and the branches, that of the fruit all the glory shall be to the husbandman, the blessed Father.

If we are abiding in Jesus, let us seek to influence those around us in our daily life. Let us accept distinctly and joyfully our holy calling, that we are even now to live as the servants of the love of Jesus to our fellow men. We must live so that somewhat of the holiness and the gentleness of Jesus may shine out in us. What the church and the world both need is this; men and women full of the Holy Ghost and of love, who, as the living embodiments of the grace and power of Christ, witness for Him, and for his power on behalf of those who believe in Him. There is work in our own home. There is work among the sick and the poor, and the outcast. There is work in a hundred different paths which the Spirit of Christ opens up through those who allow themselves to be led by Him.—*Selected from a work entitled "Abide in Christ," by Andrew Murray, of Wellington, Cape of Good Hope.*

A Beheaded King's Trinkets.—Lately the Prince of Wales went through a function which must have moved him considerably, and of which nothing has hitherto been made public. Seventy years ago, when the coffin of the unlucky Charles I., was opened, the trinkets which had been buried with him, miniatures of his family and so on, were stolen and kept out of sight for a long time. By some process they came into the possession of his Royal Highness, and recently he had the coffin of his unfortunate predecessor pulled open once more, and in the presence of Dean Davidson of Windsor only, he placed poor Charles' property back among his bones, prayed over the whole, and put the coffin away again.—*Exchange.*

A Testimony Concerning my Dear Father, George Mason.

He was born in the year 1706, at Ampleford in Yorkshire, old England, of parents in profession with the Episcopal community, in which he was educated, and after he arrived to man's estate, was brought to the knowledge of the Truth, not by instrumental means, but by the immediate powerful operation of the grace and Spirit of God in his own heart, whereby he was led out of the pollutions that are in the world, and from the prescribed forms and barren nouments of empty profession, to sit down in silence with the people called Quakers; and as he became obedient to the inward Teacher, the work nigh in the heart, he witnessed a growth from one dispensation to another, until it pleased the Lord to commit unto him a gift in the ministry (being about the 28th year of his age) in which, by going often into the valley of humiliation, and by abiding under the effectual operation of Christ's preparing-spiritual baptism, he became an able minister of the gospel of life and salvation. His ministry was accompanied with the evidence and demonstration of the Spirit and of power; he labored much therein, approving himself a workman that needed not to be ashamed; though he had but a very small share of school learning, yet by dwelling near the Fountain of Wisdom, was sometimes enabled to speak as with the tongue of the learned; several were convinced by him, some of whom kept their habitations in the Truth.

Between the years 1748 and 1764, he was much abroad in the service of the Gospel, in Great Britain, frequently attending the Yearly Meeting in London, though at the distance of 200 miles. He once visited Ireland, and was once in Pennsylvania and the adjacent colonies: in all which places, by accounts, his labor of love was edifying to the churches, and well received; being made willing to leave all for the promulgation of truth in the earth. The weight of the care of the churches was much upon him; he was fervent and clear in discipline, seeking to promote good order; but zealous against undue liberties, and particularly against formality under any appearance, despising flattery and hypocrisy; and being gifted with a spirit of discerning, had often to labor with such who appeared as ministers, but had not received their commission from on high. Such he accounted the greatest enemies to the kingdom of Christ and the progress of Truth that are in the world. He had a large family to support and no patrimony but industry, which, through the blessing of heaven, was made sufficient. His house and heart were open to receive his friends; he was a good example to his children and others of moderation in eating, drinking and apparel. It was his practice frequently to sit down with his family to wait for Divine help, in which seasons he was sometimes led to administer counsel, to set life and death before us, to rehearse the Lord's wonderful dealings with him from his youth up, to tell of his righteous judgments on the transgressing nature, to unfold the mystery of iniquity hid from ages, to reveal the man of sin, to set forth the vanity, the emptiness, and the uncertainty of all things here on earth, and endeavoring in a most pathetic and endearing manner to draw our minds thereto to engage us to seek for and press after durable riches, an inheritance eternal in the heavens, and to excite us to trust in that outstretched arm which had been his preserver through the various dispensations of Providence unto the present time;

often saying, he would have no greater joy than to behold his children walking in the Truth: he labored fervently for our growth and preservation therein. We had many highly favored opportunities of this kind. I firmly believe he sought the present and future well-being of all his family according to the ability and understanding he was entrusted with, and though he did not live to see the desire of his soul fully granted, yet I trust his precepts may be as bread cast upon the waters, which returneth after many days.

I have heard him say that he was but of a low capacity before he became acquainted with the Truth; but when he became obedient to the manifestations thereof the Lord greatly enlarged his understanding. He recommended an early acquaintance therewith as the most effectual way for men to have their faculties brightened. He was favored with extensive abilities, and had a clear sense of the nature and structure of the human body, with the various invisible operations by which it is supported; he was sometimes led by a transition therefrom to speak of the various offices of the members in the mystical body; for having passed through many deep baptisms, and great tribulations, could speak a word in season to the mourners in Zion, whereby the faithful were encouraged, the heritage watered, and the backsliders reproved, being clear and deep in opening the mysteries of the kingdom; yet he boasted not therein, but in commemorating the many mercies received, rendered the praise unto God the author thereof, knowing it was the Lord's doings, and was marvellous in his sight.

In the year 1767, he removed with his family from old England into the Province of Maryland, and settled within the compass of Gunpowder Monthly Meeting, where he resided near two years, in which time he visited the meetings of Friends in Pennsylvania, which (I believe) was acceptable to them, and a relief to his mind.

In the year 1769, from an apprehension of duty, he removed with his family into Pennsylvania, and joined with New Garden Monthly Meeting. During the remainder of his time he did not travel much abroad, except to adjacent and General Meetings occasionally. He was for several years much indisposed, his constitution had been greatly impaired through sickness and exercises of various kinds; yet for about eighteen months before his decease, it pleased Providence to favor him with a better state of health than he had enjoyed for several years. His last sickness was very short, and was as follows, viz:—On the 24th of Tenth Month, 1774, in the morning he signified he was not very well, yet continued without any alarming symptoms until 12 o'clock, about which time he was violently seized with extreme pain at his heart and with coldness in his limbs. My mother, three brothers and myself being present, and seeing us sorrowful, he uttered the following expressions, saying: "Mourn not for me. Mourn not for me." Then apprehending he was going, took his leave of us in a solemn manner. Addressing himself to the Almighty, said, "Receive thou my spirit, receive thou my spirit—let me go, let me go." At another time he said, "Thou knowest, most merciful Father, what is best for us; thy will be done." A little after he said to us: "Take heed how you live, never forget these moments." He several times desired that he might be preserved in patience, and be favored with his senses, which through mercy was fully granted. At another time he said, "Oh precious stillness! Oh precious stillness!" and lastly he said, "Most successful

father, bless my children!" About 2 o'clock the afternoon on the same day, he quietly departed this life, without sigh or groan, being fully resigned, and is doubtless united with the arch triumphant, singing and ascribing praises to Him who lives forever and ever.

On the 20th his corpse was decently interred in Friends' burying-ground at New Garden, and accompanied thither by a large concourse of Friends and others, where a solemn meeting held, and an awakening testimony delivered. Aged 68 years—a minister about 40 years.

Third Month, 1775.

FOR "THE FRIEND."

AN ACROSTIC.

MORE ESPECIALLY FOR THE YOUTH.

Days of my life are still passing away,
The earth none can tell how long I may stay,
No one alone can determine, for I cannot tell,
Once I leave it with Him who does everything well,
Ch day as I pass I see that I need
News of grace, and to take watchful heed,
Expecting to find fresh trials to bear,
Not the abatements of life's daily care.
Vine preservation at times I can find,
Rtly cares to endure; or freshen the mind.
Remember, too, when time will allow,
Ch as being the D. H. pieces, whom I'm writing to
I could I induce you to seek and to find
Rigiveness of sins! which brings comfort of mind,
All who obey the heavenly call,
Extends his kind love as God over all,
Rtly's revels and pastimes will then fade away;
Rtly the darkness of death will be turned into day.
Rtly's mind will then be more undivided,
Our worship more pure, and have less that is wild,
Rtly's usual noise that comes from the head,
I no longer relied on, as 'tis formal and dead,
Rtly's seeking alike in that which is dead,
I'm among my young friends, to one and to all,
I'd up a warm heart to the heavenly call,
I'd wish you to God, and he'll draw nigh unto you,
I'd wish the voice of his love.—And I'll bid you adieu.
D. HEDDLESTON.

DEUBLIN, Indiana.

"ONE LESS AT HOME."

One less at home!
The charmed circle broken—our dear face
Dismissed day by day from its accustomed place—
And cleansed and saved and perfected by grace—
One more in heaven.

One less at home!
The voice of welcome hushed; and evermore
The word of farewell spoken; on the shore
Where parting comes not, one soul landed more;
One more in heaven.

One less at home!
Smiled at the earth-born mist the thought would rise
To wrap our footsteps round; and dim our eyes;
At the bright sunbeam darts from the skies,
One more in heaven.

One more at home!
This is not home, where cramped in earthly mould
The sight of Christ is hid, our love is cold,
Where there, where face to face we shall behold,
Is home and heaven.

One less on earth,
Sins pains, its sorrows, and its toils to share.
One less the pilgrim's daily cross to bear,
One more the crown of ransomed souls to wear
At home in heaven!

One more in heaven!
Another thought to brighten cloudy days,
Another theme of thankfulness and praise,
Another link on high our souls to raise
To home and heaven.

One more at home!
That home where separation cannot be
That home where absent is absent eternally,
And Jesus grant us all a place with thee
At home in heaven!

THE BURDEN.

SELECTED.

To every one on earth
God gives a burden to be carried down
The road that lies between the cross and crown;
No lot is wholly free;
He giveth one to thee.

Some carry it aloft,
Open and visible to any eye;
And all may see its form and weight, and size,
Some hide it in their breast,
And deem it thus unguessed.

Thy burden is God's gift,
And it will make the bearer calm and strong;
Yet, lest it press too heavily and long,
He says: Cast it on me,
And it shall ease be.

And those who heed his voice,
And seek to give it back in truthful prayer,
Have quiet hearts that never can despair;
And hope lights up the way,
Upon the darkest day.

Take thou thy burden thus
Into thy hands, and lay it at his feet;
And, whether it be sorrow or defeat,
Thy pain, or sin, or care,
Leave it calmly there.

It is the lonely load
That crushes out the life and light of Heaven;
But born with Him, the soul restored, forgiven,
Sings out through all the days,
His joy, and God's high praise.

—Marianne Farningham.

Father Damien, the "Apostle to the Lepers."

J. Damien de Veuster, far better known as Father Damien, news of whose death in the Father settlement at Molokai, in the Hawaiian Islands, was received recently, was born in Belgium in 1840, and was educated for the priesthood in that country. Having been ordained as priest, he went as a missionary to Hawaii in 1864. One of the greatest scourges of the group of islands which is often called the "Paradise of the Pacific," is leprosy. To guard against the terrible ravages of this slowly contagious and invariably fatal disease, the government set aside one of the small islands of the Sandwich Island group, called Malietoa, to which were transported all who became affected with the loathsome disease. Here they simply herded together, living without government, without the comforts and even the necessities of life, and without hope, waiting for their slow, but inevitable death. "The miserable condition of the settlement gave it the name of a living grave yard." In their miserable grass huts "were living pell-mell, without distinction of ages or sex, old or new cases, all more or less strangers to one another, these unfortunate outcasts of society. They passed their time in playing cards, hula (native dances), drinking fermented ki-roo beer, home-made alcohol, and with the sequels of all this."

To these abandoned wretches Father Damien decided to devote the remainder of his life. He was but 33 years old at the time when he went to reside at Malietoa, in robust health, a man of education and refinement, and with every prospect of advancement in his profession. All these things he abandoned for the awful banishment among frightful scenes and the almost certainty of death by leprosy at last.

The result of his labors was truly wonderful. He became "their doctor, house-carpenter, schoolmaster, magistrate, painter, gardener, cook, sometimes even their undertaker and grave-digger." In *Longman's Magazine*, Archbishop Ballantyne, in an account of Father Damien, says of his work:

"What a wonderful change this devoted man has worked everywhere in this abandoned islet! When he first reached it the lepers were in a state of the most terrible degradation. 'In this place there is no law,' was the saying current among them. Though the other Hawaiian islands had abolished idolatry and adopted Christianity, in Molokai the old paganism in all its horrible consequences reigned supreme. To make bad worse, the people had discovered a root which when cooked and distilled in a very crude way, produced an intoxicating liquor of the most frightful kind, making those who drank it more like beasts than men. But Damien came, a priest and a teacher, among these abandoned, dying wretches. At first, as he says himself, his labors seemed to be almost in vain. But his kindness, his charity, his sympathy, and his religious zeal had not long to wait before their influence was felt. Before he reached Molokai, the leper settlement was squalid, hideous; now it is a peaceful, law-abiding community, presenting an attractive and even on some sides a cheerful appearance. It is a colony of neat, white-washed wooden cottages, some of them standing in the pasture-lands, some among fields of sweet potatoes, some even having their verandas and gardens of bananas and sugar-canes."

For eleven years he worked on in perfect health, and it was hoped that he might escape the doom that hung over every other living soul on the island, but in 1884 there were premonitory symptoms and in 1885 he showed unmistakable evidences of leprosy. In a letter to a friend in 1886 he says:

"Having no doubt of the real character of my disease, I feel calm, resigned and happier among my people. Almighty God knows what is best for my sanctification, and with that conviction I say daily a good *Fiat voluntas Tui* (Thy will be done). Please pray for your afflicted friend and recommend me and my unhappy people to all servants of the Lord."

It is consoling to know that Father Damien's work still goes on, though he has gone to his reward. Another devoted man joined him a year or more ago and will continue the work that the "apostle to the lepers" began until he too shall fall a victim or medical science becomes able to cope with the dreadful scourge. This is M. Conrady, formerly of the Diocese of Oregon. Friends have sprung up to assist in the good work, and, curiously enough, it is among the members of the Anglican Church that they have received their most material support. English Episcopal Bishops have interested themselves in helping these Roman Catholic priests, and a powerful English Church organization, the "Church Army," has built them a chapel, and makes regular contributions of money and other things to aid in bringing comfort to the poor lepers of Molokai.

THERE are a great many hinderers. There are those who are always seeing the dark side. No matter how bright a thing may be, they are sure to find a gloomy view of it. You may paint your hope in most radiant colors, but they will blot it all with black when they come to look at it. They are always seeing difficulties in the path, lions in the way. They do nothing but prophesy evil, and find out and foretell difficulties and obstacles in the way of others.

Such people are grievous hinderers. They chill ardor and quench enthusiasm in all those whose lives they touch.—S. S. Times.

FOR "THE FRIEND."

Early Meeting-houses of Friends.

THE BANK MEETING.

(Continued from page 332.)

We have seen that it was determined to take down the Centre Square Meeting House and rebuild it upon the site of the former Bank Meeting House, on the west side of Front Street, above Mulberry or Arch Street.

The minute of the Monthly Meeting of Third Month, 1792, states that "Thomas Griffith and Abraham Bickley are desired to collect subscriptions towards building the meeting house which is to be set up at ye upper end of ye Town." In the Fifth Month following, "John Redman sent a paper to the meeting to acquaint Friends that he thinks it is too late to go on with the meeting house this summer; and it (the meeting), being of the same mind, desires the persons appointed to oversee the work, to let said Redman have forty pounds in order to provide materials, that it may be done early in the spring, and that they agree with carpenters to take down and secure the old timber, and carry off the mason work also, as the bricklayers shall want it."

The work was pushed rapidly forward in the succeeding year, so that it was ready for occupancy about midsummer.

Seventh Month, 1793. "It is agreed that there be a meeting held at the new meeting house on the Front street every First-day in the afternoon, to begin the next First-day, at or near the 2nd hour." In the following month Nicholas Wain reported: "They have near finished the meeting house, and that the land whereon it stands is conveyed to him and John Goodson for a Publick Service. Therefore it is desired that Thomas Story and David Lloyd may draw conveyances to Edward Shippen, Anthony Morris and others. It is also agreed that a meeting be held therein on First-days to begin at the 11th hour."

Ninth month. "There being several debts due from the Monthly Meeting to people that have done work for the meeting house on the Bank, and money falling short, Thomas Story is willing to lend the meeting 25 pounds on interest."

"It is agreed that Samuel Carpenter pay Ralph Jackson £1 6s. 4d. for glazing the meeting house windows."

"The Preparative Meeting having recommended the necessity of paling of the front of the Bank meeting house even with the street, John Parsons is desired to get it done, and get it painted."

This house was built of brick, and of the same dimensions as the frame structure that preceded it upon the same ground, viz., 50 by 38 feet. It stood 14 feet back from the street, and that space was kept as a green yard.

The street and building were then upon the same level, but after the cutting down of the street, the building stood some 10 or 12 feet above it, giving it a singularly perched up appearance.

Originally, there was no wooden partition dividing the house, and a curtain was lowered when Preparative Meetings were held; but in 1755 it was decided to put in a partition, as appears by the following minute of the Monthly Meeting:

"It is now agreed that a division be made in the Bank meeting house suitable for the purpose of holding Monthly and Quarterly Meetings."

As Friends became more numerous and more

widely scattered over the city, and the business of the Monthly Meeting largely increased, it was deemed expedient to establish two other Monthly Meetings, to be known as the Monthly Meetings of Friends of Philadelphia for the Northern and Southern Districts respectively.

The opening minute of that held at the Bank meeting house being as follows:

"On the 24th day of Eleventh Month, being the third day of the week in the year of our Lord one thousand seven hundred and seventy-two, Men and Women Friends assembled in their meeting house on Front Street on the Bank of Delaware, being the first Monthly Meeting of Friends in Philadelphia for the Northern District." &c.

In course of time, Friends finding themselves greatly inconvenienced by the grading of Front Street, above alluded to, and other causes, decided to procure another location for a meeting place, as is shown by a minute of the Monthly Meeting of First Month, 1789.

"The Committee appointed to procure a suitable Lot of Ground to build a meeting house upon for the better accommodation of Friends, report they have lately made a contract with our friend Samuel Emlen for his Lot on the square between Sasafrafs and Vine Street, and Front and Second Street, contiguous to that held by our Society as the donation of our friend George Fox, on which the school house now stands.

"Friends were generally of the mind that the building would best answer the purpose intended of about 75 feet long east and west, and not less than 50 feet north and south, and that it would be necessary after disposing of the Bank meeting house Lot, and the one adjoining it on the north, to raise by subscription the sum of 2000 pounds."

In the Second Month "A plan was agreed upon to lessen the size of the new meeting house to 68 by 50 feet, and instead of dividing the men and women's apartments by a sliding partition of wood, to erect an additional apartment of brick 45 by 40 feet on the north side of the building," for a Monthly Meeting room.

The building was erected upon the plan proposed, on the south side of Key's Alley (New Street), finished and occupied in 1790, viz:

"At a Monthly Meeting of Friends of Philadelphia, for the Northern District, held the 21st of Ninth Month, 1790, being the first for business held in the new meeting house," &c.

The old Bank Meeting House and Lot 48 by 89 feet, was sold and conveyed Fifth Month 21st, 1791, to James C. and Samuel W. Fisher, for 1000 pounds, specie, "reserving the stone steps, forms and other movable property." Also the lot adjoining the same, on the north, for 500 pounds.

The house was taken down and the old oak column that supported the gallery which had been brought from the Centre meeting, was preserved by James C. Fisher.

Thus the premises which had for more than a century been devoted almost exclusively to religious purposes, passed into secular uses.

THE NORTH MEETING.

The meeting established in Key's Alley (New Street), was called regularly, the North Meeting, and by some the "Up Town Meeting."

The population rapidly increasing in the Northern Liberties, and Friends moving westward and northward, it appeared desirable to have another meeting still farther up town. Consequently, a lot was procured at the south-

east corner of Fourth and Green Streets, and substantial brick building erected thereon, which was completed in the Spring of 1814, and meetings opened therein, as appears by the annexed minute of the Monthly Meeting held Ninth Month, 27th, 1814. "The Committee agree to propose to the Monthly Meeting that meeting for worship be established (at 4th or Green Streets) on First-days, morning and afternoon, and on Sixth-day mornings, and Friends be allowed to hold a Preparative meeting," which was approved, and also concerning by the Quarterly Meeting. The Preparative meeting was opened Twelfth Month 23d, 181 and the first "Green Street Monthly Meeting held Fifth Month 6th, 1816.

J. W. LIPPINCOTT.

(To be continued.)

Natural History, Science, &c.

Terrapin.—Colonel Tilghman and M. Goldsborough are largely engaged in the propagation of terrapin on the Eastern shore of Maryland, and have about 3,000 confined in a pond where they are fed and prepared for market. The terrapin are caught by the fishermen and sold to Tilghman and Goldsborough. In winter they lie dormant and do not eat at all, but in summer time they seem to have ravenous appetites. The principal food given them is bay crabs, and it takes about 500 to 600 crabs a day to fatten them.—*Exchange.*

Use of Skimmed Milk.—In the *Medical and Surgical Reporter*, Dr. John M. Keating urges skimmed milk as a nutritious beverage for the working classes, the free use of which will lessen the appetite for alcoholic drinks. He therefore calls attention to this matter that the sale of skimmed milk may not be restricted by an legislative action.

Engineering at Carthage, Africa.—A French company—the Gas and Water Company of Tunis are about to undertake for practical purposes the restoration of the reservoirs of ancient Carthage. These basins cover an area of 37,509 square feet, and are divided into eighteen communicating apartments. They have been entirely neglected since the incursions of the Arab in 697.

Water-Supply and Wells.—"If the flow of organic impurities through a natural filter be so great as to fill it with precipitated organic matter, decomposition of the masses of organic filth thus carried into the soil, takes place, and the soluble products of this decomposition float on with the underground streams until a well offers a collecting place for them.

In a stiff, impervious soil the collection of organic filth is enormous, and the dangerous character of the organic matter in such soil when it is disturbed, is well known to every physician. Outbreaks of malarial disorders are all too certain to follow such disturbance. Nature, under the conditions as to safety greater in a town built upon a sandy or porous soil. Here the organic impurities do not collect in such quantities in the soil, but to offset that, the flow from the surface to the water line of the well is more rapid. In districts underlain by rocky strata the danger does not disappear, as the seams in the rock, or faults in stratification, furnish convenient inlets for surface filth. This filth-polluted water, collected from either rocky strata porous or compact soils, does not always (perhaps we might say does not usually), advertise its dangerous character. It is apt to be clear and cool, and is sought after for household use. There are no

signs to show its condition, and the wellner is usually prompt to resent as a personal offence, any suggestion that the water is unfit for use. Striking instances of this could be given, but we mention only one or two.

"In New Brunswick a well known to have been in use for more than 100 years was located recently in the rear of a tenement house and its surrounding out-houses. This house was used for many years as a tavern, the slops from the kitchen being discharged in the immediate vicinity. Near by was an old stable-yard and outhouses, the surface drainage from both being directed toward the well. The soil in the entire vicinity was completely saturated with organic impurities, and although the supply that fed the well did not come from surface or local drainage, it was supplemented by both. The water in this well was clear, cold and agreeable to the taste, and was much sought after for drinking purposes. Chemical and bacteriological tests proved it to be the merest sewage, and yet when the facts were stated, many persons using the well were greatly offended at the attack upon the character of this water.

"Another case was that of a well situated in depression in the red shale that had become filled with sand. The water was used by numerous families, and during the summer there was scarcely ever a time when some one in this vicinity was not suffering from low fevers or Lowell fevers. The quality of the water was shown, and the well closed by the Board of Health, and the locality was the cry at the injustice inflicted upon the poor.

"The regular indifference to the condition of a well surrounding the household water-supply is very great.

"Persons using such water are less able to withstand the assaults of prevailing diseases. This is particularly the case when this water is used by small children and aged and infirm persons. We firmly believe that a large proportion of the death of infants, during the heated term of our summers, is directly induced by the use of just such water, and in many cases coming under the writer's own observation this belief is being directly confirmed."—*Prof. Wilbur, of Rutgers College.*

Items.

Franklin Reformatory Home for Inebriates.—The 11th Annual Report of this Institution describes at length the means used by it to assist those victims of the drink habit who are sincerely desirous of reforming. The "Home" is located at Nos. 11, 913 and 915 Locust Street, Philadelphia—and where the patient is received, cared for, watched and brought under the discipline of a well-regulated family, and under the influence of moral and religious considerations.

The number of inmates at the close of the year ending Third Mo. 31st, 1889, was 32, and the number admitted during the year 234. Of the 237 discharged during the year, there were 152 men whose names gave satisfactory evidence of thorough reformation, 37 were re-classing them among the reformed; of 30 others, the Report says, "we can only say that they have been benefited; 23 are classed as doubtful; and 26 as failures.

The cost of carrying on its operations for the year was about \$13,000; about \$4800 of which came from the board of patients, and most of the remainder from donations.

The Report of the Superintendent says that "there is now out in the world 1000 men who are exempting in their lives the efficiency of the Home's teachings, and the saving power of God's grace. Every one of these men was a drunkard; every one of them to-day is an active agent for good."

Joining the Presbyterians.—The Presbyterians men-

fions that at a meeting of Los Angeles Presbytery, "R. H. Hartley, for ten years an acceptable minister in the Society of Friends and a Professor in one of their colleges, asked admission to our body, and after the proper examination was received. His baptism by the Moderator and ordination followed close on each other."

The Tract Association of Friends of Philadelphia.—The Report of this Association for the year ending Third Mo. 1st, 1889, shows a distribution of 165,480 Tracts, 4,547 Almanacs, and 4,668 of its other publications.

A number of the older tracts have been electrotyped, and it is proposed to continue this change, so as to have the whole series uniform in appearance. Seven new tracts have been added during the past year to the list, which now number 176. The Report states that several of their Peace Tracts have been republished by another organization, which has distributed several hundred thousand copies of them.

The expenses incurred in carrying on its operations for the year, have amounted to about \$1350. During the past four years, the invested funds and cash on hand have been reduced over \$600, principally or entirely used in improving the electrotype plates.

The Association furnishes its tracts at the rate of 16 pages for one cent; and those who desire to obtain them for distribution can be supplied gratuitously by applying at Friends' Book Store, No. 304 Arch Street, Philadelphia.

Doctrine of Purgatory.—A writer in *The Converted Catholic*, thus relates her experience: "I was a Roman Catholic and always prayed to God for his blessing, but I had a fear of purgatory that seemed to make my prayers useless. When I lost my father some years ago we were not able to have many masses said for him, and though very young I remember saying to my mother that as he was a good man, surely he did not need many masses to bring him out of purgatory, for I was sure he was with God. This thought comforted us, and simple as it was, I think it was the first impulse that led me out of the Roman Catholic Church. Now I have learned to trust Christ as my Saviour, and an very happy in my Christian life."

Northern Liberality.—Many thoughtful people in the South recognize and publicly acknowledge the liberality of Northern men toward Southern institutions. A certain Southern teacher commenting on this fact recently puts it in a strong light. The Vanderbilt University, which is the best endowed institution in the South, got its money from the North. *Emory College*, which has an endowment of \$5,000, received \$5,000 from a Northern man. All the buildings at Emory, except two society halls, were paid for by Northern money. This statement, from the *Atlanta Constitution*, will surprise many readers: "More money has been spent by Northern men for collegiate education for the negroes in Alabama alone, than any six Southern States have given to collegiate education for white boys. The Northern Methodist Church alone is spending more money in the South for higher education than all the Southern States combined give to their colleges."

THE FRIEND.

FIFTH MONTH 25, 1889.

William Penn forcibly expresses the nature of true religion, when he says, "Our religion stands not in the doctrines, meanings, preachings, or notions of man's devising or deducting from the Scriptures themselves, but in the living, quickening power of the Eternal God, which plainly discovers sin, and wounds deeply for it; and, if obeyed, ransoms the soul from death, hell and the grave; to serve the Lord God in his new, living, and spiritual way."

"The wisdom that is from beneath may study,

carp, contend about Scriptures and religion, and from thence frame and imagine how those things are wrought, that are mentioned therein; but can never give true, unfeigned repentance, nor living faith, by which to overcome the world, and to live unspotted in it, walking with God till the time of dissolution comes."

It is a very important distinction which William Penn points out, between that theoretical knowledge of doctrines which the unaided intellect of man may acquire by the study of the Scriptures and the exercise of his reasoning powers, and that living experience of the work of the Spirit which comes from the visitations of the grace of God, and his own submission thereto. The one may be compared to a marble statue, on which the skill of the sculptor has been expended—however perfect in its proportions and beautiful its finish, it is but a lifeless stone. The other is animated by the breath of life.

The Scriptures are greatly to be valued both as a revelation of the Divine will, and as a historical narrative of events of the utmost importance to man, and that should be read, and frequently read by those who have access to them; but it should not be forgotten that they themselves declare that the mysteries of religion are not within the reach of our natural faculties, but must be "spiritually discerned;" and that our Saviour returned thanks unto the Father, because he had hid these things from the wise and prudent of this world, and had revealed them unto babes. Although it is said the Scriptures are able "to make wise unto salvation," yet this is declared to be "through faith," which is in Christ Jesus, and this faith "is the gift of God," so that we are brought back to the fundamental principle, that all true religious knowledge comes from the operation of the Divine power and life communicated to the soul.

Very instructive are the remarks on this subject, of that deeply experienced elder the late Jonathan Evans, in a letter to Mildred Ratcliff many years ago. "A great deal is said and done to enforce the opinion that a knowledge of the Holy Scriptures is almost, if not exclusively, essential to our salvation; hence many may be induced to get them by rote, and conclude that if they have them in possession they are safe, when at the same time, the influences of the Holy Spirit graciously granted by our blessed Redeemer to guide into all truth, are scarcely known or even regarded. . . . I am bound to the Scriptures as a declaration of the mind and will of the Most High, mercifully dispensed for our instruction and help, and it is my practice to read them daily, but the religion inculcated by our blessed Lord is *to pure and refined to admit of any external object in the place of Him, the only Saviour of men.*"

The history of the Christian Church abounds in illustrations of the errors into which men have been led, who have relied on their own wisdom in deducing systems of doctrine from the words of Scripture, and have not realized the necessity of waiting on the Lord for the unfolding to them of the spiritual truths of the gospel of Christ. Such persons having lost their anchorage on the rock of revelation, often seem "at sea;" and it is difficult to foresee where they will land. How different is the condition so beautifully described by William Penn, "Blessed are they forever, who having found that living, holy light and power, abide with it. This is that foundation which can never be moved, and that durable rock which the gates of hell could never shake, nor prevail against them that build thereon in any age; for which the holy host of

heaven, and we on earth, magnify the name of God, and return and ascribe to Him by Jesus Christ, all honor, glory, praise, wisdom, power, strength, majesty and dominion, who alone is worthy, now and forever!"

An inquiry as to the time of the holding of one of the Yearly Meetings has suggested the preparation of a list for the present year, which may prove a convenience to some of our readers. The date given is that of the commencement of the business sittings.

Philadelphia, at Philadelphia, Fourth Mo. 15th.
Dublin, at Dublin, Ireland, Fifth Month 1st.
London, at London, England, Fifth Mo. 22nd.
New York (Conservative), at Poplar Ridge, N. Y., Fifth Month 25th.

(Progressive), at Glen Falls, N. Y., Fifth Month 31st.

(Conservative), at Emporia, Kans., Tenth Month 24th.

Baltimore, at Baltimore, Md., Eleventh Mo. 8th.

SUMMARY OF EVENTS.

UNITED STATES.—Allen Thorndike Rice, the new Minister to Russia, died suddenly at the Fifth Avenue Hotel in New York, on the morning of the 16th instant. It is believed that he was succumbed by a sudden swelling of the glottis.

News was received on the 19th instant, at Portland, Oregon, that 11 of our visiting men of the new, ill-fated steamer Alaskan had come ashore at Florence, near the mouth of the Sitkwa River. This reduces the number of missing to 19.

On the 14th inst., the Southern Baptist Convention closed its sessions in Memphis, Tennessee. Resolutions were unanimously declaring for the entire prohibition of the liquor traffic.

A law to punish drunkenness went into effect in Minnesota on the 16th instant. It provides that "whoever becomes intoxicated by voluntary drinking intoxicating liquors shall be deemed guilty of the crime of drunkenness, and upon conviction thereof, shall be punished as follows: For the first offense, by a fine of not less than \$10, nor more than \$40, or by imprisonment for not less than ten, nor more than forty days; for the second offense, by imprisonment for not less than thirty, nor more than sixty days, or by a fine of not less than \$20, nor more than \$50; for the third and all subsequent offenses, by imprisonment for not less than sixty days, nor more than ninety days."

The Michigan House of Representatives has passed the Woman's Municipal Suffrage bill.

According to a denominational paper it cost this government \$3,000,000 for the removal of 2,300,000 Indians for seven years when they were savages. After they were Christianized it cost \$120,000 to care for the same number for the same time, a saving of \$1,780,000.

A large deposit of asbestos has been found in San Diego County, Cal.

Immense quantities have been done in Northern Minnesota and Wisconsin during the past three weeks by forest fires.

Terrific hail storms passed over Norfolk and Portsmouth and the adjacent districts in Virginia, on the 13th and 14th, doing damage estimated in the aggregate at a million of dollars.

The Dover *Standard* prints advice as to the peach and berry crops of the State, and over Delaware, and several localities in Maryland. Summarized, they indicate a fair crop of peaches, and an unusually good yield of strawberries, of better average quality than usual. Some damage to late peaches by frost and storm is reported, and the whole crop has yet to run away with the fruit of June and July. Berries are likely to yield well everywhere.

Deaths in this city last week numbered 420, which is 23 more than during the previous week, and 35 more than during the corresponding period of last year. Of the foregoing 230 were males and 190 females; 68 died of consumption; 32 of pneumonia; 27 of diseases of the heart; 25 of convulsions; 19 of old age; 17 of typhoid fever; 15 of inflammation of the brain; 13 of marasmus; 13 of inflammation of the stomach and bowels; 11 of debility; 11 of congestion of the brain, and 10 of cancer.

Merchandise.—U. S. 4½, reg. 107; coupon, 108; F. 129; currency 64, 1st a 132.

Cotton sold in a small way to spinners, on a basis of 1½ cts. per pound for middling uplands.

Feed.—Winter bran, choice and fancy, \$14.75 a \$15.00; do, fair to prime, \$14.00 a \$14.50.
Wheat and meal.—Western and Pennsylvania super, \$2.50 a \$3.00; do, do, extra, \$3.00 a \$3.50; No. 2 winter quality, \$3.50 a \$4.00; Pennsylvania family, \$4.25 a \$4.50; Pennsylvania roller process, \$4.50 a \$4.75; Ohio, clear, \$4.25 a \$4.50; do, straight, \$4.00 a \$4.50; Indiana, clear, \$4.25 a \$4.50; do, straight, \$4.00 a \$4.50; St. Louis and Southern Illinois, clear, \$4.25 a \$4.50; do, straight, \$4.00 a \$4.50; winter patent fair to choice, \$4.85 a \$5.25; Minnesota, clear, \$5.25 a \$4.00; do, straight, \$4.50 a \$5.25; do, patent, \$5.25 a \$5.85.

Grain.—No. 2 red wheat, 91 a 92 cts.
No. 2 mixed corn, 4½ a 4½ cts.
No. 2 mixed corn, 4½ a 4½ cts.

Beef cattle.—Best, 6¼ a 6½ cts.; good, 6¼ a 6½ cts.; medium, 6 a 6½ cts.; fair, 5¼ a 5½ cts.; common, 5¼ a 5½ cts.

Mutton.—Best, 9 a 9½ cts.; good, 8½ a 9 cts.; medium, 8 a 8½ cts.; fair, 8 a 8½ cts.; lambs, 12 a 13 cts.

A constitutional case arranged between most of the miners and their employers, in Westphalia. The men have resumed work.

It is expected that the Samoan Conference will conclude their labors the present week.

An enormous landslip has occurred at Spiesstack, Switzerland, near the village of Gams and Gamsboden.

The latest reports from the flooded districts in Austria, show that the loss of life is much greater than was supposed. The rivers were still greatly swollen. In many places the bursting of dykes has flooded the surrounding territory and utterly destroyed the crops. Many narrow creeks, from death are reported. The death statistics prevail throughout the submerged district, and steps are being taken to relieve the immediate wants of the sufferers.

It is no marvel that so many Italians emigrate. The public debt of Italy, in proportion to the annual revenue of that Government, is the largest in Europe, being three times as large as that of Germany, and nearly twice as large as that of Great Britain. This huge debt is an enormous burden upon the people.

Advices from St. Petersburg state that it has been discovered that the conspiracy among the military officers against the czar which was recently unearthed in that city, has many and widespread ramifications. Officers of regiments stationed at Moscow and Warsaw have been found to be implicated in the plot, and three of them have committed suicide. A bomb was found in the quarters of one of the officers at Warsaw. Hundreds of the conspirators have been placed under arrest.

The dissenting ministers of the New England Conference. And yet the autocrat has instructed his new Minister of the Interior, Burnov, to continue the policy of the late Minister, Count Tolstoy, whose oppressive measures caused such wide-spread dissatisfaction and hatred.

Immense quantities of Saint Sauveur, Quebec, on the 16th inst., destroyed about seven hundred houses. As many of them were tenements, the number of families homo-

less is placed at 1200, comprising five or six thousand persons. The majority of the people burned out of the laboring class, and, as insurance rates were high, their loss is total. Saint Sauveur is a separate municipality from Quebec, but is separated by only a few miles from the city, which has a population of 15,000. There was a scarcity of water, and during the progress of the fire one soldier was killed and a fatally injured by an explosion. The loss is estimated at \$600,000.

NOTICES.

A number of articles have been left at Arch Street Meeting-house—comprising shawls, handkerchiefs, other articles, mostly of women's wear. All persons having lost such articles, will please call on Mr. Masters, 302 Arch Street, who will give them the opportunity to recover their property.

WANTED.—A competent Friend to teach in Chest Field Preparative Meeting School at Crosswicks, N. J., beginning the first Second-day in the Ninth Month next.

For information apply to JOSEPH S. MIDDLETON, Crosswicks, Burlington Co., N. J.; or WM. BISH Wainford, Monmouth Co., N. J.

DIED, at his residence in Parkerville, Chester Co., Penna., on Third Mo. 25th, 1888, WILLIAM FORSYTHE, in the 71st year of his age, a member of Birmingham Monthly Meeting.

—, in Parkerville, on 1st of Fourth Month, 18 HANNAH E., daughter of the late William and Eli Beth P. Forsythe, in the 34th year of her age, a member of Kennett Monthly Meeting.

—, in Parkerville, on 1st of Fourth Month, 1888, WILLIAM CARPENTER, in the 87th year of his age, an esteemed member and elder of Salem Monthly Meeting of Friends, N. J. He was of a diffident, retiring disposition, and it was only he who knew him intimately that could appreciate his true worth. His consistency was during a long life gained for him the respect and esteem of his friends and neighbors; and, in connection with his good judgment and knowledge of the discipline, made him useful member of our religious Society. Much suffering was his portion during the last year of his life, when he was with Christian patience. He was one who spoke much of his religious feelings, but peaceful close brought to remembrance the text "Mark the perfect man, and behold the upright, the end of that man is peace."

—, at Dwight, Kansas, on the 3rd of Fifth Month 1888, in the 41st year of her age, SARAH M. HOTO, a member of Danmore Monthly Meeting of Friends, of which she was an elder and overseer. She was the childhood of a tender and religious frame of mind and was firmly attached to the principles and testimonies of our Society, and, having an unusually clear judgment and sympathizing heart, endeavored hers to be in full of the place of mother to her children. Her belief that the Everlasting Arm on which she leaned supported her through the valley of the shadow of death, giving her remarkable patience and grace through her last severe sufferings.

—, of paralysis, at Whitecourt, Fourth Mo. 28th, 1888, JAMES J. DAVIS, aged 88 years, 7 months and 19 days, beloved wife of Joshua Davis, a member of Yonge St. Monthly Meeting of Friends, and a devoted friend to their principles. She was loving, sympathizing friend, a number of tender labors found a shelter and a home under their hospitable roof. Her friends believe that she would have otherwise would have been motherless, for God sent "the solitary in families." She brought up children of hers who are ready to rise up and call her bless. She bore her protracted illness of five years, with Christian patience, never expressing one murmur against her friends, and she remains believing that entered into that rest that is prepared for the people of God, through the merit of Christ Jesus, our Lord.

—, at his residence, Belleville, Ont., Third 2nd, 1888, JOHN MULLETT, in his 87th year, a member of West Lake Monthly Meeting of Friends. He was a devoted friend from his youth, and frequently walked four miles to attend Fairview Meeting, until age and infirmity prevented. He emigrated to Canada in 1821, with his parents, William & Mary Millett, who brought a family of eleven children with them. He remained true to the principles of the Society until his final death, although circumstances prevented his being present at many of the meetings. He left his friends the comforting evidence that his end was peace.

FOR "THE FRIEND."

Historical Review of the Society of Friends.

(Concluded from page 208.)

Since the year 1860, the point of time which was reached in the previous numbers of this article, there has been a wonderful change in many parts of our Society, perhaps I might say, a remarkable development of the erroneous doctrinal views against which true Friends had been contending in the preceding 30 years, combined with some additional errors, and a consequent change in the religious usages which had been long established amongst us.

Prominent among these erroneous doctrines is this: That Christ has perfected the work of reconciliation and redemption of man, by his sufferings and death, and therefore a mere belief and trust in Him as a Saviour are all that are necessary to insure man's salvation; Christ's righteousness being imputed to those thus believing and trusting. From this it would follow that men, at any time and in their own will, may come to Christ, rest on Him as their substitute, and be accepted in Him, though they may never have experienced thorough repentance for their sins, nor the washing of regeneration through the renewing of the Holy Ghost.

Let the reader contrast this with the doctrine of our Society as clearly stated by an English author:*

"That God not only so loved the world that He sent his Son into the world to atone for the sins of all mankind in the body of his flesh through death; but that He also so loved the world that He has enlightened every man that comes into it with some measure of his own eternal Spirit, in order that no man might miss the offer of that salvation which He has thus prepared for all." "This true light that shineth in darkness—this grace of God that bringeth salvation, that hath appeared unto all men—this drawing of our Heavenly Father, without which, Christ declares no man can come unto Him—are all one and the same thing, and the SURE FOUNDATION upon which Quakerism is built. The first step it recognizes as the duty of man, is not the assent to any creed or formula whatever, but *belief in the Light*; that is, obedience to it: for belief *about* it or *concerning* it merely,

is dead and in vain without this. 'While ye have the Light,' said the Saviour himself, 'believe in the Light, that ye may become children of light.'" "The Apostle John declares that 'if we walk in the light as He is in the light, we have fellowship one with another, and the blood of Jesus Christ his Son cleanseth us from all sin.' As no man is a true Christian but he who has the inward experience of his sins being thus cleansed—that is, who walks in the Light,—whatever may be his outward professions, or his outward belief *about* Christ; neither on the other hand, does any man fail of salvation who has never heard of Him outwardly, provided he has the deeper, the real experience [through the obedience which is of faith] of his Spirit in his heart. For there is but one way of salvation for all men; and that is Christ. Not one way for us who are called Christians; and another way for the holy men who lived before Christ's outward coming; and another way for those in heathen lands who have never heard of his outward coming. *There is but one way*; for there is no other name given under heaven among men, whereby we must be saved, but that of Jesus Christ [the way, the truth and the life], who is the same yesterday, to-day, and forever; the same as He was before Abraham was; as He was when He took upon him this mortal life, and yielded it up upon the cross; as He is and will be, who is alive forevermore; the same Almighty Power speaking, as Fenelon says, 'in the hearts of the impenitent,' to convince them of sin; leading those who yield to it, to a new birth unto righteousness; and becoming to all them that obey it, the Author of eternal salvation."

The system of doctrine stated in the second paragraph of this article is sometimes called "Evangelicalism," and while it embraces some of the doctrines held by Friends, especially a belief in the Divinity and atonement of our Saviour Jesus Christ; it is defective or erroneous on several points of great practical importance. It teaches that man can "accept" Christ and be in a state of salvation whenever he pleases—although our Saviour says, "No man can come unto me, except the Father which sent me draw him." It leaves out of sight the transforming work of grace on the heart, which is essential to salvation. It regards *faith* as a natural faculty of the mind to be exercised at man's will and pleasure, whereas *saving faith* is the fruit of the operation of the Spirit, and flows from submission to the Light or Grace of God. It teaches that faith in the outward sacrifice of the Saviour must *precede* the sanctifying work of his Spirit—thus reversing the true order of spiritual experience, for it is only through the Spirit of Christ working within man, that true faith is begotten. It makes salvation depend on belief in the outward offering of our Saviour—largely ignoring the process of regeneration, the purifying baptism of Christ, and the cleansing operations of his Spirit, although the Scriptures teach that without the experience of these we cannot be saved.

The spread of "Evangelicalism" in the Society of Friends has produced its legitimate fruit in corresponding changes in the manner of conducting religious meetings in those places where this system has been accepted. As stated in an Address issued by Philadelphia Yearly Meeting in 1883,* "Those who are carried away with the erroneous opinion, that such an acceptance of Christ's work as man can make when he chooses, will ensure his salvation, will naturally resort to the means at their command to persuade people to take this step; and hence we see that even in meetings which profess to be those of Friends, vehement persuasion, the excitement of music, the sound of numerous simultaneous petitions, the use of the mourners' bench, and other expedients for stirring up the feelings of an audience, are brought into use, to induce a public avowal of faith in Christ; and those who have been persuaded to make the required confession are encouraged to believe that they have found salvation."

It has followed from this that our meetings for worship are not looked upon so much as formerly, as seasons for waiting upon God to feel the quickening power of his Spirit, and for communing with Him; but the tendency is to regard them as fields for the use of the talents of the minister; and silent meetings are thought by some not to fulfil the purpose of assembling for worship. Hence there is an *exaggerated* estimate of the importance of *ministry*, which, however, is highly to be esteemed when it comes from the Spirit of Christ. This estimate leads persons to speak on such occasions without experiencing the baptizing power of the Spirit; and it induces them to prepare themselves by previous study and meditation for such services, and to depend on human learning, culture and intellectual attainments. It has led also to the custom of employing as "pastors" or preachers, persons who possess the ability to speak fluently on religious subjects. Such "pastors" reasonably require of those who thus invite them, a suitable maintenance for themselves and families, such as is given to the ministers of other denominations; and in return they expect to preach and conduct the meetings on every gathering for worship. Thus, step by step, the whole system of our worship is being changed—the natural and inevitable result of the adoption of a system of doctrines so strikingly in contrast with primitive Quakerism. For it is an unchangeable truth, that the tree is known by its fruits. Just as the manner of conducting our religious meetings followed from the doctrines proclaimed by George Fox and early Friends; so do the more modern methods follow from the doctrines of "Evangelicalism" which have lately been introduced.

Such decided changes in doctrine and practice could not be developed without meeting with opposition, and producing uneasiness and dissension. In some of the Yearly Meetings, the

* The Address may be obtained gratuitously at Friends' Book Store, No. 304 Arch St., Philad'a.

* See *Ritualism or Quakerism*, published by E. Kitto, London.

tendency to "Evangelicalism" has been kept in check; in others it has so far progressed as to lead to separations, so that in each of the Yearly Meetings of Canada, Western, Iowa and Kansas, there are now two bodies holding the same title.

What the future may bring forth is difficult to foresee. In the midst of the gloom and distress that overspread the mind, as the condition of our beloved Society passes in review, some consolation is at times derived from the remembrance, that the Most High still reigns over the children of men; and a degree of hope and faith is revived, that He will, by his almighty power, carry forward his work in the earth, and cause his truth to prosper.

J. W.

FOR THE FRIEND.

Notes of a Visit to Italy.

(Concluded from page 331.)

On our arrival at Milan, we were taken to the Hotel de Milan, and found good accommodations, an English speaking porter, and clerk at the office. "This is one of the oldest cities of Northern Italy, and dates back to several centuries before the Christian era, and was peopled successively by Etruscans and Celts before the Romans extended their sway over the province of Lombardy; and there are said to be traces of the Gaelic dialect in use at the present day. The city can clearly claim an age of twenty-four centuries, but has passed through many vicissitudes of capture and destruction by invading armies through the centuries, and then again rebuilt, and again destroyed, so that hardly a trace of the ancient city remains. The Austrians were the last to be expelled from the occupation of the city and province by Victor Emanuel, aided by the French armies in 1859. Since that time the city has undergone vast improvements and extended its borders, so that now it has more the appearance of a live American city than an antiquated and finished Italian one. It has its tramways leading in all directions through the well-paved streets, many of them crossing at right angles. Some of the cars are propelled by a steam engine. Its population numbers about 350,000, and you see abundance of fine stores extending along the principal streets and avenues, with high colonnades in front of the stores, sheltering the shoppers from the sun and rain; and plenty of tempting articles of the finer and staple kind offered for sale, especially silk goods, of which there are extensive manufactories, being surrounded by the silk-raising regions. The people are very polite and attentive to visitors, and seem to partake of more of the activity, and push and industry of Americans, than any other people we have seen since we came into Italy.

The places of note to be visited and interesting to travellers are numerous. Galleries of paintings and sculpture, museums, monuments and life-like statues of their great men have been erected, and are to be seen in most of the public squares of the city, especially of Victor Emanuel and his able and famous Prime Minister, Count Cavour. But their wonderful marble cathedral, with its 2000 marble statues, adorning every part of its walls, exterior and interior, is admitted to be the third in size and beauty to any other in existence, excelled only by St. Peter's at Rome and the one at Seville, in Spain. It is 480 feet high by 182 feet wide, and 155 feet high, dome 220 feet high, and tower 350 feet; the interior is supported by 52 pillars 12 feet in diameter, and adorned in cramped niches with marble statues instead of capitals; the pavement consists of marble mosaics of different colors, three enormous sized bay windows

at one end of the Cathedral of stained glass, containing 250 richly colored scenes of Scripture history, containing, however, no glorification of the papacy, or even Mary; although at some of the small niches in the aisles *her images* is set up, and we saw some of her worshippers bowing before it. The rich coloring and artistic perfections of these paintings on glass don't fail to strike the beholder. The tomb of Carlo Borromeo is in one of the side-chapel vaults, with the crucifix he wore while performing his mission of mercy to the plague stricken poor in 1576, during the time it raged in that city. Not being able to the task, we did not ascend the 300 steps to the summit of the Cathedral and the marble roof, and view the grand scene presented to the eye of the one who has courage and strength enough to perform this ascent, but those who did, bear witness to the grandeur of the mountain and landscape scenery presented to the beholder, especially through the telescope that visitors are allowed to use on that occasion.

The gallery of Victor Emanuel, said to be the most spacious and attractive of any of the kind in Europe, is 960 feet long, 48 feet wide, and 94 feet high, with a cupola 180 feet high, cost 8,000,000 francs. Among its pictures and numerous statues of eminent men, is one of *Saonara*, one of the earliest reformers and *Protectors* in the Roman Church; of such a power in Florence that the papacy was made to tremble until he was led to martyrdom, for his defence of spiritual Christianity, in opposition to papal errors and formality; but they now do honor to his memory after a period of more than 700 years—as the nobility of England of the present day do honor to the persecuted and imprisoned Puritan tinker preacher Bunyan, by giving him a niche among the nobles in Westminster Abbey. Our stay was brief at Milan; we, however, may be allowed to say that we were pleased with the city; its sights, and its people. So, agreeably to our plan to reach England in July, we took train for Como, in the silk regions, and Chiaso, and through the St. Gothard tunnel to Switzerland.

Como by rail is 30 miles, through a delightful region. Some of the vineyards having the Mulberry trees for silk-worm use, have also a large number of small channels to lead the water through the grounds for irrigation. Como is a place of some importance, with 25,500 inhabitants, and a number of large silk factories, besides the silk weaving done by hand at the homes of the poorer classes. It has a cathedral, and the noted Lake of Como, a beautiful sheet of water extending many miles in the mountain regions, and a resort of tourists as a resting place, and for the pleasure of a ride on the waters of the lake. We climb the mountain at the foot of the Alps for many miles, at steep grades, sometimes nearly in a circle, until we reach the Italian mouth of St. Gothard's tunnel, and through its seven miles to its Switzerland side, getting down the mountain in the same way by a circular course of the railroad, through wild and precipitous precipices, bridging them over, or running along side of them, and snow avalanches lying on the side of the road, not yet melted.

Arriving at Luzerne, we stop at the Swan Hotel, where we meet a crowd of English, German and American tourists; next day by rail to Berne and Lausanne, and laid over a day and night at Onclay, at Hotel Beau Rivage, on the border of the Geneva Lake, a little paradise of a place, beautiful in its surroundings, and everything one could wish in its accommodations.

Sorry we could not have stayed a week. Thirty miles on the lake brought us to Geneva, with good rooms at Hotel Metropole, overlooking gardens and lake in front, and the snow-capped mountains in the distance. Mount Blanc, 20 miles off, can be seen in clear weather. Here we stayed over First-day, and visited and heard a sermon in French, preached in the old church of the noted *John Calvin*, and stood in his pulpit where he uttered his thundering anthems against the apostasy and despotism of the papacy. Here we bid adieu to our readers, and allow them to follow us in imagination through France, Belgium, England, Scotland and Ireland, and steamer for home in six days, ten hours, thirty minutes.

G. R.

MERCHANTVILLE, Fifth Month, 20th.

The Cause of Intemperance.

The Report of the *Franklin Reformatory Home for Inebriates* for the present year contains the following remarks on the cause of the intemperate habits that so many persons have fallen a prey to:

"No one dare deny that the ravages which intemperance is making to-day are frightful to contemplate. It is the same old story of crime and wretchedness told year after year, but intensified with each succeeding year. It furnishes the ghastly story of red-handed murder with black pages of shame and death.

Who is responsible for the wretchedness, crime and misery that fill this volume of horrors? Society and society alone!

There is no escaping this charge; and no amount of finesse will exonerate it. Society makes the habit, gives it its great seal of endorsement and is horrified at the result of its own work. It gives the man the impetus which starts him on his fatal journey toward a precipice, and disowns, as its work, the shattered, revolting mass found on the rocks below. The victim was a drunkard, but society is responsible for it.

There is no one grade of society that stands specially charged with fostering the custom which creates drunkenness. All grades are alike guilty. The sparkling glass of champagne served in the West End Mansion, the glass of whiskey offered for hospitality's sake, or the generous welcome accorded with the glass of beer, are evidences of the one mistaken idea of the different grades of society that when men meet, liquor according to their taste and means is necessary for their entertainment. Drinking is the habit which society approves of and lays the foundation for, in its wisest and worst forms, by permitting drinking at home. The members of society know that they are serving out what science tells them is a poison; they know that the habit of drinking is easily formed, and they know the inevitable end of the habit. To assume that this is not known to all members of society, is to assume that society is composed of fools; and that is an assumption which society itself would resent. Then grant society intelligence, and it must wear the badge of criminality.

It is after society, by its example and approval, has instituted drinking as a habit, that there is a demand for wider facilities for drinking. Alcohol in any form creates an appetite for more of itself. The stimulation of the night produces the necessity for sufficient stimulation in the morning to correct the depressing effects of the reaction, and the bar-room is the natural resort. When this stimulation is on the wane, more is called for, and so the habit is formed of regular drinking through the day, the amount

increasing as the days and years go on. The habit began privately in the social circle, but under our social system it must be continued publicly, so the law steps in and legalizes the avers. Every year Legislatures are petitioned by society to regulate and restrict the facilities for drinking, and legislators acknowledge that drunkenness is a vice of stupendous magnitude. But just as society disowns the drunkard it has made, so Legislatures, while acknowledging the wrong done to morality by making drinking possible, dare not (so vast an influence attaches to the saloon) propose the law that would put an end to it. The Legislature stands in the position of one who, having put his weapons in the possession of a thief, sees them used to rob him of everything, from morality and money, to his very raiment and hope of salvation. That drunkenness is the result of the customs of society and sanctioned by the law is an inevitable conclusion. They are both ashamed of it, but they are dishonest if they assume not to know their own handiwork. It does not matter what grade of drunkenness it is; the well-dressed man coming out of a club house, or the one led to a carriage from a fashionable saloon, bawling out, "W' reath the bowl," is not different from the ragged wretch, who is thrust cursing from a dive in the slums and taken to a police station in a patrol wagon; except that one wears the uniform of his vice, and the other is well-dressed. In point of fact they are both drunkards. Both began in the same way, though perhaps in different walks of life. It all begins with society's endorsement, enjoys legal recognition, and ends in the same degradation.

In the blank form of application for admission to the Franklin Home, printed at the end of this Report, the ninth question is, "What is the cause of your drinking?"

Of the 4060 men admitted to the Home, 95 per cent. have answered this question by saying that the habit of drinking had its origin for them in associations, customs and example. That is, in whatever grade of society they moved—and let it be marked, these men were from every social station—they found drinking the custom and followed the example set before them. In no one case was there an admission of a natural appetite. It was the fatal custom, the fatal example, the fatal association.

A Brave Boy.—A boy about nine years old was bathing one day when, by some mischance, he got into deep water and began to sink. His elder brother saw him and ran to save him, but, lacking strength or skill, he also sank to the bottom of the river. As the two drowning brothers rose to the surface for the last time they saw a brother, the youngest of the family, running down the bank for the purpose of trying to save them. Then it was that the dying nine-year-old boy acted the part of a hero. Struggling as he was with death, he gathered all his strength, and cried to his brother on shore, "Don't come in or father will lose all his boys, at once!" Noble little fellow? Though dying, he forgot himself and thought only of his father's grief. He was a genuine hero. His brother obeyed his dying command, and was spared to comfort his father, when his two dead sons were taken from the river clasped in each other's arms. Boys, you are not called to be heroes in this way, but you are called to consider the feeling of your parents, and to study how to avoid giving them pain. Blessed are those children whose words and deeds make sweet music in their parents' souls.

FOR "THE FRIEND."
A Visit to the Mica and Feldspar Quarries of
Chester County, Pa.

(Concluded from page 335.)

After leaving the Mica Quarry near Fairville, we visited one of Feldspar, which has been opened near the summit of a hill a short distance north of the Delaware State line. Here we found further proof, and an additional example of what we had learned at the former place, *i. e.*, that these special deposits of minerals were only modifications of the ordinary granular structure of the gneiss rock. The Quartz, Mica and Feldspar were all there, but some of the heavy layers of rock were largely composed of Feldspar in the large flat plates, with oblique angles, which is the natural form of its crystals. Some portions of these were almost pure Feldspar; in others, thin plates of Quartz were interlaced between the glossy Feldspar, making very pretty specimens for a mineral cabinet. In other parts, the Quartz was so abundant that probably the mineral was scarcely valuable enough for shipment; and then again in places, the Quartz and Feldspar were so confusedly intermingled as to clearly show the granular structure. In this quarry, the Mica seemed less abundant than usual.

As we ascended the hill, the wind blew with such piercing severity, that I was glad to find refuge in the excavation at the top. The exposure of the strata made by the quarrymen in their approach to the deeper cuttings was an interesting study. As in nearly all of this part of the State, the rocks had been decomposed for several feet in depth, forming the soil and clay which are nearest the surface. In some parts of this, the position of the original layers did not seem to have been disturbed by the process of decay. In one part was a layer of a chocolate color, easily crumbled, and very light; as if some of the ingredients might have been leached out of it when it lost its stony structure. I had before noticed some veins of the same material on the roadside banks. It was probably a rotten Hornblende rock; and its rusty color was due to the iron which that mineral contains. Among this dark material were some narrow veins of a whitish color, which so interlaced as to enclose small blocks of a foot or so in diameter of the chocolate clay. These probably had been formed by the decay of narrow veins of the Feldspar, which was so abundant lower down in its unaltered state.

As we were riding over the country, my companion, who was an intelligent farmer, called my attention to the character of the soil as affected by the subjacent rocks. Hornblende land, he said was generally fertile, and especially adapted to the growth of corn. The slow decomposition of the rock furnishes materials which are stimulating to the growth of plants. About one-fourth of the weight of Hornblende is lime and magnesia, and it is probable that these are the fertilizing elements in it, which are being constantly supplied to the soil.

For a considerable distance the road-bed, and the banks on the sides were a gravelly aspect from the abundance of small fragments of Feldspar diffused through them. This "spar land," as my friend termed it, he told me was rich also, but peculiarly fitted for wheat. The enriching material in this case was supposed to be the potash present in Feldspar, and slowly liberated as it decomposes under the influence of air, moisture and other agencies.

It is a widely known fact that limestone soils are generally very productive; and for this the reason is similar—lime itself being a powerful

stimulant to vegetable growth. But flint soils—those in which quartz predominates—are not favorably regarded by the agriculturist, for that material is but little affected by any atmospheric forces, and it does not possess the fertilizing properties which belong to the substances before enumerated.

The progress of decay in rocks varies with their composition and with their situation. Where they are exposed to the flow of waters, especially those which have percolated through an earthy stratum above them, and have become more or less charged with organic or other acids, the decay is more rapid than in drier situations. But it is nevertheless slowly going on all the time; and the earth which is continually being removed by the rains and running waters is continually supplied by this rock decay. The effect is to gradually lower the level of the higher portions of the land; and though this is so slowly done as to be almost unappreciable in the limits of any one life, yet there are abundant geological evidences that in the lapse of countless ages, going back to a period prior to the creation of man, wonderful changes have been effected on the surface of the earth. In former articles of this series some reference has been made to this subject; and additional illustrations are furnished by the beds of Kaolin or China clay, which are found in Delaware and Chester counties, and which I hope to visit when the weather shall have so far moderated as to permit the mining and washing operations to be carried on in them. They belong to the same series of gneiss rocks, for the examination of which the visits described in these articles have been paid, excepting that to the Cornwall Iron Mines.

While deferring for the present any further notice of the Kaolin beds, I will refer to the statements of J. P. Leslie, in the Report on the Geological Survey of Pennsylvania, who thinks that the scattered limestone quarries in the southern part of Chester County are the remaining parts of a great bed of limestone that had been deposited on the surface of the present gneiss rocks. That the limestone beds which remain have been so deposited is very evident, because their layers do not dip in the same angle or direction as the layers of the gneiss rock underneath. Appearances indicate that all that country must have been covered with a thick and solid bed of limestone; and that the surface must have been many hundred feet higher than it now is. Leslie says: "From age to age rainfall-erosion has been lowering the surface to its present level. The limestone formation became ramified by caverns, the roofs of which kept falling in here and there, leaving sinkholes, open gullies, finally vales and valleys, until the whole was removed, and the underlying Feldspar rocks were laid bare. When the last series of caverns reached the top of the Feldspar rocks, these began to suffer the fate of the Feldspar rocks, the decomposition of the Feldspar in the Gneiss, the Kaolin is derived."

If any of my readers should think the preceding paragraph somewhat too speculative, I must shelter myself under the authority of the State Geologist, who states that it is impossible for any one to comprehend the geology of such a region, so long as the idea of a *permanent surface of the earth* obscures the thinker's mind, and he does not realize what extensive changes have taken place in it.

J. W.

We often excuse our want of philanthropy by giving the name of fanaticism to the more ardent zeal of others.

For "THE FRIEND."

Isaac Hornor.

In the year 1738, John Churchman, who subsequently became eminent in the "Society of Friends," visited the meetings in some parts of New Jersey. He was then about thirty-three years of age, and had been an acknowledged minister about four years. He attended the meeting of which Isaac Hornor was then an elder. He says in his journal that the meeting was remarkably hard, and his companion was exceedingly exercised under a sense that the people were too rich, full and whole in their own eyes; but he sat the meeting through and suffered in silence. "I had something to say which was very close, and felt a degree of strength and power of Truth to clear myself in an innocent and loving manner, and remembering they were brethren, I did not preach myself, out of charity towards them, and had peace." After meeting, Isaac Hornor invited them home with him. In a stern manner, said John Churchman, he asked me from whence I came, and said I was a stranger to him. I answered him with a cheerful boldness; he asked me what my calling was, I told him husbandry; he queried if I was used to splitting wood, I let him know I had practiced it for many years. He again asked me if I knew the meaning of a common saying among those who were used to the business. "Tis soft knocks must enter hard blocks." I told him that I knew well, but to strike with a soft or gentle blow at a wedge in blocks of old wood that was rather decayed at heart would drive it to the head without rending them, and the labor would be lost; when a few smart, lively strokes would burst them asunder. Whereupon he laid his hand upon my shoulder, saying, "Well, my lad, I perceive thou art born for a warrior, and I commend thee." Thus we came off better than we expected, for I thought that he pointed at my service that day. He was ever after very loving to me, and I was thankful that the Lord was near to me, for which I praise his sacred name.

Isaac Hornor had been much troubled by the course of his son Samuel, who had finally entered the army. Yielding to these anxieties, he became much depressed, and his nervous condition awakened the anxieties of his friends. One morning his daughter, Elizabeth Watson, informed him she had on the previous night a remarkable dream, which she related to him. The narrative has been preserved seemingly in the words of the dreamer:

"Methought I was standing in a large and stately mansion, amidst an immense throng of people moving about with noise and bustle, and while gazing about me in wonder, I was informed that this was the entrance to the infernal regions, and that hell was beneath me. I fled in terror, escaped from the building, ran across a large field and halted for breath on a stile that crossed the fence on the farther side; when a person approached and presented me with something in the shape of a cross, bidding me calm my fears and assuring me that while I preserved that cross no harm could befall me, and that I might return in safety. Prompted by curiosity I again entered the building, and being invited to enter the lower regions, I proceeded, holding fast to my cross. As I entered, Satan himself came forward, fawning and cringing, paying the greatest attention, and escorting me through the place. There, much to my horror, I saw many persons in torment, some of whom I recognized. At one time, hearing a terrible

noise, I inquired the occasion of it, and was told that a very bad man was coming below, whose name was mentioned. While terrified at these things I became less watchful and unfortunately lost my cross. In a moment all was changed. Satan sprang at me with fiend-like fury, tore out my heart, and held it quivering in his hand. For a time I felt all the horrors of the damned. Just then, while the eyes of the devil were off me as he was placing my heart in safe keeping, I gazed round me in despair, and espied my cross lying unnoticed on the ground at some distance: with a desperate effort I seized it, and in a moment was made whole as before, with the fiend bowing and cringing at my side again.

"Among other questions put to me by Satan, he inquired, 'What sort of a man is your father?' I replied, 'He has been pious from his youth.' 'So I have heard,' he replied, 'but I have hopes of him yet.' After the recovery of my cross I made my escape as soon as possible."

Isaac Hornor listened with profound interest to this narrative as it fell from the lips of his daughter, and on hearing that Satan had hopes of him yet, he started up, exclaiming, "Has he so! but I'll cheat him;" and from that time he became effectually roused and restored to his strength and energy of mind. The record adds that the man whose name was mentioned as being introduced to the abodes of darkness was a well-known neighbor, who it was found had died that night.

In the memorial of Isaac Hornor, above referred to, it is said, that "although he did not appear in public testimony, he had a sense of true ministry and was particularly qualified to administer counsel and admonition; often advising to a steady course of life, and setting forth the leadings of truth in a very informing and encouraging manner, to the edification of many; which rendered his conversation agreeable, not only amongst those of our Society, but others also; being likewise useful in settling differences. His sitting and waiting in meeting were grave and solid, becoming a true worshipper. He was a faithful elder, serving in that station divers years." It is added that "he departed this life, after a short illness, the 24th of Eleventh Month, 1760, and was interred in a burying-ground on his own plantation, aged eighty-two years and six months."

For "THE FRIEND."

Remarks on Religion.

The old law, with its outward and ceremonial religion, was given by Moses, but grace and truth, with the inward and spiritual religion, come by Jesus Christ. The old law, and the religion under it, seem to be remarkably framed so as to shadow forth spiritual and heavenly truth; and like a schoolmaster to bring us to Christ, the substance, in which all shadows and ceremonial rites flee away. So such as have the true and undefiled religion, and worship God under it, in the beauty of holiness, are set free from the law of sin and death, because they have embraced the law of the Spirit of life in Christ Jesus, and are governed by it. But while the ministration of condemnation, and the religion and worship under it had great worldly pomp and glory; so now such as receive the new law of the spirit of life, and worship under it, have a far more substantial and heavenly glory. For if the ministration of condemnation was glorious, much more shall the ministration of righteousness exceed in glory.

The old law was outward, and to an outward people, and made nothing perfect; but the new

law is inward and spiritual, and makes all perfect who are governed by it; so they worship in spirit and in truth, and not in the oldness of the letter, which kills. As they have the pure and undefiled religion, which is the only one, I believe, that will save us; as it is the only religion which leads us through the washings of regeneration, and through the strait gate, and narrow way of life, and keeps us there; so few there be that find it. But the main prevailing religion of our day, and which seems to satisfy many, conforms very much to the world, and its lifeless, formal ways and worship; and very much shuns the cross of Christ. So many there be that accept it, and go into the broad way of the world thereat.

Now let us learn a lesson from the example of the Pharisees. They appeared to be very zealous promoters of the ostentatious religion of the Jews. But our Saviour said to his disciples, "Except your righteousness shall exceed the righteousness of the scribes and Pharisees, ye shall in no case enter the kingdom of heaven." Their righteousness made the merit of their religion consist in outward observances. They paid tithes of all they possessed, but neglected the weightier matters of inward holiness. So their righteousness and their religion seemed very much in unison with the righteousness and religion which now so acceptably prevail in many places. They seemed to measure the worth of their religion very much by the multitude of its outward observances, and its emotional noise and human activity. "And fancied themselves more religious than others, in proportion as they out-stripped them in the mere show of devotion."

And though it was a self-righteousness, which our Saviour so repeatedly denounced, yet it elevated them in the estimation of the wise and prudent of the world, to the highest degree of earthly holiness, so that they were promoted to the uppermost seats in the synagogues, and seemed to think they should be heard by our Father in Heaven, by their many prayers and much speaking. But what does Isaiah say about this man-made religion? He says by the mouth of the Lord, "When ye spread forth your hands, and say, 'I will hide my face from you; for you have made many prayers, I will not hear.' And Solomon says, 'He that turneth away his ear from hearing the law of the Lord, even his prayers shall be an abomination.' So might Luke well say, "that which is highly esteemed among men is abomination in the sight of God." For God judges of our religion by the fruit and works of the heart; but man judges by the fruit and activity of the head. So God sees not as man sees. And what is our religion worth if it is not accepted by Him? It may make us more respectable in this world, but if it does not finally give us an inheritance with the saints in light, where shall we land, when time to us shall be no longer? So while our time is in mercy lengthened out, let us give diligence to make our calling and election sure. And not rest satisfied until we have a religion that will enable us to endure hardness as good soldiers; so that when we are reviled, we will not revile again. And when we are persecuted and all manner of evil said against us falsely, we pray for our enemies, as our Saviour did, saying, "Father forgive them, for they know not what they do." This is a religion which will stand the storms of time. And though many false openings, comparable to the gates of hell, may be permitted, delusively, to open on either hand, to draw us away from the strait and narrow path that leads to life, yet

SELECTED.

will not prevail against us, because we are founded on the Rock. And while we keep to pure and undefiled religion, we shall stand; but if we turn away from Him, He will turn away from us. Will we deny Him, He will deny us. Then what will our religion avail?

But Zion is to be redeemed with judgments, and her converts with righteousness; and as in a furnace of affliction. For every battle of the warrior is with confused noise and garments rolled in blood; but the inward battle shall be with burning and fuel of fire. But if he abide the day of his coming, when He comes a refiner and purifier, then our religion will be pure and undefiled, and our offerings be pleasant unto the Lord as in days of old, and as former years. DAVID HULLSTON.

DUBLIN, IRE., Fifth Month 15th, 1889.

FOR "THE FRIEND."

Temple.

The Apostle Paul, when addressing his Corinthian brethren, said: "What! Know ye not it your body is the Temple of the Holy Ghost which is in you, which ye have of God? Ye are not your own."—1 Cor. vi. 19.

Again, it is repeated: "If any man defile the temple of God, him shall God destroy," as mortal body being made of the dust of the earth, forms the material part of man, which is destined to perish. The spirit, according to sacred Scripture, returns to God who gave it, and then shall return to dust. It remains for the all-powerful Word of God alone, by its penetrating power, to pierce asunder even between soul and spirit, being, according to the Scriptures, a discernor of the thoughts and intents of the heart.

When thinking of the worth of a soul born for eternity, how fearful is the responsibility assumed, when immortal beings seek to shun the power of that word that discovers secret sins, nor a deaf ear to the voice that speaketh from heaven, and forfeit all claim to an inheritance that is incorruptible, undefiled, and that fadeth not away. Is it not a sin to allow feelings of difference to prevail when eternal destinies are at stake? How loudly the call comes, "Awake to righteousness and sin not." Christians are called upon to give ear to what the spirit saith unto the churches, as important now as when Immanuel appeared in the flesh. Jesus Christ represents the stone laid in Zion, which the Builders rejected: "whosoever shall fall upon that stone shall be broken; but on whomsoever it shall fall, it will grind him to powder." P. R. GIFFORD.

PROVIDENCE, R. I., Third Month, 10th, 1889.

FOR "THE FRIEND."

An interested Friend and parent, recently expressed a concern that our young people should be encouraged more frequently to attend meetings for Discipline, and that parents should be urged to greater faithfulness in taking their little children to these meetings, as well as to those for worship, and, when practicable, retaining them under their own care therein. She further mentioned the desire that parents should seek themselves individually, "Am I faithful in this important duty?" Believing that if this were the case, an exercise would be known to prevail, which would lead to increased zeal and watchfulness in this respect.

There is reason to believe that lasting impressions are, at seasons, made upon the tender minds of the young in witnessing the exercise of

spirit felt by their older friends in conducting these meetings, as well as in being made partakers of the sense of Divine favor and help, which is at times experienced in them.

It has been a source of regret to the writer, that in many cases the children attending schools under the care of Preparative and Monthly Meetings, are allowed to withdraw at the close of the first sitting. Where this practice is continued from one school to another through a series of years, little opportunity is accorded the young for becoming acquainted with the manner in which our meetings for business are conducted, or with the regulations of the discipline; and thus, unless much care is exercised on the part of parents, the way is made more easy for the infringement of our testimonies in the future, and finally for a loss of the right of membership.

The testimony of a minister of the Episcopal Church was to the effect, that the Book of Discipline of our Society contains the most admirable code of ethics he had ever seen; and that thought was presented whether it might not be made more generally a volume for reference in the family; and also that care should be taken to instil into the minds of children feelings of respect and reverence for its words of tender counsel, entreaty and restraint.

THE DAY IS FAR SPENT.

There seems to be a sunset glow
On every thing I see;
And all I am, and think, and feel,
Seems drawing nearer Thee,
Heavenly Father, nearer Thee.

I know thou lovest the cheerful heart
From dark misgivings free;
Intent to act a perfect part,
And humbly worship Thee—
Father, to worship Thee!

But now, the sound of many words
E'en from an infant tongue,
And shouting peals and laughter loud
My thoughts are not among—
Dear Father, not among;

For silently I love to dwell
On things of deep intent;
To trace old paths I know so well
Where we together went,
Father, together went.

Thou leading one, a truant child,
Yet never left alone;
Forward and rash, but loving still,
The true and faithful One,—
Loving the faithful One.

Oh! holy Love! whose guardian light
Beams at this very day;
'Tis curialed round my couch at night
"Tis with me all the way—
Yes, Father, all the way.

And in the sweetly shaded vale,
Where slowly now I tread,
I feel it all my path regale,
Like blossoms round me spread—
Father, around me spread.

Yet still there seems a sunset tinge
On every thing I see;
A hallowed touch of sacred things
Which gathers near to Thee,
Father in heaven, to Thee!

The outgoings of the morning now are past,
Father and Friend!
Shelter thy handmaid to the very last,
And send the inmates of thy Spirit send,
To give her faith and victory to the end!

Oh! crystal stream! in whose pure midst
Seeds the immortal tree
Whose healing leaves extend their heavenly virtue
e'en to me.
Be thou around, within—be all
In all, until I have in Thee!

HOW TO BE AN ANGEL.

BY DWIGHT WILLIAMS.

"I want to be an angel."
This was the song I heard;
It was a child that sang it,
Clear-voiced as any bird;
And then a thought came ringing
To me which I will tell,
How children may be angels
While here with us they dwell.
I know them when I see them,
Although they have no wings;
Their words are full of sweetness
As when a cherub sings;
Their ways are very gentle,
Their hearts are very kind,
They make the household happy,
To deeds of love inclined.

When mother's hands are weary
They give her ready aid,
They have a kiss for father
When cares his brow o'ershade;
The baby knows their voices,
And ceases its low cry,
As if an angel smiling
Were standing sweetly by.

Angels at home in duty,
Angels upon the street,
Dear human children trying
The best they know to meet
The trials and the crosses,
Which boys and girls must know,
Who as they follow Jesus
Will like the angels grow.

Dear children, you may sing it,
The little song I heard;
We want the angels with us
In deed and song and word;
In weeping and in laughter,
In every word or play,
This is the place for angels,
Dear angels every day.

Then go with eyes of beauty,
And go with hearts of love,
But look away to Jesus,
Look to his throne above;
Be angels here, I pray you,
With hands and lips and eyes,
Till in your home forever
You take an angel's prize.

FOR "THE FRIEND."

Advice to Parents.

The following advice to parents by the late Thomas Evans of Philadelphia, seemed so good and full of instruction, especially to those in the younger walks of life, who often feel their inability to go in and out before their dear children acceptably, that I felt willing to offer it for insertion in the columns of THE FRIEND.

"The frequent vocal reading of the Holy Scriptures and other religious books in families, is a practice which has been productive of good to many. It not only accustoms children to habits of stillness and sobriety, but is often a means of making serious impressions on their minds, which exercise a salutary influence over their characters and conduct through life. There are probably few persons whose privilege it has been to receive an education in families where this Christian duty has been observed, who cannot recur to some of these seasons of religious retirement as times of heavenly visitations, wherein their spirits had been contrited before the Lord, and induced to enter into covenant with Him.

"Those who are duly sensible of the great responsibility which attaches to the paternal relation, and who feel a correspondent engagement faithfully to discharge their duty towards

their families, cannot neglect the practice of collecting them either for silent waiting or devotional reading.

"Where this is done with minds reverently disposed to seek the Divine blessing on their endeavors, we cannot doubt but that He who hears and answers prayer, and who beholds with approbation the tender solicitude of pious parents for the everlasting welfare of their offspring, will graciously assist them by the influences of his Holy Spirit.

"And although it may sometimes be the case that but little benefit is apparent at the time, from the labor thus bestowed, yet this should not be made an apology for its discontinuance. The lessons of religious instruction thus imparted may prove as 'bread cast upon the waters,' the advantages of which will be seen and felt after many days. Even if the exertions of parents to 'lead their children in the paths of righteousness for his name's sake,' should not ultimately be crowned with complete success, yet, if they honestly endeavor, by precept and example, to train them up in a holy life and conversation, they will enjoy the consoling reflection of having discharged their duty as regards this important part of their stewardship.

"In the list of religious books, the inspired writings are, unquestionably, preëminent. But while we cheerfully bear our testimony to their superior excellence as an external means of moral and religious instruction, and desire to see them made the subject of attentive daily perusal, it is proper that we should also avail ourselves of other helps which are offered to us. Of these we may safely place next to the sacred volume, the history of the closing days of those who, through the mercy of God in Christ Jesus, have had an interest in Him, and enjoyed, in their dying hours, 'a hope full of immortality and eternal life.' Their blameless and consistent walks; the unspotted example which they maintained amid the corruptions and temptations of the world; their unshaken confidence in the goodness of God; the Divine support which they experienced in the hour of disease and death, and the glorious prospects which brightened their hopes in looking beyond the grave, have justly been considered among the most powerful incentives to virtue. The reading of these narratives to children has often been found to kindle in their minds, even at a very early age, ardent desires to live the life of the righteous, and that at last they may die the same peaceful and triumphant death, as those of whom they hear such happy accounts."

Samuel Fothergill thus addresses parents:—

"Ye heads of families! fathers, mothers and guardians, that preside over and sustain the various relations in domestic life; ever carefully prosecute your own eternal happiness, and the happiness of all those over whom you are placed in charge; exhorting them in tender affection, and encouraging them by worthy example, to set their affections on things above; watchfully guarding, and ever confining them, in order to preserve them from all harms and corruptions of vice, as gardens enclosed within the limits of that holy fence, which is a fountain of life that preserves from the snares of death, and prepares for a crown of glory, in the regions of eternal felicity. * * * * *

"O fathers and mothers! I beseech you by the mercies of God, and the solemn account you must one day close with Him, that you lay this charge seriously to heart; still offering up your

humble petitions to the Father of lights, that He would enable you more and more to instruct the children He hath blessed you with, in the one thing needful; in order that being thus favored, thus enlightened and enlarged by his power, you may have nothing to do but die, when that time shall arrive; nothing to charge yourselves with in relation to the neglect of this great duty, when the measure of your days shall be accomplished; but may render up your accounts with joy, and receive the beatific sentence of 'Well done, good and faithful servant; thou hast been faithful in a little; I will make thee ruler over more, enter thou into the joy of the Lord.'

WEST CHESTER, Third Month 4th, 1859.

Natural History, Science, &c.

The Silk-worm Microbe.—The silk business was, for a time, extensive in Amasia, but almost perished in consequence of the silk-worm disease. Year after year, just as the worms were ready to wind they would sicken and die, not having strength to pass that crisis. The application of Pasteur's principles has proved that this is due to a disease-producing microbe, and the microbe has been identified. A young German, Bauer, has come to Amasia, to assort the eggs of the silk-worms, and purge out the disease by the microscope.

At the proper season he separates the pregnant silk-moths, putting every one by itself in a tiny gauze bag; and in that bag the eggs are produced. Last season Bauer put up 85,000 such bags, each with its moth. After hatching, the moths die and remains in the bag. The examiner takes these, one by one, bruises in a mortar a portion of the dead moth's body, mixes it with a drop of water, and puts it under the microscope. The appearance of a single oval-shaped, transparent microbe dooms the whole bag, with all its eggs, to the waste basket. There are other dark microbes, with minute clear spots at their centres, which are harmless; bags containing only these are put aside as healthy. This gentleman goes on through the whole year at this eye-trying work. Last year he secured in this way about thirty pounds of healthy eggs. Year after year this inspection must be kept up, till the disease is rooted out; on a little neglect it will return. This is wonderful! I learned in a moment to distinguish between the destructive and the harmless microbes; but what patient investigation was needed to identify the sly mischief! Last year all inspected eggs were remarkably successful, while the uninspected came to naught as usual.

Disease from Ice.—The first recorded case where disease was traced to polluted ice, is that of an epidemic of intestinal troubles occurring at Rye Beach, in 1875. There broke out at that time among the inmates of a large hotel, a number of cases of bowel disorders, characterized by giddiness, nausea, vomiting and diarrhoea. After eliminating all other possible causes of the trouble, it was ascertained that the ice, which was taken from an adjacent pond, was the sole cause of the outbreak. This pond contained large quantities of putrescent matter, composed of marsh mud and decomposing sawdust. The water of the pond was discolored, and, when agitated, emitted a very offensive odor; the mud at the bottom, when disturbed, gave off large volumes of foul gas. It will be seen from the above statement that the pollution in this case was not of animal origin, but that the condition of the pond, and the rotting sawdust therein, were the causes of the disease.

A similar investigation was made into a character of ice sold at Newport, R. I., which was cut from ponds in the immediate neighborhood of the city, and contained an excessive proportion of organic matter.

Chamberlain, in the fifth Connecticut records a fatal case of typhoid fever due to the use of ice from a pond into which the dejecta of another patient, sick with that disease, had been thrown.

From the above mentioned cases we may deduce the following: Organic matter, instead of being eliminated from ice during the process of freezing, is retained therein. This fact must not be forgotten, for aside from the presence of actual disease germs in ice, the presence of a putrescent material is of itself a source of danger. Hence ice taken from the streams near the outlets of sewers must of necessity contain large amount of foul material.

The Largest Flower in the World.—In the farthest south-eastern island of the Philippine group, Mindanao, upon one of its mountains, Parag, is the neighborhood of the highest peak in that island, the volcano Apo, a party of botanica and ethnographical explorers found recently, at the height of 2,500 feet above the sea level, colossal flower. The discoverer, Dr. Alexandre Schadenberg, could scarcely believe his eyes when he saw, amid the low-growing bushes, the immense buds of this flower, like gigantic broccage heads. But he was still more astonished when he found a specimen in full bloom—a five-petaled flower, nearly a yard in diameter—as large as a carriage wheel, in fact. This enormous blossom was borne on a sort of vine creeping on the ground. It was known by the native who accompanied Dr. Schadenberg, who called it *bo-o*. The party had no scale by which the weight of the flower could be ascertained but they improvised a swinging scale, using their boxes and specimens as weights. Weighing these when opportunity served, it was found that a single flower weighed over twenty-two pounds. It was impossible to transport the fresh flower so the travellers photographed it and dried a number of its leaves by the heat of a fire. Dr. Schadenberg then sent the photographs and dried specimens to the Royal Botanical Gardens at Breslau, where the learned director immediately recognized it as a species of *Rafflesia*, a plant formerly discovered in Sumatra, and named after the English Governor, Sir Stamford Raffles. The new flower was accordingly named *Rafflesia Schadenbergia*. The five petals of this immense flower are oval and creamy white and grow around a centre filled with countless long, violet-hued stamens, thicker and longer in the fertile flowers than in the infertile. The fertilization is accomplished by insects, whose larvae breed in the decaying flesh of its thick petals. The fertile flower develops a soft, berry like fruit, in which countless seed are imbedded. The flower exhales a poisonous gas even when first opened.—*St. Louis Globe Democrat.*

Peh-Lah Wax.—Electricity, gas and kerosene have almost superseded the candle in artificial lighting, yet it is of interest to note what materials still remain to be developed for illuminating purposes. One of the most interesting of these is the *peh-lah*, or insect wax of China. This is an exudation from certain trees, formed in consequence of the puncture of the branches by a species of *Coccus*. These insects are white when first developed, but when they yield their wax are red and attached closely to the branches of trees. At first they are about the size of a grain

rice; but after the wax is produced, the accumulation is as large as a hen's egg. The insect commences to secrete the viscous substance in the spring, this taking the form of a silky down, which thickens and hardens. In August or September the balls hang like grapes, which are gathered by detaching them with the fingers, and after being dried in the sun they are purified and refined. This wax is in general used in China and Japan, where large tracts of land are planted with the trees referred to, upon which the insects are reared. The insect is propagated by means of its eggs, which are collected in baskets in the shells of the balls. As met with in commerce, the pel-lah wax is nearly pure, and melts at 190 degrees Fahr. It is sold in cakes of a circular form, and of different sizes. It dissolves easily in naphtha, and contains eighty-two per cent. of carbon, fourteen of hydrogen, and two of oxygen. It is used like bees-wax in making candles and for other similar purposes, where its high melting temperature is an advantage. The light of these candles is of great brilliancy, and, if a little oil be mixed with the wax, they do not gutter.

The Nile Flood.—The overflow of the Nile for a year 1888 has proved a great disaster to the land of Egypt on account of its being insufficient to flood its accustomed areas. The cultivated land of Upper Egypt amounts to 2,331,000 acres, and of this nearly one-seventh is this far lost to agriculture. This also means a corresponding loss of revenue to the Government, as unwatered lands are not taxed. The most serious aspect of the case is the fact that the majority of the people, varying from one-tenth to one-sixth of the whole population, are deprived of all means of subsistence. Lower Egypt, which so dependent upon the summer flood, is in much better condition. The areas lost to cultivation this year will not be restored until the end of 1889 begins about July, the highest point being reached between the middle and the end of October. In 1887 the flood was destructive of property on account of its excess, which amounted to a rise of over five feet more than the safe flood limit.

Geology of Iceland.—Thoroddsen, the Icelandic geologist, has recently communicated to Petermann's *Mittheilungen* a detailed account of his exploration in 1886 of the northwestern peninsula of Iceland. It appears that this part of the island forms an elevated table land averaging rather more than 2000 feet above the sea. The scenery is of the most majestic character, since the plateau is intersected by numerous rivers, the sides of which are everywhere abrupt, and in some places perpendicular. Nearly everywhere there are terraces representing ancient coast-lines which are now raised high above the sea, together with banks of mullusks like those now seen on the shore. These evidences of the continued elevation of the coast are strengthened by the discovery in some spots of remains of the remains of whales. The extent of the Icelandic glaciers seems to be rapidly diminishing, since M. Thoroddsen found that the Glamtjukull glacier had shrunk to half its former area of 120 square miles; that a glacier descending from the Drangajokull has decreased from 60 to 30 square miles, and that the end of the glacier of the Leykjardjof has retreated 1600 yards during the last fifty years. From Furufjord to Horn Fountain or North Cape the coast is formed of basaltic rock 1300 to 1600 feet above the sea, intersected by grassy valleys, some of which are inhabited. The dwellers in these valleys are

entirely cut off from communication with the rest of the world for the greater part of their lives, since it is but rarely that the coast is free from ice. Their chief source of livelihood is the capture of the sea birds which nest in great numbers on the cliffs. North Cape itself is one of the principal resorts of these birds.—*The Independent.*

Items.

Disarmament.—The sheet under this title, published in Paris, contains communications from Gladstone in England, and Castelar of Spain. Gladstone writes:

"The committee formed in Paris to prevent Europe's soon being converted into a military camp, has my warmest sympathies. It would be a cause of regret to me did I not embrace the opportunity you give me to reaffirm the principles to which my career as a public man has been devoted. And I should also assist you with my personal co-operation were I less advanced in years, and my duties elsewhere less imperative. You may be glad to know that in 1842, when the number of men under arms in Europe was quite one-third less than it is at present, I then, as Prime Minister of England, considered it excessive and dangerous to the peace of the Continent. What would he say now of the terrible standing armies that Europe is supporting at such frightful expense?"

Senor Castelar, with his usual eloquence, contrasts the progress that the country has made in industry, science and art with the gigantic conflict of the apparently near future that can only result in treaty solutions of pending differences that might be reached, through arbitration, without a resort to the arbitrament of arms. He then concludes:

"Look at Europe. She is maintaining at this moment 1,000,000 men, who are armed by day and night, to rush at and throttle each other at the first opportunity. And still we find ourselves surrounded by all the culture and intellectual development of this latter half of the nineteenth century. How did men in the early ages go to work to organize themselves in families, in cities and in States? They recognized the necessity of organizing tribunals, whose duty it should be to arrange quarrels that had arisen in the heat of passion. And these tribunals they made the arbiters of their destinies. Let us return to this simple mode of regulating our affairs. What individuals have done nations may do to achieve the same end, and thus enjoy the blessings of a fruitful peace. But how to go about it? By a general disarmament in Europe, which would inaugurate an era of tranquillity for the world, the reign of God among men."

Arbitration.—Lord Mayor Whitehead of London, at the farewell banquet to Minister Phelps, said the two nations have set an example to the other countries of the world. I hope they had a similar opportunity to have conferred for all time, that in the event of any disputes, arising between the two countries, those disputes shall be referred to a gentleman-like and Christian-like spirit to a disinterested party who shall adjudicate upon them. This utterance is worthy of a man descended from George Whitehead, who was the contemporary and associate of William Penn.—*Astorian.*

The Johns Hopkins Hospital.—This institution, to have one of the most complete hospitals in the world, was opened on the 7th of Fifth Month. Francis T. King, the President of the Trustees, in an address of welcome to the visitors said:

"Johns Hopkins did not leave a hospital; what he did leave was a complicated piece of machinery in the form of various investments capable of being put to the use of constructing and maintaining a hospital. When I tell you that these seventeen buildings have been constructed and furnished, and these fourteen and a half acres enclosed and beautified as you see them to-day, not only without taking a dollar from the principal placed in the hands of the trustees, but with an actual increase of the funds in the hands of the trustees by the sum of \$113,000, I think it may be justly claimed that the trustees have not failed in this part of their duty."

"You shall receive into this hospital," Johns Hopkins said to the trustees, "the indigent sick of the city and its environs without regard to the sex, age or color, who may require surgical or medical treatment, and the poor of this city and State, of all races, who are stricken down by any casualty."

The Naboth's Vineyard Principle.—The bad precedent set by our dealing with Oklahoma on the Naboth's Vineyard principle is followed, as might be expected, by demands for similar acts of aggression. The Governor of California proposes the acquisition of several adjacent provinces of Mexico, of course with the proviso that we pay the Mexicans for them, but without any reference to the nice question of the willingness of the sister republic to have her bounds still further retrenched in order to extend "the area of Anglo-Saxon civilization." The Sioux reservation in Dakota also, under discussion, and it is asked what an Indian tribe wants of a square mile of land for each of its members. A square mile is very short allowance for men in the lower grades of civilization, who have to live by hunting and fishing. And the Sioux have shown their readiness to have their reservation broken up, and their lands sold to the full market price of their lands from the incoming settlers. It was the attempt to make a hard bargain which defeated the negotiations of two years ago. In the vicinity of Oklahoma itself there is trouble over the seizure of parts of the Cherokee strip by settlers who did not find themselves suited in the new settlement. Always in Abah's eyes the piece of land that does not belong to him is the very best to be had,—just the place for his garden of herbs.—*Christian Advocate.*

Real and Apparent Conversions.—It is not always easy to distinguish between real and apparent conversions. The outward indications of a change of heart are sometimes present when no regeneration by the Holy Spirit has actually taken place. The unworthy activities of the converts, the prayers, the ministrations and evangelists into the folly of reporting hundreds of conversions, when the abiding fruits of the revival were painfully meagre. The custom of accepting the slightest tokens of a desire to live a new life as satisfactory evidences of a change of heart is to be deplored.—*Christian Advocate.*

Amendment Meetings.—A number of Friends, member of the Monthly Meeting of Philadelphia, are arranging a series of meetings in the southern section of the city, to advocate the Prohibitory Amendment to the State Constitution. The first meeting was held in Liberty Hall, in the Seventh Ward, on the 21st of Fifth Month. It was addressed by Friends and others. An interesting incident was the attendance of a saloon-keeper and his customers from next door. Other meetings are expected to follow.

A Boy's Religion.—If a boy is a lover of the Lord Jesus Christ, though he can't be a church officer or preacher, he can be a godly boy in a boy's place. He need not cease to be a boy because he is a Christian. He ought to run, jump, play and climb like a real boy. But, in it all he ought to be free from vulgarity and profanity. He ought to eschew tobacco in every form, and have a horror of intoxicating drinks. He ought to be peaceable, gentle, merciful, generous. He ought to take the part of small boys against large ones. He ought to discourage fighting. He ought to refuse to be a party to mischief, to persecution, to deceit. And, above all things, he ought now and then to show his colors. He need not always be interrupting a game to say that he is a Christian, but he ought not to be ashamed to say that he refuses to do something because it is wrong and wicked, or because he fears God, or is a Christian. He ought to take no part in the ridicule of sacred things, but meet the ridicule of others with a bold statement that for the things of God he feels the deepest reverence.—*Selected.*

THE FRIEND.

SIXTH MONTH 1, 1889.

A correspondent of the *Philadelphia Times*, in its issue of 18th inst., says: "It is a mistake to class the Quakers in a body as amendmentists. As a whole they are a temperance people, but nine-tenths also believe in the use of liquor in moderation."

This attempt to represent the Society of Friends as a body of moderate drinkers of alcoholic liquors very unfairly represents their real views and character. The growth of a total abstinence feeling amongst them has been gradual. From their earliest history they have been opposed to intemperance; and their official records and the exhortations of leading men among them show their care that their members should avoid the frequent and excessive use of intoxicating drinks. As early as 1706, the Yearly Meeting of Friends of Philadelphia sent down to its subordinate meetings advice against the "sipping and tipping of drams and strong drinks." Similar advices were frequently issued from time to time. In 1782 report was made to the Yearly Meeting that some Friends "wholly forbear the use of spirituous liquors." In 1784 a minute was adopted by the Yearly Meeting against the importation and selling of spirituous liquors, which says, "It is the united sense of the meeting that well-concerned Friends in all quarters be earnestly excited to suffer the affecting importance of this mighty evil religiously to impress their minds and animate them with a lively concern to exert honest endeavors, both by example and loving entreaty, to caution and disengage all our members from being concerned in the importation or retailing distilled spirits, or giving countenance thereto." This was followed four years later by an order that the different meetings should appoint committees to visit and labor "with our members individually who are concerned in importing distilled and spirituous liquors from the West India Islands or other places, either on their own account or as agents for others; and those who purchase and retail such liquors in greater or less quantities, as also those members who are concerned in the distillation of those liquors from grain or other produce, &c." The same minute contained an advice, that those who used "spirituous liquors in their families in a medicinal way, be careful to keep within the bounds of true moderation in the use of them for such a purpose; and that our members in general refrain from using them in the time of harvest or otherwise."

In process of time it was made a disallowable offence for a Friend to be concerned in the distillation, importation or sale of spirits. In 1837 subordinate meetings were requested to report the number of their members who used ardent spirits as a drink. Reports on this subject, founded on personal inquiry of the members by committees of the different Monthly Meetings, were made for many years, and included all who had partaken of them even on a single occasion during the year, so far as the committees could ascertain. In 1880 the number for the whole Yearly Meeting was reported as 40—not more than about one in 140 of the whole membership. The minute adopted that year advises the members "to set an example of total abstinence from *all intoxicating liquors* as a drink," and extends the annual inquiry of its members so as to include those using any form of intoxicating liquor. The reports made to

the Yearly Meeting at its session in the Fourth Month last show that only about one in 30 had tasted during the year of any beverage containing alcohol—so that the reporter of the *Times* would have been more nearly correct if he had said, not only that the Quakers as a whole are a temperance people, but that nine-tenths (or twenty-nine-thirtieths of them are believers in total abstinence.

If the rest of the Pennsylvania people vote in the same way as Friends on the Prohibition amendment, we believe that measure of reform will be carried by a large majority.

SUMMARY OF EVENTS.

UNITED STATES.—The Supreme Court of the United States has declared constitutional the Chinese Exclusion Act.

The collections of internal revenue for the first ten months of the present fiscal year, which ends Sixth Mo. 30th) were \$104,821,921, or \$4,415,516 more than during the corresponding period of the preceding fiscal year.

The total value of our exports during the 12 months which ended Fourth Month 30th, was \$735,655,422, against \$663,434,727 for the preceding 12 months; the total value of our imports for the 12 months which ended Fourth Month 30th, was \$738,818,803, against \$720,452,241 during the 12 months which ended Fourth Month 30th, 1888.

The Trustees of the Hartford Theological Seminary, at Hartford, have voted to open all courses of the institution to women on the same terms as to men. This action is taken to meet the special needs of women who are desirous of preparing themselves for Christian teaching for the missionary field, and for any religious work other than the pastorate. It is the first institution of the kind in the country to undertake theological courses for women.

The Presbyterian General Assembly in session in New York, has adopted the following resolution, by a vote of 193 to 82: "Resolved, That the General Assembly, in reaffirming the deliverance of former Assemblies, calls attention to the deliverance of 1855, which solemnly and earnestly recommended to the ministers and congregations in our connection, and to all others, to persevere in vigorous efforts until laws shall be enacted in every State and territory of our beloved country, prohibiting entirely a traffic which is the principal cause of drunkenness and consequent pauperism, crime, taxation, immorality, and war, and ruin to the bodies and souls of men, with which this country has so long been afflicted."

Hundreds of families are waiting eagerly the opening for settlement of the Sioux Reservation. There seems little doubt now that the Indians will sign the treaty selling the land to the government. The boon for the new reservation promises to exceed that of Oklahoma.

Graphite has been discovered on a farm near Plattsburg, Missouri. The vein is 4 feet wide by 300 long. It will be developed for stove polish, lubricating powders and lead pencils.

The present annual revenues of Alaska are \$9,000,000, and yet the territory is practically undeveloped. In the Illinois House of Representatives on the 21st ultimo, a bill to prohibit the manufacture or sale of liquors in the State was defeated by a vote of yeas 55, nays 62.

A dozen boys, rendered insane by excessive cigarette smoking, have been admitted to the Napa (California) Hospital for the Insane within a short time.

Deaths in this city last week numbered 339, which is 81 less than during the previous week, and 31 less than during the corresponding period last year. Of the foregoing 186 were males and 153 females; 59 died of consumption; 32 of inflammation of the lungs; 17 of convulsions; 15 of typhoid fever; 15 of debility; 13 of diseases of the heart; 13 of inanition; 12 of inflammation of the brain; 11 of Bright's disease; 10 of apoplexy; 9 of congestion of the brain and 9 of old age.

Markets, &c.—U. S. 4½, reg. 107; coupon, 108; 4½, 129; currency 68, 121 a 132.

Cotton.—Demand for spinners, was light on a basis of 112 cts. per pound for middling uplands.

Flour and Meal.—Western and Pennsylvania super, \$2 40; do, extra, \$2 40; do, extra No. 2, \$2 50; No. 2 winter family, \$3 50 a \$4 00; Pennsylvania family, \$4 25 a \$4 50; Pennsylvania roller process, \$4 50 a \$4 75; Ohio, clear, \$4 25 a \$4 50; do, straight, \$4 60 a \$4 85; Indiana, clear, \$4 25 a \$4 50; do, straight, \$4 60 a

\$4 85; St. Louis and Southern Illinois, clear, \$4 \$4 50; do, do, straight, \$4 60 a \$4 85; winter pauper fair to choice, \$4 85 a \$5 25; Minnesota, clear, \$3 a \$4 00; do, straight, \$4 50 a \$5 25; do, patent, \$ a \$5 75; do, favorite brands, best higher.

Grain.—No. 2 red wheat, 90 a 91 cts. No. 2 mixed corn, 40 a 40½ cts. No. 2 white oats, 33½ a 34 cts.

Beef cattle.—On the 21st of Fifth Month, 61 a 63½ medium, 61 a 63½ cts.; fair, 6 a 6½ cts.; common, 5½ cts.

Mutton.—Best, 9 a 9½ cts.; good, 8½ a 8½ cts.; diam, 8½ a 8½ cts.; fair, 8½ a 8½ cts.; common, 8 cts.; lambs, 12 a 14 cts.

Excursion.—On the 21st of Fifth Month the steamer City of Paris reached Roche's Point on her out trip from Sandy Hook in 6 days and 23 minutes, at time.

It is announced that the Parnell Commission not make its final report to the House of Comm until Second Month, 1890.

The trial of General Boulanger has been postponed until Eighth Month.

A despatch received in London from Berlin says is believed there that the Samoan Conference has entered upon an agreement upon all the questions at issue.

The coal miners of the Dortmund region have entered upon a general strike. The miners state that the managers of the mines did not fulfill the promise made to the men, and that the committee of men thereupon ordered a stoppage of work, and the men promptly did so. A majority of the miners have struck work at Aachen and Aix-la-Chapelle.

The Austro-Hungarian Government has been officially war by Germany that German soldiers are agitating among the Austrian miners.

Forty-five persons lost their lives through the flow in Bohemia.

The volcano of Vesuvius is assuming an alarm state of eruption, and streams of lava are coursing down the mountain on the Pompeii side.

In Denmark the police are trying an experiment some originality to suppress drunkenness. A found drunk is carried to his own residence, and a keeper of the saloon where he bought his last glass obliged to pay the expenses of the ride, which is high.

Cholera is now epidemic in the Philippine Islands and it is said that out of 1500 cases 1000 have proved fatal.

Yellow fever is reported "very bad" in Vera Cruz, Mexico.

The small-pox is reported to be making territorial ravages in Guatemala.

CORRECTION.—The obituary notice of the death Sarah T. Stephen, in THE FRIEND of Fifth Month 18th should read aged 45 years, instead of 85.

MARRIED, Fifth Month 17th, 1889, at the Friend's meeting-house, Fourth and Arch Streets, Philadelphia, ABRAHAM FRANCIS HUSTON, of Coatesville, Pa., ALICE CALLEY, near Norristown, Montgomery Co. Penna.

NOTICES.

SOCIETY FOR HOME CULTURE.—The annual public meeting will be held at Friends' Select School No. 10 North Sixteenth Street, Seventh-day, Sixth Month 3d, at 3.30 P. M.

A number of articles have been left at Arch Street Meeting-house—comprising shawls, handkerchiefs and other articles, mostly of women's wear. All persons having lost such articles, will please call on Mrs. Mary, 202 Arch Street, who will give them the opportunity to recover their property.

WANTED—A competent Friend to teach in Chestnut Hill Preparative Meeting School at Crossicks, N. J.—Beginning the first second-day in the Ninth Month next.

For information apply to JOSEPH S. MIDDLETON Crossicks, Burlington Co., N. J.; or WM. BISTOFF, Watford, Monmouth Co., N. J.

WESTTOWN BOARDING SCHOOL.—During the Summer term the stage will be at Westtown Station 7.09, 8.53, 2.53 and 4.55 trains from Broad St. Station, Philadelphia. J. G. WILLIAMS, Supt.

FRIENDS' ASYLUM FOR THE INSANE.—An Assistant Resident Physician wanted. Please apply promptly to Dr. J. C. HALL, Supt., Frankford, Philadelphia.

FOR "THE FRIEND."

Krakatoa.

Details respecting the wonderful volcanic explosion, which almost destroyed the Island of Krakatoa in 1883, were widely published at the time. A few months after the eruption, the Royal Society appointed a committee to investigate the phenomena. The results of their labors have been published in a volume of nearly 500 pages. They show that the extreme violence of the explosion of Eighth Month 27th, 1883, "was due to the inroads of the sea into the craters of the volcano, which first chilled the mass of lava and imprisoned the gases, and then they made a mighty effort, blew away two-thirds of the land, its centre being sunk far under the sea, and ejected thousands of tons of stiff, mixed with watery vapor, to heights varying from twenty to twenty-three miles. The whole surface of the globe seems to have been more or less affected by this tremendous eruption, and the air which it caused was felt at Greenwich less than fourteen hours after it had left Krakatoa. The catastrophe will be best remembered by the optical phenomena it brought about. The upper atmosphere was charged with these particles, which floated about in a state of suspension. For months the sun and moon kept changing color; at times they looked like orbs of silver and copper, and, again, their familiar faces were tinged with hues of blue and green. The Krakatoa sunsets were a nightly occurrence one had never seen before, and they did not subside till 1885."

R. S. Ball has published a condensed statement of the information gathered by the Committee, in the *Contemporary Review*, from which the following is extracted:—

"Midway between Sumatra and Java lies a group of small islands, which, prior to 1883, were beautified by the dense forests and glorious vegetation of the tropics. Of these islands, Krakatoa was the chief, though even of it but little was known. Its appearance from the sea must, indeed, have been familiar to the crews of the many vessels that navigate the straits of Sunda, but it was not regularly inhabited. Not only is Krakatoa situated in a region famous for volcanoes and earthquakes, but it actually happens to lie at the intersection of two main lines, along which volcanic phenomena are, in some degree, perennial. In the second place, history records

that there have been previous eruptions at Krakatoa. The last of these appear to have occurred in 1680, but unfortunately only imperfect accounts of it have been preserved. It seems, however, to have annihilated the forests on the island, and to have ejected vast quantities of pumice, which cumbered the seas around. Krakatoa then remained active for a year and a half, after which the mighty fires subsided. The irrepressible tropical vegetation again resumed possession. The desolated islet again became clothed with beauty, and for a couple of centuries reposed in peace.

"A few significant warnings were given before the recent tremendous outbreak. Alarmatory earthquakes began to be felt in the vicinity some years before, and for a period of three months Krakatoa was gradually preparing itself, and, as it were, rehearsing the majestic performance with which the world was astounded on August 26-27. The inhabitants of those regions were so accustomed to be threatened by volcanic phenomena that the early stages of the outbreak, which began on May 20th, do not seem to have created any alarm; quite the reverse, indeed, for a pleasant excursion party was organized at Batavia, and they made a trip to Krakatoa in a steamer, to see what was going on. The party landed on the island, and found a large basin-shaped crater, more than half a mile across at the top, and almost 150 feet deep. In the centre of this was an aperture of 150 feet in diameter, from which a column of steam issued with a terrific noise."

"It was one o'clock in the afternoon of Sunday, August 26th, 1883, when Krakatoa commenced a series of gigantic volcanic efforts. Detonations were heard which succeeded each other at intervals of about ten minutes. These were loud enough to penetrate as far as Batavia and Buitenzorg, distant 96 and 100 miles respectively from the volcano. A vast column of steam, smoke, and ashes ascended to a prodigious elevation. It was measured at 2 P. M. from a ship 76 miles away, and was then judged to be 17 miles high—that is, three times the height of the loftiest mountain in the world. As the Sunday afternoon wore on, the volcanic manifestations became ever fiercer. At 3 P. M. the sounds were loudly heard in a town 150 miles away. At 5 P. M. every ear in the island of Java was engaged in listening to volcanic explosions, which were considered to be of quite unusual intensity even in that part of the world. These phenomena were, however, only introductory. Krakatoa was gathering strength. Between 5 and 6 P. M. the British ship *Charles Dal*, commanded by captain Watson, was about ten miles south of the volcano. The ship had to shorten sail in the darkness, and a rain of pumice, in large pieces and quite warm, fell upon her decks. At 7 P. M. the mighty column of smoke is described as having the shape of a pine-tree, and as being brilliantly illuminated by electric flashes. The sulphurous air is laden with fine dust, while the lead dropped from a ship in its anxious navigation astounds the leadsmen by coming up hot

from the bottom of the sea. From sunset on Sunday till midnight the tremendous detonations followed each other so quickly that a continuous roar may be said to have issued from the island. The full terrors of the eruption were now approaching. The distance of 96 miles between Krakatoa and Batavia was not sufficient to permit the inhabitants of the town to enjoy their night's sleep. All night long the thunders of the volcano sounded like the discharges of artillery at their very doors, while the windows rattled with the aerial vibrations.

"On Monday morning, August 27th, the eruption culminated in four terrific explosions, of which the third, shortly after 10 A. M. Krakatoa time, was by far the most violent. The quantity of material ejected was now so great that darkness prevailed even as far as Batavia soon after 11 A. M., and there was a rain of dust until three in the afternoon. The explosions continued with more or less intensity all the afternoon of Monday and on Monday night. They finally ceased at about 2.30 A. M. on Tuesday, August 28th. The entire series of grand phenomena thus occupied a little more than thirty-six hours."

"The most remarkable incident connected with the eruption of Krakatoa was the production of the great air-wave by that particular explosion that occurred at ten o'clock on the morning of Monday, August 27th. The great air-wave was truly of colossal importance, affecting as it did every particle of the atmosphere on our globe.

"A pebble tossed into a pond of unruined water gives rise to a beautiful series of circular waves that gradually expand and ultimately become evanescent. A very large body falling into the ocean would originate waves that might diverge for miles from the centre of disturbance ere they became inappreciable. Waves can originate in air as well as in water. We are not at this moment speaking of those familiar air-waves by which sounds are conveyed. The waves we now mean are inaudible and apparently much longer undulations.

"Imagine a great globe, which for simplicity we may think of as smooth all over, and imagine this globe to be covered with a uniform shell of air. Let us suppose that this globe has the stupendous dimensions expressed by a diameter of 8,000 miles, and that the atmosphere is, let us say, 100 miles deep. Now, suppose that all is quiet, but that at some point, which for the moment we may speak of as the pole, a mighty disturbance is originated. Let us regard this disturbance as produced by a sudden but local pushing up of the atmosphere by a force directed from the earth's surface outwards, and let us trace the effect thereby produced on the atmosphere. Such a sudden impulse will at once initiate a series of circular atmospheric waves, which will enlarge away from the centre of disturbance just like the waves caused by the pebble in the pond. If the original atmospheric impulse be large enough we shall find the circle growing larger and larger, its radius increasing from hundreds of miles to thousands of miles, until at last the wave reaches the equator. What is to happen

when the diverging waves have attained the equator, and are now confronted by the opposite hemisphere? This is one of those cases in which the mathematician can guide us where the experimentalist would be otherwise somewhat at fault. We know that as the wave entered the opposite hemisphere it would at once move through a similar series of changes to those through which it had already gone, but in the inverse order. The wave will thus, after leaving the equator, glide onwards into a parallel small circle, ever decreasing in diameter, and converging towards the anti-pole. Finally, just as the waves all radiated from the original pole, so will they all concentrate towards the opposite one. But what is now to happen? Here, again, the mathematician will inform us. He can follow the oscillations after their confluence, and he finds that from the anti-pole they will again commence to diverge. Again they will expand, again they will reach the equator, and again will they gradually draw in to concentration at the original pole, nor will the process even here end. From the second confluence there will be a new divergence, and thus the oscillations will be sent quivering from one pole of the globe to the other, until they gradually subside by friction.

"This comprehensive series of phenomena wherein the atmosphere of the entire globe participates in an organized vibration has, so far as we know, only once been witnessed, and that was after the greatest outbreak at Krakatoa, at ten o'clock in the morning of August 27th. But the ebb and the flow of these mighty undulations are not immediately appreciable to the senses. The great wave, for instance, passed and re-passed and passed again over London, and no inhabitant was conscious of the fact. But the automatic records of the barometer at Greenwich show that the vibration from Krakatoa to its antipodes, and from the antipodes back to Krakatoa was distinctly perceptible over London not less than six or seven times. The instruments at the New Observatory confirm those at Greenwich, and if further confirmation were required it can be had from the barograms at many other places in England. This is truly a memorable incident, and the scientific value of the labors of those who so diligently obtain automatic barometric records year after year would be amply demonstrated, if demonstration were required, by this single discovery of the great Krakatoa air-wave."

(To be continued.)

SOME Christians seemingly waste their whole lives doing nothing because they are unwilling to do little things; or, if not unwilling, esteem the little things too small moment to engage their attention or call out their energies. If they could only preach like Paul they would be glad to preach; but to be content with teaching a child is not in them. If they could only give like a Morley or a Dodge they would be happy in the exercise of Christian beneficence; but to give the little they have with good will and cheerful promptness is not to their mind. If they could address a multitude how happy they would be to do some evangelistic work; but to speak to a poor man or woman by the way is not of enough importance to call out their purpose to serve the Lord. The end is that with many it is a great work or none at all. The spirit of the proud Syrian leper is more or less in us all, and we need to hear and heed the words of his faithful servant and apply his remonstrance to ourselves. —Selected.

FOR "THE FRIEND."

Our Testimonies.

"Strangers have devoured his strength, and he knoweth it not; yea, gray hairs are here and there upon him, yet he knoweth not."—Hosea vii. 9.

Not very long since a valued ministering Friend was inquired of in a public place, why Friends did not join with other religious professors in promoting moral reforms? Her answer was somewhat as follows: "The Society of Friends believe they have certain peculiar testimonies to bear before the world, which they are firmly persuaded are in strict accordance with the teachings of the memorable Sermon on the Mount, as well as all other parts of the New Testament, and are therefore unchangeable in their nature. Among these is the necessity of waiting for a feeling of Divine requiring before engaging in the solemn act of public, vocal prayer, that is, our inability to pray acceptably at times previously fixed upon in the wisdom and will of man; also, that of singing words with the lips that the heart does not feel to be true.

"We believe that in engaging in such solemn acts we must wait for a feeling of Divine requiring.

"Meetings for the purpose of moral reforms are mostly, if not always, opened and closed with such exercises as have been alluded to, and perhaps others of a similar nature.

"Were we to join with you in such meetings, would you unite with us in waiting in silence for such a feeling of Divine authority as we think is essential, or would you expect us to join with you in sanctioning (by our presence) such public acts of prayer and singing, as may be right for you, but which we believe are contrary to our Heavenly Father's will for us thus to engage in?"

The inquirer, being an intelligent person, answered: "I see! I see! It would be inconsistent for you."

In connection with this subject is the following: Eli K. Price, a venerable and highly esteemed member of the Philadelphia bar, expressed to the writer, not many years prior to his death about as follows:

"The nearer I draw to the close of life, the more I think about the principles of Friends." Looking very earnestly at me, he said, "I have studied, I have read, and I have thought for years, and have become thereby more and more convinced of the truth of the principles of Friends. 'You are as a salt and a savor in the world.'" (spoken in a very impressive manner.)

Joseph J. Lewis, a prominent lawyer of West Chester, Pa., and at one time Superintendent of Internal Revenue under President Lincoln, who came back into the Society, when near the end of a lengthened life, remarked to the writer: "Your strength will consist in your keeping to yourselves." "If you mix with the world you will lose your strength with your distinctive peculiarities."

In an interview with Joseph J. Lewis, shortly before his death, when incapable of much conversation, he, however, expressed as I was about leaving, a strong desire for the wide distribution of Friends' writings, adding: "I believe that if the doctrines and testimonies of Friends were universally accepted and adopted, that it would bring about the millennium."

These are the expressions of two men of more than four score years, of clear intellect; men who had had unusual opportunities of observation and experience in this world.

They are earnestly recommended to the careful attention of our younger members by one who feels a deep and abiding interest for their

welfare in best things, and who believes that all the principles and testimonies of the Society of Friends are founded in the everlasting and unchangeable Truth.

W. P. T.

Fifth Mo, 29th, 1889.

William Penn's Preaching in the Hotel Yard at Wells.

In the guide-book of Wells one of the most prominent names is that of Bishop Beckington. Like many other Churchmen of his day, he was even greater as a builder than as a bishop. It was he who built the market-place, pretty still though the turreted, statted gateways leading into palace and cathedral are defaced with large plate-glass windows, and only one of the houses has kept its gables and projecting stories its diamond panes and carvings. Fortunately this is the very house to which associations as well as picturesqueness give a particular interest. From one of its wide bow-windows William Penn preached the grace of God to the people of Wells as it never before had, and indeed, it may safely be said, as it never since has been preached to them by the Lord Bishop or his canons. And now, when Americans—Pennsylvanians above all—who know anything of their country's history look at the old house, with its crooked gables and bulging windows, and its court, where the carving is so sadly weather-worn, it is of the man who here delivered one sermon they must think, rather than of Bishop Beckington, who made the place beautiful, but whose name is probably forgotten once the guide-book is closed.

The story of Penn's visit to Wells is worth remembering. The incident, insignificant as it is, compared to the greater events with which his life was crowded, is very characteristic of the man. It happened not long after the death of the wife he loved so dearly. His mind, however, for the first time in many years, was at peace, and his sorrow was easier to bear because of the two great consolations that had just come to him, Friends who had looked doubtfully upon the favor in which he was held at court had once more taken him back into their confidence; the beloved province for which he had toiled so incessantly, and of which for a while he had been deprived, was now restored to him by the king.

Once more he went about the country, as he had gone in earlier years, preaching and exhorting, in hopes that his words might perhaps do for others that which Thomas Loe's had once done for him. He had been travelling between the hedgerows of Gloucestershire and along the deep-sunken lanes of Devon and Somerset, holding meetings on the way, now in open fields, now in town-halls, when he came to Wells, the little low-lying town of two long straggling streets separated by the cathedral, with its Bishop's Palace to one side, its Vicar's Close to the other. The old house in the market-place hung out then, as it does still, the sign of the Crown; but in those times it probably had not come down in the world, but occupied the position the Swan does now, and was the inn of the town. The first thing the travellers had to do was to see the Bishop, for without a license there could be no preaching in peace. For all the modern restoration and destruction, the main features of Wells have changed so little that you can follow Penn from the market-place through the gateway called the Bishop's Eye, where the wall-floors now make such bright bits of color on the crumbling stone-work, under the trees beyond, across the drawbridge, where a great horse-

hastnut drops its low-spreading branches into the water of the moat, and so to the palace.

It was like Penn, who was not afraid to speak to his mind to kings and princes, to determine to hold a meeting in Wells, which has always been essentially a cathedral town, and nothing more. To-day you feel that if it were not for the cathedral, upon which its interests centre, it could cease to exist altogether, or else quietly slide down into village life. It is a little hot-bed of Conservatism, where the church, so necessary to fill the tradesmen's pockets, is as deeply respected as the State, and where not only are Liberals to be found, but hardly a Dissenting chapel. The people explain the presence of the Carmelite Convent by telling you that the nuns came over from France when so many religious orders were banished from that country; the Salvation Army, though its officers make a great noise and daily besiege the town, has but small following. It is, easy, then, to imagine that the place was in the latter half of the seventeenth century, when Non-conformists were still being persecuted and imprisoned. To go there to preach the new gospel was to beard the church in its den.

It was equally in keeping with Penn's love of peace and order that when he thought it his duty to preach in Wells he should first ask the Bishop's permission. No one could defend his own rights better than he, and perhaps for that very reason no one was more unwilling to put himself in the wrong.

But why should he hold a meeting in Wells where there were no Quakers? asked the Bishop; that truth had to be revealed to the people that they had not learned already from ministers of the Established Church?

"The grace of God," Penn answered.

"We preach the grace of God," said the Bishop.

"But not as the Quakers," Penn declared.

He did not leave the palace, however, until the permission had been granted. It was because the Town-hall was not to be had for his purpose, those in charge sharing the prejudice against Quakers so general among people in authority, that Penn decided to address the meeting from a window of the inn. It is not difficult to picture him standing there, the wide casements thrown open, a man fair to look upon in middle age, as he had been in youth, the beauty of his face and the sweetness of his words winning to him many hearts in the Multitude below, just as they had out in the far West when he smoked the pipe of peace with his Indian friends, or in Holland and on the Rhine, whither he went to help those who were still seeking the light. It is by a curious chance that the window in which the man of peace stood now overlooks a canon from Sevastopol! Two or three thousand men and women, it is said, crowded the market-places. One wonders how space was made for so many, for a few tents and vans and stalls in a fair week will fill it to overflowing. And one cannot help contrasting those eager thousands with the insignificant handful of worshippers who barely fill the choir of the cathedral during daily or Sunday services; for the people of Wells, if they do not join the ranks of the Salvation Army, or set up unorthodox chapels for themselves, do not, on the other hand, give very active support to their own church. But, wherever he went, the eloquence of Penn always held his listeners, even if they had come together out of curiosity, and here in Wells from his window he looked down on a mass of upturned faces, the high gabled houses opposite making a

pretty background, while above and beyond them he could see the tower of the cathedral where the Bishop preached his sermons, which were so little like those of the Quakers. And as he spoke that which was in his heart, his earnestness went from him to the people, so that when constables came and arrested him there was much disturbance among them, and the magistrates were frightened. For Penn had secured his license from the Bishop, and there was no just charge against him. They were forced to let him go, but they had done "just enough to manifest the keenness of their stomachs for the old work of denouncing, in that they they could not refrain from whetting their teeth again after the Act of Toleration had blunted them."—*Elizabeth Robins Pennell in Harper's Bazar.*

To "Afric's Sunny Fountains."

The accounts of travel in this series have given place for a few weeks to an examination of the moral and religious condition of Spain. The narrative brought us down to the afternoon of Christmas Day, and left us sailing out through the Bay of Malaga into the Mediterranean, which stretches eastward for twenty-three hundred miles.

Our vessel had a truly African name the *Mogador*, named after a part of the city of Morocco. No quieter sea ever reflected a more glorious sunset, blended with a more delicate blue, than did the Mediterranean that evening. But the promise to the eye, like many to the ear, was broken to the heart, for when the sun was out of sight the winds began their revels, which soon plunged men, women, and children, whether first, second, third, or fourth class passengers, into one common gulf of nausea and despondency. Through the short choppy waves the *Mogador* pushed with great speed, and sick as we were, it was a pleasure to pass every thing great and small that rode the waves that night. A little after ten o'clock the storm subsided, the clouds disappeared, and the rugged mountains of the African coast stood forth in the starlight like stupendous battlements as we came to anchor in the harbor of Ceuta. This is the "Botany Bay" of Spain. Like ancient Rome, it stands on seven hills, and its name is said to be a corruption of *septem*. The ancients called it *Abyla*, and one of its mountains formed one of the *Pillars of Hercules*. Its many fortifications on the surrounding hills and the great towering masses of mountains on every side made startling exhibition of power, and did not fail to suggest a variety of thoughts, some of which arose from the day.

The continent which we were approaching, shrouded in darkness or groping in Mohammedan twilight, is a conviction station of a country bearing the Christian name, but overweighed with the traditions of men and the long line of historic events, of which Ceuta has been the center, or by which it has been touched. For this point Justinian contended with the Vandals before the Christian era was six hundred years old; from the Romans it was taken by the Goths in less than a hundred years; then the Moors wrested it from them and held it until 1415, when the Portuguese snatched it, and in 1580, when Portugal was annexed to Spain, it came into the possession of that Government and has been held by it from that time. From it the Moors set forth to capture Spain, and the next day when we continued our voyage we sailed over the same route which they took and anchored in the harbor of Algeciras, the point in

Spain at which they landed. It was in the harbor of Algeciras that we obtained our first view of the rock of Gibraltar.

After a brief stay at this place, of no importance now, though once the Moors' key of Spain, and the scene of the greatest crusade of the fourteenth century to which all Christendom contributed, we resumed our course along the Spanish coast through the Straits of Gibraltar. Gibraltar, with its forts, its town, and harbor filled with shipping, was in full view on the left; across was the entire line of the most north-west coast of Africa, with its hills and mountains for many miles covered with vegetation to their summits. We hugged the Spanish shore and soon sighted Cape Trafalgar, a low sandy point which would hardly draw attention, but is one of those points which illustrate the talismanic power of history; for it was off Cape Trafalgar that one of the greatest naval encounters in the history of England took place. Here the intrepid Nelson fought, conquered, and died.

After buffeting the waves one or two hours the Bay of Tangier came into view. It is in diameter about three miles, forming an amphitheater, to which the shores correspond, the city rising on the slopes of two or three hills. From the deck of our vessel we saw to the northward the citadel and to the southward the white houses of the town. Up to ten years ago there was no pier, and it was therefore impossible for vessels to land their passengers; but such was the bigotry of the people that the Mohammedans would not carry a Christian, and passengers were taken to the shore on the backs of Jews. We had heard of the pier, and supposed that we should land as at a European port, but it had been broken by the preceding storms, and we were compelled to take the small boats. A great many more Moors clambered up the ship's sides than there were passengers to take, and there was a tremendous wrangling about the prices. Attaching ourselves to the Health Officer, who spoke English, we had no difficulty in ascertaining the fixed rate, and, riding in the same boat, with himself, had no trouble in the settlement. The harbor, notwithstanding the fast-increasing darkness, was plainly a beautiful one, and the domes and minarets of the mosques on the hill-sides, so unlike the towers and steeples of Christian churches, would have been sufficient, had we drifted instead of steered into the harbor, to show us that we were landing upon an unknown shore. Once upon *terra firma*, we were conducted by the boatmen entrance by a long, dark, narrow alley, as weird an entrance as a stranger ever had. In any European city it would have raised suspicions that we were being led to a dungeon. Approaching a point where the alley turned to the left, two solemn-looking Moors, dressed in white, with turbans upon their heads, wearing long beards and having the aspect of authority, attracted our attention. Passport in hand, we were ready to surrender the baggage, when the Health Officer, who had ascertained that we were American travelers, informed them that we had nothing dutiable, whereupon they gravely bowed, pleasantly smiled, and we passed on. The alley led to a street not much wider, but a great deal lighter, and in the space of five or ten minutes we entered the hotel. Tangier being the capital of a province, and the residence of foreign ministers and consuls to the Court of Morocco, and frequently visited by English, French, and Spanish merchants upon business, besides increasingly travelers, is provided with two or three hotels of an excellent character, the Continental, at which we remained, being better than any found by us

in Spain. In front of it were scores of Moors, and in the hall there were perhaps a dozen in dressing gowns. Male Moors waited upon the tables, and very good waiters they are their fantastic but picturesque *jellabiyah* (dressing-gowns), with turbans and sandals. They were attentive, polite, surprisingly noiseless, and rapid in movement.

No sooner were we conducted to our rooms than a man, who might have been introduced as the Sultan, or as the *Caliph Haroun al Rashid*, so far as his dress and dignified condescension were concerned, appeared. There was, indeed, a little too much complacency in his smile and something of an element of flippancy in his dainty manners as he entered, and when he said, with a smile that exhibited the whitest of teeth, and was suggestive of great expectations: "*Jam se commissinaire de se hotel*," speaking English with a very French accent, we saw that this august being was willing for the sum of 82 per day to conduct us through such portions of the great empire of Morocco as we might elect. We did not employ him, as his time and ours could not be made to agree. But guides were plenty, and in due time we sallied forth into the swarming streets—streets through which no carriage can go, so narrow are they, and so crowded. Jews, Negroes, Moors, women with their faces covered, country people with peculiar dresses, donkeys, mules, men and women carrying water upon their heads, all swarming together, gave the appearance of a dense crowd, and one paused at almost every step to consider whether he could make his way. Such crowds are not as dense as they appear. De Amicis makes an inventory of what he saw in the streets. He says: "There passed before me faces white, black, yellow, and bronze." We saw them all. "Heads ornamented with long tresses of hair and bare skulls as shining as metallic balls." There were plenty of them. "Men as dry as mummies." Correct. "Faces of sultans, savages, necromancers, anchorites, bandits." What might be types of these were there. He then says: "They were all oppressed by an immense sadness or a mortal weariness, none smiling, but moving one behind the other with slow and silent steps, like a procession of specters in a cemetery." This is a misrepresentation. The street crowds in Tangier are grave, but many of them smile, and gesticulate like Italians or Frenchmen; and as for their moving with slow and silent steps, they are among the most rapid walkers to be found in the world. Of course, as they transact business in the streets, they crouch against the walls in front of the shops, and the poorer classes crowd up against the walls of the narrow lanes; being dressed in white, the color of the walls, they pass unobserved along, and these have a certain spectral look. The streets are not only narrow but crooked. The houses have no windows; they are exceedingly dirty; all the ordinary rubbish of a city is left there. Most of the shops are mere holes in the wall, getting all their light and air from the front door, which is entirely open. In this city the Moors live like birds in cages. The interior of the lawyers' offices can be plainly seen from the street, and we saw ancient men poring over documents, and others writing as slowly as children with their first copies. Of the larger shops one can have no idea from the entrance. We were conducted to one of the best for the sale of antiquities. Entering by a small door, we passed through a room not much larger than a closet, then through another, then up a very narrow stair-way, and found that the display rooms were three or four in number, able to accommodate an immense

number of curious objects. Sharp and shrewd are the Moors at a bargain. They consider the European, and especially the traveller, the legitimate object of prey. They are fluent and graphic in description, make most silly affirmations, usually keep their tempers to the last, but if they cannot sell you any thing do not always conceal their chagrin. One of them, who continued to show us things long after we had told him we did not desire to buy any thing on that occasion, said in broken English: "We want to taste your money to see if it is sweet." But when we persisted in refusing he lost his temper. He told us to keep our money in our own bowels. In general, as they hope for another visit, they are polite to the last.

A Moorish school is the strangest spectacle of an educational sort that I have ever seen. The children sit cross-legged on the floor, the teacher in the midst of them, generally an old man of venerable aspect, also cross-legged. The Prophet thought that a knowledge of the Koran was all that the believer needed to possess, and this the children have to learn by heart. I visited such a school in Tangier. The old teacher, with a long stick in hand, was compelling the children to repeat aloud, as they swayed backward and forward, passages from the Koran. If they did not do it correctly, he rebuked them; if they were inattentive, he beat them. Whatever may be said of corporal punishment in its moral aspects, that it compels attention there is no doubt; for when that stick descended the laugh of the young Mussulman was changed into a cry, and with tremendous energy he began to repeat the sacred words. As the whole school talks aloud all the time, swaying backward and forward—a thing believed by them to be beneficial to the memory—the hubbub is as great as that of the Tower of Babel; but what was unintelligible to us was not so to the teacher, and from the amount which some of the children repeated without reference to the book, he seemed to be accomplishing the work required of him.—*J. M. B., in Christian Advocate.*

I USED TO KILL BIRDS.

I used to kill birds in my boyhood,
Bluebirds and robins and wrens,
I hunted them up in the mountains,
I hunted them down in the glens.
I never thought it was sinful—
I did it only for fun—
And I had rare sport in the forest
With the poor little birds and my gun.

But one clear day in the spring-time
I spied a brown bird in a tree,
Merely swinging and chirping,
As happy as bird could be,
And raising my gun in a twinkling,
I fired, and my aim was too true;
For a moment the little thing fluttered,
Then off to the bushes it flew.

I followed it quickly and softly,
And there to my sorrow I found,
Right close to its nest full of young ones,
The little bird dead on the ground!
Poor birdies! for food they were calling;
But now they could never be fed,
For the kind mother-bird who had loved them
Was lying there bleeding and dead.

I picked up the bird in my anguish,
I stroked the wee motherly thing,
That could never more feed its dear young ones,
Nor dart through the air on swift wing,
And I made a firm vow in that moment,
When my heart with such sorrow was stirred,
That never again in my lifetime
Would I shoot a poor innocent bird!

M. C. Edwards

OUR OWN WORK.

God gives to each a work to do;
The world, so wide and populous,
With many hands, but none in lieu
Of ours can do our work for us.

The gifted may do more than we,
And win applause from cot to throne;
The thoughtful in reitancy
Discover secrets long unknown.

And others may do less than we,
Though brave and faithful in the strife;
And some be wasteful utterly
Of all the golden hours of life.

Alas, my brother, it is true
Life's day may pass and leave undone
The very work we were to do;
Life's day is lost, the only one!

And more is lost: the rich reward
Laid up in Heaven's boundless store,
The honored welcome of our Lord,
The pleasures that are evermore.

Oh look! oh haste! the sun is high,
The shadows lengthen from the west;
Speed to thy work, for night is nigh;
Our work undone, there is no rest!
—*E. P. P., in American Messenger.*

BETWEEN THE LIGHTS.

A little pause in life, while daylight lingers
Between the sunset and the pale moonrise,
When daily labor slips from weary fingers,
And soft, gray shadows veil the aching eyes.

Peace, peace—the Lord of earth and heaven knoweth
The human soul in all its heat and strife;
Out of his throne no stream of Lethal floweth,
But the clear river of eternal life.

Serve Him in daily work and earnest living,
And faith shall lift thee to his sunlit heights;
Then shall a psalm of gladness and thanksgiving
Fill the calm hour that comes between the lights.
—*Sunday Magazine.*

The Shirk.—The essential nature of every shirk, masculine, feminine, domestic, social, or civil, is selfish. The shirk thinks only of himself, his own ease, his own comfort, his own indulgence, and this regard to self so fills his whole horizon that he cannot perceive any one in the world who should be consulted, indulged, and favored in preference to himself. To tear this veil of selfishness from the eyes of the shirk is a task so difficult that it is often easier to do his work for him than to make him do it for himself.

But the willing worker should not be imposed on simply because he is willing. If any man will not work, neither shall he eat, is a precept of Divine authority. The sick, the crippled, the helpless should be cared for, but those who deliberately shirk the work they are well able to perform will be benefited by being compelled to do it or suffer from its being left undone.

The mother who permits her daughters to array themselves in fine clothes and sit in the parlor at fancy work, while she drudges in the kitchen, does them, no less than herself, an irreparable injury, and the daughters who permit themselves such indulgence are incapable of making good wives and mothers.

Life is full of burdens to be borne, of drudgery to be done, of laborious tasks to be accomplished, and the earlier in life one begins to apply himself and herself to the tasks to be done, the sooner does life become easy, does toil become pleasure, does achievement become its own exceeding great reward.—*Selected.*

FOR "THE FRIEND."
Early Meeting-houses of Friends.

(Continued from page 142.)

THE NORTH MEETING—CONTINUED.

About 1834-5, Friends again felt the necessity of making a change in location, as follows, viz: "The location of our present meeting house (Key's Alley), being brought into consideration, and the minds of Friends fully expressed, it appeared to be the prevailing sense, that it is seasonable to appoint a Committee to look out for a Lot, which may be procured, on which to erect a house that will better accommodate the members of this District."

Fifth Month, 1835.—"The Committee appointed to look out for a site whereon to erect a Meeting House, reported after considerable inquiry, they have had the offer of a Lot bounded by Sixth Street, John Street, and Noble Street, which may be procured for about \$28,000. They also present a plan for a meeting house. Upon consideration the report was approved. * The meeting agrees that there be erected on the lot bounded by Sixth Street and Noble Streets an edifice 121 feet long by 66 feet wide, the whole cost of which is estimated to be about \$30,000."

A very commodious and convenient building was put up and finished, so that meetings were held there in the Eighth Month, 1838, and the first Monthly Meeting was held there Eighth Month 28th, 1838.

The old meeting house property on Key's Alley being no longer needed as a place of worship, was sold in the same year to the "Controllers and Overseers of Public Schools," &c., for educational purposes, for the sum of \$20,000.

PINE STREET MEETING.

The Pine Street Meeting House, or the "Hill Meeting," as it was called in its early days, was located on the south side of Pine Street below 2nd street.

It was built in 1753 largely for the accommodation of the Yearly Meeting, as appears by the following minutes:—

"At a Monthly Meeting held the 31st of Seventh Month, 1752. The consideration of building a new meeting house being now received, and Friends in general at this meeting being of opinion it is necessary to build one, Anthony Morris (and 21 other Friends), were appointed to view a piece of ground left by Samuel Powell, Jr., for the purpose, on Pine Street. They reported the lot would be suitable if 40 feet more could be added to it (50 feet were added). The committee prepared an estimate for a house 60 feet long and 43 feet broad to cost £800, and think it may be of suitable dimensions to accommodate the Yearly Meeting."

In the Eleventh Month the subject was again considered, and "The meeting agrees that a brick house of 60 feet front, and 43 feet deep shall be built on the said lot, as the principal inducement to this meeting to consent to the building of such a house is for the accommodation of Friends at our Yearly Meeting."

28th of Ninth Month, 1753.—"The meeting house on 'Society Hill' being now finished and meetings held there during our late annual solemnity," &c.

Evening meetings were opened the 27th of Twelfth Month, 1754. But it does not appear that day meetings were regularly established there for some time, as we may observe by the annexed minutes.

"At a Monthly Meeting held in the Chamber of our Great Meeting House in Philadelphia

(Market street), the 24th day of Sixth Month, 1757—

"It is agreed that an afternoon meeting be held at the Pine Street Meeting House, the first First-day of each month, during the summer season, no meeting at this house ("Great House") at that time."

30th Third Month, 1759.—"It being proposed that a meeting be held at the Pine Street Meeting House on First-day mornings during the summer season, it is agreed to."

25th Fifth Month.—"It is agreed that while the work is being carried on at the Great Meeting House (i. e. fitting pillars under the floor, and finishing the chamber," so as to accommodate the Quarterly, and other public meetings), the First-day meeting both morning and afternoon be held at Pine street, and the First-day evening meeting at the Bank meeting."

12th Third Month, 1761.—"The meeting agrees that meetings for public worship may be held at Pine Street Meeting House on First-days, morning and evening."

During the prevalence of the yellow fever in 1798, the Men's Yearly Meeting assembled here Ninth Month, 24th, and after a time of solid deliberation concluded to adjourn to the Twelfth Month. Several Friends, about 13 in number, of those who came to attend the yearly meeting contracted the fever and died; among them was Warner Millin.

Mary Prior then visiting in this country under date of Ninth Month, 1798, thus alludes to the matter. "A number of Friends are to meet to-day to consider and feel after the pointings of truth respecting the Yearly Meeting, which falls in course next Second-day."

Ninth Month 24th.—"About 100 Friends met in the city in the Pine Street Meeting House, and after a solid time of writing came to the conclusion to adjourn the Yearly Meeting to the Twelfth Month."

The Yearly Meeting was held continuously in this house, it is believed, until 1802, when it was removed to the North Meeting House.

Thomas Scattergood, in his journal under date of Fourth Month 19th, 1802, alludes thus to the change: "The meeting on consideration very unitedly agreed to adjourn to the North House, in hopes that it will accommodate the meeting better than the present place of meeting—the Pine Street House."

He again alludes to a change of place of holding the Yearly Meeting, as follows:—

Fourth Month, 1811.—"The Yearly Meeting for business was large. The two first sittings were held in the North House, where it has been held for some years; the afternoon sitting adjourned to meet in the morning of the 16th in the East House on Mulberry street and Fourth streets, and the women took possession of the new one just finished on the West."

J. W. L.

(To be continued.)

"Did you Expect Me?"—The anecdote is told of — Kidd, a Scotch minister who was very eccentric, and had his own way of doing things. "Just as the year was opening," says one of his parishioners, "I was very busy in my shop when, right in the midst of my work, in stepped the parson. 'Did you expect me?' was his abrupt inquiry, without ever giving or waiting for a salutation. 'No, sir,' was my reply, 'I did not.' 'What if I had been dead?' he asked in a solemn, earnest tone, and out he stepped, as suddenly as he had come, and was gone almost before I knew it."

FOR "THE FRIEND."

John Churchman.

The account which this worthy minister gives of his religious experience is so instructive, that it is proposed to insert some extracts from it in THE FRIEND, with the hope that they may prove both interesting and edifying to those who read them.

I was born in the township of Nottingham, in the county of Chester, and province of Pennsylvania, on the 4th day of the Sixth Month, 1705, and was tenderly brought up in the profession of the truth. My parents, John and Hannah Churchman, were diligent attenders of religious meetings, both on the First and other days of the week, and encouragers of their children in that practice, which is certainly a duty in parents, and often owned by the visitations of Divine love, even to those who are very young in years, of which I am a living witness. I early felt reproof for bad words and actions, yet knew not whence it came, until about the age of eight years, as I sat in a small meeting, the Lord by his heavenly love and goodness, overcame and tendered my heart, and by his glorious light discovered to me the knowledge of himself. I saw myself and what I had been doing, and what it was which had reproved me for evil, and was made in the secret of my heart to confess that childhood and youth, and the foolish actions and words to which they are prone, are truly vanity. Yet blessed for ever be the name of the Lord! in his infinite mercy and goodness He clearly informed me, that if I would mind the discoveries of his pure light for the future, what I had done in the time of my ignorance, He would wink at and forgive; and the stream of love which filled my heart with solid joy at that time, and lasted for many days, is beyond all expression. I was early taught to think differently from such who hold the perdition of infants, and am since confirmed in believing that the sin of our first parents is not imputed to us, though as their offspring, we are by nature prone to evil, which brings wrath, until by the discovery of light and grace, we are taught to distinguish between good and evil, and in that Divine light which shows us the evil, we feel the enmity against the evil, and the author thereof, the wicked one. If we afterwards commit those things which we saw to be evil, we then fall under condemnation and wrath, and here every soul that sins, must die to the sin he hath committed, and witness a being raised by the power of God, into newness of life in Christ Jesus, not to live to himself, to fulfil the will of the flesh; but to live unto Him who died to take away sin.

My father sent me about three miles from home on an errand; and on my return, the colt which accompanied the mare I rode, ran away to a company of wild horses, which were feeding not far from the path I was in. My father bid me go back to the place with speed, that it might follow the mare home. I went, and found the horses feeding on a piece of ground where the timber trees had been killed perhaps about two or three years. Before I went among the dead trees, a mighty wind arose, which blew some down, and many limbs fell about. I stood still with my mind turned inward to the Lord, who I believed was able to preserve me from hurt; and passed among the trees without fear, save the fear of the Lord, which fills the hearts of his humble depending children with love that is stronger than death. I found the colt, and returned home with great bowdown of heart and

thankfulness to the Lord, for his mercy and goodness to me.

It was my practice, when I went to bed, to examine how I had spent the past day, and to endeavor to feel the presence of the Lord near, which for some considerable time I preferred to all other things, and I found this practice a great help to sleep sweetly, and by long experience I can recommend it to children, and those also of riper age.

I suppose that no one living knew my condition; for I delighted to keep hidden, yet was quick to observe the conduct of others. I remember a person was once at my father's, who spoke about religious matters with an affected tone, as if he was a good man; and when he mounted his horse to go away, taking a dislike to some of his motions, he called him an ugly dumb beast, with an accent which bespoke great displeasure, and grieved me much. I believed that a man whose mind was sweetened with Divine love, would not speak wrathfully, or dimly, even of the beasts of the field, which were given to man for his use; and I relate this instance as a warning to be careful of giving offence to the little ones.

Notwithstanding I had been favored as before mentioned, yet as I grew in years, I was much given to play, and began to delight again in several things, for which I had before been re-proved, and by the Divine witness in my mind was still brought under judgment; for, but having lost my innocence, I endeavored through fear to fly from the voice of the Holy Spirit in my own heart. The enemy persuaded me, that I could never be restored to my former state, because I had sinned against so great knowledge, or if I was, that the judgment through which I must pass, would be intolerable, so that I had better be cheerful, and take my ease and delight. When I was about nine years old, my father sent me to school to learn to read, having been taught to know my letters and spell little at home, in which I took great delight, and thereby diverted myself from feeling pain of mind for the great loss of my innocence which I had sustained. Although the man by whom I was taught, was poor and sat in his loon, being a weaver, while the children read to him, I improved very fast, and he soon put me to writing, and finding my capacity as ripe as is common in boys of that age, he began to teach me arithmetic. But my gracious Lord still favored me with conviction, his spirit bearing witness against me, and in mercy He visited me with a sore fit of sickness, and by his rod of correction brought me a little more to myself. This was in the fore part of the winter, when I was between nine and ten years of age, and in the following spring I had a relapse of the same disorder. Thus by outward correction with sickness and inward judgment, He was pleased to draw me to himself, which caused me to renew my covenant with Him, and I hoped never more to stray from Him to follow lying vanities, whose sweets I had experienced to be exceeding bitterness in the end. I had taken great delight from a child to play with whistles and pipes, made of the bark of small branches of trees, and of straws of wheat and rye; but now it grieved me to observe children delight therein, and I ventured to tell my mind to some of them concerning such things.

Man is distinguished from other creatures by his voice; and by varying the breath together with the orderly motion of tongue and lips, that voice is made to convey the ideas of the mind and thoughts of the heart to his fellow-creatures. As he was created to glorify his Maker, the use

of his voice should be directed to promote his glory among men, whether in things natural or spiritual, that is of this life, or that which is to come. Music is now commonly used, and whistling and singing, have no such tendency; but rather divert the mind from what it ought to be employed about, and are therefore a waste of precious time, for which man must be accountable. If this were often regarded, instead of music, whistling, and singing merry, foolish and profane songs, many would have occasion to lament and weep for their misspent time. I leave this as a caution to parents, to beware of indulging their dear children in any thing which may impress their tender minds with a desire after music, or other improper diversions; but that instead thereof, by living in the pure fear of the Lord, and near the Spirit of truth in their own hearts, they may by example and precept, direct the minds of their offspring to attend to the voice of Him who called to Samuel in days of old, and remains to be the Teacher of his people in this age; may his holy name be magnified for ever and ever!

(To be continued.)

Speaking to People.

"Who in the world is that you are speaking to?" said one young lady to her companion of the same sex and age, as they walked down one of the avenues the other day.

"That man? He is the man that mends my shoes when they need it," was the reply.

"Well," said the first speaker, "I wouldn't speak to him; don't think it's nice."

"And why not?" queried the other. "He is a kind, faithful, honest, hard-working man. I never pass his window but I see him on his bench working away, and when I speak to him he looks pleased as can be. Why shouldn't I speak to him?"

"I never speak to that class of people," said the other; "they're not my kind."

"I do," was the rejoinder. "I speak to everybody I know—from Dr. Brown, our minister, to the colored man who blacks our stoves and shakes our carpets—and I noticed that the humbler the one in the social scale to whom I proffer kindly words, the more grateful is the recognition I receive in turn. Christ died for them as much as He did for me, and perhaps if some of them had had the opportunities my birth and rearing have given me they would be a great deal better than I. That cobbler is really quite an intelligent man. I've lent him books to read, and he likes quite a high style of reading, too."

The two girls were cousins, and they finally agreed to leave the question as to recognizing day laborers, mechanics and tradesmen to a young lawyer of whom they had a high opinion. So the first time the three were together one of the girls asked him:

"If you met Myers, the grocer, on Broadway, would you speak to him?"

"Why, yes, certainly; why do you ask?"

"And would you speak to the man who cobble your shoes?"

"Certainly, why not?"

"And the janitor of the building where you have your office?"

"Of course."

"And the boy that runs the elevator?"

"Certainly."

"Is there any body you know that you don't speak to?"

"Well, yes; I don't speak to Jones, who cheated a poor widow out of her house; or to Brown, who

grinds down his employees and gives them starvation wages; or to Smith, whom I know to be in private any thing but the saint he seems to be in public. I speak to every honest man I know whom I chance to meet. Why do you ask?"

"Because we simply want to know," replied the young lady who had taken her friend to task for speaking to the cobbler. In fact, she was ashamed to tell him that she was referee in the discussion on this point held a day or two before.

It is the privilege of nobility to be gentle and courteous to all. Kindly words hurt no one, least of all him or her who speaks them.

MAY be of the retiring generation be happily continued objects of Divine regard and compassion, and be ended from season to season with fresh supplies of heavenly wisdom, that so we may walk in and before our families with propriety, and leave such vestiges in all parts of our conduct, as our successors may safely follow; and may our beloved offspring and their connections, having been favored to see a glimpse of the beauty which is in the truth, dwell low in humble, watchful fear, that this eye may ever be kept open in them, that the vision may be more and more cleared and extended, and the God of this world never be permitted to close or obscure with the dust of the earth, or dazzle and dim with worldly splendor! I am anxious for the coming forward of the youth of our day; something or other retards their growth; with many it is not any evil disposition, any criminal pursuit, but I fear there is a want of a steady, solid, diligent waiting for the renewal of those baptisms which purge the soul and prepare it for further illumination and discoveries of duty. There is a seeking and desiring after good, and a looking towards the servants and messengers and expecting them; but if, under a sense of our wants and weakness, our attention was more immediately turned to the Master himself, and our dependence more abstractedly fixed on Him, I believe there would be more of a growing in the root."—Richard Shackleton, 1781.

Natural History, Science, &c.

Tight Clothing.—A young lady a few weeks ago applied to a physician for treatment. She suffered from continual headache, and had done so for years, and she had other troubles. The physician examined her thoroughly, and satisfied herself (the physician was a woman), as to the causes of the patient's maladies.

"I cannot treat you," said the doctor, "unless you will follow my instructions implicitly. But if you promise to do so, I think your health will improve immediately, and will soon be entirely restored."

The patient promised entire compliance with the instructions of the physician.

"The first thing for you to do is to take off your corsets, or wear them so loosely that your vital organs will not be at all compressed even when you take a full breath. Then suspend all your clothing from your shoulders, and have nothing hang from your hips. Procure a pair of low-heeled shoes about two sizes larger than you wear now. Give up drinking tea and coffee, or take them very weak. At first you may miss the stimulus, but only for a few days. Eat nourishing food at regular intervals, and go to bed early and get your sleep out. Walk to and from your place of business so as to get all the exercise possible for you in the open air."

A little medicine was given the patient for some local trouble, but treatment was relied on for the main difficulties. She did exactly as her

physician told her. In a few days she was free from headache, and in a few weeks she was enjoying a degree of health up to that time entirely unknown to her. The heart was able without heck from tight clothing to do its work; her lungs had full play, and could purify the blood without hindrance from corset laces; the abdominal organs, no longer crowded down upon the delicate organs below them, performed their unobtrusive functions without interfering with any other organs of the body; elasticity gradually came back to the step of the young woman, color came to her face, light to her eye, and the cheerfulness of good health to her heart.

The physician from whose mouth this statement was received avers that the good results his patient enjoyed were directly from the treatment she received and gave herself, and not from the medicine.—*Selected.*

The Boy's Kite and the Seagull.—Some fishermen while engaged near Belfast, Ireland, picked up a large seagull, which was seen approaching her boat with wings outspread floating on the water, but quite dead. The men were puzzled to account for the progress it made through the water as it went faster than the boat, but as it came near it was found that, wound securely around the body and under the wings, was a string which they discovered was attached to a large paper kite then flying above them at a considerable height. The kite had furnished the propelling power. The bird had evidently, while flying at Belfast, got entangled in the string of a boy's kite, had been unable to extricate itself, and, taking to the sea, had been drowned in its efforts to obtain freedom.

Extinguishing a Fire.—Captain Kennedy has written an interesting article for the *North American Review*. In it he tells of an experience he had in mid-ocean, while commanding some of the Baltic, in 1873. He was eating dinner when a servant whispered in his ear that the vessel was on fire. Without losing any time he captain quickly arose and repaired to the deck, where smoke and flames were pouring in huge volumes from the forward ventilators. Several streams were soon playing on the burning cargo, but without having any perceptible effect. The captain relates what followed in these words: "At the time she was running before a strong westerly gale and heavy sea. An idea suddenly flashed through my mind, and at once determined to act upon it. I went up on the bridge, and, calling to all who were on deck, told them to get under cover as quickly as possible. I immediately ordered the helms to be put to port, bringing the sea nearly abeam. A tremendous wave broke on board, filling the hatchways and flooding the deck. Tons of water poured down below, and instead of black smoke issuing from the hatch, I saw a cloud of steam ascend, proving that the fire was under control. I kept the ship before the wind and sea, and set all hands to work hoisting up bales of cotton. In about an hour they reached the place where the fire commenced, and I had the satisfaction of seeing it very soon extinguished."

Mineral Wax.—A car load of a peculiar mineral arrived in this city a few days ago. It was ozocerite, or mineral wax, and it came from Utah. Until recently, this substance has not been known to exist in any quantity except in Moldavia and in Galicia, Austria. Three years ago, however, a deposit of the queer substance was discovered on the line of the Denver and Rio Grande Railroad, about 114 miles east of Salt Lake City. The mine is known to cover at

least 150 acres, and over 1000 tons per year can now be produced. Ozocerite resembles crude beeswax in appearance, and can be used for nearly all purposes for which wax is employed. It is now largely used in manufacture of waxed paper. It enters into the composition of several brands of shoe polish. Mixed with paraffine, it produces an excellent grade of candles. One of the largest fields for the new material is the insulation of electric wires. It is claimed that ozocerite is preferable to any substance previously employed for this purpose. As the mineral wax comes out of the ground in condition to be used without refining, unless it is required for some especial purpose, it is much cheaper than the product of the honey-bee, and is evidently destined to be extensively used in the future.—*New York Mail.*

Simple Method of Preventing Sore Throat.—H. Valentine Knaggs recommends a simple prophylactic measure for cases of children or adults who are subject to recurrent sore throats or attacks of quinsy.

The treatment consists in simply placing round the neck ten to twenty threads of Berlin wool. This must be worn night and day except when taken off for purpose of making ablutions. In some cases it must be worn all the year round, in other cases only during the months when the complaint is likely to return. When it is to be discontinued it should be done gradually by leaving off a single thread each day until none are left. If the patient objects to the appearance, a coin or locket may be attached.

As explaining to some extent the favorable action of the wool in these cases, Dr. Knaggs suggests that the skin of wool thus attached around the neck keeps up a belt of skin action and so acts continuously and in a slight degree as a mild counter-irritant.—*Archives of Pediatrics.*

Brother Winters' Cat.—My predecessor at Hollister, W. M. Winters, had a very fine cat, of which, with his well known kindly nature, he made a pet. At the Conference of 1886 he was removed to Salinas, leaving the cat at the parsonage. It would not, however, fraternize with the new-comers, but at once took up its abode at the house of one of our stewards on the next block. It occasionally looked into the back yard, but never once entered the house. A month since, Brother Winters called on his way to Conference, and stayed over night. The next morning early I was surprised to find the cat on the back porch, and the moment I opened the door it rushed into the house; and when Brother Winters came into the dining-room it ran toward him, purring merrily with most manifest pleasure. "Has he forgotten the way to box, I wonder?" said Brother Winters, pretending to hit him, when the cat at once sat back on its haunches and struck out with its paw, blow for blow, in scientific style. Its former kind master left by the early train; the cat returned at once to its adopted home, and has never been near the parsonage since. Brother Winters said he believed he heard that cat under his bed-room window during the night.—*R. Boyers, Hollister, Cal.*

Items.

Testimony Against War.—At a meeting of the London Meeting for Suffering, in the Fourth Month, the Peace Committee reported the liberation of the Servian Nazarenes who had suffered imprisonment at Belgrade on account of conscientious objections to take up arms. A grant was made to the Committee to enable them to circulate peace literature at the Paris Exhibition.

The Liquor Traffic.—The following from the Louisville Courier-Journal, shows that all literature from that city does not favor the liquor traffic. It thus speaks of the traffic in intoxicating drinks:

"It is a business which is opposed to every clergyman in the country.

It is a business which every merchant and business man hates and detests.

It is a business which is the standing dread of every mother in the city.

It is a business which makes ninety per cent. of the papermiser for which the tax payer has to pay.

It is a business which makes ninety per cent. of the business of the criminal courts.

It is a business which keeps employed an army of policemen in the cities.

It is a business which puts out the fire on the hearth and condems wives and children to hunger, cold and rags.

It is a business which fosters vice for profit and educates in wickedness for gain.

Drunkenness means peculation, theft, robbery, arson, forgery, murder, for it leads to all these crimes."

Ergo, therefore, and because these facts are indubitably so, vote for the banishment of the whole traffic from the State of Pennsylvania.—*The Episcopal Recorder.*

Unscriptural Terms.—The editor of the *Herald of Truth* (Mennonite says: "The terms Person and Trinity in describing the Divinity were not allowed among the early Mennonites, and we still avoid them, as they are likely to convey an impression at variance with our faith."

Neglect of Public Worship.—An article on this subject in *The Episcopal Recorder*, of Philadelphia, explains the neglect of attending religious meetings by so many people in this country, by stating that such people go to places of amusement, because they get there what they want; but they do not go to places of public worship, because they do not care for the religious improvement which might result from it. They want amusement, but they don't want religion.

Sale of Opium in India.—In the House of Commons Sir Joseph W. Pease gave notice that he would move "That this House is of the opinion that the system by which a large portion of the India opium revenue is raised is financially unsound and morally indefensible, and would urge upon the Indian Government that they should cease to grant licenses for the cultivation of the poppy, except to supply the legitimate demand for opium for medical purposes."

W. E. Gladstone on Militarism.—On being presented with a copy of Eyraud's "Essay on War," with preface by the late John Bright, recently published in Manchester, W. E. Gladstone replied:—

"16th April, 1889.
"Dear Sir,—I thank you, and I am glad that the advocates of peace are active, for Militarism is the most conspicuous tyrant of the age, and it is the road to war. Yours faithfully,
"W. E. GLADSTONE."

Force of Example.—Christian example is more potent than argument. The Gospel owes its victories among men more to the lives and characters of its followers than to the eloquence and logic of its advocates. The greatest hindrance to the spread of the Gospel is not paganism nor ignorance, nor the opposition of Jews and atheists, but the selfishness and worldliness and inconsistency of members of the Christian Church. Some Christians who recognize these facts while they are at home, and conduct themselves accordingly, evidently forget them when they go abroad. Methodists, Presbyterians, and Baptist Churches have been found indulging in doubtful practices when visiting distant cities and foreign countries, to the hurt of the cause of religion. It is said that certain members of these denominations in the United States visit Sunday ball-plays in Mexico. In Mexico, in this country, are treated as they are perceived over this fact. The authorities in Mexico are moving in the direction of abolishing ball-plays on account of their demoralizing influ-

ence, and yet proffering Christians from the United States to encourage them by their patronage. Do they consider how effectually they neutralize their own influence for good? Do they not know that they not only injure themselves, but wound the whole Church? Men and women do these things, generally laugh at those who call their conduct in question. The true explanation of it is that their religion is so light and airy that it cannot be carried beyond the boundaries of their own country.—*Christian Advocate.*

NEXT in importance to knowing what to say in public address, is knowing when to stop. Many a preacher who has impressed a great truth on his hearers by his earnest spoken words, dissipates or neutralizes that impression by continuing to talk after he has said enough. In praying for power in his pulpit work, every preacher ought to pray for grace to stop at the right time.—*Selected.*

THE FRIEND.

SIXTH MONTH 8, 1859.

We have received a copy of *The Civil Service Record* for the Fifth Month, which refers to the importance of extending the Civil Service rules to the Indian Service; and quotes from the report of J. H. Oberly, Commissioner of Indian Affairs, for 1858, who says:—

"These evils can be corrected in no other way than by an abandonment of what has been called the 'party spoils system'—for no matter how desirous the Commissioner of Indian Affairs and the Superintendent of Indian Schools may be to obtain good material for the service, and no matter how conscientiously both may endeavor to improve its condition, they will, so long as this system is endured, be obstructed in all such efforts by clamorous demands that the places on Indian reservations, and in the schools not on reservations, shall be dispensed as rewards for partisan activity. In short, the commissioner and superintendent, with twelve hundred places (exclusive of Indians) at their disposal, cannot give to the agencies and the school competent employees until after they shall have secured protection from partisan pressure and personal solicitation; and such protection can be afforded to them only by the provisions of the Civil Service Act of 1853. As United States Civil Service Commissioner, I gave to this subject much consideration; and I have no doubt that the provisions of that act could be applied to the Indian service, and that, by their application thereto, under wise rules promulgated by the President, the cause of Indian civilization would be advanced many years."

Both the "Indian Rights Association" and the National Indian Aid Association, while differing in their views on some points of public policy, are united in the desire to retain J. H. Oberly as Indian Commissioner. This concurrence of judgment among those who have the interests of the Indians at heart, and who have long watched the course of events affecting their welfare, is a strong argument in favor of such retention.

SUMMARY OF EVENTS.

UNITED STATES.—The most awful catastrophe known in the history of Pennsylvania, occurred in the Conemaugh Valley, on 6th-day, the 21st of Fifth Month. After a steady rainfall of 48 hours, a cloudburst occurred in the valley on the afternoon of that day. About 2½ miles above Johnstown lies an enormous reservoir, that originally was one of the feeders of the old Pennsylvania canal. It was from 200 to 300 feet above the level of Johnstown, being in the mountains; and about 14½ miles in extent, the water in some places 100

feet deep. It is said to have been the largest reservoir, natural or artificial, in the United States, and was held in check by a dam nearly 1000 feet wide. At 3 o'clock P. M., this reservoir gave way under the pressure of the weight of waters. In one hour the waters had all run out, carrying with them most fearful destruction. Between 10 and 15 miles of houses and houses were crushed or carried with resistless force down the stream. At the stone bridge of the Pennsylvania Railroad, near Johnstown, the wreckage accumulated to an enormous extent, until the mass took fire, and hundreds of men, women and children, were burned to death. The loss of life and property will probably never be known. Governor Beaver, in an official proclamation, places the lowest estimate at 5000 deaths and \$25,000,000 in property, but these estimates are probably far below the reality. Generous contributions of money, clothing and other necessities are being made in various sections.

The same storm was very destructive through the Susquehanna and Cumberland valleys, as well as in other localities. The nearly universal feeling of sympathy with our afflicted fellow citizens in this truly awful and man's helplessness and constant dependence upon the mercy of our Heavenly Father, is an encouraging and comforting circumstance.

The Board of Pardons, at Harrisburg, has decided to recommend that the death sentence of Samuel Johnson, convicted of murder, of our friend John Sharpless, be commuted to imprisonment for life.

The Delaware Legislature (Democratic in the Senate and Republican in the House) has passed a bill raising the liquor license rates from \$100 to \$300 in Wilmington, Dover and New Castle, and to \$200 in every other place. Wholesale liquor dealers' licenses are fixed at \$100 and druggists' at \$20. The measure does not contain any tax restriction or Local Option provisions, and is to be considered as an act for revenue only. A Local Option bill passed the House, but was defeated in the Senate.

The Connecticut House of Representatives has, by a vote of 65 to 59, passed a bill giving women the right to vote on the question of the sale of intoxicating liquors.

In the Rhode Island House of Representatives, on the 31st ultimo, the Committee on Elections made a report concerning the Block Island bribery case. The report states that 75 to 80 votes were bribed to vote for John G. Sheffield, Esq., Republican, who holds the seat, from \$25 to \$100 being paid for votes. With the report was a resolution that John G. Sheffield, Jr., was not legally elected and not entitled to his seat in the House, and that C. C. Champlin was entitled to the seat. The House voted to continue the matter to the session in First Month next.

The colored citizens in Richmond, Va., have organized an independent party, to which no white man will be admitted. They propose to act in all political matters through a council of leaders of their own race.

The deaths in this city last week numbered 395, being 54 more than the previous week, and 58 more than the corresponding week last year. Of the whole number 185 were males and 208 females; 54 died of consumption; 24 of inflammation of the lungs; 21 of old age; 21 of inflammation of the brain; 17 of inflammation of the stomach and bowels; 16 of typhoid fever; 15 of cholera infantum; 11 of casanthal; and 10 of infection.

Markets.—*W.*—S. 4½, 8; 107; coupon, 107½; 4's, 129½; currency 6's, 118 a 130.

Cotton sold in a small way to spinners on a basis of 11½ cts. per pound for middling uplands.

Wool.—Winter lambs, clean and fancy, \$14.75 a \$15.00; do, fair to good, \$14.00 a \$14.50.

Flour and Meal.—Western and Pennsylvania super, \$2.71 a \$2.75; do, do, extras, \$2.87½ a \$3.37½; No. 2 winter family, \$3.50 a \$3.90; Pennsylvania family, \$4.00 a \$4.25; Pennsylvania roller process, \$4.10 a \$4.75; Old York, \$4.10 a \$4.40; do, straight, \$4.50 a \$4.75; Indiana, clear, \$4.10 a \$4.40; do, straight, \$4.50 a \$4.75; St. Louis and Southern Illinois, clear, \$4.10 a \$4.40; do, straight, \$4.50 a \$4.75; winter patent, fair to choice, \$4.75 a \$5.25; Minnesota, clear, \$3.25 a \$4.00; do, straight, \$4.50 a \$5.25; do, patent, \$5.35 a \$5.75.

Grain.—No. 2 red wheat, 87 a 90 cts.
No. 2 mixed corn, 40½ a 41 cts.
No. 2 white oats, 32 a 32½ cts.

Ref.—Best, from 74 a 75 cts.; good, 71 a 72 cts.; medium, 7 a 7½ cts.; fair, 6½ a 6½ cts.; common, 6½ a 6 cts.
Hutton.—Best, from 9 a 9½ cts.; good, 8½ a 8½ cts.; medium, 8 a 8½ cts.; fair, 8½ a 8½ cts.; common, 8 a 8½ cts.; lams, 12 a 14 cts.

FOREIGN.—Heavy storms of rain and lightning oc-

curred in the midlands of England on the 3rd instant. The lower part of Liverpool is under water. A bank building at Preston has been struck by lightning. Numerous accidents are reported from other places.

Balfour, the Chief Secretary for Ireland, has introduced in the House of Commons, bills for the drainage and improvement of the Shannon and other Irish rivers and lochs, and the construction of railways in Ireland.

A despatch from Berlin, dated the 3rd instant, says:—"It is expected that the protocol drawn up by the Sanction Conference will be signed on the 8th instant. The American Commissioners are making preparations to leave for home."

Sydney, N. S. W., Fifth Month 29th.—A hurricane, extending over an extensive range of the coast, has prevailed for four days. The rainfall has never been equalled. Railway traffic has been suspended, many landslips have occurred, and a number of lives have been lost.

News has been received in Washington of the signing of a treaty by the Governments of Bolivia and the Argentine Republic, settling the old boundary dispute between the two countries, and causing strained relations between the two countries.

A Pacific mail steamer has arrived at San Francisco with Chinese and Japanese news. Great fires are reported in Japan, which occurred on Fifth Month 3rd. At Yokoto a thousand houses were destroyed, the Emperor residing in the residence quarters on the island, at night, and burned for hours. Many lives were lost. The Emperor subscribed over 1000 pounds out of his own purse for the relief of the sufferers. About 10,000 people were rendered homeless. On Oshima Island an eruption took place Fourth Month 16th, and destroyed more than half the houses on the island.

Another peculiar disease has broken out in Tokandagi, the victims dying five hours after being attacked. A series of earthquakes were followed by the opening of the ground a thousand feet long by three wide.

CORRECTION.—A note from a friend in Iowa, informs, that last year Iowa Yearly Meeting (Conservative) decided to meet alternately at North Branch, Mass., West Point, and at Elm Branch, Cedar County; and that the present year it is to be held at West Branch.

In the printed "Extracts from the Minutes" of Philadelphia Yearly Meeting, Charles Wright, Jr., is said to have been appointed correspondent for Burlington Quarterly Meeting—it should have been said, correspondent for Upper Springfield Monthly Meeting.

NOTICES.

The Twenty-fifth Anniversary of the Home for Aged and Infirm Colored Persons, is to be held on Fifth-day, Sixth Month 13th, 1859, at 3 P. M.

A meeting for Divine Worship has been appointed by the joint committees of Philadelphia Yearly Meeting and West Point Quarterly Meeting, to be held at Newark, Delaware, in a Presbyterian meeting-house, at 7.30 P. M., on First-day next, the 9th of Sixth Month.

SOCIETY FOR HOME CULTURE.—The annual public meeting will be held at Friends' Select School 140 North Fifth-month Street, Seventh-day, Sixth Month 8th, at 3.30 P. M.

BOARDING.—Two women Friends can be accommodated with summer board, at Media, Pa. Address, P. O. Box 88, Media, Pa.

WANTED.—A competent Friend to teach in Chesterfield Preparative Meeting School at Crosswicks, N. J., beginning the first Second-day in the Ninth Month next.

For information apply to JOSEPH S. MIDDLETON, Crosswicks, Burlington Co., N. J.; or WM. BISHOP, Walsford, Monmouth Co., N. J.

WESTTOWN BOARDING SCHOOL.—During the Summer term the stage will be at Westtown Station to convey the West Point Quarterly Meeting to be held at 7.00, 8.53, 2.53 and 4.55 trains from West Point Station. J. G. WILLIAMS, Supt.

FRIENDS' ASYLUM FOR THE INSANE.—An Assistant Resident Physician, is desired to apply promptly to Dr. J. C. HALL, Supt., Frankford, Philadelphia.

Krakatoa.

FOR "THE FRIEND,"

(Concluded from page 354.)

"Lloyds' Agent at Batavia, 94 miles distant, says, that on the morning of the 27th of August, he reports and concussions were simply deafening. At Carimon, Java Island, reports were heard which led to the belief that some vessel off-hore was making signals of distress, and boats were accordingly put out to render succor, but no vessel was found, as the reports were from Krakatoa, 355 miles away. At Macassar, in Celebes, explosions were heard all over the province. Two steamers were sent out to discover the cause, for the authorities did not then know what they heard came from Krakatoa, 969 miles away. But mere hundreds of miles will not suffice to exemplify the range of this stupendous siren. In St. Louis Bay, in Borneo, a number of natives, who had been guilty of murder, thought they heard the sounds of vengeance in the approach of an attacking force. They fled from their village, little fancying that what alarmed them really came from Krakatoa 1116 miles distant. All over the island of Timor alarming sounds were heard, and so urgent did the situation appear that the Government was aroused, and sent off a steamer to ascertain the cause. The sounds had, however, come 1351 miles, all the way from Krakatoa. In the Victoria Plains of West Australia the inhabitants were startled by the discharge of artillery—an unwonted noise in that peaceful district—but the artillery was at Krakatoa, now 1700 miles away. The inhabitants of Daly Waters in South Australia, were rudely awakened at midnight on Sunday, August 26th, by an explosion resembling the blasting of rock, which lasted for a few minutes. The time and other circumstances show that here again was Krakatoa heard this time at the monstrous distance of 2023 miles. But there is undoubted testimony that to distances even greater than 2023 miles, the waves of sound conveyed tidings of the mighty convulsion. Diego Garcia, in the Chagos Islands, is 2267 miles from Krakatoa, but the thunders traversed even this distance, and created the belief that there must be some ship in distress, for which a diligent but necessarily ineffectual search was made. To pass at once to the most remarkable case of all, we have a re-

port from James Wallis, chief of police in Rodriguez, that 'several times during the night of August 26-27th, 1883, reports were heard coming from the eastward like the distant roar of heavy guns. These reports continued at intervals of between three and four hours.' Were it not for the continuous chain of evidence from places at gradually increasing distances from Krakatoa, we might well hesitate to believe that the noises James Wallis heard were really from the great volcano, but a glance at the map, which shows the several stations where the great sounds were heard, leaves no room for doubt. We thus have the astounding fact that almost across the whole wide extent of the Indian Ocean, that is to a distance of nearly 5000 miles (2968), the sound of the throes of Krakatoa were propagated."

"I have not space to enter fully into the discussion of the great sea waves which accompanied the eruption of Krakatoa. I shall content myself with the mention of three facts in illustration thereof. Of these probably the most unusual is the magnitude of the area over which the undulations were perceived. Thus, to mention but a single instance, and that not by any means an extreme one, we find that the tide gauge at Table Bay reveals waves which, notwithstanding that they have travelled 5100 miles from Krakatoa, have still a range of eighteen inches when they arrive at the southern coast of Africa. The second fact that I mention illustrates the magnitude of the seismic waves by the extraordinary inundations that they produced on the shores of the Straits of Sanda. Captain Wharton shows that the waves, as they deluged the land, must have been fifty feet, or, in one well-authenticated case, seventy-two feet high. It was, of course, these vast floods which caused the fearful loss of life. The third illustrative fact concerns the fate of a man-of-war, the *Berone*. This unhappy vessel was borne from its normal element and left high and dry in Sumatra, a mile and three-quarters inland, and thirty feet above the level of the sea."

"During the crisis on August 26-27th, the volume of material blown into the air was sufficiently dense to obscure the coast of Sumatra to such a degree that at 10 A. M. the darkness there is stated to have been more intense than it is even in the blackest of nights. The fire-dust ascended to an elevation which, as we have already mentioned, is estimated to have been as much as seventeen miles. Borne aloft into these higher regions of our atmosphere, the clouds of dust at once became the sport of the winds and the currents that may be found there."

"It appears that this cloud of dust started immediately from Krakatoa for a series of voyages round the world. The highway which it at first pursued may, for our present purpose, be sufficiently defined by the Tropic of Cancer and the Tropic of Capricorn, though it hardly approached these margins at first. Westward the dust of Krakatoa takes its way. In three days it had crossed the Indian Ocean and was rapidly flying over the heart of Equatorial Africa; for

another couple of days it was making a transatlantic journey; and then it might be found, for still a couple of days more, over the forests of Brazil ere it commenced the great Pacific voyage, which brought it back to the East Indies. The dust of Krakatoa had put a girle round the earth in thirteen days. The shape of the cloud appears to have been elongated, so that it took two or three days to complete the passage over any stated place. When the dust-cloud had regained the Straits of Sanda the eruption was all over, but the winds were still the same as before, and again the comminated pumice sped on its impetuous career. The density of the cloud had, however, lessened. Doubtless much of the material was subsiding, and the remainder was becoming diffused over a wider area. Accordingly, we find that the track of the stream during this second revolution is somewhat wider than it was on the first, though still mainly confined between the tropics. The speed with which the dust revolved was, however, unabated. Continents and oceans were again swept over with a velocity double that of an express train, and again the earth was surrounded within the fortnight. The dust-cloud had now further widened its limits, but was still distinguishable, and with unlesened speed commenced for a third time to encircle the earth. The limits of the stream had spread themselves outside the tropics, though still falling short of Europe. There is no reason to think that there was any decline in the velocity of 76 miles per hour, but the gradual diffusion of the dust begins to obliterate the indications by which its movements could be perceived, so that during, and after the third circuit the phenomena became so fuses that while their glory covers the earth, the distinction between the successive returns has vanished. In November the area which contained the Krakatoa dust had sufficiently expanded from its original tropical limits to include Europe and the greater part of North America. During the winter months the suspended material gradually subsided or, at all events, became evanescent, and in the following spring the earth regained its normal state in so far as the Straits of Sanda were concerned."

There is an old story of a beggar to whom one day there appeared by the way-side a beautiful being, with her hands outstretched, laden with treasures. As he gazed at her in stupid surprise, she glided past him; but she returned with her treasures still held out to him; and once more, with beseeching eyes, as if she would compel him to take what she offered, she passed slowly by and disappeared. She had no sooner gone than, as if waking from a dream, he hurried eagerly in the direction she had taken. He met a traveller, and said, "Have you seen a beautiful stranger, with her hands full of the things that I want going along this road?" "Yes," replied the traveller, "her name is Opportunity. But once offered, and once refused, she never returns."—*Congregationalist*.

FOR "THE FRIEND."

George Mason.

The testimony concerning George Mason, published in THE FRIEND, No. 43, has called to mind some interesting particulars respecting his visit to America in 1760, gleaned from some old letters, which may be worthy of preservation.

In a letter to Samuel Fothergill, dated Twelfth Month 22nd, James Pemberton thus alludes to this visit:—

"The return of this noble and experienced soldier, our worthy Friend, G. M. [George Mason], may perhaps at first hearing it cause some admiration, but I expect he will be able to give such an account of the manner in which it appears to himself as may satisfy the discerning view. His relation of his concern to Friends here, and the manner of his doing it, has I apprehend, left no room to suppose him under any deception, although it would have been lightly acceptable to all well-wishers to the Truth, it had been consistent with his duty and peace to proceed on his religious visit, but we must submit, having given us undeniable proofs of a Divine message, during his short stay among us. After being at the Yearly Meeting he visited all the Quarterly Meetings in this Province, as [also] some on the Eastern Shore of Maryland, and in the course of his labors hath [been] largely opened to the state of the church, and now apprehends himself entirely clear of a concern to labor further in these parts; which being a singular case has caused a variety of speculation, and many give him up to return with great unwillingness. Yet who durst venture to say, 'Thou art mistaken.' There may be a depth of instruction hereby conveyed and a use which is not easy to penetrate; and it therefore becomes us to seek for the means and assistance of making a proper application of such a dispensation by a solemn inquiry to what purpose we have applied the many extraordinary visitations of Divine regard manifested to us heretofore, when, alas! the present state of the church loudly claims our deficiency.

"The return of this Friend to England was attended with several remarkable occurrences. The early part of the voyage proved a very stormy one. In writing to his friend, Israel Pemberton, Fourth Month 5th, 1761, George Mason says: 'We thought we were twice on our way to the bottom, and I think we had cause to believe the Lord was pilot and preserver from the fury of the merciless waves. The war between England and France at this time, rendered the approach to the English coast very hazardous, and one morning when about three weeks at sea, George remarked to the captain that the wind that night had been in their favor and he believed had kept them out of the hands of a privateer, and pointing with his finger towards the south, said, 'I have a sense yonder is a privateer, but out of our sight.' They were kept by calms and easterly winds in about the same place for several days, during which George was attended with more than common uneasiness of mind, and slept but little. The wind again becoming favorable he encouraged the captain to make the best of it, which, however, was not strictly attended to; a few hours afterwards the man at the mast-head spied a vessel making towards them, which proved to be a French privateer from which they could not escape. Her captain took possession of the ship, and carried her to the coast of Spain, but treated George with uncommon civility and kindness. Here he and other pas-

sengers, one of whom was a woman Friend named Ann Moore, then going on a visit to England, landed at the small fishing port of Lastras, on the Bay of Biscay. Although among an unbeliving and dark people, yet way was remarkably opened in the minds of some of them towards George and his companions, and some of the friars they met with showed extraordinary marks of kindness and respect. While in Spain his mind was particularly drawn towards the approaching Quarterly Meeting at York. After travelling some distance in that country, he embarked at Portugalete for Holland, whence he proceeded to England, and arrived at Hull three days before the occurrence of the meeting.

"In giving an account to the Quarterly Meeting at York of his journey, and his unexpectedly short stay in America, he stated that he had felt himself remarkably edified with gospel authority, and had been abundantly confirmed that he was in the discharge of his duty; that he had not been long in this land before his mind was frequently turned towards his native country; which gave him disquiet, fearing it was a delusive apprehension, but on a certain occasion in a large Quarterly Meeting all doubt was removed that it was his duty to return home, and a language like this passed through his mind attended with an indubitable evidence of it being a revelation of the Divine will: 'I have visited this people from time to time, have sent many of my chosen servants among them; but those my favors have not had the desired effect; I, who brought thee here, will conduct thee back again, having made thee a cloud full of rain to come within their view but not to descend.' He was further instructed in reference to a remnant who were willing to receive the Divine visitation as tender plants that wanted watering, that the Lord would provide for and visit and water them by whom and in such manner as he saw meet, but as for him, he was ordered to return to his native country to fulfil such services as were appointed him there.

"George further stated that upon laying his prospect of returning before a meeting of Friends, he received its approbation and concurrence, and that Friends came severally to him afterwards, and expressed their sense of his duty, and unity with him therein, and in his resignation to the Divine will.

"Ann Moore also had an impression made on her mind that troubles would befall them in the course of this voyage, and that she should be preserved through them. In conversation with some of the ship's company, she had expressed her belief that they would be taken, but they laughed her to scorn. But when the captain and others at the sight of the French ship were struck with amazement and dismay, her mind was preserved from fear, and she felt easier than she had for several days. She remarks in her journal that in order to save the articles of clothing which she had in the vessel from falling into the hands of the French, she thought she would follow the captain's example and put on some of her best clothes, but when she attempted it she lost all power, and seemed as though she would have fainted. 'Then I locked them up, and said, if they take part they must take all, for I cannot put any of them on; and turning into my lodging room, I sat down alone, querying in my mind, what could be the matter: in this language passed secretly through me, "They that will lose their lives for my sake, shall save them," then I gave them all up, as though I never had owned them, not expecting to keep any of them, and felt sweet peace. By this time the

French privateer drew nigh to us, when our captain distributed his money, and threw some of it into my lap; yet would not believe it was French ship that was pursuing us until she came so near to us that one of our men who spied French said he was certain of it. Immediate after they fired a cannon, and hailed us, and a vessel not laying to as soon as the French wanted, they fired a second time; and soon after came on board our ship with drawn swords their hands as though they meant to kill all before them; tearing down the compass and looking glass, and hurried to our captain, mate and seven others on board their vessel, taking several chests and trunks with them.' The French treat Ann Moore with kindness, her clothing was given her, which having given up as though she had never owned them, 'increased my faith and confidence,' she remarks 'in my ever-blessed Guide.' After remaining for some weeks on the Spanish coast, where she was preserved through many exercises, and had some religious service with those who could understand her; she also obtained a passage to England, and was favored to arrive there safely in the Fourth Month 1761."

FOR "THE FRIEND."

A Visit to the Kaolin Works in Delaware County, Penna.

A kind friend having offered to take me to the Kaolin deposits, and some other points of geological interest in Delaware County, Pennsylvania, we left his hospitable abode on the morning of Fifth Month 28th.

The road which leads from the railroad station to his house, ascends a rather steep hill, which had been cut down in places for several feet through a partially decomposed rock, thus displaying some interesting exhibits of the stratification. For a few feet from the surface the rock had been thoroughly rotted—converted into earth and clay, such as we find in most of southern Pennsylvania. Below this the layers of the rock were distinctly visible—partially decomposed, but with thin layers of the more enduring materials (principally Quartz), still retaining the form of stone. These layers leaned up the hill, with a rather steep slope; but at several places, where they joined the loose earth near the surface, they were suddenly bent downward, as if the earth at some former period had slid, and carried along with it, in its descent, the upper parts of the strata beneath. We observed the same curious effect in one of the quarries we visited during the day.

Such slides are not uncommon, especially in mountainous countries, where in the spring of the year, or after a period of heavy or long-continued wet weather, a layer of clay may become so softened, or one of gravel so weighted by the water it has imbibed, that the earth above slides down the slope. In 1806, a destructive slide of this kind took place in Switzerland, and so extensive as to cover a region of several square miles in extent, and overwhelm a number of villages. A very curious one happened in 1862, near Tivoli, on the Hudson River. The land for a space of 3 or 4 acres, sunk perpendicularly, leaving a straight wall around the sunken area, 60 or 80 feet in height. An underlying bed of clay had been so softened as to be forced out sideways on the shore of the river by the pressure of the strata above. Part of the surface remained level with the trees standing.

When a bed of clay is so situated as to be subject to pressure, when in a softened state, and especially where there is some lateral motion, it

sometimes forced into folds or wrinkles, while the beds of rock above and below it remain almost unaltered. It is thought that some of the complicated foldings which the gneissic rocks of Pennsylvania exhibit, have been the result of milar forces acting upon them, when in a plastic state. But there seems to be but little doubt that the mountains of Pennsylvania, and the adjacent ridges of hills, which show so remarkable a uniformity in direction, from N. E. to S. W., have been formed by the slow contraction of the earth's surface, caused by its cooling on its originally heated condition. This contraction which has acted with inconceivable power, and with inconceivable power, has produced a pressure at right angles to the general line of the hills; and has forced the crust of the earth into the ridges which we now find. "The little rock," says Dana, "experienced the force gradually that it yielded with little fracture, except along the axes of the folds, where the strain was greatest. The folds were sometimes reversed over until their tops projected westward over their bases—which could only have been done by a force acting with extreme slowness."

There are ample proofs that rock, and even ice, which is a very brittle substance, will yield to long-continued pressure. If a long flat cake of ice is supported at the ends only, and left in that position, it will gradually bend by its own weight so as to be hollow in the middle; and I have seen slabs of stone in which the same effect had been produced in the same way. One of these was a heavy slab covering a grave in the yard by the old Presbyterian place of worship in Donegal, Lancaster Co., Pa. The two ends were supported by low walls, and there was a decided flexure in the stone.

The Kaolin beds lie along the valley of one of the branches of a small run called Beaver Creek. Half a mile or more to the south of it, is a belt of Feldspar, in which a quarry has been opened, from which large quantities of this mineral are being removed. It was an interesting spot, geologically very similar to that described on page 347. The Feldspar lay in a thick massive stratum, less mixed with Quartz than in the former mine. But Quartz was present in abundance, and crystals of Mica were scattered about, showing that the rock was not essentially unlike the gneiss rocks in the adjoining districts, and differed principally in the constituent materials being formed into separate masses, instead of being mingled in minute crystals. About 900 tons per month of this Feldspar are ground in a mill near by, and shipped to manufacturers of pottery, &c., in many parts of the United States.

The stone is first crushed into a coarse powder, by huge grindstones of several tons weight, which revolve upon it. This powder is then placed in iron cylinders where it revolves for several hours in contact with a bushel or so of small egg-shaped pebbles of extremely hard stone, brought from the coast of Greenland or Norway. This reduces it to a fine powder.

The visit to this quarry enabled me the better to understand the Kaolin deposit which appears to be a bed of 125 feet in width, lying at the bottom of the little hollow along which flows Beaver Creek. It has no doubt at one time been a layer of Feldspar, such as I saw exposed in the quarry in the vicinity, and through the decomposition which so readily affects Feldspar, it has been converted into white plastic clay, so valuable in the making of china. In the workings we visited a large amount of the overlying earth had been removed; but the Kaolin is now

obtained by sinking shafts into it to a depth of about 100 feet, and then running drifts as far as convenient into the clay. It is so impervious to water, that very little trouble is experienced in keeping the workings free from that fluid. How deep the deposit extends is not known, as none of the shafts that have been sunk, have reached the bottom; but it is probable that if a sufficient depth were attained, the Kaolin would be found to change into the rocky Feldspar, from which it has been manufactured by the chemical forces of nature.

A small spur of limestone rock projects at one end of the excavation. The proprietor of the mine suggested that the toughness of his Kaolin (which he claimed to be greater than usual) might be due to the presence of a portion of lime; and in support of this theory, he stated that at one time he had introduced water from some limestone springs into his mill, to wash the Kaolin. The effect was to render it so tough and plastic, that it was unmanageable, and would not pass through the pumps.

The Kaolin as it comes from the mine is a moist mass of clay. This is thoroughly mixed with water, and the quartz sand, and small particles of Mica which it contains are allowed to settle, while the particles of Kaolin remain longer in suspension, and are carried by the water into vats, where they also settle. The semi-fluid substance is then pressed in cloths to remove the most of the water, and the residuum dried, when it is ready for shipment.

Pure Kaolin is a silicate of Alumina, with a little water in combination. That furnished by the National Kaolin Company contains only about 2 per cent. of other ingredients, of which about 1.5 per cent. is oxide of iron. Where iron is more abundant, it gives the clay a darker yellow shade, which is objectionable in the manufacture of white ware. The quality of the clay must vary with that of the rock from which it is formed.

The great agent in the decomposition of the Feldspar rock is water percolating through the strata, and this is especially effective when there is a stratum of soil above it, from which the water can absorb vegetable and other acids, which act chemically on the rock. The depth to which the decomposition goes in a bed of Feldspar is determined by the drainage outlet of these percolating waters—which in the present instance is probably the bed of the Brandywine Creek, a short distance to the west of the mine.

Of the clay dug from these pits, about two-thirds are estimated to be sand and refuse; and one-third marketable Kaolin.

After leaving the Kaolin works and the Feldspar quarry, we visited a quarry or mine, from which a large amount of garnet rock is taken—which is used for making sand-paper and similar uses. The hardness of the material adapts it for such purposes. In describing the quarry at Avondale in Chester County, a few weeks ago, I spoke of the large rounded crystals of garnet which were imbedded in the stone of that quarry. Garnets are found in many places in the slaty rocks (Mica-schists) which abound in the southern parts of Delaware, Chester and Lancaster counties; and in some places they so abound as to form a large part of the substance of the rock. The specimens which we obtained at the "Garnet Mine" were composed of masses of crystals, from the size of a small grain of sand to that of a large pea, intermingled with quartz and some Mica.

During one part of our day's travel, we passed over a field of quartz gravel, which reminded

me of my Jersey home—especially when I saw specimens in which the gravel had been cemented together by oxide of iron, forming a pudding-stone, such as is common in eastern New Jersey, and which is spoken of in the geological treatises, as a *Ferruginous conglomerate*.

J. W.

FOR "THE FRIEND."

John Churchman.

(Continued from page 358.)

I retained my care and circumspection for some time; but through unwatchfulness and a desire for play, which led into lightness and forgetfulness, I lost this state before I was twelve years of age; and though the Lord was near, and followed me by his reproof, in order to bring me under judgment, I fled from it as much as I could. I let in a belief, that as I had been favored to taste in so wonderful a manner, "of the good word of life, and powers of the world to come, and had so shamefully fallen away, there remained for me no more sacrifice for sin; and a fearful looking for of judgment, and fiery indignation," which as I thought, burned in me to that degree that I was afraid to be alone, for it seemed to be loudly proclaimed in me, that whether I eat, or drank, waked, or slept, I was accursed. When alone, I abhorred myself; but when in company, I used my utmost endeavors to hide my condition by being cheerful and artful in my discourse, and was thought by most young people to have a knack, as they called it, at jesting and witty turns; yet even in this time, I contained such a value for religion, that I was not willing to disclose my situation, lest I should be a reproach thereto, or discourage others from seeking happiness. When night came and I went to bed, no tongue can express the anguish I felt. I was afraid to lay awake, and afraid to desire sleep, lest I should be cut off from the land of the living, and my portion appointed in utter darkness. I so far neglected my learning, that when about thirteen years old, I could read but poorly, though once a ready reader. I was not willing that good Friends should take notice of me, or look me steadily in the face; for I thought they would discern my wickedness, and it would be a trouble to them, or their reproving me would add to my distress. I seemed to be left without any power to resist what I knew to be evil, and being ashamed that I had so lost my little learning, I sought to divert myself by endeavoring to regain it. My former genius and delight returned, and when about fifteen years of age, I had made great improvement, not only in reading, but in writing, arithmetic, and several branches of the mathematics, and began to value myself thereon, and so got over the convictions of the Divine Witness, which spoke trouble in me. During this time I was diligent in attending meetings, hoping at seasons that the Lord would descend once more to visit me; for a saying of an eminently pious man was revived in my remembrance, "That if there remained a desire in the heart after redemption, as it was kept to, the Lord would again assuredly visit such in his own time." I was therefore fearful of neglecting meetings, lest I might miss of the good intended for me; yet the subtle working of the power of darkness was very great, suggesting to me that all things came by nature, and that there was no God, no heaven, no devil, no punishment for evil, religion a jest, and no painful care about futurity a silly whim, propagated to deprive people of pleasure in life. But blessed be the Lord! He preserved me from this snare; for while I felt his judgments for sin, I believed in

his being and holiness; and I am indeed fully of the mind, that no man can be an atheist before he acts contrary to knowledge, when, to allay the horror and anguish of mind he feels for the commission of sin, he closes in with this temptation. At other times the same subtle power would tempt me to despair of mercy, which, if given way to, would lead to distraction; but the hand of the Lord was underneath, though for my disobedience He suffered me to remain in the wilderness and to dwell as among fiery serpents, until He had wasted that disposition in me which lusted after forbidden things.

In this state I continued until I was about nineteen years of age, and as I was one day walking to meeting, thinking on my forlorn condition, and remembering the bread in my Heavenly Father's house, of which I had partaken when I was a dutiful child, and that by straying from Him, and spending my portion, I had been eight years in grievous want, I inwardly cried, if thou art pleased again to visit me, I beseech thee, O Lord, visit my body with sickness, or pain, or whatever thou may please, so that the will of the old man may be slain, and every thing in me that thy controversy is against, that I may be made a sanctified vessel by thy power; spare only my life, until my redemption is wrought, and my peace made with thee!

About this time, viz., in the Tenth Month, 1824, my father died, which was a great loss to our family; and as he had allotted me to live with and take care of my mother, it became my duty to keep mostly at home. I spent nearly a year in the condition above mentioned; often out of hope of ever attaining to the state I had witnessed when very young; but in the fall of the year after I had arrived to the age of twenty years; it pleased the Lord to remember me, who had been an exile, in captivity under the old taskmaster in Egypt spiritually, and by his righteous judgments mixed with unspeakable mercies, to make way for my deliverance. I was visited with a sore fit of sickness, which in a few days so fully awakened me, that I had no hope of being again entrusted with health. My negligent time, and all my transgressions were brought to my remembrance, and heavy judgment was upon me for them. I was met with in this narrow path, and could no longer fly from God and his spirit in my conscience, whose sore displeasure I had justly incurred. I had heard of men who had been notorious offenders, and fled from the justice of the law, until they became outlawed; such in a spiritual sense my case appeared to be. I thought I had, as it were, heard an act of grace and free pardon repeatedly proclaimed, if I would return and live uprightly for the future; but in the time of such visitations, I concluded it was only to bring me under judgment and to take me from my pleasure, for that my offences would never be pardoned, and so I had withstood, or neglected those visitations. I now saw clearly, that herein I had followed the lying suggestions of Satan, my enemy. At this time my old will in the fallen nature gave up its life, and I cried, "I am not worthy to live or enjoy thy favor, yet Oh Lord! if thou wilt be pleased to look on me with an eye of pity, do what thou wilt with me, magnify thy own name, prepare me by thy judgments and power that thy mercy may be shown in and by me, whether thou cut the thread of my life, or shall grant me more days, which is only in thy power." My heart was made exceedingly tender. I wept much, and an evidence was given me, that the Lord had heard my cry, and in mercy looked down on me from his holy habitation, and a

willing heart was given me and patience to bear his chastisements and the working of his eternal Word, which created all things at the beginning, and by which only poor fallen man is created anew in the heavenly image and prepared to praise Him with acceptance, who lives for ever and ever.

Whilst I lay in this condition I said little or nothing, but was quite sensible, yet exceedingly weakened, having for about twenty-four hours felt more inward and inexpressible anguish, than outward pain. Toward the morning of the fifth day and night of my illness, I felt the incomes and owning of Divine love in a greater degree than ever; for the prospect I had of so great forgiveness made me love the more, for love is ever reciprocal. I saw the morning light and thought all things looked new and sweet. I lay where the sun shone near, or on my bed, and have sometimes since thought, that being weak, the strength of the light and too much company hurt me. I leave this hint to excite nurses and those who have the care of very weak indisposed people, to beware of letting over much light come upon them, or many visitors, except they be such who are sensible of the weak by being inward and quiet, waiting to feel the sympathy which truth gives, the company of such being truly refreshing.

It pleased the Lord to restore me so that I recovered my usual strength, and was frequently humbled under a sense of the tender dealings of a merciful God, whose goodness and owning love I felt to be very near. I then loved retirement and to feel after the incomes of life, and was often fearful lest I should again fall away. In this time it was manifested to me, that if in patience I stood faithful, I should be called to the work of the ministry. I loved to attend religious meetings, especially those for discipline, and it was clearly shown me, that all who attend those meetings should wait in great awfulness, to know the immediate presence of Christ, the Head of the Church, to give them an understanding what their several services are, and for ability to answer his requirements, for it is by his light and spirit that the Lord's work is done with acceptance, and none should presume to speak or act without its motion and direction. They who act and speak without it, often darken counsel, mislead the weak, and expose their own folly, to the burthen and grief of sensible Friends. It was in great fear that I attempted to speak in these meetings, and as I kept low, with an eye single to the honor of truth, I felt peace and inward strength to increase from time to time. It is good for all who are concerned to speak to matters in meetings for discipline, to take heed that their own spirit do not prompt thereto, and to mind the time when to speak fitly; for a word in season from a pure heart is precious, and frequently prevents debates instead of ministering contention, and when they have spoken to business, they should turn inward to feel whether the pure truth owns them, and in that rest, without an over anxious care whether it succeeds at that time or not, so Friends will be preserved from being lifted up, because their service is immediately owned; or if it should be rejected or slighted, in this inward humble state, the labor is felt to be the Lord's.

(To be continued.)

"The children of this world are wiser in their own generation than the children of light," but it is not necessary for Christians and churches to act foolishly in order to make good their claim to be true disciples.

OUR OWN.

SELECTED.

If I had known in the morning
How wearily all the day
The words unkind
Would trouble my mind
I said when you went away,
I had been more careful, darling,
Nor given you needless pain;
But we've "our own"
With look and tone
We may never take back again.

For though in the quiet evening
You may give me the kiss of peace,
Yet it might be
That never for me,
The pain of the heart should cease.
How many go forth in the morning,
That never come home at night!
And hearts have broken
For harsh words spoken
That sorrow can ne'er set right.

We have careful thoughts for the stranger
And smiles for the sometime guest;
But oft for "our own"
The bitter tone,
Though we love "our own" the best.
Ah, lips with the curve impatient!
Ah, brow with that look of scorn!
"We were a cruel fate
Were the night too late
To undo the work of morn."

—M. E. Sangster.

HE GIVETH HIS BELOVED SLEEP.

SELECTED.

BY ALEXANDER R. THOMPSON.

O precious gift of thoughtful love!
It wariness is time-fitted,
That it can need or ask, above
All price, the benison of rest!
The rest that help and healing brings,
To wakeful eyes that watch and weep,
Beneath its strong and silent wings.
He giveth his beloved sleep.

And then to them whom lovingly
His tender hand to sleep hath stilled,
He giveth on in full and free
Restowal, till all need is filled,
To sinew strength, so it may bear
The burden of another day,
To failing heart the will to dare
The strain and peril of the way.

And thus there cometh by his gift,
Out of this mimic death of sleep,—
Marvel of love,—the silent lift
To fuller life, whose every act can keep
Upon the rugged way their hold,
And steadily can onward fare,
Come toil and trouble manifold
Gladness or sadness, peace or care.

He giveth sleep, with gentle hand
From weary limb and throbbing brain,—
His angel,—to unclasp the band
That holds them prisoners to pain.
In slumber sweet the gift he gives,
Longer or shorter let it be,
Yet for the while a glad release,
A welcome, blessed immunity.

Sometimes the waking here below
Is only to another morn
Of time on earth; but even so
His own to fresher life are born.
And sometimes they from sleep awake
Not here, but on the other side;
And so to them has come the break
Of the transcendent morning-tide.

—S. S. Times.

TO AN AFFLICTED CHRISTIAN.

'Tis a Heaven below
Our Saviour to know,
And to feel that his presence is near us,
To sweeten the way
While on earth we still stay,
And in our afflictions to cheer us.

D. H.

FOR "THE FRIEND."

Early Meeting-houses of Friends.

(Continued from page 357.)

FOURTH STREET MEETING HOUSE.

The meeting-house on Fourth Street near the corner of Chestnut, on the site now occupied by the William Forrest buildings was erected in 1763, and seems to have been designed largely to accommodate the "Youths' Meetings," which were organized in 1696, and held four times a year, on the second day after the Quarterly Meeting; also to afford a suitable place to hold Monthly and other business meetings. Although the chambers of the Great Meeting House had been fitted up for that and kindred uses, as before alluded to, Friends did not appear to be well fitted in that respect, and after various plans had been proposed, among others the enlargement of the Pine Street House, the following conclusion was reached:—

Seventh Month, 1763.—"It being considered, and now agreed to, that a building should be erected on some part of the lot belonging to this meeting on which the Public School House stands, which may not only serve for this purpose, but for the accommodating the meeting also Quarterly with the scholars under the care of Friends, which has for some time past been much wanted."

A committee was appointed to prepare a plan and make an estimate of the cost, who proposed that the building be one story high, 76 feet front on Fourth Street, 42 feet deep, and 12 feet high; and that it should not stand nearer the wall of the school house than 25 feet; their plan was adopted and the work commenced. But upon further consideration it was determined to raise the building another story.

Eleventh Month.—"The Friends who undertook to solicit subscriptions for carrying the meeting house (now building) another story, report that they have obtained subscriptions to the amount of 550 pounds, &c., upon consideration whereof, and the report of the workmen that materials may be readily procured, it is agreed to carry up the wall another story between 10 and 11 feet, and to get the house covered in," &c.

It was completed the following year, as appears by a minute of the Monthly Meeting, as well as in the answer to the general queries, viz:—

"At a Monthly Meeting held in our new meeting-house in Fourth street, Philadelphia, the 5th of Tenth Month, 1764," and "A new meeting-house on Fourth street in this city (has been built) for the accommodation of our meetings for discipline."

After the division of Philadelphia Monthly Meeting into three parts, or Districts in 1772, the Monthly Meetings for the Southern District were held in this house, as is shown by their opening minute, viz:—

"On the 25th day of the Eleventh Month, being the fourth of the week, 1772, divers men and women Friends assembled in our meeting-house on Fourth street, being the first Monthly Meeting of Friends of Philadelphia for the Southern District, appointed for the maintaining of the testimony of Truth and our Christian discipline, within the limits prescribed for the said Monthly Meeting."

A select school for girls was held in the second story of this building for many years; later a primary school was opened on the first floor, after it ceased to be used as a meeting room.

The building was taken down in 1859, and

the large block of business buildings erected on its site, and that of the old Academy building, which was removed in 1867.

FAIR HILL MEETING.

The first meeting we find made of this meeting, is by a minute of Philadelphia Monthly Meeting, in the Twelfth Month, 1702, viz:—

"Some Friends living distant from the meeting, between this and Germantown, and Frankfort, proposed the building of a meeting-house near the Half-Way Run. The meeting after considering the matter, thought fit to leave it to the neighborhood of Friends thereabouts, if they think themselves able to go on, without the assistance of Friends in the town, who are at present building a meeting-house, and cannot help them, unless they defer it to another year."

"A piece of ground containing four acres was purchased in 1703 by Nicholas Wain and John Goodson, for the sum of £8, current money, of Pennsylvania, by the direction and appointment of the members, or persons belonging to the Monthly Meeting of the people of God called Quakers, in Philadelphia, and by them held in trust, for the benefit, use, and behoof of the poor people of the said Quakers belonging to ye said meeting forever, and for a place to erect a meeting-house and school-house on for ye use and service of ye said people, and for a place to bury their dead," on which was afterward erected Fair Hill Meeting-House.

This land was bounded on the northwest by another tract of land of 20 acres, which came into the possession of Friends by the will of George Fox. "For a meeting-house, and a school-house, and a burying place, and for a playground for the children," &c.

There was considerable difficulty in getting the land located, and the title does not appear to have been fully confirmed to the Monthly Meeting of Philadelphia until the year 1767; seventy-seven years after the death of George Fox.

The meeting-house was erected probably in 1706, as a minute of Second Month, 1707, mentions it as being completed; also that a bill was presented "for fencing a little burying ground at Fair Hill, which was allowed, and ordered to be paid; David Lloyd and Anthony Morris are desired to enquire into the conveyance of the said house and ground at Fair Hill."

Tenth Month, 1759.—"The meeting being informed that some convenience is wanting at Fair Hill meeting-house the better to accommodate the holding of their meeting and school there, Isaac Zane (*et al.*) are desired to view the same, and after conferring with Friends of that meeting to get what is necessary done."

First Month, 1761.—"The Committee reported a bill for repairs, and building a partition in Fair Hill meeting-house, which was approved."

This house does not appear to have been used as a meeting house much after the beginning of the present century; for in the allotment of property to the different Monthly Meetings in 1817, there was assigned "to Green Street Monthly Meeting the four acres of land at Fair Hill, on which was the old graveyard, and all the buildings, including the brick kitchen attached to the stone farm house, which was erected for Fair Hill meeting-house."

This venerable structure, in which many of the ancient worthies delivered their gospel messages, was obliged to give way to the march of improvement, and was removed in 1885 to form of the opening of Cambria street.

J. W. LIPPINCOTT.

Saved by a Lark.

"There is a nest in there, and I am going to find it," said Helen to herself. She parted the tall yellow wheat-stalks to right and left, and went forward, looking all about her with her bright, sharp eyes. She did not have to go very far, for before her was the nest, sure enough, and in it were three little birds.

Was there ever anything so cunning as those little heads, with their tiny bills wide open! It was such a pretty place for a nest too. Helen clapped her hands again, she was so happy.

Then she sat down by the nest, but she did not touch the birds. It was like being in a golden forest, for the grain was high above her head.

Soon her eyes began to feel heavy, for she was very tired after her long walk. She lay down, with her head upon her arm, and in a short time was fast asleep.

On came the horses, drawing the great reaper with his sharp, cutting knives. Helen's father was driving, and they were coming right towards the spot where the little child was lying. Oh, Helen, little does your father think that you are hidden there in the tall grain!

What was it that made the farmer check his horses all at once? Did something tell him that his dear baby was in danger? Oh, no; he thought that she was safe at home with her mother. But he was a good man, with a kind heart, and he saw something that made him stop.

The lark was flying wildly about over the grain that was in front of the reaper. She seemed to say, "Stop! stop!" The farmer thought that he knew what she meant, and he was too kind-hearted to harm a bird's nest. So he said to one of the men, "Here, Tom, come and hold the horses. There must be a nest somewhere among this grain. I will walk in and look for it."

What a cry the men heard when he found little Helen fast asleep by the lark's nest! How his heart almost stood still when he thought of the danger that she had been in! He caught her up in his arms and covered her face with kisses. "Oh, my darling!" he said, "it was the lark that saved you."

Yes, it was the lark, and his own kind heart, that had saved her. Helen was carried home in her father's strong arms. She could not understand what made the tears run down his cheeks.

It was some time before the men could go on with their work. They left the grain standing around the lark's nest, to thank her, as they said, for saving little Helen.

As they stood looking at the little birds in the nest, one of the men, with big tears in his eyes, said, "God bless the birds! Come away, boys, and let the little mother feed her babies."—*Harper's Second Reader.*

A Deed of Kindness at Newton, Massachusetts.—The hill was alive with merry boys and girls on a bright afternoon in winter. What fun it was indeed to coast swiftly down the icy slope, and what shouts of ringing laughter as the sleds flew down the hill.

Young and old seemed to be having the gayest time possible. Big boys on double-runners, with crowds of little tots at their backs, with rosy cheeks and sparkling eyes, turned the sharp corner at the end of the hill, to shortly help drag the heavy carry-all up to the top again.

The sun had almost set, and its rosy light filled the street, but before any had started to go

home, a man driving a large load of wood began to ascend the icy path. The sleds steered out of the way, as the poor horse tried almost in vain to go on.

Suddenly he stopped, for he could go no further. The road was so slippery that in trying to walk his hind legs slipped from beneath him. The man seemed enraged, and began whipping the poor creature cruelly. As the horse could not go on, the man struck harder. Meanwhile, a little girl, Amy by name, got off her sled, and stepping up to the man said politely, "Couldn't I help you with your horse, sir? the load of wood seems very heavy for him." The man looked very much surprised, but stopped immediately. Amy went up to the horse, patted his nose gently, and whispered kindly in his ear. A number of boys were taking a few of the logs off the cart, and transferring them to their sleds to drag up the hill.

Amy then led the horse along, for she was very gentle, and the noble creature was perfectly willing to obey her. The man walked along, and really felt much ashamed, as he ought. At last they reached the top, and the boys put back the wood, as the load was not too heavy for a level. As the children all bade each other good-night to go home, the man turned around, saying, "Many thanks to ye, my lads, and to the little missy," which showed how he felt. Which do you think was happier that night, the horse, or the little girl who belonged to the Society for the Prevention of Cruelty to Animals?—*D. M. D. in Our Dumb Animals.*

Old Age.—Rowland Hill, himself a very old man, says that he heard of one who was asked what age he was. He answered, "The right side of eighty." "I thought you were more than eighty," said the inquirer. "Yes, I am beyond it," he replied; "and that is the right side, for I am nearer to my eternal rest."

A man once said to Dr. Rees, "You are whitening fast." The doctor answered him in a sermon which he preached immediately after: "There is a wee white flower which comes up through the earth at this season of the year. Sometimes it comes up through the snow and frost; but we are all glad to see the snowdrop, because it proclaims that the winter is over, and that the summer is at hand. A friend reminded me last night that I was whitening fast. But heed not that, brother; it is to me a proof that my winter will soon be over—that I shall have done presently with the cold east winds and the frosts of earth, and that my summer—my eternal summer—is at hand."

To a humble Christian it was remarked, "I fear you are near another world." "Fear it, sir!" he replied, "I know I am; but, blessed be the Lord, I do not fear it—I hope it."

The apostle Paul was an old man, but, happily for him, he was no agnostic, and, so he could say, "I know in whom I have believed, and that He will keep that which I have committed to Him until that day; henceforth there is laid up for me a crown of righteousness."

But for old age to be happy it must be a time of acceptance. Old age fought against is miserable; old age accepted is calm and peaceful. Enamelled wrinkles dare not smile; the honest wrinkles may even laugh. To be living in a mistake is to be living in a false position, and in all false positions there is weakness and discomfort and misery.

The way to be happy in your old age is to consider that you are not in a false position, but in a right one—in the one which God has or-

dained for you, and therefore in the one which contains blessings for you—its blessings, its own peculiar blessings. Where you meet with disappointment is in expecting from it what does not belong to it, and what would not be blessing even if it did.—*The Quiver.*

Natural History, Science, &c.

Bread of Water-Lily Seeds.—A variety of water-lily, called Water-Chestnut, grows in China, the fruit of which is collected by women and children, who paddle about among the plants in small circular boats resembling wash-tubs. Other species are grown in Cashmere, where the lakes become so crowded with plants that navigation is impossible. The fruit has the flavor of a chestnut, and may be eaten either raw or cooked. The seeds of the Lotus (*Nelumbo*) were much used as food in ancient Egypt. The Khamath Indians use the seeds of the yellow water-lily (*Nupha lutea*).

Whiskey and Rattlesnake Poison.—Dr. S. Weir Mitchell mixed the virus of the rattlesnake with alcohol, and injected the solution into animals, and found that its power was not altered. The effect of the poison was less powerful in larger animals than small. The benefit derived from taking whiskey after being bit by a rattlesnake is due to its sustaining the flagging powers while the poison is being eliminated from the system by the excretory organs.

Vegetable Life and Deposits in Hot Springs.—In the Yellowstone springs the maximum temperature at which vegetable life has been found is 185° Fah. Algaes growths are very common in the alkaline waters of the Geyser Basins. With rare exceptions, the yellow and salmon tints of the geyser pools, and the red, orange, green and brown of the hot springs are produced by algaes vegetation.

The algaes vegetation by its vital processes abstracts silica from the hot spring water in which it is dissolved, and converts it into a gelatinous deposit. On the death of the alga this jelly loses part of its water, and gradually hardens until it becomes a hard, stony mass.

Electrical State of Atmosphere.—In Dakota the atmosphere became so charged with electricity that it was dangerous to touch metallic bodies. A net of barbed wire that came loose set fire to a field of grass. A cow passing along by a barbed wire fence would sustain a continuous fire of sparks from the bars. In fact the Territory was pretty nearly in a state of spontaneous electrical combustion.—*Scientific American.*

Leather Tanning by Electricity.—A French firm has succeeded (says the *Scientific American*) in so applying electricity as to hasten the process of tanning. The raw hides are placed in large cylinders, with a decoction of tannin, and made to revolve slowly, while an electrical current is kept passing through the drum. The saving of time and expense over the former method is said to be large.

Poppy Roots.—The Red Poppy has been found to have the property of binding with its roots the soil in which it grows in such a manner as to be valuable in supporting embankments. Several French engineers have undertaken the sowing of railway embankments with poppies.

Child Carried Away by an Eagle.—A peasant with his wife and three children, had taken up his summer quarters in a chalet, and was pasturing his flocks on one of the rich Alps which overhang the Durance. The oldest boy was an idiot, about eight years of age; the second was

five years old and dumb; and the youngest was an infant. It so happened that this infant was left one morning in charge of his brothers, and the three had rambled to some distance from the chalet before they were missed. When the mother went in search of the little wanderer she found the two elder, but could discover no traces of the babe. The idiot boy seemed to be in a transport of joy, while the dumb child displayed every symptom of alarm and terror.

In vain did the terrified parent endeavor to collect what had become of the lost infant. The antics of the one and the fright of the other explained nothing. The dumb boy was almost bereft of his senses, while the idiot appeared to have acquired an unusual degree of mirth and expression. He danced about, laughed, and made gesticulations as if he were imitating the action of one who had caught up something of which he was fond, and hugged to his heart. This, however, was some slight comfort to the poor woman, for she imagined that some acquaintance had fallen in with the children, and had taken away the infant. But the day and night wore away, and no tidings came of the lost child.

On the morrow, when the parents were pursuing their search, an eagle flew over their heads at the sight of which the idiot renewed his antics, and the dumb boy clung to his father with shrieks of anguish and afright. The horrible truth then burst upon their minds, that the miserable infant had been carried off in the talons of a bird of prey, and that the half-witted elder brother was delighted at his riddance of an object of whom he was jealous.

On the morning on which the accident happened, an Alpine yager,

"Whose joy was in the wilderness—to breathe
The difficult air of the icel mountain's top,"

had been watching near an eagle's nest, under the hope of shooting the bird upon her return to her nest. The yager, waiting in all the anxious perseverance of a true sportsman, beheld the eagle slowly winging her way toward the rock, behind which he was concealed. Imagine his horror, when, upon her nearer approach, he heard the cries and distinguished the figure of an infant in her fatal grasp.

In an instant his resolution was formed to fire at the bird at all hazards, the moment she should alight on her nest, and rather to kill the child, than to leave it to be torn to pieces by the horrid devovner. With a silent prayer, and a steady aim, the mountaineer poised his rifle. The ball went directly through the head or heart of the eagle, and in a minute afterward the gallant hunter of the Alps had the unutterable delight of snatching the child from the nest and bearing it away in triumph. It was dreadfully wounded by the eagle in one of its arms and side, but not mortally; and, within twenty-four hours after it was first missed, he had the satisfaction of restoring it to its mother's arms.—*Arcine's Cyclopaedia.*

Items.

Slavery in Egypt.—In view of the complications on the Zanibar coast it may possibly interest you to have a *resumé* of the methods by which slavery in Egypt has been abolished—as it may now practically be said to be—and of the opinion which has been arrived at in the course of the twelve years' work done since the signing of the Convention, with regard to the utility of endeavoring to intercept caravans of slaves. In the first place we must take the slave-trade as existing under very much the same conditions as any other trade, and remember that when the Government determined to interfere with it there were the usual elements to deal with.

was regulated by the common laws of supply and demand, and it could only be attacked, as all trade attacked, in the market of produce, the market of live-ry, and the transit between the two ports. It was on a campaign, a general who shall direct it intelligently is a condition of the first necessity, and the circumstances of Ismail's deposition and the her political troubles which followed shortly after the signing of the Convention, this was precisely what was wanted. The application of the Convention to the Convention was left in the hands of the existing provincial governors and other officials, who had already their own work to do, and up to the year 1850, the part of the Convention which was most effectually carried out was the clause directed against the capture of slaves in the Soudan. In that year, the necessity of more department was having made itself felt, a new department was created. The director of this department had under him a force of from 800 to 1,000 men, and he employed them almost entirely in the attempt to prevent the importation of slaves into Egypt. He was sent to stop the passage of large caravans of slaves on the coast; his duty was to prevent the smuggling of slaves, which are in great request, the prospect that his system could achieve was to check the open passage of the living merchandise, and to use it to be brought in in smaller quantities, and with risk, of which the unfortunate slaves had frequently to pay the principal cost in the additional sufferings that he imposed upon them. In the year 1852, followed by the English occupation and the reorganization of the public offices, brought about another change. The slave-trade department was amalgamated with the gendarmerie, of which General Baker became Inspector-General, and Colonel Schaefer was made entirely responsible for the department's administration. Since that time the Colonel Schaefer has taken the place of the general. He has had a great deal of sympathy and help from the Egyptian as well as from the English government. The Khedive and Riaz Pasha have shown warm interest in the movement, and have helped him whenever it lay within their power. "The Egyptian slave-trade is not only well known to need to be dwelt upon. These represent the political forces which stand in every way behind the fighting force. The credit of the actual planning and carrying out of what has been done belongs to Colonel Schaefer. It determined, since he could not fight the slave-trade at his source, to fight it here, and try the effect of a determined assault upon the market of delivery. He obtained a list of slave-dealers. There were then, although the Convention had been for six years a force, thirty-two in Cairo alone. He had them closely watched, and prosecuted whenever the chance presented itself under the provisions of the Convention, obtaining convictions and retributions. In addition to the material loss of the confiscated slaves, varied from one to five years of imprisonment with hard labor. An order of Riaz Pasha made the buyers equally guilty with the sellers. Men of wealth and social position were tried and condemned by court-martial and hanged. In one or two cases the penalties were made retroactive, and the violability of the bargain, and made the slaves responsible for a purchase of which they declared themselves to be in ignorance. A woman could not be brought before a court-martial; but she Khedive was appealed to, and by the simple exercise of his personal authority a lady of noble rank or a year was granted her liberty. The punishment was severe under the circumstances which attend it than it sounds, and it was found to be effectual. Excuses of the kind were not repeated. Still great difficulties existed in the way of obtaining information. Anything like a house-to-house visitation is, of course, impossible in a half-turban country, where the women wrap one-self up in society in its veil. It was essential to win, somehow or other, the co-operation of the slaves themselves, and to convey to their minds the main fact that by the law of Egypt they had only to ask for their freedom in order to become free. The manumission bureaus at which they had to present a petition was held by the Convention. But there were only four—one in Alexandria, one in

Cairo, one for the provinces of Lower Egypt, and one for the provinces of Upper Egypt. They were managed by Esch, near the frontier, and up to the year 1855, they were independent of the Slave Trade Department. In 1855, when Colonel Schaefer had already been at work for two years, they were placed under his control. He immediately multiplied them throughout the provinces, creating one for each province throughout Egypt, and in the provinces of Esch, near the frontier, where they were most required, one for each district. Each bureau became not only a centre for the performance of its own special work of giving out manumission papers to the slaves who asked for them, but in a very effective, if informal, way a centre of advertisement of the movement. The information filtered to the ears of slaves that slavery was at an end for those who chose to end it. Even in the most carefully kept harems they are not prisoners. It became possible for everyone to go to a manumission bureau, and the result of the multiplication of these offices was that the number of slaves freed in Egypt amounted to nearly from about 600 to 1,800 a year. It is now steadily decreasing, and it is confidently hoped that before long the possession of slaves, as well as the trade in slaves, in Egypt will be a thing of the past. At present it must not be forgotten that the possession of slaves is not illegal. The Convention was directed against the buying and selling. The possession of them was left to die the natural death which must result from the suppression of the trade. Nothing has dealt a sharper blow at the trade than the ease with which the slaves are now freed. It has converted them from a good to a bad investment.

Practically, therefore, the conclusion to be drawn from the work of the last twelve years in Egypt are, first, that it is perfectly possible to destroy the slave-trade in any given market of delivery, and the Turks, if they would, might destroy it in a similar manner in Asiatic Turkey, which is at present the principal market of the slavers of the Soudan; secondly, that the great importance to attach to the market of supply, but this can only be done by having the source of supply under the control of an orderly Government; and thirdly, that it is almost useless to attack it between those two ends. The result of coast and frontier blockades under existing geographical conditions has not shown to be that a very small percentage of imported slaves can be stopped so long as the trader is sure of his price in the market with which he deals, the loss of these is not great enough to affect the trade. For one show in ten which may be captured the trader reckons himself in the price of the other nine, and the freedom of the few slaves who obtain their liberty is paid for by the hiked sufferings of the remainder, who are carried to their destination under the difficult conditions of concealment.—*Abridged from "The Manchester Guardian" of Fourth Month 20th. From a Cairo correspondent.*

What Shall a Bright Girl Read?—The late Bishop George F. Pierce, of the Methodist Episcopal Church, South, in a letter, dated St. Louis, Oct. 5th, 1856, to his daughter Claude, gives the following wholesome counsel:—"I wish, my daughter, that you would devote yourself to serious reading. It is necessary, not only to develop your mind and make your knowledge respectable in society, but it is a high moral duty. It is a grave question whether a Christian ought to read anything that does not increase knowledge and prepare for life. The very most that can be allowed on the other side is a little light reading for recreation. You, I fear, are wasting time with magazines and tales and empty stories in general. This is a great evil; in fact, a sin. Quit it. Read history, biography, poetry, the English classics; study the Bible in its doctrines, principles, and history. You will thus improve your mind, heart, character. I want you to be wise, good, happy. The time has come for you to prepare earnestly for life and its responsibilities. A word to the wise is sufficient."

THE FRIEND.

SIXTH MONTH 15, 1859.

The mail of this morning (Fifth Month 27th) brought two proofs of the interest felt in the proposed "prohibition amendment" to the Constitution of Pennsylvania. One was a letter from a valued Friend in Kansas, who says:—"It has been with deeply exercised feelings that I have looked forward to the election that is to decide the question of continuing the open saloon under the sanction of the State [of Pennsylvania]." "It seems to me that we have had all the facts and arguments needed in this case; and that what is needed now in that State contest, is to incite the people to lay aside all party claims, all evil surmises as to whether the adoption of the amendment will hurt or help this or the other political party—and weigh the saloon in the balance against the individual citizen, against the peace, quietude and prosperity of the country against every thing that ennobles, elevates and refines—and then go to the polls and vote their honest conviction of right."

As to the condition of things in Kansas, the same Friend says:—"It may be safe to say, that our prohibitory laws are as well enforced as other criminal laws at this time—so much so that no liquor is made in the State; there is no open saloon under the sanction of State license, and but very few places where liquors are sold openly."

"Whereas we had nine years ago several large breweries and some distilleries, a number of extensive wholesale liquor-dealers, and several thousand saloons, much drinking to intoxication; now comparatively we have none but what is under the ban of law. Unprecedented prosperity has followed the banishment of the saloon."

The other was a copy of the West Chester *Local News*, containing an appeal to the young men of Chester County, by our friend William P. Townsend, cautioning them against the use of strong drink, in which he quotes Charles Lamb's warning to the intemperate, as follows:

"The waters have gone over me; but out of the black depths, could I be heard, I would cry out to all those who have set a foot in the perilous flood. Could the youth, to whom the flavor of the first wine is delicious as the opening scenes of life, or the entering upon some newly discovered paradise, look into my desolation and be made to understand what a dreary thing it is, when he shall feel himself going down a precipice with open eyes and a passive will; to see his destruction and have no power to stop it, and yet feel all the way emanating from himself; to see all his empy emptiness of him, and yet not be able to forget a time when it was otherwise; to hear about the piteous spectacle of his own ruin. Could he see my fevered eye, feverish with the last night's drinking, and feverishly looking for to-night's repetition of the folly; could he but feel the body of the death out of which I cry hourly with feeble outcry to be delivered, it were enough to make him dash the sparkling beverage to the earth in all the pride of its mantling temptation."

We are pleased to see these evidences of concern in regard to what we are all convinced is a great evil; and we would gladly encourage all our readers to patiently dwell under such a feeling, which will not only prompt each one to

such labors as may be right for him or her to undertake, but will awaken secret aspirations to the Father of all, to rebuke that which is wrong, and to save men from destruction. The Apostle Paul, in writing to Timothy, exhorted that "supplications, prayers, intercessions, and giving of thanks be made for men; for kings and for all that are in authority; that we may lead a quiet and peaceable life in all godliness and honesty." We are told, that the fervent, effectual prayer of a righteous man availeth much. Therefore let none think themselves useless because the only field of service open to them seems to be secret pleading with the Almighty Ruler for the exercise of his power on the hearts of his people. Cowper says of him whose warfare is within, where unfatigued his fervent spirit labors:

"Perhaps the self-approving, haughty world, that
 "Exalts its deigns to see above him,
 Receives advantage from his noiseless hours,
 Of which she little dreams. Perhaps she owes
 Her sunshine and her rain, her blooming spring
 And pteaceous harvest, to the prayer he makes,
 When, Isaac-like, the solitary saint
 Walks forth to meditate at event-ide."

SUMMARY OF EVENTS.

UNITED STATES.—The work of clearing away the debris of the flood at Johnstown, in this State, is progressing rapidly. About 7000 laborers were employed the past week. It has been decided that the State authorities should assume all liabilities for the removal of the debris from the town sites and the drift at the stone bridge, and the work necessary for putting the valley in good sanitary condition and preventing the pollution of the water supply of distant cities and towns. It is also agreed that money set aside for the relief of the sufferers should be used in clearing the towns; that this work should be done by the State, and that the contributions of money, food, clothing, &c., which the public are expected to continue, shall be used to supply the necessities of the survivors. The medical and nursing services in the district up to the 10th instant are more than 5000, of whom about half have been identified.

Thirty-two lives were lost during the flood in Centre County, this State. The damage to property will be over \$2,000,000. It is estimated that three-fourths of the 200,000,000 of lumber carried away from Williamsport is floating about the Chesapeake or lying on its shores.

Navigation in Chesapeake Bay is badly obstructed by the immense quantity of logs and lumber, and other drift matter, through which vessels can pass only after great delay and with extreme care. At night navigation is not practicable.

Washington, D. C., has suffered heavily from the flooded Potomac River. Some of the streets of the city were flooded, and the only traffic in them was by means of boats. The damage to property is about \$2,000,000.

A great conflagration in Seattle, Washington Territory, on the night of the 6th instant, burned over 64 acres, destroying the entire business portion of the city. The loss is estimated at \$10,000,000. The insurance amounts to about \$4,000,000.

It is reported from the Rosebud Agency in Dakota that the Chiefs Yellow Horn, Bear and High Hawk have withdrawn from the opposition and agreed to sign the treaty. Their action insures the acceptance by the Indians of that agency of the terms offered by the Government for the cession of the surplus land of the Great Sioux Reservation. The Commissioners, in concluding a treaty with the chiefs and warriors of Indians living at a distant point, will go to the Pine Ridge Agency.

The International Indian Council held its final session in Purcell, Indian Territory, on the night of the 6th instant. The land question was discussed, and the agents of the Government presented their allotment plan, and resolutions were adopted in executive session reprimanding the Creeks for selling Oklahoma; opposing the sale by the Cherokees of the Cherokee outlet or any other lands in the territory, and calling upon the various tribes and nations to give up each one of its people to be educated in their land system and further enrichment of whites.

In announcing the arrival at Deming, N. M., of Lieutenant Schwatka, a despatch from that place

states:—"His party has been successful beyond all expectations in their explorations, and especially in Southern Chihuahua, where living cliff and cave dwellers were found in great abundance, just as any of the Mexican writers at the time of Cortez's conquest. The above facts are in an exactly similar manner to the old, abandoned cliff dwellings of Arizona and New Mexico, about which there has been much speculation. It was almost impossible to get near the dwellers, so wild and timid were they. Upon the approach of white people they fly to their caves by notched sticks placed against the face of the cliff, if so exactly although they can ascend vertical stone fences if there are the slightest crevices for their fingers and toes."

Laura Dewey Bridgman, the celebrated blind deaf mute, died on the 24th of Fifth Month, at the Perkins Institute at South Boston. She was born in Hanover, N. H., on the 12th of 1829. Until two years ago all her faculties were intact. At that age a fever deprived her of speech, sight, hearing and smell. With the only remaining sense, that of touch, she learned to read, converse, sew, and do all, in fact, that a person thoroughly endowed could do. She was scintillatingly active in her dress, delighted in company, and very affectionate.

Governor Hill, of New York, has vetoed the bill to tax the sale of beverages, known as the Veder bill. His grounds are that it is useless, cumbersome and extravagant, existing laws being amply sufficient to cover the ground to be covered by the bill. The Governor says it was introduced and urged before the Legislature simply to retard and embarrass the proper solution of the excise question. The Governor also vetoed the High License bill. He said it was pressed merely as a matter of political expediency.

The Connecticut House of Representatives on the 4th instant, defeated the bill giving women the right to vote on questions pertaining to the sale of intoxicating liquors.

The British steamship Red Sea is now bound to Philadelphia from Hamburg with 4000 tons of beet sugar and is the largest cargo of the kind ever brought to this port since 1829.

Deaths in this city last week numbered 286, a decrease of 7 as compared with the previous week and an increase of 66 as compared with the corresponding week last year. Of the foregoing 196 were males and 190 females; 45 died of consumption or of diseases of the lungs; 21 of consumption; 29 of old age; 18 of inflammation of the brain; 17 of inflammation of the stomach and bowels; 15 of marasmus; 15 of convulsions; 14 of typhoid fever; 12 of cholera infantum and 11 of apoplexy.

Markets, &c.—U. S. 4½, 107; 4½, reg., 128½; coupon, 129; U. S. 6's, 118; U. S. 10's, 131.

Cotton sold in a small way to spinners at 1½ cts. per pound for middling uplands.

Feed.—Winter bar, choice and fancy, \$1.75 a \$1.90; do., fair to good, \$1.40 a \$1.50.

Flour and Meal.—Western and Pennsylvania super, \$2.40 a \$2.75; do., 4's extras, \$2.87 a \$3.37; No. 2 winter family, \$2.50 a \$3.00; Pennsylvania family, \$4.00 a \$4.25; Pennsylvania roller process, \$4.10 a \$4.75; Ohio, clear, \$4.10 a \$4.40; do., straight, \$4.50 a \$1.75; Indiana, clear, \$4.10 a \$4.40; do., straight, \$4.50 a \$4.75; St. Louis and Southern Illinois, clear, \$4.10 a \$4.40; do., straight, \$4.50 a \$4.75; winter patent, fair to choice, \$4.75 a \$5.25; Minnesota, clear, \$4.00 a \$4.00; do., straight, \$4.50 a \$5.00; do., patent, \$5.35 a \$5.65; do., favorite brands, high holder.

Grain.—No. 2 red wheat, 90 a 90 ½ cts.

No. 2 mixed corn, 41 a 41 ½ cts.

No. 2 white corn, 35, 32 a 33 cts.

Feed.—Best selling from 7.50 a 8.00 cts.; good, 6½ a 6½ cts.; medium, 6½ a 6½ cts.; fair, 6 a 6 cts.; common, 5½ a 5½ cts.

Mutton.—Best selling from 92 a 10 cts.; good, 91 a 9½ cts.; medium, 91 a 9½ cts.; fair, 9 a 9½ cts.; common, 87, 87 a 87 cts.; range, 17 a 18 cts.

FOREIGN.—Arthur Wellesley, Peep, Speaker of the House of Commons, welcomed the visiting American engineers at Leamington, on the 10th instant. In his address he said the English people admired the great feats performed by American engineers. Any one travelling in America was bound to admire the enormous works of art and the great progress and advancement of nature. The heart of England went forth to the great republic beyond the sea. The visitors would find a ready welcome everywhere.

At the Thames Police Court, London, some days ago, a woman, who had been convicted 257 times at the same court for the same offence, was charged with being drunk and disorderly. She got five days of hard labor.

Two houses of leading Boulangerists have again been searched by the police. It is alleged that papers which implicate General Boulanger in an International plot were discovered.

A violent shock of earthquake occurred at Brest, France, on the 7th instant.

The town of Zbariaz, in Austrian Galicia, was almost entirely destroyed by fire on the 10th instant. Many lives were lost.

On the 6th of the present month, Premier Crispien announced in the Chamber of Deputies that the Italian troops occupied the Trentino district in Abyssinia, and that henceforth that district would be retained by Italy.

It is reported in St. Petersburg that during Shah's visit there a secret treaty was made between Russia and Persia for the temporary annexation of Nowa Russia to the latter certain provinces.

The Panama Canal enterprise has failed beyond retrieval. The Jamaica Government has sent a commissioner to direct the removal of the workmen. It has already sent away 4,000. Three thousand more will go as soon as steamers can be found. The snuffing of the coal in the district is intense. Food and shelter are almost inaccessible. Further, the tropic wet season is at its height.

A despatch from Ottawa says, the Weldon Extension act of last session has been transmitted to the Imperial authorities for approval or otherwise, the honor of the act being reserved to the Imperial Government within two years after its passage by the Parliament of Canada. In the event of its being intimated by the Imperial authorities that the act be left to operation, it is proposed to declare it in force an effect as regards the United States and Mexico.

CORRECTION.—Owing to a misapprehension, a sentence was omitted from the article on "Our Testimonies," in last week's FRIEND, by which a wrong impression is given. The remarks: "Your strength will consist in your keeping to yourselves. If you mix with the world you will lose your strength with your distinctive peculiarities," were attributed to Joseph Lewis, which is not correct, as they were made by E. K. Price. The interesting remarks of Jos. J. Lewi follow in the next paragraph.

NOTICES.

WESTTOWN BOARDING SCHOOL.—A Stated Meeting of the General Committee will be held at the school on Fourth-day, the 19th inst., at 8 A. M.

Services will be held at the Friends' Meeting-house the previous evening, at 7 o'clock, at the school.

The Visiting Committee met at the school on Seventh-day, 15th inst.

The conveyances will meet the 2:55 and 4:55 trains on the 15th and 18th instants, at Westtown Station.

WM. EVANS,

Philada., Sixth Mo. 1889. Clerk.

MARRIED. Sixth Month 6th, 1889, at Friends' Meeting-house, Fourth and Arch Streets, Philadelphia, CHARLES C. SCATTERGOOD, of Paoli, Chester Co., PA., to MARY S., daughter of James and Lydia A. Davis of Malvern, Chester County, Penna.

DIED. First Month 15th, 1889, SUSAN T. SEXTON wife of Thomas Sexton, in the 64th year of her age, member of Chesterfield Monthly Meeting of Friends, &c., at his residence, in Hamilton Co., Ind. This Mo. 28th, 1889, DAVID HAWORTH, an esteemed member of Westfield Monthly and Preparative Meeting (Smaller Body), aged 61 years, 4 months and 9 days. He was firmly attached to the principles of Friends and a regular attender of meetings while health permitted. After being deprived of that privilege, he spoke of the trials the Society was passing through, and, as he thought it his duty, he spoke of the affliction upon them as a subject of no small importance, and the direction of truth ought to be followed therein as well as in other things. At another time he spoke of having endeavored to examine himself, with self-loathing, and could not see anything in his way,—he believed that he was a hypocrite, and would show it to him. His bereaved family and friends have the comforting belief that their loss is his gain.

FOR "THE FRIEND."

John Churchman.

(Continued from page 391.)

It is a great favor that the Lord is pleased to cover his children with his pure fear, and to tray their souls with the garment of humility, that they may stand in his presence with acceptance, waiting to be taught of his ways, and in meekness to be guided in judgment. These feel the necessity of minding that excellent exhortation, "Be ye steadfast, immovable, always abounding in the work of the Lord." In a degree of recent thankfulness, I bless the name of the Lord through his beloved Son, that according to my measure I knew what I now write; it was a time of growing with me, I rarely passed a day without feeling the incomes of Divine life, and was favored strongly to desire the sincere milk of the holy word, that in humility I might thereby grow in substance. But afterwards I was left for many days together, without inward refreshment, and was ready to fear that I had offended my gracious Redeemer; and being thoughtful and inwardly engaged to know the cause, I had to consider that children, though they may be thriving, and darlings of their natural parents, are not fit for much business until they are weaned; and although they grow finely, they are gradually taught to wait the appointed time between meals, before they have much care of their father's business, and are further prepared, so as to miss a set meal, or be a longer time without outward food, before they are fit for a journey. With these thoughts a hope began to revive in me, that I was not forsaken, of which indeed, as I kept patient, I was at times abundantly sensible, even those times which are in the Lord's hand; for his children experience that the times of refreshment come from Him, who when He has exercised and proved them, in his infinite kindness is pleased to cause them to sit down, and condescend himself to serve them. Blessed for ever be the name of the Lord who knows how to prepare his soldiers to remain faithful, and endure with patience what the natural man would account hardness!

I had strong desires that elderly Friends should be good examples to the youth, not only in word and conversation, but in meetings for the worship of God, and it grieved me exceedingly to see any of them overcome with sleep. My

concern for one Friend was so great on that account, that I knew not what was best to do; and reasoned after this manner: Lord! thou knowest that I am young, and he an elderly man, he will not take it well that I should speak to him, and perhaps I may yet fall; and if so, the more I take upon me, the greater my fall will be; besides, though I have spoken in meetings for discipline, when truth hath been strong upon me, yet out of meetings, I am not fit to reprove, or speak to particulars. I was cautious indeed in those days, of talking about religion, or good things, from a fear I should get a habit thereof, and so not know the true motion; which I thought I had observed to be the failing of some. In this strait it came into my mind to go to the person in the night, as the most private time and manner; for if I took him aside before or after a meeting, others might wonder for what, and I might betray my weakness and reproach the good cause, and do no good, and if the Friend should be displeased with me, he might publicly show, what otherwise he would conceal after private deliberation. So in the evening I went, desiring the Lord to go with and guide me, if it was a motion from Him. When I came to the house, I called, and the Friend came out to see who was there, and invited me in. I told him I was in haste to go home, but wanted to speak with him if he pleased, and so passed quietly toward home, to draw him from the door, and then told him my concern for him in a close, honest, plain manner; and without staying to reason much, left him in a tender loving disposition, as I believe, and returned home with great peace. When thou dost or givest alms, let not thy left hand know what thy right hand doeth, is an excellent precept. The left hand of self should not act in such things; so neither how privately they are done, they often answer the end better; neither is it a fault to lay things low and familiar, the truth will have its own weight, and accompany what it dictates with its own evidence. My intention in writing this, is to encourage the humble careful traveller in the way of his duty. Sometimes it appeared to be likely to do most good to write my mind, which I did with success, as I aimed only at a discharge of duty in the most private manner, and the good of those to whom I wrote.

In the twenty-fifth year of my age, I married Margaret Brown, a virtuous young woman, whom I had loved as a sister for several years, because I believed she loved religion. I think I may say safely, it was in a good degree of the Lord's pure fear, and a sense of the pointings of truth, on both sides, that we took each other on the 27th day of the Eleventh Month, 1729, old style, in an appointed meeting at West Nottingham, and I thought that our Heavenly Father owned us with his presence. The covenants made in marriage are exceedingly great, and I think they never can be truly performed without Divine assistance; and if all who enter into a marriage state, would in the Lord's fear seek his assistance, they would know their own tempers kept down, and instead of jarring and dis-

cord, unity of spirit, harmony of conduct, and a concern to be exemplary to their offspring would increase and be maintained.

In the year 1730, a Monthly Meeting was settled at Nottingham by the advice of the Quarterly Meeting; it being before a branch of New Garden Monthly Meeting. This brought a weighty concern upon me and many others, that the affairs of truth might be managed to the honor thereof; for we had but few substantial elderly Friends. In a sense of our weakness, it was the breathing desire of my soul that the Lord would be pleased for his own sake, and the honor of his great name, to be near his children and inspire them with wisdom and judgment for his own work. Blessed for ever be his holy name! I believe He heard our cry, and in measure answered our prayers; and we being kept low and humble, it was a growing time to several. My affection to Friends of New Garden Monthly Meeting was so great, that for many months after we parted from them, I seldom missed attending it, and therein had great satisfaction, and some of their members frequently attended ours, for our love towards each other was mutual.

When I was about twenty-six years of age, some Friends were appointed to perform a family visit, and being desirous of my company, I joined with them, and therein felt the ownings of truth in some degree. But notwithstanding I saw at times the states of families and particulars, yet not in so clear a manner as I thought necessary to make it my duty to open my mouth in the service, save now and then, in a private way to particulars, of which none knew except those to whom I spoke. At one house the Friends of the service had a good opportunity, several young folks, some of whom were not of the family, being present. I felt the Divine presence to be very near, and a motion to conclude that sitting in supplication and thanksgiving to the Lord, but was not hasty, for fear of doing what was not required of me, so omitted it, and afterwards asked an experienced worthy minister, if he had ever known any Friend appear in a meeting in public prayer, before he had appeared in public testimony; which inquiry I made in such a manner as to give him no mistrust of me; he answered, "no," I believe it would be very uncommon. It struck me pretty closely, but I kept my condition very private; having been exceedingly fearful of deception, and now began to doubt whether it was not a delusion for me to entertain an apprehension that I should be called to the work of the ministry; the concern thereof had been at times very heavy upon me; though no motion that felt like a gentle command to break silence, until at the house before mentioned. I let in reasoning, and so departed for a time from my inward guide and safe counsellor, as all assuredly will, who place their dependence on man for instruction, to perform duties required of them; or who forbear, or reason against the humbling, gentle motions, and leadings of the Spirit of Truth. Our only safety is in attending steadily thereto for instruction

and ability to perform religious services, and when performed, we ought to be tender of the sentiments of our brethren concerning them, and not over confident of our call and commission; for our brethren have a measure of the same spirit by which we are taught, and have a sense and right thereby given to judge of our service. A becoming diffidence of ourselves, and a readiness to attend to the advice of such, is the badge of true discipleship; Divine love teaches us to esteem others rather than ourselves.

This was an exercising time to me, but I did not discover it to any one. I seemed to be forsaken, though not sensible of much judgment for my omission of duty, for I could with sincerity appeal to Him who knoweth all things, that it did not proceed from wilful disobedience, but a fear of following a wrong spirit, and a secret hope revived that my gracious Lord and Master would not cast me off, and blessed be his holy name! He did not leave me very long before I was favored as usual, but had no notion of the same kind.

(To be continued.)

FOR "THE FRIEND."

Of Thomas Wilson, who travelled and labored extensively in the ministry of the Gospel of Christ, and departed this life in the year 1725, it is related in his journal that in 1682 he landed at Dublin and from thence travelled to some other meetings, particularly the province meeting at Castle Dermot, and visited friends in the counties of Wexford and Wicklow and had several heavenly and satisfactory meetings with them. "Some little time after," says he, "the motion of life in me for travelling ceased, and I durst not then go further; but I returned back to the county of Wexford and wrought harvest work at Lambstown for some time; after which James Dickinson from Cumberland came to visit friends with an intention to go into Munster, and the Lord was pleased to open my way to go with Him, and we travelled together in true brotherly love, and had a prosperous journey; and I saw it was good to wait the Lord's time in all things. When we had travelled through Leinster and Munster, James Dickinson went northward, but I was afraid," said Thomas, "of running before my true guide (because they who run and are not sent of God can neither profit the people nor themselves), and so I staid at work in the city of Waterford about sixteen weeks, and afterwards left for my home in Cumberland."

The same care is requisite in the present day to feel and to be made sensible of the pure leading and openings of the True Shepherd, and not to yield to the temptation to run before, but to follow Him. Wherever the disposition to go beyond the clear sense of the Divine requiring is felt, it is safe to conclude that it arises from self and not from the Lord. "All who approach unto God with their offerings are to be watchful and careful, both with what and how they offer under this administration of the Spirit and dispensation of the new covenant."

If this care is not felt and maintained we shall gradually drift backward until we are landed on the same sort of ground occupied by what are called the Evangelical sects, but be in a far worse condition.

"In our regular assemblies for public worship, how can one assume the direction, or how can the exercises be conducted by a prescribed system, without circumscribing the leadership of Christ, and the liberty of his servants and handmaidens in the exercise of his gifts?"

FOR "THE FRIEND."

A Ride on the Banks of the Susquehanna.

The friend to whose kindness I was indebted for the opportunity of visiting the quarries of flint and serpentine in Harford County, Maryland, as described in numbers 26 to 29, of THE FRIEND, invited me and my companion to take a ride with him up the tow-path of the canal which follows the west bank of the Susquehanna. Having accepted his kind offer, we made our way to his house, near Darlington, Maryland, on the 14th of Fifth Month, and the next day took our proposed ride.

In the lovely woods which border that noble river, we found many birds, among them were the Catbird, Goldfinch, Baltimore Oriole, Scarlet Tanager, Maryland Yellow Throat and others which we could not identify, but whose whistling notes enlivened our journey.

As we passed northward from Conowingo, it was interesting to notice the change in the rocks which rose from the banks of the canal. The Susquehanna is bordered on the west by lofty, abrupt and rocky hills; and there were many places where the necessary space for the canal at their feet, had been obtained by building high walls from the bed of the river, and removing projecting rocks opposite them. As we passed the successive ridges which abutted on the river, this process had left great faces of rock almost perpendicular. Opposite each of these could be traced a ridge of rocks projecting above the bed of the stream, the remains of the higher ridges, which had been gradually worn down and washed away by the waters. These river rocks had a water-worn appearance, with the projecting edges on the top planed off, and numerous pot-holes.

After passing the Granitic or Gneiss strata through which the river runs in the lower part of its course, we drove by the Flint Ridge which we had crossed some miles to the westward in our former visit; and then the Serpentine rock, and after that the ledges of Peach Bottom slate—most curiously twisted. North of this the prevailing rock was a micaceous or talcose rock of slaty structure such as in Chester County makes a wide southern border to the Chester Valley limestone.

The Susquehanna River abounds in fish; and at the proper season of the year the shad and herring ascend it in great quantities to find suitable places to deposit their eggs. In the race-way leading to the wheels of a mill, which we passed, there were a number of herring swimming near the surface; and we were told that earlier in the season they had been so numerous that 15,000 were taken by the use of scoop-nets.

During our visit, I noticed many varieties of plants in bloom which do not flourish in our Jersey soil. Among these were the Papaw (*Asimina triloba*), a member of the Custard Apple family, which contain about 300 species, nearly all of which are tropical plants, and some of them highly esteemed for the rich custard-like pulp of the fruit. The fruit of the Papaw ripens in the fall of the year, is 3 or 4 inches long, and is sweet and edible—some think resembling a banana in flavor. The Papaw is a small tree or shrub, and grows from 10 to 20 feet in height. The flowers are about an inch and a half in diameter, of a dull purple color. The petals are 6 in number, in two sets of 3 each, and of a leathery consistence. It is abundant on the banks of the Susquehanna, and on the Ohio hills.

Here and there along the roadside, or on the

rocks, were patches of a low plant almost like bed of moss, with white flowers. It was the *Sto. Crop*, or Purslane-leaved Houseleek (*Sedum tetanum*), which is often cultivated in garden. The leaves are small, and thick and fleshy. T flowers are at the summit of the stem, arranging in three diverging spikes.

In some of the crevices in the rock masses) the side of the canal, were the bright bl flowers of the Spider-wort (*Tradescantia virginica*), a plant with long grass-like leaves, a stem full of slimy mucilage. Near by it were the red blossoms of the Wild Columbine (*Ag. legia canadensis*). These plants both look attractive, but the canal lay between them at us, so that we had to leave them ungathered.

At different points on the canal we observe piles of the wood of the Tulip Poplar, cut in cord wood lengths, and waiting to be conveyed to the paper-mill below Conowingo, where it used in making printing and wall paper. The mill is driven by the water of the Susquehanna and has about 2000 horse power, derived from six Turbine wheels. In addition to 600 cwt of poplar, it consumes annually about 1000 cord of Spruce wood, and a large amount of rags and other materials. The sticks of wood are cut by a circular saw into lengths of about 16 inches. These are then subjected to the action of a scraper which removes the bark. After the have been split into convenient thicknesses, they are put into another machine, where they are firmly held by hydraulic pressure against the face of huge revolving grindstones, and soon reduced to fine fibres. In the engines the further process of grinding is completed. The different constituents of the paper are mixed in vat, where the finely divided fibres are suspended a pulp in water, and flows out on to the paper making machines. The fibre of the spruce wood were told, was rather stronger than that of the poplar, but the poplar made a whiter paper and one which absorbed the ink more readily in printing. The rags are added to give additional strength.

At McCall's ferry where we stopped to feed our horses, I wandered into the woods, and was much pleased to find the beautiful little *Orchis Spectabilis*, sometimes called Priest in the pulpit. It has two rather large, smooth and fleshy leaves close to the ground, and a single stem a few inches high, with several purple and white flowers. I had often seen it in the woods of Pennsylvania, but had not met with it for several years.

It would be tedious to enumerate all the plants we met with, or to attempt to describe all the interesting objects we saw. The day was favorable, the roads smooth, the company agreeable, and the trip one which furnished both interest and information.

In the times of slavery, it was not unusual for runaway slaves to follow up the tow-path of this canal in their flight towards freedom. We were shown the former residence of a family that had acquired an evil reputation for enticing into its dwelling such hapless fugitives, and then betraying them to those who claimed the ownership, for the sake of the promised reward. Going on from bad to worse, they had even kidnapped some free people of color, and sold them into bondage. One of these, who had been carried to Georgia, found means to write to his friends in the North, and was restored to his home and freedom. The man who was guilty of stealing him, fearing the consequences of his crime, deserted his home and left for parts unknown.

J. W.

"Give me the pulpit I want, and the salary I demand, and I am a Methodist. Refuse me this, and I am a Rationalist, a Spiritualist, or any thing I choose." No amount of talent, no degree of brilliancy can compensate for the absence of honesty and truth. Men who play fast and loose with conscience will soon have no conscience that can be trusted.—*Christian Advocate.*

FOR "THE FRIEND."

Our Heritage.

"Lo, children are a heritage of the Lord."—Ps. cxxvii. 3.

Where is the flock that was given thee, thy beautiful flock?—Jer. xiii. 20.

"The young children ask bread, and no man breaketh it unto them."—Lam. iv. 4.

Recent articles in THE FRIEND, bearing upon the subject of rightly directed religious observances in the family, and the effect of truly reverent scriptural readings, have led the writer to consider, also, the great necessity of a continual rightly sustained Christian example on the part of parents and teachers, and all others who are brought into contact with young and susceptible minds. An example which encourages watchful care in the performance of every little duty, and the exercise of every needful restraint, at the same time maintaining ready sympathy, interest, and love, for all that pertains to their best welfare here and hereafter.

The responsibilities and privileges of parents and teachers, are so closely linked together, the weight of the one is often balanced by the pleasure of the other. A position of great trust is invariably a position of great opportunity. Divine help alone can enable us rightly to realize the one, or improve the other; and it is indeed a great attainment to be able, as Susanna Lightfoot expressed it, "to feel the hungry and thirsty souls about us," and to be qualified, as parents and teachers and friends of the children, "to guide their feet in the way of peace."

Mary Lyon used to say to her pupils at Mount Holyoke Seminary: "There is nothing in life I so much fear, as that I shall not know and do all my duty."

The writer bears in grateful and pleasant remembrance the exceedingly conscientious life of a teacher, whose heart seemed so impressed with the responsibilities of her position, and her own accountability, that she used frequently to say: "I know not what to call little things. Every movement, word and action, seems to me so important."

A manner that invites all needful freedom and helpful confidence on religious subjects, and at the same time forbids and checks a familiarity which is in the least lacking in reverence, should be very carefully maintained by those who would be true helpers of the young, in this day of varied practices and diverse opinions. "To seek a right way for us, and for our little ones, and for all our substance" should be the renewed desire of each responsible member.

It is exceedingly interesting to notice in the early Annals of Friends, the deep interest felt by parents and others, for the children. Francis Howgill's letter to "Daughter Abigail," a child very dear to him, bearing date of Sixth Month 25th, 1666, is a striking illustration of a father's religious desires for a child. From his advice we may judge her mother was equally qualified to guide and instruct; for, after counselling her thus, "Love the Lord with thy heart and soul, and still wait for the knowledge of Him in thyself; for He is not far from thee, but near unto thee and unto all who call upon Him with an

upright heart," he adds: "And do thou enquire of thy dear mother, she knows Him, and the way to life and peace; and hearken to her instruction."

One has impressively said: "Where true heart-changing religion rules in the parents, the family circle must necessarily be a privileged place. How often have we seen the earnest concern, the living exercise and travail of the parents for the eternal well-being of the children eminently best."

William Sewell very instructively refers to the religious life of his mother:

He relates that the night before her departure, she called him to her bedside, and exhorted him very fervently to depart from evil, and to fear the Lord, "which," he says, "by the mercy of God, in time, made a very deep impression on my mind, so that I still find reason to bless the name of the Lord, for having been pleased that I was the son of such an excellent mother." Years after her death this regard for her memory is cherished and almost quaintly shown in his history, in an apology for so lengthy a notice of Josiah Conle, "who," he says, "was indeed dear unto me, and I have his kind usage yet in remembrance; for the piety of my mother, whom he had seen in England, caused him to give me marks of the esteem he bore her memory."

The religious sympathy existing between William Penn and his son Springett, is another touching instance. The description of that "closed door" and season of heavenly communion enjoyed by this devoted father and his dying son, appeals strongly to the deeper feelings of the reader; and William Penn's closing words of the account, "In him I lost all that a father could lose in a child," show not only a depth of parental tenderness, but the great comfort in witnessing a consistent Christian experience in a child.

(To be continued.)

INTERPRETATION.

SELECTED

The lamp burned low, the hour was late,
The embers died within the grate,
Yet with an anxious brow she sat,
And questioned keenly of the day
Just closed, that had been told away
In work that would not brook delay.

"I had not meant," she sighed, "to see
It slip my grasp, and yet there be
No separate duty done for thee!
"This little trustful sleeper here,"
"Who clings me with a love so dear,
How could I keep my conscience clear?"

"So, working with such full accord,
As links therein its own reward,
I've left no margin for my Lord!"
Just then the golden head was stirred,
As in its nest a crouching bird;
And then her voice she dreamed she heard:
"O, sister, such a dream I had!
So sweet and strange, it made me glad—
I thought that you were sitting sad—
"Because the king of all the land
Had sent the people his command
To bring him, each, a gift in hand."

"And in my dream I saw you there,
And heard you say, 'No hands can bear
A gift that are so filled with care.'
"Why care?" the king said; and he smiled
To hear you answer, smiling wild:
"I only toil to feed a child!"

"And then with such a look divine
"That awaked me with its shine
He sprang up, 'But the child is mine!'"
She started to clasp, with arms outthrown,
The little dreamer: all was lone
And hushed; the dream had been her own?
Margaret A. Preston.

NEVER FULL.

SELECTED

No father's house is full,
E'en tho' there seems no resting place for more;
Forgiving arms and doors do open wide,
If one repentant child improve
Outside.

No mother's heart is full,
Unless it be with longing, burning will—
Heart-throbbings that no cheerful face can hide—
The wish to clasp her smiling child
Outside.

God's dock is never full,
Fear not to enter boldly at his door.
None ever were refused with thee applied;
He hath abiding place for more
Inside.

SUNSHINE LAND.

SELECTED

They came in sight of a lovely shore,
Yellow as gold in the morning light;
The sun's own color at noon it wore;
And had faded not at the fall of night;
Clear weather or cloudy, 'twas as one,
The happy hills seemed bathed with the sun,
Its secret the sailors could not understand,
But they called this country Sunshine Land.

What was the secret?—a simple thing
(It will make you smile when once you know).
Touched by the tender finger of spring,
A million blossoms were all aglow;
So many, so many, so small and bright,
They covered the hills with a mantle of light;
And the wild bee hummed, and the glad breeze fanned,
Through the honeyed fields of Sunshine Land.

If over the sea we were bound,
What port, dear child, would we choose for ours?
We would sail, and sail, till at last we found
This fairy gold of a million flowers.
Yet, darling, we'd find, if at home we stayed,
Of many small joys our pleasures are made,
More near than we think—very close at hand,
Lie the golden fields of Sunshine Land.

—Edith M. Thomas.

A COMMON method of planning for a desired result in the sphere of benevolent endeavor, is based on averages. If a certain amount of money is to be raised, it is very easy to see that an average of so much to each member will secure all that is desired. If a certain work is to be done which involves a specified number of workers, it is obvious that an average of so many workers to a given field will be ample for the necessities of the case. This simple sum in arithmetic is very often accepted as the warrant for a hope of results that would gladden the hearts of multitudes; but unfortunately the issue is ordinarily very far short of the expectation. The reason of the failure is, that the average man never does his duty. It is always the extraordinary man that accomplishes anything in this world. Not the extraordinarily rich man, nor the extraordinarily able man, nor the extraordinarily good man, but the extraordinarily faithful man, is the man who finally counts for a good result in any undertaking in life. This truth is an important one, with its practical bearings on the duty of all those who would gain help from others, or give help to others. If you are planning to raise a certain sum of money, or to secure a certain number of helpers, the first thing for you to think of is: Who are the extraordinary persons to whom I can turn at this juncture? If, on the other hand, a call is made on you for aid in an emergency, your question ought not to be, What is my duty as an average helper just now? but, What is my duty as an extraordinary helper? A good average is a poor attainment. He who is not above the average is below his own fair level; for the average in this world's measurements is by no means a praiseworthy line.—S. N. Times.

Early Meeting-houses of Friends.

(Continued from page 365.)

FIFTH STREET MEETING (Western District.) We can scarcely close the imperfect sketches of the early places of worship of Friends in Philadelphia without briefly alluding to the Twelfth Street meeting, which, although not one of the primitive meetings, holds a prominent place at the present day. A brief abstract of a title to the lot of ground upon which the new stands may be of interest. It is as follows:—

23rd of March, 1681. "William Penn, Esq., Proprietary and Governor, sold to George Rogers and Francis Rogers, of Ireland, each 2500 acres of land, to be laid out in the Province of Pennsylvania."

In 1683 George and Francis Rogers sold their respective interests to George Collett, who, by his last will and testament, bequeathed all his lands in Pennsylvania to his two grandsons athenial and Joseph Pennock.

In 1787 a Deed of partition was executed to Joseph Pennock, for "Lot of ground in Philadelphia, laid out and surveyed in the right of Francis and George Rogers, in the city of Philadelphia."

Sixth Month 15th, 1794. "Deed of Joseph Pennock to George and Isaac Pennock for Lot on High and Chestnut Streets."

Fifth Month 27th, 1809. "Deed of Isaac Pennock and Wife to Samuel Bettle, Joseph Cattergood (et al), Trustees, for "all that Lot on the West side of Twelfth Street between High and Chestnut, &c."

In the Second Month, 1809, a committee of Philadelphia Monthly Meeting was appointed to take into consideration the present local situation and general circumstances of Friends in this City," who recommended a conference of the three Monthly Meetings on the subject. At the next Monthly Meeting the following minute was made: "The Philadelphia Monthly Meeting having for some time past held their Meetings for Worship and Discipline in the House on Mulberry Street, and the Market Street meeting-house being thereby of little use, we have agreed that the Lot on which it stands be laid off in suitable building lots, and disposed of nearly agreeable to the following terms, viz: The present buildings on the ground to be reserved to Friends, and taken down as early as may be practicable."

The proceeds of the sale might be properly vested in the purchase of a lot of ground so situated as may be most likely to be useful to Friends of the Meeting in each District. Twelve thousand dollars, or more if necessary, may, with the materials of the present Market Street Meeting House, or the proceeds of them, be appropriated to the erection of a Meeting House on some of the ground proposed, to be in the Middle District, so far Westward as to accommodate the families of Friends who may be resident in that Quarter, &c."

In the same year a lot of ground was purchased of Isaac Pennock and wife on the west side of Twelfth St., between High and Chestnut Street; containing in front on said Twelfth St. 112 feet and in length or depth 132 feet.

In the Third Month, 1811, the attention of Friends was directed towards the establishment of another meeting, &c., and a committee appointed to consider the matter, who reported in the Fifth Month following, viz: "It is desired that Friends of the three Monthly Meetings will promote the building of a Meeting House on the Lot on Twelfth Street, between Chestnut

and High Streets, agreeable to our present conclusions."

Tenth Mo. 29th, 1812. "A Meeting House having been erected agreeably to the conclusion of this Meeting in the Sixth Month of last year, on Twelfth Street, and nearly finished." A committee was appointed to consider the subject of opening a new meeting there, who reported, viz: "They agree to propose that meetings for worship be held there on the morning and afternoon of the first days of the week; to begin on the first First-day in the Fourth Month next," which was approved, and endorsed by a minute of the Quarterly Meeting.

Fourth Month 29th. "The meeting in the Meeting House on Twelfth Street was opened and held at the time agreed upon."

The first Monthly Meeting of Friends of Philadelphia for the Western District was held there the 16th of Third Month, 1814.

J. W. LIPPINCOTT.

FOR "THE FRIEND."

"The Spirit and the bride say, Come. And let him that heareth say, Come. And let him that is athirst come. And whosoever will let him take the water of life freely."

Dear friends, are we saying, Come, who have "heard" and accepted the Bridegroom of souls, and who are endeavoring to follow Him?

Doubtless, our first concern should be for ourselves; to seek continually for grace from God to walk worthy of Him; but surely a consideration of the realities of life, of eternity, of the awful case of lost souls, should quicken us to an intense desire for the salvation of others. And I do not think that even a deep sense of our own unworthiness should hinder us from a willingness, an earnest wish to be made useful in this respect. He who would win souls to Christ must live a pure life; that of itself is a powerful invitation (1st Matt. v. 16.) But let us be ready to speak for Him; let us watch for opportunities, and for the ability which I do believe will be given to the willing-hearted. If we have found a good thing, free to all, shall we not invite others to it? Shall we not tell them how good our loving Lord is to us, how sweet it is to trust Him, and to leave our affairs in his hands?

Some unsatisfied heart may be longing for a word from us, and our Heavenly Father may grant us the unspeakable privilege of effectually pointing that soul to the Lamb of God. I remember when quite young, being away from home, teaching school; and one of my pupils, a dear young girl, stayed a night at my temporary home, and shared my room. When we were alone, I ventured to speak to her of things concerning her soul's welfare. I have no recollection of what I said, but I remember her answer: "I had been wishing thee would speak to me." And then she went on to tell me of what she thought to be her greatest hindrance; a thing in which I could fully sympathize with her. Now I cannot tell that I really helped her; only it has often made me think there may be others wishing for a few words from a friend whom they believe to be a Christian.

Sometimes, when no opportunity offers of speaking to a friend or neighbor, a few written lines may be of service.

Our Saviour has told us, "Without me ye can do nothing;" and true, indeed it is; and yet in Him, we may "abound to every good work." (2 Cor. ix. 8.)

With a sense of many shortcomings, yet "coveting earnestly the best gifts," these words are penned.

SHELWOOD, N. Y.

Effects of the Drinking Habit.

It is often claimed, and it is sometimes unfortunately true, that in many cases the incidents related by people engaged in temperance work are highly colored; yet day by day the records of the criminal courts, of the prison, the almshouse, the Coroner's office, the remnants of humanity stretched dead, cold, and mute on the slabs of the morgue, tell more startling stories than anything revealed in tales of fiction.

Here are three pictures—three types of the destruction which liquor invariably works.

Come to my home, a rich one. It is six o'clock. The business of the day on the Exchange has been long over, and father, mother and son sit at a table in a handsomely appointed dining-room. There is luxury here and happiness too. It beams in each of the three faces. Everything tells of no wish ungratified. The mother looks admiringly at her husband and son as they talk of gigantic speculations projected, and scan the condition of the markets of the world. And as they talk they sip wine, hold it to the light and commend its qualities, as they watch it sparkle in the glass. There is a tumult in the street, and when the servant who has been sent to discover the cause, returns, he reports that it is only a drunken brawl between workmen. It is a matter of little moment to them; but the mother improves the occasion to thank God in her heart that her noble boy is safe from such degradation. His education, social position and wealth all preclude the possibility of his ever sinking his manhood to such a level.

Come to another home. This is the house of a well-to-do mechanic. It is about the same hour. The home is a neat and cosy one. There are growing plants in the window, and a bird in a gilded cage is warbling in demonstrative happiness. The wife, holding in her arms an infant, goes to the door and looks in pleasant expectancy up the street, and as she looks the child coos in delight, stretches out its tiny hands and struggles in its glee, and the mother knows that father is coming. The man's weary step quickens, the careworn face brightens, and as he enters his home he is as content as any being in the world, for here his treasures are, and here virtue and happiness have full care. Supper over, the wife entertains her husband with the incidents of the day; tells of the infantile pranks of their little trifles of pleasure, and all those things which he would like to hear. As he listens he is drinking a glass of whiskey, under the strength—make good the expenditures of the body after the day's labor. Besides, this is pure liquor, for did he not buy it at a wholesale store himself? A shrill, piercing scream rings out on the air. The man and wife look at each other. They know what it is. It is the wail of a heart-broken wife suffering under the brutality of a drunken husband. They live near by, and the mechanic's wife thanks God that her husband is safe. He loves her, spends his evenings at home, does not go into taverns, drinks no vile poison.

Come to another house—a shade lower in the social scale. It is up an alley five feet wide—the home of an honest, hard-fisted laborer, toiling day after day for shelter and food. As he gets near his home, his children run to greet him, and as they give him welcome he forgets all the cares and trials which beset him in his struggle for a bare existence. With wife and children

he eats his supper, goes for a pitcher of beer, takes it home and drinks it as he reads the paper; reads aloud of a murder committed by a husband while drunk. And that wife thanks God for her treasure. Her husband is not a drunkard.

Some years have gone by, and we return to these homes.

At the mansion everything is still. An aged and troubled man meets you, but all his former self-possession is gone. The mother is there, all her joyousness gone; the premature marks of age on her face; the furrows of suffering on her brow; the patient, longing sorrow in her eyes; all tell of a great grief corroding the heart. Ask for her son—he is not there—and the mother with a startled look whispers that the poor boy is unfortunate. Then a merciful fit of weeping relieves her pent-up feelings. And while this poor mother, with torn and bleeding heart, can find no harsher word to say of her son than that he is "unfortunate," he is squandering his manhood in degrading orgies and babbling of his social position. How did he arrive at such a bestial condition? He saw his father drink and no apparent harm followed. He drank at home himself; tried it in the club room; tried it in the bar-room and created the appetite which ruined his hopes, destroyed the happiness of his home, and is carrying him onward toward final ruin.

Come back to the home of the mechanic. The flowers, the bird and the happiness have all gone. Clothes-lines fill the place, and a toil-worn, broken-hearted woman is at the wash-tub. There is a neglected, pallid, crying child. The very air of the place breathes of wretched poverty. With eyes filled with tears, the woman tells you when you ask her for her husband, that he fell in an evil hour and that he is a ruined man. He brought the serpent into his home and nursed it until it grew into a monster that crushed him. The woman can scarcely support herself and her child; but she labors and prays—prays to God in his infinite mercy to send back to her the husband of her love with the manhood he has lost.

Come to the other house. Deserted. You ask the neighbors and they tell you. The man became a drunkard, that the woman drank with her husband till she too became a drunkard; he is in prison for a crime committed when drunk, and she, the once happy mother, is a vagrant in the House of Correction; while the poor, deserted children are scattered in the different institutions, placed there by the society to protect children.

Are these colored illustrations? you ask. Well, no, gentlemen. They lack the merit of having been invented. They are simply three sets of facts, and, if you care to authenticate them, you may call at the Franklin Home.

But if you care to know still more, to see the men and women whom liquor has dragged into the depths; if you want to prove to yourself by actual example that liquor is no respecter of persons, that it strikes men and women in every rank of life, go to the Almshouse and win the confidence of some of the old people in the uniform of pauperism, waiting there to die and be buried in paupers' graves. You will find there a once prosperous merchant, a man whose name was a bulwark of financial strength, the synonym of commercial integrity; you will find the once able lawyer; you will find another who was a minister of God; you will find them from all grades—professional men, business men, mechanics, laborers, politicians—yes, even

politicians, at whose beck thousands went to the polls and did their bidding. Go to the House of Correction and get the histories of some of the men there, or who have been there. Go to the morgue and ask the attendants concerning the people who have fallen dead on the street after a debauch, or who have in their liquor-madness plunged in the river. You will find that there is no necessity to color the story of what liquor does for mankind.—*Report of Franklin Reformatory Home.*

Natural History, Science, &c.

Collars.—Some few weeks ago a child died in a diphtheria not many miles from this city of diphtheria, in its most malignant form. About a year previous, the baby, fourteen months old, died of marasmus. Soon after this the remaining children had scarlet fever, from which they had about recovered, when one of them was carried off by membranous croup, and then another by diphtheria.

By this time the physician in attendance advised the family to move to some other house, as they had had a succession of sicknesses and deaths since they moved into this one. The father, nearly prostrated with grief and long watching, promptly acted on this advice, satisfied that his family was a victim of mysterious and calamitous providences.

The health officers, soon after the death was reported to them, visited the empty and infected premises, and made thorough inspection of them. The house drains were found obstructed, and there were two inches of slime covering the cellar bottom. In the cellar, which was extremely moist, were a number of old cider and vinegar barrels, some decayed vegetables, and a lot of damp miscellaneous trash and debris. If any mystery there were as to the sickness and death in the house, it was that any of the family living there should have survived.

The father of this family is a man of more than ordinary intelligence, but he did not know that a filthy cellar would kill his children.

A lady in whose presence this subject was discussed, the wife of an itinerant Methodist preacher, remarked: "Two of my children died of unwholesome cellars. In the parsonage where Hattie died the cellar had been used the year before we lived there as a sink-drain. (What an intelligent man that minister must have been!) In the parsonage where Frank died of scarlet fever there had always been sickness. We tried to make the cellar dry and wholesome, but we failed. After Frank's death the next minister refused to go into the parsonage, and it was moved to another part of the town, a new house erected on the same site, with a thoroughly drained and cemented cellar under it. That house has been free from sickness and death." Is any comment necessary?—*Christian Advocate.*

Rain-fall at Salt Lake City.—The Salt Lake Tribune, of Fifth Month 10th, in speaking of a rain storm that fell the day before in that region, says: "There is nothing in the world more beautiful than is the process by which the rain is sent to the desert. In the warm currents of the Pacific the force pump of the sun was set to work last week, and enceph of the ocean was picked up to cover all this space between the great mountains with moisture. Then the winds were called out of their caves and made to waft the moisture-laden clouds inland. They were cooled by the mountains, and part of their life was pressed out of them. Lightened, they found

their way into the Great Basin, leaving more and more of their treasures wherever a high mountain crest caught them, until at last the struck the wall of the Wasatch range, and rain in the valley and in snow on the height exhausted their stores. The water that fell here yesterday was a week ago being sported in by the Pacific Ocean whales. Now it has been set to work to make sure the lucerne and potato crops here, seven hundred miles from the nearest ocean coast.

In harvest time, irrigation by man beats that of nature, but when plants are struggling under the discouragement of a dry spring, it is a joy to see nature set her marvellous machinery in motion, and with it delight the gasping work with rain."

A Prehistoric Canoe.—A discovery of extreme archeological interest has been made upon the Barton section of the Manchester Ship Canal. While the excavators were at work in what is known as the "Salt Eye" cutting, the stearn navy brought to light a prehistoric canoe. It was imbedded in the sand about twenty-five feet below the surface. With some difficulty the canoe was removed to a shed in the vicinity of the engineer's office and examined. It was found to consist of a portion of an oak tree, roughly hewn and fashioned. In length this relic of a long past age is 13 feet 8 inches from end to end, with a width of 2 feet 6 inches. Notwithstanding the lapse of centuries, the marks of the axe are distinctly visible in the interior of the canoe; the width of the blade of the implement used—whether of flint or iron—being apparently about three inches. Unfortunately, the vessel sustained some damage in the ruthless grip of the "navy," the bottom having been cut through at the bow end, while a portion of one side is broken in. But for this mishap the canoe would have been recovered practically intact. The bow is shaped so as to leave a projecting block, through which a hole is driven, evidently for the purpose of fastening it by means of a rope. At this point the grain of the wood indicates that the ancient workmen had cut through the heart of the tree, and that a portion had broken away. Another piece of wood appears to have been fitted into its place and fastened with two stout wooden pins. The piece itself is gone, but it is easy to pass the finger into the holes left by the pins. At the opposite end the canoe has been strengthened by the fixing to it of a species of gunwale, consisting of the naturally bent arm of a tree, also held in position with pegs or pins of wood.

It is impossible to fix the precise period of the canoe; but the circumstance that it bears no trace of a nail or any ironwork, may perhaps aid the formation of an opinion upon this point. The wood, particularly of the bottom, is for the most part, quite sound. A portion of one side, however, which has apparently been at some period more exposed than the rest, has commenced to crack; and to prevent the spread of this process of decay, now that the relic has been brought into contact with the air, measures will at once be taken. The canoe rested in a bed of sand and leaves, among which hazel-nuts were found. In the immediate vicinity several large trees have been discovered, leading to the conclusion that the bed of the canal is being cut through what was once a forest. The ultimate disposition of this interesting link with the remote past has not been decided upon; but it is hoped that it will be added to the archeologic treasures in the museum at Owens College, Manchester.—*Manchester (Eng.) Guardian.*

Items.

Licenses in Philadelphia.—The Philadelphia judges've again shown themselves to be public benefactors by the rigidity with which they have applied the restrictive laws committed to them by the high license law. They are entitled to the thanks of the community. But the admirable manner in which they discharge their duties suggests a danger that men of like minds may not always be the management of the law. The effort made by Harrisburg to impeach the judges, and the futile application of the law in Pittsburgh, though futile, is a danger which must ever wait upon the faithful administration of restrictive laws. We expect to see the whole power of the liquor sellers directed against the judges, and when they do not gain their point by corruption, directly or indirectly we shall certainly see them exert their power to secure the removal of such just and true men. The difficulties which must always exist in a way of revoking a constitutional amendment seems to give that method of treating the evil, advantages over the mere passage of restrictive laws. In either case, it will be found that eternal vigilance is the price of liberty, and that beyond security is the price of liberty. The real advantages, the present can do but little to protect which which comes after it from evil influences.—*Selected.*

Women Voters.—The following declaration of principles was published by some of the women of Atchison, Kansas:—
"Whereas, the privilege of voting in municipalities has been granted to the women of Kansas; and whereas heretofore too many men of doubtful honesty and immoral character have been elected to offices of public trust; therefore, resolved, that the women voters of Atchison demand that only those who are recognized as persons of honesty, sobriety and good moral character. Resolved that we are less for parties than for principles, and political parties that expect our votes must give us good men or whom to vote."

Labor Among the Degraded.—A house has been secured in one of the lowest parts of New York, and partly of the city of London, W. Wesley and his colleagues are to live there under the Presidency of Jeanette Gurney Fine, for at least three months at a time. Jeanette Gurney Fine has devoted all her life to helping the poor, and the object of this movement is to enable these ladies to become these abodes of squalid poverty by living among them. They hope by the force of their example, and the power of their kindness and sympathy to lead the degraded to a sweeter and purer life. In his institution there are to be free baths, free instruction, and all kinds of attractions counter to those usually incident to a vicious life.

Divorces.—J. W. Dike in *The Independent*, says: "Divorces have doubled, or more than doubled, in the ten years or in a shorter period in the United States, and all over Great Britain, France, Belgium, the Netherlands, Baden, Saxony, Elsass-Lothringen, Hamburg and Norway. They have increased largely, though not quite enough to double, in twenty years in Wurttemberg and Hesse. They have increased in Russia and in Roumania; over 20 per cent. in Russia in five years; but this is not men, but an exaggeration of the real facts. Denmark is also increasing her divorces. Divorces have not increased much in Austria as a whole; but probably are gaining in Vienna. They have decreased a little in Hungary in the eleven years reported, and in Switzerland, while there has been a decided falling off in Bavaria and Italy. The number of divorces, however, is not less uniform and so prevalent in Europe than on our own continent. Divorces in the United States increased from 9,337 in 1867, to 25,535 in 1886. In the thirteen foreign countries, including Canada and the city of Hesse, there were 3,541 in 1867, and 9,200 in 1886, or an increase of 159.8 per cent."

This movement seems to go on among people of every religion, race, political or other social condition, with very few exceptions. The volume

varies, but the rate is wonderfully uniform, and exceptions are remarkably few.

Women Preachers.—At the General Conference of the United Brethren, the following decision was adopted:

"Not wishing to hinder any Christian who may be moved by the Holy Spirit to labor in the vineyard of God for the salvation of souls, it is ordered, that whenever any goodly woman presents herself, before any quarterly or annual Conference as an applicant for authority to preach the Gospel among us, she may be licensed so to do. "Provided, such person complies with the usual conditions required of men who wish to enter the ministry of our Church, and passes the examinations by the proper Committees of the Conferences, and in the courses of study; and may be ordained after the usual probation."

Dublin Yearly Meeting.—Dublin Yearly Meeting convened Fifth Mo. 1st, and continued till the 8th. A petition to Parliament was adopted in favor of legislation against the opium traffic in India. Report was made that 1,000 copies of the "Declaration of Faith," adopted at Richmond, was printed in pamphlet form last year, and about 600 of these had been disposed of. The proposal of the Richmond Conference for "the establishment of a conference of the Yearly Meetings with certain delegated powers, to meet at stated periods," was considered, and the meeting was not prepared to adopt it in the form in which it was presented.

Epistles from the corresponding Yearly Meetings were read, and in answer to a question was prepared to London, one to Canada, and a general copy to all the Yearly Meetings in the United States.

A petition to Parliament was adopted, in favor of the bill before that body to make the "Irish Sunday Closing" act permanent, and to extend its provisions to the five exempted cities and towns, and also in favor of "Saturday Early Closing" which is before Parliament.

The report from the Yearly Meeting of Ministers and Elders shows that one woman and one man have been recorded ministers during the year, and two women ministers have gone to reside in England. The ministers numbered thirty-five in England, two, women six, in Scotland, total thirty-six; elders, men forty-six, women forty-six—total ninety-two.

The report from this body contains the following information: "In many of our meetings portions of Scripture are read."

The meeting of ministers and elders was authorized to appoint a standing committee of not less than twelve members, which shall have power to liberate a Friend (should such a case arise) who might feel called to religious service in foreign lands, in the intervals between the yearly meetings of ministers and elders.

A strong minute on the subject of peace was adopted by the meeting.

The General Session was made at one of the seasons toward the close:

"We have at this sitting resumed the consideration of the state of our religious Society in this land. In bringing this consideration to a conclusion, it has been felt that we have been much favored in brotherly love and condescension in deliberating upon various points that have been presented to this meeting. In view of the exercise of this meeting, it is concluded that the most helpful course to take would be to separate a committee to visit Friends in their several meetings."

The following minute was made:

"We would again impress upon our members to consider prayerfully what is their individual responsibility, not only as regards the use, but also as regards any interest they may have, either in the manufacture or the use of intoxicating liquors."

The total number of members, as reported on the 31st of Twelfth Mo. last, is 2,704, being forty-one less than last year. Of this number 206 are non-residents and in foreign parts, and 155 have practically withdrawn from attendance of meetings.—*Christian Worker.*

THE FRIEND.

SIXTH MONTH 22, 1889.

"Hiring Ministers."—We have received from a Friend a letter sent to him by a "Pastor" among the Methodists, which complains of Friends using the term "hiring ministers," and states that the "Methodist Episcopal Church do not recognize the policy of hiring a set of men for so much pay, but that the foundation of our economy is the principle of support." "Our discipline requires every preacher to promise that he will give his whole time to this work—not only preaching the Word, but exhorting the people, and going from house to house in the work of seeking to save." "The [Methodist] Society says to these men, We will look after your support, if you will devote your whole time to the work of the ministry."

We do not see the practical difference between "hiring" a man to preach for a salary of \$500 or \$1000 a year, and appropriating that sum for the support of himself and his family so long as he continues to preach. To say that a man is hired to perform a certain service does not necessarily imply any censure, nor is it any detraction from his character, if the service is one that is proper to be performed; for he may discharge his duty in the case with conscientious fidelity; and this we believe is the case with many of our Methodist friends.

The Society of Friends has always held the doctrine that the ability to preach the Gospel was a Divine gift bestowed upon certain persons for the edification of the Church, which can be exercised rightly only as they are freshly endued with power from on High. "It is the sole prerogative of the Head of the Church to select, anoint and give authority to any to preach the Gospel. When our Lord was about to depart from his disciples, He told them, 'Ye have not chosen me, but I have chosen you, and ordained you, that ye should go and bring forth fruit, and that your fruit should remain.'" "As my Father hath sent me, even so send I you," and when He had said this, He breathed on them and saith unto them, 'Receive ye the Holy Ghost.' As every man hath thus received the gift, he is to minister the same freely as a good steward of the manifold grace of God. 'Freely you have received, freely give.'"

Believing that Christian ministry is a Divine gift, and not the result of intellectual study or training, Friends have not seen any good reason why their ministers should not enter into business for the support of themselves and families, as other Christians do. When engaged about their outward employments it is still possible to have the heart wholly directed to the Lord, and to be receiving spiritual instruction and strength through communion with Him. This indeed is the privilege and the duty of all the members of the Church, whether called upon to preach to others or not. And when assembled for the worship of God, all may draw near in spirit to Him, and feel after the arising of Divine life and power, without depending on the ministrations of any man. If any present feel a living concern for others, and a command from the Almighty to deliver his message to the people, the relief of mind and the subsequent peace which are felt, for their faithfulness in the performance of the duty required, is a sufficient recompense.

We believe the foundation of "hiring ministry" in the professing Christian church, is the

clerical or pastoral system, by which certain persons are set apart as a peculiar class to perform religious services which properly belong to the Church as a whole. If such persons are required to devote their services, it follows as a matter of course that some provision must be made for the maintenance of their families. But the system itself is one which the Society of Friends believes to be inconsistent with the most healthy condition of the Church. It is better that the duties to be performed should devolve on all of the members who are called to them by the Lord—that none should excuse themselves from such services as they may feel required of them, by the thought that they are paying another person to do the work, and therefore they may be excused from the personal effort, with its sacrifice of ease and of feeling.

We have received an anonymous article which gives some remarks made by Ashbel Welch, Sr., of Lambertville, N. J.

Will the author of the article be kind enough to send his name and address to the Editor?

SUMMARY OF EVENTS.

EXTRAORDINARY.—The opening of the dollar in the bank district in Seattle, Washington Territory, is fully under way. All the contents of the vaults of the various banks have been found to be in perfect order. The loss is now placed at \$15,000,000.

The American ship, State of Maine, captain E. D. P. Nichols, arrived in New York on the 12th inst. The State of Maine, with a valuable cargo of fine silks, sailed from Hong Kong Third Month 11th, and completed the trip in the remarkably quick time of ninety-two days, which is believed to be the fastest on record from that port.

Colonel William H. Legg has arrived in Baltimore from his home on Kent Island. He says the pack of logs and lumber around the island from the broken Susquehanna booms is remarkable in extent, and that an estimate of their value puts the figures at double the assessed value of the island with its property. All sorts of goods lie with the logs, including canned goods, grain, and all kinds of household and business useful utensils. Horses hitched to carriages and some haltered to mangers have come ashore. Queenstown Creek, he said, was packed with valuable logs and lumber, and much of the latter is being carried inland.

A forest fire is raging south and west of Superior, Wisconsin. Already over half a million dollars' worth of pine has been destroyed. The districts tributary to the Menomoni and St. Louis rivers, in Wisconsin, are suffering heavily. The smoke from the burning districts is obscuring the sun, and renders difficult the entrance of vessels into the harbor. The fire is burning from E. to W. to Northern Indian Territory. A despatch from Mora, Minnesota, says that the treacherous Chippewa Indians are on the warpath again, and there are grave fears of a general uprising. Recently a contract was awarded by the white settlers to Foley Brothers, of St. Paul, to dig a ditch for irrigation purposes from Mille Lacs Lake to a point on the Snake River, near the mouth of the Snake. It was found that a ditch was to be dug which concluded that the intention was to drain the lake and deprive them of their fishing privileges. Notice was given the contractors by the Indians that if they did not leave they would be put to death. No heed was given to the warning and the contractors were killed. The work began work on the 15th instant. About noon they were attacked by about 4000 Chippewas, led by White Snake and Great Bear. The laborers fled, and were pursued by the Indians, who shot and killed seven men and wounded several others.

John Kincaid, of Gunnison, Colorado, who is in Chicago, says: "The syndicate of Chicago and Pennsylvania capitalists who went to Gunnison to inspect some lands supposed to contain anthracite coal, found a richer discovery than they anticipated. A huge mountain of almost chemically pure manganese of iron was found, together with almost unlimited veins of anthracite. This manganese is essentially the spiegel-eisen of commerce."

The people of Raleigh, North Carolina, voted on the license question on the 10th instant, and gave a majority of 108 for license, in a total vote of 2240.

The Amendment to the Constitution of the State of Pennsylvania, prohibiting the manufacture, sale and use of intoxicating liquors as a beverage, was defeated on the 18th instant, by more than 167,000 majority. Twenty-nine counties voted "for" and 37 "against" the amendment.

The \$2,500,000 subscribed for the completion of the Hudson River Tunnel, is in hand, and a force of fifty men are at work.

Deaths in this city last week numbered 395, an increase of 11 as compared with the previous week and of 42 as compared with the corresponding period last year. Of the foregoing 193 were males and 202 females; 56 died of consumption; 22 of old age; 22 of diseases of the heart; 21 of marasmus infantum; 20 of inflammation of the stomach and bowels; 16 of congestion of the brain; 15 of convulsions; 14 of apoplexy; 14 of typhoid fever; 13 of cancer and 11 of measles.

Markets, &c.—U. S. 4's, 107; 4's, reg, 128 $\frac{1}{2}$; coupon, 127 $\frac{1}{2}$; currency, 97; 118 a 121.

Cotton was quiet but steady at 11 $\frac{1}{2}$ cts. per pound for middling uplands.

Flour and Meal.—Western and Pennsylvania super, \$2.25 a \$2.65; do., do., extra, \$2.75 a \$3.25; No. 2 winter family, \$3.35 a \$3.75; Pennsylvania family, \$3.60 a \$4.00; process, \$4.00 a \$4.50; do., do., \$4.00 a \$4.50; do., straight, \$4.40 a \$4.60; Indiana, clear, \$4.00 a \$4.55; do., straight, \$4.40 a \$4.60; St. Louis and Southern Illinois, clear, \$4.00 a \$4.25; do., do., straight, \$4.40 a \$4.60; winter patent, fair to choice, \$4.65 a \$5.00; Minnesota, clear, \$3.25 a \$3.50; do., straight, \$3.45 a \$3.60, per barrel of 49 lbs. \$5.50. Rye flour moved slowly at 55 per barrel for choice.

Grain.—No. 2 red wheat, 88 a 90 cts.

No. 2 white corn, 41 $\frac{1}{2}$ a 42 $\frac{1}{2}$ cts.

No. 2 mixed oats, 32 a 32 $\frac{1}{2}$ cts.

FOREIGN.—The 12th instant a train containing an excursion party left Arrah, was wrecked near that place, and about 75 persons were killed or mortally wounded. The train contained 1200 persons, composed of Methodist First-day school pupils, their teachers and relatives. They were going on an excursion to Warren Point, in the north of Ireland.

The engine left Arrah in the morning in two trains. The accident occurred at a point where the trains ascend a grade on a bank 50 feet high. The first train ascended the grade without trouble. The second section attempted the ascent, but the weight of the train proved too great for the engine. Several cars derailed and lay heavily behind the wheels of the detached cars to prevent them slipping, but the locomotives on re-starting gave the entire train a shunt that displaced the stones. The result was that the detached cars began to slip backward down the grade, their speed gradually increasing until they had attained a velocity of 60 miles an hour. After running four miles, they crashed with terrific force into a third train, at a point about a mile and a half from Arrah.

Zanzibar, Sixth Month 12th.—A letter received here from Uru, on the southeastern shore of the Victoria Nyanza, dated Third Month 2d, reports the arrival there of Henry M. Stanley, with a number of inviolated members of his force. The letter says that Stanley had sustained heavy losses, a large number of his men having died from disease and famine. The explorer had rejoined and left Emin Pacha at Unyara, on the northeastern shore of the lake.

Tipoo, dated Third Mo. 10th, say that Stanley met Tipoo and sent a number of sick followers with him by way of the Congo. Stanley intended coming to the sea coast with Emin Pacha. Tipoo Tibo would arrive at Zanzibar in the seventh month.

The contest of Samoan Deputies on the 17th instant, Senor Bevera, Minister of the Colonies, read the Cuban budget. The revenues and expenditures balanced at \$25,000,000. The Minister asked authority to issue a Spanish guaranteed loan of \$175,000,000 and to convert the Cuban debt.

The contest of Samoan Treaty was signed on the afternoon of the 14th instant. The draft guarantees an autonomous administration of the islands under the joint control of Germany and America, and England acting as arbitrator in the event of differences arising. The Samoans are to elect their own King and Viceroy, and to be represented in a Senate composed of the principal chiefs and chambers elected by the people. Samoa is to have the right of levying duties of every kind. The treaty also stipulates that the Germans shall receive money indemnity for the losses. A special court will be appointed to deal with the land

question. The Americans made their treaty conditional upon the ratification of their ally by the United States Senate.

The Russian army will soon be provided with breech loading rifles which will carry a distance of 6000 feet. Noiseless powder will also be used in future by the army. These improvements in the arming of troops involve immense expenditures.

A Berlin letter in the Vienna *Presse* says the impression is increasing in Germany that the Czar's remark at a banquet in St. Petersburg recently, that Prince of Montenegro was the sole sincere friend of Russia, was directed at Germany as well as Austria. The Emperor says the remark was made to banish all hope of maintaining peace, and points to the continued strengthening of the Russian armament on the western frontier as an indication of Russia hostile intentions.

The steamer City of Peking, which arrived at San Francisco on the 12th instant, brought a copy of the Shanghai *Courier*, of Fifth Month 10th, which contained news to the effect that Luchow, a city in Upper Yangtze, was reported as being nearly destroyed by fire a month previously. The loss of life, burned or trapped to death, is estimated at 10,000. In commenting on the report it was stated that before the fire was received, the *Courier* says a month is not a long time for a letter from Luchow to reach Chung king.

NOTICE.

A few invalids, or those needing rest, can find both medical and moral care in the home of a physician. Sun roundings healthful and pleasant.

For particulars address SUSAN G. OTIS, M. I. Auburn, N. Y.

DIED, on the 31st of Third Month, 1889, at his residence in Colerain, Belmont County, Ohio, JESSE RUSSELL, aged 78 years and 3 months, a member Concord Articular, and Shorteock Monthly Meeting Friends. He was a member of the Society for many years, and was long and very suffering with Christian fortitude and spoke at different times of the mercy and goodness that had followed him from childhood; but often saying it was all of mercy, not from any merit of his own. When the innovations which have since first begun to prevail in the Society were introduced, he was not able to see the tendency of them, but was afterward favored with a clearer insight, and as he followed the dictates of Best Wisdom, was enabled to come out from among those who he believed were buying waste our testimonies, and remained firm in his allegiance to the doctrines and testimonies given us as a people, to bear witness.

—, at his residence in West Grove, Chester Co., Pa., on the 11th of Fourth Month, 1889, GEORGE REID, in the 92nd year of his age, a member of Broad Monthly Meeting of Friends. "Mark the time this man, and behold the twilight; for the end of his life is as a day." He believed that he might be called truthfully of his beloved parent. The peace attending his close was sensibly felt; and he quietly passed away as though falling into a gentle slumber.

—, at the residence of her husband, Charles Cooper, New Garden, Chester Co., Pa., on Fifth M. 20th, 1889, PEARCE HILL, in the 65th year of her age, an esteemed member of New Garden Monthly Meeting. This dear Friend, was from her early womanhood, strongly attached to the principle and testimonies of the Society of Friends; and while in health to do so, she was an interested attendee of a church, but she was concerned to take her stand with her. During the last nine years of her life, she was mostly confined to her home by physical diseases at times attended with much suffering; all of which was endured, not only with Christian patience, but with almost uninterrupted cheerfulness. To her family it had long been known that she was unwilling of her latter end, and that she was impressed with feeling that at the close she might have but little warning. Upon being taken severely ill, three or four days before her death, she calmly informed those about her, that it was her last sickness, and that she would be called to her Father's house in a few moments, and, desiring that she might have an assurance that her way was clear—which assurance was in mercy granted to her. On the evening before her death, she informed the family that she was then ready to go—"just waiting." The impressive language of the departed spirit, seemed to be, "I loved you, for me, but I love for yourselves, and for your children."

FOR "THE FRIEND."

John Churchman.

(Concluded from page 370.)

When this visit was over, I kept much at home, yet was careful to attend meetings on the First and other days of the week, and found work enough to watch against a lukewarm, inolent spirit, which would come over me when I sat down to wait upon God. Though I came to the meeting in a lively engagement of mind, I found the warfare against lukewarmness, sleepiness, and a roving mind, must be steadily maintained, and if none of these hindrances were given way to, the Lord when He had proved his children, would arise for their help, and scatter his and their enemies, which my soul experienced many times beyond expression. The Lord alone is all powerful, and worthy to be waited upon and worshipped in humility and reverent adoration of soul for ever. Indolence and lukewarmness bring darkness given way to, occasion hard work for even the most lively exercised Friends to get from under the barthen thereof. It was a mercy that I was preserved seeking, and could not be satisfied without feeling the renewings of Divine favor, by which I grew in the root of religion, though I thought very slowly, but had a hope it would be lasting.

In 1733, I accompanied Friends on another visit to families, wherein, at times, I felt the opening of truth in the love of it, and a few words to speak to the states of some, though in great fear, lest I should put my hand to that weighty work without the real requiring of duty. At one family, I thought it would be better for the whole family, in a religious sense, if the heads of it were more zealous in attending meetings. I saw the necessity of being examples to children and servants, by a careful attendance of meetings for worship on the First, and other days of the week; but I was so weak and poor, that I doubted whether it was my duty to mention any thing thereof to them, so concluded to omit it; by which I hoped to judge of what I had been about before, and so grew easy in my mind. On the way to the next house, I began to judge that I had no business to say any thing at any house; and having forborne in my own will, I was now left to my own judgment for a time. At the next house, Friends were tenderly

concerned to speak to several states, and of several matters which I thought instructive; but I sat dry and poor, and so remained during our passage to the next house; where I fared no better, but worse. My feeling and judgment being quite gone, as to the service in which we were engaged; and though I did not say any thing to the other Friends how it fared with me, yet they were affected therewith as I apprehended. I was in great darkness and distress, and sometimes thought of leaving the company privately, and going home, but concluded, that would not only be a disappointment to my friends, but dishonorable to truth, which made me determine to go forward, and endure my own pain, as much undiscovered as possible. My companions, as I before observed, were affected, and all save one seemed closed up from the service, and in the evening of the same day at the last house, all of them were silent. There was a school near, the master of which was a Friend, and the children mostly belonging to Friends, whom some of our company appeared willing to visit, but others being doubtful, we omitted it, which now some thought was not right, and that therefore this cloud of darkness and distress came upon us, and we were willing to meet at the school-house next morning, to try if we could recover our former strength in the ownings of truth. This being agreed to, each took his way home, and it being now night, and I alone, I rode slowly, under a deep exercise of mind, and humble inquiry into the cause of my own distress; and after some time, being favored with great calmness and quietude of mind, I was inwardly instructed after this manner: Thou sawest what was wanting in a family this morning, and would not exhort to more diligence in that respect, and therefore if they continue to do wrong, it shall be required of thee; on which I became broken in spirit, and cried in secret, may I not perform it yet, and be restored to thy favor? Oh Lord! I am now willing to do whatsoever thou requires of me, if thou wilt be pleased to be with me. Blessed be his name, in mercy He heard my supplication, and I was fully persuaded that I must go to the house again; which I concluded to do next morning, and went home with a degree of comfort, and being weary in body and mind, slept sweetly, and awoke in the morning quiet and easy in spirit, and now began to conclude that I might meet my company and be excused. But my covenant was brought to my remembrance, and I was given to believe, that peace was restored on condition of my performance; therefore I went to the house, though several miles distant, before sunrise, the man of the house was up, he invited me in, and I followed him, and sitting down by the fire, being cool weather, with my mind retired, I felt that I must not speak before the rest of the family, but rather in private, yet was fearful of calling him out, being unwilling to discover any thing to them. In the meantime, he went out, and walked the way I was to go, I followed, and told him how I felt when we were at his house the morning before, and could not be easy without exhorting

him to be more careful in several respects, and a better example to his family in his attendance of meetings. He seemed affected, and said he hoped he should mind my advice. I then left him, and met my companions at the school-house, and enjoyed great peace. I leave this remark, to excite all to dwell in meekness and fear, and to beware of the will of the creature, and the reasonings of flesh and blood, which lead into doubting and disobedience. They who are faithful in small things, shall truly know an increase in that wisdom and knowledge which are from above.

Before we had gone through this visit, I attended the quarterly meeting of ministers and elders at Concord, and as I sat therein, the unwearied adversary renewed a former charge against me, by suggesting to my mind, that I might know I had been wrong and under a delusion, in entertaining a belief I should be called to the work of the ministry; for that all who had ever been rightly engaged therein, it was greatly in the cross to the will of the creature, which was not my case, for I was willing. This I felt to be true, and was exceedingly distressed, not considering that I was made willing by the weight of the exercise, which had been several years at times very heavy upon me, until it seemed as a fire in my bones, and as though I was dumb with silence. I held my peace even from good, and my sorrow was stirred, my heart was hot within me, while I was musing, the fire burned. While under this conflict, a Friend stood up with these words, "Also I heard the voice of the Lord, saying, whom shall we send, and who will go for us? Then said I, here and I send me." Showing that, "to them whose will was rightly subjected to the Lord, it became their meat and drink, to do the will of Him who had subjected them by his Divine power, and influenced their hearts with his love to mankind;" by which I was relieved, and my spirit humbled and made thankful. Next morning being the first-day of the week, I went to Kennet Meeting, and toward the close thereof, something appeared to my mind to offer, but I was fearful that the motion for speaking was not enough powerful, and had like to have forborne, but remembering what I had suffered by neglecting a weak motion in a family visit, as already related, I stood up, and spoke a few sentences in great fear and brokenness of spirit, and had solid satisfaction. I attended the quarterly meeting of business at Concord on Second-day; on my return from whence, I let in the old reasoner, who suggested to me, that if I was called to the public ministry, I had not waited for a sufficient commission to speak; for some had been raised up with great power, and an authority they could not withstand, but that I might have been still and quiet, the motion was so gentle and low, and that I must not think to speak in public testimony in great meetings with so small a motion, and in so doing, I had committed a sin that would not be readily forgiven, perhaps a sin against the Holy Ghost. My exercise was great, but as I enlavored to be quiet in my mind

seeking to know the truth of my present condition, I was secretly drawn to attend to something that spoke inwardly after this manner, "if thou wast to take a lad, an entire stranger to thy language and business, however likely he appeared for service, thou must speak loud and distinctly to him, and perhaps with an accent or tone, that might show thee to be in earnest, to engage his attention, and point out the business; but thou wouldest expect it should be otherwise with a child brought up in thine house, who knew thy language, and with whom thou hadst been familiar. Thou wouldest expect him to wait by thee, and watch thy motions, so as to be instructed by thine eye looking upon him, or pointing thy finger, and wouldest rebuke or correct such an one, if he did not obey thy will on such a small intelligent information." I was instantly relieved thereby, believing it to be from the Spirit of Truth, that is to lead and guide into all truth.

About this time, as I sat in one of our own meetings, I felt a flow of affection to the people, for many not of our Society came there, perhaps out of curiosity, several young ministers having come forth in public testimony; in which extraordinary flow of affection, I had a very bright opening as I thought, and expected to stand up with it very soon, but being willing to weigh it carefully was not very forward, viewing its decreasing brightness, until something said as it were within me, "is the woe in it, is necessity laid upon thee, and therefore woe if thou preach not the gospel?" This put me to a stand, and made me feel after the living presence of Him, in whose name and power I desire to speak, if I appeared in testimony; and not feeling the pure life and power of Truth, so as to stand up, the brightness of the vision faded, and left me quiet, humble, and thankful for this preservation.

Friends in Cardiganshire, &c.

THE FRIEND, of Eighth Month, 1874, contained an account of a visit that I had paid to Gwern Driv, the only spot which seems to have been used by the Society of Friends as a burial-ground in Cardiganshire. Some particulars were also given respecting the Friends who had lived in that country, two of whom, Samuel George and his brother John George, resided at the adjoining village of Llandewi-Brefi, in the early part of last century. I am now able to add to this account by having lately had an opportunity of perusing some papers left by John Pleyer, a Friend of Tockington, near Bristol, who took an active part in the concerns of the Society, in the latter half of the last century, and died in 1808, aged about eighty-three.

In 1753, when John Pleyer was about twenty-eight years of age, he spent about six weeks in travelling through Wales as companion to one whom he describes as "that worthy and honorable servant of God, William Brown, of Philadelphia." William Brown was the brother-in-law of John Churchman, an eminent American minister with whom he was a frequent fellow-laborer in the Gospel. They had crossed the Atlantic together, but they believed it was best for them to carry out their visits in this country for the most part separately. In part of his service John Churchman had for a companion John Pemberton, whom he describes as "a sober, well-inclined young man," and who himself became a valuable minister. John Pleyer wrote a brief journal of his visit in Wales with William Brown, in which (after mentioning meetings held in the counties of Monmouth,

Glamorgan, Carmarthen and Pembroke), he says:—

"Twelfth Month 5th, Fourth-day.—Being guided by Morgan Price, we set forward over the mountains to the widow Ann Evans, at Gwern Driv, in the parish of Llandewi-Brefi, in Cardiganshire, at whose house we had a meeting on the morrow. A solid and satisfactory meeting it was, there being some of the neighbors well-inclined, and most of the few Friends there keep their places pretty well, being of those who was first convinced in this place, to whom encouragement was given as well as the way of life declared to others, which covered the souls of some present through the power of Him who is all-sufficient, that it seemed as a shower to refresh the drooping heart of some there; they were encouraged to continue in the practice of holding a week-day meeting. From this place (on Sixth-day) we set forward guided by Daniel Evan, to John Goodwin's at Esgairgoch, on the mountains called Trefglwys in Montgomeryshire. This Friend and his wife are a noble pair and well esteemed of at home, having built a meeting-house and purchased the ground at their cost. We rested with them one day, and the morrow being the First-day, we had a meeting, (which was pretty large)—I think I may say very, considering the few inhabitants here-away) and a solemn and good meeting it was; the states of some seeking souls present being a pretty deal spoken to and encouraged to go on. The morrow we set forward to Llanidloes, guided by Edward Rees."

"This is the only notice of Cardiganshire that occurs in this journal, and Gwern Driv is also the only place in that county mentioned by John Churchman, but the names given of the Friends who were seen by William Brown and his companion form connecting links respecting others. Daniel Evan, who guided these Friends into the adjoining county of Montgomeryshire, was the grandfather of an elderly woman who was living in the village of Llandewi-Brefi, in 1873, and who very pleasantly supplied some of the information I sought. The widow Ann Evans was the sister of the Georges, and of them John Pleyer has left the following interesting account. "An account of John Goodwin's visit to some young convinced at Gwern Driv, as related by himself to me the 8th of Twelfth Month, 1753, at his house at Esgairgoch.

"At the Yearly Meeting at Llandoverly, in Carmarthenshire, [in 1709] was observed two young men of sober and grave deportment to be often pretty much reached in the meetings, and much tendered by the power of Truth. By their apparel and speech they were taken to be Friends, but none knew from whence they were, neither did any ask them as I know, nor make inquiry after them till they were gone from the town, when it rose with me to inquire after them, but they were gone; but by some means I found they lived in Cardiganshire, but where, or what their names I could not learn. Some time after my return home, I found it laid on me to go and visit those two young men, but where to go I knew not, nor whom to inquire after: so delayed in going till I could not with ease of spirit stay any longer at home. Then calling to mind that there was no Friends lived in that county as I knew of, save an old man at Aberystwith, to whom I resolved to go and inquire if he knew of any such as my concern was to; so taking my horse, early in a morning, I rode to this Friend, who I found more ignorant concerning them than myself; so there was I left in a great strait: to go back I did not dare, without of-

fence to my Master, and where to go forward I could not tell, but being very low in myself, I resolved to rely on the Divine Director for a guide, and accordingly turned my horse as he rode out of the town, resolving to ride that road I found most freedom to take, when I can where there was two. Accordingly, having followed this Guide without asking anyone after any religious or sober people till I came with about a mile of the place where they live where, seeing a man keeping sheep. I found freedom to go and ask him if he knew of a sober, religious people thereabout. He told there was two young men and their sister who lived about a mile off, that was called Quaker who would not pull off their hat nor go to church, but did sit together without any preaching; at hearing of which my heart leaped for joy. I inquired of him the way, and rode to the house, where being come I called at the door and asked if any religious people lived there. The father came to me, who was a son of an old man and much displeased with my manner of addressing him; but his son John being in the garden behind the house, heard my first inquiry and ran to me and fell on my neck and kissed me,—having in the spirit knowledge of me coming. It was now near night, and where to get lodging could not tell, and they were afraid to ask their father for me to lodge there, but desired me to ask myself, which I did, and he told his son he might set up my horse and take me in. So after having been there a little time, the father began to exclaim against his children for their leaving the church and joining in so foolish a worship as he apprehended ours was. I walked in the meekness of wisdom to open to him the way of righteousness, he became more moderate, and suffered his children to sit with me, we were comforted in each others' company; being in all things, though they had not seen or heard anything of our Society till a little before the aforesaid Yearly Meeting. Their names were Samuel George, John George, and Ann their sister, (now the widow Ann Evans, whose house the meeting is held.)"

The foregoing narrative is a valuable addition to the memoir of Samuel George, which is published in the fifth part of "Piety Promoted," and is equally valuable as portraying the earnest Christian character of John Goodwin, of whom there is also an account in "Piety Promoted" confirming the impression that he "walked by faith, not by sight" in other cases besides this in which he seemed to remember that "it is not the will of our Father which is in heaven that one of the little ones should perish," even if he had literally to carry out our Saviour's description of "going into the mountains" to seek some of his flock. To accomplish this object was no light matter, for the first journey to Aberystwith would be about thirty miles, and after getting no information at that place, there would be about thirty miles more to ride before reaching Llandewi-Brefi.

John Goodwin was in very limited circumstances when he was a young man, and being anxious for the support of his family, he proposed following his parents and other near relations who had removed to America; but finding a stop in his mind, and feeling after Divine counsel, he found it his place to settle in his native land, and it livingly arose in his heart that the Lord would provide for him and his family. "At the close of his days he said with thankfulness that the Lord had fulfilled this to him." About the twenty-seventh year of his age he was called to the work of the ministry,

FROM "THE INDEPENDENT."

A Greater Niagara.

BY BISHOP H. W. WARREN, D.D., LL.D.

became an able instrument in turning many from darkness to light and from Satan to the God of God. He often paid religious visits in Wales and in some parts of England. He is described as having been pleasant in conversation, and continued fresh and lively to old age. During his last illness he appeared to be in a heavenly frame of mind, abounding with praises to God for his continued mercies; often expressing how valuable the enjoyment of the love of God is on a dying bed. He died in 1763, aged only eighty-two years.

Esgairgoch, where John Goodwin lived, is a large about eight miles from the Llanilloes, in Montgomeryshire, very near the slopes of the eastern end and the Wye, on the slopes of Pllinlimmon. It was of such a Welsh mountain as this, though probably it was Cader Idris that George Fox wrote with no expressions of incredulity, that the country people said it was two or three leagues high. And he says, "From the side of the hill I could see a great way. And I was wroth to see my face several ways, and to sound the horn of the Lord there. And I told John Jones (a faithful Welsh minister) in what places God would raise up a people to himself, set under his own teaching. These places he took notice of, and since then hath a great open arisen in those places."

At the time that John Goodwin was living, he is told by John Churchman that there were at Esgairgoch "several tender Friends," but he adds, the living are scarcely able to bear the weight of the professors, who, although they know the truth, do not abide therein, and so are withered branches cast forth.

Amongst those who then lived there was Edward Rees, who followed the occupation of a mountain farmer; his widow, Elizabeth Rees, continued to reside at Esgairgoch until her decease in 1804, at the advanced age of ninety-two. Their descendants settled further south, and the last survivor in the Society of Friends who retained the family name was their grandson, the late Jonathan Rees, who died at Neath in 1867.

In this gathering together fragments respecting the Friends in Cardiganshire, the exact limits have been exceeded by the mention that has been made of some who lived in the adjoining county of Montgomery. Although Friends have ceased to exist in these districts, yet when we turn to such records as we can find respecting them, it is evident that Friends' principles were far more extensively held in the latter than in the former county; but the number seems to have been greatly reduced by emigration to America, on which continent the Welsh element is still very apparent in the surnames that frequently occur, for there we hear of the families of Evans, Griffiths, Jenkins, Jones, Thomas, Williams, and other names that are most familiar in Wales. F. J. GIBBONS.

NEATH.

AS A RULE, an employer in any line of occupation must work harder than any of those whom he employs, in order to be a success in his undertakings. They are compelled to work without certain hours for certain specified wages. He is free to work earlier and later than they do, as a means of keeping up the business that shall give them employment. When a man by advancement passes from the grade of a clerk or an operative to an employer, he is sure to find that his new freedom brings to him a privilege of harder work and more of it, with an alternative of comparative failure.

Having distinct mental pictures of over forty famous cataracts, I eagerly embraced an opportunity to add another, viz., that of the Shoshone Falls, of the Snake River, in Idaho, called above the Greater Niagara.

These falls lie 26 miles south of Shoshone, a town on the Oregon Short Line. A driver was found who would take me there and back in one day in winter for \$12.

The road runs over a plain of lava 250 miles long by 25 to 100 miles wide. It has the usual characteristics of lava; mounds, dikes, fissures and caves. Into one of these locomotive might run for half a mile, or in the night a man might drop into unfathomed depths.

At eleven o'clock the sun burned through the fog and revealed a vast landscape—in the distance blue as the sea, set round with jeweled mountains, glittering in snow and ice. Half an hour later, in the level earth, appeared a chasm 50 miles long, 1,000 feet deep, and at the bottom of this lay the green river, reflecting with perfect fidelity the winding lines of the perpendicular walls, and reproducing the variegated tints of the cleft lava so faithfully that the chasm seemed twice as deep as it was; and beyond its multiplied depth one gazes into the azure depths of heaven.

The first impulse is to kneel in silent adoration of the great God who can put such sublimity and beauty in the midst of such desolation. The walls of this chasm are so perpendicular that one might come, perishing for water, from one of these plains of terrible lava, and wander for ten miles in sight of this delicious coolness and be unable to find a single place where he could descend. At the point where we reached the chasm descent can be made. The quiet river suddenly changes from eight hundred feet below the general level of the country to one thousand and ten feet below, by the Shoshone Falls. Just above the cataract, close to the terrible descent, runs a ferry, guided by a wire rope.

The water above the falls is more than two hundred feet deep, its bottom never having been reached. Below the falls is an unmeasured depth. This shows a height that the chasm has been dammed to this enormous height.

Going down the sides of this cliff toward the bottom, one can easily study the process of their manufacture. Over this vast plain have poured successive floods of lava from unknown fountains hundreds of miles away, and at intervals of unknown periods of time. Just above Basas, south of Mount Hermon, one may see a low flat crater that has poured its stream of lava down the gorge, where a young Damascus river is born; but there does not seem to have been but one such overflow. On the inside of the crater of Popocatepetl may be seen dozens of successive overflows each of which has raised the mountain by its thickness. So here may be seen great numbers of overflows. In several lower ones the break went through many little caves in the lava, showing where gas had been evolved that found no outlet. Sometimes the developing gas threw up a mound in the viscous mass of the lava, and the next layer of lava, respecting the hardened mound, rose above it.

Little islands divide the stream into six cascades, dropping down seventy feet. Then the whole river is compressed to a breadth of 750 feet, and united again into a single stream, it makes its sublime dash of 210 feet into the

water below. This is nearly a third greater fall than Niagara. It is not quite a perpendicular plunge. Projecting rocks dash the whole mighty mass into cataracts of foam and furious spray, over which hovers Iris on her wings of fame. At Niagara there is a sense of power sometimes producing a feeling akin to terror. But here, though the chasm is deepened, from 160 to 1,000 feet, the sublime is touched and glorified by the beautiful. Sometimes the volume of water is nearly equal to that of Niagara. Of course the volume of rising mist, because of the greater fall and the fury of foam from the projecting rocks is much greater. And as the wind toys with the rising clouds, the rainbows shift and play, as if angels of glory were practising their mazy movements in the presence of this sublime exhibition of power.

On one of the little crags of islands in the upper fall a pair of bald eagles have nested for years and raised their young in the midst of the thunder and spray of the waters.

FROM "THE CHRISTIAN ADVOCATE."

Science Leading to God.

Some years ago there came to the writer a letter very full of interest. It was from a young botanist, expressing the wish that ministers would take more interest in, and become better acquainted with, natural science as part of God's revelation of himself, his wisdom and goodness to man. It went on to give an account of the young man's religious history. Trained up by his father to disbelief of the Bible, he was ever on the watch for new arguments against it. Hearing something about what the noted infidel of to-day calls "the mistakes of Moses," he thought he would take up the study of geology, as likely to give him what he was seeking, new weapons against the Christian revelation.

For a time all went well, but as he obtained further knowledge of the facts of geology, he began to find them turning against him, began to see a wonderful harmony between the "testimony of the rocks" and the history of creation given in the Book of Genesis, became convinced that the God of creation and the God of the Bible must be the same, and was brought by his geological studies to a hearty belief in the Bible and the religion of Christ contained in it.

Nor is this a solitary or unparalleled experience. This is nothing new under the sun. Evolution has been considered by many as the great infidel bugbear of the age, the great and dreaded enemy of revelation. It has been brought forward to fight religion, to show that it is unnecessary, unnatural, unscientific. It has been used to prove that nothing came down from above; that all was of the earth, earthy; that as our high scientific authority has told us, "in matter alone can be seen the promise and potency of all things." Therefore we are to bow down before and worship, not God, but nature, and that spelled with a small "n."

But it did not take long to show that, reasoning from all experience, evolution demonstrated an evolver, just as much as creation a Creator, that plan and accomplishment, means bringing about an end, required and proved intelligence; that law necessitated a law-maker; and as to the underlying facts in human nature and history on which religion is based, and to which it is fitted, as to those motives to which religion appeals, it soon began to be seen that science, when she denied or ignored them, had not thought her way through, and that the very motives to which religion appeals are those upon which we must rely to lead and impel and inspire us to

reach the summit of human attainment, progress, success.

Altruism—a rather formidable sounding, comparatively recent, but very harmless word—is made to work this apparent miracle of harmonizing the teachings of pure science with the claims of religion. Science has been investigating the condition of man primeval as she thinks, certainly man degraded, undeveloped, savage, brutish. She has announced loudly her law of the "survival of the fittest;" that is, the strongest, most savage, fiercest. For cycles there was war, struggle, combat; every man's hand against every other man; a condition of constant, bitter, deadly antagonism. Selfishness reigned triumphant.

But it began to be apparent that this could not go on forever; that it entirely prevented human progress; would, if carried out to its logical end, annihilate humanity. Science was compelled to recognize the religion of altruism, "otherism," the right, the claims, the relations, of others. She now differentiates between ourselves and our fellows, and then acknowledges and points out that mutual helpfulness is essential to both, and that human progress is possible only when this great law of love begins to be obeyed.

But she does not stop here; she develops her religion, her gospel of altruism; and by and by, studying the actual facts in the life of man improving, progressing, developing, she is compelled to differentiate again between the lower and the higher, between man and something superior to man, better than man, a "something that makes for righteousness," "nature and the supernatural," and lo, a God is found to be thought out, recognized by man, the result of his improvement in thought and life, and absolutely essential to his highest attainment.

But this is only what the Bible has been telling us these thousands of years of God, our Father; or our fellow-men, our brothers. It is what Christ proclaimed when He gave his epitome of the commandments: "Thou shalt love the Lord thy God with all thy heart, and mind, and soul, and strength; and thy neighbor as thyself." The Bible and the religion of Christ have long ago anticipated science, and taught and insisted upon as absolutely essential to man's deliverance from the power of selfishness, this idea of "looking not every man on his own things, but every man on the things of others."

And now social science, in her study of human history, has stumbled upon and is presenting the part that those nations and those individuals who have made the greatest advances, risen to the highest plane of life and action, have been inspired, stimulated by this motive and principle.

Furthermore, the Golden Rule, "Therefore all things whatsoever ye would that men should do to you, do ye even so to them," has been demonstrated to be the only way to successful living; not exalting others above ourselves, not impoverishing ourselves to make others rich, not wronging ourselves to right others, but having love and justice ever go hand in hand, desiring that which is best and highest for ourselves, and desiring it equally for others, and finding our highest happiness in promoting the welfare of our country and of humanity, and thus "adorning the doctrine of our God and Saviour;" while to God our loyalty, our devotion, our self-sacrifice, the best service of our lives, are to go out unchecked, unlimited by thought of other existence. Herein "science and the Bible," Divine revelation and human history, harmonize in their teachings. And to every such life, whether in the first century or the nineteenth, whether amid

pagans darkness or in the full light of Christian civilization, humanity has ever borne witness, recognized its power for good, given it praise and honor even when it has failed to imitate and copy.

Whenever has been seen on earth a noble, helpful, useful life, thus has it been inspired, in love to God and love to man has it ever been rooted and grounded, and thus through infinite riches of grace in Christ Jesus our Lord has it entered into life eternal.

Our Heritage.

(Continued from page 372.)

"The father to the children shall make known thy truth."—Isaiah xxxviii. 19.
"And all thy children shall be taught of the Lord; and great shall be the peace of thy children."—Isaiah liv. 13.

From John Barclay's History of Friends in Scotland, we gain a pleasing picture of the religious life of Christian Barclay, the widow of the Apologist. Every morning when her seven children were up and dressed, "she sat down with them before breakfast, and in a religious manner waited upon the Lord. Which pious care" the historian adds "and motherly instruction of her children when young, doubtless had its desired effect upon them, for, as they grew in years they grew in the knowledge of the blessed Truth." "Thus cherished and watered, did Peter Gardiner," a minister from Essex, England, "find this group of young olive plants, when he entered their abode."

Many are probably familiar with the account of his visit to the meetings of Ury, Aberdeen and Montrose; and the remarkable visitation of Divine Grace which was at that time extended to so many of the young there: Christian, Catharine, Robert, David and Patience Barclay, all appearing in impressive, solemn testimony or prayer.

David was but twelve years of age; Christian fourteen. Indeed they were all under the age of twenty-two.

Christian, for fifty-seven years, continued to exercise faithfully her gift in the ministry, dying at the age of seventy-one.

There seems in Peter Gardiner's letter, addressed to these meetings after his visit, advice which is not inappropriate to the present day. "I beseech you all in the love of God, do not neglect the day of small things; for whosoever despiseth the day of small things in themselves, or others, a withering day will certainly come upon them."

"Therefore, dear Friends, cry mightily unto the Lord on behalf of your children, for I do believe the Lord will pour out his Spirit upon them, and make them every very glorious, as they give up in obedience unto Him."

"I have sweet peace with Him that is the Redeemer of Israel, and am now waiting for my pilot to conduct me to my long home," was the dying message of this servant of the Lord, whose services were so tenderly extended toward the young. His ministry thus eminently blessed, was the self-denying message of the cross of Christ. He exhorted "to think nothing too dear to part with; but that all might be freely given up for Christ." "That their eyes might be unto Him, and so abide faithful unto the end."

David Hall, a minister, and a truly conscientious and highly educated teacher among Friends, in 1703, who was at the head of what was known as the "Quaker Seminary at Skipton," for thirty two years, writes thus of his

concern for his scholars: "For the good of my pupils, that they might in their blooming year imitate the sound principles of the pure and undefiled religion, and receive early impressions thereof in their tender minds, I generally kept little meetings in my house or school, when in these, every Third or Fourth-day evening. If a home, I waited upon the Lord with the boys, and as I found openness and freedom, I led my lambs either by causing them to read the Holy Scriptures by turns, and making observations to them upon the same, or by ordering them alternately to read other religious books, or giving some times my own mind and experience to encourage the good and discourage the evil in them all I loved my Master, and therefore fed his lamb with pleasure; yet not without exercise for some that would needs creep through or break the hedge."—*Friends' Library*, vol. 13.

(To be continued.)

A Daughter Worth Having.

Two gentlemen, friends who had been parted for years, met in a crowded city street. The one who lived in the city was on his way to meet a pressing business engagement. After a few expressions of delight, he said:

"Well, I'm off. I'm sorry, but it can't be helped. I will look for you to-morrow at dinner. Remember, two o'clock sharp. I want you to see my wife and child."

"Only one child?" asked the other.
"Only one," came the answer, tenderly; "a daughter. But she's a darling."

And then they parted, the stranger in the city getting into a street-car for the park. After a block or two a group of five girls entered the car; they all evidently belonged to families of wealth; they conversed well. Each carried a very elaborately decorated lunch-basket; each was well dressed. They, too, were going to the park for a picnic. They seemed happy and amiable until the car again stopped, this time letting in a pale-faced girl of about eleven and a sick boy of four. These children were shabbily dressed, and on their faces were looks of distress. They, too, were on their way to the park. The gentleman thought so; so did the group of girls, for he heard one of them say, with a look of disdain:

"I suppose those ragamuffins are on an excursion, too!"

"I shouldn't want to leave home if I had to look like that; would you?" This to another girl.

"No, indeed! But there is no accounting for tastes. I think there ought to be a special line of cars for the lower classes."

All this was spoken in a low tone, but the gentleman heard it. Had the child, too? He glanced at the pale face, and saw tears. He was angry. Just then the exclamation, "Why, there is Nettie! Wonder where she is going?" caused him to look out upon the corner, where a sweet-faced young girl stood beckoning to the car-driver. When she entered the car she was warmly greeted by the five, and they made room for her beside them. They were profuse in exclamations and questions.

"Where are you going?" asked one.
"O, what lovely flowers! Who are they for?" said another.

"I'm on my way to Belle Clark's. She is sick, you know, and the flowers are for her."

She answered both questions at once, and then glancing toward the door of the car, saw the pale girl looking wistfully at her. She smiled at the child, a tender look beaming from her beautiful eyes, and then, forgetting she wore a handsome

velvet skirt and costly jacket, and that her supple hands were covered with well-fitted gloves, she left her seat and crossed over to the lady one. She laid one hand on the boy's thin cheeks as she asked of his sister:

"This little boy is sick, is he not?" and "he is your brother, I am sure."

It seemed hard for the girl to answer, but finally she said:

"Yes, miss; he is sick. Freddie never has been well. Yes, miss, he is my brother. We're going to the park to see if 'twont make Freddie better."

"I am glad you are going," the young girl replied in a low voice, meant for no one's ears except those of the child. "I think it will do me good; it's lovely there, with the spring waters all in bloom. But where is your lunch? you ought to have a lunch after so long a ride." Over the little girl's face came a flush.

"Yes, miss; we ought to, for Freddie's sake; it, you see, we didn't have any lunch to bring. He's—his other brother—he saved these pennies as Freddie could ride to the park and back, guess, maybe, Freddie'll forget about being angry when he gets to the park."

There were tears in the lovely girl's eyes as she listened; and very soon she asked the girl where she lived and wrote the address down in a tablet which she took from a bag on her arm.

After riding a few blocks she left the car, but she had not left the little ones comfortable. Half a bouquet of violets and hyacinths were asped in the sister's band, while the sick boy, with radiant face, held in his hand a package, on which he helped himself now and then, trying to his sister in a jubilant whisper:

"She said we could eat 'em all, every one, when we got to the park. What made her so good and sweet to us?"

And the little girl whispered back:

"It's 'cause she's beautiful as well as her clothes," the gentleman heard her whisper.

When the park was reached the five girls hurried out. Then the gentleman lifted the little one in his arms and carried him out of the car across the road into the park, the sister with a heart full of gratitude following. He paid for a ride for them in the goat-carriage; he treated them to oyster soup at the park restaurant.

At two o'clock sharp the next day the two gentlemen, as agreed, met again.

"This is my wife," the host said, proudly introducing a comely lady; "and this," as a young lady of fifteen entered the parlor, "is my daughter."

"Ah!" said the guest, as he extended his hand in cordial greeting, "this is the dear girl whom I saw yesterday in the street-car. I don't wonder you call her a darling. She is a darling, and no mistake. God bless her."

And then he told his friend what he had seen and heard in the horse-car.—*N. Y. Evangelist.*

THE Christian religion has a far more powerful hold upon mankind than any mere array of outward evidences can give it. It is rooted deep in the conscious weakness and sinfulness of mankind, and in men's conscious need of the knowledge and mercy of God. Its great hold upon the human heart is in the fact that it supplies this knowledge and assures and manifests this mercy. In this sphere are found the deepest grounds for faith, which, while in no way diminishing the value of other reasons, do underlie all other reasons, and impart to them a convincing value which they could not otherwise possess.—*Selected.*

SELECTED.

THE JUG OF WHISKEY.

The following poem, taken from the *London Star* of Sixth June 1874, shows that the contents of the whiskey jug were known a hundred years ago:

Within these earthen walls confined
The ruin lurks of human kind;
More mischiefs here are united dwell,
And more diseases hamt this cell
Than ever plagued the Egyptian flocks,
Or ever cursed Pandora's box.

Within these prison walls repose
The seeds of many a bloody nose,
The clattering tongue, the horrid oath,
The fist for fighting nothing loth,
The use with diamonds glowing red,
The bloated eye, the broken head.

Forever fastened be this door—
Confined within a thousand more
Destructive fangs of hateful shape
E'en now are planning an escape.

Here only by a cork controlled,
And slender walls of earthen mould,
In the innards of death, reside
Revenge, that ne'er was satisfied;
The trees that bear the deadly fruit
Of maiming, murder and dispute;
Assaults that innocence assail;
The images of gloomy jail;
The giddy thought on mischief bent;
The evening hour in folly spent.
All these within this jug appear,
And Jack, the hangman, in the rear!

Thrice happy he, who early taught
By nature, ne'er this poison sought,
He, with the purring stream content,
The beverage smells that Nature meant;
In reason's scale, his actions weighed,
His spirits want no foreign aid,
Long life is his, in vigor passed,
Existence welcome to the last—
A spring that never yet grew stale;
Such virtue lies in Adam's ale!

THE DAY IS PAST AND GONE.

"The day is past and gone,"
And gentle evening sits upon the hills.
With noiseless feet, the bright hours slipped away;
And from our lives Time claims another day.

"The day is past and gone,
Night draws her purple veil o'er hill and world.
Whither, O friend, have all thy bright dreams sped?
What thought is sweetest, now thy life is dead?"

"The day is past and gone,"
The silver stars come shining into heaven.
I kneel beside my bed to-night to pray
That God will keep us safe and right away.

"The day is past and gone,"
The tender moon smiles from a quiet sky,
I lay down, through the night's long hours to sleep,
With one last prayer for all that wake and weep.
—*Juliette Coates Harding, in Christian Register.*

PRAYER FOR OUR CHILDREN.

Father, our children keep!

We know not what is coming on the earth;
Fenceath the shadow of Thy heavenly wing;
O, keep them, keep them, Thou who gav'st them their birth.

Father, draw nearer us!
Draw nearer us Thy protecting arm;
O, clasp our children closer to Thy side,
Uninjured in the day of earth's alarm.

When in Thy chambers hide!
O, hide them and preserve them calm and safe,
When sin abounds, and error flows abroad,
And Satan tempts, and human passions chafe.

O, keep them undefiled!
Unspotted in this sinning world of sin;
That, as clothed in white, through the bright city gates,
They may with us in triumph enter in.
—*H. Bonar.*

SELECTED.

IN THE LAST DAYS.

As we grow old, how softly, slowly close
The doors of sense, and shut us from the world—
Like tender petals of some light ring rose
That, of a frosty night have inward curled!

Dim as the figures in a dream now pass
Those glittering shows that stirred our youthful
hearts—
Poor, hurrying shadows in a misty glare,
Each but a moment seen ere it departs.

Nor sight, nor sound, nor taste, of earth's delights
Can longer please; these things are past and gone,
The soul will put her quiet house to rights,
And in the upper chamber wait the dawn.
—*James Buchanan.*

WATCHFULNESS for opportunities of service is as important in its way as willingness to serve when the opportunity presents itself. If we were always on the lookout to be helpful to others, along the line of our own special endowments, we could create a large sum-total of happiness with the expenditure of very little energy. For the strong man passing by on the pavement to lift a basket up the steps, or to carry it a block, is a mere trifle; but to the feeble woman or child who has the basket in charge, it is a crushing burden. In many instances like this, two hearts might be made sunshiny for the whole morning through such an act of thoughtful service,—the heart that prompts the kind deed and the heart that accepts it; but usually the man passes by, and never thinks of the service he might render. He has not in mind the woman's feebleness and his own strength. He is not on the lookout for opportunities of being serviceable. He has not cultivated the habit of helpfulness along those lines in which he is especially endowed. If we were more watchful for openings to service, we should render more service; as we go on in life, and we should be glad we had done so.—*S. S. Times.*

Generosity of Indians.—Thomas C. Battey says that on one occasion an Arapaho Indian, being ill, asked him to take one of his ponies to the agency and sell it and with the proceeds purchase certain things of which his family stood in need. He accepted the commission and sold the pony for a good price in cash. After buying the things wanted he had a balance of \$12. An Indian of the same tribe to which the sick man belonged was present, and learning of this balance, said: "I need some things for my family and I have no money. Give me the \$12 that is left." "No," said Friend Battey, "I can't do that, for it is not my money." The Indian replied: "You no understand Indians." Then turning to the agent he explained matters through an interpreter, whereupon the agent told Battey to let him have the money. He did so and then returned to the Indian camp. He told the sick man how much he got for his pony and what he had paid for the goods. He seemed much pleased. He paused before proceeding with his report, for he feared that his friend would not be pleased with the remaining item. The Indian asked: "How many dollars left?" He replied, "Twelve." "You bring that home?" "No; I gave it to ——" explaining the whole matter. "That right," He my brother.

These Indians did not belong to the same family, but were members of the same tribe. "The sentiment of brotherhood," says Friend Battey, "is much broader and much more practical among Indians than among professedly Christian white people."

Natural History, Science, &c.

The Sahara Desert.—The Sahara as a whole is not below sea-level; it is not the dry bed of a recent ocean, and it is not as flat as the proverbial pancake all over. Part of it, indeed, is very mountainous, and all of it is more or less varied in level. The Upper Sahara consists of a rocky plateau, rising at times into considerable peaks; the Lower, to which it descends by a steep slope, is "a vast depression of clay and sand," but still, for the most part, standing high above sea-level. No portion of the Upper Sahara is less than 1300 feet high. Most of the Lower reaches from two to three hundred feet. The two spots below sea-level consist of the beds of ancient lakes, now much shrunk by evaporation owing to the present rainless condition of the country; the soil around these is deep in gypsum, and the water itself is considerably saltier than the sea. That, however, is always the case with fresh water lakes in their last dotage, as American geologists have amply proved in the case of the Great Salt Lake of Utah. Moving sand undoubtedly covers a large space in both divisions of the desert; but, according to Sir Lambert Playfair, our best modern authority on the subject, it occupies not more than one-third part of the entire Algerian Sahara. Elsewhere rock, clay, and muddy lake are the prevailing features, interspersed with not infrequent date groves and villages, the product of artesian wells, or excavator spaces, or river oases. Even Sahara, in short, to give it its due, is not by any means so black as it's painted.—*Cornhill Magazine.*

Owl Characteristics.—Last spring, while wandering about the woods, I was attracted by the barking of my dog, and on going to him, found a young of the Great-horned Owl, that had fallen out of the parent nest. It was in a little creek-bed, and the parent owls had nicely concealed it by covering it up with leaves. I decided at once to make a pet of it. A few days later I took a half-grown Barred Owl (*Syrnium nebulosum*) from a hollow sycamore, and placed it with the first, with the intention of comparing the habits and dispositions of the birds.

They are now full-grown, and have indeed proved to be very interesting pets. They have the run of an out-house that gives them plenty of room to play about in. They have become very much attached to each other, and if one is removed from their apartment the other is inconsolable until its return. And then such a bowing and nodding to each other is ludicrous indeed. The disposition of the two birds is very dissimilar. The *Bubo* is by far the nobler bird—as tame as a cat, good-natured and intelligent, pleased at the appearance of familiar faces, but suspicious of strangers. Always greets my appearance at the door of the owl-house with a *hoo! hoo!* Greatly enjoys having his head scratched; shuts his eyes, and his voice will sink almost to a whisper.

The Barred Owl is just the opposite: untamable, revengeful, suspicious alike of everything and everybody. Mice, rats, ground-squirrels, kittens, chicken-heads and small birds are first thoroughly crushed by their beaks and are then usually swallowed whole; before swallowing birds they first pluck out their feathers. During the summer months small fish formed the staple of my pair of pets.

The Barred Owl has developed a great hatred for the boys, probably as a result of their disposition to gey him whenever an opportunity offers. This dislike has lately taken shape by

his making a dive at every boy that enters his house, raking the top of his head with his claws as he passes over him, and then giving vent to his peculiar laughing cry of "Who! hoo! hoo are you!"—*Dr. W. S. Stodge, in the American Naturalist.*

Old Trees and Plants.—There is a small tree growing near Tuscarora, Nevada, the foliage of which at certain seasons is said to be so luminous that it can be distinguished a mile away in the darkest night. In its season, it emits sufficient light to enable a person to read the finest print. Its luminosity is said to be due to parasites.

There is a tree that grows but one place in the world, and that is near the Dead Sea. It produces fruit resembling luscious apples, which are beautiful only to the eye, when bitten are found to contain salty ashes. They are called the "apples of Sodom."

The Cow-tree of South America is another peculiar tree; it yields a fluid which is very much like the milk of the cow in appearance, richness and flavor.

Venus' Fly-trap is a strange plant. The leaf is two-lobed and on each lobe are three hairs, which, on being touched by an insect, the two halves collapse and inclose the insect. Several fine specimens can be seen in the conservatory in the Golden Gate Park.

A plant growing in the United States of Columbia in South America, is named the Ink Plant. The juice is used for writing, and is said to be indelible. It is very useful in writing public records and documents. *Viel's Magazine* tells of a plant that grows in Arabia, called the Laughing Plant, because its seed produces the same effect as laughing gas. The flowers are of a bright yellow, and the seeds resemble black beans, two or three growing in each pod. The natives dry and pulverize them; and the powder, if taken in small doses, will make the most dignified person act like a clown: he will dance, laugh, and cut the most fantastic capers. When the excitement ceases, the exhausted exhibitor of these antics falls asleep, and when he awakes he has not the faintest remembrance of his frisky doings.—*The Kindergarten.*

Spreading of Plants.—The celebrated eruption of Krakatoa entirely exterminated the flora of the island, and covered the entire superficies with volcanic debris. The only methods by which the desolate area could receive new plant life were the agency of the currents, the action of the winds, and the carrying of seeds by birds—methods identical with those through which naturalists believe recent coral islands to have received their plants. M. Treub, who reached Krakatoa in 1886, only three years after the occurrence of the eruption, gathered near the coast the seeds of sixteen species, and upon the mountain eleven kinds of ferns and eight of flowering plants, four of which were composites. All the coast species, except *Gymnodictyon elegans*, a grass common in the adjacent island of Sava, were identical with the colonizing species which are common to all recent coral islands. Only two of the mountain ferns were identical with those of the coast. The soil of the island is in its composition not at all favorable to the growth of ferns, yet M. Treub says that, as regards the number of individuals of the various species, the new flora may be considered as consisting almost entirely of ferns, the flowering species only occurring here and there in isolated groups. The decay of two forms of moss and of six species of algae has furnished alimony to the ferns, which in their turn are doubtless destined to give way to the higher classes of plants.

Wood-pulp for Paper.—At the beginning of the present year there were forty-four wood-pulp manufactories in Norway, all of which were in full swing, and four new wood-pulp works were in course of erection. The export during last year of mechanical wood-pulp and wet and dry cellulose amounted in the aggregate to about 200,000 tons.

Skiffal Feeding.—When my first child was cutting his teeth, said a mother who had brought up a large family of children, I kept constantly by me a bottle of "chalk mixture" to regulate his bowels. That was the remedy then employed in such cases. But as I learned more I ceased to use medicine of any kind, and my children who came later I fed skiffally, so they had no need of medicine. When they were teething, I kept them as much as possible in the open air, wrapping them up on cold and wet days, and letting them play on a covered piazza with southern exposure. If their bowels were loose, I gave them scalded milk and toasted bread or cracker; and all the time, even in the very hottest weather, I kept a flannel shirt on them that completely covered the bowels, so they could not be chilled. The application of flannel to the surface of the skin, and especially over the bowels, will often cure cases of diarrhoea without the use of any other remedy.

If they were constipated I gave them oatmeal or granah mush, ripe fruit, apple sauce, molasses candy, and other laxative foods, of which dried figs and raisins are perhaps as effective and agreeable as any that can be named. Some obstinate cases of constipation have been cured by the free use of raising salt pork was the omnipresent dish at meal-time, I abjured every form of the "product of the hog" from my table, and I think because of that my children were quite free from eruptions on their faces and bodies, even when teething. Frequent bathing in tepid water, followed by vigorous rubbing, so that all the pores of the skin are kept free and open, is the great safeguard against eruptions on the surface of the body. If in addition to this the bowels are kept in perfect condition, the skin will be smooth and healthy.

I made a study of foods, and taught my children to eat everything that I thought proper to put before them. If they objected to certain dishes, I tried various methods to overcome their objections, and they learned to eat and to like the various foods brought on the table. I put what would have been put into doctor's bills into fruit and vegetables in their season, and I found very little occasion for medicines or doctors.

Items.

High License in Nebraska.—H. W. Hardy, "Father of the Nebraska High License Law," Lincoln, says:

"High License does increase the number of unlicensed drinking places. The last time we had access to the Internal Revenue Collector's books, there were 91 persons in Omaha, and 17 in Lincoln, who held a Government permit without the sign of a city or State license. Of course they were selling liquor, or why did they pay for a Government permit? We never knew one liquor-dealer to complain of another. They all live in glass houses of violated law, and throwing stones would be dangerous. Some parts of the State are even worse than the cities I have mentioned. If ten are making clear \$1,000 each and you tax each of them \$1,000, it would leave them no profits at all; but if four dropped out, or went into partnership with four others, then they could pay \$5,000 and make money

gain; for they save the expense of running four loons and have all the trade the ten did. It does not lessen the drinks or the curse, but heavily increases them. After a man pays \$1,000 he pushes things to the best he knows how. The prohibition in ten years. It is a whiskey devil in impudence garb. We were deceived by it, or Nebraska would have Prohibition to-day. The money goes as a bribe. In Omaha it is \$32 for every vote. Praying church members vote for it just for no money. They are willing to let their boys slide after to keep the number of saloons from 22 to 10 but when I found it did not lessen the curse I saw my mistake. There are just as many stabbings, footings, and pounded noses as ever there were; just as many broken homes, crying wives and ragged children. It is no great consolation to a houseless, hungry, crying wife to tell her that her husband drinks on High License whiskey. High License is one of the best devices to deceive good temperance people."

The Negro Question in the South Carolina Episcopal Convention.—The Independent gives the following information:—

"The question of admitting Negroes to the Diocesan Convention of the Protestant Episcopal Church in South Carolina was settled last week, at its annual Convention, at least for the present. Bishop Howe in his address said: 'Our constitution provides the qualification for clerical candidates. There is no word of color in that canon. It simply says 'an ordained Christian minister, one in holy orders.' Now, if you would have me add color to the definition and say, for instance, a white man in holy orders, I answer that I cannot do it, because out of substituting a local for an ecclesiastical definition, the only ground on which I could defend myself is learned in the laws, and I answer that, while I yield great respect to the reference in matters pertaining to life and property and civil affairs, I just in ecclesiastical matters relating to church canons and constitutions, follow my own conscientious convictions. I must use my own eyes and not the eyes of the secular world. I have no indication, partly for another reason. In self-indication, because I learn that some have thought that I ought, for peace's sake, to leave off from my list names of colored clergymen who come up to annual requirements and constitutional requisitions. If I could even think of such a thing I should be unworthy of my position, and of you who voted me to it."

"The bishop's party had a majority of the convention. The lay delegates from the thirteen succeeding churches were present, the only colored delegate at the convention being Pollard, known in the controversy as the 'bone of contention.' Early in the proceedings the secretary presented himself in a body and read an address in which he announced their willingness to return to the convention, provided there was to be an entire separation of the races. Next was submitted an amendment to the constitution defining the qualifications of lay delegates in such a manner as to exclude colored clergymen who may hereafter apply for admission, but in effect admitting Pollard. A fight was made on this by the anti-colored party, but it was finally passed, and has to be again passed at the convention of 1890 by a two-third vote. Thus a majority of the seceders accepted the compromise and returned to the convention to the exclusion. About half a dozen marched out of the convention, declaring they would not sit in it as long as a colored man occupied a seat. There are four colored churches in the diocese, neither of which have elected lay delegates to the convention for the past five or six years."

The Presbyterian Assembly on Color Caste.—At the recent meeting of the Presbyterian General Assembly in New York, a report of a conference committee of the Northern and Southern Presbyterian

churches was presented, which approved "the policy of separate churches, Presbyteries and Synods [for the colored members], subject to the choice of the colored people themselves." This policy was denounced as unchristian, and the paragraph was stricken from the report by an overwhelming majority.

Institute for Colored Youth, Philadelphia.—The 37th Annual Report of the Managers of this institution states that Richard Humphreys, a native of the Island of Porto, in the West Indies, died in 1832, bequeathing a sum of \$10,000 to found an institution, under the care of members of the Society of Friends, "having for its object the benevolent design of instructing the descendants of the African race in school learning, in the various branches of the mechanical arts and trades, and in agriculture, in order to prepare them to act as self-supporting teachers." The Institute was founded in 1837. The teachers are all colored persons, except those in the industrial department. The number of graduates to the present time is about 250. Many of these, as well as others of the pupils who did not graduate, are now engaged in teaching in several of the Southern States.

During the past year, an additional lot of ground was purchased, a building erected thereon, and instruction commenced in the trades of carpentry, bricklaying, shoemaking, dressmaking, &c. In this department there are 120 students, making the whole number on the roll 477. Great interest is felt in the industrial department, and the number desiring admission into it is far more than can be received, with the present accommodations.

AFTER all that I have said about the perils to young men from temptations in business, from the wine-cup and other sensualities, from theatres and from vicious amusements, and from the skepticisms which are in the air, the chief perils in the *depraved heart* which is at enmity with God. This is surely no new thing under the sun. Human nature is about the same in America to-day that it was in Palestine and Greece and Rome eighteen centuries ago. Paul's weapons are our only weapons. Various methods and machineries have been invented—some of them with an eye to reach and save the young; they are good so long as Christ's Spirit is "within the wheels," otherwise they only absorb and waste the power of the Church. Jesus Christ is the only hope of young men to-day. Preach, brethren! preach his precious Gospel of salvation, but with love and mighty in heavenly power! Live, fellow-Christians! live out the beauty and warmth and holiness which Christ inspires. Then God will be with us, and will make his Church the home, the refuge, and the training-school of the rising generation. If Satan captures the young men of America (and thus captures our country) it can only come about through the indolence or worldliness or cowardice or faithless treachery of the Church of the Lord Jesus Christ.—*Selected.*

"THE next day we passed on; for the Lord had said unto me: If but one man or woman were raised up by his power, to stand and live in the same Spirit that the prophets and apostles were in, who gave forth the Scriptures, that man or woman should shake all the country in their profession for ten miles round. For people had the Scriptures, but were not in that Power and Light and Power, and Spirit, which they were in that gave forth the Scriptures: and so they neither knew God, nor Christ, nor the Scriptures aright; nor had they unity one with another, being out of the Power and Spirit of God."—*George Fox's Journal, First Edition, Folio 1694, Page 72.*

THE FRIEND.

SIXTH MONTH 29, 1889.

LONDON YEARLY MEETING.

The *British Friend* and the *London Friend*, for Sixth Month, each contain pretty full reports of the proceedings of London Yearly Meeting, which commenced on the 22nd of Fifth Month.

Among the strangers in attendance for whom certificates were read, were Samuel Morris and Thomas P. Cope, of Philadelphia Yearly Meeting, who received a cordial welcome.

A suggestion that more systematic arrangements should be made for the reporting of the proceedings of the Yearly Meeting, was met with a fear that the Yearly Meeting would become more and more of a popular, and less and less of a religious assembly.

Joseph Storrs Fry was appointed Clerk, and Caleb Hickman Kemp and Arthur Pease, assistants.

The reading of the Epistles from other Yearly Meetings opened the way for some remarks on the subject of correspondence with Friends in America, "towards which" one Friend stated, "he was rather negatively than positively minded." This arose from sympathy with those with whom London Yearly Meeting retained no connection, and who "were separated from their brethren conscientiously for truth's sake, that the ancient doctrines and discipline of our Society should be maintained in its integrity." Another Friend compared the state of things in the American Yearly Meetings to a ship with a great deal of sail and making great way, but with a very little amount of ballast." His feeling was, that in proportion as such work was extended we needed a proportionate supply of religious growth and experience.

In considering the reports from the Quarterly Meetings, it was stated that meetings in agricultural districts were generally dwindling in number of attenders, while those in towns were better maintained. This appeared to be owing to the diminished profits of agriculture, which induce many of our members to leave that for other occupations.

The tabular statement gave a total membership of 15,574, an increase of 43 during the year. The births had been 163, the deaths 214. The number of recorded ministers was 342.

In the consideration of the state of Society, one of the visitors expressed a desire, that Friends, in their efforts to promote the well-being of the people, might not be led into methods which are out of harmony with our religious views and testimonies, which seem to belong to other people: in connection with this subject, the belief was expressed that we shall find our chief strength to consist in the faithful maintenance of our underlying principles, and the precious testimonies that have grown out of them.

It was also stated by one or more of those who spoke at that time, that there was reason to fear that Friends were losing their hold of the testimony as to the spiritual nature of worship, which the Society had held for more than 200 years.

Among the subjects which claimed the notice of the Yearly Meeting, was the report of the Foreign Mission Association, which is a voluntary organization, not directly under the supervision of the meeting. The Report on Education referred to the efforts being made to establish a high-class school for the children of

Friends. A revised form of Marriage Certificate, adapted, we suppose, to the new marriage regulations, was read. A proposition to lessen the number of reports brought before the Yearly Meeting, was referred to the Meeting for Sufferings. The same course was taken with a report on the Opium Traffic. Two of the Quarterly Meetings had asked the Yearly Meeting to consider the subject of the legalized experiments (for surgical purposes) on living animals. Some of those who spoke thought that Friends were not sufficiently acquainted with the case to take action upon it. In the report of the "Continental Committee," reference was made to the Conference of Australian Friends, held at Melbourne last year; and the growth of the school at Hobart was noted.

The question of the re-appointment by the Yearly Meeting of a Home Mission Committee, elicited remarks from several Friends who were uneasy with the manner in which its operations were carried on, particularly with the employing a set of men for its service, who were supported by its funds. This, it was stated, was an admission amongst us of the clerical principle, and was likely to interfere with our position as a religious body, and to modify the character of our work as such. After considerable discussion, the committee was reappointed.

Yorkshire Quarterly Meeting introduced the subject of the social condition of the poor. After a long discussion a minute was adopted, commending the whole subject to the attention of Friends.

The question of peace was considered in a joint session of men and women Friends.

A proposal for the appointment of a committee to visit meetings throughout the Yearly Meeting, was deferred till next year.

The meeting closed on the 30th of Fifth Month, after the reading of the usual General Epistle.

We have received from the Census Office of the Department of the Interior, a circular letter, requesting that the farmers of our country will keep an account of the products of their farms from the 1st of the present month to the last day of the Fifth Month, 1890, so as to be able to answer the inquiries of the agent who visits from house to house in the Sixth Month of 1890.

The letter also requests that all physicians who have not received a copy of the "Physicians' Register," will send their names and addresses to the Census Office, when a copy will be mailed to them. It is on the voluntary co-operation of the medical profession, that the Census officers largely rely for the vital statistics of mortality which form so valuable a part of the data gathered by the Census.

SUMMARY OF EVENTS.

UNITED STATES.—Official returns of the Pennsylvania election, held on the 30th of 4th mo., show that 29 counties a majority of 48,142 votes were cast for the Prohibitory amendment, and in 28 counties a majority of 287,162 against it; making a total of 189,020 against, the total vote has not yet been furnished. The principal reasons for the defeat were, that while the Prohibitory amendment was the subject of the campaign, the saloon interest is believed to have spent not less than \$1,000,000. The daily press generally were opposed to the amendment, and many temperance people honestly believed that the present license law, with its prohibitory features, was better than the proposed amendment, the adoption of which would repeal the license law, and before the Legislature could be convened, the State would be left for months to come, without any law regulating the liquor traffic. The "Grand Worthy Patriarch of the Grand De-

vision of Pennsylvania, Sons of Temperance," has issued an address to the subordinate divisions, in which he says, "the educational work of the campaign has reached the moral consciousness of the State, so that the prohibition of the sale of the entire liquor traffic."

The Prohibitory Amendment to the Constitution of Rhode Island, was, on the 20th instant, repealed by vote of the people. The total vote in the State was 28,449 for repeal to 9853 against, or 5439 more than the three-fourth vote required. The vote was taken upon an article of the Constitution, which annuls the Constitution, which annuls "Article V," the prohibitory article.

The Senate of Michigan has passed a local option bill. A number of serious defects led the Supreme Court to declare the local option law of two years ago unconstitutional. The bill now passed has been carefully framed to avoid these objections.

The Governor of Missouri has signed a bill which prohibits music, cards, dice, billiard tables, pool tables, bowling alleys and boxing games in saloons, and will go into effect Seventh Month 1st. It is said that St. Louis and Kansas City saloons will be most seriously affected by the new law, and about 3,000 of them will have to change their style of operations.

The Cherokee Indians have recently dedicated, with great rejoicings, their new seminary for girls at Tahlequah, Indian Territory. The building is three stories in height, and more than one hundred rooms, a chapel, study and recitation rooms; is steam-heated and supplied with waterworks of its own, and cost \$200,000. The money comes from the lease of the Indians' lands to cattle companies.

The complaints in Indiana about the destruction of wheat by a strange insect are increasing. They come chiefly from the central and eastern parts of the State, but the ravages of the little bug have already spread to Northern Indiana, and the Secretary of the State Board of Agriculture regards the reports as alarming. The insect is what is known among agriculturists as a "green bug," and another name which it bears is "red midge." The green midge has not been seen by farmers since 1865, when it almost entirely destroyed the wheat crops in Indiana and neighboring States. Millions of them appear in a field, settle upon the stalk, from which they draw the sap, causing the grain to wither and mature.

From statements now coming in, the loss from the flood in Williamsport is estimated at \$10,000,000. The lumbermen have about completed arrangements for the collection of the logs which are to be brought back by railroad.

Col. John L. Rogers, Judge Advocate General, and Chief of the Bureau of Information at Johnston, has submitted an elaborate report to Adjutant General Hastings in reference to the number of human lives sacrificed. He estimates that 4,000 will entirely cover the number lost.

On the 24th instant, a fire occurred at Johnston, which destroyed 25 buildings, including a large brick school-house, in the first ward. Many of the burned buildings had been washed from their foundations, but most of them contained household goods, which had been saved from the flood.

Beef cattle.—Extra, 4 1/2 cts.; good, 4 1/4 cts. medium, 4 1/4 cts.; common, 3 1/2 cts.; fat cows, 2 a 3 cts.

Swine.—Extra, 4 1/2 cts.; good, 4 1/4 cts.; medium, 3 1/2 cts.; common, 2 1/2 cts.; culls, 1 a 2 cts. Spring lambs, 4 1/2 cts.

Hogs.—Western, 6 1/2 cts.; State, 5 1/2 cts.

FOREIGN.—C. S. Parnell's appeal against the postponement of his libel suit against the Times has been decided in his favor. On the 24th inst. the delay in the trial had not damaged Parnell's character, the Times having admitted the libel and paid the money into court.

Gladstone lays down the following three fundamental principles upon which he believes Home Rule to be right and wise. He maintains, first, that the granting of a dependency has never been effected by the separation of an autonomy; second, that separation has in numerous cases been caused by the refusal of autonomy; and third, that there have been abundant cases in which separation has been prevented by the granting of autonomy. Gladstone supports these propositions by reference to colonial history. At the beginning of the public career, he says, there was not a colony that was not held by precarious tenure, but since being granted the fullest liberty in the management of their own affairs all have been bound strongly to the empire. He appeals to the nation to give the same liberty to Ireland.

In the Spanish Cortes on the 21st instant, Becerra Minister of the Colonies, reaffirmed that the United States Government had made no proposition relative to the purchase of Cuba. He added that no proposition looking to the sale of the island would be entertained by the Spanish Government.

There is almost no doubt that a conference of the powers will be held this year to devise measures for the suppression of the slave trade in Africa. The British Government, in the Third Month, communicated with the Government at Belgium on the subject of the slave trade, and the latter should take the initiative in inviting the powers to the conference. Communications are now passing between the two governments with reference to the preliminaries that must be arranged before the conference meets, and informal communications have also taken place with Belgium and the Netherlands.

A law has been passed in Waldeck, Germany, for bidding the granting of a marriage license to a person addicted to intemperance.

Russian authorities have sentenced 41 students of the Graev University to three days' imprisonment to pay a fine of 500 roubles for staging Polish songs while on an excursion.

Russia has retracted the law which forbids heirs to the throne contracting marriages with persons not members of the Orthodox Greek Church.

Crops in the south of Russia are in a bad condition owing to hot weather.

A dispatch from Shanghai states, that Russia has occupied Deer Island, in Corea, as a coaling and navy depot. There is a Russian man-of-war there, and no body is allowed to land or leave without a permit from the Admiral. The possession of the island gives Russia great advantages over England.

One-half of the industrial city of Laachan, in the province of Szechuen, China, was recently destroyed by a fire. The conflagration raged four days. It is estimated that 1,200 persons were killed. Most of them were crushed in trying to escape from the narrow streets. Ten thousand persons are homeless. A fune has been started for the relief of the sufferers.

Two Boston men have passed through Pietou, or their way home from the Magdalen Islands. They represent a syndicate of American capitalists, who propose to buy the islands and build on them a second Gloucester. The islands are owned by Captain Coffin and are to be sold for \$1,000,000. It was some 20 many years ago, for services rendered the British Government, received the islands by grant. Captain Coffin has offered the property for sale, the price, it is said, being \$500,000, and the Boston syndicate has concluded to purchase. Large fishing works will be built on the islands, and the fish will be sent to Boston. Pietou is to be made the port of trans-shipment and a steamer will ply between that port and the Magdalen.

NOTICE.

WEST-TOWN BOARDING SCHOOL.—During the Summer months the students of the West-Town Station convey passengers to the school on the arrival of the 7.00, 8.50, 2.50 and 4.55 trains from Broad St. Station.

For "THE FRIEND."

Some Account of Maria Cope's Last Illness.

Maria Cope was the daughter of Joseph and Eliza Wilson, and wife of Thomas C. Cope; and deceased the 17th of Second Month, 1886, in the 70th year of her age, a member of Flushing Monthly Meeting of Friends, Ohio.

Some instructive extracts from the memoranda of her father, Joseph Wilson, were published in the present volume of THE FRIEND.

Although her health had been declining for one time, she continued able to walk about the one and yard until the morning of the 24th of 4th Mo., 1885. During the following eight months she was mostly confined to her bed, and her sufferings were often great, so that she passed many wearisome nights.

She was very desirous that she might bear her sufferings patiently, and remarked at one time, "If my support leaves me for a moment I am almost ready to sink;" and at another, "I have to raise my hands almost continually for help."

In the early part of her illness she felt much anxiety for her husband and little son, if she should be taken from them; saying at one time in speaking of the latter, "I should like to care for him a little longer." During her illness she often talked with him, telling him to be a good boy and meet her in Heaven; but afterward she was able to give all up, and remarked to some who were waiting upon her, that it would not be her choice to get well if she might.

She was very tender of the feelings of others, and not only sympathized with the suffering, but did what she could properly for the relief of such under her notice. At one time she repeated the Scripture, "Unto the merciful thou wilt show thyself merciful;" and added, "Have I been merciful?"

At times, during her illness, she experienced such poverty of spirit, saying at one time, "Poor and weak and lame and blind." On a neighboring in who urged the necessity of faith, prayer, &c., she remarked: "I know what prayer is, I have prayed, but I cannot repeat the words over, my heart must be touched;" signifying that the spirit of true prayer was not at our command. One night, after a time of suffering, she asked if her mother were awake, and if so she would like to have her come into the room, when she said to her in substance, that

she should be laid on a bed of sickness she did not want her to become discouraged, and referred to the length of time she had lain there with scarcely any light upon her path, &c.

When in health, and previous to her marriage, it was for a long time her practice to retire alone in the evening for silent meditation; and during her illness she spoke of these as favored seasons; saying, she came to find no difficulty in collecting her thoughts; and signified that she felt the influence of her Heavenly Father's love the moment she started. At times after her marriage, she omitted this daily duty, thinking it might seem selfish thus to retire alone; but she now expressed herself as believing it would have been right had she continued the practice as formerly.

She was frequently heard to repeat portions of Scripture, also passages from different authors, such as evinced that her thoughts rested not upon earthly, but heavenly things. Upon one occasion, after all had retired except the watchers, she was observed to be more than usually affected and unable to sleep, and after a time calling those present by name, she said, "I do not know but it would have been right for me to have called you all in this evening, and told you how much was lost by not reading the Scriptures more frequently, with desires to understand the truths they contain;" and said, if she had known certainly it was required of her, she would not have hesitated to do so.

At one time she repeated the Scripture, "Who may abide the day of his coming, and who will stand when He appeareth? for He is like a refiner's fire and like fullers' soap," &c.; and either at this or another time remarked, "I reckon I am not sufficiently purified." On being asked if she had any evidence of it, she replied, "No, but it takes so much to be pure." At another time, "They who surround the Throne are those who have come out of great tribulations—have washed their robes and made them white in the blood of the Lamb."

On bidding a person farewell, with whom she had been acquainted from early life, she said, "I do not know of any one I have thought more about than thee, since I have been on this bed of sickness;" and added, that she hoped he would have something to support him when it came to such a time as this—that we were in a poor condition if we had nothing to support us at such a time. At another time, and the day previous to her death, to the same person she said, "I hope we will meet in a better home, but thee will have to strive hard for it. I have wondered whether thee would be willing to spend the rest of thy life on a bed of sickness in order to secure it," or words to that effect.

At one time, to a young man present, she said most emphatically, calling him by name, "I want thee to do anything, anything in the world to be ready for a time like this." On it being remarked to her in substance, that we might profit by her sufferings did we allow them to have proper place with us, she replied, "I do not see how you can help allowing them to have

place with you, not knowing but that any of you may come to the same." She often seemed impressed with the consideration that so few in health appeared to realize what was necessary in order to become fitted for the kingdom of Heaven; and wished to have those of some religious experience come to wait upon her.

A relative from a distance, who was spending some time in the neighborhood, frequently called to see her, much to her comfort; yet she felt that she must not lean too much on any earthly friend, saying at one time, "I want to go to the Fountain. There is where I want to go." At one time when she felt less sensibly than at some others, the presence of her Heavenly Father, she said, "I wish I could feel as I felt a few days ago: the grave had no terrors for me then;" and afterwards, in referring to it, "I could say the grave had no terrors for me then." At another time, when preparing for the night, she said, "I suppose, if I had the company I had last night, I might lie quietly," and added, "The presence of the dear Father, how sweet to my heart! yet we cannot expect it all the time;" she further said, she did not want us to be too much troubled at her times of nervous distress, saying, "I think I am not left very far."

On being taken more poorly a few days previous to her death, she remarked: This seemed different from anything she had felt before, more like nearing the shore. On being asked in substance, if it were comfortable to her to feel so, she replied, "Very comfortable, if I could have an evidence that all would be well;" and to the query whether she had anything to fear, she replied, "Not much to fear; I think if there was anything in my way, I would feel distressed." In reply to a remark made to her she said, "she felt pretty quiet, that she believed she had done all that she could."

On saying she had not had the evidence of acceptance she would like, a friend who watched beside her quoted the language of a worthy Friend, and remarked: "Thee has an abiding hope." To which she emphatically replied, "Indeed I have."

During the last twenty-four hours of her life, frequent were her petitions that her Heavenly Father would be pleased soon to take her home. At one time when suffering greatly she said, "I believe I am bearing this to the best of my ability;" and at another, "If this is the design, let it be so." When told, these are the damps of death, she replied, "Sweet, how sweet!"

For several months she suffered almost constantly with her head, and at times was apprehensive that she would lose her consciousness; but she retained her faculties remarkably, being able to give directions in regard to waiting upon her till very near the close. Her last request being to turn her once more, which was done; when a change was noticed immediately, and in a few minutes she passed away, leaving with her friends the comfortable hope and belief that she had, after a weary journey, entered that city whose walls are salvation, and whose gates praise.

FOR "THE FRIEND."

Bright Stars.—Spot on the Sun.

In the western sky, for several weeks, the planet Saturn has been an object of much interest; and will be fairly in sight for some weeks yet. It is the brightest and lowest one of several stars—about one-third the way from western horizon to zenith. The other stars compose the Sickle, and two or three above it, in Leo. The brightest of these is Regulus, in the south end of the Sickle-handle, and several degrees above and to the left of Saturn. The great ring-system of Saturn is now being turned considerably edgewise to the earth by the planet's revolution round the sun—so the ring is growing narrower; but it is still a fine object with a good telescope.

Those who enjoy the study of Saturn by observation would do well to use the next three or four weeks, as after that it will be too near the sun to show well.

Jupiter, the greatest of all the planets, now rises in the southeast about sunset, and by dark it is very brilliant, an hour high or more. Being on the opposite side of the earth from the sun, it is about as near to us as it ever gets, and the body of the planet with its belts and spots, as well as the four satellites, show to much better advantage than when they are near conjunction with the sun. A telescope an inch and a half clear diameter, worth seven or eight dollars, will show the planet as a little nite moon—the two chief belts and all the satellites—a sight of much interest.

Venus is now a brilliant morning star, and can be easily seen with naked eye after sunrise. I have lately made a little Equatorial mounting fitted with circles, by which I can point a very small telescope right at the planet, and thus view the fine little crescent any time in the day before it sets—about 3 p. m. The phase of Venus is generally better defined, and prettier in a telescope during daytime than at night. Uranus south about sunset, being an hour or so west of south and about half way from southern horizon to zenith at dark. But this planet is only just visible to the naked eye; about like a star of sixth magnitude. It is four degrees north of the bright star Spica, in the constellation of Virgo. The planets Neptune, Mars and Mercury are all too near the sun to be seen easily.

The bright red star nearly overhead is Antares. The Great Dipper will be easily recognized northwest of zenith and southwest of the North Star, nearly west of the "Guard," several degrees above Polaris. The most brilliant star in the northeastern heavens is Alpha Lyrae, the way up toward the zenith. It forms a little triangle with two small stars just east of itself. The red and brightest star, about two hours west of Jupiter, is Antares.

The sun had been nearly clear of spots for several weeks until the 16th instant, when a large spot appeared at the east edge of the sun. At first it seemed to be long and narrow, and forked at the south end, resembling the letter Y. In two days it presented a triangular form and on the 20— a neat circle—more than half way to the sun's centre. It is surrounded by a fine penumbra. It is hardly visible to naked eye, but easily seen with a telescope magnifying three times. It is about 7,000 miles in diameter—nearly large enough to take in the whole earth.

W. DAWSON.

SPEWLAND, Ind., Sixth Month 22nd, 1859.

WHAT will become of the glory of all flesh, when God shall enter into judgment.

FOR "THE FRIEND."

Our Heritage.

(Continued from page 380.)

"Tell ye your children of it, and let your children tell their children, and their children another generation.—Joel 1. 3.

To encourage religious development, as well as literary advancement, has long been a prominent feature in the instructions of conscientious Friends.

In 1780, Dr. John Fothergill wrote to Dr. Priestly of his deep interest in the founding of Ackworth School, England, saying: "The great object with me is to establish young minds in truth," and he "very much wished to have *imbued* into all their instructions, an early inclination of acting uprightly; doing to all as they would desire others to do to them, even in the most trivial concerns of life."

In the early establishment of Westtown Boarding School, a very similar desire was frequently expressed by that valuable and consistent minister, Thomas Scattergood, and his frequent visits to the institution, and sojourn there for several months, seemed to be, to aid and encourage the teachers in accomplishing this important end. It is also pleasant to feel, that through all the changes of ninety intervening years, this principle of its founders has not been without faithful advocates.

When Stephen Grellet was pursuing his religious visit in Russia, he writes while at Moscow: "The Countess Toutschhoff, one displaying true religious sensibility and love for her Saviour, came to our hotel, bringing her son with her, and told me she came to request that I would take this, *her only child*, and educate him as my own—that however dear to her, and her only earthly treasure left, her love to him, and her desire that he might become a child of God, rendered the sacrifice of thus parting with him easy." "To see him in the way to become a true Christian was far more desirable to her," she said, "than to have him heir of earthly treasures, or to obtain ever so many worldly honors."

This circumstance should certainly encourage fearful, timid parents, to renewed trustfulness. Young Margaret Fothergill, amid the weakness and suffering of her dying-bed, lifted up her prayers, "humbly and fervently," that her "children might be enriched with the favor, love and goodness of God." Her faith was so firmly anchored to that which is "within the veil" that she even wondered that she could not be troubled at leaving her little ones and her husband." The eighth child, a little new born babe, had just been laid to rest. Her seven remaining children were all under the age of ten. "They will be cared for, *thou* wilt be helped, and there is a place prepared for me," was the assuring language of this devoted Christian wife and mother. Tracing the lives of this interesting family, and noticing the marked extension of Divine favor to one, even after a season of "folly and dissipation," and noting how the refining, purifying grace of God wrought its transforming work, and qualified for a life of peculiar usefulness on the part of Samuel Fothergill, and also his brother Dr. John Fothergill of London,—the reward of her dying faith, and of her husband's consistent efforts for his children, seem very apparent. These incidents of parental influence are often striking—advice and counsel which at the time given may have seemed unheeded, will be prized and cherished in after years.

Those whose mind have been brought into

tender sympathy with the young among us, an whose prayers are often uplifted for their establishment in Divine Truth and more read obedience to its dictates, may sometimes labor under seasons of discouragement. The evidence of a growth in heavenly wisdom and understanding may seem so long delayed.

Charles Spurgeon once wrote: "We have less to do with being successful than with being faithful. It is not the acreage sown, but the multiplication which God gives the seed, which makes up the harvest."

laborers abide faithful in their allotted portion of his heritage; in his own time the springing up and the fruit-bearing shall be accomplished. Though the seed be little, and the hand that planted grows feeble: if it be his word, and the planting season of his own choosing, "it shall no return unto Him void, but shall accomplish that which He pleases, and prosper in the thing whereto He sent it."

"God alone

Beholds the end of what is sown;
Beyond our vision weak and dim.
The harvest time is hid with Him.

Yet forgotten where it lies,
That seed of generous sacrifice,
Though seeming on the desert cast,
Shall rise with bloom and fruit at last."

"And thou shalt be like a watered garden. "And they that be of thee shall build the old waste places." "And the flock of thine heritage which dwell solitarily in the forest in midst of Carmel: let them feed in Bashan and Gilead as in the days of old."

Evolution.

In the last number of THE FRIEND we quoted from *The Christian Advocate* an article headed "Science Leading to God," in which it was maintained, that the doctrine of evolution—that is, the gradual development of one form of animal or plant from a pre-existing one—necessarily implied the existence of a Law-giver who had power to impress upon organized being, and upon matter in general, those attributes and laws which rendered such changes possible. We find this point somewhat further elaborated in an article in the *Episcopal Recorder*, from which the following is condensed.—[E.]

Among objects of interest at our Centennial the exhibit of railway engines will not be forgotten. The progress made during the little more than forty years of their existence, was illustrated by the presence of the first engine used in this country. Another and yet another showed the march of improvement, until the latest and highest specimens of the art claimed the admiration of the visitor. Let us suppose a sight-seer's attention called to these interesting objects. He is, we will suppose, a dweller of some far away island of the sea. He has never seen a railway engine before; he is, however, a man of culture, a philosopher, a scientist,—in fact, an evolutionist. The history and object of these structures are explained to him, and their superiority over each other pointed out. "Very remarkable," says our sight-seer. "It is a perfect illustration of the principles of evolution, and confirms the truth of its hypothesis regarding anatomical resemblances. Observe," he continues, "the remarkable conformity of structure; you can trace it back, not only to this first engine, but to a very remote ancestry. This last engine is but the development from the rough ox cart that may yet be found in some out of the way region of the world. The wheel

nd axle are common to all. They are, so to speak, the vertebrae that link them together, at establish their common origin, and that confirm the correctness of the evolutionary theory. No other way can it be explained."

"But," says a listener, "do you not recognize blind planning and constructing, and working wards an end?" "No, not at all. Science does not recognize mind; it only recognizes laws. You arrange wheels and axles thus and so, and apply force, such and such results must flow. This is law: science deals with facts. Agents of course are employed; but it is all mechanical. What we call mind, is itself only matter in motion. All is mechanical, and in accordance with the laws of nature—nature working with a blind force. This is quite sufficient to produce the developments we are considering. To suppose that all this is the result of intelligent design working with a pattern, is "mechanical." Uniformity of structure gives positive evidence that this last built and splendid life is evolved from the oar cart, whether it may have come from. And the law of natural selection and survival of the fittest, can account satisfactorily for all we see."

Such in substance is the argument of "the theory" based on anatomical resemblances. Fish have a spinal column; so has man. Fish have jippers; man has hands. Fish have ribs forming a cavity for vital organs; so has man. And other particulars there are striking resemblances between their anatomical structures. Therefore, says evolution, man, through reptiles, birds and beasts, is a blood relation and descendant of a fish. Our friend, Prof. Heckel, has written a book to demonstrate this. Says Darwin: "The similar framework of bones in the hand of a man, wing of a bat, fin of a porpoise, and leg of a horse, ** at once explain themselves on the theory of descent, with slow and slight successive variations. "Natural selection working without a purpose" has developed man from the fish. The resemblances between the bony structures is the all-sufficient evidence.

"We emphatically oppose," says Heckel, "the view of animate nature which presents animal and vegetable forms as the productions of a kind creator, acting for a definite purpose. * * * We must, on the other hand decidedly adopt that view of the universe which is called the mechanical or casual. * * * They (the physicians, &c.) universally, and without hesitation, look upon the phenomena which appear in their different departments of study, as the necessary and invariable effects of physical and chemical forces which are inherent in matter."

Here then, we have the reasoning of our Centennial visitor. In the anatomical structure of fish and man there are striking resemblances. This, according to "the theory," establishes their family identity—their "blood relationship." In the latter, however, there has been a marvellous advance in some directions. How did it come about? Through so-called natural selection and survival of the fittest. But was there no intelligent, overruling power? Not at all. We have discarded that notion. There is no need for it. The idea of construction "by an ingenious creator," is a thing of the past. "The aimless action of natural selection" is all-sufficient. All this wonderful development is "mechanical," and results from natural law; and the resemblances we note establish the descent of man and the certainty of "the theory."

"The theory," then avowedly dismisses mind, forethought, design, from the phenomena of the

universe, just as our Centennial visitor did from the construction of the steam engine. For the progressive development that it announces has culminated in man, the aimless action of natural selection is all-sufficient.

We would not be understood as denying the principle of evolution. Its manifestations are all about us, and wonderful to behold. But some of us ignorant laymen presume to think that our scientific masters are looking through the wrong end of the glass—they have mistaken the forces that are at work. In the case of the steam engine we have referred to, there has been evolution and consequent development. But it has not been by a mechanical process carried on in the engines themselves, but in the minds that have thought, and devised, and wrought, and carried on to perfection. It is mind that works the work of mind, and improving and advancing upon it, and working toward a desired end, &c., with a model—with a plan to be carried out—with an end to be attained. So in nature. It is not aimless, purposeless life evolving the wonders we see about us. It is mind—infinite mind, evolving, unfolding itself through the agency of these laws—working on a pre-conceived model, which reached its greatest manifestation in man.

How Fritz Found the Purse.

Something was the matter with Fritz, but no one knew exactly what. His eyes were dull and heavy, his face was pale, and his head ached almost all the time. His shoulders were bent, his muscles were weak and flabby, he had no appetite, and he did not sleep well. His mother petted him and coaxed him to eat, and watched him for fear he should do any work—for work had never agreed with poor Fritz. And the neighbors sent in every kind of herb tea they could think of, and he drank it every drop, but was no better. And they all shook their heads and sighed over him, wishing they could know the real name of his trouble. At last his mother, worn out with hard work and anxiety, died, thinking with her last breath: "Ah me! what will become of my poor Fritz?"

She left a snug, tiny bit of a cottage, a large garden patch and an orchard, with a long lease and a low rental. But everything was ill-kept, poorly cultivated, forlorn and neglected. "Good evening to you, Fritz," said a voice, as Fritz sat by himself, wondering the same as his mother and all the neighbors had wondered. It was the old, very old schoolmaster who came up the little walk to the cottage door. He made room for the old man.

"I taught you to read, Fritz," he said, "and your father and his father before him. I'm an old, old man, you see! And I've come to tell you something you ought to know. There's a heavy purse of gold buried on this place of yours. * * * A purse of gold?" exclaimed Fritz, in astonishment. "Whereabouts? Show me, so that I can dig it up." "No one can show it to you," said the master, "I only know that it is somewhere within these boundary lines, and that whoever seeks it faithfully is sure to find it." "But I am not strong," said Fritz, mournfully. "I never could dig." "That's true, poor lad," said the master, compassionately. "How could I forget that. Ah well! you are a good boy, Fritz, and will be able to rejoice in thinking that whoever comes after you here will find it. A lucky fellow he will be! I shall have to tell him what it is hardly worth while to tell you, that there is a kind of a charm about it. No one will find it who leaves any slack work

behind him. The garden must be well cared for and well planted as he goes, and if a single tree in the orchard is injured, the charm will fail." After a little more chat he went on, leaving Fritz full of thought over the wonderful thing he had told him. He would have doubted the story had it come from any one else; but no one ever knew the old schoolmaster to tell an untruth.

He thought and thought of it as he tossed on his bed that night, wondering in what part of the garden or orchard the purse might lie, and thinking it very hard and cruel that a poor, weak fellow like himself could not be shown the spot at once. He would be willing to dig one hole, but to dig over the whole place! But the more he thought over it, the less was he inclined to rejoice in the idea of some one else finding the gold. Perhaps there were others who knew of it. Perhaps already greedy eyes were turning in that direction and wondering how soon he might die and be out of the way.

Full of indignation at the thought, he sprang out of bed the next morning with the first peep of day, mended an old spade, and began to dig. In the very farthest corner of the garden he began, digging deep, and carefully pulverizing every inch of the soil. The cool, moist earth looked so inviting as he went on, that it seemed no hardship to carry out the old man's caution by stopping to plant in the neatly prepared beds the seeds his poor mother had stored. His limbs ached, his hands were blistered, and his back lame as he stopped work to get something to eat.

"If this kills me," he said to himself, "it will be the master's fault. My mother always told him I was not fit for work. But he was amazed at finding how good his brown bread and water tasted, and made up his mind that it was the first loaf of really good bread that rascally baker had ever furnished.

His pains and aches gradually disappeared as his work went on, and he sometimes found himself almost forgetting the purse of gold in the interest he began to take in his garden. He was surprised that he had never before discovered the delight of watching the growth of beautiful things, forgetting that the secret lay mainly in the fact of his own hands having planted and cared for them. The bounteous earth seemed ready to cast back to him a hundred-fold return for all he entrusted to it, and the sunshine, the soft wind and the gentle rains co-operated with her. He scarcely had time to turn from one finished section of his garden plot to attack vigorously another, before the tender green leaves seemed to start out of the ground and smile up at him with a "Ho, Fritz! all this in return for the little brown seeds you hid!"

And before many weeks had passed, the neighbors raised their hands and eyes at beholding Fritz carrying his basket of green vegetables to market. "What can have cured him?" they asked. "And what could have been the real name of that terrible disease he had?"

"Found the purse?" asked the old schoolmaster, leaning over the fence one day in late autumn to speak to Fritz, who was busy banking up with his spade a fine crop of cabbages. "Not yet, master," said Fritz. "In truth, I've been too busy lately to look very sharply after it. I've spent all my time on the garden this season, you see, but there's the whole orchard yet. I shall begin early next spring and go carefully over that." "You'll find it," said the old man very positively. "Flow is your health?"

"My health, master? Why, bless your heart, I haven't had much time to think of that, either."

He slept as sound as a top and ate with the appetite of an honest laborer; and the good gossip was no longer obliged to distress themselves as to what was to become of him, for he had a good provision for the winter ahead of him. At the end of the second summer, the old schoolmaster went in at Fritz's gate, taking quiet note of the evidences of care and pains bestowed upon every corner of the premises. The neatly-trimmed vines over the door were laden with ripe fruit, and he smiled to himself as he walked between the borders of bright-colored flowers, remembering a whisper he had heard, that the pretty little maid at the mill was coming before long to help Fritz keep house. He opened the door without knocking, and Fritz looked up from his seat at a table, upon which he was counting some money, to welcome him. "You have found it at last, then?" asked the visitor. "Found what, master?" "The purse of gold." "Ah, I remember. No, master, I haven't. Somebody else must look for your purse, if they want it, for I have no time to look for gold. My garden and my orchard give me all the work I can do." "Then what is all this?" He laid his forefinger on some of the gold pieces. "This is the price of my fine crop of fruit. You must have noticed how my trees have been laden, and borne almost down to the ground. They have produced as never before."

His eyes were bright and his cheeks ruddy with the glow of health; his form was straight, and every limb round and strong. The master looked keenly at him and laughed—a laugh so full of thorough, hearty, genial enjoyment, that Fritz could not forbear laughing with him. "Ah, friend Fritz," he at length said, "I promised you only one purse, but if I had promised you a dozen, or perhaps a hundred, I should have been the nearer right."

Fritz stared at him with something of a perception of his true meaning dawning upon him. "Then you were jesting with me?" he cried. "No," said the old man, "it was every word true." And Fritz took his honest old hand in a tight clasp. "Surely, master, if it was a jest, it was the best jest ever played." And to this day the neighbors never learned the real name of the disorder which came so near being fatal to Fritz in his younger days.—*The Interior.*

Drink Habits of Austrian Children.—So serious and widespread has inebriety been of recent years among school children that the Vienna school board have, though hitherto ineffectually, been making strenuous efforts for the prohibition of the sale of intoxicating drinks to children. The board has just resolved to invoke the intervention of the government, and a bill is to be laid before Parliament during the present session to prohibit the selling of intoxicants to boys and girls under fifteen years of age. So alarming is the present state of matters that the appearance of a boy at school in a state of drunkenness is by no means a rare sight. During the winter poor children are often sent to school with only a glass of the cheapest spirits for breakfast, partly to allay hunger, and partly to "keep out the cold"—that venerable delusion which still lingers in England. Slave children, of the tender age of five and six years, are so "seasoned" to alcohol from infancy by the administration of small quantities in milk, that these youthful scholars can take a liberal dram without showing any symptoms of intoxication. — *British Medical Journal.*

FOR "THE FRIEND."

The Word or Voice of God.

It is written that "all flesh is as grass, and all the glory of man as the flower of grass. The grass withereth, and the flower thereof falleth away: but the word of the Lord endureth forever. And this is the word which by the gospel is preached unto you." And I believe that this saving word or power of the everlasting Gospel has been, and is silently preached to all "them that dwell on the earth:" even to them that never heard the outward declaration of it. For the gospel is not in the outward words of man, but in the power of God. And we are told that this great creative Word was in the beginning with God, and was God. And we are also told, that—

"Before the Almighty Fiat had gone forth,
Before depths were, or even was the earth;
From everlasting—ere the hills were made,
Or the formations of the mountains laid;
Before creation's ensigns were unfurled,
Or raised the lofty summits of the world,
When first the great Creator did prepare
The heaven and heaven of heavens, the Word was there."

And though this same word or voice is spoken of in Scripture as a still small voice, yet the same writer in speaking of it says:

"The voice that thunders on the mountain's brow,
And sits the bottom of the deep below;
The voice that roars where'er the tempest rolls,
And strikes the rocks and shakes the distant poles;
The voice that spoke as never man was heard,
Speaks in thy heart,—O be that voice revered!
Soft as the lover's mourner's secret sigh,
It whispers to thy soul, "Why will ye die?"
Why seek amid the dying and the dead,
For false supports, for all which is no bread?
Earth's hopes are bubbles, bursting ere they fall,
And vanity of vanities is all.
Yet there's a power that thro' this sinking scene
Can keep the soul unshaken and serene;
Can sweeten every blessing to the taste,
And make amends for all that time can waste;
Can set us free amidst a land of slaves,
And lead us safely o'er affliction's ways,
And plant our feet upon a happier shore,
Where time and chance and death, shall be no more."

To this great power, my reader, I commend
For comfort now, and glory in the end.

For I believe we all may be partakers of this power if we will believe in it and receive it, for a manifestation of the Spirit is given to every man for our profit, if we will receive it. For when the Word was made flesh and dwelt amongst us, as many as believed in Him, and received Him then, to them He gave power to become his sons. And He is not a God afar off, if the body of flesh has left us. For it is said, "the Word is nigh thee, even in thy mouth and in thy heart; and this is the word of faith which the apostles preached," and which all true ministers of the everlasting gospel preached, whether they had ever had any outward declaration of it or not. If not, then they preached it purely by faith, as seeing Him who is invisible. For I believe that the gospel was preached before the Scriptures were written. Though some seem to think that the Scriptures are essential to the ministry, as they believe them to be the Word of God. But the kingdom of God is not in word but in power. And when the gospel is preached to us, not in the cutting words of man's wisdom, but in demonstration of the Spirit, and in the ability that God giveth, it is then the power of God, and tends to the salvation of the people, because it is mixed with faith in them that hear it. Then our ministers would no longer need to have the Bible at hand in time of their ministry,

so they could have the letter to refer to in case the Spirit should fail, and by reading supply the lack of gospel power.

Where is the faith of such? Is it in the living Word which is quick and powerful, and is a director of the thoughts and intents of the heart? Or is it in the letter which killeth, if we depend on it, instead of the living power? Our zeal for God must be according to a spiritual and internal knowledge of Him, or our faith is vain, and our preaching vain also; for we are yet in our sins and know it not; for the darkness has got to be so great that we do not comprehend the light and the spiritual ear so dim, that we do not hear the still small voice. But if we have an ear to hear what the Spirit saith unto the churches, we may, when we incline to run too fast, and get ahead of our guide, hear a word behind us saying, "this is the way, walk ye in it," when we turn to the right or to the left. So we may see by the word spoken of being behind, that we are liable to be urged on by human activity and a zeal for God, without knowledge, so as to go ahead of our leader. And in seeking the praise of men, go about under the guise of religion seeking to establish our own righteousness, instead of the righteousness of God. For we are told that evil men and seducers shall wax worse and worse, deceiving others and being deceived themselves. And while going about as wolves in sheep's clothing, may say to the deluded audience, thus saith the Lord, when the Lord hath not spoken. And thus by receiving the word of man, instead of the word of the Lord, we exalt the creature, while the great Creator is kept on back ground, and nearly lost sight of. But what doth the Lord our God require of us but to do justly, and to love mercy, and to walk humbly with Him. Not before Him nor behind Him, but in all humility with Him, whither soever He leads us. D. H.

DUBLIN, IRE., Fifth Month 27th, 1889.

SELECTED.

A GERMAN TRUST-SONG.

Just as God leads me I would go;
I would not ask to choose my way,
Content with what He will bestow,
Assured He will not let me stray.
So as He leads my path I make,
And step by step I gladly take,
A child in Him confiding.

Just as God leads I am content;
I rest me calmly in his hands;
That which He has decreed and sent,
That which his will for me commands,
I would that He should all fulfill;
That I should do His gracious will
In living or in dying.

Just as God leads I will resign;
I trust me to my Father's will;
When reason's rays deceptive shine,
His counsel would I yet fulfill—
That which his love ordained as right
Before He brought me to the light—
My all to Him resigning.

Just as God leads me I abide;
In faith, in hope, in suffering true,
His strength is ever by my side;
Can aught my hold on Him undo?
I hold me firm in patience, knowing
That God my life is still bestowing,
The best in kindness sending.

Just as God leads I onward go;
Oh! amid thorns and briars seen,
God does not yet his guidance show,
But in the end I shall be seen.
How, by a loving Father's will,
Forthwith and true, He leads me still.
— *Laurence, 1625.*

"MARY."

SELECTED.

When in compassion Christ came down from heaven,
To bless this stricken earth,
O Mary, favored Nazarene, was given
The honor of his birth.

When crowned with thorns He bore our condemnation,
And shed his precious blood,
To atone the dear cross of his humiliation
The faithful Mary stood;

And on the morning of the resurrection,
With spices and perfume,
To pay the last sad tribute of affection,
She hastened to his tomb.

Mary, whose story lives by his appointment,
A memorial of his care,
Pointed his beloved feet with ointment,
And wiped them with her hair.

And though by scribe and Pharisee rejected,
With hope again deferred,
He saw in Him the saviour long expected,
And listened to his word.

Thus from the manger till He descended
To God's right hand above,
A band of Marys on his steps attended,
And shared his precious love.

Thus—bright examples to all coming ages—
Portrayed by skill divine,
In the unerring gospel's sacred pages,
Their peerless virtues shine.

Drop of salt water! O offspring of the ocean!
Thy concerted name
Shall never cease to awaken deep emotion,
And fan affection's flame.

As the warm sun exhales from scattered fountains
The crystal drops of dew,
And clothes them, then thro' above the dusky mountains,
In robes of dazzling hue,

So the pure spirits of unnumbered Marys,
In spotless garments dressed,
From eastern villages and western prairies,
Have been caught up to rest.

O Mary! when the solemn word is spoken
That ends this earthly strife,
When Death has loosed the silver cord, and broken
The golden bowl of life,

Mayst thou be welcomed at the pearly portals
By Marys gone before,
And by the smile of Him whom blest immortals
Unceasingly adore.

FROM "THE CHRISTIAN ADVOCATE."

Ceylon.

BY BISHOP C. H. POWLER.

The island of Ceylon is 5 degrees north of the equator, and as far from New York as it can well be placed. It contains 24,700 square miles. It has one peak (Adam's), 8,269 feet above sea level. All Buddhists believe that on this peak Lord Buddha first set his foot when he came here. Singhalese kings are traced to 543 B. C. They had a continuous line until March 2, 1815, when George III., of England, was declared king. With English rule came justice, good roads, schools, Christianity, better remedies, better nutriment, fewer chetals (a kind of tiger), fewer cobras, polongas and stricors; more trade, more work, more money, more comforts, more intelligence, and more security for purse and life.

The climate is not inviting in the hot months, and nearly all months are hot. January is less heated than the others, when the thermometer drops down at night in Colombo to 72 degrees, but it rises with the sun and before it. It rains frequently. In some parts of the island the average rain-fall is 16 feet 8 inches yearly.

With such a temperature and such a supply

of moisture the growth of vegetation is enormous. Bamboos grow to the height of 100 feet and are 10 or 12 inches in diameter. They put on their full size in six or eight weeks. A single day marks almost preternatural changes. Here, as in China, native justice and cruelty utilize this rapid growth. A doomed man is bound down upon a young bamboo sprout, which has a sharp, hard point, and in a night it will grow through his body. Prolific nature seems prodigal of life.

One is constantly delighted with the variety and beauty of the Palm. It seems to supply all the native wants. If he can climb (in this he approaches the skill of the monkey), he has food and shelter at hand. A young native puts his feet against the tree, and hooks his hands about it, and walks up it with ease and velocity; or, slipping his feet into a loop of rope a foot long, he clasps the tree with his feet thus held together, and leaps up three or four feet at a time.

The cocoanut palm is at home in this climate. It probably came over from Southern India. It prefers sandy sea-shores to inland soils. It seems to float, like the British flag, in all warm seas, and to root in every beach it touches. Even the coral islands of the Indian Ocean have picked up floating cocoanuts, and are now covered with forests of these nuts. Its trunk is bare for forty or sixty feet, when it unfolds into a rich, feathery crown or plume of long leaves, 18 to 20 feet long. Every part of this tree is utilized. It is the centre of many industries. The tree is also especially adapted to the climate as a shade tree. One sees the houses or bungalows along the sea-shore completely shaded by these and other varieties of palms; yet the under space is open and clear for the free circulation of air.

These palms draw themselves up as slimly and high as possible, trying to hold their needled umbrellas over the heads and homes of man without obstructing his vision or his breath. A few of the uses of this palm may be catalogued: The fibre is made into mats, ropes, cords, cables, brushes, brooms, hats, stuffing for cushions instead of hair; the fruit also produces valuable oil. It is expressed in the most primitive fashion. It is used for cooking and for light (non-explosive). The kernel is valued as food; four nuts to a person is sufficient. The milk is like some New York milk—more like water than milk. It is sweet, clear and cool. For a very small coin, a native went (walked or ran) up the tree, selected some nuts, picked them, took them in his teeth, came down as he went up, trimmed off the coarser shell down to the white meat, then stuck in his knife, when the milk spurted up two feet above the nut. The palm has a patent refrigerator, for the milk hanging in the broiling sun keeps sweet and cool. The shells are made into spoons, cups, &c. The milk is made into toddy, vinegar and sugar. The leaves are valuable for thatching houses and braiding mats, hats and coats. The undeveloped leaf, cut out of the heart of the tree, is used as we use cabbage. The brown fibres of the leaves are made into sieves and nets. Many drugs are made from the tree.

The Palmyro palm has nearly one thousand known uses. The leaves of this and of the Talipot palm supply the Hindus with paper. One of the curiosities offered to the traveller, and greatly tempting him to buy, is the "Hindu Bible," written on these leaves.

One is much interested in the Kitral palm. It grows to its full height, 50 or 60 feet, before it blooms. Then it begins to unfold itself at the top. The flower is long and hangs down

like a horse's tail, and is 10 or 12 feet long. Then another flower unfolds in the joint below, and so on down, till all the leaves are pushed off and the tree dies. We have seen mothers give themselves and their lives to their daughters, and when the daughters were ready for life, the mothers have passed on to their reward. This is better practice for palms than for mortals.

The areca-nut palm enters into the life of nearly every native. It bears a small fruit or nut about the size of a nutmeg. It is cut into strips or slices, seasoned with lime (plastering lime), wrapped in the leaf of the betel tree, and chewed as Americans chew tobacco. It makes the mouth red, and the saliva is like blood. Everywhere one sees betel boxes, of silver, brass, iron, &c., as one sees tobacco pouches in Japan and China. It is difficult to turn away from the great groves of every variety of palms that wave their tufted heads against the sun; flowers, fruits, birds, insects, butterflies, of every hue and form; *Jack fruit*, that grows as large as pumpkins, and hangs on twigs a few inches long right out of the great trunk of the tree, and breadfruit large as squashes, and many other kinds of fruit—all keep one in the enthusiasm of novelty.

The Royal Botanical Garden at Peradeniya, near Kandy, about 70 miles from Colombo, is a land of wonders. Listen to the names of some of the trees one sees there, brought in from every tropical land: Honduras Mahogany, West Indian Star Apple, Assam India rubber, African Oil Palms—every known species of palms; *Durion* fruit, more offensive in smell than Limburger cheese, and as fascinating in taste as Arizona *Loas* to horses; the Rubber trees, from South America and from Central America and from India; the Ups; Balsam of Tolu, from New Granada; the Camphor tree, from Japan and China; Malacca joints (bamboo); Sapan trees (Indian dye-woods); the Chocolate tree, from Trinidad; the Pith tree from the Nile; Sandal wood, from South India; Himalayan Cypress; the Pencil Cedar, of Bermuda; the Champak of India, noted in the fact that one sees its sweet yellow flowers offered on all the idolatrous altars of Ceylon. All these interest one; yet we must pause before the *Coco-de-mer*, a double cocoanut, known only in its fruit for centuries before the tree was discovered. It washed in from some islands in the Indian Ocean (Seychelles group). It grows very slowly, putting out but a single leaf in a year. It lives for many centuries. Its fruit requires ten years in which to ripen. The seed is the largest known seed, and takes more than a year to germinate. "One, but a lion." One sees also the Balsam of Peru, from Central America; the Bayuan, the Teak tree, the Rain tree of South America; the Traveller's tree, from Madagascar, (our guide stabbed this tree with his knife, and a cool stream of water spurted out, and we drank, as many another traveller had done); the Nux vomica tree (of which we did not drink); the Candle tree, with fruit like old-fashioned "tallow drops"; the Vegetable Ivory Palm; the "B" tree, against which Buddha leaned, and so it is sacred to all Buddhists; wild Nutmegs, with flying foxes in the tops; creeping Pepper vine; China Tea plant, now run out of Ceylon; Red Cotton tree; Nutmeg tree, quite rare; Allspice, Cloves, also large; Cocaine, and Cinchona. Parts of two days spent in this Royal Botanical Garden, in this tropical land, were days of wonderful interest. The trees and plants of which we read in school books, and whose fruit and products have come into later commerce, came out like

"old friend never seen before." "The spicy breezes of Ceylon's Isle" are not myths.

Natural History, Science, &c.

Teak Wood.—So indestructible by wear or decay is the African teak wood that vessels built of it have lasted fully one hundred years, to be then broken up only on account of their antique mould or defective sailing qualities.

This wood is one of the most remarkable employed in the human industries, for its great weight, hardness and durability, its weight varying from forty-two to fifty-two pounds per cubic foot. It works easily, but from the large quantity of silicx contained, the tools for working it require to be hard, and even then are subject to severe wear. It also contains an oil which prevents the iron spikes driven into it from rusting.

Friktion of the Limbs.—For rubbing the limbs in cases of illness, or in the effort to resuscitate the drowned, the rubbing should always be upwards or toward the centre of the body, where the heart and lungs are located. The blood in circulation which can be reached by rubbing is the venous or impure blood, and is struggling to get to the heart and lungs for purification.

Wood Pulp for Paper.—At the beginning of the present year there were forty-four wood pulp manufactories in Norway, all of which were in full swing, and four new wood-pulp works were in course of erection. The export during last year of mechanical wood-pulp and wet and dry cellulose amounted in the aggregate to about 200,000 tons.

The Loving Memory of Dogs.—The late — Eyre, a clergyman, left a dog, which was very much attached to him, at the country house of a friend while he left England for a long sojourn abroad. After two years — Eyre returned, arriving at his friend's house late at night, and retiring without having the dog called.

Next morning, — Eyre was awakened by the dog bursting into his bed-room and leaping upon him with the wildest demonstrations of delight.

"How on earth did he know I had arrived?" asked the gentleman of the servant, who brought hot water.

"Oh, sir," the man replied, "it is the most curious thing! As I was cleaning your boots the dog recognized them and became excited beyond measure, and I have not been able to quiet him until he saw where I was carrying them, and rushed up along with me to your door."

A correspondent of the same English paper relates that he gave away, at a year old, a dog which he was unable to keep in his London home. After eight years the dog was returned to its first owner.

"The dog met me," says the correspondent, "at first as a stranger, and then, with little animated sniffs of inquiry, going round and round me. I remained still for a few moments, while she grew more and more excited. At last I stooped and patted her, and called her by her name, 'Dec'."

"On hearing my voice the poor beast gave what I can only describe as a scream of rapture, and leaped into my arms. From that moment she attached herself to me as if she had never left me, and with the tenderest devotion."

Kansas Salt.—While boring for natural gas in Kansas a bed of pure rock salt was discovered at a depth of about 250 feet, and about 400 feet thick. Surveys that have been made indicate

that this bed is over 300 miles long and 25 miles wide.

A number of salt companies have been organized to work this deposit. It is expected that shafts will be sunk and the rock salt mined in the usual manner; but the method thus far pursued has been to bore down into the salt bed, and insert a double pipe. Through the inner tube water is pumped down, and this rises up as a concentrated brine in the space between the inner and outer tube. The brine is then evaporated in open tanks. The salt is now delivered in the Kansas City market at \$4 per ton and has monopolized the salt trade of that city.

Nitrogen.—This gas, which is invisible, and possesses neither color nor taste, nor scarcely any physical properties but bulk and weight, forms four-fifths of the atmosphere. The *Journal of Chemistry* says, it is apparently a dead form of matter, and yet it is one of the most important and useful of the elements, and if it should vanish from the universe, life would cease to exist.

The gas itself is neither poisonous, corrosive, explosive, nutritious, nor medicinal; but combined with carbon and hydrogen it forms the deadly prussic acid; with oxygen and hydrogen, the strong corrosive nitric acid; with hydrogen alone, ammonia; with carbon, hydrogen and oxygen, the terrible explosive nitro-glycerine; and with the same elements in varying proportions, it forms the albuminoids, the gelatines, the glutens, and other strength-giving elements of our food, or the indispensable medicinal agents, quinine, morphine, strichuine, cocaine, and many others.

Although nitrogen is tasteless, it forms an indispensable part of the flavors of the peach, plum, apricot, and other delicious fruits; as well as tea, coffee, chocolate, and tobacco. Without smell, it is found in many of the most powerful and delicious perfumes, as well as in the nauseating odors of putrefaction. Present in immense quantities in the air, it furnishes little or no support to vegetation; but combined with other elements the amount present in the soil determines its fertility. Colorless and invisible, nearly every dye stuff or coloring matter known contains in it greater or less proportion. Harmless and powerless by itself, when combined with another non-explosive gas, chlorine, it forms the most powerful explosive known, of which a ray of sunlight is sufficient to arouse the terrible destructive power.

And yet, notwithstanding the pre-eminent importance of this element in the affairs of life, there are but few of its combinations which we can form directly. Millions of tons of nitrogen are all about us, but not a grain of morphine, or theme, gelatine or albumen, can we make from it, only the mysterious vital force working in the natural laboratory of the vegetable and animal organism can build up most of these compounds from their ultimate elements, and place the atoms of nitrogen in their proper position, like the beams or stones of a building. Our wonder at the marvellous powers displayed by these organisms is none the less when we see what simple and common elements are used by them in making up their wonderful products; and we can only say that it is a part of the great and insoluble mystery of life.

Refilling old Coal Mines.—Considerable damage to the surface property has lately been caused in the coal mining regions by the caving in of the earth, underneath which the beds of coal had been removed. At the Kilmoor Col-

liery, the Reading Company have tried the experiment of attaching to the coal-breaker an endless chain which carries the fine refuse to an elevation, where it is mixed with some of the water pumped from the mine, and in this semi-liquid state flows back into the bowels of the earth, whence the coal had been removed. The coal dust settles to the bottom and packs closely and the water drains away to a lower level whence it is again pumped to the surface. The *Journal of the Franklin Institute* says that in this manner more than two acres beneath the city of Shenandoah, from which the coal has been mined have again been solidly refilled with coal dust, which used to be piled mountain high around the town.

Botany.—I shall never cease to be profoundly grateful to one of my teachers who persuaded me to study botany with him as an extra, at the age of thirteen, when the adventurous period which comes to every boy was beckoning me to every excitement of country life. The study had been wholly unknown, and, with its hard terminology and its careful analysis, it seemed at first anything but attractive; but I had not pursued it a month before nature became invested with unsuspected mysteries, revealing to me a new life. It taught me to walk adventurously miles and miles through brush and briar, over rocks and in swamps, fearless of snakes and vermin, to greet the early sunrise and the late sunset of long summer days in long tramps before and after school hours, till I had explored every rod as it would seem within miles of my country home. And what was my reward? It gave me eyes and ears, not only during my eager youth, but for all my subsequent life. It gave an interest to my rambles in open nature, which I have not lost to this day. I never see one of the formerly well-known flowers, whether common or rare, that I do not greet the first as a well-known friend, and the second as a friend long parted and now restored.—*Pres. Noah Porter.*

Admiral Porter's Dog, "Bruce."—Dogs have been favorites with the Admiral all his life, and within the last twenty years, or since making Washington his headquarters, he has owned no less than twenty-two.

But Bruce, early in his career, earned the highest place in his master's regard by one of those feats of sagacity which seem to prove that animals sometimes reason, and that too, often more wisely than their recognized mental superiors.

Admiral Porter had a little grandson, who lived near a deep and rapid water-course about twenty-five feet wide. The stream was crossed by a narrow plank. One day, the little fellow—who was but three years of age—attempted the perilous crossing alone. There was no one near to warn him of danger or prevent him but the dog. Realizing the child's peril, Bruce ran to him, and, catching hold of his dress, tried to pull him back. The youngster was determined to have his own way, and vigorously resented the dog's interference by beating poor Bruce in the face, with a big stick he carried, until the dog was forced by pain to relinquish his hold.

The faithful animal then jumped into the water, and swam slowly across the stream, below the plank, evidently with the intention of saving the child should he happen to fall in.

When they were both safely across, and Bruce had shaken the water from his shaggy coat, he artfully induced the little fellow to get on his back for a ride, a treat he knew the youngster

such enjoyed and for which he was always ready.

The moment the dog felt the child's arms round his neck, and the little feet digging into his sides, he trotted back across the plank, and onward, never stopping until his young charge was safe beyond any temptation of repeating his anguished performance.—*St. Nicholas.*

Items.

Unification of Nations.—The seed of international friendship has been very widely sowed by modern invention. The knowledge once confined to a few, which the printing press has seized, preserved, and scattered; the comforts of life which commerce has been able by her servants, God's ministers, and electricity, to make universal; the facilities of travel, and, chief of all, that great reservoir of nationalities, our own free country, have left mankind no longer strangers and foreigners. The last quarter of a century has witnessed the unification of countries for centuries divided into small States, hostile and naturally dependent. England and Germany have followed Great Britain in a peaceful union which the latter is laboring to perfect in all her vast dominions. The bitter rife of religious sects has subsided, and such political conflicts as have led perpetually to warfare, with every year less bloody and more amenable to reason.

The heaven of Christianity is, consciously or unconsciously, pervading the leading nations of the world. The special efforts put forth by missionaries of all Christian peoples have not been without effect, is raising the tone of international feeling to more nearly the Christian plane. American, English, and German missionaries in Africa, China, India, and the islands of the sea, have joined hands in the service of a common Lord and Master. May I not add, it seems hardly conceivable that by question of so called national honor or interest could induce them in the name of patriotism to injure their hands in each other's blood.—*American Advocate.*

Intemperance.—In Belgium, says a Parisian journal, they drink seventy million quarts of alcohol in the year. During the last fifteen years the population has increased only fourteen per cent, but the consumption of alcohol has increased thirty-seven per cent, and with it cases of insanity forty-five per cent; crimes of various kinds seventy-four per cent; suicides, eighty; and beggars, one hundred and fifty per cent. The country spends in strong drink a hundred and thirty-five million francs per year, whilst the State expends sixteen millions only on public education. There are 5,500 schools, and 36,000 public houses.

Religious Liberty in Russia.—Some time since, for professionally political reasons, the Russian Government treated with great severity certain of its subjects in the Baltic provinces, who were members of the Lutheran Church, denying them the right to be governed by their own consciences in religious matters. The Evangelical Alliance united in a protest to the Tsar. To this protest a courteous but unsatisfactory reply was received, and now the Swiss Branch of the Alliance has replied to the Russian official from whom the letter came, arguing the question, and pointing out the injustice of the demand. As against this treatment the various branches of the Evangelical Alliance united in a protest to the Tsar. To this protest a courteous but unsatisfactory reply was received, and now the Swiss Branch of the Alliance has replied to the Russian official from whom the letter came, arguing the question, and pointing out the injustice of the demand. As against this treatment the various branches of the Evangelical Alliance united in a protest to the Tsar. To this protest a courteous but unsatisfactory reply was received, and now the Swiss Branch of the Alliance has replied to the Russian official from whom the letter came, arguing the question, and pointing out the injustice of the demand.

"It is in vain, Monsieur le Procureur, to assert the power of certain historical rights, and your duty and obligation to use them. The rights of man are not to be measured more than one point of view. The right of imposing a certain form of religion upon the subjects of his Majesty the Czar, under pain and penalty of exile or other punishments, may well be doubted. There is, be well assured, a principle of right which comes before all others, and which transcends all others; a principle which, when asserted on a touch, or with which it cannot interfere, without violating the grand law of justice;

a principle and a right, which God has accorded to all his creatures, namely, to seek freely and unobscured for the truth, and, when found, to accept it honorably and heartily, each seeking it for his own sake, and each individual for himself, without human influence interfering, no matter what the nature of such influence or authority may be. In view of this unwritten law, a law which is not written there that can be granted or revoked at pleasure, or according to circumstances, but which is a Divine gift of God as much as is life itself, force, brute force alone, can be the engine employed against it. And it is against the employment of this force, no matter where it is found, or on what pretext or under what name, that the Alliance has protested in the past, and still protests. Now, this right to believe, Monsieur le Procureur en Chef, has an inseparable corollary, namely, the right freely to profess that faith in which a man believes.

"If I have correctly understood your meaning, Monsieur le Procureur, it is this two-fold right, that of choosing his faith freely, and professing it unfeignedly, that you deny to the consciences of your fellow-countrymen. By so doing you set up the dogma, 'Might before right.' Make no mistake. There is no denying it; and, moreover, you prove that political interests are to be placed before the rights of religion. No other conclusions can be arrived at, since you declare that henceforth anyone dissenting from the orthodox faith shall do so at the risk of pains and penalties. In protesting once more, Monsieur le Procureur, against the employment of force in questions of conscience, we not only are concerned, as we have stated in our petition to his Majesty, about the Lutherans in that matter, but also about those of the thousands of true and sincere believers throughout the vast Russian Empire, whose cries and tears are ascending up to the throne of God. It is on behalf of all these brethren in the faith, for it is only about such that the Alliance takes any action; it is in their name, or rather, we say, in the name of eternal justice, and the inalienable rights of conscience, that we venture to appeal anew to the imperial prerogative; and we shall at the same time, Monsieur le Procureur, present our petitions at the throne of that Supreme Ruler who reigns over all the kingdoms of the world, and who is King of kings and Lord of lords.—*Episcopal Recorder.*

Any one principle of faith and life, no matter how fundamental it may be, if it be constantly exalted and monotonously reiterated, to the exclusion of other important, and perhaps complementary or supplementing, principles, will be likely to suffer thereby. Its native force will be vitalized, and its natural effect will be deadened. Because we know that one part of the truth ought not to be made prominent by sacrificing all the remaining parts, our prejudice against an unfair method of enforcing a truth tends to work in us a prejudice against that truth itself. Yet farther, it awakens in us a presumption against the expounder of that truth. It shakes our confidence in him. There is sure to be a revulsion in our minds from the teaching of one who either deems it necessary to submerge the full and glorious round of truth for the sake of bringing into prominence one single point, or whose intellectual or spiritual advance has gotten no further than the one ever-recurring point. His mission as our teacher is practically ended. It is not that we tire of the truth, but that we tire of the contracted and therefore false limitations under which the truth is apprehended and meted out by him. In the end we can accept nothing that he says to us without mental reservations and corrections on our part. The instant he tries to refer a fact to his favorite principle, or to draw his favorite inference, we feel, "There comes his old hobby again," and we instinctively harden ourselves against it. This is the case in every sphere of instruction, of reform, or of counsel. Many a child, for example, hardens

himself against parental admonition because of this error on the parent's part. He feels that the parent's outlook is warped, when the parent's one-sided exhortations are forever drawing all evil or all good consequences from a single pet principle. Every preacher, teacher, parent, moral or spiritual adviser, would do well to forget not the *balancing* of principles and truths, that he may "render unto all their dues."—*S. S. Times.*

Every question may be looked at from two directions. When a man hesitates at a call which is put to him as a duty, his first question ought to be, not "Can I see my way clear to accept it?" but "Can I see my way clear to refuse it?" He will sometimes find the latter way blocked, when he would have imagined that he saw the former way open.

No one can justly deem himself a Christian who deliberately and persistently continues in any known sin. He must quit that sin at any sacrifice, even to the plucking out of right eyes and the cutting off right hands, or he will discredit all his claims to piety. No man can at the same time be the servant of sin and the servant of Christ. The two conditions are contradictory and incompatible.—*Selected.*

THE FRIEND.

SEVENTH MONTH 6, 1859.

The recent contest in Pennsylvania over the adoption of a Constitutional amendment, prohibiting the manufacture and sale of alcoholic beverages, awakened (as was natural) much interest among the members of our Society residing in that State. Many of them took considerable part in the labor of endeavoring to convince the people of the propriety of adopting prohibition, and of inducing them to go to the polls and vote.

The large majority by which the amendment was defeated, was probably due to the combined effect of several causes; yet it manifests that the people in general either were not properly impressed with the evils of intemperance, or did not believe that the proposed remedy was the safest and best one to apply. We do not doubt, however, that the interest awakened by this contest has had an educational effect as regards the Temperance question; and that it betokens a decided advance in public sentiment in the right direction.

Although we were desirous that this amendment should be adopted, yet we do not feel discouraged at the result. It seems to us a cheering fact that about 275,000 persons in Pennsylvania voted for prohibition, and this number is far short of including all of those who are advocates of Temperance. For it is probable that many temperance men abstained from voting, because they were not convinced that the method proposed was the one most likely to produce the best results; others feared that the people in general were not sufficiently alive to the subject properly to enforce such a law, if it were enacted; and others were influenced by the bonds of party.

Many of our own members, in common with other citizens who were concerned for the best interests of the community, felt that this occasion was one which called for hearty and laborious effort to promote a righteous cause. While

sympathizing with these, we can acknowledge to a feeling of satisfaction, that the late contest is over, and there is now an opportunity given to all of us to review the events of the last few months.

"To engage in acts for the moral reformation of others, partakes of the nature of a religious duty." In such labors, as in every other of a religious nature, we must attribute all the real good accomplished to the loving-kindness of Him, from whom cometh every good and every perfect gift; and who operates on the hearts and minds of men, either through instruments, whom He qualifies for his service, or by the immediate work of his Spirit. Those, therefore, who engage in such labors ought to feel a measure of the Divine requiring; and should have their expectation placed on the Lord's blessing, and maintain a reverent looking to Him for help and guidance. If this dependence is neglected, persons of an active and ardent temperament, who may feel desirous of promoting the good cause of righteousness in the earth may be drawn into things which do not belong to their sphere of duty, and be exposed to spiritual dangers which are not prepared to encounter with safety. In order to labor availingly in the cause of moral reform, there is required a degree of the seasoning virtue of truth in the mind of him who engages in the work, and inducing a religious qualification to labor for the benefit of his fellow-men.

When John Woolman was laboring with those Friends who held slaves, he says, "I often saw the necessity of *keeping down* to that root from whence my concern proceeded." The Lord singularly blessed his efforts, and no doubt made them conducive to his own spiritual growth, as well as to the promotion of a testimony against slavery. One good result of dependence on the Lord in efforts to promote the general good, or to check particular evils, will be to preserve those so employed from all acts of doubtful propriety, and especially from everything clearly wrong. For want of this godly care, a degree of unscrupulousness has crept into political movements, which is so contaminating that upright and honorable men are almost ashamed to be connected therewith—and the word "*politician*" has nearly become a synonyme for a man, who will sacrifice truth to the success of a party.

SUMMARY OF EVENTS.

UNITED STATES.—The full official copy of the recent election in this State on the two proposed constitutional amendments, is reported as follows: For the Prohibition Amendment, 296,917; against it, 484,624; majority against Prohibition, 188,707. For the anti-Poll Tax Amendment, 183,371; against it, 429,233; majority against, 236,952.

The temperance men of Pennsylvania who voted against the Prohibition amendment, in the belief that the present Brooks' law would be better, have been suddenly awakened to a realization of the delusion under which they rested, by a decision of the State Supreme Court, given ten days after the election. The Prospect Brewing Company had been refused a license by the Philadelphia Court, for cause, and had appealed to the Superior Court, which has now tested its mainstays, compelling the license to be granted.

"After severely reflecting on the action of the Judges of the License Court, the Supreme Judges declare: 'The act of May 21st providing for whole-sale licenses was a revenue act. There is not a word in it to indicate any intention of restraining the sale of liquor.' Judge Gordon, one of the conscientious members of the court refusing the Prospect Brewery license, says in an interview: "Speaking for myself, as a citizen and not as a public officer, I look with exceeding regret upon this decision. Its result is, in my judgment, and the liquor traffic is in a worse condition now than it ever has been in this Commonwealth. We have certainly taken a step, a very long step backward,

and the friends of temperance reform have not the slightest right to recognize, that in this Commonwealth, beer and spirits in quantities of a quart may be sold anywhere and everywhere, and in such manner as is alone governed by the cupidity and recklessness of the seller."

The Supreme Court of Indiana has rendered a decision to the effect that a license to sell liquor is not a contract, but a special tax.

The public debt statement shows a reduction of \$16,255,929 during Sixth Month. Total cash in the Treasury, \$643,113,772.

Lucy Hayes, wife of ex-President R. B. Hayes, died of apoplexy at Fremont, Ohio, on the morning of the 24th ultimo. She was in her 58th year.

Simon Cameron, the statesman and politician, died at his home in Donegal, Penna, on the 20th ultimo, aged 90 years.

Maria Mitchell, the noted astronomer, died in Lynn, Massachusetts, on the 24th ultimo. She was born in Nantucket, and was 70 years of age. At the age of 11 years she helped her father, William Mitchell, in astronomical observations. She discovered her first comet in 1847, and received therefor a gold medal from the King of Denmark. She subsequently discovered 11 other comets, and was professor of astronomy at Vassar College for 22 years, resigning about First Month last, 1888.

A triple collision of freight trains occurred on the 20th ultimo, near Latrobe, Penna., by which a number of cars were thrown down a 50-foot embankment. A large quantity of lumber caught fire from a carload of lime, and burned for several hours. A number of laborers returning from Johnstown were on the wrecked cars, twelve of them were killed and several others injured.

The question of the annexation to Chicago of its little adjoining suburbs of Hyde Park, Lake View, and Lake View, Jeffers was voted upon on the 27th of last month, and carried, the annexationists being successful in all the suburbs. The towns named give Chicago an additional population of 200,000, making its total, estimated, 1,100,000, and giving the city a total area of about 174 square miles.

Lead, which is the place of the largest natural gas well ever discovered. It is said to be yielding 40,000,000 feet per day, under a pressure of 800 pounds to the inch. The discovery of this well is regarded as significant of an unlimited supply of this valuable product.

A large cave near Hermosa Mining Camp, 60 miles from Los Cruces, New Mexico, has been opened, and it is said that its interior is lined with veins of almost pure silver. It is thought the cave will exceed in richness the famous Bridal Chamber Cave, at Snake Valley, New Mexico, from which over \$500,000 in silver was obtained.

The deaths in this city last week numbered 493, an increase of 38 over the previous week and a decrease of 43 as compared with the corresponding period last year. Of the foregoing 189 were under one year of age; 276 were males and 257 females; 70 died of cholera infantum; 29 of consumption; 26 of inflammation of the stomach and bowels; 26 of convulsions; 25 of diseases of the heart; 16 of inflammation of the brain; 15 of debility; 15 of casualties; 12 of inanition; 12 of congestion of the brain; 12 of old age; 11 of paralysis and 10 of cancer.

Market.—Wheat, No. 2, red winter, 91 1/2 cts.; No. 3, 89 1/2 cts.; No. 4, 87 1/2 cts.; No. 5, 85 1/2 cts.; coupon, 12 1/2 cts.

Cotton was in light supply and firm, at 1 1/2 cts. per pound for middling choices.

Feed.—Winter bran, choice \$14 a \$14.25; do, fair to good, \$12.50 a \$13.50.

Flour and Meal.—Western and Pennsylvania super, \$2.25 a \$2.65; do, do, extras, \$2.75 a \$3.25; No. 2 winter family, \$3.35 a \$3.75; Pennsylvania flour, \$4.00 a \$4.25; Pennsylvania roller process, \$4.10 a \$4.60; Ohio, clear, \$4.10 a \$4.40; do, straight, \$4.50 a \$4.75; Indiana, clear, \$4.40 a \$4.40; do, straight, \$4.50 a \$4.75; do, low and Southern Illinois, clear, \$4.10 a \$4.40; do, do, straight, \$4.50 a \$4.75; winter patent, fair to choice, \$4.75 a \$5.25; Minnesota, clear, \$3.25 a \$3.40; do, straight, \$4.50 a \$5.25; do, patent, \$5.50 a \$6.00; do, favorite brands held higher.

Grain.—No. 2 red winter, 91 a 91 1/2 cts.; No. 3, 89 1/2 cts.; No. 4, 87 1/2 cts.; No. 5, 85 1/2 cts.

No. 2 white oats, 23 a 23 1/2 cts.

Beef cattle.—Extra, 4 1/2 a 5 cts.; good, 4 a 4 1/2 cts.; medium, 4 a 4 1/2 cts.; common, 3 1/2 a 4 cts.; fat cows, 2 1/2 a 3 cts.

Sheep.—Good, 3 a 3 1/2 cts. per pound on all grades; extra, 3 1/2 cts.; medium, 3 1/2 cts.; common, 3 a 3 1/2 cts.; wools, 1 a 2 cts. Spring lambs, 4 a 8 cts.

Hogs.—Western, 6 1/2 a 6 1/2; State, 5 1/2 a 6 cts.

FOREIGN.—On First-day last, Wm. O'Brien, member of Parliament, was arrested at Cork for addressing a meeting which the Government had prohibited. It has since been released on bail. William John Lamb, member of Parliament for East Cork has also been arrested for inviting tenants in Ireland to adopt the plan of campaign.

In the House of Commons, on the evening of the 1st instant, Sir James Ferguson, Parliamentary Secretary to the Foreign Office, stated that Portugal had cancelled the Delagoa Bay railway concession, notwithstanding the representations of England. The Portuguese Government had been informed by England that Portugal would be held responsible for any loss which British investors might suffer by her action. The legal question involved was being considered by the Government, and no further steps would be taken to protect British residents at Delagoa Bay.

In Lisbon, in political circles, it is asserted that the concession and Portuguese laws fully guarantee the repayment of the capital which the railroad company has sunk in the enterprise.

The *Washington Herald* and the *Politische Nachrichten* are both commenting on the Delagoa Bay incident, express sympathy with Portugal, and deprecate what they characterize as an English attempt to reduce the South Africa republic to a British dependency.

The Berlin Academy of Sciences has decided to send out this summer an expedition, under the direction of Prof. von Exped., to investigate the marine fauna of the Eastern coast of America from Greenland to Brazil.

As a result of the complaints made by foreign powers of the actions of Socialists and others in Switzerland the Government has appointed a Public Prosecutor in order to strengthen the control of the police over the movements of refugees.

Russia has in Central Asia transportable schools. In Western Turkestan, especially in the villages, there exist no Russian schools, the Government transformed special cars of the Transcasian Railroad into school rooms, occupied by one or two teachers. These cars are moved from one station to another, where they stop for several hours, during which time the school-children visit the car, receive instruction in Russian grammar and writing, and the next train carries the school-car to another place. It is expected that this institution will be extended to the cities. The parents of the city are very anxious to profit thereby, and have their children instructed in Russian.

Our State Department is advised by our Consul at Auckland, New Zealand, that the island of Swallow in the Pacific Ocean, has been annexed by Great Britain. The commander of the war ship Rapid having hoisted the British flag on that island on the 1st of Fifth Month.

NOTICES.

WESTWON BOARDING SCHOOL.—Friends wishing to enter their children for the Fall and Winter Term commencing Ninth Month 3rd, 1889, will please make immediate application to

J. G. WILLIAMS, *Sup't.*
Westwon, P. O., Penna.

FRIENDS' LIBRARY.—The Library will be open during the Seventh and Eighth months, on Fifth-day from 4 to 6 P. M.

MARRIED, at Friends' Meeting-house, Birmingham on Fifth Month 18th, 1889, ALBERT LEVINS, near J. Bortown, N. J., to LYDIA E. HAYES, daughter of J. Bortown and Hannah Hayes, of East Bradford, Chester County, Penna.

DIED, at the residence of her son-in-law, Allen M. Walker, Tioga, Philadelphia, on the 13th of Fifth Month 1889, MARY BISHOP, widow of the late Mallon Kirkbride, in the 71st year of her age, a member of the Monthly Meeting of Friends of Philadelphia for the year 1888.

DROWNED in the flood at Johnstown, Pa., on the 23d of Fifth Mo. 1889, MADLON KIRKBRIDE (son of above Friends) in the 35th year of his age, a member of Upper Springfield Monthly Meeting of Friends, N. J. His wife and children also perished in the flood.

DIED, near Strasburg, Penna., on Sixth Mo. 12th 1889, WILLIAM LYONS & COLEMAN, son of the late Prof. Wm. Collins, in his 29th year, at a meeting of Frankford Monthly Meeting of Friends. "Patient and resignation characterized his months of suffering,

Incidents and Reflections.—No. 179.

GOOD FOR EVIL.

The Memoir of John Roberts contains a pleasant illustration of the exercise of that Christian virtue which the precepts of our Saviour injoin, of returning good for evil. He lived in England, in the latter part of the seventeenth century; and like many other good men of that time experienced the truth of the Apostle's declaration, "All that will live godly in Christ Jesus shall suffer persecution," having to endure imprisonment and loss of property for assembling with his friends to worship the Lord.

Among those who were active in persecuting their neighbors, was a Justice named James George. It so occurred that a murrain broke out among his cattle, and some of them died. His steward told him that he must send for John Roberts to doctor them, or that he would lose them all. "No," said the Justice, "don't send for him now, because I have warrants out against him and his sons [for being at a religious meeting], send for anybody else now." So the steward sent for another; who did what he could for them, but to very little purpose, for the cattle continued to sicken and die as before. The steward then told him, "Please worship, if you don't send for John, I believe you will lose all our cattle; for now the bull is sick, and off his seat, and I don't find as this man does them any good. But if you please to send for John, I don't question but he could be of service to them." "Send for him, then," said the Justice, "but don't bring him in as you used to do. When he has done what he can, pay him and dismiss him." So John was sent for, and went, having learned the great Christian lesson, to return good for evil, and did his best for them. When he had done, as he was wiping his hands in the entry, the Justice undesignedly came by him; and, seeing he could not avoid his notice, said, "So, John, you have done something for my cattle, I suppose." "Yes," replied John, "and I hope it will do them good." "Well," said the Justice to the steward, "pay John."

J. Roberts. No, I'll have none of thy money, Justice. None of my money! Why so?

J. Roberts. To what purpose is it to take a title of thy money by retail, and thou come and take my goods by wholesale?

Justice. Don't you think your coming to drink

and bleed my cattle will deter me from executing the king's laws.

J. Roberts. It's time enough for thee to deny me a favor when I ask it of thee. I seek no favor at thy hands. But, when thou hast done me all the displeasure thou art permitted to do, I will, notwithstanding, serve thee or thine to the utmost of my power.

John Roberts' son, who wrote out this narrative, says that his father presented the Justice with a piece against persecution, written by Thomas Ellwood, "which, together with my father's readiness to serve him, so wrought on him, that I don't remember any of his corn being taken from him at that time. But my brother Nathaniel and myself, being partners in trade in Cirencester, were fined by this Justice George [for ourselves and some unable persons present with us at the meeting] seventy pounds."

The Christian spirit is one that seeks the welfare of all, and is ever ready to overcome evil with good. This is instructively shown by the reply of our Saviour to his disciples James and John. They had entered into a village of the Samaritans, who would not receive them, because they were journeying towards Jerusalem; and listed a deep-seated enmity. The disciples said to Jesus, "Lord, wilt thou that we command fire to come down from heaven and consume them, even as Elias did?" But He turned and rebuked them, and said, "Ye know not what manner of spirit ye are of. For the Son of man is not come to destroy men's lives, but to save them."

The feeling shown by James and John was one natural to a mind not fully under the government of the Spirit of Christ. A few years since I was much interested in a conversation with an elderly man, who related to me some of his own experiences. While still a minor he came under religious conviction. About that time a public festival, with music and dancing was to be held in the town where he lived; and he was ordered to assist in lighting and preparing a hall for that purpose. Believing it was wrong, he declined; and his master in consequence discharged him from his service. He was also subjected to reproach from the people of the town, who could not sympathize with his convictions of duty, but would call after him as he passed along the streets, as one who was not willing that they should have innocent enjoyment; and they would throw dirt and stones at him. He thought at that time they were among the most wicked people on the face of the earth; and when he left the town and ascended the neighboring hill, he knelt down, and like James and John, prayed that they might be destroyed; and actually looked back several times to see whether fire had come down from heaven or some other ruinous visitation had fallen on the town and its inhabitants!

Increasing experience in the way of life enabled him to see the mistaken feeling which he

at that time cherished; and to convince him that the Christian must bear with patience the trials to which he may be exposed, and must overcome evil with good.

Among the anecdotes published by the Religious Tract Society, is one relating to Sir Eardley Wilmot, who was for a time Lord Chief Justice of the Court of Common Pleas in England. A man who had received a real injury from a person prominent in the political world, came to Sir Eardley, full of indignation at the wrong that had been done to him; and asked whether he did not think it would be manly in him to resent it. "Yes," replied the knight, "it will be manly to resent it, but it will be God-like to forgive it." This reply had such an instantaneous effect upon him that he came away with very different feelings.

In the Eighth Month of the year (1888), being at the house of a relative who resides near Christiana, Lancaster Co., Pa., Thomas Bunsall narrated the following chapter of his experience with his neighbors:

A part of the line fence, which it was the duty of a neighbor to keep in order, had been blown down; and he had straightened it up, without sinking the posts into the ground, so that the bottom rails were considerably elevated. Some of my cousin's hogs had wandered from a stubble field into which they had been turned, down to the meadow; and from that had gone under this defective fence into his neighbor's ground, who took possession of them as intruders, and refused to deliver them up, thus causing some annoyance and trouble, as well as pecuniary loss.

Some time after this, as my cousin and his sons were going across the fields on the way to their meeting-house, they found that 23 of this neighbor's pigs had broken out of his orchard and had come on to their ground. They drove them back into the orchard, fastened up the fence so as to keep them there; and then, calling at his house, desired the girl who was at home to let him know what had been done.

This return of good for evil completely broke down their neighbor, who said that he did not deserve such treatment at his hands. Never after that was there any difficulty between them.

An interesting incident is related of John Quincy Adams, when President of the United States. He made out a list of men whom he had chosen to examine into the condition of the United States Bank; and submitted it for approval to his cabinet.

The appointment of these men would bring each of them prominently into public notice and stamp them with official approval as possessing exceptional ability and incorruptible honor.

Henry Clay, glancing over the list, objected to one name upon it.

"Mr. Adams," said he, "that man I know to be one of your bitterest enemies. He has been your opponent throughout the whole of your political career. He deserves no preference at your hands."

Adams' color rose. He took the list, and looked at it in silence; then, in his usual grave, measured tones, he said:

"I am sorry to hear that, for I am assured that he is an able financier, and a man of the sternest integrity. So he does not like me, eh? Well, Mr. Clay, as it is the interests of the country, and not mine, which we must consider in this case, we will let his name stay."

Henry Clay nodded approval. "The President," he said "had risen to an admirable height of self-negation. But I should not have climbed there, I fear."

In the early days of the Society of Friends, its members were spoiled to much persecution, and were made the subject of a set of unprincipled informers, who often bore false testimony against them, and were exceedingly greedy to seize upon their substance—the pretence being that Friends violated the law against meeting for religious worship, except in the manner of the established Church. A peculiarly bad set of these men were to be found about the City of London. George Whitehead, who resided in that city, describes them as "a company of loose, irreligious, profligate wretches, who had been suffered to plunder, rob, steal, break houses, commit burglary, tear away and make havoc and spoil of their neighbors' goods."

George Whitehead was earnestly concerned for his suffering friends, and used much exertion to stop their unjust and often illegal proceedings. He finally persuaded the king to appoint a commission to hear the statements of Friends and the replies of the informers. G. W. says, "I showed the commissioners one case after another, in order for a thorough consideration and examination of each, and produced plain demonstration and positive proof of each article as we went along, how grossly and abominably those informers had forsworn themselves, and borne falseness in divers cases."

"The informers were so bitterly enraged against him, for this exposure, and made such threats that some Friends feared they would endeavor to do him mischief; but George says, 'I feared them not, nor what they could do, for I was bound in conscience to make them manifest to the Government. I can truly say, I was greatly assisted and strengthened by the Lord's power, in true faith and zeal, to clear my conscience in those concerns, against that persecuting spirit, and the destroying work thereof.'"

"The effect of these efforts was to induce the Government to discourage the persecution and spirit that had been going on; and the trade of the informers soon ceased to be lucrative. Their ungodly gain and ill-gotten goods did not prosper, and many of them soon came to be in want. George Whitehead further remarks:

"After their trade of informing was over, I remember George Hilton, informer, came to my house, complaining to me, that he was to be a servant to a great person, but he wanted clothes or money to buy them; whereupon I gave him something, being willing to render good for evil, he having been a very injurious adversary against myself and many others of our Friends; however I was comforted, for that the case was so well altered, as from taking away our goods by force, now these poor wretches were fain to come and beg of us." J. W.

"If we could sweep intemperance out of the country, there would be hardly poverty enough left to give healthy exercise to the charitable impulses.—*Philippa Brooks.*

Extracts from the Memoranda and Letters of Ann Watkins.

[Having received from the daughter of this Friend a copy of the book, of which the title is placed at the head of this article, it was read with interest; and we believed parts of it would prove acceptable to our readers.

Ann Watkins was a minister in the Society of Friends, of which she became a member when a child. She died at Ipswich, England, on the 28th of Seventh Month, 1885. The Preface, written by her daughter, who edited the work, says, "Should any derive instruction from reading this simple account of a life of many trials and many mercies, crowned by a peaceful old age, and a happy death, I shall feel myself amply rewarded for what has been truly a labor of love."—Ed.]

In the Divine fear, and with the earnest desire that Best Help may be afforded me, I propose to pen down a few incidents of my life for the benefit of my children, or rather for their information, that they may not be entirely ignorant of the way of my training, and of the dealings of my Heavenly Father with me through life.

I was born at Ipswich, in the County of Suffolk, on the 20th of the Seventh Month, 1813. My parents' names were James and Rachel Kirkham, the former of Goldsgate, Earl's Colne, Essex; the latter of Long Stratton, Norfolk, daughter of John and Sarah Edge. My father was considered a man of more than ordinary mind. He became a member of the established religion by confirmation, and although partaking much of a worldly spirit, was given at seasons to serious thoughtfulness. My mother was originally a member of the Society of Friends, but lost her membership in consequence of her marriage with my father.

My mother died in 1816, when I was about three years old, leaving my father with the care of six daughters (the youngest of whom died about six weeks (her.) Here my father was met with, by the way, in a very strait place; his spirit was bowed within him, and in a good degree he yielded to his best convictions. He consigned my mother's remains to their last resting place in the Friends' burial ground at Barking, about nine miles from Romford, where we then lived. My father now more outwardly professed his belief in the doctrines and practices of our Society, and endeavored to bring us up in accordance therewith, more by the weight and influence of example than by any verbal instruction relative to those views.

Thus, by an over-ruling Providence, was I early brought under the Divine fear, and taught to esteem religion as the chief object of life. When very young, I was made acquainted with the Witness for God, as inwardly revealed, and this knowledge of Him is amongst my very earliest recollections. Upon this experience is based my belief in the universality of the Light of Christ, or Grace of God, and when I found it to be upheld by our Society, in the reading of Barclay's *Apology* (when I was about seventeen years of age,) I rejoiced exceedingly and admired greatly at the love of God to poor, lost, fallen man.

My dear and honored parent joined the Society of Friends in 1821, and his three remaining children were united to that body at the same time.

In looking back upon my school life, I have to record that I there received many advantages;

but, whilst I desire to acknowledge with thankfulness the care and oversight of those who boy, and also the guardianship and protection of a merciful Providence, yet my more mature judgment of large schools has led me to conclude that such institutions are much less favorable to the growth of good morals, or the influence true religion in the heart than a careful home education.

I grieve over the beloved youth of the present day, * * * [and wish that their attention were directed to the necessity] of coming under the Light and Life of Christ, which would reprove them for sin and bring them into obedience, and make them not only practical followers of Him but elucidators also of the character of his kingdom. And, oh, how much more abundant through the operation of this Grace, would th elucidation be even of shining as lights in the world, that others, seeing their good work, might glorify our Father who is in heaven. Oh, that parents may seek in the ability afforded to fulfil their duty to their beloved offspring, and endeavor to train them in the nurture and admonition of the Lord! As the exercise of this is from day to day maintained, seeking their strength to be derived from Him whose name is a strong tower, poor as their efforts may appear unto themselves, I verily believe a blessing rest upon them, to be testified of in due time. May the encouragement go forth to these which I endorsed in the language, "In your patience possess ye your souls!"

To return to my history; I lived at home with my father and mother for three years, and they kept no domestic, I was much engaged in household duties. When I was seventeen years of age my father placed me with my two sisters in business in the town where he lived; but I was often backwards and forwards, living between the two homes. My father held his post [as manager of the gas works] for fifteen years but feeling his strength decline, he proposed to relinquish it, when on the day on which he would have retired, the 16th of the Ninth Month, 1834, it pleased Best Wisdom to remove him by death, in the 62nd year of his age.

I should like to render some suitable tribute of affection due to my beloved father's memory. I estimated his character very highly; his watchful care over his conduct without many words was a teaching lesson to me; his reverence for all that was grave and really serious was deep; his occasional brief remarks on Divine things were very weighty, and the work of Grace appeared to blend itself in a good degree with the actions of his life. He was much respected in the town where he lived; his position not unfrequently manifested that his conduct was based upon principle, and thus he adorned the doctrine of his God and Saviour. After the decease of my mother, he felt himself exposed to a variety of temptations, and the future care of his family pressed heavily upon his heart. The conflict between flesh and spirit was very great. A religious life was now before him as the settled conviction of his mind, and although clothed with weakness, he determined with Best Help to press onward, and a prayer was begotten in his heart that his life might be spared until all his children had attained the age of womanhood. This was remarkably the case, as I had entered my 21st year only two months before his decease. We, his children, have the comforting belief that, having passed through great tribulation, he was favored to know his raiment washed through a Saviour's blood, and an entrance granted him into that state "where the wicked

ase from troubling and the weary are at rest."

The work of true religion is a practical one, the work of the Holy Spirit is indeed of an inward character, but it operates to the subduing of sin in our mortal bodies as we are willing to yield to his convictions and obey and follow his adings, and thus, as we pass along, we witness his changing power and learn by an attention to the lessons taught us by heavenly wisdom, in our gradual unfolding, the hidden worth of that message of the Apostle: "For our conversation is in heaven, from whence also we look for the saviour, the Lord Jesus Christ, who shall change this vile body, and fashion it like unto his most glorious body, according to the working whereby he is able to subdue all things to himself."

(To be continued.)

FOR "THE FRIEND."

A Walk by the Pensaukin Creek.

On the afternoon of the 19th of Sixth Month strolled along the banks of one of the branches of the Pensaukin Creek, in Burlington County, N. J. In the part which I visited, the wide meadow through which the stream flows, is rarely, if at all, above the level of tide-water, and as the gates which formerly barred out the flowing tides from the Delaware have long since been allowed to go to decay, the meadow has become a bed of mud, thickly covered with a heavy growth of various kinds of marsh plants.

Prominent among these were clusters of large and smooth dark green arrow-shaped leaves, on long stems, all springing from the root. It belongs to the Arum family, most of the species of which are natives of the tropics. The leaves are similar in appearance to those of the common cultivated *Calla*, or Egyptian Lily, to which, indeed, the plant is closely allied. Those who notice the construction of the flowers of the *Calla*, will see a central stem, on which the stamens and pistils are placed, and this is enclosed by a beautiful white envelope—a modified leaf, called a spathe, which is the showy part of the flower. In our plant the construction of the flower is similar, but it is much less showy. The spathe in it is long, but slender, green, and closely wrapping the central column of stamens and pistils, which are hidden from view in its folds. The flower is shorter than the leaves, and so hidden in the mass of these that it is easily overlooked. Later in the season the upper part of the spathe ruts off, and leaves the base firmly enclosing the globular cluster of fruit. The flower-stem then often curves downward till it buries the fruit in the mud in which the plant is rooted: thus not only producing its seeds, but planting them in the position best adapted for their growth. Linnaeus called the plant *Arum Virginicum*, but it has been separated by botanists from the genus *Arum*, and is now named *Peltandra Virginica*.

One of the characteristics of the Arum family is the method of flowering which has been above described, i. e. the arrangement of the stamens and pistils on a common stem, and the more or less complete enclosure of this in a spathe. The Indian Turnip or Jack-in-the-pulpit (*Ariseema triphyllum*), so common in our woods, is a well-known variety. Most country children are familiar with the peculiarly strong biting taste of the root or underground stem.

Flowering in many species of the Arum family, and is due to the presence of a poisonous principle, which is mostly dissipated in drying. The root contains considerable starch, and may be used for food after the acid juice has been re-

moved. Dr. Hooker found that the inhabitants of the Himalayas collected the tuberous roots of two species of *Ariseema*, bruised them with wooden pestles, and threw them into pits with a little water until fermentation commenced, which removed most of the acidity. In warm countries, several plants belonging to this natural order are extensively cultivated for food—especially those of the genus *Colocasia*, such as the Cocco and the Tara of the South Sea Islands, which forms a very important portion of the food in some of them. Its roots, which are a foot or more in length, are boiled or roasted.

Among the curious species of the Indian Turnip family, is the *Ariseema Draconculcus*, or Dragon Plant, a native of Southern Europe, which has a straight stalk about three feet high, curiously spotted like the belly of a snake. It is sometimes cultivated in gardens as a curiosity, although it has a very disagreeable, carrion-like odor. The acidity, common to so many of the plants of this family, is very strongly developed in the Dumb Cane, a West India species which has received its name from the property it has of producing temporary dumbness when chewed—the poisonous juice causing an immediate swelling of the tongue, accompanied with excruciating pain.

Flowers in general are slightly warmer than the surrounding air, the heat being produced by the union of the oxygen of the air with some starch-like ingredients in the sap of the petals or other parts of the flower—a kind of slow burning. This increase of temperature is generally not more than one degree or a degree and a half; but in some of the Arums the flowers become sensibly warm to the touch, and one of them has been found to have a heat of 121° F., while that of the air around it was only 66°.

In the tissues of many vegetables there are found clusters of needle-shaped crystals, called *Rhaphides*, the Greek term for needles. These abound in the herbage of the Arum family. They are contained in cells which may be detached from the other tissue, and when moistened forcibly discharge their contents from an orifice at each end.

Besides the genera already referred to, there are three other forms of Arum that grow in our part of the country, all in wet places. One of these is the common and curious Skunk-Cabbage, which has a very perfect spathe, or leaf-like projection enveloping the flower. In the Golden Club and the Sweet Flag or Calamus (the other two genera) the spathe is imperfect or wanting.

In some parts of the Pensaukin marsh, the Yellow Pond Lily or Splatter Dock (*Nuphar advena*) was as abundant as the *Peltandra*. The leaves were large and the flowers were like round balls of about two inches in diameter, green at the base and on the outside, and gradually changing into a bright yellow. It is one of the Water Lily family—an interesting group, which includes among its members the Nelumbium or Sacred Bean, and that universal favorite wherever it is known, the sweet-scented Water Lily (*Nymphaea*).

Less abundant than either the *Peltandra* or the *Nuphar*, was the Pickerel Weed (*Pontederia cordata*), a plant with somewhat similar leaves, but having a spike of violet-blue flowers.

Floating in the current under the railroad bridge was a patch of the Pond Weed (*Potamogeton natans*). The upper leaves which float on the surface of the water are elliptical in outline, and very unlike the long, narrow submerged ones, which never come to the surface.

Following the stream in its downward course, I came to a spot where the surface of the water was covered with millions of very small floating green plants. These were the Duck Weed (*Lemna*), the simplest of flowering plants, consisting of a simple rounded leaf or frond, which floats on the surface of the water, with minute rootlets hanging below. Some of them produce flowers; but the species which was here so abundant (*Lemna polyrrhiza*) has not been found in blossom in this country. It propagates itself by new individuals growing out from the edge of the parent frond; and in the autumn, minute bulblets are produced which sink to the bottom of the water, but rise and vegetate in the following spring. The plants which I saw were from one-eighth to one-fourth of an inch in length.

FOR "THE FRIEND."

A Right Call to the Ministry.

The Apostle Paul said, in alluding to his call to the ministry, that immediately he conferred not with flesh and blood, but attended to the heavenly vision; and that he was not ashamed of the Gospel of Christ, for it was the power of God unto salvation, unto all them that believe; that the Gospel should be proclaimed by those that the great Head of the Church may see fit to call forth to stand as mouthpieces to the Church, standing as between the living and dead; that he (the Apostle) received it not of man, neither was taught of men, but by the revelation of Jesus Christ, and woe is unto me if I preach not the Gospel. George Fox gives some plain teaching in regard to the right call to the ministry—that it did not depend on education, while he did not condemn education in its place.

The Apostle in his last words to Timothy, exhorted him to study, to show himself approved unto God, a workman that need not be ashamed, rightly dividing the word; to show himself to be an Evangelist, to make full proof of his ministry. Then how important that those that are rightly called should wait on their ministry, and those that exhort, on their exhortation; and that teach, on their teaching. Where the call and qualification are from a source higher than man, it will have a baptizing influence on those that hear, reaching the witness for truth as it is in Jesus, for the promise is that my word shall not return unto me void, but it shall accomplish that which I please, and it shall prosper in the thing whereunto I send it."

G. B.

FOR "THE FRIEND."

Some remarks made by Ashbel Welch, Sr., a leading elder in the church of which he was a member, about the Seventh Month, 1870, in his house in Lambertville, N. J., and in the presence of his daughter Mary, whom he said, "he wished to bear witness to the same."

"I want to say to you that the Quakers (I mean no disrespect by the term), have been of incalculable advantage to Christendom.

"You must not come to us, we are going to you. But I fear many of your people are departing from original Quakerism; and I think you will have to stop and take a new start on the original foundation.

"I am a Quaker in many respects; and among other things do not approve of instrumental music in our churches, nor the adornment of them.

"I think I know what Quakerism is, and should not be surprised if I understand the departs being made by some of the members better than they do themselves."

He said he thought there was especial need now for Friends to press their views of spiritual worship, as there was an evident tendency in the different churches to magnify and to depend upon things not of vital importance.

FOR "THE FRIEND"

Early Meeting-houses of Friends.

GERMANTOWN AND FRANKFORD MEETINGS.

Frankford Meeting in early times was called Oxford, or Tackony. The first account we have of meetings being held here, was of a First-day meeting "at the house of Sarah Seayres, at Taconey or Oxford."

Thomas Fairman, who was a surveyor, and married Elizabeth Kinsey at Burlington in 1680, and was spoken of as "on ye River Delaware," had located at Shackamaxon, near the famous "Treaty tree" at whose house were held the first Friends' meetings in or near Philadelphia, in 1681. His was perhaps the most pretentious or comfortable dwelling then erected at or near the infant city; for, on the arrival of William Penn, there seemed to be no other place so suitable for the residence of the Governor and Proprietary; his own mansion at Pensbury not being then completed, he desired to occupy Fairman's house for the winter of 1682-3.

Samuel Smith says: "Thomas Fairman removed with his family to Oxford, where he gave a piece of ground to build a meeting-house on. The first was built of logs, very early. Another was afterwards built of brick, and went under the name of Frankford meeting-house."

Another account says: "Thomas Fairman, at the Governor's request, removed himself and family to Tackoney, where there was a meeting appointed to be kept."

William Penn, in a letter dated 17th of First Month, 1683, to Friends in Great Britain, says, "There is one meeting at the Falls, one at the Governor's house, one at Colchester River [Neshaminy], one at Taconey, one in Philadelphia, one at Darby, &c." There is one Quarterly Meeting in the county of Philadelphia, &c.

Smith says, "The Quarterly Meeting was now composed of divers particular meetings consisting of Friends of Tackoney or Oxford, Poet-questing, the Welsh Friends, and those nigh the City."

In the Sixth Month, 1683, "at a Quarterly Meeting held in Philadelphia, it was concluded that there be a First-day meeting of Friends at Tookany and Poetquesting, and that the two make one Monthly Meeting."

This Monthly Meeting was first held the 3rd of Seventh Month, 1683, when Thomas Fairman was directed to provide a book for the service of the meeting, and it was agreed to build a log meeting-house, on land given for the service by the said Thomas Fairman, in the Township of Oxford.

The Monthly Meetings were held alternately at Sarah Seary's, in Oxford, and John Hart's, at Poetquesting (Byberry), till Third Month, 1684, when the meeting convened in the new (log) meeting-house at Oxford. This is believed to be the same location now occupied by the "Oxford Trinity Church," which is known to have once been a Friends' meeting-place, and was abandoned by them after the Kethian controversy, in 1691-2. George Keith says, "the place at Frankford, alias Oxford in Pennsylvania, was formerly a Quaker meeting."

The old brick structure now standing at Unity and Walk Streets, was built in 1775. An addition was made later to the northern end. In

1776 report was made to the Monthly Meeting of this house as "a new meeting house at Oxford."

The frame meeting-house on Orthodox Street was built in 1830.

The first religious meetings of Friends at Germantown, were held at the house of Tennis Kundert (Dennis Conrad), in 1683.

A part of the wall of this house is said to be still standing, on Main Street, nearly opposite Manheim.

Smith says, in his history, "About 1686, many Friends from Holland and Germany arrived in Pennsylvania, who fixing among their friends, six miles to the northward of Philadelphia, contributed to the further settlement of the Town called German-Town."

The first meeting-house, built in 1686, was probably of logs, and is said to have been a very humble affair, and stood on Main Street, on a part of the lot now occupied by the ancient burial-ground, which was granted to Friends by Jacob Shoemaker for a meeting-place.

"Friends of Germantown, Tackoney, Poet-questing and Cheltenham united in holding a Monthly Meeting; and a general meeting was held at Germantown in 1687."

It was from one of these Monthly Meetings, held "at our Monthly Meeting at Dublin, 30th Second Month, 1688," that the famous protest of the Germantown Friends against African slavery was issued.

In 1699, the Germantown Friends informed the Monthly Meeting that they intended to keep two meetings on every First-day during the winter season. And in 1701 it is noted, "Our German friends desire their First-day meetings may begin at the 11th hour, and to have an evening meeting" which was granted.

In the Twelfth Month, 1704, it was proposed to Abington Monthly Meeting that a new house be built for the Friends of Germantown; it is also alluded to in a minute of Philadelphia Monthly Meeting of 30th of First Month, 1705, as follows: "Daniel Pastorius and Arent Cluiken, from Germantown, requested the assistance of this meeting towards building a new meeting-house, it is agreed that a subscription may be begun at our next Monthly Meeting. The subscription for Germantown Friends amounting to 120 pounds, Pentecost Tag is desired to enter it in the subscription book."

The house was erected in 1705, and was of stone and stood with its gable end to the avenue, and being nearly upon the site of the former one. In 1812, a new and larger house was built upon a contiguous lot, which served its purpose for more than two generations and was finally removed in 1871, after the erection of the present commodious and convenient structure.

J. W. LIPPINCOTT.

PHILA., Sixth Month 28th, 1889.

Reminiscence of War Times.

About the beginning of the Seventh Month in 1863, was, perhaps, to the inhabitants of this section of the country one of the darkest, if not the very darkest, periods during the sanguinary War of the Rebellion, as it was termed.

The Rebel army, flushed with victory, had triumphantly entered our State from the South, was lying in great force within our borders, threatening an onward march to Philadelphia, where breastworks had already been thrown up from which to offer some resistance. The line of march would apparently be through and over the fair fields of Chester County, quite possibly through our beautiful town, the reputed

wealth of which would naturally make it an object of interest, carrying with it devastation of property, if not loss of life and many other sad results, readily pictured by many anxious minds. David Meconkey, then a banker in the brown stone building near the Court House, becoming alarmed, as well as others, for the safety of his securities and treasures, either did, or proposed buying them in the cellar of the stone building on Gay Street, now owned by T. T. Smith, then belonging to him.

Meeting the late William Everhart on the street, he exclaimed with much earnestness: "Oh, William, I wish all the world were Friends, then there would be no wars!"

It was indeed "a time when men's hearts were failing them for fear."

About this time of trial, as the writer was passing along North High Street, he met the late John T. Worthington, who, as those who knew him will testify, was not a timid man. We stopped and entered into conversation on the serious aspect of affairs that had been permitted to come upon us. He was a prominent citizen of that period, one of five brothers (Dr. Wilmer, Isaac, Carver and Lewis), all of whom had been military men.

After speaking of the probability of the army crossing the Susquehanna (the bridge over which had been burnt at Columbia), and their marching through this section, the sad results of which could not be foretold, he paused, as if in deep thought, and then reverently said: "Well, it will be just as the Lord pleases."

A very significant expression, full of meaning, and a fit subject for reflection. "Well, it will be just as the Lord pleases," showing evidently, that although of a military family himself, he had no confidence or hope of preservation from injury and perhaps destruction but in the protecting power and goodness of our Heavenly Father. It pleased Him to stay their further progress, though at the expense of many dead, dying and wounded the next day at Gettysburg.

In intimate connection with this very trying period of our history, there is related an interesting as well as instructive incident in the life of the late Ebenezer Worth, Senior, whose character was well known in this community as a man of uprightness, temperance and purity of life. He spent about seven years in the prime of life, instructing the Indians on the Tunesassah Reservation in the State of New York, but at the time referred to was residing on his large fertile farm on the banks of the Brandywine, a few miles west of West Chester.

Although no mention of the incident is made in his diary, it was generally understood and believed that about this time, feeling in common with his fellow-citizens of this vicinity the great danger we were in, he covenanted with his Heavenly Father that if He would not permit the Rebel army to cross the Susquehanna River, he would devote the whole of his large crop of corn, then growing, to the benefit of the poor—a crop estimated to be worth \$1200 to \$1500, perhaps more.

It is said that the prayer of the righteous man availed much, and we know that the Rebel army was not permitted to cross the Susquehanna, although close upon its western border. Most faithfully did E. Worth fulfill his covenant, giving, it is said, his check at one time for \$1000 for the benefit of the freedmen of the South, and at home buying yarn and employing poor women to knit it up into socks and stockings for the poor wherever needed.

The two truthful incidents above related afford

pod for reflection as well as deep instruction, but it is better to trust in the power and goodness of Him, who ruleth the winds and the waves, than in the arm of man.—*W. P. T., in a West Chester Republican.*

SELECTED.
"HE CARETH FOR YOU."

"Casting all your cares upon Him; for He careth for you."—1 Peter v. 7.

How strong and sweet my Father's care!
The word, like music in the air,
Comes answering to my whispered prayer—
He cares for thee.

The thought great wonder with it brings,
My cares are all my glad little things.
But to the truth my such faith clings,
He cares for me.

Yet keep me ever in Thy love,
Dear Father, watching from above,
And let me still Thy mercy prove,
And care for me.

Cast me not off for all my sin,
But make me pure and true within
And teach me how Thy smile to win,
Who cares for me.

O still, in summer's golden glow,
Or with the tones of wind and snow
Love me, my Father: let me know
Thy care for me.

And I will learn to cast the care
Which like a heavy load I bear
Down at Thy feet in lowly prayer
And trust in Thee.

For naught can hurt me, shade or shine,
Nor evil thing touch me, or mine,
Since Thou, with tenderness divine,
Dost care for me.

SELECTED.
"THE GREAT MOTHER."

BY M. F. BUTTS.

Basest of mothers, putting all her wondrous realm in order;
Setting wild-rose beds by the breaking sea, pink in the garden border;
Filling the spreading fields with happy herds that live among the grasses,
And look out shyly, with a welcome sweat, when a flower-lover passes;
Bidding the cowslips bloom in yellow bands across the meadow reaches;
Cutting deep scallops for the branching oaks, and ovals for the beeches;
Bending, in mother softness, smiles and tears, o'er budding buds and cherry,
Till rose and snow dispute the garden place; painting the crude strawberry;
Breathing sweet balm into the wild grapes' flower; loosening the wood-fern's curls;
Mixing rare nectar for the clover cells, and fitting daisy whorls;
Match-making 'mong the robins, watching close, with tenderest inspection,
If suit of red or gray, if songs or nests, need motherly correction.

Unwinding, with a tender touch, cocoons, that wings may find their heaven;
Pouring in many a chill and earthy mold her life's electric leaven;
Looks the great mother with impartial care into the lowest room
Of her vast house,—fills up the glow-worm's lamp, refits the spider's loom;
Lights from her smile the tiny firefly's spark; makes pollen-dour for bees;
And hollows little caves for squirrel homes 'mong her old forest trees.
Upon her beauteous breast, if thou wilt lay thy weary head, O brother!—
Dearer to her than all—thou, too, shalt feel the love of the great mother.

—S. S. Times.

FOR "THE FRIEND."

New England Yearly Meeting [Conservative.]

Our New England Yearly Meeting, (smaller body) met at Westery, R. I., commencing with a Select Meeting on Seventh-day, the 15th of Sixth Month last. Public Meetings for Worship were held on both fore and afternoons on First-day, the 16th. Meetings for Business occupied the two following days; and the Yearly Meeting closed with a Meeting for Worship on the Fourth-day, the 19th.

While we were very few in numbers and felt weak, we had the cheering company of several beloved Friends from other Yearly Meetings, the weight and unity of whose spirits in the life and love of the Gospel were made precious to our hearts on those cementing occasions, when the feeling was comparable to that of "ointment poured forth." The sweet spring of the ministry was found to be still open to some, for the refreshing of all whose hearts were prepared to receive it.

Epistles were received from the four Yearly Meetings with whom we usually correspond, and answers returned, as also one prepared and addressed to that of Canada, and being taken there by several of our members, was cordially received and united with, and a reply returned to us by the same hands; so that now, for the first time, the six Conservative (Smaller body), Yearly Meetings, are all united by correspondence—a consummation, which it is sincerely to be hoped, may prove as lasting and beneficial to all, as it has been ardently desired by some.

[A communication from a Friend who was in attendance, says that the Meetings for Worship held on First-day, "were precious meetings, which the dear Master condescended to own."

It also states that John W. Foster and Job Gidley acted as Clerk and Assistant, and that the business was transacted with harmony, "there not being a single jar in any of its proceedings."]

The Religious Condition of the Eastern Jew.

Among the more than half a million immigrants that last year crowded our shores there was an entirely new element, consisting of more than forty thousand souls, namely, the Jews from Southern Russia, Roumania, Eastern Austria, and the Balkan districts in general. The Israelites of Western Europe and of America are not the typical representatives that have been trusted to be historic ideals of this peculiar people. To a greater or less extent, the emancipation of the Jews in the West, and their participation in the affairs of State and society have compelled them to make a compromise with modern thought and modern life. As a class the Western Jews are "reformed" or liberal. To all such change and departure from the landmarks of the fathers, the Oriental Jew is the most determined enemy. He lives, moves, and has his being in the forms of his traditional ancestral religion. Post-biblical Judaism as developed into ritualistic minutiae by the Talmudic doctors and their mighty codex are his ideals. He lives in the past and is personified conservatism.

This stagnation and petrification of religious formalism has developed a number of peculiarities that are as instructive as they are interesting. One of the strangest outgrowths has been the spread of wonder-working rabbis throughout the East, each with its own constituency and host of faithful ones. The most prominent one of this class is he of Salsgora, in the Bukowina district

of Galicia, who is at the head of the *Chasidim* or Pious party. His adherents come to him for council, and help and bring him offerings from as far east as China and as far south as Africa. They ascribe special efficacy to his prayers, and he is believed to have power to perform miracles. His title is "Rebbe," and his annual "Peter's Pence" amounts to about two hundred thousand dollars. The present Jewish Pope at Sadagora is Israel Friedmann, and he is consulted even by Christians at times. The recent efforts of Baron Hirsch to establish with his many millions, schools of various kinds in the Jewish districts of Eastern Europe, in which Jew and Christian should receive instruction in useful arts and knowledge on the same conditions, brought to light the strong opposition of the leaders of Oriental Judaism to new thought and new ideas. The *Chasidim* party made an effort to dissuade the Baron from pushing his scheme. When this failed, the orthodox rabbis of Galicia—the most thickly settled Jewish province of Austria—sent one of their principal men, Rabbi Rokeach, to Vienna, to prevail upon the Government to refuse the imperial sanction.

This action is essentially of the same kind and indicative of the same attitude of heart and mind as that of the Rabbis of Jerusalem last year. They forbade the poverty-stricken Jewish colonists of Syria from cultivating their land this year, because it is a *Shemittah* or Sabbatical year. The proclamation to this effect, signed by Samuel Salvant and Rabbi I. L. Diskin, as Chief Rabbis, declares that this being the year 5649, "there can be no permission found for sowing, plowing, reaping or planting, with the exception of what is necessary for the preservation of fruit trees.

We entertain the joyous hopes that the observance of this Divine command will bring special blessings, and deem it superfluous to point to the punishment in case of neglect of the observance."

The Jerusalem rabbis in general are the most pronounced advocates of Oriental Judaism. They have taken a firm stand even against the efforts of the *Alliance Israélite*, and of the private charitable enterprise of wealthy Western Jews, such as Montefiore, the Rothschilds, and others, to ameliorate the lamentable condition of the Palestinian Jew by the founding of institutions of various kinds, the establishment of schools on a national basis, &c. The rabbis in the sacred city demanded the control of these enterprises as they control the thousands of dollars that are annually sent up by the Jewish Diaspora to the brethren in Jerusalem, and by virtue of which the latter are practically religious beggars, living on the charitable sentiment of their people. When the Western man would not yield, the rabbis simply pronounced excommunication on all who would send their children to these schools; and this completely crippled the schools. The rabbis demand schools after the manner of the *Cheder* in Eastern Europe, where the mechanical study of the Talmud is the beginning, middle and end of all wisdom.

But it seems that not even this intellectual and religious petrification of centuries will be able to resist all influences from without. Indeed, the beginnings of the disintegration process are at hand. It is well known that no less than three Christward movements independent of each other have arisen among these people in the last five or six years: the principal one at Kishineff, under Rabinowitch; a second in Hungary, and a third in Tomsk. In all these the central thought is that a false line of development was entered upon when Talmudism began in Israel, and that Christianity and the New Testament

are the correct and normal complement and fulfilment of the Old Testament and its religion. Just to what extent this conviction, of equal importance for Christian missions and for civilization, has spread in the East, it is of course impossible to say. But the single fact that of Delitzsch's Hebrew Version of the New Testament fully seventy-five thousand have found readers among this people, is evidence enough that they are doing some thinking of which they formerly knew nothing. There can be no mistake about it, that a new heaven has been introduced into this seemingly impenetrable lump. What the harvest shall be only future developments can tell. The beginnings are certainly auspicious.—*The Independent.*

Natural History, Science, &c.

Electrical Phenomena.—Some of the recent numbers of *Nature* contain several descriptions of travellers, who, on the summits of mountains have found themselves in a highly electrified atmosphere. One of these was F. G. Smith, who with his party was overtaken by stormy weather as he ascended the Lingard Mountain. When they reached the summit snow was falling, but the "otherwise death-like stillness of the spot was broken by a strange, intermittent noise, resembling the rattling of hailstones against the panes of a window. It proceeded from a flagstaff, and was due to the passage of a continuous electrical discharge from the cloud in which the summit was wrapped."

After a time the party held their alpenstocks point upward in the air, and at once each became conscious of an electrical discharge passing through him.

Daniel Pidgen describes a similar experience when crossing the divide separating Central City from Idaho Springs, Colorado. "It was raining, but without lightning, as we neared the divide, when I felt a tickling sensation on the back of my hands. Presuming that a discharge was taking place between our bodies and the cloud, I tried to increase its intensity by holding my wet umbrella, point upwards, above the wagon. This at once produced distinct sensations in the hand and arm."

Force of Waves.—Thomas Stevenson, an eminent English engineer, carried out a series of experiments to determine the force with which the ocean waves beat against the walls of a lighthouse. The greatest force at the Skerryvore Rock Lighthouse, registered by his apparatus, was 6,083 pounds to a square foot, or nearly 21 tons.

Drednet Ships.—*Chamber's Journal* in an article on ships that have been deserted by their crews and left to float on the ocean, mentions one of iron that was abandoned in flames, owing to the spontaneous combustion of her cargo of coal, on the 15th of Tenth Month, 1876, about 1,900 miles from the Marquesas Islands, which her crew creached in open boats in 25 days. The burning vessel drifted westward to Tahiti, a distance of over 2,100 miles, and was towed into port by a French warship on the 9th of Sixth Month, 1877, nearly eight months after her abandonment. Her coal cargo continued burning until Fifth Month, 1878, when she was repaired.

Cunning Reynard.—A funny fox-chase is reported in this county, writes a New York Sun correspondent from Lancaster, Pa. At Landis Valley a fox had been started and thirty-five hounds and a half dozen cross-country riders

were in lively pursuit. The trail led among the fields and over the hills for several miles, and then took the bounds to the turnpike. There, in the middle of the pike, the scent was lost. The dogs manoeuvred and beat about here, there and everywhere, but the trail could not be found. A teamster, on his way to town with a load of hay, had passed the spot where the trail was lost in the pike only a minute before the hounds burst on the road in full cry. The teamster stopped on seeing the pack and the riders following them to watch the result of the manoeuvring.

"Which way did he go?" shouted one of the hunters.

"Danno!" the teamster shouted back.

"Didn't see him."

After watching the dogs and the hunters for a few minutes the teamster went on. The hunters unanimously declared that there had never before been such an inexplicable loss of a fox's trail, and had to give up the chase. After going a mile or so, as he tells the story, the teamster with his hay stopped his horses to talk with an acquaintance he met on the road, and, as they were talking, a fox jumped out of the hay at the rear end, landed in the road and trotted leisurely away.

A Bright Bird.—He was an English starling, and was owned by a barber. A starling can be taught to speak, and to speak very well too. This one had been taught to answer certain questions, so that a dialogue like this could be carried on:

"Who are you?"
 "I'm Joe."
 "Where are you from?"
 "From Pimlico."
 "Who is your master?"
 "The barber."
 "What brought you here?"
 "Bad company."

Now it came to pass one day that the starling escaped from the cage and flew away to enjoy his liberty. The barber was in despair. Joe was the life of the shop; many a customer came attracted by the fame of the bird, and the barber saw his receipts falling off. Then too, he loved the bird which had proved so apt a pupil. But all efforts to find the stray bird were in vain.

Meantime Joe had been enjoying life on his own account. A few days passed on very pleasantly, and then alas! he fell into the snare of the fowler, literally.

A man lived a few miles from the barber's home, who made the snaring of birds his business. Some of these birds he stuffed and sold. Others again were sold to the hotels near by, to be served up in delicate tid-bits to fastidious guests.

Much to his surprise, Joe found himself one day in the fowler's net, in company with a large number of birds as frightened as himself. The fowler began drawing out the birds one after another, and wringing their necks. Joe saw that his turn was coming, and something must be done. It was clear that the fowler would not ask questions, so Joe piped out:

"I'm Joe."
 "Hey! what's that?" cried the fowler.
 "I'm Joe," repeated the bird.
 "Are you?" said the astonished fowler.
 "What brings you here?"
 "Bad company," said Joe promptly.

It is needless to say Joe's neck was not wrung, and that he was soon restored to his rejecting master, the barber.—*Sunday-school Advocate.*

Items.

New York Yearly Meeting.—The general Yearly Meeting opened on Friday, Mo. 31st, at Glen Falls. The men and women met in that session. On the Quarterly Meetings asking some advice in regard to the minute adopted in 1885, which advised the meetings should not admit or endorse the service of ministers whose teaching on the ordinances was contrary to our views. The subject was referred to a committee, who subsequently reported that the doctrine of New York Yearly Meeting respecting ordinances is clearly set forth in that session. Our faith contained in its Discipline. These articles are legally binding on all the members. The report recommended that where any in the station of minister or elder teach in public or private in favor of the so-called ordinances, or be baptized with water or partake of the outward communion of bread and wine—and that their names be removed from the record of the ministers and elders. The epistle to Ohio (the Binns' Meeting) mentioned that ministers from that Yearly Meeting, holding unsound views, had been travelling in their midst, and asked that something should be done respecting it.

It was concluded to meet next year at Poughkeepsie.

Welsh Tithes War.—During the past eighteen months some of the Welsh farmers, tired of waiting for legislation which is always promised but which never comes, have been taking the bull by the horns, and have sought to solve the problem of disendowment for themselves. Were it not for the state of Ireland, the tithe war in Wales would have been a very prominent feature in the British history of 1887 and 1888. Not since the famous Chartist riots has Wales been in such a state of agitation and excitement; and the Tithes sales have been attended by as much commotion as the evictions in the west of Ireland. The Welsh Tithes War is the result of the action of stress of circumstances upon long-standing sentiment. The sentiment is the ranking sense of injustice which a nation of Non-conformists feels under the domination of an alien Church. The Dissenting farmer had long been complaining that a tithe of the produce of his labor should go to the support of an institution to which he could not conscientiously belong, and which did its best to suppress and stifle the religious cause to which he gave his voluntary support. This had been in his feeling as long as he had been so prosperous enough to be able to pay tithes without much trouble he was loth to take part in any active revolt. Agricultural depression, however, came on, and the shoe began to pinch. At last paying tithes to support an alien institution out of the reduced income brought on by low prices and bad harvests, became too much for the equanimity of the bucolic mind. In the Vale of Ayr, in the County of Denbigh, a number of farmers refused to pay tithes unless they obtained a reduction of twenty-five per cent. The clergy were obstinate and the farmers determined. Distraints, auctions, riots followed, until the revenues of Mother Church had at last to be collected under the grim protection of a squadron of military.

Now it is important that the position of those Welsh and English farmers who object to pay tithes, be correctly understood. It is true that the demonstration against their payment has been brought forth by agricultural depression; but it is not so much to the absolute payment of tithes that the Dissenting farmer objects, as to their payment for the maintenance of a Church whose ministrations are not in accord with his religious views. In fact, the non-payment of tithes is not the tithes agitated for, but their nationalization. That is the position which English Liberationists now occupy. The charge brought by the Church party against the Nonconformists of a desire to share in the spoils of a robbed Establishment is altogether unfounded. The Dissenting farmer simply demands that the money be used for *bono-fide* national purposes, such as education, for instance. The State Church, he maintains, has ceased to be national; it is as sectarian in its character as any other religious denomination. And he protests against paying out of his hard-won earnings to support a denomination which he cannot join.—*The Independent.*

Law and Order Society of Philadelphia.—This society was organized in 1881. Its object, as declared by its constitution, was "to secure by all proper means the enforcement of the laws against Sunday traffic of whatever nature and character the same may be, and of all such laws and ordinances as may from time to time exist in this Commonwealth relating to the liquor traffic." The report for the year ending Second Mo. 7th, 1888, is an encouraging document.

Disarmament.—A new journal, bearing the title of *The Disarmament*, has appeared in Paris. It is published under the auspices of the Church of Rome. Its conductors say:

"Men of Europe! In view of the fact that at the present time, the nations of old Europe have for their frontiers, lines of soldiers, and that multitudes are preparing for mutual destruction, we think the hour is come when we should proclaim the unrecognized rights of humanity. Just as if no account were taken of the wishes of the populations, it is said, with truth, that an imprudent tenant, who, for whatever reason, or for no reason, may transform his farm into a human slaughter-house. In this way millions of men, waded, under compulsion, and without explanation, be sent to death like cattle. Do we live, then, still in the terrible times when, for the satisfaction of two or three ambitious chiefs, their unhappy subjects were required to massacre each other?"

"Is it the will of the mass of the people sovereign or not? Either the three hundred millions of men who inhabit Europe have the hearts of slaves, or war will cease. If they do not desire war, yet it takes place, then war is made by them, in spite of them, and against them."

Le grand organe of the popular will, always demanding universal Peace, will declare everywhere, without distinction of country, these signal truths, that there may be wars which are glorious for the great, but never for the humble; that the wretches who let loose this plague hold mankind in contempt, and that the one who can find fault by his tongue is to be despised; thus if canit are by that, the last word of kings, then simultaneous disarmament is the last word of the people.

"The question then arises whether we are pursuing a chimera, and whether disarmament is a utopia? That is an objection constantly thrown in our teeth. We reply that war is as detestable as eternal. Nations, as they develop, end always, after more or less successful efforts, in getting rid of that which does not deserve to exist. The day, then, will come when the guns in our arsenals will share the lot of those in front of the Hospital of the Invalids. Our sons will find them in museums as they find other curiosities of the savage life. It is a question of time, but it will come. The car of civilization moves slowly sometimes, but it never goes back."

Tolerance and Liberty.—There is a wide difference between religions toleration and religious liberty. The one is a concession, the other a right; the one is a matter of expediency, the other a principle; the one is a gift of man, the other a gift of God.

Tolerance implies more or less censure or disapproval. We tolerate or endure what we dislike, but cannot prevent. The most despotic governments are tolerant toward subjects who are too numerous or too useful to be killed or exiled. Russia tolerates Romanists, Protestants, Jews and Mohammedans; Turkey tolerates "Christian dogs," and likes them to prey upon each other; but woe to him in either country who apostatizes from the State religion, or attempts to induce any member of the same to apostasy. "Tolerance is first sought and granted as a favor, then demanded and conceded as a right, and at last spared as an insult." In a free country nobody wants to be tolerated for his religious opinions or sacred convictions.—*Philip Schaff in The Independent.*

A Danger.—The danger of false tenderness in the training of children was finely illustrated at one time in this manner: A person who was greatly interested in entomology secured, at great pains, a fine specimen of an emperor moth in the larva state. Day by day he watched the little creature as he wove about him his cocoon, which is very singular in shape, much resembling a flask. Presently the time drew near for it to emerge from its wrappings, and spread its large wings of exceeding beauty. On reaching the narrow aperture of the neck of the flask, the pity of the person watching it was so awakened to see the struggle necessary to get through that he cut the cords, thus making the passage easier. But, alas! his false tenderness destroyed all the brilliant colors for which this species of moth is noted. The severe pressure was the very thing needed to cause the flow of fluids which created the marvelous hues. Its wings were small, dull in color, and the whole development was imperfect. How often we see a similar result in character when parents, thinking to help a child over some hard place, rob him of strength of purpose and other qualities essential to the highest attainments in mental and spiritual life.—*Selected.*

British Rule in India.—The change in the internal condition of India effected by the British Government, is depicted by the Maharajah of Gwalior, who contrasts the present with the condition more than half a century ago, in his commendation of the success of the British Indian Government in bringing peace and security to India. "Within fifty years," says he, "when Maharrattas went from time to time to Gwalior to the Deccan, small bodies were not safe. The departure was an epoch in the year. Their friends parted from them knowing that they had to set out on a journey of danger—perils through Thugs, robbers, spoliation and blackmail levied on them by the States through which they must pass; these things men not old still speak of. Now all pass to and fro without danger or hindrance—the poorest traveller feels as safe as the richest—for you make as much effort to protect the poor as the rich. I never put myself on the mail-car, unattended and perhaps unknown, without appreciating the strength of your rule. It is a substance—I leave Gwalior without apprehension, and my absence occasions no distrust."

THE FRIEND.

SEVENTH MONTH 13, 1889.

CANADA YEARLY MEETING [*Conservative.*]

A valued friend writes of this meeting, recently held, that it "was marked by peculiar evidence of Divine favor, greatly comforting and strengthening Friends generally."

From another person the following details have been received:—

Canada Yearly Meeting was held at Pickering from the 20th to the 25th day inclusive, of Sixth Month. The representatives from the Quarterly Meetings were present except two. The following ministers from elsewhere were present:—Daniel T. Dye, from Iowa; Gilbert Weaver, from Ohio, and James McLaughlin, from New York State, with a number of other visiting Friends.

Epistles were received from, and answers returned to, the following Yearly Meetings:—Iowa, Kansas, Western and Ohio, also one from New England Yearly Meeting, held at Westley, which, after seeking Divine counsel, was unanimously received, and replied to.

The reading of these epistles portray the deep trials through which they, like us, have passed in the maintenance of the Truth as it is in Jesus; they also prove that they have sought and found the Divine source of all comfort and consolation, the same Almighty protecting hand, and we felt encouraged thereby, and by the deep sympathy and love to which they bear record.

The name of the Quarterly Meeting of Pelham was changed to Norwich, as being more appropriate.

Geo. Rorke and Arnold Haight were chosen as the Clerk and Assistant, respectively. Adam Spencer, who so long acted as Clerk to the meeting, lies precariously ill at home; and two Friends were deputed to carry a message of love and condolence from this meeting.

Amicable arrangements having been made with the separating body of Friends with regard to the Yearly Meeting property, Friends agreeing to pay \$2,000 to satisfy their claim, the representative meeting was directed to secure the property to the trustees of the Yearly Meeting. Seven hundred copies of the minutes were ordered to be printed, to contain the usual subjects, together with a calendar of our own subordinate meetings, and of the Yearly Meetings with whom we correspond.

The committee on First-day schools reported, and a concern arose for their establishment, diligent support, and careful supervision; that they may be conducted strictly in accord with the views of Gospel truth as held by Friends.

The Treasurer made a report, and \$100 was directed to be raised to meet the current year's expenses, also one-third of the money required for the settlement of the Yearly Meeting property claim. Monthly Meetings were directed to furnish statistics of losses to property, real or personal, in their respective meetings, and report the same to the clerk of the representative meeting, assigning the reasons therefor.

Our younger Friends remark that few of them ever attended a more favored meeting. These were found in godly numbers, making it the largest meeting since the separation. Streams of a living Gospel ministry flowed abundantly; but words fail to express the holy feeling of solemnity, the tendering spirit of grace, the refreshing springs of Divine life with which the Lord Jesus, the Shepherd and Bishop of our souls refreshed his heritage. Such a sensible overshadowing of Divine mercy was seldom experienced. Especially was this the case with a Youths' Meeting, held on Second-day evening. Fathers and children united in thanksgiving and praise, in the same universal Divine language of the Spirit, and seemed unwilling to part, so sweet had been the communion. We were reminded, that if true and faithful to our Lord and Saviour, who had brought us and redeemed us by his own most precious blood, so as to be his disciples indeed, keeping his commandments, hearkening and obedient to his inspeaking word, that these blessed seasons of drinking of the streams of life, would, according to his promise, be time and again granted as refreshing rills in our course Zionward.

The meetings for Divine worship held on First-day were largely attended by those not in membership with us. The Gospel was preached

with baptizing power; the glad tidings of salvation, through Jesus crucified but now risen Lord and Saviour, who ever liveth to make intercession for us, and hath promised to be with and walk among his people who love Him, even to the end of the world; the all sufficiency of Divine Grace, as Christ, the true Light that lighteth every man that cometh into the world, to convict and convert the sinner, regenerate and redeem from sin, and to purify unto himself a peculiar people by a living faith that bringeth forth works of righteousness by love, and to sanctify the sons of Levi that they may offer spiritual sacrifices acceptable to God by Jesus Christ, was largely dwelt on; also that He, the Great Head of the Church alone calls, qualifies and equips his messengers whom he commissions to publish his Word, and that no human qualifications, nor wisdom obtained through men or books, are exercised by the will of man, can effectually supersede Christ's ministry. Lengthy and solemn were the meetings, and his people rejoiced that our Lord had been mindful of us, had satisfied his poor with bread, and had not sent the hungry empty away. For all which undeserved mercies, songs of thankfulness and praise were the clothing of our souls.

SUMMARY OF EVENTS.

UNITED STATES.—The Constitutional Convention of North Dakota met in Bismarck on the 4th inst., and organized by electing F. E. Faucher, Republican, permanent chairman.

The South Dakota Constitutional Convention met on the 4th inst. in Sioux Falls. Judge Edgerton, Republican, was chosen chairman. Meetings were telegraphed to the Constitutional Conventions of North Dakota, Washington and Montana.

The Washington Territory Constitutional Convention was called to order by the Territorial Secretary on the 4th inst., in Olympia. Only three delegates were absent.

The Constitutional Convention of Montana met in Helena on the 5th inst., and organized by electing Democratic officers, including W. A. Clark as President.

William Walter Phelps, of New Jersey, the most prominent and active member from the United States of the recent Saniam Convention, has been appointed by President Harrison to be Envoy Extraordinary and Minister Plenipotentiary to Germany.

A giant mortgage has recently been filed, covering every dollar's worth of property owned by the Chicago, Milwaukee and St. Paul Railway Company, except a small mortgage in its favor of the United States Trust Company of New York, and is for the sum of \$150,000,000. The mortgage is executed for the purpose of carrying out the funding scheme of the company. The plan is to make the trust company sole creditor, in order to secure a lower rate of interest.

A tragedy of fire broke out in the morning very heavy and painful and a great loss in the Brazos and Trinity rivers. Great damage has been done to railroads and other property, the aggregate loss being estimated at \$2,000,000. Four lives are reported lost.

Ten blocks of the best portion of Ellensburg, Washington Territory, were destroyed by fire on the night of the 14th inst., and nearly 100 families were rendered homeless and destitute. All the leading hotels, the Nash Opera House block, the City Hall, the Board of Trade building and a number of stores were destroyed, and the loss is estimated at nearly \$2,000,000. It is believed the conflagration was started by fireworks.

A passenger train on the Norfolk and Western Railroad was wrecked by a washout near Flaxton's switch, about 30 miles above Lynchburg, Virginia, early on the morning of the 21st inst. The water at the washout was about eight feet deep, and the engine dashed into this, carrying with it eight cars. The rushing water in the clefts of the rocks, and the breaking of the woodwork of the coaches was set on fire. There is no means of ascertaining the exact number of those who were killed, on account of the fire, but a number of 17 of them have been learned.

Deaths in this city last week numbered 422, a decrease of 15 from the corresponding period of 1897, and 71 as compared with the corresponding period last

year. Of the foregoing 244 were males and 208 females; 182 were under one year of age; 77 died of cholera infantum; 39 of consumption; 29 of marasmus; 22 of inflammation of the brain; 19 of convulsions; 18 of inflammation of the stomach and bowels; 18 of disease of the heart; 16 of old age; 15 of pneumonia; 15 of inflammation, 10 of debility.

Markets, &c.—U. S. 4½'s, 107; 4's, 128½; currency 6's, 118 and 120.

Cotton was in small supply and firm, at 11½ cts. per pound for middling uplands.

Feed.—Winter bran, choice \$14; do., fair to good, \$12.50 a \$13.50.
Flour and Meal.—Western and Pennsylvania super, \$2.35 a \$2.80; do., extras, \$2.90 a \$3.25; No. 2 winter family, \$3.35 a \$3.75; Pennsylvania family, \$4.00 a \$4.25; Pennsylvania roller process, \$4.25 a \$4.75; Oats, clear, \$1.25 a \$1.29; do., straight, \$1.05 a \$1.40; Indian, clear, \$1.25 a \$1.60; do., straight, \$1.45 a \$1.80; St. Louis and Southern Illinois, clear, \$1.45 a \$1.60; do., do., straight, \$1.65 a \$1.90; winter patent, fair to choice, \$5.00 a \$5.50; Minnesota, clear, \$3.50 a \$4.25; do., red, \$4.50 a \$5.40; do., patent, \$5.75 a \$6.25.

Grain.—No. 2, straight, white, \$4 1/2 cts.
No. 2 mixed corn, 42 1/2 cts.
No. 2 white oats, 33 1/2 cts.
Beef cattle.—Extra, 4 1/2 cts.; good, 4 1/4 cts.; medium, 4 1/4 cts.; common, 3 1/2 cts.; 4 cts.; fat cows, 2 1/4 cts.
Hogs.—Extra, 5 1/2 cts.; good, 5 1/4 cts.; medium, 4 1/4 cts.; common, 3 1/4 cts.; culls, 2 a 3 cts.
Lungs were in fair request at 4 a 7 1/2 cts.

Hides.—Western, light, 6 1/2 cts.; western, heavy, 6 a 6 1/2 cts.; State, light, 5 1/2 a 6 cts.; State, heavy, 5 a 5 1/2 cts.

FOREIGN.—Thomas P. Gill and Joseph R. Cox, Nationalist members of Parliament, were arrested in London on the 7th inst. They were taken to Drogheda on a charge of conspiracy. On the 9th inst they were dismissed by the Court.

The Shah of Persia, now on a visit to England, has been seen in London on the 7th inst.

A despatch received in London from Cairo, dated the 3rd inst., says: An engagement has taken place at Arquin between a force of Egyptian troops, under command of Colonel Wodehouse, and a body of Derwishes. The Derwishes were defeated, and fled. Their loss was 500 men.

Nearly seven-eighths of the population of Zanzibar are slaves. Some owners have 1,000. A negro boy costs about \$20, a strong workman about \$100 or \$120, a young negroes from \$50 to \$100; Abyssinian women from \$200 to \$500; while the women from Jeddliah, in Arabia, bring from \$100 to \$200.

The 22nd of Ninth Month is fixed for the general elections in France. Exciting times are expected. On the 3rd inst. occurred an explosion of fire-damp occurred in a coal-pit at St. Etienne, France. Three hundred miners were entombed, of which number it is believed 185 perished. Money for the relief of sufferers is arriving from various directions.

The *Belgian Tagblatt* says that England, Germany, France, Portugal, Belgium, the Congo State and Italy, are making arrangements for a conference to settle the limits of their respective settlements in Africa.

Berlin, Seventh Month 31st.—Emperor William's Norwegian trip has nearly had a final termination. While the Emperor and his party were viewing the Bear Glacier, a great mass of the ice became displaced, and a fragment struck the Emperor on the shoulder, dashing him violently to the ground. Full particulars of the accident have not been received, but it is known that the Emperor's injuries are not at all serious.

NOTICES.

WESTWON BOARDING SCHOOL.—Friends wishing to enter their children for the Fall and Winter Term, commencing Ninth Month 3rd, 1889, will please make immediate application to

J. G. WILLIAMS, *Sup't.*
Weston P. O., Penna.

WESTWON BOARDING SCHOOL.—A stated meeting of the Committee on Admissions will be held in the Committee-room, Fourth and Arch Sts., on Seventy-third the 27th inst., at 10 A. M.

JNO. W. BIDDLE, *Clerk.*

FRIENDS' LIBRARY.—The Library will be open during the Seventh and Eighth months, on Fifth-days, from 4 to 6 P. M.

DIED, at his residence, near Viola, Linn Co., Iowa, on the evening of Tenth Mo. 11th, 1888, LINDSEY SHAW, aged 36 years, 4 months and 15 days, a member of Hopewell Particular and Springville Monthly Meeting of Friends. He was firmly attached to his principles and doctrines of our Society, always was favored with many tender visitations of Divine love in childhood and early youth. These he was favored to close in with, giving him much comfort in after life and particularly when prostrated on a bed of suffering. He spoke of having borne much ridicule in young years on account of his faithful testimony to plagues, but said the reward of his obedience was also said he desired that young parents might see more clearly the necessity of dressing their children plainly. On being taken sick he felt that it was very uncertain about his recovery, and was very anxious that he be found ready when the call came; said he had missed his way in involving himself so deeply in business as to require too much hurry and exertion in order to meet his obligations, which had a tendency to draw away from the pure life within. It was a great trial for him to part with his family, but we believe he was favored to leave them all to Him who careth for the spouse, and was very ever in the center of his dear and supplied fervently for different members of the family, and on his own behalf, which prayer seemed lost in praises for the Light which had been granted him. He then calmly gave orders concerning his funeral, and wisely he held at the house. His sufferings were very severe, but he bore them with a patience in a remarkable degree of patience, his countenance often lighting up with a heavenly smile, the recollection of which leaves a pleasant savor in the minds of his family and friends, and they trust that through great mercy he has entered into rest.

—, on Fifth Mo. 9th, 1889, at his home near Richmond, Virginia, JOHN B. GREENSHAW, a minister of Richmond Particular and Cedar Creek Monthly Meeting of Friends, aged 48 years, 10 months and 14 days, in the harness; his wish was gratified, as he was in meeting serving his Master when the solemn summons came. One slight, and one severe stroke of paralysis, some months previous, had weakened him, and warped him his time of departure might be near at hand, he had made a great effort to get up, especially to attend meetings. He had been a rested minister forty-five years. He was much interested in the welfare of the colored people in and about Richmond, and during the war of the rebellion had frequent occasion to intercede with the Confederate authorities on behalf of the colored people of Virginia and North Carolina, and in prisons for their refusal to take part in the war. In a community where Friends are few, and their distinguishing doctrines and testimonies not generally understood, he was concerned to uphold these in the various public engagements into which he felt led, and had the reward of peace therein.

—, in Wexley, R. I., the 26th of Fifth Mo. 1889, LYDIA H. FOSTER, wife of John W. Foster, aged 62 years, on the 26th inst. She was a member of the Hopewell Monthly Meeting of Friends, and when in health, a diligent attender of meetings, not omitting those held in the middle of the week. From early life she was concerned to seek first the Kingdom of Heaven, and the righteousness thereof, and was faithful in maintaining not only the doctrines of our Society, but also the principles of the Bible, and was ever ready to dispense the shame. She was of a tender spirit and full of love and charity for others; frugal and industrious in her habits, and a most affectionate wife and mother—endeavoring often to impress upon her children the importance of innocent and Godly lives, often reading to them the Bible, and the history and the lives of other pious authors. Her illness was long and severe. In the Tenth Month, 1889, it assumed an alarming character, and she was a great sufferer for nearly five six months before her close consumption set in and hastened her death. The last days of her life were remarkably calm and patient—all her fears about her soul were entirely relieved. Peace, sweet peace, was the clothing of her mind, and she more than once said she felt happy and longed to be at rest. At the same time she was very anxious to see her dear friends, and she believes has been permitted to join those who came out of great tribulation, and who washed their robes and made them white in the blood of the Lamb.

—Sixth Mo. 17th, 1889, J. MORTON ALBERTSON, in his 69th year, a member of Gwynedd Monthly Meeting.

Incidents and Reflections.—No. 180.

REPROOF.

In one of the numbers of the *Christian Advocate*, C. C. McCabe calls the attention of Christians to the Scripture command, "Thou shalt in private rebuke thy neighbor, and not suffer sin upon him." He remarks, "how it would diminish profanity, for instance, if every time a man would swear on the streets, on the cars, or in shops, he should be sure to call up some witness or Jesus;" and he mentions a case in which he says, "I knew John H. Vincent to reprove a weaver so powerfully, and yet so tenderly, that he not only subdued him, but melted him to tears. It was in a railway station. The room was full of passengers waiting for a belated train. A man, probably slightly intoxicated, was shocking everybody with his profanity. Suddenly Dr. Vincent began to sing:—

'Jesus, Lover of my soul,
Let me to thy bosom fly,
While the nearer waters roll,
While the tempest still is high!
Hide me, O my Saviour, hide,
Till the storm of life is past;
Safe into the haven guide,
O receive my soul at last!'

"The song ceased. Perfect silence reigned. The swearer was reprov'd. After a time he came to Dr. Vincent and said:

"'Could I see you a moment outside?'

"'They went out together.

"'How came you,' said he, 'to sing that hymn just now?'

"'The doctor replied:

"'I heard you swearing, and I thought I would let you know there was somebody there who loved the name of Jesus.'

"'That's very strange,' said the man. 'My sister when she was dying sung that very hymn, and she made me promise to meet her in heaven. Could you pray for me?'

"'Down in the snow they knelt together, and the doctor prayed for the penitent man, and asked that he might have grace and strength to keep his vow.

"'The train came. They were separated, to meet no more, in all probability, till they meet in eternity.

"'Disciple of Jesus, stand up for your Master. Bear his reproach. Confess his name before men. The hour is rapidly approaching when a

glance of recognition from Jesus will be more to you than all the wealth and honor of this world. And He has said, if ye confess me before men, I will confess you before my Father and his angels."

"This incident is an interesting illustration of faithfulness in reproving sin; and the concluding remarks as to being willing to "bear the reproach of Christ," and to "confess his name before men," are worthy of being kept in remembrance; yet in their practical application, it is needful to be on our guard, that we do not enter upon services which are really not required of us; for in so doing we may injure rather than help the good cause, and that we do not imitate the methods of action, which may be appropriate enough in others, but are not adapted to our training or views. He who is fervent in spirit to serve the Lord, and watchful to do his duty as it presents, is not likely to go far astray in these matters. He will be sensible of the gentle drawings of the Lord into such services as it is the Divine will he should perform; and if his own will is sufficiently humbled, will be strengthened to perform them in such a manner as to bring peace and comfort to him.

The *Louisville Observer* relates the following anecdote, in which a reproof was administered in a manner which reminds one of the proverb, "Answer a fool according to his folly, lest he be wise in his own conceit."

"A certain infidel, who was a blacksmith, was in the habit, when a Christian came to his shop, of asking some one of the workmen if they had ever heard about Brother So-and-so, and what they had done? They would say no, what was it? Then he would begin to tell what some Christian brother or deacon or minister had done, and then laugh and say, 'That is one of their fine Christians we hear so much about.'

"An old gentleman—an eminent Christian—one day went in the shop, and the infidel soon began about what some Christians had done, and seemed to have a good time over it. The old deacon stood a few moments and listened, and then quickly asked the infidel if he had read the story in the Bible about the rich man and Lazarus?

"'Yes, many a time, and what of it?'

"'Well, you remember about the dogs, how they came and licked the sores of Lazarus?'

"'Yes, and what of that?'

"'Well,' said the deacon, 'do you know you just remind me of those dogs, content merely to lick the Christians' sores.'

"The blacksmith grew suddenly pensive, and hasn't had much to say about failing Christians since."

Simond, in his travels in Switzerland, describes an interview between Claude Gay and the celebrated Voltaire, in which the humble Quaker administered a well deserved reproof to the witty infidel. Claude was a native of Lyons in France, educated by his parents in the Roman Catholic faith, but who became convinced of the

principles held by Friends by reading *Barelay's Apology*. He died at an advanced age in England in 1786. He was an approved minister in our Society, and paid several religious visits to various parts of England, the Channel Islands, Holland, France, Germany, and Switzerland. He was remarkable for his industry and humility and often travelled on foot. He was a simple hearted Christian, but no scholar. In one of his visits to Switzerland, he remained for some time at Geneva, and excited some attention by his moderation, good sense and simplicity. Voltaire heard of him, his curiosity was excited, and he desired to meet with him. Simond's narrative is as follows:—

"The Quaker felt great reluctance, but suffered himself at last to be carried to Ferney, Voltaire having promised beforehand to his friends that he would say nothing that could give offense. At first, he was delighted with the tall, straight, handsome Quaker, his broad-brimmed hat, plain drab suit of clothes, and the mild and serene expression of his countenance, and the dinner promised to go off very well; yet he soon took notice of the great sobriety of his guest, and made jokes, to which he received grave and modest answers. The patriarchs and the first inhabitants of the earth were next alluded to; by and-by he began to sneer at the historical proofs of revelation; but Claude was not to be driven away from his grounds; and while examining these proofs, and arguing upon them rationally, he overlooked the light attacks of his adversary when not to the point, appeared insensible to his sarcasms and his wit, and remained always cool and always serious. Voltaire's vivacity at last turned to downright anger; his eyes flashed fire whenever they met the benign and placid countenance of the Quaker; and the dispute at last went so far that the latter getting up said: 'Friend Voltaire, perhaps thou may come to understand these matters rightly; in the meantime, finding I can do thee no good, I leave thee, and so fare thee well.' So saying, he went away on foot back again to Geneva, leaving the whole company in consternation. Voltaire retired immediately to his own room."

The infamous Judge Jeffries, who sat on the bench during the reign of Charles the Second of England and was notorious for his brutality and tyranny, once drew upon himself an unintentional reproof or warning.

In the latter part of the seventeenth century, some young men of Newcastle-on-Tyne, who had formed an association for their mutual improvement, were maliciously accused before Judge Jeffries of guilty and dangerous fanaticism. Among them was one who had been taken in his working apparel, which added to the general meanness of his appearance. The Judge singled out this man, whose name was Vermer. "Can you read, sirrah?" cried Jeffries. "Yes, my lord," was the reply. "Reach him the book," returned the Judge; and the clerk immediately handed over a Latin Testament. The

young man opened it at the seventh chapter of the Gospel of Matthew, and began to read from the first verse, "Ne judicate, ne judicamini," etc. "Construe it," thundered out Jeffries. "Judge not, lest ye be judged; for with that judgment ye judge, ye shall be judged; and with that measure ye mete, it shall be measured to you again." This extraordinary and applicable quotation reduced the unhappy wretch who sat on the bench to silence. Although the young men were sent to prison, where they were confined nearly a year, they were ultimately released.

In Baxendale's Collection of Anecdotes, there is a story told of a woman who sent to her minister for advice, and she said, "Dear sir, my life is very miserable." "Well," said the minister, "what would ye have me to do?" "Ah!" said she, "My husband and I don't agree. We quarrel very often. He comes in sometimes tired and ill-tempered, and I fire up. Then we go to it tooth and nail." "Very well," said the minister, "I can cure that." "Oh! can you, sir? I am so delighted, for I do love my husband when a's come and gone," said she. "It's a certain cure," said the minister, "and will work a charm." "Oh! I am so happy to hear it," said she. "Well," continued the minister, "When your husband comes in from his work fatigued and quarrelsome, and says a sharp thing to you, what do you do?" "Oh! I answer back, of course." "Very well," says the minister; "the singular charm is this: whenever your husband comes in and commences to speak sharply, the first thing you do is to run to the pump, fill your mouth with water and keep it in for ten minutes." Well, the woman came back to the minister in three or four weeks, and she said, "The Lord bless you, sir, for that's the most wonderful charm I ever heard of!" He might have reproved her for want of patience and forbearance under her husband's sharp speeches, but the plan he advised her to follow gave her time to cool her rising temper, and accomplished his object. It reminds one of the quick tempered deacon, who had a pair of unruly oxen. Of course, the more irritated he became, the less fitted he was to control them. He finally adopted the method when things went wrong, of singing a psalm to his oxen, and he remarked that it had a surprising effect in quieting them!

J. W.

FROM "THE CHRISTIAN ADVOCATE."

Algiers.

Ascending to the great height upon which the magnificent Catholic Church of Notre Dame d'Afrique stands, a peak of Mount Bon-Zarea, we commanded a splendid view of the sea and city. In the church we beheld an immense black virgin. The Virgin Mary has been subjected to remarkable treatment. Here we found her one of the blackest of Negroes. In most other cities she is as white as the fairest lily that ever bloomed. In one we saw her in the form of a gilded statue fifteen yards high. She was intended to be elevated to a great height, but in the position which she occupies appears larger than some of the women exhibited as giantsess. It is claimed that this Virgin appeared to some native of Africa in the form of a great black woman. This inscription surrounds the altar: "Notre dame d'Afrique, priez pour nous et pour les Musulmans."—(Our Lady of Africa, pray for us and for the Moslems). If one wishes to know precisely how the Archangel MICHAEL looks, he need only to go to this church, for there is a statue of that wondrous

being, made of solid silver, valued at twenty thousand dollars. The place is also famous for a ceremony which is said to have no parallel elsewhere. It is performed every Sunday afternoon about half past three. When vespers have been concluded the clergy chant the regular prayers for the dead, and then go in procession to the point which overhangs the sea, and there perform over that greatest of sepulchres all the ceremonies which the Roman Catholic Church appoints for ordinary funerals. A fine monument has been erected, on which is an inscription, the translation of which I give:

S. EM. C. CARDINAL CHARLES MARTIAL ALLEMAND-LAVIGERIE,

Archbishop of Algiers and of Carthage, Primate of Africa,

has been kind enough to accord in perpetuity one hundred days of indulgence to all those who will recite here one *pater* and one *ave* for the sailors who have perished on the sea, or those who find themselves in peril of death.

The Pope, LEO XIIIth, has accorded full indulgence to those who will recite these prayers on Sunday.

From this point began a walk of nine miles, ascending to the loftiest summit in the vicinity of Algiers. The route was by an old and now disused Arab road.

After we had been walking about three-quarters of an hour, absorbed in the enchanting prospects visible on every side, a formidable voice was heard demanding in the French language where we were going. It came from the mouth of a Moor of most distinguished appearance, apparently sixty-five years of age, who stood in front of a fine old moorish mansion. Our guide informed him that we were ascending to the observatory. He responded: "I have bought the property and broken up the road. You must go back." Our courier, perceiving from the excellence of his French that he was an educated man, began to use blandishments, informed him that we were Americans, would not have presumed to trespass upon his property, and supposed that the road was open, whereupon his bronze features relaxed into a smile that lighted up his countenance like warm sunshine on a wintry day. He allowed us to pass, taking great pains to send us by a path which led us as far as possible from his house. On reaching an elevated point, at some distance, we were able to see the roof of the extensive structure, and the indications, drawn from the decoration of his person and the solidity of the exterior of the edifice, of the elegance within, were strengthened.

Turning aside and traversing the route we reached the famous, or infamous, point of observation whence in old times the piratical Algerians scrutinized the sea for their prey—merchant vessels peacefully traversing the Mediterranean. Nor were those times so very long since. Less than a hundred years ago Algiers was the terror of the civilized world. European powers obeyed the orders of the Dey, who exacted annual tributes from all consuls, and, whenever he needed money, declared war on some commercial nation. Spain, Holland, Venice, Denmark, Portugal, and Naples were obliged to purchase peace, and even our own country, in 1795, had to do the same, at a cost of seven hundred and twenty-one thousand dollars, and the further agreement to pay a tribute annually of twenty-two thousand dollars, besides the annual gifts of the consuls.

Immediately after the Revolution Algiers declared war on the United States. In a few years it captured thirteen prizes and made slaves of more than a hundred American citizens. It was after this that the great price just mentioned was paid, partly as a ransom for these captives and partly in presents. In 1812 it declared war against the United States, and began to capture vessels, when the President begged the Dey to negotiate another ransom. He refused, affirming that "he considered American slaves as beyond price." In May, 1815, the United States sent a squadron to Algiers to demand a modification of all treaties. Captains Decatur and Bainbridge happened to arrive when the Algerian vessels were away, and secured what was demanded. A couple of years later Great Britain compelled the Dey to abolish Christian slavery forever, to liberate all slaves then in his dominion, and to pay back all money received by him for the redemption of slaves, the result of which was the liberation of three thousand and three European Christians. But the old spirit was there, and not till the French conquered Algiers, in which they did not succeed until after long struggles, was this organized piracy brought to an end.

Here we were in sight of the port whence they sailed, and of the estates built by the produce of their piracy. From this elevated view-point they could see more than sixty miles, and with their trained eyes probably eighty. Their faster cruisers were always in readiness, and woe to the unsuspecting merchant vessel that was becalmed upon the Mediterranean off Algiers, where expert rowers, in the darkness of the night, could sail forth, plunder, kill or enslave.

The Observatory occupies a still more commanding site. The buildings are not completed, but are being constructed by the French with their usual regard to the needs of science. It is said that no observatory in the world is more favorably situated, being a thousand feet above the level of the sea.

We continued still higher to Bon-Zarea. This is a small European village, but the native village, about two-thirds of a mile to the left, was the object of interest to us. There, situated in inclosures of prickly pears of great size, are several "koubbas" (tombs of saints), the most noted of which is that of *Sidi Naaman*, of alleged miraculous powers. This place is distinguished for dwarf-palms of such extraordinary height as to make them a difficult problem to botanists—like some of the dwarf trees of our own country, which occasionally, from causes which cannot be ascertained, shoot up to the full size. The apex of the elevation is occupied by an Arab cemetery. The stones, masonry and monuments almost hidden beneath old trees, vines, and shrubs, present a picture of crystallized antiquity, the whole surrounded by as sparkling a scene as this mundane sphere can exhibit.

Thence in a walk of six miles we returned by a longer but level winding road to the suburb of *Bab-el-Oued*. The French Alpine Club had shortened our journey by constructing a steep but not difficult foot-path down the mountain side.

Struck with the beards worn by the priests whom we saw in the Roman Catholic churches, streets, and funeral processions, we inquired and found that as among Arabs the beard is the sign of manhood (the Arab swearing by the beard), the Roman Catholic Church compels its priests in Africa to wear beards. If they are transferred from France to Algiers, they must not shave;

they return permanently to France, they just do so. Noticing years ago in the paintings of bishops and priests in the galleries of Europe that they were often represented with beards, I asked a Roman Catholic priest occupying a conspicuous position in the United States how the requirement that priests should wear shaven faces, originated. He frankly replied that he could not state; that some claimed that it was an order issued by a pope who could not raise a beard. Be that as it may, the rule is relaxed by dispensation in special cases, and by wholesale where the Church can gain by it.

One of the ancient fortifications now commanding the town was built by the Moors on the spot where Charles V. had his camp during his unsuccessful assault upon Algiers. Here the French general received the capitulation of the city. Many are the traditions exhibiting the blood-thirsty spirit of those despotic rulers. Once the day returned, I looked at the wall where executions took place, and saying, "That wall is hungry," ordered that every prisoner except such as he chose to favor should be executed or his amusement the next morning.

The Jews are very powerful in Algeria, both in Oran and Algiers. They own the best building sites and buildings, keep the largest shops and stores, and make the great bulk of the population tributary to them. In Oran the Moors hate them so that, if the French troops were withdrawn, they would probably make short work with them. Many are men of the greatest financial and general ability, and not a few of high character.

I have already spoken of the magnificent villas purchased from the Moors or erected in the Moorish style by foreigners who escape the rigors of severe climes by spending the winters in Algiers. Among these one of the most beautiful is that occupied by Sir Peter Coates, a name known over the world, and especially in the United States, for almost every spool of thread bears it. To Sir Peter I had a letter of introduction from his old and dear friend, Dr. William M. Taylor, of the Brooklyn Tabernacle. On presenting it I was received as though a relative of the family, and every possible courtesy exhibited. It was not the privilege of seeing the interior of so fine a residence, nor of gazing upon a prospect of surpassing loveliness, nor of witnessing the perfection of detail and the happy combination of beauty and utility in all the arrangements, nor the luxuriant growth of vegetation of nature left to itself, or where its profusion is trained and pruned by art, that my most highly estimated—one need not now leave the United States to enjoy these things—but it was the reception of such honest, downright, bounteous, Scotch, Christian hospitality. Sir Peter is just past his eightieth year, but his eye is not dim, and his natural force is not materially abated. At his table I met Dr. Simpson, who was a delegate to the Evangelical Alliance when it assembled in the city of New York. He spoke of many whom he then met, some still living, and others deceased, paid a tribute to the spontaneous and affluent genius of Beecher, deploring the shadows which gathered about him toward the last, the classic eloquence and scholarship of Rogers, and vigor and fearlessness of Crosby, and asked after many of whom the answer had to be—"Passed away."

Sir Peter's residence is at Paisley, Scotland, where his great works are, but at Paxtucket, R. I., the house employs thousands of workmen. The entire establishments give occupation to about ten thousand persons. Sir Peter is a Pres-

byterian, and has built a church not far from his grounds. Dr. Simpson was ministering for the winter. I learned from the latter that Sir Peter's munificence in the support of education, philanthropy, and public welfare, led to his being knighted by the Queen a few years ago. The conversation of our venerable but sprightly host and his old friend and winter pastor, rendered vivacious by the younger members of the family and visitors, had upon the travelers, who sat at his table during the long winter (summer) evening, an effect which deposited in the memory a permanent sense of delight.

J. M. B.

Extracts from the Memoranda and Letters of Ann Watkins.

(Continued from page 395.)

The foundation of all true religion is the work of the Spirit of God in the human heart. He strikes at the root of all sins, shews unto man his thought, teaches him his sinful and undone condition by nature, and the need he has of redeeming grace. Brought to see his helpless and ruined condition, his spiritual eye is opened to behold the Lamb of God which taketh away the sin of the world. The condemnation for sin is heavy, and he is bowed under the weight of the Lord's judgements. In this state of weakness and humiliation he is led to abhor sin and to cleave with trembling to the ransom offered him. Light dawns upon his soul as the dawning of the morning. Light is brought forth and the King's highway is opened before through the midst of the path of judgment. If he be a wise son he moves onward under the teaching and leadings of his Heavenly Guide; and faith, that heavenly gift, that precious treasure, is begotten in his heart, so that in humble confidence he receives the lesson, "In Me is thy strength." Step by step he is led onward, reproved, encouraged, counselled, and instructed. The light of the moon gives place to the light of the sun, and the light of the sun becomes as the light of seven days. He finds in his Saviour a Healer of breaches, and a Restorer of paths to walk in.

Who can fathom the redeeming

Act of Universal Love?

Human thought, though ever teeming,

Yet would insufficient prove.

We hold this truth in a mystery, whilst we have the indubitable evidence by and through the faith imparted to us. According to our measure of this precious gift we feel a unity with all the living in the Church of Christ. By the same holy help, for which we wait and watch with all perseverance, we are taught to sympathize with the visited and the afflicted, and true prayer not unfrequently arises in our hearts for those that are disobedient and out of the way. We are often brought low, but with patience we desire to cleave still closer to the dear Redeemer, conscious that such dispensations are needful for our discipline, to whatever end they may refer. "When He hath tried me He shall bring me forth as gold." For I am persuaded that neither heights, nor depths, nor angels, nor principalities, nor powers, nor things present, nor things to come, shall be able to separate me from the love of God, which is in Christ Jesus our Lord; and that he is able to keep that which I have committed unto Him against that day, as into the hands of a faithful Creator.

My father's death was an event of deep sorrow to us all. I felt it deeply; a shade appeared to be cast over all my earthly hopes, my spirit sank within me, and I abandoned myself to a state bordering on despair; I did not, however, quite let

go the hold I felt of the mercy of God in Christ Jesus but my state was comparable to a bark tossed on the sea of time. But how often are the severest trials designed as blessings! I had leaned too much on that arm which no longer could protect; I had sheltered myself under that wing which no longer could befriend; and I felt that my only friend was in God. My relatives were kind to me, and whilst on a visit to them, though clinging to some of the tenets of my profession, I entered a little into their gay pursuits, but the Eye of everlasting Love was upon me, so that for some time I labored as between two opinions. He who had led me out and instructed me was now pleased to visit me more powerfully in order to bring me more fully off from the spirit of this world and its vain allurements, and so attractive was the messenger of mercy that my heart and soul were often filled with awe and reverence, and I felt compelled, as it were, at seasons to bow to the gracious visitations of the Holy Spirit.

I marvel at the forbearance and goodness of God towards fallen man. He follows through a course of weakness, and when the convictions of his spirit are yielded to, the evil tendencies of our nature give way, and his life and power are raised in us.

I was now taught that a knowledge of the Holy Scriptures and a being built up in a profession, or form of Godliness, would avail nothing in the day of Christ. I had been earnest in the study of the sacred record, had read and considered the lives and actions of good men, had made myself acquainted with the doctrines and practices of our religious Society, had embraced them as my own, and was in the habit of strenuously defending them; but with all this, I felt an aching void within my heart, which led me almost to despair. Is there no hope for me? I would exclaim. Is there no God to defend my cause? Oh, that I were as nothing, and had never seen light! It pleased Infinite Wisdom thus to deal with me and eventually to break the rock in pieces. Then were my tears (literally) my meat day and night. The anguish of my soul and the agony of my heart is more than human language can describe. I thought I was destined to eternal vengeance, the object of Almighty wrath. I tried to read my Bible, but could not; I sought comfort on every hand, but in vain; until at length the dawn of the morning was seen. I was brought to the feet of my Saviour, made willing to receive Him into my heart, and to take up my cross and follow Him according to his own declaration, blessed language, which was opened instructively to my spiritual ear, "If any man will come after Me, let him deny himself, and take up his daily cross, and follow Me." I was taught by my unerring Guide the precepts of my every-day life. I found that there were many things to be put away, much to overcome, which can only be done through the aid of his Holy Spirit; that the work was not mine but his, and that only as I closed in with me and followed the convictions of heavenly love, and only so far could I availingly contend with the world, the flesh and the devil; that, in order to this end, I had need of the waiting state, of a dwelling inward with God, that my help, my strength, my ability, might be availingly from Him alone. The tendencies of the natural mind are very strong and would interfere with this work of the Spirit, but as there is a looking to Jesus in his inward and spiritual appearance, so will He be found to be strength in weakness, riches in poverty, and a very present help in the hour of need.

I believe I must mention one or two incidents which very much strengthened my best interests.

In a sen of trouble, both inwardly and outwardly, I felt as one that had no helper, when a woman Friend came to our town to pay family visits. I had a reverent regard for the ministry, believing that in it there was an immediate communication between the soul and her Maker; it was enough for my poor trired mind that my state was open to the great Searcher of hearts, and I could not endure the thought of its being laid open to a fellow mortal. The sense of anguish so increased upon me that it was almost more than I could bear. Whilst I was passing through this trired situation, intelligence was conveyed to me that the Friend was taken ill, and that her visits were suspended for the present. During this interval, one night as I was tossed in spirit, I was inwardly arrested by a calming influence, and a ray of Divine Light shone round about me. My mind immediately reverted to the visit of the Friend, and I involuntarily enquired, "Comest thou peaceably?" The answer was, "Peaceably; and I soon after fell asleep. The desire arose to see the Friend, and information was given that she would come and breakfast with us. After breakfast, the Scriptures were read as usual, and my step-mother and myself were left alone with the Friend. Mark my astonishment when she addressed me at considerable length, and with a pertinency and clearness that I could not mistake. Inclining to a married life, when she ceased I said in my heart, "Thou hath satisfied me on all points but one"; and as if she immediately recognized the question (although not a word passed between us), she addressed me in the following significant language: "He setteth the solitary in families, for the eye of the Lord is upon them that fear Him, upon them that hope in His mercy." Thus closed this remarkable interview, and my mind received a stay not to be forgotten.

I was [during this part of my experience] often looking for something outward to answer the inward witness. I once attended a public meeting, under feelings of an acute character, and was very much struck with the way in which the speaker was led. Instead of addressing the assembly in general terms, he made use of the singular number, and spoke very aptly to my condition; but perhaps I should not have so received it, believing that God hath fashioned our hearts alike, and that the bread of His table is wholesome and salutary for the many, or for the few, if the circumstances in which I was placed, and upon which I not infrequently dwell, had not brought home the address to me in particular. "Are thy parents gone to heaven which in faith thou verily believest they are," &c.

I scarcely need say that I rejoiced in spirit, and wondered at the marvellous dealings of my Heavenly Father with me.

(To be continued.)

WORDS written are judged by the eye, Words spoken are judged by the ear. The eye has only the word itself to judge from. The ear has the tone of voice as a more important element of judgment than even the word itself. As a means of influencing the reason, the written word has its advantages. As a means of swaying the feelings, it is the spoken word that has chief power. In the ordinary intercourse of life it is not so much what is said, as how it is said, that settles the question of what is meant by the speaker. The slightest difference in tone may make the greatest difference in meaning. And the only way for us to have the right tone in our voices, is to have the right feeling back of the tone.

THE PHILISTINES.

BY MARGARET E. SANGSTER.

Turning the leaves of the Bible,
And walking in Canaan's land,
In the days of the olden story,
The days of the Lord's right hand,
We find how the chosen people,
By the Philistines girt around,
Were now in furious battle,
And now as captives bound.

And again, in sinful langour
To the Philistines lent an ear;
And bowed in the groves of Baal,—
To Asarath bent in prayer,
Forgetting the great Jehovah,
Who out of Egypt's coast;—
With arm that was strong and mighty,
Forth brought the ransomed host.

Turning the Bible pages,—
With something like disdain
We cry, "How weak these Hebrews,
And the thoughts of their hearts how vain!
How little they knew of loving,
Oh! how faint their trust in God!
No wonder He smote their folly,
The Philistines his rod."

But softly Conscience whispers,
As alone we sit and muse:
"Have ye never chosen the evil,
When the good was yours to choose?
Have ye never stood and listened
To the charm of the tempter's call?
Have ye never yielded your freedom,
To be of sin the thrall?"

And lo! as she speaks, the blushes
Come hot to our cheeks, and fast;
For oh! the shame of the present,
Oh! the mist of the past.
And "The Philistines are upon us!"
How often must we cry,
When not our words, but our actions,
Our blessed Lord deny.

Turning the leaves of the Bible,
We take ourselves to prayer!
There is peace at the throne of mercy,
There are strength and safety there.
No other king can help us,
But the King whose arm is right hand,
From the Philistines defended,
His people in Canaan's land.

LIVE IT DOWN.

"Has your life a bitter sorrow?
Live it down.
Think about a bright to-morrow,
Live it down.
You will find it never pays
Just to sit, wet-eyed, and gaze
On the grave of vanished days;
Live it down.

"Is disgrace your galling burden?
Live it down.
You can win a brave heart's regard;
Live it down.
Make your life so free of blame,
That the luster of your fame
Shall hide all the olden shame;
Live it down.

"Has your heart a secret trouble?
Live it down.
Useless griefs will make it double,
Live it down.
Do not water it with tears—
Do not feed it with your fears—
Do not nurse it through the years—
Live it down.

"Have you made some awful error?
Live it down.
Do not hide your face in terror;
Live it down.
Look the world square in the eye;
Go ahead as one who tries.
To be honored, ere he dies;
Live it down.

SELECTED.

THANKSGIVING.

BY ELLA CUMMINS HATCH.

For barn and store-house filled with garnered grain;
For flocks that crowd the meadow and the plain;
For blessing us in basket and in store,
For all these mercies, and for how much more,
We thank Thee, Lord.

For tender hearts to feel for other's woes;
For all the peace and joy Thy love bestows;
For sympathy to help the fallen rise;
For faith that ever points to brighter skies;
We thank Thee, Lord.

For lonely griefs with which our hearts are stirred;
For days of waiting, and for hopes deferred;
For fruits that turned to ashes at our lips;
For stars that rose to darken in eclipse;
We thank Thee, Lord.

For sending us Thine only Son to save
A ruined race from death beyond the grave;
For strength to gladly work till life be o'er,
When standing side by side on yon bright shore,
We'll thank Thee, Lord.

—Episcopal Recorder.

FOR "THE FRIEND."

Count Tolstoi.

"When I read," says W. D. Howells, "that Count Leon Tolstoi was born on the 28th of August, 1828, in Yasnyaya Polyana, a village near Inla, in the government of Inla, I have a sense of lunar remoteness in him. It is as if these geographical expressions were descriptive of localities in the ungazetted regions of the moon, and yet this far-fetched Russian nobleman is precisely the human being with whom at this moment I find myself in the greatest intimacy, not because I know him, but because I know myself through him; because he has written more faithfully of the life common to all men, the universal life which is the most personal life, than any other author whom I have read."

Briefly, we may trace Count Tolstoi's as follows: Born of a noble family, he early evinced remarkable powers of mind, and thoughtfulness on the serious problems of life.

After studying Oriental languages and law at the University of Kazan, he entered the army and served during the Crimean war. Returning from the siege of Sebastopol thoroughly sickened with the horrors of war, he engaged in literary pursuits amid the dissipated society of St. Petersburg.

Here were begun his series of works that were translated into every European language, and established his reputation as one of the leading *literati* of the age.

Flattered and fawned upon by society, prosperous, and blessed with a happy domestic life, he might now have been considered a successful man in every worldly sense; but the Master had other designs for him, and was leading him into paths that he had not known.

Concerning this part of his life, he writes: "In order to obtain the fame and money for which I wrote, I was obliged to hide what was good, and how down before what was evil. How often while writing have I outgelled my brains to conceal under the mask of pleasantry or indifference those yearnings for something better which formed the real problem of my life. I had moments of perplexity, of a stoppage, as it were, of life, as if I did not know how I was to live, what I was to do. During their continuance, the same questions always presented themselves to me: why? and what after? what is life?"

"It was long before I could believe that

human learning had no clear answer whatever to these questions."

He turned to the earnest study of science and the ancient philosophies, and finally in despair thought of suicide, and this he was prevented from only by the thought that there might yet be some clue to the mystery of life that he had not yet discovered.

But He who has promised that none of the wrestling ones shall seek his face in vain, was at last pleased to manifest himself to him, and grant him an increase of that faith which was the keynote of the higher life he sought.

He was led away from the hollow life of the nobility, and joined the orthodox Greek Church. "Then," he writes, "I began to study the life of the (common) people, and I became convinced that a true faith was among them, that their faith was to them a necessary thing, and alone gave them a meaning in life, and a possibility of living."

Returning from St. Petersburg to his country estates, he has since lived the life of lowly usefulness, which he believes the true Christian life.

His time is taken up in teaching the peasants in their schools, in writing for the education and amelioration of the people, in spending and being spent in every good work—not omitting, however, to labor with his own hands at the trade of shoemaking, in accordance with his theory that manual labor is the duty of all. Who can say that from the nobleman's humble life of later years has not spread a wider influence than from his more brilliant work of twenty years ago?

"His conviction is," says a prominent writer, "that Jesus Christ came into the world to teach men how to live in it; and that he meant literally what he said; that he forbade us luxury, war, litigation and hypocrisy. It is a sorrowful comment on our Christianity that this frank acceptance of Christ's message seems eccentric and even mad to the world. We have come to think that the right will accomplish itself spectacularly, splendidly; but Tolstoi makes us know that it can never do so. He teaches such of us as will hear him that the right is the sum of each man's poor little personal effort to do right, and that the success of this effort means daily, hourly, self-renunciation, self-abasement, the sinking of one's pride in absolute squalor before duty. This is not pleasant, the heroic ideal of righteousness is more picturesque, more attractive, but is not the truth?"

Speaking of Tolstoi's views as applied to practical life, a current magazine says, "they have been tried by the Quakers and the Moravians, in whom they produced a high type of rather colorless and unpicturesque goodness. If these sects are now evanescent, the world is undoubtedly better for their past existence."

His views on war, oaths, and many other points certainly bear a close analogy to our own, and a study of his character cannot but induce the belief that the same Spirit has led him to their adoption, which guided our predecessors. May we not desire that a greater measure of this may lead him to understand the "way more perfectly," and lead out of the literalism which still characterizes some of his beliefs; while we honor the courage with which he has been true to his convictions, an example we may well emulate.

A. E. M.

WHEREVER the love of Truth prevails, it opens our hearts in a degree of its own nature towards one another.—*Lydia Lancaster.*

FOR "THE FRIEND."

Crucified with Christ.

Christ's body of flesh was crucified for us, on the cross, that we might live in the spirit but be crucified in the flesh. He bore the cross for us, and we must have our fleshly nature crucified by bearing the cross for Him. Paul, who had been at one time in the persecuting and fleshly nature, says, "I am crucified with Christ, nevertheless I live;" but he had first died daily to the fleshly nature, and then he could live spiritually, and say, "the life that I now live, though yet in the flesh, 'I live by the faith of the Son of God, who loved me, and gave himself for me,' that I no longer should live after the gratification of the fleshly nature, but after the life of Him who gave his life for me.

For if we live after the gratifications of the fleshly nature, which is enmity against God and godliness, we keep that fleshly nature alive which ought to be crucified; but if we, through the assistance of Christ's spirit, do mortify or crucify the evil deeds of the body of flesh, we shall live spiritually. Now the words *mortify or crucify*, if I understand them, mean a slow and gradual death, like Paul meant when he said, "I die daily," but if we are crucified with Christ, as Paul says he was, we grow in grace, and in the knowledge of Him who was crucified on the cross, that we, through his death, might live both now and forever—the body of death being crucified and out of the way. But the death of the cross was an agonizing one, and if we would live with Him we must also suffer with Him: not only have the fleshly nature crucified in us, but suffer reproach and scorn like He did, and be willing to go down with Him in baptism and death; that like as He was raised from the dead by the glory of the Father, we also might walk with Him in newness of life. So let us, as the apostle says, lay aside every carnal weight and every besetting sin—for I believe we all have besetting sins or hindering weights, which must be laid aside or crucified on the cross before we can run the race that is set before us, so as to finish our course with joy.

But we must not look too much outward for help, but to Jesus, who was the author of our faith, that He might be the finisher of it also, who for the joy that was set before Him endured the cross and the contradiction of sinners. So let us not become weary or faint in our minds, for whom the Lord loveth He chasteneth. But we must abide the day of his coming, when He comes as a refiner and crucifier; for all the ferocious, beastly animal nature must be crucified—for "no lion shall be there, nor any ravenous beast shall go up thereon. It shall not be found there." Because all the ravenous, beastly nature that destroyed the innocent life of the Lamb, must be crucified upon the cross and taken out of the way. Then the ransomed of the Lord can return to Zion through this high and holy way, for we all have like sheep gone astray. But if we sin wilfully after we have received the knowledge of the truth, there remains no more sacrifice for sins; and the death and sufferings of Christ will be in vain, as far as we are concerned. But we have need of patience, that after we have done the will of God we might receive the promise: for the just shall live by faith; and if any man draw back, my soul shall have no pleasure in him.

While I thus write, I remember with true sympathy such as have had a true zeal for God and have run well for a time, but have suffered their own wills and attainments to lead them

forward ahead of their true Guide, and thus made shipwreck of faith and a good conscience without seeming to know it. The Jews crucified Christ outwardly, and we may crucify Him to ourselves afresh, and by denying Him to be the Life and Light of men, may substitute a human life and light to fill the lack of the Divine; and thus in our mock worship and professed devotion, put Him to open shame. So we must do his will and not our own, or we shall crucify the Divine life in us, and still go on in our own strength and call for mercy. But it is not every one that saith unto Him, "Lord, Lord," that shall enter into the kingdom of heaven, but he that doeth the will of God and not his own. For the foolish virgins could after their lamps had gone out, go boldly forward, after the door was shut, saying, "Lord, Lord, open to us;" but the answer was, "I know you not." So if we want an entrance to the heavenly Kingdom we must keep our lamps trimmed and burning to the end, or until the old man is crucified with Christ and the body of sin destroyed, that we henceforth should not serve sin. For the lust of the flesh, the lust of the eyes, and the pride of life would be taken out of the way, or nailed to the cross. But Paul sums up the whole matter where he says, "they that are Christ's have crucified the flesh with the affections and lusts." So he says, "God forbid that I should glory, save in the cross of our Lord Jesus Christ, by whom the world is crucified unto me, and I unto the world." He knew that he had been crucified with Christ, and that he was a new creature—the old persecuting spirit had passed away, and all things had become new, and all things of God. And if we know these things by experience, like he did, happy are we if we do them. For "to him that knoweth to do good and doeth it not, to him it is sin." Brethren, the time is short and eternity long. D. H.

DELEIN, IND., Sixth Month 4th, 1889.

Sewing-machines.—Whether or not the invention of the sewing-machine has really benefited woman is sometimes doubted. That it has been and is a great boon to many women is certainly true. But it has multiplied the demand on feminine industry indefinitely. Where once women were content with a plain hem on a garment, now they must have ruffles and puffs, and insertings and tucks, until not only is the seamstress oppressed with the toil, but the laundress as well.

In the hands of a really sensible woman, the sewing-machine is an invaluable assistant. It does her work with more ease and rapidity, possibly with greater perfection, than she can do it by hand. In an hour or two with it she can make a garment that without it would occupy her an entire day, and if she makes the garment as plainly and simply with the machine as she would without it, she has saved time that may be invested in intellectual and social culture, in studies in literature and art, in enterprises of benevolence and charity.

The great problem in these days is to combine comfort with simplicity. We are in great danger of consuming all our vigor and vitality and time and resources of every description in mere living, and that not always of the noblest kind. If we can make sewing-machines and all other helps of that kind *helps*, and not occasions of increased labor; servants, not masters; we shall attain a result extremely desirable, but difficult of realization.—*Selected.*

FOR "THE FRIEND."

A Visit to Mineral Hill, &c.

Having accepted the kind offer of a friend to take me to Mineral Hill, one of the serpentine deposits in Delaware County, on the west side of Tidley Creek, near Media, I took the cars to that place on the afternoon of Fifth Month 4th, and was joined at the depot by my friend. After a short drive, we found ourselves at a quarry of serpentine which had been opened in the side of the hill. The rock is rather soft in its texture; and advantage is taken of this peculiarity to cut by means of a strong, circular saw narrow and deep grooves in the exposed surface of the rock, so that the stone can be detached in blocks of a uniform thickness, equal to the distance between the adjoining grooves. On some of the loose masses of stone, and on the numerous fragments lying around, the size of the saw-curfs showed that the stone readily yielded to the steel teeth of the circular saw.

Most of the stone of this quarry was of a pale shade of yellowish green color; but in some parts of it were to be found specimens of a much darker hue. Disseminated through the serpentine were to be seen dark steel-colored crystals with a metallic lustre, which I supposed to be a compound of the metals chrome and iron, which is frequently associated with serpentine. Indeed, it is from the serpentine ridges that our supply of chrome is chiefly, if not altogether, obtained. In them it is often found in veins in a massive form.

At two places in this hill veins of felspar had been worked to a small extent. The first one of these which we visited had furnished specimens of the variety called "Moonstone," in which an iridescent play of colors is visible when the light falls on it at certain angles. We examined a pile of the refuse material, without securing any good specimens; but I was interested in noticing the numerous layers of the felspar, with sheets of quartz between them. Some of the pieces we picked up had sixteen such layers in the space of an inch in thickness.

At the second felspar opening, we obtained specimens of green-colored felspar.

Some of the felspar from this hill had been shipped to the potteries at Trenton, but was found to contain too much iron to be adapted for use there; and the felspar veins appear to have lain for some time unworked.

The botanists about the serpentine quarry were gay with flowers. I was pleased again to meet with patches of the large flowered Chickweed (*Cerastium oblongifolium*), which grows abundantly on the serpentine rocks, but is rarely met with elsewhere in this part of the country. In striking contrast with these were the flame-colored flowers of the Mountain Pink (*Phlox subulata*), a plant whose stems clothed with small awl-shaped leaves, creep over the surface of the ground, sending up numerous short branches, each crowned with a cluster of bright, pink flowers, with a dark-purple center. We found they had attracted the notice of some of the inmates of the Asylum for Feeble-Minded Persons, located near by, for several of them with whom we met had gathered bunches of this charming little plant.

Several weeks after the visit above described, an opportunity presented for visiting the serpentine quarries known as the Brinton quarries, in Chester Co., about 3 miles south of West Chester. A large amount of building stone has been shipped from here. When first quarried, the stone is soft and easily worked, and before shipment is dressed

with the hammer, and roughly squared, so as to be ready for laying in walls. The rock near the surface is much intersected by cleavage planes, so that it can be mostly detached without blasting. But here, as elsewhere, in serpentine deposits, the rock becomes more solid in the deeper parts of the quarry. The quarymen stated that the stone hardened as it dried by exposure to the air. Whether this is a mechanical effect of the evaporation of the moisture or whether any chemical change takes place in its composition, is a question I am unable to answer.

Serpentine is composed of silica and magnesia in nearly equal parts, combined with a smaller portion of water. It is supposed by most geologists to have been formed from other rocks by the action of percolating waters, which held certain salts in solution. The abundance of magnesia which it contains furnishes an easy explanation for the presence of the carbonate of magnesia which generally accompanies it. At Brinton's quarry we found this in a massive form, in small pieces, of soft, white material. Its absorbent power is so great, that when applied to the lips or tongue, it absorbs moisture so rapidly as to adhere to the surface touched. We also found it in the form of delicate needle-shaped crystals, radiating from a common center, arranged in groups on flat surfaces of the serpentine.

This quarry also furnishes specimens of beautifully crystallized green talc, in flat plates like mica; but the mineral is much softer, with a soapy or greasy feeling. We observed also considerable quantities of a black mica, partially decomposed, so that it was not easy to obtain desirable specimens.

We found here what I had often seen in other serpentine deposits, plates of silica, which had been formed in the mass of serpentine, and from which the surrounding serpentine had been washed away by the weather, leaving the silica in the form of cellular quartz.

Several of the plants that in Chester County are common on the serpentine ridges, were noticed as we crossed the fields near the quarries, such as the long leaved Chickweed and the Mountain Pink. I was pleased also to meet with an old acquaintance in a small kind of Milkweed, which grows in clusters with very narrow and short leaves. The flowers (which were not yet expanded), are of a greenish-white color, tinged with purple. It is known to botanists as *Aselepius verticillata*.

J. W.

Natural History, Science, &c.

The School of Forestry at Dehra Doon, India.—In a long valley of the same name, which lies at the foot of the Himalaya range, between the great rivers of Irrama and Ganges, lies the town of Dehra Doon. It is rather a straggling town, like most similar Indian stations, but centrally situated and surrounded by gardens is found the Forest School. The school was first started in 1878, by the exertions of the Inspector General of Forests. At present the Director is assisted by a professor of forestry, and a professor of geology and chemistry, while other officers, attached to the school for the management of the adjacent forests, teach mathematics, forest law, forest entomology and surveying.

Attached to the school is a well-equipped museum, containing a magnificent collection of accurately named Indian woods; an herbarium, a chemical laboratory, and a meteorological observatory, while the forests of three districts are attached to the school as a training ground,

in which the young students may learn, by personal and actual experience, the conduct of forest operations in the field.

The forests attached to the school circle consist of those of Dehra Doon, Saharanpore, and Jaunpur Forest Divisions. The two former contain chiefly forests of the Sál-tree (*Shorea robusta*), the chief gregarious tree of India, and the most valuable timber for building purposes after teak. They occupy respectively the northern and southern slopes of the Siwalik Range, and are carefully managed as training forests. The Dehra Doon forests had, till about some twenty years ago, been very badly treated, so that at present the older portion of the stock consists chiefly of trees which are crooked and unsound, the good and sound ones having previously been all cut out to provide sleepers for the railways.

The present working plan provides for a temporary rotation of twenty years, during which (1) all the old, unsound, crooked Sál-trees which can be cut without letting in too much light, are removed; and (2) all trees of the less valuable kinds that are not required for shade are cut away. These operations have now been carried on for a few years past with the most beneficial results, for the ground is being rapidly covered with good and straight saplings and coppice shoots of Sál. The forest operations, the selection of the trees to be cut, and their marking and enumeration, are all done by the students themselves, so that in this way they obtain a valuable amount of practical experience.—*Nature*.

A Triple Star.—Seeliger, of Munich, has recently published an interesting paper on the well-known triple star, Zeta Cancri. This consists of a close pair of stars about a second apart, each of about the fifth magnitude, accompanied by a third star of nearly the same size at a distance five or six times as great. The two stars of the close pair revolve right-handedly around their common center of gravity in about fifty-nine years, while the more distant star also moves around the pair in the same direction and at a rate which would take it completely round in about 700 years. More than twenty years ago Struve and other observers noted unmistakable irregularities in the motion of this third star; and Seeliger shows that they can be explained only by supposing that it has a dark companion, nearly as massive as itself, though invisible, and that the two revolve around their common center in about twenty years. The whole system is really a quadruple one, much like that of the well-known Epsilon Lyre, but one of the four stars that compose it is sensibly non-luminous. Readers will recall the companion of Sirius and the as yet undiscovered partner that is waltzing with Procyon and causing it to move in an orbit only to be explained by the existence of such an unseen associate.—*The Independent*.

Killing Birds by Electricity.—The Zoological Society of France has warned the French Government that a great ornithological calamity is impending. The Department of the Bouches du Rhone has hitherto been one of the chief landing-places for swallows coming from Africa. Engines for killing them, formed of wires connected with electrical batteries, have been laid in hundreds along the coast. When fatigued by their sea-flight, the birds perch on the wires and are struck dead. The bodies are then prepared for the milliner and thousands of them are shipped to Paris. This has been going on for some years, but this spring the swallows have

not landed on the low-lying coast, but have gone further west or east, and to other parts of Europe. There are places, says the Zoological Society's stationer, where once numerous they are not to be found, although there has been no falling off of quats and other flying insects on which they live.—*Nature*.

Items.

Animal Worship.—Zoolatry is one of the deeply rooted institutions in India. The Hindus believe that there are eighty-four lakhs of different species of animals through which any man may pass—even a flea may contain the soul of some person who was a sage or saint.

Among the jungle tribes tiger worship is common. A tiger may attack one in these tribes and he will make no resistance. He may carry away his children and he will not resist. So tigers live on the best and are only exterminated by foreigners, and the animal conquest in India is as far behind as the human. In many places women go to snake holes and place their offerings of milk and eggs with invocations and prayers.

The monkey is also a deity, inverting the order of modern development by natural selection. In India the monkey is the most sacred. He is a deity, and has departed from the nobility of his ancestor, and if he would get back into deity he must rise to the condition of the monkey—the monkey worship, like tiger worship, was afterward adopted by the Brahmins.

Some animals are worshipped for their usefulness. This applies especially to the cow among the Hindus. Great religious observances take place among the Hindus. One of the most remarkable is the feeling with regard to the cow. In Vedic times the *Gomedha*, or cow-sacrifice, was common. When a person died, a cow was killed to accompany him. The flesh of the cow was freely eaten.

It is present the idea of eating beef is so horrible to Hindus that some never mention the word in the vernacular, and frequently there have been serious riots on account of the slaughter of cows. Among the Sikhs it was considered a greater crime to kill a cow than to kill a daughter.

The cow, valuable for its milk, is the animal which receives the most worship in India. There is an annual ceremony in her honor. The prayer is sometimes offered: "O, mother, be gracious to us. Bless us with a rich harvest. Let our lands bring forth an increase. We are thy humble servants."

Every object that benefits the Hindu and helps to provide him with a livelihood becomes for the time being his most worshiped. On particular days the farmer prays to his plough, the fisher to his net, the writer addresses his pen, the banker his account books, the carpenter his tools, the woman her basket and other articles that assist her in her household labors. The Thugs, who murdered travellers in the name of the goddess Kall, worshipped the pickaxe which they carried for the purpose of killing their victims.—*Dr. Matchmore in The Presbyterian*.

Indians going with Shoes.—In a letter to the Secretary of the Interior, Indian Commissioner Oberly says:

"I desire to say that I am strongly opposed to taking Indians from their reservations for exhibition purposes.

"The effect of travelling all over the country, among all associating with the class of people usually attending shows, circuses, and exhibitions, attended by all the immoral and unchristian surroundings incident to such a life, is not only most demoralizing to the Indian, but it creates a roaming and unsettled disposition and educates him in a manner entirely foreign and antagonistic to the good and elevating ways of his noble forefathers. Government is well of the mind of all the good Christian people who are doing so much for the welfare and benefit of the Indian.

"In such associations and with such surroundings and influences, the Indian sees and learns all the bad, degrading, and immoral, and very little of the good and elevating ways of his noble forefathers. His interests—moral, Christian, and financial—would be much better subserved by remaining

upon his reservation and endeavoring to make a home for himself and family, and by sending his children to school and thereby preparing them for citizenship, and all the privileges, cares, and responsibilities incident thereto."

Amiah-Monnetto Conference.—At a Conference held in La Grange, Indiana, on the 10th of Fifth Month, "the danger of covetousness and other evils in connection with life insurance, along with the want of trust in God which it fosters, were presented in a way that showed the Conference to be positively opposed to life insurance. It was decided that it is advisable to guard against taking members of secret organizations into the church. It was advised that the brethren should not hold secular offices, for the reason that we are called to a higher calling. Only a few offices, such as Christians need—school-director or road-master should be held at all by the brethren."—*Herald of Truth*.

PRELID PORTER, of Yale, said, in substance, that the chief advantage of the college curriculum is, that it trains a young man to do what he ought to do, when he ought to do it, whether he wants to do it or not. Any course of training for a young person that fails to accomplish thus much, is part of a sadly imperfect system. There are few, if any children who do not need to be trained to apply themselves earnestly to occupations which they dislike.

THE FRIEND.

SEVENTH MONTH 20, 1889.

The *Christian Worker* of Chicago, which represents the views of the more progressive element in the Society of Friends in the Western States, in its issue for Fifth Month, 23d, had an article on the position of Philadelphia Yearly Meeting; in which its editor expresses the hope that the efforts being put forth by that body, through its committees, etc., may meet with success, and that "some hearts will catch the Divine fire, that conviction will come, and that Christ will be sought for salvation." In this hope we can all unite.

The *Worker* imagines a scene in which "forty or fifty bright, intelligent persons should rise up, and with tears and emotion express their desires to be saved;" and then at a meeting of these with "the committee and other workers at a chosen place, as they prayed and counselled together, peace should come to their souls, and they could rise and testify with full hearts, that their burden of sin was gone, and Christ was exceedingly precious to them." It thinks that if we do not witness such scenes "the fault will be with the church, and not with God."

The reading of the article above referred to conveys the impression that sensational scenes, such as he has imagined, are so associated in the mind of its writer with the work of Divine Grace, that he cannot fully appreciate the more quiet, but effectual work of the Spirit of Christ in convincing of sin and leading to patient submission to the refining operations of the baptism of Christ, unless it is accompanied with some such outward manifestations. But these outward manifestations are not a decisive proof of the inward work of Grace, from which they are supposed to proceed. They may arise, and we believe often, from nervous sympathy, and the excitement which skillful preachers are able to produce in a crowded assembly. They may pass away with the excitement, and leave the nominal convert no further advanced in his spiritual progress than he was before.

We have received from a correspondent in

Kansas a communication respecting this editorial. In the letter accompanying it, the writer says, "the concern under it all is, that Philadelphia Friends may continue to bear an unflinching testimony for the truth and right, and against error and wrong; and also to attend promptly and fully to every opening in the life, to extend the work of the Gospel at home and abroad."

The substance of the communication is as follows:

"Every tree is to be known by its fruit. Men do not gather grapes of thistles, nor fruits of brambles. No corrupt tree can bring forth good fruit, neither doth a good tree bring forth corrupt fruit." The tree and its fruit must be alike.

Such were the teachings of "Him who taught as never man taught, as one having authority, and not as the scribes."

"Whatsoever a man soweth that shall he also reap," was not spoken of grain and other seeds alone, but in illustration of agencies and influences which shape and develop individual character.

As we are met by thousands of persons now living who can and do witness that a wonderful change has been wrought in the Society of Friends within their recollection. Results can only come from causes. Seeds produce plants. Whatsoever a man, a community, or a religious society may sow, that is what will be gathered.

In the gathering period of the Society's formation, unmistakable evidences were given that the great Seed Sower had sowed the good seed abundantly in the hearts of many persons—some of one outward profession and some of another; the effect of which was that very soon there were gathered a great company of believers out of all orders and religions, but one of them was the common man; not a common body of divergent views and conflicting practices; but under the teaching of that anointing that taught the apostles they were in the unity of that faith once delivered to the saints, and in the bond of peace—having come to the True Teacher they all spoke the same thing—as did the Primitive Christians, all was by the same Spirit. They were brought together, not without preaching, but by the power of the quickening word; the blood of Christ being sprinkled upon their hearts.

Being thus brought out of and "off from" all forms of liturgy, they bore testimony against what were called the sacraments—namely, fasts and feasts, bread and wine, and water-baptism as an ordinance; against priests' and minister's wages, against the culture and practice of "all kinds" of music; against oaths and war, against the use of words expressive of false relations and flattering titles; against taking off the hat in honor of any potentate, king or court; against using the plural pronoun to refer to persons; against needless apparel. These and more, were testimonies that they were led to bear.

They asserted their unflinching belief in the universal light of Christ in every man sufficient for salvation, it followed faithfully; which doctrine has been styled the "root of the goody tree of doctrine," and of this doctrine the plain professions and practices which were peculiar to themselves, became rejected by others. Their experience led them in their religious assemblies to gather into solemn silence and reverential waiting for the anointing of the Holy Spirit, which alone was able to give them a good thought—a feeling of reverence and devotion for God, and a desire to be known for vocal utterance, without which they felt all speaking to be speaking into the air, and could neither edify the hearer nor glorify the great Head of his Church. They asserted it to be a duty to seek for Divine direction in their secular employments; in that connection many interesting incidents were experienced.

In support of the doctrines and testimonies thus promulgated by the early Friends they suffered much persecution in various ways; yet in the midst of all these sufferings and afflictions in patience and in meekness possessed they their sons, counting it all joy that they were found worthy to suffer such things for the sake of the meek and lowly One

As stated in the forepart of this article, a "great change" has come over the Society of Friends in

these our days. No one can deny that in truth—no partly—this is indeed the case. So true is it that in the present day many of the members, ministers and all, conform to the common customs of the world at large in the use of unscriptural language; just such language as early Friends renounced and set up a testimony against. The care of the early Friends against falling in with changing fashions of dress, and the use of ornamental ornaments appeared to be observed by many; but instead of the maxim of the worldly-minded devotee to the world's ways has been adopted in many parts of the Society, in practice, "As well be out of the world as to be out of the fashion." The changes made in religious meetings and in matters of faith and practice are equally noticeable, if not more so. New York Yearly has taken the name of "pastors" who are entirely supported, as are the ministers of denominations who do not hesitate to say they hire their ministers, to wit; by the members of their respective "charges," in money or its equivalent. Iowa Yearly has a much larger number of "supported" ministers, and all or nearly all of the other larger Yearly Meetings, have a greater or less number of "supported" pastors, and in many places there are *entirely supported pastors*. Many by reading and "special study" prepare their sermons "before hand." Quite a number of meetings are provided with organs for use in the worship commanded to be in spirit. The study of vocal and instrumental music has been given a place with the things useful and necessary. The central doctrine set up at the first has been set aside,—to wit, "In silence to wait for the anointing."

Philadelphia Yearly Meeting stands very much alone among the larger [Yearly Meetings] in a faithful support and defense of what may properly be called the *original doctrines, views, practices and testimonies* of Friends; and in extending from time to time a warning against the insidiousness of this modern movement. In a late number, the *Christian Worker* has been pleased to characterize these "originals" as *the Rubbish of Formalism and Superstition*. The *Christian Worker* must stand condemned for advocating a return to doctrines, views and practices out of which the Spirit led those whose name it claims to bear.

It was by giving heed to the finishing of the light of the 1st, and to the engraved word, that Friends were gathered to a peculiar people, zealous of the good works wrought in them by the Holy Spirit, and by which they were bound together in full fellowship; and it is that and that alone, that can now bring back true and abiding harmony and peace to our divided and scattered Society, and give it the exalted place it once occupied. *This* is that which *ought* to be a source of joy in all the borders of Society, and a peculiar people, joining in Heaven. We may remember from whence we have fallen, and return to our first love, &c., before our candlestick is removed out of his place, is the prayer of one who feels lowly.

SUMMARY OF EVENTS.

UNITED STATES.—The State Department has sent out circulars explaining the purpose by the Congress of the Three Americas, to be held in Washington next autumn. These circulars state, in substance, that "It is proposed by a Congress of Representatives of all the American Governments to improve commercial relations between the different countries, to establish a system of arbitration in international disputes, and to adopt a uniform monetary system. These are the leading subjects of the Convention, and will also, doubtless, be those that will develop the greatest amount of discussion."

General Crook, speaking of the outlook of the Sioux Convention, said recently they had been in the reservation for some time, and had secured nearly 2500 signatures, and only about 1500 of them were of the Indian race. Indians who have not yet signed, only a few hundred are reported hostile.

The population of the city of St. Paul, Minnesota, according to a directory census, is 193,374, a gain of 81,845 since the local census of 1875.

A despatch to the *Public Ledger* from Findley, Ohio, dated the 15th instant, states that the manager of the American Aluminum Company, Fred. J. Seymour,

died in that city on the 12th instant, and the secret of making aluminum died with him. He was the inventor of processes by which this valuable metal could be profitably extracted from common clay, and had put his inventions into practical use. A company had been formed and large quantities of the metal were extracted and sold at remunerative prices. Seymour's death was the result of a paralytic stroke, from which he never recovered consciousness, so that on his death he had no opportunity of revealing the all-important part of the process, which was known only to him.

On the 9th instant, heavy rains caused a flood at Johnstown, Fulton County, New York, and three large dams were swept away. Nine bridges were carried along by the torrent, and a number of people standing on one of them were thrown into the water. Four persons were drowned. Three factories and some other buildings were also destroyed.

On the night of the 11th instant, a cloud burst occurred on the Santa Fe Road, a few miles above Albuquerque, New Mexico, and all trains were delayed. The tracks for several miles were washed away, and two bridges are gone. Steel rails were twisted into all sorts of shapes. Just before the burst occurred a violent shower of rain in the mountains and rain descended in torrents.

Heavy rains on the morning of the 15th instant, did great damage to farm property in the Lebanon and Schuylkill valleys, in this State. At Avon, Myers-levon and Lehigh, the lower floors of a number of houses were flooded. Many fields were submerged, and crops which had been cut and left lying were washed away. Much damage was done in the northern portion of Lancaster County by storms on the two previous nights.

The death rate in New York City last week was 112, the heaviest for the year. The increase was in children under five years.

Deaths in this city last week numbered 607, an increase of 185 over the previous week, and of 158 over the corresponding period of last year. Of the whole number, 272 were under 1 year of age; 323 were males and 284 females; 128 died of cholera infantum; 52 of marasmus; 50 of consumption; 32 of disease of the liver; 28 of convulsions; 25 of inflammation of the stomach and bowels; 25 of inflammation of the brain; 20 of inanition; 16 of old age; 16 of debility; 13 of congestion of the brain; 12 of pneumonia; 11 of typhoid fever, and 10 of peritonitis.

Markets, &c.—U. S. 4½, 107; 4's, 128½; currency 65, 118 & 130.

Cotton was quiet but firm, at 11½ cts. per pound for middling uplands.

Feed.—Winter bran, choice \$13.50 & \$13.75; do, fair to good, \$12 & \$13.

Flour and Meal.—Western and Pennsylvania super, \$2.35 & \$2.80; do, do, extras, \$2.90 & \$3.25; No. 2 winter family, \$3.35 & \$3.75; Pennsylvania family, \$4.00 & \$4.25; Pennsylvania roller process, \$4.25 & \$4.75; Ohio, clear, \$4.25 & \$4.60; do, straight, \$4.65 & \$4.90; Louis and Southern, \$4.65 & \$4.90; do, do, straight, \$4.65 & \$4.90; winter patent flour to choice, \$5.00 & \$5.50; Minnesota, clear, \$5.50 & \$6.25; do, No. 2, straight, \$4.50 & \$5.00.

Grain.—No. 2 red wheat, 43 & 45 cts.

No. 2 mixed white, 42 & 44 cts.

No. 2 white oats, 32½ & 33 cts.

Beef cattle.—Extra, 4½ & 4½ cts; good, 4½ & 4½ cts; medium, 4 & 4 cts; common, 3½ & 3½ cts; fat cows, 2½ & 3 cts.

Sheep.—Extra, 5½ cts; good, 4½ & 5 cts; medium, 4 & 4 cts; common, 3 & 3½ cts; culls, 2 & 2½ cts.

Lambs, 4 & 7½ cts.

Hogs.—Good light western, 62 & 62 cts; heavy, 250 to 350 pounds, 6 & 6½ cts; extra heavy western sows, 250 pounds, 5½ cts.

George W. S. Parnell authorizes the announcement that the Irish party will immediately form a Tenant's Defence League for protection against the landlord syndicate. Conventions will be summoned throughout Ireland. It is reported that Glabstone and Morley have approved the Tenant's Defence League. The main object will be to raise a fund for the purpose of giving legal assistance to tenants against combining landlords, and not to divert rent from the proper channels.

The yield of gold in Quebec last during the past half year amounted to 300,000 ounces. This is an increase of 150,000 ounces over the production of the previous year.

The Portuguese Directors of the company whose

concession to build the Delagoa Bay Railway was cancelled by Portugal have formally protested to the Government against the cancellation of the concession. A general meeting of the parties interested in the road will be held in Lisbon shortly, at which the English shareholders will be present.

Thirty-seven more bodies have been taken from the coal pit at St. Etienne, in which an explosion occurred recently.

The Paris *Siecle* says the elections for members of the Chamber of Deputies will be held in Eighth Month instead of in Ninth Month, as previously announced.

Violent storms, accompanied by whirlwinds, prevailed throughout Austria-Hungary on the 15th inst. Heavy losses of life and property are reported. Many bridges were destroyed, and railway traffic is seriously interrupted.

The Government of Russia has totally suppressed the Lutheran Church in their domain. One half of the town of Bjarkent, Semiretchinsk, has been destroyed by an earthquake.

There is prospect of not a little trouble before the Nicaragua Canal Company. Costa Rica threatens an immediate invasion of Nicaragua, unless heavy indemnity be paid for carrying the canal in San Juan River for sixty miles along the Costa Rican boundary. This land claim by Costa Rica has once been decided by treaty to belong to Nicaragua, but this treaty will be violated. Menocal obtained from Costa Rica, only a few months ago, a concession to carry the canal along the river, but the new war party gained power and repudiated the agreement. Costa Rica has a much larger army than Nicaragua, and the troops have recently been equipped with the best guns from Europe. Managua is greatly excited, as troops have been massed on the Costa Rican frontier, and an immediate advance is feared.

RECEIPTS.

Received from MARY ANN HAINES, N. J., \$2, vol. 63; from Lydia T. King, Pa., \$8, being \$2 each for herself, and from Evans, Joseph E. Mickle, and Lydia K. Edge, vol. 63.

Remittances received after Third-day will not appear in the Receipts until the following week.

NOTICES.

BOARDING SCHOOL FOR INDIAN CHILDREN AT TENNESSEE.—A Friend and his wife wanted to take charge of a boarding institution and farm, as Superintendent and Matron.

Friends who may feel a call to this service, address Aaron P. Dewees, Chester, Penna.
Ephraim Smith, 1110 Pine Street, Phila.

WESTWOM BOARDING SCHOOL.—Friends wishing to enter their children for the Fall and Winter Term, commencing Ninth Month 3rd, 1889, will please make immediate application to

J. G. WILLIAMS, *Sup't.*
Westtown P. O., Penna.

WESTWOM BOARDING SCHOOL.—A statement of the Committee on Admissions will be held in the Committee-room, Fourth and Arch Sts., on Seventh-day the 27th inst., at 10 A. M.

J. W. BIDDLE, *Clerk.*

MARRIED, at Friends' Meeting-house, West Grove, Penna., on the 16th of Fifth Month, 1889, ALFRED H. MOON, of Fallsington, Bucks Co., Pa., to BELLAH T. EVANS, daughter of Owen and Lydia T. Evans, of West Grove, Chester Co., Pa.

DIED, in Philadelphia, Second Month 29th, 1889, "in resignation to the Divine Will," JOSEPH B. COOPER, in the 61st year of his age, a member of Newton, Particular and Haddonfield Monthly Meetings of Friends, of Camden Co., New Jersey.

—, at his residence, near Salem, Ohio, the 22nd of Fifth Month, 1889, JOHN FRENCH, a member of Salem Monthly Meeting of Friends, Ohio, aged 66 years, 8 months and 2 days. His patient and cheerful life was a long and a period of declining health, and his calm and peaceful close leaves to his bereaved family and friends the comforting assurance that through Divine love and mercy he has been safely gathered into everlasting rest and peace.

FOR "THE FRIEND."

Incidents and Reflections.—No. 181.

In a previous number of this series of articles, mention was made of a young man who was on trial before Judge Jeffreys, having repeated to him the warning given by our Saviour: "Judge not that ye be not judged; for with what judgment ye judge, ye shall be judged." Some notice of the history of Judge Jeffreys will show the appropriateness of this warning.

He was the descendant of a Welsh family of good repute, and was born in 1648. He studied law, and being a man of unusual talents, rapidly rose in his profession, and at the early age of 35 was made Chief Justice of England by Charles the Second, and two years afterwards became Lord Chancellor, under his successor, James the Second. His legal decisions, where no motives of personal or State policy interfered with his judgment, are quoted with respect; but he was always unscrupulous, and finally became notoriously corrupt, and attained to a "bad eminence" for haughtiness and brutality, and a determination to make every consideration of justice yield to the policy of the government, which has probably never been reached by any other British Judge.

Those who are familiar with the early history of the Society of Friends, and have read the records of their persecutions, know very well that they often received but little justice or law in the courts before which they were brought; that the Judges were exceedingly arbitrary in their conduct; that witnesses were browbeaten, and juries threatened if they hesitated to bring in such verdicts as the Judges wished. The life of George Jeffreys, and his proceedings on the bench, in cases with which Friends had no connection, show that such conduct was not unusual in those days. Indeed, the political animosities in the Seventeenth century were carried to a most unreasonable and even blood-thirsty degree of violence; and the effect of these was often increased by the hatred and intolerance growing out of differences in religious views. Some degree of allowance must therefore be made for Jeffreys by those who read the accounts of his proceedings, for there are few or none who are altogether unaffected by the feelings prevalent in the circle in which they move, yet after making all proper allowance, there remains such an amount of violence, brutality, cruelty and cor-

ruption attached to his name, as fully justify the appellation of *infamous*.

The Church of England at that time was very bitter towards dissenters, and a prosecution was instituted against the celebrated Non-Conformist preacher and writer, Richard Baxter, as being a seditious libeller of the Church of England bishops, for expounding some passages in the New Testament rather too strongly against the Roman religion. The spirit in which the trial before Jeffreys was conducted may be seen in the reply of the Judge to a request from Baxter for more time to prepare his defence.

"I will not give him a minute's more time to save his life. Yonder stands Oates in the pillory, and says he suffers for the truth; and so says Baxter; but if Baxter did but stand on the other side of the pillory with him, I would say, two of the greatest rogues and rascals in the kingdom stood there." When the trial came on, the Judge grossly abused the counsel for the prisoner, who endeavored to show that the offensive words did not refer to the English bishops; and when one of them was about to read some of the text to prove his position, the Judge exclaimed, "You shan't draw me into a conventicle with your annotations, nor your snivelling parson neither." When Baxter himself proposed to make some remarks, Jeffreys broke out, "Richard! Richard! dost thou think we'll hear thee poison the court? Richard, thou art an old fellow, an old knave; thou hast written books enough to load a cart. Hadst thou been whipt out of thy writing trade 40 years ago, it had been happy."

This is not an excessive specimen of the manner in which the proper functions of a Judge were often laid aside by this arbitrary man, who thus wielded the power placed in him to procure the conviction of those he disliked from the juries, to whom of right the decision belonged. Baxter was found guilty and sentenced to pay a fine of £500; but through the kindness of Lord Powis, his fine was remitted.

That which more than any other act of his life loaded George Jeffreys with popular odium, and has rendered his character a stench in the nostrils of subsequent generations, was his conduct in the trials of the unfortunate persons in the west of England who had sided with the Duke of Monmouth in his attempt to wrest the throne of England from his uncle, James the Second. The invasion of the Duke had been promptly put down, with much bloodshed and great cruelty; and many of those who had favored his cause had been arrested and imprisoned. To punish these, a special commission was issued by the Crown, at the head of which Jeffreys was placed. One of the first persons placed on trial was Lady Alice Lisle, who was charged with having fed and lodged two persons who had fled from the rebel army after the defeat at Marston Moor. In her defence she stated that she had no knowledge of whence the persons came, but had relieved their wants as an ordinary act of Christian charity. The jury hesitated, under the circumstances, to bring her in guilty of treason,

and Jeffreys was beside himself with fury. He stormed, cursed and swore, and so frightened one of the witnesses who was a Presbyterian, that he at last stood silent. "Was there ever such a villain on the face of the earth," exclaimed the Judge; "of all the witnesses that ever I met with, I never saw thy fellow. A Turk is a saint to such a fellow as this." No wonder the poor witness faltered out, "I cannot tell what to say, my lord!" With much hesitation, and after a vehement expostulation from Jeffreys, a verdict of guilty was extorted from the jury, and in a few days Lady Alice was beheaded.

There were many hundreds of prisoners, and to try them all would have been a very tedious affair, so many were induced to plead guilty in hope of pardon, which was held out to them, especially when they saw but little hope of acquittal when tried before a Judge of whom witnesses and juries were in such fear. The details are too revolting to publish; but the number of persons hung by Jeffreys in this "Bloody Assizes," as it is well termed, was 320! The number transported was 841, many of whom were sold as slaves for a term of ten years in the West India Islands.

By law, a subject attainted of treason forfeits all his substance. The Chief Justice rapidly accumulated a fortune out of the plunder of the wealthier class of his political opponents. One of these named Edmund Pridaux, lay for some time in jail, there being no sufficient evidence to convict him of any criminal act. At length, overcome by fear of the gallows, he consented to pay £15,000 for his release. Jeffreys received the bribe, and with it bought an estate to which the people gave the name *Aceldama*, from that accursed field which was purchased with the price of innocent blood.

But a time was rapidly approaching when the fate of Jeffreys furnished an illustration of the observation of the Psalmist: "I have seen the wicked in great power and spreading himself like a green bay-tree: yet he passed away, and, lo, he was not; yea, I sought him, but he could not be found." His power was of but short duration. About four years after he received the great seal of England as Lord Chancellor, his monarch, James the Second, fled from London, terrified by the hostile approach of his son-in-law, William of Orange; and having so far alienated the affections of the people that he could not rely on popular support. This was on the 11th of February, 1688. Jeffreys, who well knew that he would receive no mercy at the hands of an exasperated populace, left his home and hid in a small house, disguised as a sailor or collier. But he was detected and conveyed to the Tower under a strong guard, necessary to protect him from the violence of the mob. So sensible was he of the danger he was in, that as the crowd pressed about the coach in which he was carried, with whips and halbers, he exclaimed, "For the Lord's sake, keep them off! For the Lord's sake, keep them off!"

The prison was at that time a house of refuge

for him. One evidence of the intensity of the oilium he had excited, was a petition of more than a thousand "widows and fatherless children" of those whose husbands and fathers he had caused to be executed and banished, praying the authorities that he might be brought down to the West of England and delivered up to their tender mercies! Indeed, one historian states, that the hatred of which he was the object, is without a parallel in English history. "The people, where he was concerned, were as cruel as himself, and exulted in his misery as he had been accustomed to exult in the misery of convicts listening to the sentence of death." No wonder that he soon broke down under such a load of public abhorrence. He endured intense suffering from attacks of pain, of which the surgeons were unable to relieve him; and his disease was aggravated by the excessive use of brandy, to which he had been long addicted. After about four months' imprisonment, he died, without having been brought to trial, whilst yet comparatively young, being in his 41st year; perhaps more to be pitied than any one of those whom he had sentenced to death. The estate of £12,000 a year which he had accumulated by the most dishonourable means was soon squandered, and some of the family servants lived long enough to hear of its total waste and dispersion. So that a blast instead of a blessing rested on his ungodly gains.

The career of this remarkable man evidences the truth of the Scripture proverb: "Though hand join in hand, the wicked shall not be unpunished." J. W.

FROM THE BRITISH FRIEND.

The Bishops' Palaces.

An interesting suggestion appears in a recent issue of *The Rock*, the organ of the Evangelical Church party. It is a proposal that the Bishops of the Church of England should give up their palaces, live in some populous town of their diocese, and devote the proceeds of the large sums thus saved to the augmentation of the stipends of poor curates and clergymen with insufficient livings, or to the elevation of the masses.

And to show that this is no mere dream, the names of several bishops are given among whom that of the late Bishop of Manchester and the present Bishop of Ripon are mentioned, who, if they were not compelled to live in their palaces, would only have liked to have dispensed with all the grandeur which surrounds them under their present conditions, and go down among the people and make themselves acquainted with the privations, and temptations, and hard lot and thorny path of the poor. Such men as these do not need the reminder that this was what their Lord and Master did when He was on the earth; neither can they be ignorant that what they gave up in the matter of "houses and lands" would be made up to them even in this life "an hundred fold."

Those who know anything of the working-classes can testify that there is no greater stumbling block in the way of the acceptance of Christianity by the masses, than the apparent and often real inconsistency between Christ's humble and self-denying walk on earth and that of his preachers and followers in the present day. If there are difficulties, legal and otherwise, in the way of such a desirable renunciation of worldly state, the sooner they are removed the better for both bishops and their flocks.

J. L.

Extracts from the Memoranda and Letters of Ann Watkins.

(Continued from page 404.)

TO HER SISTER S— K—.

DARLINGTON, Tenth Month 4th, 1844.

It did me good to be present at the Quarterly Meeting; it would have afforded thee comfort too, my beloved sister. We had a large attendance. Dougan and Asenath Clark were present; the former was engaged very prophetically to express his belief that the spirit of Antichrist would have his seat amongst us; charging the right-minded to beware of wolves in sheep's clothing, for such, as the ministers of satan, would transform themselves as angels of light. A very awful covering seemed to rest upon us, I thought. Celia Wilcox was engaged in very close testimony in our meeting for discipline respecting the superfluity and costliness of apparel. Ann Conning, too, was led in a similar strain. A. C. also strengthened the hands of these by some very weighty remarks; she said she believed there were some who would very soon see it their duty to set an example of moderation, both in their dress and their style of living; she said she led it with us as a legacy of love, believing the time was approaching when we should be separated to see each other's face again no more. A. C. was very beautifully led in testimony in the meeting for worship, also in prayer. Oh my dear sister, for Mothers in Israel! How often do I think I should value the kind care and advice of some experienced friend! I much hope I shall find one in my dear W. I have found one in thee, my beloved sister, but I speak as regards my present location. There are many able ones amongst us in a public capacity, but there are none to visit me in my low estate. I have now occasionally spoken in meetings for eight years, believing it was required of me, and I am now ready to conclude the distance of my friends arises from a wish to discountenance such appearances. I do not think anyone around me is aware of the deep mental suffering that is permitted, for I endeavor to be cheerful and to hide my distress. Desire for me, my beloved sister, that I may rise above all unnecessary anxiety about my spiritual and temporal well-being, and also that I may be favoured with a stay in this day of conflict.

I was married on the 9th of Tenth Month, 1845; my husband's family meeting for the first time in their lives at the wedding. The opportunity was a solemn one, and the prayer for Divine assistance was impressively dwelt upon. My dear husband brought me the same evening to a small, neat, and comfortable home in the village of Eydon, Northamptonshire. He was a country shopkeeper, was much respected, and had a satisfactory prospect, but was not at all adapted for business, being of a literary turn of mind, easy, and good-natured. He was strict in his views of integrity and uprightness in trade. We paid ready money for our private expenditure, and were economical, drawing in as we found it needful; but the state of the times and the potato disease, which about that time made its appearance, combined to our disadvantage.

[In 1849, William Watkins had the offer of a commission agency in Belgium for ten years, which, by the advice of his friends, he accepted. Of her feelings with regard to this change, A. W. writes:—

I had no inclination for this movement, and great were my conflicts. I was plunged into sorrow, but submitting our cause to the Lord,

was favored eventually to feel quietness as a canopy to cover my mind. Just before we left, two dear Friends came to our village in the work of the ministry. A public meeting was convened on their behalf. We waited upon Mary Hillier, a respectable inhabitant of our village living in a state of comfortable independence, and invited her to the meeting. She responded to the invitation. It was a remarkable meeting. "The shout of a King was heard in the camp." We believe that that individual was visited and, through releasing mercy, gathered home to her everlasting rest. (She died about two weeks afterwards.) We lodged one or both of the dear Friends, and the next morning after breakfast we had a very precious opportunity. The woman Friend was led to address me with much power, commencing with the words, "Thou shalt not die, my sister, but live and declare the works of God." They took their leave in much sympathy and tenderness.

The visit and address of this Friend were very helpful and cheering to Ann Watkins, she being at that time so cast down at the prospect of leaving the country and her friends that she thought she should not live to return to them again.]

And now the way being cleared, it was needful for us to be in earnest in making our arrangements. At the end of the Fourth Month, or early part of the Fifth Month, 1850, I took our two dear children to our sister's, at Banbury, while my husband sold his business and the bulky part of the furniture. We were soon ready, and having spent a week in London, went by way of Dover to Calais, where we lodged one night. The people were very kind to us, having very recently accommodated John Yeardeley and his wife. Our landlady told us, that a few weeks prior to our coming, "Tew gude people had stayed with them. They had gude bukes, they were priests." What a precious influence do upright people spread around them!

In the morning we left Calais for Lille, and after dinner proceeded to the frontier town of Belgium, where we had to pass through the Custom House. I stood within the building, with my child in my arms, feeling the loneliness of our situation. I felt myself as a stranger in a strange land, a heretic worth nothing more than the beasts that perish. The sense was truly humiliating. We passed on in an unusually long train to Bruges; the number of priests was amazing, I think there were from 500 to 600. There were a number of extra carriages supplied on their account, as the centenary festival was about to be held at Bruges. I was frightened lest my children should offend them in their play, but one that sat next to me assured me that he liked little children. A sense of spiritual darkness almost overwhelmed me, and, worn out and tired, I longed for a resting place. I sought for patience and it was mercifully granted.

At length we reached Bruges. All conveyances were engaged, and we had to walk to our quarters. This was a great tax to my wearied frame, and when we arrived at the hotel, there was no room for us. I was forcibly reminded of the situation of Joseph and Mary. Feeling very much exhausted I obtained the sympathy of the landlady and I and my two young children waited there whilst my husband, aided by a commissaire, went to procure a resting place for the night. We met with some rather rough accommodation, but were, I believe, thankful to be so far helped.

In the morning we left our apartments, and proceeded forth to find a breakfast. We came to a tidy, neat public house, where we had a good breakfast of eggs and bread and butter, but coffee,

not ten, was to be had in this part of the world. Before night we found comfortable apartments at the Albion Library, a Pierre Street. We were unable to meet with a suitable house, and we remained here six weeks. We could not obtain our goods from the Custom House, without paying double duty, my husband not being a householder, so that I was sometimes almost at my wits end, to provide clothing, etc., and rose sometimes at two o'clock in the morning, for the purpose of working in the cool of the day. We were reduced to many straits, in a variety of ways, and our faith was tried to a hair's breadth. We tried to select a house day after day, but in vain. Meanwhile my husband was acquiring information in the way of business, and becoming acquainted with the manners and customs of the people.

My husband and I took some walks alone, but we were much annoyed. In one street, the women were particularly disagreeable, coming out of their houses, and by loud laughing and odd gestures showing their contempt.

(To be continued.)

FOR "THE FRIEND."

A Visit to Absecon.

On the 8th of Sixth Month I accompanied a friend on a ride in the vicinity of Absecon, which is a small town on the New Jersey coast, opposite Atlantic City.

Our visit was not so fruitful in plants as it might have been later in the year, yet it was not without interest. The most showy of the wild flowers was the common or broad-leaved Laurel, (*Kalmia latifolia*) whose smooth and glossy dark evergreen leaves contrast well with the masses of white and pink bloom which adorn its branches. The buds and flowers are remarkable for their angular outline and for having ten small pouches, marked on the outside by projecting points, each of which contains the anther of one of the two stamens, whose slender and long threads start from the base of the flower. As the bud expands and opens, additional strain is brought on these filaments, until finally they force the anthers from their resting places with a sudden jerk, which scatters the pollen over the pistils in the centre, and thus insures the maturing of the seed.

We saw also an abundance of the sheep-laurel (*Kalmia angustifolia*), or narrow leaved Laurel, a much smaller shrub than the other, with clusters of very pretty bright red flowers, similar in shape to those of its larger cousin, and having the same arrangement of pouches to contain the anthers. The plant is thought to be poisonous to sheep, whence comes one of its popular names, *Lamb-bill*.

In places by the roadside we saw two kinds of grape vines, one the common Fox grape (*Vitis labrusca*), whose leaves are thickly clothed on the under side with a rusty, woolly lining. This is the parent of the Isabella, Catawba, Concord and other cultivated varieties. The other was the Summer Grape (*Vitis rotundifolia*).

Our road led us past a piece of salt meadow, and it was interesting to note to how large an extent the grasses which occupy the ground in our interior meadows had disappeared and their place was taken by different species of rush (*Juncus*).

In one place the sandy shore of a bay was thickly covered with a dense growth of a small yellow clover (*Trifolium procumbens*), while close by it, but on more elevated ground, two other species were growing—the White and Red clover.

Seeing a wagon loading with some dark sub-

stance that had been discharged on a wharf from a small vessel; I drew near to examine and found the owner was shovelling into his wagon some muscles which had been dredged or gathered with oyster tongs, from the mouth of the bay. These are largely used in that neighborhood for manuring corn, and command a price of four cents a bushel from those who gather them to sell. The muscles were young and small ones, and were fastened together by the threads which they spin, so that probably 100 or more would be tied into a bundle. There must have been many thousands in the wagon load. J. W.

A Letter Written by Elizabeth Webb to her Children in Chester County, in Pennsylvania. Dated at Newport on Road Island, the 24th of the Sixth Month, 1724.

My tender and motherly love is to you all, and my prayers are for your Heavenly Father that He will be pleased to take you under his care and keeping, and grant unto you all a day of visitation, by his grace and his good Spirit, which I verily believe He will, and it will enlighten your understanding, and show unto each of you the vanity of your own minds; and will draw you by cords of Divine love to seek after salvation—which comes by Jesus Christ only and alone. And God almighty hath sent his Spirit into some of your hearts already, whereby He hath begotten desires in you at times after the knowledge of himself, who is the way to the Kingdom of Heaven, the Truth and the Life. And there is none comes into the Kingdom of God but by Him.

Therefore, my dear children, as you are believers in his first coming or outward appearance, according to the record of the Scriptures of Truth, which I exhort you to read often, so have a near and dear regard to his Holy Spirit in your own hearts,—which will incline your hearts to love and fear God, and to learn to know Him who is the Father of your spirits and your great Benefactor, both as to soul and body,—for it is He that hath fed us all our life long, and it is in Him that we live, move, and have our being; although there are very few that consider it as they ought. So great reverence is due to almighty God upon this account.

But O, the great love of God in the redemption and salvation of the souls of the children of men, is so stupendous, that it is beyond my capacity to set it forth as it is—and yet He hath condescended so low as to reach forth his hand of love to little children, and will yet do it in and for all them that will love Him, to lead them gently on as a tender Father, and feed their souls with the milk and honey of his Divine Word—as my soul witnessed in my young and tender years, even in such raptures of Divine love that it was many times more to me than my outward food or anything else this world can afford; but Oh, my dear children, partakers of my frail nature, let me tell you that flesh and blood is very apt to grow uneasy under the yoke of Jesus Christ, although his yoke is easy unto the obedient souls; and his burden is light when the old man is mortified, and when the creature hath learned obedience of Him who is meek and lowly in heart. They do then find sweet peace and rest to their souls—even in resignation to the will of God—as our Lord and Saviour taught both by precept and practice. For, as He came not to do his own will, but the will of Him that sent Him, so He leads all his followers in the same way.

And now, my dear children, although I have

nothing of my own to boast of, except it be weakness and infirmities, under the sense of which my soul hath mourned many times, yet I, as a tender mother, shew you the way by which my Saviour hath led my soul to rest and peace with Him; which is by the highway of the Holy Cross of our Lord Jesus Christ. The preaching of which was formerly to the Jews a stumbling block, and unto the wise Greeks foolishness; but unto as many as believed both Jews and Greeks, the power of God, and the wisdom of God. I believe it was so to those that walked in the way of self-denial, and loved that spirit that leads in the midst of the paths of judgment, that gives to those that love it to inherit substance. For, my dear children, the lesson that I have learned is, to give up my heart to God, and to resign up my will to his will in all things, and to love Him above all things, and in all states to be content.

Believing that all things shall work together for good to those that fear and love God. And as the heart and mind will and affections are given up to almighty God, which is but a reasonable duty, the Holy Spirit doth work in the creature to will and to do, according to his own good will and Heavenly pleasure; and his will and work is the mortification of the old man with his deeds and the sanctification of the inner man, or hidden man of the heart, and then He gives unto the soul the oil of joy for mourning, the garment of praise for the spirit of heaviness and the esteem of such as are willing and obedient, as plants of his own right hand planting; and this is the Lord's doing, and it is marvelous in our eyes. For which the souls of all those that love Him are filled with praises to Him that liveth forever and forever.

And my dear children, although you are young in years, yet often remember your latter end; and pray earnestly to Almighty God that He will sanctify your souls, and redeem your minds and affections out of the things of this low world and set them on things that are above; and that the Lord may be your portion and the lot of your inheritance; and then you will have cause to say, the lines are fallen for us in very pleasant places, we have a goodly heritage, etc., and then if we should never see each other again in this world, we shall meet again (after a short though troublesome life) in the paradisaical joyful life of Divine love that shall never have an end; where are the souls of those that have gone through many tribulations, and have known their garments washed and made white in the blood of the Lamb of God, who taketh away all their sins. These behold the ineffable glory of God, and sing a new song, even the song of Moses, and the song of the Lamb, that none can learn but those that are redeemed from the earth.

Oh, my dear children, this redemption, this salvation that comes by Jesus Christ is very valuable, it is the only pearl of great price, indeed, for which a wise man would give up his all to purchase it. And when he has bought it, by giving up his heart to God for it, Oh, then the care and watchfulness that there is need of in the keeping of it; that no worldly Delilah steal away the heart again from the Lord. For we have many enemies while here. Even the flesh, the world and the evil spirit. Therefore our best friend, Jesus Christ, exhorteth all to watch and pray lest (saith He) ye enter into temptation.

And so my dear children, although I love you dearly and dearly, yet the love of God, the father of your spirits far exceeds my love. Therefore, into his Holy hand I commit and commend you all with my own soul, advising you to

love Him and fear to offend Him; for He is just in all his ways, and equal in all his doings; and although at the sins of ignorance He winketh, yet if any sin after he or she hath received the knowledge of his mind and will, that soul must be redeemed through judgment, and the baptism of the Holy Ghost and fire, which is the spiritual baptism of our Lord and Saviour Jesus Christ. Whose fan is in his hand, and He will thoroughly purge his floor and will gather his wheat into his garner, but the chaff He will burn with unquenchable fire. Take notice of the word unquenchable, for our God is a consuming fire to all the works and workers of iniquity. It is unavoidably so, for there is nothing that is of an impure nature that shall enter the Heavenly Kingdom (and take notice that our God Almighty is no respecter of persons, no, not Moses that meek man, when he was provoked to speak unadvisedly, he suffered for it, which may teach us patience. Nor yet David, the man after God's own heart, when he looked out and saw the beautiful woman, etc. He suffered great judgment and troubles for his great offence. But this is the comfort of all that love the just and righteous judgments of God, viz: that in the midst of judgments He remembers mercies, as in the type. Even under the law, his mercy seat was set above his judgment seat, which causeth many to sing songs of prayer and thanksgiving to Him, both here and hereafter, even to all eternity. Which that it may be our lot and portion, together with all our friends and acquaintance, is the earnest breathings of my soul.

This I send as a token of my good will to you, and good desires for you, and remain, your tender mother,

ELIZABETH WEBB.

P. S.—Remember my dear love to all our friends and neighbors, as you have opportunity, and be kindly affectionate one to another and to all people. Remembering that God is love, and he that dwelleth in love, dwelleth in God, and God dwelleth in him. Also Jesus Christ, our Lord and Saviour is the Son of God's love, and he that hath the Son of God hath eternal life in him. But he that hath not the Son hath not (this) life, but the wrath of God abideth on him. So my dear children watch and beseech. Hope to the end. Gather yourselves together and read this in the same love that I have written it, and the Lord Jesus be with you all to the end of your days here, and redeem you to himself.

The Helpless State Church.

As time advances the absurdity of a State Church is constantly becoming clearer. Looked at abstractly, the very existence of such an absurdity in the midst of the light and liberty of this late century appears an impossibility. There is really no ground for the exercise. The origin of it lies far back in the ages, when Constantine, claiming to be Pontifex Maximus, assumed the headship of the Church and controlled its destinies. The later emperors, whether pygmies or giants, sustained the same ridiculous relationship, and appointed bishops and other ecclesiastics.

When one examines into the fundamental qualities of the State Church, the enormity of the great wrong becomes at once apparent. For example, the clergy are paid out of the State treasury. The principle of choice is shattered into hopeless fragments. A pastor may be absolutely worthless, but the parishioner has no resort. He must pay tithes for his pastor's pay, just as he pays his house or read or poll tax. He is not free; he must pay or emigrate. The

Church may be a mere shell; he must pay, whether rich or poor, for the perpetuating of the shell.

Again, there is small place left for the Divine call. Multitudes of the clergy in a State Church are simply educated for the Church, and drop into livings because they were owned by remote ancestors. The parish goes with the oaks and the sheep, and the clerical care is determined by the caprice of some rich, titled, and gonty owner. That supreme call to the pastoral office is hardly thought of. It is not taught as an essential. The man becomes a preacher just as he becomes an advocate or a physician. It is only when there is no State Church that the great ordainment of the Divine call asserts itself in all its majesty.

But the most serious infirmity is the helplessness of the State Church against the ingrowth of skepticism. When Colenso, Bishop of Natal, left his real calling as a maker of arithmetics, and entered the more hazardous domain of attacking the writings of Moses, his open skepticism became a serious question for the ecclesiastical authorities in London to handle. He was tried for his vagaries, but it was all a farce. The mighty State Church was powerless to defend its own creed. There was much protesting against the writers of the "Essays and the Reviews," but Oxford learning was stronger than the State Church whip. But suppose the State Church itself is heretical, what then? The spiritual interests of the whole land is at the mercy of the unbelieving machinery.

The most notable present illustration of the defenceless condition of the State Church which we have recently seen, can be found in Germany. Bremen, with its one hundred thousand people, has long been a Hanse or free city. But its clergy are paid out of the general treasury, so that the conditions are quite the same as though the support came from Berlin.

Now for about twenty years there has been a pastor of one of the large churches there who is an outright infidel. The *Reformirte Kirchenzeitung* publishes extracts from some of his printed sermons which are simply outrageous. His name is Schwab, and here are some of his utterances: "Yes; we do not agree with the confessions of the Protestant Church." "We do not believe in the great, holy, venerable things held before us, and which we are told that we, as Christians and Protestants, must believe." "We do not believe in the impregnability of the Bible." "We do not believe in the Trinity." "We do not believe in the God-man." "We do not believe in the sinless man Jesus." "We do not believe in the Scriptural miracles." "We do not believe in your facts of redemption; and so far we are totally at variance with the Reformation."

Think of such expressions in a Christian pulpit! Imagine such words spoken in the city made memorable by the labors of the saintly Menken! But how can the matter be helped? All over Germany there are skeptics in the pulpits, and the State pays for their support.

This is the possible plight of all State Churches. To do away with them is one of the problems of the future. Our own Methodist Church in Germany is doing a marvellous service in preparing the people for a change from bondage to freedom. The voluntary principle of Church allegiance and support is the great ecclesiastical lesson which the United States is now teaching to the world. We are not discouraged by what we see abroad. One by one the burdens on the conscience will be removed. We must believe that the time will come when intelligent men in

all churches, where the Church is dragged at the chariot-wheels of the political machine, will unite in relegating the entire system of State Churchism to the same museum of antiquities where the implements of medieval torture and other memorials of darker days belong. We trust the bright day for such a clearing process will soon dawn upon all the world.—*Christian Advocate*.

THANKSGIVING SONG.

BY ANNIE D. REYNOLDS.

Year after year God's goodness, falling never,
Scatters rich blessings on our earthly way;
Year after year his love, abiding ever,
Still leads us safely on from day to day.

The sun, moon, stars, the seasons ever changing,
Tell of God's watchful care and sovereign power;
Each flower that blooms and every sweet bird singing
Proclaims his providential love each hour.

God's promise, ages ill, is still unbroken,
And will not fail till time itself be past;
Year after year, so long as earth remaineth,
Seed-time and harvest, cold and heat shall last.

The golden sheaves and fruits of autumn glowing
Tell how the sower's days of toil are blest;
We plant and water, but God gives the increase,
And patient working crowds with peaceful rest.

From forest, field, and mine, our land so fertile
To industry and toil yields wealth each year;
Success attends the faithful workman's efforts,
And honest labor makes reward more dear.

Our nation's bulwarks, liberty and justice;
Her fairest treasures, happy homes and hearts;
We value more than kindly glory or glory
The quiet blessings gentle Peace imparts.

Year after year our lives should e'er be showing
Our gratitude to God for all his love;
Day after day our hearts should keep "Thanksgiving,"
And endless praise send up to heaven above.

And if sometimes a cloud should o'er us darken,
And life's bright gold seem turning to alloy,
We still must trust our Father, and remember
That "they who sow in tears shall reap in joy."

Dear Lord, when Thou dost with Thine angel reapers
Come to this earth to seek a harvest fair,
Like cars of golden grain, well-filled and ripened,
A place in heaven's garner may we share.

Christian Advocate.

A WORKER'S PRAYER.

"For I have received of Thee that which also I delivered unto you."—1 Cor. ii. 25.

Lord, speak to me, that I may speak
In living echoes of Thy tone;
As Thou hast sought, so let me seek
Thy erring children, lost and lone.

O lead me, Lord, that I may lead
The wandering and the wavering feet;
O feed me, Lord, that I may feed
Thy hungering ones with manna sweet.

O strengthen me, that while I stand
Firm on the Rock, and strong in Thee,
I may stretch out a loving hand
To weaksters in the troubled sea.

O teach me, Lord, that I may teach
The precious things that Thou dost impart;
And wage my words, that they may reach
The hidden depths of many a heart.

O give thine own sweet rest to me,
That I may speak with soothing power
A word in season, as from Thee,
To weary ones in needful hour.

O fill me with Thy fulness, Lord,
Until my very heart o'erflow
In kindling thought and glowing word,
Thy love to tell, Thy praise to show.

O use me, Lord, use even me,
Just as Thou wilt, and when, and where;
Until Thy blessed face I see
Thy rest, Thy joy, Thy glory share.

Frances Ridley Havergal.

DISSATISFACTION.

SELECTED.

A man in his carriage was riding along,
A gayly dressed wife by his side,
In satin and laces; she looked like a queen,
And he like a king in his pride.

A woodsaver stood in the street as they passed;
The carriage and couple he eyed.
And said, as he worked with a saw on a log,
"I wish I was rich and could ride."

The man in the carriage remarked to his wife,
"One thing I would give if I could—
'd give all my wealth for the strength and the health
Of the man that saweth the wood."

A pretty young maid with a bundle of work,
Whose face as the morning was fair,
Went tripping along with a smile of delight,
While humming a love-breathing air.

She looked on the carriage—the lady she saw
Arrayed in apparel so fine,
And said in a whisper, "I wish from my heart
Those satins and laces were mine."

The lady looked out on the maid with her work,
So fair in her calico dress,
And said, "I'd relinquish position and wealth,
Her beauty and youth to possess."

Thus, in this world, whatever our lot,
Our minds and our time we employ
In longing and sighing for what we have not,
Ungrateful for what we enjoy.

Ve ungrate for the pleasures for which we have sighed;
The heart has a void in it still,
Inowing deeper and wider the longer we live,
That nothing but Jesus can fill.

FOR "THE FRIEND."

The whole tenor of the editorial of THE FRIEND of Seventh Mo. 6th, in relation to the late Prohibition campaign, was probably a relief to many, and a desire is felt to commend it to the notice of Friends. "To engage in acts for the moral improvement of others, partakes of the nature of a religious duty," is a sound axiom, and to wait for Divine authority to move them, has always been recognized by the Society of Friends. To depart from this safe ground will, it is apprehended, be attended with danger to our welfare and standing in the Truth. It is a relief that the campaign is over, and the review of its result is not so discouraging as would at first sight appear. The vote in this State for "Fisk," the Prohibition candidate for President last autumn, was 20,758; that for prohibiting the sale of liquors, last month, was 296,617; showing a gain of some 275,000 for the cause of Temperance in the short space of about eight months, surely this is animating rather than discouraging.

Our late beloved friend, James Emlen, near the close of his long and useful life, expressed his belief, that the love of our Heavenly Father "was boundless and extended the world over." Whilst it is important to bear this great lesson in mind, so as to embrace every right opening to labor for the improvement and elevation of the whole human family, it does seem desirable that we all, having done what we thought was right in the present instance, will accept the situation, and endeavor now to look closely into the state of our own vineyards, and to labor there for the removal of all that is impure; and then, when we can, with Best Help seek to repair the gates, and build up the broken down walls of our own religious heritage. The fields are already white unto harvest—the laborers, true spiritually-minded laborers—few.

Our young people have claims upon our notice; a kindly recognition, the handing of a volume illustrative of the doctrines and testi-

monies of Friends, or a narrative of the life and work of some departed worthy, may be blest to both giver and receiver. W. S. T.

Seventh Mo. 10th, 1859.

Dr. Lasserre at Trafalgar.

BY WILLIAM WRIGHT.

The readers of the *Sunday School Times* were interested, a few months ago, in reading the marvellous story of Henry Lasserre, who has given to the people of France a fascinating version of the four Gospels. The following incident in his father's life (now made public for the first time) will shed new lustre on the name of Lasserre.

On the 21st of October, 1805, the English fleet encountered the United French and Spanish squadrons in the battle of Trafalgar. During the progress of that battle, a furious storm arose, and continued to rage when the cannon had ceased to roar.

The *Berwick*, a French frigate, on which Dr. Lasserre was surgeon-major, had been seriously damaged in the combat. The captain and second in command had been killed. The frigate had been pierced through and through like a sponge, and at the close of the engagement the cry arose from the survivors, "The ship is sinking!"

Dr. Lasserre had been busy for many hours in cutting off shattered arms and legs, and in dressing the wounds of the victims that lay around him, when suddenly he heard, above the groans of the wounded and the sound of the storm, the wild cry, "The ship is sinking! Every man to the pumps!"

The untold efforts of the diminished crew were unavailing, and the vessel had to settle down. A great ship, however, does not go to the bottom suddenly like a scallop-shell. The *Berwick* continued in spite of the pumping, but increased slowly. The storm raged tempestuously, though as yet it had not reached its greatest force.

The defeat of the united French and Spanish squadrons was complete, and the *Berwick*, whose masts were broken, could no longer manoeuvre, and stood almost alone in front of the British fleet. The condition of the shattered sinking ship became desperate. Suddenly the cry rose again above the sound of the hurricane, "Launch all the boats!"

Of the frigate's boats there were scarcely two that remained seaworthy. These were launched, but it was painfully evident that they could not accommodate the entire crew. It was necessary to make a selection, and those who were able forced their way into the boats. They called on Dr. Lasserre to accompany them. He replied: "I am a captain of the wounded, and I wish either to be saved with them or to perish with them."

"How absurd! how mad!" they cried impatiently. "Either take my wounded, whom I cannot leave, and will not leave, or go without me," he responded.

The wounded men were crowded between decks, and it would have been utterly impossible to have had them embarked under the circumstances.

Dr. Lasserre, having voluntarily made the sacrifice of his life, remained on the sinking ship. The two boats departed without him; but they were suddenly swamped by the tempest, and the entire effective crew of the *Berwick* perished.

About an hour after the crew had abandoned

the *Berwick*, Dr. Lasserre was standing on the deck, looking out on the wild, sweltering sea, when suddenly he saw an English pinnace, manned by five English sailors, bounding over the waves towards him. The commander of the pinnace called for the doctor.

"I am the doctor," replied Lasserre. "Very good," said the English captain. "We offer you your safety if you will come aboard our ship."

"I accept your offer gratefully," said Lasserre, but on one condition,—that all my wounded shall be removed to your ship before me. "Impossible!" said the English captain. "You see we are caught in a hurricane, and we have no time to make a number of transshipments. It is impossible."

The English sailors prepared to take Lasserre by force, but he cried, "I shall throw myself into the sea if you attempt to seize me."

The doctor in the English ship had been killed by a shell, and the wounded were lying without surgical aid.

"I wish to go with you," cried Lasserre, as he prepared to plunge, "but you must first take my wounded."

When threats proved of no avail, the captain accepted Lasserre's conditions. The English sailors boarded the sinking vessel, and by the help of the doctor proceeded to remove the wounded. But the little pinnace was too small to take all on board, and it had to make four voyages before all the wounded Frenchmen were safely conveyed aboard the English ship.

As the removal proceeded, the storm increased in violence, and the difficulty of getting the men from the one ship to the other increased in endurance. At last Lasserre saw every one of his men safely removed, and himself alone on the foundering ship. When narrating the story in after years, he always spoke of the overwhelming desire to live that possessed him as he saw the last boat-load of his men move off from him, and found himself alone on the foundering ship. He stood on the deck, over which the waves surged and swept. He watched the last cargo deposited in the English vessel, and the little pinnace coming towards him, now on the crest of some mountain wave, now in the trough of the sea, and, fearing lest it might be dashed against the sinking *Berwick*, he flung himself into the sea, and swam with all his might toward the returning boat. A strong English hand seized him, and drew him into the boat, which sped like an arrow to the English vessel.

The story of Lasserre's devotion to his wounded had preceded him, and the English received him with a ringing cheer. The captain pressed his hand in silence. The officers placed dry clothes at his service, several pressing upon him their own top-coats, as they vied with each other in acts of kindness. While receiving the hearty English welcome, Dr. Lasserre noticed a sudden sensation among the officers. He turned his eyes in the direction in which they were looking. The broken masts of the *Berwick* were disappearing beneath the waves.

Dr. Lasserre attended to the wounded English sailors with as much skill and tenderness as he had shown to his own wounded countrymen. The English in return loaded him with presents and set him free at Gibraltar, with one companion, who was liberated for his sake. Lasserre and his companion marched on foot through the length of Spain, and reached France and home long after they had been given up as lost.—S. S. Times.

A Dreaded Task.

A task never grows smaller or lighter by sitting down and lamenting that it must be done; and there is an old maxim that teaches us that a thing "once begun is half done."

A farmer friend of mine had a boy of fourteen years, named Billy, who is like a good many other boys of my acquaintance. His heart is heavy, and a cloud immediately overpreads his mental horizon when he is asked to make himself useful.

"Billy," said Mr. H.—, one day when I was out to the farm, "why don't you go to work on that little patch of potatoes?"

"Aw," whined Billy, "there's so many of them taters, I'll never get them hoed."

"You won't if you don't begin soon."

"I hate to begin."

"How are you ever going to do the work if you don't begin."

"Well, I'll begin pretty soon."

His father walked away, and I heard Billy exclaim, in a tone indicating great mental distress, "Plague on them old taters! It makes me sick to think about them."

"Why do you think about them then?" I said, laughingly.

"I've got 'em," he replied dolefully, with a sorrowful shake of the head. "I've been thinking about them ever since I got up this morning."

"How long, now Billy, will it really take to hoe them?"

"Well, at least an hour."

"And you have been distressed about it ever since you got up?"

"Well, I hate to hoe taters."

"And you've been up a little more than five 'Well, I, I—" Billy began to grin, took up his hoe, and said, "I never thought of that!"

And the potatoes were hoed in just forty minutes. He doubles a task who dreads it.—*Golden Days.*

Natural History, Science, &c.

Fashions in Leather.—Kangaroo leather is one of fashion's favorites, according to the New York *Sun*. It was first used in the manufacture of shoes about twelve years ago, since which time it has gradually grown in favor. As it has won public favor entirely by its merits, it will doubtless retain its popularity for some years. It has the virtue of being both durable and very easy to the foot. Its strength is so great as to defy the power of ordinary men to tear. The kangaroo was first hunted for sport. The Australian considered that his visiting English cousin had not "done" the country if he returned without enjoying the excitement of a kangaroo hunt. The kangaroo is now hunted for profit, the hide being worth, delivered at the seaports of Australia, from 75 to 85 cents a pound. As shooting injures the hide the killing is usually done by clubbing.

During 1888 upward of 750,000 kangaroo hides were imported into the United States. Add to this the number of hides consumed in Europe, and it seems no wonder that the Australian government is now discussing the advisability of limiting the annual slaughter of kangaroos.

Patent leather is one of the things of fashion's fancy. The better grades of patent leather shoes are made from patent calf. It may be surprising to many to learn that no patent calf is made in this country, but it is all imported from Germany and France. Some few years ago the Ger-

ners spent considerable money in trying to make a patent calf that would compare favorably in quality with the imported article, but were unable to do it. Patent leather and patent calf must not be confounded. Of the former, large quantities are made here, it being tanned from cowhide, while the latter is from calf-skin. Small calf-skins of fine fibre are selected. During the process of tanning they are stretched, else the japan would soon crack. The process of laying the japan followed in Germany and France is a secret the American tanner has not yet learned. A first quality patent calf, if not exposed to sudden change of temperature, will wear quite as well as the ordinary calf. The quality may be judged by the brilliancy of the jet black. If the japan has a bluish cast depend upon it the quality is not first-class, and let not the smoothest tongued shoe salesman deceive you.

Cordova has taken the place of alligator for wear in wet weather. This, too, is largely imported from Germany. It is made from certain parts of the horse hide, and is a very durable leather. It is impervious to water, and has a very smooth surface. It is not imported in sides, as are most kinds of leathers, but comes blocked to the shape of the vamp. Unlike calf, it does not stretch in wearing, but retains the shape of the last until the shoe is worn out. A few years ago it was very expensive, but recently the tanners have conquered many of the difficulties in preparing the hide, and, with reduced cost, it is now quite popular.

Perfumes in the East.—To a Western mind, the idea of pouring costly perfume on the head of one to whom it was desired to show honor is still very new. In the East, however, it is a thing of the very last that would have occurred. Perfumes have a much more important place in the domestic economy of the East than among ourselves. It has often been remarked that the Tartaric and Slavonic races are more indifferent to scents than any others. The poorest Orientals spend money for the gratification of the olfactory nerves. The woman who goes to market with a few plasters to supply her family needs for the week would think her purchases incomplete unless she had spent a para (the sixth of a cent) on some tuberose or other powerfully scented flowers. The men one meets in the street have a flower in their fingers, at which they are continually sniffing. The Jews have a pretty custom which I have noticed whenever I have been at a synagogue. The worship over, some one at the door hands a fresh citron or lemon to his neighbor, who passes it on, and each one, as he takes it, smells it, and says, "Blessed be Jehovah, who gives us all things good, even pleasant smells for our noses." While the Orientals remark on the olfactory obtuseness of the Westerners, the latter may retort, as is said of Cologne, that the ordinary odors and filth of Eastern cities are so offensive that perfumes are absolutely necessary to counteract them. When it is said that the woman broke her alabaster box, what is evidently meant is the seal by which the lid was secured and the perfume prevented from evaporating. We see similar boxes, only made of richly colored glass instead of alabaster, at the present day in the bazars of Damascus, containing the attar of roses for which that city is celebrated, and which are very elaborately sealed. The manufacture of perfumes and unguents is an important industry in Damascus and many other Eastern cities. But spikenard is not among these. It is still the most costly of all perfumes in Syria, being imported only from India, where the aromatic plant, called by botanists *Nardostachys jatamansi*, is

found in Nepal by the upper waters of the Ganges. It is curious that the first mention of the Ganges by ancient writers is as the river by the banks of which spikenard is obtained, and at the same time they add that it is a mountain plant. We may well conceive the costliness of an unguent brought in those days by Arabian merchants from such an immense distance.—*H. B. Tristram, Custom of Durham, in Sunday-School Times.*

A True Gibbon.—A writer in *Chambers's Journal* describes a black Gibbon which he purchased and kept as a pet in the south of China. He says, "When I fastened my purchase to the copying-press I took no account of the length of the animal's arms, and I was therefore not a little surprised when a black hand took possession of a red and blue pencil, and a black mouth began to eat it. Nature is said, in her beneficence to instruct the lower animals what to eat and what to avoid. An animal in captivity must, however, be treated differently, and must not be allowed to do as it likes. So I proceeded to recover the stolen article. Though my new pet did not mind being touched, though he would jump into your lap and make himself at home, he strongly objected to part with anything which he had once got hold of, and a good deal of diplomacy had to be used before I possessed myself of the pencil.

"Scarcely was this fun at an end, before some black fingers were dipped into the ink; and when the ink was removed out of reach, the gum bottle was next turned over, the gum being particularly appreciated.

"At the last post at which I was stationed, the lower windows of my dwelling house were provided with iron bars, as a protection against thieves. I could attach Sam to them at meal times, thus keeping him out of mischief. If we sat down and began eating before he was served the most noisy protests were made; and when the saucer of rice was put down, there was no one courageous enough to recover the empty saucer. The point was often settled by Sam himself, who having finished his rice, would throw the saucer into the air a few times, catching it very cleverly and then hurl it away from him.

"One very noticeable feature about Sam was his extreme jealousy. If I stroked the cat in his presence, he used to get in a paroxysm of rage and make great efforts to bite me. When I guest came to luncheon, he was so angry at the intrusion that he often had to be removed. He had a singular objection to anything being removed by the servants.

"Sitting up, Sam measured 16½ inches; but his arms are 23 inches long. He is jet black all over, has fur as thick as many animals which live in cold climes. He has a good voice. When I take him his bread and milk at half-past six every morning, he shows his gratitude in a queer way; prostrating himself, he makes what no doubt are eloquent speeches in his own language. After he has spoken some time, he takes hold of my hand and hugs it. Until he has gone through this performance he will not touch his food. Though his diet should consist of rice and fruit only, he often has bread and jam. I never give Sam tea. Tea makes such animals nervous.

"If Sam breaks loose in the summer, he helps himself liberally to bananas. If his rope gives him in winter, he makes his way to the drawing room, he warms himself, and having done this, he jumps on the sofa, pulls an anti-maccassar over him and goes to sleep.

The young Gibbon does not pat his mouth to the water when he wants to drink; he dips his left hand into it, and sucks the back of his fingers.

As he grows older he dips his head into the water and sucks the fluid up in the same way as a native horse. What the gibbon lives on in his native wilds it is impossible to say; but he evidently has a predilection for spider's webs. My pet clears away all webs within his reach, and not liking to leave the owners of them homeless he devours them too.

"During the 27 months which Sam has now spent with me, he has been my constant companion. At the office he constitutes himself my special guardian, making strong protests against any one approaching my desk. On the way to the office he swoops down on any fruit that may be within range. If he captures a pear or an apple, he returns with it to the Sedan chair in great triumph. I am so well known here, that itinerant fruit vendors know where to apply for compensation for thefts committed. There is no ill-fleeting created; indeed, there are roars of laughter when the 'black monkey,' as they term Sam, makes a good seizure. I have to keep a string of 'cash' at the office to pay for Sam's depredations."

Items.

Ministerial Titles.—Leonard Woolsey Bacon, in the *Forerun for Sixth Month*, writing upon "Semi-Liturgical Functions," says: "Here is a curious sort of distinction the one set of men to whom this parallel distinction is forbidden, under the command, 'Be ye not called Rabbi,' should be the only set of men in America to seek it, and make much of it, and ostentatiously parade it. The lawyer who should put LL. D. on his title sign, on his briefs, or at the head of his door to put, says, 'Here is a curious sort of burden by the ways of the profession.' It is only the Christian minister who, being tapped on the one cheek with this accolade, promptly turns the other also. It is well understood that ministers as a class do very much like this kind of thing; and faithfully doing to others as they would that these should do to them, are particularly in bandying complimentary titles among themselves. Such are criticised by the good taste and self-respect of more secular men."

As L. W. Bacon is one generally addressed as "Reverend Dr.," this criticism of an evil custom must be regarded as a very candid one on his part.

New England Yearly Meeting—held at Portland.—The printed Minutes state that the sittings of this body commenced on Sixth-day, Sixth Month 14th. William O. Newhall was appointed to act as Clerk. The Committee appointed last year in reference to the establishment of a Conference of Yearly Meetings, with delegated powers to meet at stated periods, reported that they were united in the judgment that way does not open at present to join in such a conference. This report was satisfactory to both the men and women's Yearly Meetings. The statistical report gave the whole number of members 4463, being 18 more than the year before. The number of births during the year had been 30, and of deaths 50. The committee having charge of the Mosher Fund, reported that their income was about \$500 per annum. The larger part of this had been spent in circulating the *Friends' Review* and *Christian Worker*. A proposition received from Indiana in regard to the formation of a "Central Missionary Board" was referred to next Yearly Meeting.

On Seventh-day, the answers to the Queries showed considerable deficiency in the attendance of members. In 42 instances they had not been held. There were some objections to the attendance of our testimonies against war and oaths. The average number of scholars at Providence Boarding School during the past year was 84 boys and 76 girls, of whom 19 were day scholars. The proportion of these who are members of the Society is not stated.

The Freedmen's Normal Institute at Mayville, Tenn., had been more fully attended than usual. Ninety of these were in the Normal class.

The statistics of the Yearly Meeting in ministry

and oversight, give the whole number of ministers as 117—of elders 251, and of "associate members," 190—in all 558.

A Protest in the Church of England.—A protest has been signed by nearly 9,000 persons in the diocese of London, against some things which have been introduced into St. Paul's Cathedral in that city. It says:

"1. The Central Committee of the Union of Clergy and Lay Associations have observed with deep alarm and regret that a new altar recently erected behind the communion table in St. Paul's Cathedral; on which appear the figures of our Saviour on the cross—so sculptured as to resemble a large crucifix—and of the Virgin Mary with the infant Jesus in her arms, known in the Church of the West as the Madonna and Child."

"2. The Committee believe that the erection of these in the most conspicuous part of the great metropolitan church is of very doubtful legality; that it is a public contradiction of the teaching of the Homily on the peril of idolatry; that it approaches perilously near, if it does not actually constitute an open breach of the ancient and solemn commandment, which is read as binding and obligatory every Lord's day; and that grave dishonor is done to the one Mediator by the position of prominence given to the Virgin Mary, placed, as she is, between the crucified and risen Lord."

"3. Past history provides ample and significant record of the disastrous results of admitting carved images into churches. Incentive is furnished for the promulgation of Romish doctrine. A new and formidable hindrance is created to Christian mission work, especially among Jews and Mohammedans, who entertain the strongest repugnance to the presence of images in places of worship. The consciences of many loyal churchmen are grievously wounded. The apprehension gains ground that 'What begins in decoration may end in idolatry.' Incalculable injury is inflicted on the Protestant character of the National Church."

"4. The Committee therefore most solemnly and sorrowfully protest against this unhappy innovation, and all the more as they feel compelled to believe that its intrusion has already shaken the confidence in the government of the Church of many loyal and devoted members. In the judgment of the Committee the figures ought to be removed."

Drunkenness a Sin.—In the midst of the discussions on Temperance, High License, Prohibition, &c., it should not be forgotten that the drunkard is a sinner, amenable to the penalties of Divine and human law. The saloon is to be condemned, and so are the customs of the saloon. The State of Minnesota has clear convictions on this subject, and has embodied them in a law which has just gone into operation. It provides that "whoever becomes intoxicated by voluntarily drinking intoxicating liquors, shall be deemed guilty of the crime of drunkenness, and upon conviction thereof shall be punished as follows: For the first offence, by a fine of not less than ten dollars nor more than forty dollars, or by imprisonment for not less than ten, nor more than forty, days; for the second offence, by imprisonment for not less than thirty, nor more than sixty days, or by a fine of not less than twenty dollars nor more than fifty dollars; for the third and all subsequent offences, by imprisonment, not less than sixty days nor more than ninety days."

THE FRIEND.

SEVENTH MONTH 27, 1859.

Since the decision of Philadelphia Yearly Meeting, at its sitting in the Fourth Month, to continue for another year its Committee appointed to visit subordinate meetings and members, and for other religious services, that committee have not been idle. Although fewer meetings for those not Friends have been held than during the same length of time in the winter months, yet there have been more of such

opportunities for the religious awakening of the community, and for the spread of sound sentiments, than during the same period in last year. A number of our own meetings have been visited by portions of the committee—among others the meetings of Muncy and Exeter Monthly Meetings.

On First-day afternoon, Seventh Month 7th, an appointed meeting for the general public was held in Friends' house at Haddonfield, N. J., which was graciously owned by the solemnizing presence of the Head of the Church, we believe to the comfort and encouragement of many. In the vocal services, full testimony was borne to the Divinity and offices of our Lord and Saviour, Jesus Christ; to the inspired origin of the Holy Scriptures; and to the necessity of experiencing the *new birth*, through submission to the transforming power of the Spirit of Christ, "the Grace of God, which bringeth salvation, which hath appeared unto all men." This Grace teacheth man to deny all ungodliness, and to keep in restraint the lusts of the flesh—those natural appetites, which are useful if kept in proper subjection, but which must not be indulged beyond their proper limit.

We were reminded of the humble form in which the Saviour—He who had all power in heaven and in earth—appeared among men; and how He selected for his disciples poor fishermen, men who depended for their support on their daily labor; and the command of the Lord through the prophet Jeremiah was revived, "Neither let the wise man glory in his wisdom, neither let the mighty man glory in his might, let him that riches man glory in his riches; but let him that glorifieth glory in this, that he understandeth and knoweth me, that I am the Lord, which exercise loving-kindness, judgment and righteousness in the earth."

The Church of Christ is not confined to any one denomination, or to any part of the earth,—but includes all those who are brought into a state of grace through the work of the Spirit, for "in every nation, he that feareth God and worketh righteousness is accepted of Him."

Much wholesome exhortation was given by different Friends who took part in the vocal services, tending to stir up the audience to individual watchfulness over themselves, and to the maintenance of a lively zeal for the promotion of righteousness in the community. And near the close of the meeting thanks were returned to the Lord for the favors received.

We believe it was a profitable and relieving meeting—and one that was held to the honor of Truth.

In the year 1776, London Yearly Meeting appointed a Committee to make a general visit to the meetings throughout Great Britain. Dr. John Fothergill was a member of it, and he addressed an epistle to his fellow-members, a part of which is as follows:—

"Let it be your care, in this service, to look to that Arm of Power which gathered us to be a people; . . . and be it your chief care, in much brotherly love, to strengthen the weak and bring back the scattered, and, by an awful labor, to awaken them to a sense of the holy principle of light, life and grace, to an obedience to, to a knowledge of its blessed effects; this is the one thing needful; and, oh! that they may wrestle and prevail, as Jacob did, and obtain the blessing for yourselves, and for the whole heritage of God."

The wrestling in Spirit to which J. Fothergill exhorted his friends in that day, seems to be an

essential requisite for the producing of much good fruits. If there is not maintained a lively exercise and concern for the religious welfare of those who are visited, it is not likely that the labors of a committee will have much effect.

SUMMARY OF EVENTS.

UNITED STATES.—From despatches from Indian Territory it is learned that the proposed sale of the Cherokee strip to the United States is likely to fail. The United States Commissioners, Wilson, Hartranft and Fairchild, were expected to reach Tahlequah on the 25th, and their agents will doubtless call at the special session of the Cherokee Legislature to consider their proposition and also the offer of the live stock company, which now holds the strip under a lease which they want extended for ten years. The Cherokees claim to hold a Government patent for the strip, and say they must have a big price if they sell.

Judge Foster, of the U. S. Court, at Topeka, Kansas, has decided that no officer of Oklahoma has legal authority to arrest or imprison offenders against the law, inasmuch as that country is under the jurisdiction of no court.

The Territorial Convention of Oklahoma, in session at Guthrie, adjourned on the 20th instant until Eighth Month 30th, after appointing committees on organic law, the judiciary, legislature, etc. It was decided to partition the Territory into twelve counties, and for two of these the names recommended were Cleveland and Harrison.

The Illinois State Board of Agriculture estimates that there will be 127,000,000 bushels of oats harvested in that State this year and 4,072,000 bushels of rye. An average yield of oats is estimated at 33 bushels to the acre on an acreage of 3,500,000 acres.

According to a Detroit report, the wheat crop of Dakota is 30,000,000 bushels short. The greatest detriment to a successful crop has been the exceedingly dry season, and it is said that only along the streams will there be any crops at all.

Professor Hastings, of the Sheffield School of Yale College, after numerous experiments in combining lenses, has succeeded in reducing the chromatic aberration about one-third. This will make every telescope from ten to thirty per cent more powerful. It makes the error so small, with the use of two lenses only, that the keenest eye, it is said, cannot detect it. In Chicago, Iowa, is being discovered an invasion by Mormon flies. The pest is attracted about the gas and electric lights in great swarms and people were compelled to abandon the streets. The flies came from the sand beds along the river, and are sometimes called sand flies. They are about an inch long with broad wings. It is said that in many places along the street they were three inches in depth where they had fallen dead. The stench was unbearable, and the health authorities employed several wagons in removing them.

Last week's shipment of iron ore from the Lake Superior mines aggregated 260,194 gross tons, of which total 59,282 tons went from Marquette, 111,047 from Escanaba, 2,617 from Soudan, 1,807 from Ashland, and 37,561 from two harbors. The shipments to date for the season foot up 2,858,838 tons, being 1,350,373 tons in excess of the quantity that had been sent forward by water at this stage in the season a year ago.

The statement has been made that with the recent sudden retreat of Parkerburg, West Virginia, says of the flood in Little Kanawha Valley, on the night of the 18th inst., the scene of the greatest disaster was on Pond Creek, Jackson County, and Tucker Creek, Wirt County. The two streams head together, and a cloud burst must have occurred near the watershed. Pond Creek rose 25 feet in less than an hour, and rushed down hill to hill, and carried all before it. Four men took refuge in Thomas's Mill. The mill was washed away, and Edward Boss was drowned. Thomas Black and his newly-wedded wife were washed from their home and perished. Thomas Hughes, his wife, and children fled to the United States. The Tucker Creek seven lives are reported lost. The loss to property will run up into the millions.

Deaths in this city last week numbered 536, a decrease of 71 as compared with the previous week, and

an increase of 80 over the corresponding period of last year. Of the whole number 249 were males and 287 females. Of the 296 were children under one year of age; 68 died of cholera infantum; 45 of consumption; 41 of marasmus; 28 of inflammation of the stomach and bowels; 23 of inflammation; 21 of convulsions; 19 of diseases of the heart; 18 of pneumonia; 18 of old age; 17 of inflammation of the brain; 17 of typhoid fever; 17 of debility; 16 of inflammation of paralysis; 10 from casualties and 8 were drowned.

Markets.—C. U. S. 4 $\frac{1}{2}$ s, 107; 4s, 128 $\frac{1}{2}$; currency 6 $\frac{1}{8}$, 118, a dco.

Cotton was in limited request from spinners, but firm under small supplies. Middling uplands quoted at 11 $\frac{1}{2}$ cts, in round.

Wool—Woolen bran, choice and fancy, \$13.75 a \$14.50; do., common to good, \$12.25 a \$13.25.

Flour and Meal.—Western and Pennsylvania super, \$2.50 a \$2.80; do., do., extras, \$2.90 a \$3.25; No. 2 winter family, \$3.50 a \$4.00; Pennsylvania family, \$3.00 a \$3.25; Pennsylvania do., extra, \$3.50 a \$3.75; Ohio, clear, \$1.25 a \$1.60; do., straight, \$1.65 a \$1.90; Indiana, clear, \$1.25 a \$1.60; do., straight, \$1.45 a \$1.80; St. Louis and Southern Illinois, clear, \$1.25 a \$1.60; do., do., straight, \$1.65 a \$1.90; winter patent, fair to choice, \$5.10 a \$5.50; Minnesota, clear, \$3.75 a \$4.25; do., straight, \$1.50 a \$1.80; do., patent, \$3.75 a \$4.25.

Grain.—No. 2 red wheat, 86 a 88 cts.
No. 2 mixed corn, 43 $\frac{1}{2}$ a 43 $\frac{1}{2}$ cts.
No. 2 white oats, 34 a 34 $\frac{1}{2}$ cts.

Beef, extra.—Extra, 44 $\frac{1}{2}$ cts.; good, 44 $\frac{1}{2}$ cts.; medium, 4 a 4 $\frac{1}{2}$ cts.; common, 3 $\frac{1}{2}$ a 3 $\frac{1}{2}$ cts.; fat cows, 2 $\frac{1}{2}$ a 3 cts.

Sheep.—Extra, 5 cts.; good, 4 $\frac{1}{2}$ a 4 $\frac{1}{2}$ cts.; and medium, 4 $\frac{1}{2}$ a 4 $\frac{1}{2}$ cts.; common, 3 a 3 $\frac{1}{2}$ cts.; lambs, 3 a 7 $\frac{1}{2}$ cts.

Hogs.—Good light western, 61 cts; heavy, 250 to 300 pounds, 61 a 63 cts; extra heavy sows, 350 pounds, 61 a 63 cts.

FOREIGN.—Upon the opening of the Parrell Commission on the morning of the 16th instant, Sir Charles Russell, counsel for Parrell, arose, and addressing the Court, stated that after full consideration of the situation, Parrell had instructed him and Asquith, also of counsel, to no longer represent him before the Commission.

Keenly, formerly member of Parliament for Cavan succeeds T. Sexton as Lord Mayor of Dublin. Dickson, member of Parliament for the St. Stephen's Green Division of Dublin, has purchased 20,000 acres of land in the West.

On the 17th instant, a shock of earthquake was felt on the island of Arran and the mainland of Scotland. The shock was so severe that houses were violently shaken.

The wheat crop in Hungary is below the average, and is in poor condition, owing to the shrinking of the grain in the ear. The rye crop is poor, and the barley crop is very bad. Corn is in good condition. The vineyards make an excellent showing.

Pest, Seventh Mo. 21st.—Four hundred houses and public buildings were destroyed by fire in the town of Paks-to-day. Many children are reported to be missing. The cause of the people are reported to be homeless by the fire, and the greatest distress prevailed.

The Italian Government has withdrawn its vessels from participation in the blockade of East African ports near Zanzibar.

The Porte will send several battalions of troops to the island of Crete in consequence of the threatened rising of the people there. Bands of Cretan insurgents have seized the towns of Varnos and Gidonia. They expelled the authorities of the towns and burned the archives. A number of Turkish peasants who fled from the district occupied by the insurgents have taken refuge in Crete.

On the evening of the 17th instant, the Emperor of Brazil attended a theatrical performance. At his conclusion a Portuguese fire shot from a revolver at him. The bullet, however, missed the Emperor, and he sustained no injury whatever. The would-be assassin was taken to custody.

The latest reports from the Isthmus of Panama, received at the State Department, show that it is very quiet there. Chili, desirous of adding to her laboring population, furnished 3000 of the canal workmen thrown out of employment, transportation to her ports. The United States Congress appropriated \$250,000 to enable the State Department, by its representative at Colon, to furnish to the workmen their homes at such American laborers. The Isthmus, but up to the present time, the Isthmus has been thus expended. The State Department has not been noti-

fied by the beginning of work upon the Nicaragua Canal by the American Company as reported.

RECEIPTS.

Received from John M. Rammison, Ill., \$2.00; 63; from David Ellyson, O., \$2.00; 63; from John M. Sheppard, Pa., \$2.00; 63; from Emilie F. Metzler, Philada., \$2.00; 63; from W. H. Corse, M. D., Del., \$8.00; 62 each for himself, Mary Ann Spencer, Jane Aaron, and Mary Downing, Md.; 63; from William J. Smedley, Pa., \$2.00; 63; from David J. Brown, Gtn., \$2.00; 63; for Zezaida Michener, Philada., \$2.00; 63; from Sarah P. Johnson, Gtn., per Israel H. Johnson, \$2.00; 63; from Caroline W. Bacon, N. J., \$2.00; 63; and for Maurice W. Bacon, Minn., \$2.00; 63; from Lydia Ann Hendrickson, N. J., \$2.00; 63; from William B. Mack, Philada., \$2.00; 63; and for Anna M. Shearman, O., \$2.00; 63.

Remittances received after Third-day will not appear in the Receipts until the following week.

NOTICES.

A Teacher is wanted for West Grove Preparative Meeting School.

Application may be made to George R. Chambers, Margaret Cook, Jane Jones or Z. Haines, all of West Grove, Chester Co., Pa.

FRIENDS' INSTITUTE ROOMS. No. 1303 Arch Street, (near to Broad Street Station), open from 9 A. M. to 10 P. M., afford to Friends visiting the city a convenient and comfortable resting place to meet, leave their packages or have their purchases sent to. The daily papers and other periodicals are on the table. Friends are invited to make free use of the rooms.

NEW PUBLICATIONS.—The *Tract Association* has just published two new Tracts:

"Instances of Women's Preaching, from the apostles' days to the present time," 16 pages.

"A Short Account of Spriguet Penn, written by his father, William Penn, 8 pages.

Also five old tracts from new electrotype plates:

"The Poet Cowper and his brother," 16 pages.

"Brief account of Robert Barclay, author of a treatise on the Doctrines and Principles of the Religious Society of Friends," 24 pages. Covers.

"Das Leben und Wirken von Frydriech Smith," 8 pages.

"Memoir of Frederick Smith, of London, written by himself," 24 pages. Covers.

"Brief Memoir of Andrew Underhill, with an account of his last illness," 8 pages.

BOARDING SCHOOL FOR INDIAN CHILDREN AT TUNESASSA.—A Friend and his wife wanted to take charge of the institution and farm, as Superintendent and Matron.

Friends who may feel a call to this service, address Aaron P. Dewees, Chester, Penna.

Ephraim Smith, 1110 Pine Street, Phila.

WESTERN BOARDING SCHOOL.—Friends wishing to enter their children for the Fall and Winter Term, commencing Ninth Month 3d, 1859, will please make immediate application to

J. G. WILLIAMS, *Sup't.*,
Westtown P. O., Penna.

WESTTOWN BOARDING SCHOOL.—A stated meeting of the Committee on Admissions will be held in the Committee-room, Fourth and Arch Sts., on Seventh-day the 27th inst., at 10 A. M.

J. NO. W. BIDDLE, *Clerk.*

DIED, on Sixth Month 10th, 1859, at her home at Jerseytown, Columbia Co., Pa., MARY F. HARTMAN, daughter of Samuel and Elizabeth Hartman, aged 32 years, 4 months and 11 days, a member of Muced Monthly Meeting of Friends. She was ill for about nine weeks, and desired to be told truly, if the doctor thought she would recover. Upon being informed that he considered her seriously ill; she said, "I fear I am not prepared to go," being told that there was hope even at the eleventh hour, she said, "I know it, but how wrong to put off until then; if I had my life to live over how differently I would spend it. The last day of her life was spent in prayer for herself, and desired all in the room to pray for her. Upon being asked if she saw her dear father, she said, "I do." "She leaves a husband and three small children.

WM. B. PILES' SONS, PRINTERS,
No. 422 Walnut Street.
